BUSINESS PICK-UP

Zenith unveils its
PC-like portable - p32

WIN AN APPLE IIC-FREE

Seeing is believing

See the pack – see the screen – see the game.
See the difference the moment you pick up one
of the games from Firebird's new Silver Range.

The difference is that our packs show the high
quality you'll see on the screen when you play,
so you know exactly what you're buying.

The same high standard applies to all twenty
games in the range and all are available at the
remarkably low price of

£2.50

FIREBIRD

SOFTWARE

Here's a sneak look at three of the NEW games:

BOOTY

Feast yer eyes on the BOOTY-ful treasure
stored in 20 holds.
There be pirates, parrots and fun galore!!!

THE WILD BUNCH

Can you survive life on the run in this Wild
West adventure???

BIRD STRIKE

Dodge the planes and shoot the pigeons to
complete the tune –
then move to the next level.

Look out for these games in the FIREBIRD silver range at selected high street stores.

SPECTRUM: THE WILD BUNCH · BOOTY · MR. FREEZE · TERRA FORCE · VIKING RAIDERS · MENACE · EXODUS · RUN BABY RUN · CRAZY CAVERNS. VIC 20: SNAKE BITE · MICKEY THE BRICKY.
COMMODORE 64: BOOTY · MR. FREEZE · EXODUS · HEADACHE · ZULU. BBC MICRO B: BIRD STRIKE · GOLD DIGGER · ACID DROPS · DUCK!

The new range from British Telecom.

You'd better believe it!!!

FIREBIRD SOFTWARE, WELLINGTON HOUSE, UPPER ST. MARTIN'S LANE, LONDON WC2H 9DL. TEL: 01-379 6755/5626

QL to get disk interface

QL users standby to throw away your Microdrive cassettes. A semi-official disk interface should be available in December.

The interface has been developed by Cambridge Systems Technology with the cooperation of Sinclair's technical staff.

Unlike the disk system announced by Quest (issue 85), the CST interface has been designed to work with QDOS.

Although the interface won't be carrying a Sinclair label, the involvement of the company in the design will ensure support for the proposed disk data format.

The interface will support 5.25in disk drives but will be sold mainly as a package with Teac 3.5in microfloppy drives.

CST refused to comment officially about the product or its price on the grounds that it does not want to make a formal announcement until the product is ready to be delivered to the shops.

But the company will be giving a sneak preview of the interface at this weekend's Independent QL Users Group meeting in Swindon. (Further details of the meeting can be obtained from Leon Heller on 0908-613004.)

Apple offers 'test-drive' on Macintosh

For all those people who think a computer could run their business and their lives but are still frightened by the prospect, Apple has launched its Test-Drive-a-Macintosh.

The scheme, which will run until the end of December, allows Apple dealers to have up to four Macintoshes to be lent out overnight to anyone interested in purchasing one.

The test-drive Macintosh comes with a cassette tape which guides you through the computers facilities and a suite of programs. For the more adventurous, a booklet is provided which guides the user through the development of a new baby food marketing operation down to the company logo using MacPaint.

You can explore how you'd make contact with potential backers using MacWrite, and impress them by producing forecasts of costs (Microsoft's Multiplan) and a graphical

representation (Microsoft's Chart).

Apple is also expected to launch a laser printer early next year. Apple claims that this printer will offer full graphic facilities and produce a full page of text quicker than a photo copier.

There's no indication of the price yet, but looking at Apple's past performance it should cost considerably less than those already available.

Meanwhile, Apple remains coy about speculation that it will launch a colour version of the Macintosh early next year. Apple traditionally uses its shareholders meeting in January to make new product announcements. At this year's meeting it was the Macintosh and rumours are rife that a colour version, a logical next step, could be revealed soon.

If all Apple announces at the meeting is a laser printer there'll be some grim faces.

Acorn plugs in Beeb music synthesiser

Acorn is all set to launch itself into the music business. It is due to unveil a music synthesiser at COMPEC next week.

The Music 500 is a plain box that plugs into the 1MHz bus on the Beeb and can send its stereo sound output to a hi-fi system.

At £199, it consists of a 16-voice polyphonic sound generator that can be controlled from the Beeb's keyboard.

With the device comes a

high-level structured language called AMPLE which allows you to control wave forms, pitch and volume envelopes and use cross modulation techniques.

You can also create octaves, cords and simulate a variety of musical instruments.

Conspicuous by their absence from the system are a Midi interface to link it to other synthesisers and musical equipment and a music keyboard.

Acorn says the facility to plug in a keyboard will be offered as an add-on 'at a later date'.

Beeb alive with the sound of music.

IBM wants change of gear in Advance

It looks as though Advance will have to go into reverse, if IBM has its way. Advance's £1,500 PC compatible has been selling in WH Smith for some time, but now IBM has issued a statement claiming that part of the Advance's ROM is an unauthorised copy of a program from the IBM PC's BIOS.

Last Friday Advance replied to IBM. An IBM spokeswoman told PCN that having been informed of the infringement, Advance, Ferranti and WH Smith have agreed to cease the infringement. 'As the infringement is in the Advance's ROM, this can only mean that the current version of the machine is being withdrawn.'

As it now seems that Smith's entire stock will have to be withdrawn in any case, things must be looking bleak for Advance.

Meanwhile Advance's friends are showing a suspicious lack of enthusiasm. Ferranti, which manufactures the machine, admits to being in discussion with IBM, but won't say what it's discussing. We put it to a spokesman that there was a possibility of Ferranti ending its arrangement with Advance, but the spokesman wouldn't comment. WH Smith is still selling the Advance for £1,499, in its in-store computer shops, although Advance has dropped the machine's price. It appears

the price of the 86b has dropped by £300, although an Advance spokesman told us he didn't think it was that much.

Sales of the machine in WH Smith have been 'satisfactory', according to a Smiths spokesman, but while elaborating on this he made a curious distinction. WH Smith has a business computer sales arm in addition to its in-store shops, and while Advance sales have been good by the lights of the business section, they have been 'disappointing' by the standards of the in-store shops, where they're displayed alongside Spectrums, QLs and Acorns.

Logically then, the Advance might be better placed alongside the business machines, rather than taking up valuable floor space in high street stores. While WH Smith says it hasn't withdrawn the Advance, it won't comment on the possibility of the machine being moved out of the in-store shops.

Micropro gives old stager new life

Micropro has announced an upgraded version of its old workhorse word processing program, Wordstar. It will be shipped in by January and will retail at £440 (plus VAT).

Managing director Robin Oliver insists it is not a replacement for the widely used Wordstar, although the company does offer a direct swap plus £200 for all who wish to change

their current version for the update (this offer holds for originals only).

Wordstar 2000 will be available only for the IBM PC, XT, and AT. Micropro says it will be converted for other machines but couldn't say when.

Micropro claims for Wordstar 2000 that 'it will redefine the state-of-the-art for micro-computer applications software'.

Special features, or as Micropro calls them, the 'bells and whistles of the new package' include on-screen windows, so that you look at several documents at the same time and transfer sections from one document to another, a built-in arithmetic calculator and spelling corrector, so you don't have to leave the current document each time you wish to carry out a calculation or spelling check, and a typewriter mode which means you can type directly to the printer.

Micropro seems confident that this time its product is fully protected with a software protection algorithm which will allow only up to three backup copies, so any one trying to avoid the rather hefty sum of £400 is likely to be unlucky!

Prestel hacker may force ID change

It was egg-on-face time for Prestel at the end of last week after a computer hacker broke into Prestel and ran amok through the system.

As a result Prestel is considering changing all Prestel users' identity numbers and

advising them to change their passwords.

The major security breach occurred after the personal ID and password of a Prestel system manager was printed on a frame on one of Prestel's development computers.

Armed with the ID and password any hacker could have access to any part of the Prestel system.

In the break-in last week the hacker was able to read the mailbox belonging to the Duke of Edinburgh and private pages belonging to a firm of stock-brokers.

He also put a frame up on the pages belonging to the *Financial Times* that announced the pound was worth \$50.

The break-in was organised as a stunt by the *Daily Mail* to prove how vulnerable Prestel is.

In the story in Friday's *Daily Mail*, Peter Sheridan, who wrote the article, claimed: 'I ensured that all erroneous messages were removed from Prestel screens after proving what could be done.'

In fact, the fake *Financial Times* frame was still in place when PCN checked, suggesting that some of the other efforts of the hacker also remained.

Prestel refused to comment on the extent of the break-in, apart from saying that it was carrying out a full investigation.

It is a very complicated matter which Prestel is taking very seriously,' a spokesman said. 'The investigation will be a thorough look into the allegations made in the *Daily Mail*.'

TECHNOLOGY TRIUMPH — Triumph Adler is taking on the Japanese with this new low-cost daisywheel. The 7020 is £375 plus VAT and comes with serial and parallel interfaces. It's not particularly fast at 20cps but it does give you 10, 12 and 15 characters per inch and proportional spacing. More details from the distributor, Westrex, on 01-578 0957.

Coleco Adam is cut to a remainder

Coleco Adam, the machine that looked as though it would be a trend-setter, is now remaindered at £299 from Silica Shop, London (01-309 1111).

Originally the Adam sold for £700, then it came down to £499 and now another £200 has been knocked off. As well as buying the machine, you may want the games machine adapter which is now selling at £49.

The Z80-based machine, which comes with a daisywheel printer, digital tape drive and a built-in word processor called Smart Writer, has had some troubled times.

The system was plagued with reliability problems last year due to its word processing system which slowed sales down of the machine. This could be one of the reasons why Coleco Industries in the US last week slashed the price of the Adam from \$650 to \$475.

Speculators in the US are saying that this drop in price is a sign of Coleco abandoning the system after Christmas and withdrawing from the home computer market (see below).

However, CBS Electronics, sole distributor of the Adam in Britain has no plans to abandon it.

Philip Gibbs, marketing manager said: 'The Adam has been badly affected by earlier

technical problems and the lack of software. Now software for it is beginning to emerge and it's doing moderately well. And as far as we're concerned we'll go on supporting it.'

Einstein gets a boost with more capacity

Einstein users who want to boost their computer to a full one Mb disk capacity can now do so with a second disk drive unit.

