

Alghuaibi Est.

***ALGHUAIBI
ESTABLISHMENT
PROFILE***

A BRIEF INTRODUCTION OF Alghuaibi Est. ESTABLISHMENT

Alghuaibi Est. . For Contractor Oil and Gas fields Services

Founded in 1987 with its head office based in Almogama city, the capital of Marib governorate with associated offices in Dubai, Jeddah,. Since founded, we proudly dedicated ourselves by providing major and distinctive services to Oil & Gas Companies operating within the Marib governorate, including governmental development projects and non-governmental in the region.

Our company commenced with self-effacing facilities & manpower, yet with persistence and determination. From the time when **Alghuaibi Est.** was established, we committed ourselves by strictly understanding, respecting our clients' requirements and always appreciated their business offering best value added services and quality in different activities. Its worth mentioning that we have tremendously succeeded in gaining our clients' confidence, for the reason that of our continuous support and the policies that governs our company.

Our company is gaining momentum and achieving remarkable, unremitting progress as we move forward day by day. As a result, we have accomplished a high level of management characterized with unique, decision-making, managerial, and supervisory proficiencies on all projects we have executed.

Furthermore, under the ongoing demands of our clients, we have established specialized ventures in several fields. Therefore, our establishment has gained extra recognitions on our capabilities for supplying/providing different kind of work activities & services.

Our warehouse facility along with branch in Dubai, Jeddah, and Cairo plays a major role in our development and we can easily cover all kind supplies & requirements. This made us a supplier of choice within the Marib governorate.

Our business fields in brief:

- Civil Construction
- Customs clearance, Freight Forwarding, Transportation
- supplying of materials
- Visas, residence visas, work permits
- Procurement
- Manpower (Skills & Un Skills)
- Rental equipments, vehicles and camp.
- Catering
- Environment Management
- Safety Equipments

All above are detailed in the following pages.

OUR MISSION STATEMENT

OUR MISSION:

Our mission at **Alghuaibi Est.** is providing our customers with business practice, services and materials that meet our customers design expectations for quality, value and timely delivery.

OUR VISION:

Our vision within **Alghuaibi Est.** is to provide a safe, secure, and generally good work environment for our employees, who we expect will provide services and products that will ensure very satisfied customers. We recognize that our customers are our best advertisers in developing new business for us. This will in turn provide a reasonable return on investment for our company.

CORE BUSINESS VALUES:

The following are a list of core values upon which this business is built:

- Customers must be satisfied at any reasonable expense as satisfied customers are the key to our future success.
- Our employees are key contributors to company success.
- We do not work Friday as we believe all employees must have at least one day of rest each week.
- Safe operating practices are to be used in our work locations.
- Employer and employees must work together sharing equal responsibility to ensure a safe and pleasant work environment.
- Employees will be paid market competitive salaries and benefits to fairly reflect their contributions to the company.
- All company employees are valuable and will be treated with respect by others in the company.

Alghuaibi Est. employees will treat customers, suppliers and fellow employees with dignity and respect at all times.

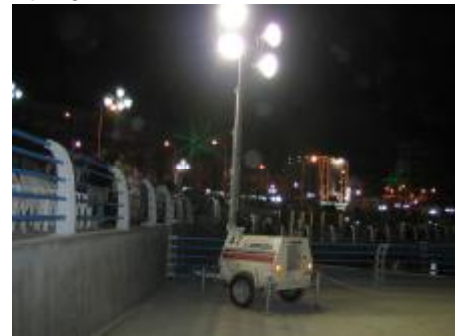

SAFETY POLICY

Alghuaibi Est. Shall promote & maintain high standards of safety within all company activities in order to safeguard its employees, clients, subcontractors and the community at large.

To achieve this, **Alghuaibi Est.** Will:

- promote the health & safety of staff performing works by reducing & controlling the risks associated with those works;
- promote & ensure a safe & hygienic workplace;
- protect the public, suppliers, subcontractors & all other site personnel working, delivering or occupying that workplace or its immediate surroundings from danger to health & safety;
- provide occupational health & safety training for employees and subcontractors;
- Provide ongoing review and auditing of workplaces to ensure compliance with company safety objectives.

