

INHIBITED SULFAMIC ACID-BASED SPECIALTY METAL CLEANERS, DESCALERS

ALDAC 97 AND 97-NF

Aldac 97 and 97NF are formulated to inhibit the attack of sulfamic acid when used for cleaning and descaling of metals and equipment. Aldac 97 is a non-foaming type.

ALDAC DAC

Foaming type for use in cleaning and descaling of metals with the exception of zinc and aluminums, or their alloys.

ALDAC DAC-CU

A formulated inhibited acid powder descaler for water cooled rectifiers and transformers. Inhibited for minimizing etching of copper and aluminum surfaces.

ALDAC DAC-RR

Foaming type for use in cleaning and descaling of metals with the exception of zinc and aluminum and their alloys. Formulated specifically for the removal of rust or iron containing scales.

ALDAC DAC-1

Foaming type for use in cleaning and descaling of metals with the exception of zinc and aluminum, or their alloys. Contains an indicator, which under goes color changes when acid is neutralized and serves as a visual aid in determining when the acid content is spent.