The TK01, which comes in kit

form, costs £149 and can be fitted inside the Einstein's housing. The Einstein, with its 3in floppy disk drive holding 500K, 64K of memory and a separate 16K for graphics was designed from the outset with a view to expanding its storage considerably.

British manufacturer Tatung has cut down its production costs and has passed this saving on to the user. The unit is available now from retail shops.

PICTURE FRAMES — Do you think you could produce a picture better than this? If so, you could win a colour monitor for your efforts. Compunet (01-637 0942) has organised a competition for young artists to put their ideas on screen. First prize of a Commodore 1701 monitor will go to the entrant who designs the most original frame to introduce one of the many services available or planned for Compunet.

To get an idea of what you can create call up the Compunet advertisement page, design your own picture and when you've finished your masterpiece simply upload it. The competition, which is open to anyone who has access to a Commodore 64 and modem, closes on 14th December.

IN BRIEF

As **PCN** predicted, Osborne (0908-615274) has cut the price of the Osborne 1 from £695 to £499 (plus VAT) for the 52 column screen version (issue 85). The 80 column screen version is also down in price. It costs £695 (plus VAT) instead of £870.

No need to wear out your feet queuing up for those theatre tickets. Edwards & Edwards (01-734 6767), the London ticket agency, has just launched a theatre ticket booking service on Prestel. With no less than 52 different productions to choose from you can now book, and pay for, tickets from the comfort of your home. It also provides details of theatre times and ticket availability.

What can be worse than to be separated from your beloved micro while it is down at your local computer shop waiting to be repaired? Enter stage right Thorn EMI's Computeraid Services (0252-548888). It is now guaranteeing a three-day turnaround service.

Faster execution and significant new facilities are promised in Prolog-2 from Expert Systems (0865-242206). Running on an IBM PC or Sirius, the company says that this new version 'is believed to be the world's most sophisticated implementation of the AI language'.

VIEW FROM AMERICA

Baby boomers cause consumer chaos

America's baby boom generation is heading into middle age. The ramifications of this are widespread and unpredictable.

Although the microcomputer scene has always been in flux, the current drum roll of bankruptcies is echoing in every sector. Hardware firms like Gavilan, Otrona and Convergent have all found it impossible to crack the market with fancy machines.

Dozens of software companies — most recently Ovation — have folded their wings in the past months. Others are

holding back products developed for the promised boom-time in the fall. Suddenly no one is sure what the people want.

In addition we are in an odd kind of economic boom. Canny US consumers (the Baby Boomers are the pickiest of all) have slowed spending to a trickle. For micro manufacturers this showed up as a 30 per cent drop in sales in one month (from June to July). Nor was this just the summer time blah.

The fact is that the US micro market has hardened in terms of market share. A survey of 654 computer stores (which don't sell Commodore 64s) found things split thus: Apple 45 per cent, IBM 34 per cent and Compaq 9 per cent. Still out in the cold are all those IBM compatibles from the likes of Texas Instruments and AT&T, as well as the Japanese and remnants of the 8-bit CP/M world.

IBM has a good lock on the US business market and Compaq has developed a portable compatible that IBM can't kill.

Meanwhile Apple demonstrated that, yes indeed, it has bounced back from the dark days of autumn 1983. For the quarter ending September 28, Apple sales jumped 75 per cent over last year to \$477.4 million. Earnings climbed to \$30.8 million. John Scully, Apple's chief, said 'Apple has chosen the industry role of innovator and survived the shakeout as an industry leader.'

And for next year? Well, one option that Apple is considering involves the 65816 true 16-bit, which is compatible with the venerable 6502. The 65816 can address more than 16Mb — even the IBM PC AT can only address 3Mb.

Elsewhere Commodore posted a 14 per cent increase in profits and net income rose to \$27.7 million on sales of \$244.2 million in the last quarter. This Christmas is likely to bring further confirmation of the Commodore 64's position.

Coleco effectively slashed the price of the Adam system to \$475. Analysts believe no more than 250,000 Adams have been

built and that Coleco is trying to cut its inventory on its way out of the risky microcomputer market. They also note that although Coleco's profits surged 65 per cent in the last year, 85 per cent of the company's sales were from Cabbage Patch dolls.

The story of Amiga Corporation is a good example of the state of the market. Amiga spent two years developing a powerful graphics computer based on the 68000 chip.

Amiga planned to market the machine with 128K RAM (expandable to 512K), one double density disk drive, built-in modem and software for about \$1500. It also planned to make it compatible to a certain degree with existing IBM software. It thought venture capital firms would be impressed, especially with the support it had lined up with outside software firms.

But venture capitalists have learned a thing or two about microcomputers and after months of fruitless searching Amiga finally sold out to Commodore.

Chris Rowley

Aries patent drama continues to simmer

While the patent drama simmers between Aries Computers, Watford Electronics and Raven Micro Products (*PCN*, issue 85), the threat of more legal action is in the air.

In a statement Aries said: 'We are certainly going to take legal action against infringement of our patent. Damages mount up from the publication date of a patent, not from when it is finally granted. So, Watford and Raven are already in trouble. . . . Raven and Watford's boards are both covered by the patent, despite variations of detail.'

According to a spokesman from the London Patent Office, Aries' case is questionable. The spokesman said: 'After publication of the patent application, the applicant then has to file a request for examination.

'It can take up to a year or more after the application has been published before a patent is granted. During this time the applicant has no rights whatsoever in saying his product has been patented.

'However, if the applicant feels that his rights have been infringed by the time he has been granted the patent — it can be backdated.'

SPEED OF LIGHT — All right, we know it is expensive at around £3,000 but wouldn't you just like to own a laser printer like this. The EPS LaserJet prints at eight A4 pages per minute, can mix up to four typefaces on a single page and has a print resolution of 300 dots per inch. Prices of laser printers are starting to tumble, so who knows, it may not be long before you can buy one for £1,000. Meanwhile carry on with your dot matrix and dream.

W H Smith homes in on good prices

If you're hunting around for good deals on home computers, W H Smith has a couple of attractive offers.

For £149.95 you can buy a 48K Spectrum, a Kempston Pro joystick interface and a Pro

5000 joystick in one package.

In addition the Beeb's baby brother, the Electron, is being sold with £46 worth of free software.

The Electron costs £199 and comes with the five-game Electron Playmate Pack. There is a choice of two packs and the offer is open while stocks last.

Opus Christmas offer tempts at Boots

Disk drive supplier Opus has some pleasant surprises in store for Christmas.

Boots has agreed to sell the Opus 100K 5.25in disk drive at a tempting £119.95. And Opus' disk operating system, D-DOS, has been rewritten so it can run Acornsoft's Elite mega-game.

An Opus spokesman said the disk drives should appear in Boots' high street shops 'within seven days'. They come with an exceptional two-year guarantee, user manual and utilities on disk.

The rewriting of D-DOS was done in conjunction with Acorn to ensure full compatibility with all of Acornsoft's latest software, including Elite.

The D-DOS interface kit costs £129.95 but Opus dealers will sell you D-DOS and a single drive for £299.95.

This is something of a major turnaround by Acorn. It has traditionally followed a policy of non-cooperation with suppliers of alternative operating systems.

And Acornsoft has included in its up-market disk software routines that check whether a pukka Acorn DFS is fitted. No Acorn DFS and the software hangs up on the user.

H OMEFRONT

Games image suffers hit parade hype

With its budget labels, compilation cassettes, hyping of new products and continuous complaints about piracy and counterfeiting, the games software business is becoming more and more like the pop record industry. It began when record companies like Virgin set up their own software houses.

Virgin's first foray in games publishing came when it hired the Rainbow Room at the top of the old Derby and Toms building in Kensington High Street

for a launch overflowing with razzamataz, free drinks and waitresses dressed up as spacemen.

The software industry had not seen anything like it but it set a trend.

Then along came Mastertronic. Its budget label and £1.99 price tag was a straight rip-off of the budget album idea that helped sell classical music to thousands.

There was nothing classical about Mastertronic's original offerings but they certainly set the Pac-man among the ghosts.

The initial standard was rather low, but has improved and the ranks of budget games have been joined by the big names such as Software Projects, publishers of *Manic Miner* and *Jet Set Willy*, both chart toppers.

And respectability has been given to pocket money games by British Telecom whose Firebird label leapt into life with games selling at £2.50.

It was only a matter of time before someone published K-tel — like compilations of old hits.

Beau Jolly was one of the first to wade in with bargain six-packs of old Imagine numbers.

It has been joined by Alligata with its own-brand Chartbuster offering five games for £9.95. And then there is Select 1 which contains a dozen best sellers from top names such as Ocean and Bug-Byte for £12.95, and is marketed in conjunction with Tel-Star Records.

There is no doubt that the borrowing of ideas like these from the record industry has benefited the consumer. Unfortunately, other ideas have been borrowed as well.

The worst of these is undoubtedly hype — expensive advertising campaigns and promotional ploys to keep the name of a game in the public's mind. The aim is to create such a following that no self-respecting punter can walk into a shop and not come out with a copy.

Some software houses go to incredible lengths to promote a run-of-the-mill game. Calling it a 'megagame' is no longer enough. A favoured technique is to offer a prize of unbelievable value or beauty. It started with *Pimania*, and the golden sundial that has yet to be won.

Since then we have had the original Golden Hare of Kit

Pedlar fame, and a golden sceptre on offer from the Edge for solving the riddle of *Quo Vadis* (the latter also comes with £30,000 in cash).

Another promotional ploy is the pseudo-award winner. A recent press release from a software house told *PCN* about a programmer being presented with a gold cassette for 50,000 sales of the program he wrote. To add credence to the event a well-known personality was hired to present the award.

But the real prize in this category is chart-rigging. It is a fact of life in the pop business and is making itself felt in the games charts.

PCN pioneered software charts and we like to think that our weekly list is the most objective assessment of over-the-counter sales. But of chart can be immune.

In the course of a casual conversation in a pub, a director of a software house (which shall stay nameless) offered to prove the point. 'Give me £2,500 and I guarantee to get any game into your charts', he said.

The moral of this story is: 'let the buyer beware'.