To fulfil the above objectives, all aspects of the company's operations shall be planned, controlled and monitored in order to verify conformance with the company's safety policy. All employees have a responsibility to follow safety procedures outlined by the company, and to report hazards to their supervisors as a priority above all others.

OUR QUALITY POLICY

Alghuaibi Est. , is an established company engaged in the Civil construction, design & construction of small to medium scale civil engineering contracts, Steel Fabrication, Rental of equipment and vehicles, Manpower, Camp Upgrading, Procurement, Transportation and Customs clearance throughout Marib governorate. Alghuaibi Est. is committed to providing cost, time and quality effective solutions to the requirements and expectations of our clients.

All employees, subcontractors and suppliers are an integral part of the company's operations, and are responsible for the quality of the product or service they provide. All employees are required to comply with this company quality policy and shall be made aware of the same by their supervisors

The company recognises that in order to maintain customer satisfaction, it must perform in a manner consistent with contractual obligations and provide a product which predictably and consistently meet the specifications agreed between the customer and the company.

To fulfil the above objectives, all aspects of the company's operations shall be planned, controlled and monitored in order to verify conformance with the above policy.

THE FREE ZONE FACILITY:

Furthermore, we are accomplishing what's called "Free Zone Project". The project is purposely founded to be in close proximity to the oil & gas companies. So, all urgent needs, facilities will be at hand when requested, with the bases of custom exemption scheme in the company of a transport service to the location assigned.

Our main strategy that we pursue is being well conscious of our clients' needs, and promoting a high level of our service quality, dedicated commitments, and our individual and combined efforts ensure that we remain the most sought after vendor when it comes to providing the best services with continuously reducing costs and improving efficiency.

Civil Construction

This division is actively involved in civil construction works and has executed several projects in the public works and both private and government sectors. The variety and complexity of projects completed by **Alghuaibi Est.** Continues to grow. They have included bulk earthwork, site development, road and car park construction, landscape and pavement reconstruction. Our reputation for quality and performance combined with our systems, skilled staff and attention to detail all help to ensure we deliver to the client's expectations each and every time.

The diversity of our operations enables us to deliver successful project outcomes by design and construct, construct only or project management methodologies.

This brief record of recent significant project says it all:

- Road and pavement construction for developers, private contractors, local and state government authorities.
- Buildings for commercial and industrial developments
- Heavy duty pavements in Marib area

Alghuaibi Est. recognizes that reputations are built on performance. Our team has a well deserved reputation for successfully delivering projects that meet the client's expectations for price, service, quality and completion time.

Further to the civil construction, **Alghuaibi Est.** has also successfully designed and constructed projects and project management contracts that require broad engineering and project management skills. **Alghuaibi Est.** Contractor's expertise and depth of engineering experience developed since its inception in 1987, enables it to provide project management, design and construct as well as construct only services.

These projects demand creative solutions that deliver the best value backed with the resources to ensure optimum project delivery. At **Alghuaibi Est.** we have the staff, resources and skills required to meet clients' expectations for price, performance, quality and value.

Our record of achievement in design and construct projects include a number of significant projects but not limited to:

- Car parks for the Public Transport Corporation
- External works at Marib shopping centre

Alghuaibi Est.

We have comprehensive quality assurance and occupational health and safety systems and the resources to quickly mobilise on a project. Our commitment is to deliver projects on-time, within budget and to specified quality each and every time.

Equipment we use for most of our projects consists of CAT (Dozers, Graders and wheel loaders) Komatsu (Dozers, Cranes, graders, Compactors, wheel Loaders), Mercedes and Hino Dump Trucks.

CUSTOMS CLEARANCE, FREIGHT FORWARDING AND TRANSPORTATION

Our freight handling and transportation has reached the highest skills in handling shipments; from receiving the goods at ports & airports providing customs clearance, transport to site, unpacking, delivery to stand, repackaging & handling the return freight.

Our professional trained staff together with our equipment such trucks, forklifts, and all necessary tools which guarantees perfect on-site handling service.

As developed and well organized company, Alghuaibi Est. provides a fully integrated logistics and forwarding service and with a combination of professional competencies and technical perfection we offer our customers a full quality and safety controlled services from its beginning to the last drop.

We provide road transportation and equipment of any type to any destination throughout the Republic of Yemen and throughout Middle East.

