

● ● ● Advanced remote monitoring solution for all facilities of a photovoltaic installation

Alfileo offers a **tunrkey** solution for remotely monitoring PV facilities across all the equipments on the installation.

This advanced solution integrates a communication gateway (GPRS) to install and Web interfaces that are easy to take control of in order to monitor near real-time data "meters" (production, non-consumption and consumption), "inverter(s)" and "sensors" (temperature, radiation ...) in your fleet.

The Alfileo solution consolidate all the data for a detailed analysis of your facilities.

Now you can enrich your maintenance, optimize your operating costs and differentiate yourself from your competitors.

- Complete and non-proprietary solution for the management of your equipments (inverters, meters and sensors)
- Two Web portals in your colors to view the data (1 Web portal "pro" + 1 Web portal "End User")
- PRECISE supervision of alarms with description, clearance and definition of trigger thresholds
- Analysis tool of multi-inverter data
- A unique contact : a complete solution per installation that includes communication gateway and services (SIM card with GPRS subscription, data hosting and access to web portals)

3 meters
(production, consumption
non-consumption)

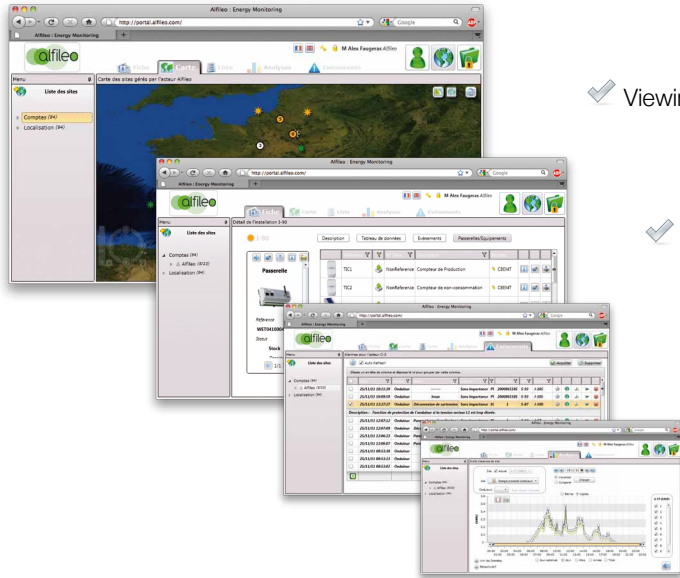

Inverter(s)

Sensors
(temperature,
Radiation ...)

Data use

The solution Alfileo allows you to track your **fleet of PV systems** through a portal, enabling you to manage professional Web sites and accounts with access.

In addition, Alfileo offers yours customers a second portal to view data production and consumption of the installation.

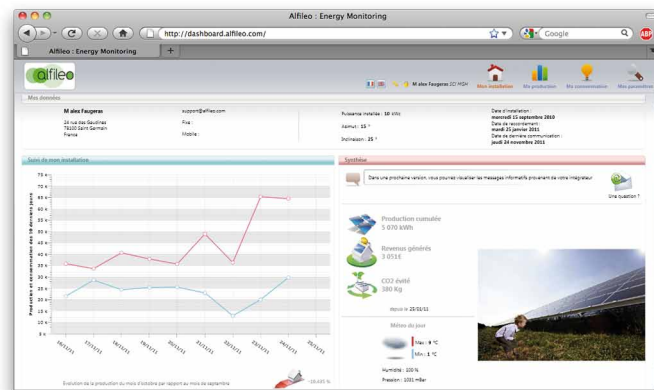

✓ Viewing your park

✓ Equipment management

✓ Monitoring Alarms

✓ Data analysis

✓ Web portal "EndUser"

"Pro" test kit available including :

- Pro gateway
- 2 months of access to Alfileo services (GPRS Subscription + access to web portals)