Ralph Bancroft

Pirates face banknote challenge

Software houses are turning to advanced printing technology in a bid to reverse the tide of piracy.

Dataview Wordcraft is making a welcome switch from the use of dongles and taking the lead.

Dataview, which publishes the Wordcraft word processing package for Commodore micros, has been among the keenest advocates of dongles as a means of combating illegal copying.

It has now switched to a printing system called The Beeewe used by banknote printers Bradbury, Wilkinson.

'A not insignificant factor is that The Beeewe is 20 times cheaper than the dongle,' said Paul Handover, Dataview's chairman.

'In addition, it does not entail any inconvenience to our customers in terms of having to adapt their hardware to this security device. It also allows them to change programs without having to disconnect

or reconnect anything,' he added.

The Beeewe system consists of a set of self-adhesive labels. One goes on the disk, one on the manual, one on the licence agreement and one for a spare disk.

The labels are produced by a process similar to that used for printing banknotes, including a latent image and individual numbering.

The latent image can be seen only when viewed from a particular angle, which makes it easy to spot forgeries.

From a legal point of view, The Beeewe has full protection against copying.

● Another printing company to jump on the anti-piracy bandwagon has been set up by ex-Imagine marketing manager, Michael Crofton.

The company, Leisure Art Productions, uses a number of techniques to foil counterfeiters, including printing in a fifth metallic colour.

Once Imagine adopted this technique the company claims, it suffered from no further professional large-scale counterfeiting.

PRECISION CONTROL — The Mach III joystick from Hayes is a deluxe joystick for Apple and IBM users. It includes a fine trim adjustment along with a self-centering mechanism. A hose to users who find that when the joystick is centred, the cursor on the screen is not. Just twist the rotary controls to tune the joystick in. The Mach III is distributed by P&P Micro Distributors on 01-677 7631 at £46.95 plus VAT.

Sinclair seeks out new horizons

Sinclair is spreading its wings in an attempt to increase overseas sales of the ZX81 and Spectrum.

The company is setting up subsidiaries in France and Italy and has appointed a business development manager for Eastern Europe.

Sinclair products already sell well in France and Italy and the new companies, set up in conjunction with Sinclair's local distributors are aimed, as

Sinclair puts it, to 'further reinforce Sinclair's position as Europe's number one supplier of personal computers'.

There are probably other companies which would challenge that claim but there can be no doubt that increasing sales abroad can only be healthy for Sinclair users in the UK.

The sales push in Eastern Europe follows on from the lifting of the US government's restrictions on high technology exports to communist countries.

THE **sinclair** VISION QL MONITOR

£299.00
INC VAT

Developed in conjunction with Sinclair Research Ltd., the Sinclair Vision QL monitor is based on proven Taxan monitor technology.

Its black angular design and 12" non-glare tube result in a remarkably compact unit that complements the QL in looks and performance – including 85 column text display.

The Sinclair Vision QL is the ideal monitor for high resolution colour graphics and professional business applications.

Comes complete with cable and full 12 months warranty.

Specifications:

Input form:	RGB
Amplifier type:	Linear
Video Bandwidth:	More than 18MHz
Dot (Slot):	0.38 mm
Display area:	214 mm (H) x 158 mm (V)
Dot resolution:	640 (H) x 440 (V)

**Recommended by Sinclair Research Ltd.
for use with the Sinclair QL computer.
Manufactured for and sold, guaranteed
and serviced by MBS Data Efficiency Ltd.**

Easy answer to a pointed query

In answer to John Lettice's problem with *FlightPath* (issue 82), the chances will depend on the cross sectional area of the back of the dart. Then, assuming that the darts do not hit the board at an angle the chances equate to:

π (radius of the dartboard)²
to 1. area of the back of the dart
Mark Dunn
Bingley, W Yorks

PS — If the dart could only stick in the hole for the flights, the 'area of the back of the dart' will be replaced by the cross sectional area of the hole.

Time Warp heading causes confusion

We have been selling a Real-Time clock/calender unit for the last year, called *Time Warp*. We were surprised when prospective customers began to ask whether it was just software and not hardware.

I have traced the source of confusion to a small program that you published (issue 81). This program is a simple clock needing the program permanently in the computer, and assuming that the edit keys are not pressed.

We are upset that *Time Warp* has been used as a name for this program. Technomatic has been using this name for its own hardware unit since the beginning of the year — this unit has been widely advertised in most computer magazines. While we are sure that you have used the name inadvertently, we are certain that the writer of the article has 'borrowed' the name for this own use.

I therefore feel that it would be fair for *PCN* to print some comment regretting the accidental use of the name *Time-Warp*, and possibly including brief details of our unit.
Michael Lerner
Technomatic, London NW 10

Happy to clear up any misunderstanding. Time Warp was not a name given by the author of the article, but a headline written by us. We were unaware of the existence of Technomatic's product — Ed.

Has anything we said struck you as outrageous or worth fulsome praise? Let us know how you feel about the issues covered in *PCN*. Air your views in this column — and you could earn £15 for the best letter of the week. Don't hesitate — send your words of wisdom to: Random Access, *Personal Computer News*, Evelyn House, 62 Oxford Street, London W1A 2HG.

Lack of support will mean Oric's decline

Mr Bolter (issue 84) seems to have missed the real thread of my argument and I think criticises me unfairly. First, I am mad keen on my Oric and use it avidly. Second, I too attempt to write programs for it and crude as they are, I enjoy doing so. Third, he is naive to consider software support to be so unimportant.

It is a fact (sad, maybe) that many judge a micro's success largely on the quality and quantity of software available for it. In this respect Oric lags behind. At least three prominent computer outlets in my town have either dumped the Oric/Atmos and software, have chosen to ignore it completely, or treat it with little or no enthusiasm.

As shops continue to ignore it, fewer people will buy Oric/Atmos, less money will return to Oric Products and future investment will decline. Software houses will probably withdraw support and the hardware development put into production will drop. Servicing and repairs of the machine could also be difficult, and Oric owners will be left with a lame duck.

How many prominent adverts do you see for Oric add-ons and software? I don't see many and I look constantly. Without enthusiasm and active

support from the professionals, Oric faces a tough time in a cut-throat industry. If Oric succumbs, we amateurs will pay the price. My letters are intended as a spur to Oric products. This machine *deserves* support.

Matthew Hisbet
Kirkcaldy.

Why BT goes after pirate modems

C Haine's letter (issue 82) has prompted me to write to you on the subject of modems. In principle I would agree with the ideal offered by Mr Haine. However, it is evident that there is a lack of appreciation of communications among computer operators — demonstrated by this letter and others which appear from time to time in computer magazines. I would like to bring to your attention the reasons why British Telecom is so keen to search out illegal modems.

Safety: Any modem operated from the public electricity supply must be checked to ensure that in the event of an electrical fault in the power supply the 220 volts mains cannot be accidentally connected to the BT line.

Transmission: British Telecom has its own transmission standards, ie the level at which signals may be transmitted. Signal levels in excess of these

may cause interference with other channels.

A further aspect to this problem is that the number of channels in a given system carrying telegraph and data signals must be limited to prevent intermodulation or over loading of the modulators. As the telephone network uses its channels for telephones in a random manner, carrying signals from different parts of the system, it is necessary to control the quantity of data users.

This is also why large computer systems perform their data transfers over the Public Switched Network during the night.

In Germany a system such as Mr Haine suggests is available. But the data signal is separated from the telephone networks and passed over high speed data channels.

D Herring
Shape BFP 026.

Spectrum Plus — too little too late

Sinclair's new Spectrum Plus is a case of too little too late. It was released because of the Spectrum's falling sales and at £180 is not good value for money. The only difference from the 'old' Spectrum is a QL-type keyboard. You can get a much superior keyboard for £50!

The launch of the Spectrum Plus is merely a sign of Sinclair's panic over new machines (such as the Amstrad) pinching its share of the market.

Neil Olnor
Doncaster, S Yorks

Whether Sinclair has cause to panic remains to be seen. Perhaps it just want a slice of the add-on keyboard market? — Ed.

Help for the Aquarius user

Brett Emms of Rainhay complains he is unable to obtain programs and equipment for his Aquarius. We carry the range of add-ons and tapes and so can supply anyone with similar problems. A phone call on Ryde (Isle of Wight) 63437 is the best approach.

ROUTINE ENQUIRIES

Here's an end to the hair-tearing nail-biting keyboard-pounding frustration of programming your computer. Whatever your problem call on PCN's panel of experts and we'll come up with an answer. Remember we cannot reply personally, so no stamped addressed envelopes please. Address your problems to Routine Enquiries, PCN, Evelyn House, 62 Oxford Street, London W1A 2HG.

Where can I obtain supplies for my Adam?

Q Recently I bought the Adam expansion module for the family's Colecovision TV system. I was assured that the formatted blank tapes would be readily available but I can't find any. Can you give me the address of a supplier?
R Hammond, Great Linford, Milton Keynes

A Try Silica Shop which is supporting the Adam like is crazy. You'll find them at 1-4 The Mews, Hatherley Road, Sidcup, Kent. You might give them a call first to make sure on 01-309 1111.

Choosing a modem for the 64

Q I am thinking of buying a modem for my Commodore 64. Can you give me some information?
S Cash, Alveston, Derby

A Your first choice should be Commodore's own modem which requires no special interfaces and, for the moment, comes with a free year's subscription to Compunet, Commodore's own bulletin board and database.

The problem is that it is somewhat limited compared to other products and runs only 1200/75 baud. Independent products offer multi-rate communication which you'll need for full use of the equipment.

The catch is that these modems generally require an RS232 interface since the 64 does not fully support that standard. Although there are a number of interfaces around they can cost up to about £60.

Also watch out for suppliers selling non-approved equipment. While it is not against the law to sell modems which have not been approved by British Telecom, it is an offence to use them (cute, huh?)

The best solution would be to find a good computer dealer and discuss what you need. Then buy the equipment there.

How can I make the connection?

Q I took delivery of my QL in August during a trip to England and also treated myself to a super, high-

resolution colour monitor. Do you know of anyone making a cheap RGB socket/plugin/interface or whatever so I can connect my Spectrum to the monitor too?

A If you have room perhaps you could print my address so anyone who makes them could contact me?