We also provide customs clearance and freight forwarding services throughout the major sea and airports in Yemen and worldwide, and has made good reputation in many cities including the following but not limited to:

- Sana'a
- Hodeidah
- Mukalla
- Aden
- Harad Border
- Shehine Border

Our services include a full package of logistic services within Yemen and worldwide providing a full "Door to Door" service from processing of the orders, collection, packing, marking, labeling, customs formalities, shipment and delivery to the final destination. With fully equipped storage and lay down yards at strategic locations throughout the Republic of Yemen.

The idea, to form a pioneered freight forwarding section, took shape in the year 1987, after the acquisition of wide experience in this field within the Arab Gulf countries. It is essential to say that Alghuaibi Est. primary

Objective is to serve its clients with professional handling, quick and safe delivery of their shipments at a very competitive charge.

The main activities of this section comprise the following by not limited to:

- Ocean/air forwarding, custom clearance, port supervising, storage and distribution,
- Comprehensive services like; marine insurance, tracking and courier services,
- Logistical service,

Covering the following services:

- Freight Forwarding Business
- Air Import & Export
- Sea Import & Export
- Combined Sea/Air Service Via Dubai
- Custom Clearance (Air & Sea)
- Removals & Warehousing Facilities

Our main objective is to be the leader in our logistics industry, utilizing new technologies and emphasizing Human resource development to provide the highest level of service and value to our customers.

“We can handle the impossible and the sky is our limit.”

CUSTOM CLEARANCE:

Over years, we are fortunate to have been offering custom clearance, transportation services, and all related activities at Mukalla Sea Port, Riyan Airport, and all other custom outlets in the Republic of Yemen.

In addition to these long years of working on the same field, we have maintained a well-qualified personnel equipped with advanced & various experiences on the ground. Besides to the typical relations developed between us and all concerned government offices in the Republic, and Marib governorate in particular. With certainty, we are pleased to be grown-up to the strongest establishment working in this field since the nineties. For instance, we are the customs clearing & transport agent for many oil and gas companies in Hadhramout. We also carry out custom exemptions releases to facilitate our clients' work and we are definitely committed to providing all environment, health & safety conditions when delivering our clients' goods/shipments to the assigned location.

OBTAINING VISAS, RESIDENCES, AND WORK PERMITS:

We have a special crew intended to cover the following services:

- Obtaining different types of visas, residences, and work permits.
- Performing all associated processes with the government offices including the Passport & Immigration department.
- Renewing residences, work permits, and exit visas.
- Building up good relations among our clients & the parties concerned.
- Handling all clients' urgent issues.
- Receiving/welcoming clients' passengers, including engineers, technicians and labours and transporting them to their locations.

For instance, we were the sole local agent to our client "Valentine" on their "SPM2" project with French Co. in Marib , Terminal Al-Marda That was the most recent project we carried out on providing such construction works, heavy/light equipment, trailers, sea & land transport, custom clearance, visas, work permits, port communications, welcoming, hostelling, medications, emergencies, the engineers', monitors', & technicians' issues and all of their interrelated work facilities. In conclusion, we were more than happy to have made certain that our respected customer was so pleased and much satisfied, as all work plans/schedule went smoothly, conducted in trouble free manners and handed over prior to the timetable previously assigned, because of our *"to the best interest of the customer"* strategy.

However, we can grant you with a copy of regulations/formalities that are applied in the Republic of Yemen as regards visas, residences, and work permits with our liable commitment to present the best of our efforts to speed up our clients' concerns.

Domestic and International Procurement Services "Material Management - Outsourcing"

Alghuaibi Est. is becoming internationally recognized for procurement outsourcing and management services that covers the entire spectrum of materials and equipment. We provide procurement outsourcing and materials management services for the entire petroleum, public and governmental industries. From the supply of pipe, valves and fittings, to the provision of procurement specialists, Alghuaibi Est. is your "one stop shop" procurement source.

Alghuaibi Est. is in the business of managing all levels of procurement services as well as providing oilfield supplies to support petroleum drilling, construction, refining, and production operations. As a oilfield supplier, Alghuaibi Est. is your competitive alternative to the major supply houses

For materials, Alghuaibi Est. enjoys an overall advantage due to our lower overhead, operating efficiencies and our supplier/manufacturer relationships. The fact that we are a "reseller" allows manufacturers to quote Alghuaibi Est. discount prices no higher, and in some cases quite lower, than our competitors. Lower overhead allows us to quote our client a lower net cost.

The Alghuaibi Est. Advantage and Success:

Alghuaibi Est. Procurement section specializes in the petroleum energy industry, offering a comprehensive range of purchasing and supply chain management services:

- Experienced, professional staff
- Full traceability and documentation
- Innovative techniques
- International procurement
- Advanced purchasing technology including e-mail transactions
- Competitive pricing
- OEM partnership programs
- Lower overall purchasing costs
- Inventory analysis and materials management

Changing times...a changing industry

Change is the only constant in our industry. Over a painful and turbulent decade, restructuring and downsizing have become facts of life. Major energy companies shift their focus, and their activities overseas, while independents move to fill the gap domestically and internationally.

The pace is quickening. Every aspect of operations is coming under the microscope as managers continue to slash corporate overhead. More and more companies are severely reducing their purchasing staffs, yet demanding increasingly complex services.

Our Cost Saving Concept

"You're all too familiar with the problem. We'd like to offer you an innovative and remarkably effective solution. Why not let us outsource your materials? Alghuaibi Est. has a staff of qualified people ready to deal with your outsourcing requirements. Our field-seasoned professionals provide a full range of procurement and outsourcing services for both large and small companies. These include:

- Project Purchasing
- Project Material Coordination
- Air and Ocean Logistics Coordination
- Export/Import Coordination and Facilitation
- Material and Purchasing Audits
- Procurement/Materials Management Computer Systems Support
- Expediting
- Field Inspection Services
- Document Control and Project Documentation Compilation

You can draw on our resources rather than relying on overstretched in-house personnel. We can help you as much - or as little - as you need, on a turnkey, project by project, or monthly fee basis. You set the terms!

It's clear that outsourcing pays! Alghuaibi Est. value added services can add an entire new dimension to your procurement operations. You'll be surprised just how much time and money we can save for your company by outsourcing.

We would like the chance to prove it!

MANPOWER

As a service oriented company, **Alghuaibi Est.** aim to help the country in attaining its national goal by enhancing through deployment of our Yemen and International workers overseas.

Alghuaibi Est. has a good reputation and ability in searching good and qualified Local and international workers. In this vast and competitive job market we are certain that all suitable workers are chosen for each vacancy, this means we ensure you have a choice of workers who are MORE QUALIFIED, DISCIPLINED and EXCELLENT HEALTH.

Our mission is to provide our principals, continuous toward total customer satisfaction and supply the best available Human Resources to the local market.

To meet your needs in optimum level **Alghuaibi Est.** relies on its solid organization and systematic method of recruitment.

We have developed a top calibre staff whose vast experiences and expertise in the business are placed at our client's disposal. We have so strengthened our institutional capability that we can meet all skill requirements in nearly all facets of business, including but not limited to Oil & Gas, manufacturing, commercial and service industries.

Our staff gathers applicants from all over the globe providing our clients with a range suitable candidates for the Job. **Alghuaibi Est.** clients' satisfaction is our utmost care. Yet, only in rare events Alghuaibi Est. deployed worker not quite up to your expected standards.

PLEASE bear in mind that your satisfaction is our business.

WE PROVIDE:

- Total recruitment services including position definition, recruitment, advertising, search and selection, permanent and contract placement and outplacement.
- Executive professional and technical personnel for contract and permanent appointments.
- Local, national and international registered candidates drawn from a wide range of disciplines.
- Quality, reliable and cost effective services.
- Specialized consultants with specific discipline experience.
- Administration of payroll, visas, permits, travel and logistics.

Specialized understanding and knowledge of international cultures, environments and operating conditions.

WE CAN:

- Comprehensive knowledge of various disciplines, skills and aptitudes.
- Comprehensive knowledge of various industries and their unique requirements.
- Comprehensive knowledge of recruitment and HR generally.
- Trained and reliable staff.

“Throughout own experiences, we understand the power of the right people and what is important for a position.”

For environmental management Alghuaibi Est. means business...