Dave Kurthe, Langgasse 51, 3292 Busswil, Switzerland

A Funny things people. They go splashing out on an RGB monitor then start asking for information about cheap interfaces... There are actually a number of these about, most of them fairly expensive but there is one cheap one from Adapt Electronics.

This checks in at just under £30, and you can get more information on 01-589 5111 extension 5027.

The Spectrum is a very open machine in that practically every line you're likely to need comes out of the edge connector. It isn't that simple with RGB because, although you can get a composite signal out of the back with no trouble, you've got to do a certain amount of signal decoding to produce RGB, and this means money and/or clever electronics.

Adapt also makes a composite interface for the Spectrum, should you ever feel skint enough to have to hock your RGB monitor. As it's also possible to get a composite signal out of the QL (QV and video in the diagram in the manual), it's relatively easy for most people to achieve monitor compatibility between the QL and the Spectrum.

Take care when clearing out

Q I've written a program for my Spectrum, but I can't get it to work, and it always stops with a variable not found error.

A I've checked repeatedly but all the variables I use are defined. Can you help?
Andy Trafford, London E16

A The most common cause of the problem you describe is so obvious you'll probably kick yourself.

If you habitually define your variables in the first line then CLEAR, you'll find you're clearing out your variables too. It's a pity not everything is so simple.

Slick shortcuts tell age of BBC

Q I own a BBC B without disk or any extras fitted. I recently bought *Elite* and have hit trouble.

The program loads all right but the machine immediately goes to a hard reset. My other tapes work fine. The *Elite* tape loaded on the retailer's BBC. At this rate, I think I will remain 'harmless' forever.

E Waller, Harlow, Essex

A Loops are familiar to all computer users but the hardest one of all is the 'it's your hardware... no, it's your software' loop. Breaking out can be tougher than taking on a pack of Thargoids.

However... just because the program loaded on the shop's BBC doesn't mean the tape is blameless.

Suspicion then falls on your BBC and the first suspect is the operating system ROM. You don't say how old the machine is, but if you've got one of the original ROMs, that might be the cause of the trouble. *Elite* uses some slick shortcuts and corner-cutting which may be incompatible with older versions of the operating systems.

If we're wrong we're stumped. Get in touch with Acorn and go for the jugular...

Commodore 64 communications

Q I have a Commodore 64, disk drive and printer and intend to buy Dacon's Buzz Box modem. Is there a 'telephone book' of public computers available? Is there a book which will tell me how to use the more advanced disk commands? Is it true that Softset has converted the Microsoft flight simulator for the 64? Can I re-ink my ribbon cartridges?
S Lock, Northfleet, Kent

A Working from the back, you can re-ink ribbons if they're of the fabric type but we suggest you'll need an old sou'wester, wellies and an expanse of open space... or cough up for a new one.

The flight simulator you mean is published by SubLogic (Microsoft licensed it for the IBM PC) and Softset is the wholesale distributor. The 64 version is available now and your local software specialist

should be able to order it from Softset. Price varies between £30 and £40.

We'd recommend the Commodore Disk Companion (£7.95 from Sunshine Books) as an excellent all-round guide to using disks with the 64.

As a starting point for communications get hold of a recent copy of Computer Answers (PCN's sister magazine) where you'll find a list of public bulletin boards and other useful information.

Back copies are available from Back Issues Service, VNU, 53 Frith Street, London W1.

Should I wait for a better machine?

Q I have been considering buying a BBC Micro but am put off by a couple of points. First, the amount of RAM available is small compared with other systems; second, I would like to continue with Fortran and other high level languages.

The cost of expanding the BBC with the graduate costs more than a real 16-bit machine such as the Sanyo MBE. I am prepared to wait a couple of years for the production of an 8088 micro aimed at the home user, but am I wasting my time? Should I rush out and buy a BBC?

Neville White, Portsmouth

A You don't sound like the kind of man to do anything in a rush. But your hesitation is due to one of the great traps of computing — the 'real soon now' syndrome.

You can wait around for ever for better products and in your case assuming an 8088 micro at a low price does materialise, even more incredibly fantastic 32-bit machines will be waiting for release.

So the answer is: yes, you are wasting your time. Buy a machine now, learn and enjoy, then sell it and upgrade when you find a better machine has come onto the market.

Micro versions of Fortran are a bit thin on the ground but you'll probably be able to track one down running under CP/M (possible on a Beeb with either a Torch disk pack or Acorn's Z80 second processor).

As to the memory problems, we would suggest you check out Acorn's 6502 second processor which comes with an extra 64K of RAM.

Tips from readers to make programming easier or open up new avenues of possibility. A new look to PCN's pages means a new look to the payments too. Now £10 for every hint in print, and a hefty £50 for the Microwave of the Month. Send your hot tips to *Microwaves, PCN, Evelyn House, 62 Oxford Street, London W1A 2HG.*

Amstrad screen read routine

This routine adds a new command GET X,Y,CA% to Locomotive Basic. It positions the cursor at X, Y and places the

character at that location into A%. It will then print CHR\$(A%). The program is presented as hex dump and as an assembly listing.
*M Hankins,
Southampton.*

More colours for BBC Modes

One drawback to BBC screen Modes 0, 3, 5 and 6 is that they allow only a single foreground or background colour on the screen at one time.

Here's a program that provides a simple way of getting around this and allows the screen to be split into two colours.

Using the screen update event (*FX14, 4), the interrupt routine changes the logical colours of the foreground or the background. Locations &72

and &73 specify the lower and upper colours respectively. &71 specifies the physical colour to be split ie in Mode 0, &71=1 splits the foreground, and &71=0 does the background. The position of the split is set with the value in &70. Note that if this value is too large, the screen is updated twice before the colour is changed, causing it to flash.

This routine plays havoc with the editing cursor and clear screen commands but you can turn it off with *FX 13.3.

*Kenn Garroch,
Peripherals editor.*

A tidy QL screen for clear editing

Debugging a program on the QL can be awkward if it redefines the screen windows. This short routine initialises the screen to the start-up format with borders to keep the output on the screen.

Save it as a separate procedure and merge it with the program you are working on. When the screen is full of windows scrolling all over the place, you simply type: (enter). Note: all £ signs should be typed in as # (hashes).

How to write for Personal Computer News

PCN WANTS YOU!

Whatever you want *PCN* will try to bring you . . . but we need your help. You tell us you want more programs, more features to help you get the most from your machine. Well, we've listened and we're offering more programs, projects and useful information than any other magazine. But if your machine isn't featured you're only yourselves to blame.

So we're making you an offer you can't refuse. Send us your programs and in return we'll send you upwards of £80 for each one published. We also welcome written contributions — tell us about the ways that you've conquered your machine; your best sound routines, those great graphics features, how you mastered disk and printer.

What we want

We're looking for programs and articles on any aspect of using personal computers — including games, graphics, utilities, and applications.

If you're sending a written contribution we require it in typed form (dot matrix printout is fine), with double spacing on one side of the paper only. Where possible include short, example

programs to illustrate the article.

If you've written a program we require a working version, on tape for any machine, or on disk if you prefer for Commodore 64, Atari, BBC or Apple. We'd also like notes on how the program

works, what it does, and any special features that you've included. A printed listing would be nice but isn't essential — on the other hand we can't consider listings without a working copy on tape or disk.

If you would prefer to make preliminary enquiries before submitting material, you should write — don't phone — to *Personal Computer News*, Evelyn House, 62 Oxford Street, London W1A 2HG. Questions about articles should be addressed to John Lettice, Features Editor; program queries should go to Nickie Robinson, Programs Editor.

If we decide not to use your contribution it will be returned to you if you enclose a stamped, self-addressed envelope but give us at least six weeks. You should receive payment four weeks after publication.

If you want to enclose photographs and screen shots, feel free to do so but make sure they are of good quality and make them colour transparencies or black and white prints. Do not send colour prints.

So, get cracking. Just think . . . two articles could pay for that printer, disk drive, or even a new machine.

COMMANDING PERFORMANCE

Your BBC gets three useful extra commands with Stephen Grigg's program. It uses Basic II and takes up 1K of memory, and there is a commentary on how the program does its stuff.

Have you ever wanted to have extra commands at your disposal and found you couldn't afford expensive utility ROMs? Well, this utility program for a BBC computer with Basic II adds three new commands to the Beeb's repertoire.

The extra commands which are available are as follows:

- *APPEND <fsp>
- *TAB
- *GDUMP

The commands may be abbreviated and used as if they were part of the resident star commands and stay resident until the power is turned off. The new commands take up 1K of memory.

The commands

*APPEND<fsp>

The file following this command is joined on to the end of the program currently resident in memory. Care should be taken that the two files can be

APPENDED together in memory without overwriting the screen. The file to be appended should also have higher line numbers than the program in memory. However if problems occur RENUMBER might take care of the resulting mix up.

*TAB

This command expects a line to be input, and all non-space characters are regarded as tab-stops. On pressing Return this line is remembered. When Tab is pressed the cursor will im-

mediately move along to the next nearest tab-stop. A maximum of thirty-two characters between tab-stops is allowed.

*GDUMP

This command will dump any Mode 1 screen out to an Epson printer. It also works on other printers that use the Epson control character format.

How it works

Lines 100 to 110 store the location of the star command for future reference.

Lines 130 to 170 find where the start of the text of the command is. If the command is being passed through the Basic II OSLCI command no star is needed.

Lines 200 to 240 compare the command being interpreted with the one stored in the data table. If a complete match is found, *ie* it is the same all the way along, a branch is made to the MATCH label at line 460. If, however, the command is not a match then the routine goes to line 250 and checks whether it is the end of the look-up table. If this is true the command is turned over to OSLCI to deal with at lines 390 to 450.

If it has not found the end of the table the program continues on to lines 280 to 310. Here the program jumps over the rest of the command in the table and finds if there is a full stop present in the command entered at the keyboard. If so, it jumps to the routine pointed to by the look-up table. It does this by getting the two address bytes held after the com-

mand. This happens at lines 460 to 520.

The command table follows the following format:

```
<command string> <&OD> <absolute address>
```

so it should be easy to add your own commands, but remember to change line 920 and line 3990.