Technology can and does create pollution. Fortunately, with skill and experience it can also be harnessed to control and abate the contamination of our environment.

Alghuaibi has been a guardian of the environment for nearly nine years, providing coherent and sustainable environmental solutions to industrial challenges.

Alghuaibi provides capabilities and services to deliver innovative solutions that balance wealth creation, regulatory controls, economics and the desired level of environmental quality.

Our expertise includes:

- Industrial and Hazardous waste disposal
- Hazardous waste transportation
- Environmental engineering, monitoring & consultancy
- Analytical testing
- Waste minimization

Company Background

The Alghuaibi Company (Alghuaibi) was incorporated in 2000 with the mission of promoting sound environmental management practices in Yemen & we have partner in the Kingdom of Saudi Arabia and developing systems and processes to safely and effectively manage the by-products of industrial activities.

Alghuaibi is dedicated to environmental excellence in the management and operation of its facilities as well as in the environmental services provided to customers.

Principles

- Efficient, controlled use and protection of all natural resources as well as protection of the general public.
- Commitment to legal environmental compliance will be the minimal basis for implementing programs and procedures.
- To be environmentally responsible in the community.

Alghuaibi has developed expertise over the entire spectrum of the environmental management field to provide safe and efficient solutions for industrial customers with respect to environmental improvements and pollution abatement. It also operates the only licensed facility of its kind in the Middle East for the treatment and controlled disposal of the complete range of hazardous and non-hazardous industrial wastes.

Through the continual development of "best available techniques not entailing excessive cost" [BATNEEC] our primary remit has, and continues to be that of providing the most cost-effective solutions for managing environmental concerns without compromise, and above all by the most truly professional means.

Hazardous Waste Management

Release of hazardous substances often contaminates air, soil and water environments. Transport and transformation of chemicals can adversely expose such constituents to human populations and natural ecosystems.

Alghuaibi has nearly nine years of direct experience in hazardous waste management, waste treatment and disposal and is fully staffed and equipped to assist industrial, commercial and public sector clients meet their waste management challenges.

Specialist services include:

- Waste sampling, characterization and analysis
- Hazardous waste transportation
- Industrial and hazardous waste treatment and disposal, recovery, re-use and recycling
- Contaminated land site assessment and remediation
- Hazardous waste removal and tank cleaning
- Asbestos management
- Waste minimization

How to choose a Waste Management Contractor

Before choosing a Waste Management Contractor ask yourself.

Why am I producing this waste?

Can I change the production process to reduce the amount of waste or use less hazardous materials?

Can I reuse the material? or recycle it, or recover it?

If you are not sure you may want to contact a Waste Minimization specialist for more information.

Waste Disposal may be only option but remember, Waste Disposal is the last resort not the first choice!

Selecting the right company to manage your waste is one of the most important environmental management decisions you make.

The professional waste management company should be able to provide you with the following:

- Evidence of a Hazardous Waste Management license, permits, etc.
- A Waste Characterization and analysis service to identify whether waste is hazardous or not.
- Evidence of a Waste Tracking System.
- A range of treatment and disposal facilities.
- Evidence of comprehensive procedures for treatment and disposal of your waste.
- Can propose a treatment and disposal regime that satisfies environmental regulations-not just a rate.
- A Waste Disposal Certificate.
- Explanation of your regulatory responsibility and liability, and certifies who is responsible for the waste after it has been disposed.
- Technical and scientific support.
- An open invitation to view facilities and to question senior staff.
- A list of client companies already using waste management contractor.

If you are satisfied with the responses you received to these questions, then you have probably made a wise choice.

As with all things, you get what you pay for and what may be a cheap alternative today may be a very expensive mistake in several years time.

If you must generate a waste material then choose a company you can trust to treat and dispose of it properly to protect the environment and your reputation

Emergency response capabilities

Accidents happen. Some are minor; some however turn into major emergencies.

The emergency services are a phone call away and part of the emergency response procedure where it involves hazardous waste relies on the specialist services of The National Environmental Preservation Co. (Alghuaibi).

Alghuaibi is resourced and equipped to deal with the spillage or discharge of almost all hazardous materials. Our specially designed and equipped emergency response vehicles combined with the technical and operational skills of hazardous waste management personnel are available to minimize the impact and damage caused by release of hazardous materials.

Waste Classification

Hazardous waste is defined as:

"Any material in a quantity or concentration which, if improperly managed, may pose a hazard to public health or the environment".

Hazardous waste may be solids, semi-solids, liquids or gases and include hazardous wastes. The classification of hazardous waste materials includes materials with one or more of the following characteristics*:

- Ignitable
- Corrosive
- Reactive
- Toxic
- Radioactive
- Biohazard

*The specific component characteristics are detailed in Royal Commission Environmental Regulations (2004)

In order to determine whether a material is hazardous, the Waste Management contractor should be provided with the following:

1. A completed Waste Profile Sheet which includes details of the process or processes involved in the generation of the material, the likely composition of the waste, the quantity and the frequency of generation.
2. Material Safety Data Sheet for all chemicals comprising the waste.
3. A Certified Representative Sample of the material to enable waste treatment characterization analysis to be undertaken.

On receipt of the above, the Waste Management Contractor will be able to advise you whether the material is hazardous or not and what methods of treatment and disposal can be employed to render it safe or non-hazardous. It is important to remember that a charge may be imposed for the analysis and waste characterization.

It should be remembered that it is the responsibility of the waste generator to know the details and nature of waste for disposal. It is also important to note that the generator will normally remain the legal owner of the material even after disposal and may be required to pay for any damage (to the general public or the environment) caused by the material.

In contrast, Alghuaibi assumes full title and ownership of any accepted wastes thereby relieving the generator from any future liability.

Waste Handling and Transportation

The handling, packaging and transportation of hazardous waste require a complete knowledge of the material, that is, how it may react to and with water, acids, alkali, heat, sun or shock or electric sparks etc. Much of this information may be available through Material safety Data Sheet (MSDS) which will be provided by the manufacturers of the raw materials. However, when the material is a by-product of an industrial process or a contaminated raw material its characteristics may change, making the material more or less hazardous.

The method of containment is important. The physical or chemical characteristics of the waste will dictate the type of container to be used and the maximum quantity that should be stored in a container. For example, caustic material should not be stored in metal drums. Equally, the material may have a low Flash point and may need to be protected from the sun or even in an air-conditioned environment as is the case with many Peroxide materials.

There is a requirement to segregate waste material. Different type of waste should not be combined in the same container merely to save on the number of drums: it is dangerous and potentially life threatening. It may also increase the costs of waste treatment and disposal by creating a larger quantity of hazardous waste.

Care must be taken when storing organic materials. Environmental regulations are strict in the storage of such material and the evolution of Volatile Organic Compounds (VOC's).

All drummed waste must be labeled according to international convention and identify the material, its hazardous and precautions.

Drummed waste must be palletized and care taken when loading drums onto the container vehicle. An emergency plan should be in place in the event of spillage or accident during loading.

All waste transported by land, sea or air should only be transported by a Registered Hazardous Waste Transporter. All vehicles are required to be placarded according to International Convention and the appropriate transport authority. A Waste Manifest must accompany all waste. This will detail the material, the generator, the transporter and the treatment and disposal contractor.

The same strict precautions must be exercised in off-loading drums, and the segregation and storage of drums.

The same conditions apply to totes, tankers and other bulk transported waste. Some wastes will require additional protection such as hazardous dust material or Asbestos to prevent airborne dispersion of the material whilst in transit.

The competent Waste Management Contractor will be able to advise you on all aspects of waste handling, packaging or containment and transportation.

Caution should be exercised in selecting a transporter. It is important to know who will assume responsibility and liability in the event of an accident.

Alghuaibi assumes full and absolute liability for all material accepted for transportation by Alghuaibi vehicles. This may not be the case with other transporters.

Waste acceptance procedures

Hazardous waste management contractors are only permitted by regulation to receive those materials with known waste treatment characteristics. This means that before a waste can be accepted, the waste management contractor must be fully aware of the nature of the material, its compatibility with other material, the risks associated with storage and the techniques to be employed in treatment and disposal.

All waste must be allocated a Waste Profile Sheet number. This identifies both the waste and the waste generator.