These lines move PAGE up to the new value specified. The star command itself starts at the two byte address pointed to by &F2 and &F3. The parameters after the command may be accessed by indexing the value held at location &80 with the command start location.

Also, remember there has to be a &FF byte at the end of the table so the program knows when to finish searching for a particular command. You can also put your command in the *HELP interception table, which is located at lines 3860 to 3920. The format of the table is:

```
<command string> <&OD>
```

The table is terminated with a &FF byte. To invoke the *HELP command just type *HELP EXTENSIONS.

The standard operating system calls are used, though you might be puzzled by the &DFSD call that appears a few times in the program. This is only OSLCI in disguise, as it is a direct call (shock, horror). This is used because OSLCI stores the X and Y registers at location &F2 and &F3. These locations should not be corrupted as they are used already within the program to store the location of the star command.

To use the program first set the Basic

variable PAGE to equal &1DOO. This is most important because the program overwrites the standard disk Basic program area. Then type in the program as shown in the listing. I advise you to save it immediately.

Once you have saved it type RUN, and providing you have set PAGE properly the program will save two files to disk or tape. The first program in the listing contains the utility routines themselves. The second is the initialisation program. This loads up the main program and runs it. To run the tape version type *RUNBOOT, or on disk Shift-Break.

There will be no noticeable change when the program has loaded, so when the computer returns from loading do a Break or Ctrl Break. You will see the usual display except for the word EXTENSIONS which will appear after the BBC Computer 32K message. The only change you might have to make in the program itself is at line 60. If you have a disk system the line does not have to be changed. If yours is a tape system line 60 has to be changed to:

```
60 PAGE=&AEOO
```

This ensures that the minimum of memory is taken up by the program. In fact disk users could set the PAGE variable to &1100, and save the program to tape. It would ensure maximum memory conservation, although I do not think APPEND would work. But then you would have more memory to do Mode 1 dumps in if the graphics were generated by Basic. ▶

Is the Information Revolution Passing You By?

If you use an Apple, IBM, BBC or ACT micro then you could be missing out on the information revolution of the decade. Today there are literally hundreds of databases worldwide, which can be accessed by a microcomputer fitted with a Nightingale modem and using appropriate software. These data bases include Prestel, Micronet, Homelink, Telecom Gold, various 'Bulletin Boards' and massive American Databases such as 'DIALOG' and 'The Source'. Micros can also be used to send telex messages.

NIGHTINGALE - The Modem

By far the most versatile modem available, at the price, for either home or business use, Nightingale will enable your micro computer to send and receive data utilising an ordinary P.O. Telephone Line. It offers Prestel/Viewdata baud rates (1200/75 & 75/1200) alongside 300/300 baud full duplex for communication between computers.

The state-of-the-art modem chip technology employed in Nightingale requires minimum support circuitry resulting in low power consumption, low cost, high quality and extreme reliability. It also features a simple self test facility for easy installation.

Nightingale complies with the vigorous specifications laid down by British Telecom and is fully BAPT approved.

"INFORMATION SHEETS AVAILABLE ON REQUEST"

A world of information is available to you now when you install the Nightingale modem from Pace. There are hundreds of thousands of 'pages' of data available on Prestel, free computer software on Micronet, homebanking facilities available with Homelink, Company facts, Educational information, magazine and news articles available with Knowledge Index and the ability to communicate with other micro users direct, or via 'bulletin boards'.

The Nightingale modem is only £136.85 inc. VAT. If you do not already have suitable communications software Pace can supply this complete with a manual and full installation instructions.

PACE SOFTWARE LTD.
92 NEW CROSS STREET,
BRADFORD. BD5 8BS
Tel. (0274) 729306

"Bringing tomorrow a little closer"

SPECIAL INTRODUCTORY OFFER

For a limited period, when you order the Nightingale modem you will receive discount vouchers entitling you to the following:-

KNOWLEDGE INDEX

20% discount off standard enrolment fee (normally £25)

This remarkable collection of databases includes over 22,000,000 items covering Agriculture, Books, Business, Electronics and Computing, Corporate and Company News, Education, Engineering, Government Publications, Legal Information, Magazine Articles, Mathematics, Medicine and News; Current Affairs (The enrolment fee also includes 2 hours of free access time).

ONE TO ONE

50% discount off standard enrolment fee (normally £50)

One to one is an electronic message service designed to give you the communications capabilities of a telex at much lower cost.

By using your micro fitted with a Nightingale modem you can produce, send them in seconds to any destination, paging are also included in this highly efficient communications service.

To Pace Ltd., 92 New Cross Street, Bradford BD5 8BS

Please supply:

- modems at £136.85 inc. VAT & carriage
- modems & software pack for BBC micro at £159. inc. VAT & carriage
- modems & software pack for Apple II file at £279 inc. VAT & carriage
- modems & software pack for IBM PC* at £269 inc. VAT & carriage
- modems & software pack for ACT at £269 inc. VAT & carriage

TAKE A BITE OF THIS APPLE!

PCN has offered some great competition prizes in the last few weeks, but this time we've got something that will really make your mouth water — a complete Apple IIc system worth more than £1,000.

We're giving away a IIc, monitor and monitor stand to the winner of this free competition. The IIc features 128K of RAM, a built-in 5.25in disk drive and is compatible with the wide range of Apple software. The monitor is a green screen, 80-column high-resolution unit and the whole set-up forms an attractive and compact system.

To win, all you have to do is prove the untruth of that old adage, a little knowledge is a dangerous thing. All we're looking for is a little knowledge of Apple Computer. Just answer the questions below and send off the entry form to: Personal Computer News, Apple Competition, 62 Oxford Street, London W1A 2HG to reach us by Friday, December 7.

Entry Form

1 Name the two Steves who founded Apple Computer

2 Name the little brother of Apple's innovative Lisa

3 Which main processor is used in Apple's II series

4 The 'e' in IIe stood for enhanced. What does the 'c' in IIc stand for?

Name

Address

Current machine owned

I do/do not wish my name to be included on mailing lists.

The competition is not open to employees of VNU, Quickset, Chase, or Apple Computers. The judges' decision is final. No correspondence will be entered in to.

Datapen

A QUALITY LIGHTPEN for use with the SPECTRUM computer

The DATAPEN lightpen enables you to create high resolution pictures and technical layouts directly on your T.V. screen. The accompanying software allows you to draw any shape or filled area you wish, to pixel accuracy, in full colour and the results may be utilised within your own programs, e.g. for animation, or to illustrate your title pages. At just £29 inclusive, the Datapen lightpen package represents superb value – just look at the actual screen photographs and you will agree that this must be the best value for money on the market.

- Incorporates features not provided with other pens.
- Push button operation on pen – no need to use keyboard.
- Works under any lighting conditions.
- Plots to pixel accuracy.
- 20 pre-defined commands allow plotting of geometric shapes, including triangle, lines, circles, etc., text, or user-defined characters.

- Uses all paper and ink colours.
- A screen grid may be turned on and off, at will, to assist drawing.
- Flexible erase capability.
- All drawings can be saved to tape for further use.
- Plugs in direct – no batteries, additional components, or adjustments needed.
- Handbook, plus printout of routines for use in your own programs.

PLUS: 3 SOFTWARE PROGRAMS

- Routines and ideas for your own programs. (Menus, games, music, etc.)
- User-defined graphics creation program.
- Superb full colour drawing program as illustrated in these actual screen photographs.

Send cheque or P.O. for £29.00 to: Dept. SU2 or ask at your local computer shop. Send S.A.E. for details.

DATAPEN MICROTECHNOLOGY LIMITED, Kingsclere Road, OVERTON, Hants. RG25 3JB 0256 770488
Lightpens and software are also available for BBC B, Dragon, CBM-64 and VIC-20.

IT TRANSFORMS THE HOME COMPUTER OUT OF ALL RECOGNITION

Because Touchmaster is a touch sensitive surface which effectively bypasses the keyboard, it has none of the keyboard's complications, typing skill requirements or potential errors.

To operate Touchmaster, you simply slide an overlay onto its surface, load the matching Touchware into your computer and touch the overlay.

For repeatability and resolution, no other ostensibly comparable pads can touch Touchmaster.

In fact, Touchmaster's unique technology makes it state of the art when it comes to such pads.

Other pads might fairly be described as peripherals. Touchmaster goes a lot further: it re-specifies the home computer.

Now anyone can master the home computer

TOUCHMASTER

or phone Teledata (01) 200 0200

CHECKMATE

The Chess column is a new feature of Output for all you dedicated pawn movers. Once a month we shall tune to the latest moves in the chess world. Our expert Tony Harrington begins with an exclusive review of Psion's 3-D chess microdrive cartridge for the QL.

For some time now we've all grown used to see even the best home computer chess programs trailing helplessly behind dedicated machines in competitions. But now Psion has produced a chess program for the QL that looks as though it could close the gap.

The *Psion Chess* program (running on an 8MHz Sage computer) shared joint first place with three dedicated chess computers at this year's World Micro-computer Championship, in Glasgow, in September. But how could a program designed for a home computer compete with the best of the dedicated chess machines?

Dedicated machine manufacturers like Fidelity, Hegener and Glazer not only have the advantage of being able to build their hardware specifically to suit their programs, they also have the financial muscle to spend on research and development.

Richard Lang, the author of *Psion Chess*, has several programs for both the Spectrum and the Dragon to his credit, but it was still a puzzle how he managed to produce a program that was so much stronger than Bryant's colossus.

The answer became obvious when I stepped inside Psion's workshop and saw Lang sitting in front of three screens and an open QL with an interface card to a VAX 11780 coming out one end of it. The old amateurish approach to program development where the programmer spends weeks hunched over his home computer patiently hunting down bugs in his algorithms are over.

3-D approach

The 3-D approach to the board takes a while to get used to but the effect is great. The Psion design team reckon that they spent hours at a chess board checking it out.

Replaying a completed game on Psion Chess is a treat. You can replay a game as often as you please without worrying about misreading a move off the scoresheet.

Performance

Because they don't have a purpose-built piece of hardware at their disposal, Lang and Psion have to fit in with the QL's usual way of doing things, and there is a price to be paid for this. Although it has the same clock speed as the Sage, Lang's program is slower by a factor of three on the QL.

So just how good is Psion Chess as marketed? Someone of a cynical turn of mind might point out that while running

on the Sage at Glasgow, the program had extremely lucky escapes from lost positions: one notable instance being when it was hopelessly down against the Fidelity Elegance.

On the other hand, Psion scored a very good victory over the Conchess machine Princess, which didn't lose to any of its rival dedicated machines in the tournament and ended up with five points, a share of first place and the title of World Champion commercial machine. Beating the 1984 World Champion DCM can't be bad.

Our review copy was a pre-release version and testing is still going on but the results so far are encouraging. I tend to believe that people who buy chess programs don't want to sit around for long periods waiting for the program to move. So competition performances at

C won five games in a row quite convincingly and looked like it would keep doing so for ever. So I experimented by taking Psion up through some of the other levels while still keeping the Super C on its blitz level.

If that sounds unfair, remember that very few casual chess players can beat the Novag machine at this level, no matter how long they ponder. You have to be at least a strong club player to have a chance. On level seven, which is theoretically a move a minute, but in practise seems to be a bit faster than that, Psion began to achieve drawn positions against the Super C, a fact which speaks very well for its playing strength.

As to its features, it has almost all the standard facilities that one expects from a chess program. There are fourteen

Psion's chess program in action. It stood up well against its competitors.

two minutes a move are not really the key issue.

Up until the last month or so, during which Conchess, SciSys, Fidelity, Hegener and Glazer all revealed new, more powerful machines, the machine which played the best lightning chess was undoubtedly the Novag Super Constellation. This machine has taken the scalps of several players of International Master standard during blitz competitions, and the other DCMs still have to prove themselves against it. So it seemed logical to pit Psion against the Novag machine. The first point to make is that the Super C has very little difficulty whipping Psion at the blitz level (Psion's level three, which at six seconds a move is actually four seconds a move too fast for blitz chess). The Super

'levels' going from novice to infinite time, and eight problems solving levels, with mate in eight being the absolute upper limit.

The QL printer can be used to dump board positions or to print out a running (or complete) game score, and there are the usual analysis, hint, takeback and replay facilities. The expected market price will be £19.95, and the program comes with a good well written manual.

The North American Computer Chess Championship has produced an astonishing result. Fidelity achieved second place with a souped up version of its Elegance program, behind the Cray Blitz. This is the best result ever by a microcomputer based program. David Levy's game this month comes from this event.

Annotated by John Nunn

The ability to play the endgame well distinguishes the master from the amateur' is an old chess aphorism. Until recently chess programs have suffered from poor endgame play, even while their middlegame play has been improving rapidly.

Judging from the Glasgow World Microcomputer Championships, this problem is now well on the way to being solved. There were several interesting endgames which were constructively played by both sides. Here is one of the best.

Move 22, black to move.

Psion Chess is White and Princhess X is Black. We take up the story with Black

about to make his 22nd move.

22 Bb6xe3+? Black's well placed bishop at d5 gives him an edge, which could have been maintained by 22...Ra8-d8, but he is lured into a tempting combination which misfires.

23 Kf2xe3 f7-f6
24 g5xf6 g7xf6
25 Rf1-g1+ Kg8-b8!
The best move. 25...Kg8-f7 26 Bd3xh7 f6xe5 27 Bh7-g6+ would have lost at once, while 25...Kg8-f8 26 Rc1-f1! f6xe5 27 f4xe5+ Kf8-e7 28 Bd3xh7 gives White a useful extra pawn.

26 Rg1-g5!
There is a bewildering array of pins on the lines e8-e3 and e5-h8, but White finds the best move.

26...Re8xe5+ 26...f6xe5 27 f4xe5 is worse since White's rook remains in command of the g-file.

27 Rg5xe5 f6xe5
28 f4xe5
The dust has cleared and we can see that White's problems are behind him; indeed Black must take care lest the passed e-pawn becomes a real menace to him.

28 Ra8-g8!
29 Bd3-f5 a7-a5
30 h3-h4 Rg8-g3+
31 Ke3-f4 Rg3-f3+
32 Kf4-g5 a5-a7

A very poor move. After 32...Kh8-g7! bringing the king into the game Black

can draw with ease.

33 b3xa4 Bf5xa2
34 h4-h5
Over the next few moves neither program appreciates the importance of allowing the White king to reach f8, supporting the advance of the e-pawn. Here 34 Kg5-f6 Ba2-d5 35 Rc1-d1 would have won immediately.

34 Rf3-g3+ Black misses his last chance to bring the king to g7.

35 Kg5-f6 Rg3-g8
36 h5-h6! Rg3-g8
36 e5-e6 Rg8-f8+ 37 Kf6-e5 would have won. Now Black gets a new lease of life.

36 Rg8-f8+
37 Kf6-g5 Rf8-g8+
38 Kg5-f4 Rg8-a8?
38...Rg8-f8! pinning the bishop and threatening 39...Ba2-e6 might have drawn. Now all is well again for White and Psion Chess winds up efficiently.

39 Bf5-c2 c6-c5
40 Bc2-e4 Ra8-a5
41 Kf4-f5 b7-b6
42 Rc1-d1 Ba2-g8
43 Rd1-d8 c5-c4
44 Bd5-c6 c4-c3
45 Bc6-b5 Ra5xb5
Forced, as 45...c3-c2 46 Bb5-c4 c2-c1=Q 47 Rc8xg8 is mate. The game concluded 46 a4xb5 c3-c2 47 Rf8-c8 c2-c1=Q 48 Rc8x1 Bg8-f7 49 Rc1-c7 Bf7-e8 50 Rc7-c8 Kh8-g8 51 Kf5-f6 Kg8-f8 52 e5-e6 Kf8-g8 53 Rc8xe8 mate.

Annotated by David Levy

The following game was played at the 1984 North American Computer Championship in San Francisco. White, 'Intelligent Software Experimental' was running on an Apple II, Black, 'Ostrich' on a system of eight Data General Nova computers. The game illustrates two of the significant problems facing chess programmers.

White Black
1 Ng1-f3 a7-e6
2 d2-d4 d7-d5
3 Bc1-f4 Bf8-d6
4 Bf4xg6 Qd8xg6
5 Nb1-c3 Nb8-c6
6 e2-e3 a7-a6
7 Bf1-e2 Ng8-f6
8 a2-a3 0-0
9 Qd1-d3 Ra8-b8
10 0-0 Bc8-d7
11 Rf1-d1 b7-b5
12 Kg1-f1

A strange move, but one which is typical of a syndrome seen in many computer games. White thinks that it cannot improve on the positions of its Knights, Bishops, Rooks or Queen and it does not have any useful play. So it moves the King!

12...Rb8-e8?
(Better was 12...Rf8-e8)

13 h2-h3 e6-e5
This move loses a pawn, but it requires a 14-ply search to discover this fact. After

Black's move White's next two moves are virtually forced, as Black replies, and in the position arising after 15...Re8xe5, it is possible also for White to see the win of the pawn, which is then only 9-ply deep.

I would argue, however, that an intelligent chess program could avoid such 'bad luck' by analysing moves deeply in variations that are forced. This technique would encourage a detailed study of the position arising after 15...Re8xe5.

14 d4xe5 Nc6xe5
15 Nf3xe5 Re8xe5
(If 15...Qe6xe5 then 16 Nc3xd5 Nf6xd5, 17 Qd3xd5 Qe5xd5, 18 Rd1xd5)

16 f2-f4! Re5-e6
Black can try to hold onto the pawn only at the cost of losing even more material.

16...Re5-f5, 17 g2-g4
17 Nc3xd5 Nf6xd5
18 Qd3xd5 Re6x3
19 Qd5xd6 c7xd6
20 Rd1xd6 Rf8-e8
21 Be2-d3 Bd7-c8
22 a2-a4!

A fine move, emphasising the vulnerability of Black's a-pawn.

22...b5xa4
23 Ra1xa4 Rc3-e6
24 Rd6xe6 Bc8xe6
25 Ra4xe6 g7-g6
26 c2-c3 Re8-b8
27 b2-b4 Rb8-c8
28 Ra6-a3 Be6-c4

29 Bd3xc4 Rc8xc4
30 g2-g3 Kg8-b7
31 Kf1-e2 Rc4-e4+
32 Ke2-d3 Re4-e1
33 c3-c4 Re1-g1

Move 12, black to move.

34 Kd3-d4 Rg1-g2
35 b4-b5 Rg2-b2
36 Kd4-e5 Rb2-c2
37 Ke5-d5 Rc2-b2
38 g3-g4 Kg7-f6
39 Ra3-a6+ Kf6-g7
40 b5-b6 Rb2-b3
41 h3-h4 h7-h5
42 g4-g5 Rb3-d3+
43 Kd5-c5 resigns

Black cannot stop the white queen side pawns from promoting.

GOING IN CIRCLES

If the thought of drawing circles on your Amstrad puts your head in a spin, try these programs from Kenn Garroch and Bryan Skinner.

A Circle command is sadly absent from the Amstrad CPC 464's Locomotive basic. It's easy to write your own simple circle drawing routines in Basic, but most are very slow if you need much detail. However, you can use mathematical principles to produce some really fast Basic circle sub-routines.

Simple circles

Each point of a circle's perimeter can be calculated by the formulae:

$$x = \text{radius} * \sin(\text{angle})$$

$$y = \text{radius} * \cos(\text{angle})$$

Where 'angle' takes on values between 0 and 360, see figure 1. If your micro doesn't support the DEG command, you must convert the angle in degrees to its radian form using `angle/57.2957795`. For circles whose centre is not at the origin (coordinates (0,0)), an offset must be added to each point:

$$x = x \text{ origin} + \text{radius} * \sin(\text{angle})$$

$$y = y \text{ origin} + \text{radius} * \cos(\text{angle})$$

This rather slow basic method of calculating perimeter points can be speeded up by using integer variables. Listing 1 gives a complete simple circle listing.

Faster circles

Circles have certain unique properties which we can exploit to speed up the drawing process. The compass points N, S, E and W don't have to be calculated—they're obvious:

North — (x origin, y origin - radius)

South — (x origin, y origin + radius)

East — (x origin + radius, y origin)

West — (x origin - radius, y origin)

Knowing this saves eight calculations involving SIN and COS, and these functions are time-expensive.