Prior to waste delivery, a purchase order or a valid contract must be in place-both to safeguard the generator from unauthorized shipments and to enable subsequent invoicing and issue of a Waste Disposal Certificate.

Advanced notice (48hrs) of intended delivery indicating both the waste(s) and approximate quantity is required to enable internal tracking and receipting procedure and any special handling facilities to be arranged.

The generator is required to complete a Waste Manifest which should accompany the waste on its journey to the treatment facility.

On receipt, the actual weight of the material is recorded and a Weighbridge Ticket issued. Alghuaibi reserves the right to undertake fingerprint analysis of the waste in order to assess conformity of waste treatment characteristics against those originally determined for this material. Any deviation resulting in necessary changes to the predetermined treatment regime and the treatment and disposal unit rate will be notified to the customer and their formal agreement obtained before the material can be disposed.

Following disposal, the generator will be issued with a Waste Disposal Certificate as a formal record that the material has been disposed of in accordance with current environmental regulations.

Waste storage

Under Waste Storage Time Regulations, waste must be disposed of within twelve months the time of generation.

Equally, all stored waste must be clearly identified and labeled in suitable containers and segregated according to their waste type. Certain waste are considered incompatible (see Royal Commission Environmental Regulations or US EPA 40 CFR) and should not be stored in the same area because of the risk of fire, chemical reaction, etc. which may cause injury or damage to life or property.

All stored waste should be inspected on a regular basis to ensure there is no leakage or that containers have expanded due to either exposure to external heat or some chemical reaction or polymerization of the container contents.

Due to the increasing risk of injury or damage over time, all waste materials should be removed from site to a registered Waste Management Contractor disposal facility as soon as practicably possible. There is no benefit to the generator of storing waste for longer than is necessary; the cost of treatment and disposal is not going to be less and risk of a major incident will increase.

The professional Waste Management Contractor can advise you on all matters of waste storage and advise you on the precautions you need to take.

Waste treatment and disposal

The methods used in the treatment and disposal of industrial and hazardous waste depend on the waste treatment characteristics of the material concerned with the criteria for permissible treatment option detailed in regulatory documents such as Royal Commission Environmental Regulations and General Presidency for Meteorology and Environment Guidelines.

A range of facilities are provided by Alghuaibi to suit the treatment and disposal requirements of the wasters received. Currently, these facilities extend to:

- Surface impoundment with solar evaporation
- Chemical treatment
- Physical treatment
- Stabilization
- Phase separation
- High temperature thermal destruction (incineration)

Where possible and economically feasible, certain waste may be eligible for re-use, recovery or recycling.

The progress of all accepted wastes is tracked through the waste treatment and disposal processes and waste disposal certificate issued on final disposal.

Environmental Engineering

Industry today is faced with the challenges of meeting increasingly more stringent environmental regulations whilst operating in increasingly competitive world-wide markets. Environmental management has become an integral part of industrial management practice and plays an important role in optimizing performance, protecting the company's reputation in the global community and helping to preserve our environment.

Alghuaibi is the acknowledged expert in the application of science and engineering to meet the environmental challenges faced by industry. The wealth of knowledge, skills and experience combined with an international network of other specialist International Environmental Consultancies means that Alghuaibi can offer world class solutions to any environmental problem.

Alghuaibi environmental engineering services include:

- Environmental impact review and assessment
- Environmental monitoring
- Emission testing
- Stack testing
- Fugitive emission monitoring and predictive emission testing
- Solid waste management
- Emergency and safety planning
- Dioxin and Furans surveys
- Environmental Consultancy

This laboratory in the Kingdom of Saudi Arabia Analytical Testing

Accurate data are essential for effective management decision making. Alghuaibi Analytical Services provides reliable environmental test data through comprehensive, quality assured laboratories using proven methodologies and "state of the art" instrumentation.

In addition to performing routine environmental testing of water, effluents, solids, sludges, soils and gases, the laboratory regularly undertakes complex projects requiring chemical, physical, microbiological and biological analytical techniques to solve client's problems.

Alghuaibi's highly sophisticated laboratory offers an unparalleled service underpinned by scientific expertise in the analysis and data interpretation in areas such as:

- Potable, non Potable and saline water
- Soft drinks
- Waste water
- Soils
- Air & Emissions
- Hazardous waste
- Effluents