Of more importance here is the fact that a circle can be defined in terms of a single quadrant (quarter segment). Once this is done, the other segments are merely reflections of other transitions of the original segment. Figure 2 shows how the calculated coordinates of a point on the perimeter in segment A can be translated to create points in segments B, C and D. Listing 2 is the modified circle drawing routine using this principle, and takes less time than Listing 1.

Even faster

The latest method is the most complex, but allows you to use an extremely fast method of drawing the perimeter. The trade-off is memory—this is a very long program just to draw circles. If your application is time-critical, however, and you're not concerned with memory overheads, you'll want this algorithm.

Figure 1

Figure 2

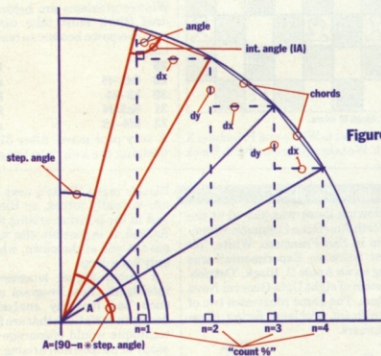

Figure 3

The method doesn't calculate absolute points around a centre like the first two. Given a starting point and a radius, it calculates the set of differential movements required to get from one point on the perimeter to the next, over an arc of 45 degrees. Just as we used the symmetry principle in the second program to generate seven, 45 degree segments, from one.

The algorithm uses the fact that a circle can be considered as a series of straight lines drawn between two points on the perimeter and at right angles to the radius through their mid-point. Provided the number of steps in each segment is large, reasonable circles are drawn. However, as the ratio of the radius to the number of steps increases, so the accuracy of the shape is reduced.

To use the program as a subroutine you must define a radius as 'radius%', as well as the number of steps to be used in

each 90 degree quadrant. This information is held in the integer variable 'no.steps%'. Multiply by four to find out how many steps are used to draw the whole circle. To adapt the routine for use in your own programs you must set the values of 'x origin%' and 'y origin%' too.

Figure 3 shows how the variables used in the routine are calculated. The angle at the base of the segment (marked IA in the figure, represented by 'int.angle' in the program) is given by $(18\text{-step.angle}) / 2$. Starting from 0 degrees, the large angle A is given by 90-step.angle . Dropping a perpendicular from the current point on the perimeter to the x-axis allows us to calculate the angle at the top of the triangle ('angle' in the diagram) as 90-n*step.angle , where 'n' is the segment count, 'count%' in the listing.

We can then calculate the relative movement required to reach the next

Data Processing Managers should try this simple cost-cutting exercise.

Take the short cut to data processing savings and send for details of Ferranti PT7.

We'll tell you how PT7 can cut investment in mainframe equipment by adding power more cheaply at the terminal. How by connecting the Ferranti pro-personal computer, CP/M86[®] is available at each VDU, enabling you to perform industry standard applications, with word processing too, what's more PT7's local processing distributes system loads, eases mainframe 'peak' problems, and allows simpler planning of mainframe upgrades.

We'll show you how PT7 can cut your telecommunication costs by running more VDUs per communication line. And there's further cost saving by more VDUs sharing the same remote printers and discs.

We'll tell you how PT7 can save your data entry costs by running concurrent data entry and interactive work through one controller.

And how PT7 can save terminal programming and support costs by using industry standard COBOL.

You'll also see that PT7 offers a wider choice of peripherals and software, and a fully integrated choice of systems from basic interactive to fully programmable mainframe independent. You'll also be pleasantly surprised to see that it's all here today.

Pick up the scissors and snip out the coupon now.

UTPUT: Amstrad

point (dx and dy in the diagram), using SIN and COS ad the hypotenuse. The hypotenuse is in fact the chord of the segment, calculated in lines 80 and 90 as $(2*PI*radius)/(360/step.angle)$.

We need only repeat this for angles up to 45 degrees, because after this the dx and dy values are the same for each subsequent segment, though they must be transformed (by swapping dx for dy, or negating dx of dy when plotting).

If your computer doesn't use a relative DRAW command you should be able to adapt the routine to PLOT points, as long as you up date the perimeter points, as in:

```
FOR count% = 1 TO no.units
xpoint = xpoint + dx%(count%)
ypoint = ypoint + dy%(count%)
PLOT xpoint,ypoint
NEXT
```

Other uses

By changing some of the definitions and calculations, other interesting shapes can be generated by the routine. For example, in lines 160 and 170, where the

arrays dx and dy are filled, try swapping the SIN and COS statements. Changing line 140 to angle = step.angle produces a four-point star. Leaving out the minus sign in line 170 also changes the effect.

You should find you can generate many interesting shapes simply by playing around with the basic code. It should be possible to adapt it to produce many polygons other than circles and curved shapes.

DONKEY APE

A fair damsel urgently requires rescue from the hairy clutch of a barrel-rolling ape. Happily, help is at hand in the form of an intrepid carpenter who climbs girders and ladders to rescue the unwilling stand-in for Fay Wray.

You start off in the bottom left-hand corner of the screen and use the cursor keys to wend your way along each level to the ladders. As you proceed barrels are rolled along the floor — avoid these or be flattened. At the top the hapless female awaits you guarded by a very splendidly coloured ape who obviously has something to do with the rolling barrels.

You bravely struggle your way to the top level only to discover that you are the unfortunate dupe of the ape, and in a flash you are whisked back down to the first level.

Perseverance is the name of the game, so up you go again. Now your upward manoeuvres have become even more tricky as the ape must have collected fresh ammunition, and the barrels come thick and fast.

A downward cursor key has been omitted for a faster running game. ▣

If at first you don't succeed, try, try again. That's the Number One rule in this ladders and obstacles game from Christopher Dillon.

Program notes

80-150	Set up all variables, a\$ is set for the number of barrels	260-262	Moves you up one of the four ladders	273-295	The opening screen showing the cursor controls
200-272	Main game loop	263-264	You hit a barrel	296-402	Data for user defined graphics
254-257	Move the barrels along the different levels	265-268	Make you jump up	405-700	Introduction screen showing the ape
258	Moves you to the right	269	The final jump — you have made it to the fair damsel's position	405-410	Prints ape
259	Moves you to the left			598-700	Data for introduction tune

THE PSION

THE WORLD'S FIRST PRACTICAL

THE PSION ORGANISER WILL CHANGE THE WAY YOU WORK

Imagine how much more convenient and simple your life could be with a full-feature microcomputer - including screen, keyboard, mass storage and software - in your pocket.

That's what THE PSION ORGANISER gives you - a uniquely versatile and innovative computing resource incorporating hybrid microprocessor technology more advanced and powerful than that found in micro computers twenty times the price!

A UNIQUE NEW INVENTION

Thanks to a Psion-pioneered breakthrough in solid-state drive technology, the ORGANISER's data and program packs offer open-ended, failsafe storage and ultra-fast operation.

- Built-in data-base facility allows instant access to programs and information.
- Simple operating procedures for ease of use.
- Off-the-shelf software library provides a mass of powerful programs and information designed to solve problems at work and home.
- The purpose-designed POPL programming language enables you to write and save your own programs.
- Communicate with office computers, printers and other peripherals through a standard RS232 interface.

PACKED WITH EXCLUSIVE FEATURES

- Solid-state drives access information in milliseconds.
- Information stored on datapaks is totally secure. Datapaks may be removed from the Organiser and still retain their information. Datapaks are re-usable through formatting.
- Solid-state drives allow the open-ended use of software and data. There's no limit to the amount of information or variety of programs which can be slotted into the drives.
- Auto-switch off after 5 minutes and low power-consumption CMOS components give six months' life in typical use with standard PP3 battery.
- 16 character alpha-numeric display with full scrolling over a 200 character record with adjustable contrast.
- Includes an editable calculator. Lets you carry out complex calculations involving up to 200 characters and two levels of brackets. Using the editing facility you can amend your calculation during entry. Moreover, you can go back and edit both data and formulae after a calculation has been carried out allowing you to carry out "what if" analyses.
- The special UTILITY PACK extends the power of the calculator even further with an extensive

ONLY
£99.95
(+P&T)

Includes FREE
- 8K Datapak
- Utility Pack

range of additional mathematical and scientific functions.

- Includes time and date clock function.
- Tough, protective sliding case.
- British designed and built with the highest quality engineering including gold-plated contact points and connectors for rugged, reliable use.

THE PSION ORGANISER: THREE WAYS TO PRACTICAL POCKET-COMPUTING

Use THE PSION ORGANISER in any of three ways:

AS YOUR OWN PRIVATE DATABASE TO STORE PERSONAL INFORMATION AND RETRIEVE IT INSTANTLY

You can use the Organiser to store all the vital day-to-day information you need -

Names and addresses	Customer and supplier records
Meeting notes	Survey information
Schedules	Statistics
Important dates	Exchange rates
Expense details	Experimental data
Restaurants	Personal Reminders
Timetables	

ORGANISER

TICAL POCKET COMPUTER

THE PSION ORGANISER: IT'S LIKE HAVING A FILING SYSTEM IN YOUR POCKET

Forget about diaries, notebooks and the backs of old envelopes. THE PSION ORGANISER allows you to type in information as you want and file it away at the touch of a key for instant future reference.

Retrieving information is every bit as simple. Just type in a keyword, a few characters, or even a date or number. THE PSION ORGANISER will search out the appropriate records and display them on the LCD screen. The simple scrolling facility allows you to view an entire entry up to 200 characters long.

Entries can be easily amended and edited and, since all data is permanently stored, there is no danger of it being lost - even if the battery is disconnected. A choice of 8k or 16k datapaks is available for you to build up an infinitely large information base.

WITH READY-TO-RUN SOFTWARE FOR IMMEDIATE PROBLEM SOLVING

A comprehensive range of ready-written software programs is already available for THE PSION ORGANISER and more are on their way.

FINANCE

Mortgage Cash Flow

- monthly repayments
- net present value
- internal rate of return

Investment

- bond redemption
- yield, equity price to earnings ratio estimates

Compound Interest

- payments
- present value
- capital appreciation
- savings

Depreciation

- straight line
- reducing balance
- lifetime estimate
- depreciation charge schedule
- book value schedule

SCIENCE

Physical Constants -

- Planck, electron mass, electron charge, Rydberg, Gravitation, Avogadro, speed of light, sound, Gas constant, permeability, permittivity, earth radius, Bohr radius, Astronomic unit, etc.

Conversion Factors - UK to MKS etc.

- Formulae - LC circuit, Lenses, Bohr energy levels, Larmor, plasma, etc.

Integration Under a Curve

Least Square Fit

Solution of Polynomial Equations

UTILITY

- LOG, ALOG, LN, SQRT, EXP, SIN, COS, TAN, ATN, ABS, INT, DEG, RAD, MOD, MIN, MAX, FAC, SGN, ROUND, MEAN, STDEV, PI, RND, RAND, ENG, FIX, POWER FUNCTION AND COPY.

MATHEMATICS

- Bessel Polynomials Matrices**
- Integration Curve-fitting Statistics**

- functions
- solutions of equations
- solution of matrix equations
- Eigenvalues
- under a curve
- least squares
- mean standard deviation
- Chi-squared

LINK-UP COMMUNICATIONS

- Industry standard RS232 with ribbon cable plug into a solid-state drive
- Configuration module sets the Organiser to transmit and receive programs and data. Options are selected using the cursor keys including:
 - BAUD RATE : 150-9600
 - PARITY : ODD, EVEN, MARK, SPACE, NONE
 - PROTOCOL : NONE, RTS/CTS, XON/XOFF

AS A PERSONAL COMPUTER TO RUN YOUR OWN PROGRAMS

THE PSION ORGANISER has its own program ming language - POPL - contained in the Finance, Maths and Science packs.

POPL is built around a set of straightforward commands such as IN, OUT and GOTO. It enables you to write your own programs which can be as simple or as sophisticated as you choose. By storing and saving programs in a datapak, you can run them whenever you need.

DEVELOPED BY ONE OF EUROPE'S LEADING MICROCOMPUTER SOFTWARE COMPANIES, THE PSION ORGANISER IS THE WORLD'S FIRST PRACTICAL POCKET COMPUTER. FILL IN AND RETURN THE "FREEPOST" COUPON TODAY AND GET THE POWER OF A DESK-TOP MICRO IN YOUR POCKET - OR CALL US ANYTIME ON 01-200 0200 TO PLACE YOUR ORDER

PSION LTD., 22 Dorset Square, London NW1E 6QG.

If for any reason you are not completely satisfied with your Psion Organiser, return it in good condition within seven days and we'll return your money in full and without question.

SOLE SURVIVOR

Key in part two of E.H. Wilson's dramatic adventure game and see if you have got what it takes to survive in the jungle. Despite injuries and a damaged plane and although help is on the way, our hero is still keen to find the source of that mysterious light. . .

Program notes

380-382 Wave routine. Not a lot of good in this game!
 384-404 Cut routine
 406-420 Chop routine. A subtle difference between this and cut. This assumes heavy handedness whereas cut implies a degree of skill
 422-476 Light routine. Meaning "to set fire to". The command is accepted only when certain conditions are met
 478-526 Climb routine
 528-538 Attack routine
 540-548 Kill routine
 550-564 Hit routine
 566-626 Make routine. Once your object is made, its position is noted, the raw materials are decremented or hidden and flags are set to ensure that only so many articles are

made from the one basic ingredient
 628-634 Oil routine. A stuck door may need some lubrication.
 636-644 Stab routine
 646-664 Throw routine. If the object is neither 4 or 10, it is assumed you are dropping it and flow goes to line 146
 666-676 Rub routine
 678-688 Read routine
 690-724 Examine routine
 726-736 Jump routine. Must be in location 29
 738-754 Break routine. Boat must be broken to obtain wood
 756-764 Posh routine
 766-808 Save and Load routine. These call subroutine at 78 to obtain the device number and on the basis of this, open the relevant files to tape or

disk. Save prints to the device all object positions, flags, counters, player positions, etc, and Load reads these back in
 810-828 Insert routine. In one location, money must be inserted in slot and in another a hollow in a stone wall must be jammed with something
 830-844 Launch routine
 846-854 Say routine
 856-874 These sort out any repetitions (which Ladder, which compass). Judge each input on the basis of position
 876 Dimensions all arrays on basis of 84 locations, 39 verbs, and 93 nouns
 878-1116 Location descriptions
 1118-1134 Data statements holding all directional information.

The best thing next

The BBC Model B Microcomputer is widely recognised as an impressive first computer for the home or the school, but its capabilities are restricted by its lack of data storage and the limitations of Basic for serious programming. For the user who needs more from this computer the Torch Z80 Disc Pack is a gateway to the world of advanced computing.

Model B's fitted with disc interface can be upgraded to full business machines by the Torch Z80 Disc Pack thereby offering the use of more powerful and flexible languages such as Fortran, Pascal, BCPL and Cobol while twin 400K disc drives provide a massive storehouse for information and rapid data transfer from disc to processor.

Torch Z80 Disc Pack
The Torch Z80 Disc Pack is the

proven upgrade for the BBC Model B microcomputer. It provides 800K of disc storage plus a Z80 second processor with 64K RAM running TORCH's own CP/M[®] compatible operating system based in ROM.

This advanced design means that almost all of the 64K RAM provided by the Z80 board is available for programming use - an advantage no other BBC micro upgrade can offer.

If your BBC micro has the Econet[®] option, there is a further benefit the Torch Z80 Disc Pack can offer. TORCHNET can link together up to 254 upgraded Model B's on a local area network, so for enthusiasts, clubs, schools and businesses it is a simple and low-cost way to achieve networking facilities.

The discs can be used for storage under the Acorn DFS system or for CP/M[®] programs and data.

A comprehensive software package is provided which includes word and data processing and a spreadsheet program, along with utility programs and manuals.

The Torch Z80 Disc Pack is recommended by the CCTA for government use.

At £699 the Torch Z80 Disc Pack is exceptionally good value.

Torch Z80 Extension Processor (ZEP100)

When fitted to a BBC system which already has compatible high quality twin 400K disc drives, the ZEP100 provides a complete business or scientific computer.

Alternatively, a ZEP100 may be fitted to a BBC system to enable it to be used as a Torchnet station.

The ZEP100, priced at £299, comes complete with full software support. There are already over 10,000 users of Torch computer systems.

Our customers include hospitals, universities, private businesses, the Government and schools.

If you are ready to take a step into the world of serious computing contact your local dealer listed on the facing page.

VU FILE UNCHAINED

Getting Vu-File to run with the Sinclair Microdrive is not all that difficult. Carl Lawrenson unlocks the mysteries of this simple conversion that will enable you to run programs at no extra cost.

Sinclair's Vu-File can easily be converted to run on Microdrive.

Listing 1

Listing 2

This is for Kempston Interface S

```
1 OUT 58303,129: OUT 58303,15: LET a=PEEK 23631: LET b=PEEK 23632: LET c=a*2
56#b+15: POKE c,0: POKE c+1,91
2 LOAD *m*111"n1 r#s"CODE : LOAD *m*111"VU-FILE"
```

A growing number of small ads in various micro magazines, PCN included, offer programs that allow Psion's Vu-File to operate with the Microdrive. It is actually very easy to convert Vu-File to Microdrive without spending any money. Here's how.

The problem is that the Basic part of Vu-File is too large to fit between the end of the channel area set up by the Microdrive and the start of the machine code.

Fortunately much of the Vu-File Basic contains unnecessary 'frills'. If we remove them, the Basic and one Microdrive channel will sit below the machine code and thus allow Vu-File to use one Microdrive.

Place your bytes

Take a blank Microdrive cartridge and FORMAT it in Drive #1. Now load the Basic part of Vu-File, type MERGE "", which will load it but prevent it from auto-running. LSR the program, and amend it in accordance with listing #1. You must do this exactly as we are grabbing every spare byte here. Note that the normal prompts for loading and saving will not now appear when the program is in use, but you know what you're doing anyway don't you?

Having changed the Basic, you now need to save it to Microdrive. Type:

```
SAVE ""M";1;"RUN"LINE 50
```

and hit ENTER. Now for the machine code, we can forget about the SCREEN\$, so wind the cassette past it.

Type LOAD "" CODE to load the code from cassette. When this has loaded, all that remains is to save it to Microdrive. To do this type:

```
SAVE ""M";1;"VU-CODEMD"CODE25088,5640
```

and hit ENTER.

You now have Vu-File on Microdrive. To use it reset the Spectrum, insert the cartridge in drive 1 and press RUN and ENTER.

Kempston interface

If, like me, you use a plain paper printer connected by a Kempston Centronics interface (or similar) then it is a good idea to save the interface software on the same cartridge so that it boots up with Vu-File. Don't incorporate the interface software loading instructions in the Vu-File Basic as it will use up too much memory. Instead write a small loader (call it 'run') which loads the interface software and is then overwritten by Vu-File Basic. My loader is given in listing #2.

If you use this, then remember to save Vu-File Basic as 'Vu-File' rather than 'run'.

I hope you find this information useful. But remember, this is intended for you to produce your own Microdrive version of Vu-File. Needless to say, you should not infringe the copyright laws by passing copies to other people. ▀

•• MAY WICO BE WITH YOU ••

When you're up against all the evil in the universe, you need the finest joystick. Weak, sticky, slow controls can only lead you to your doom.

You need a Wico.® The controls in more than 500 modern arcade games are actually made by Wico.® They set the industry standard for durability and performance. And the same arcade quality goes into the Wico.® you take home.

Wico.® joysticks work directly with the Commodore 64.™ Vic 20.™ all Atari.® Home Computers and Atari.® Video Games.

Add an interface, and you can connect into a Sinclair Spectrum or Apple II.® and IIe.® If you have a new MSX computer there's the just released MSX Grip Handle for you.

What do you get? A man-sized handle on a virtually unbreakable shaft. Tough, ultra-sensitive Wico.® switchgear. A heavy-weight base. A year's guarantee. And more sheer

dodging, chasing and blasting power than ever before.

The Wico.® range includes the famous Red Ball.™ straight out of the arcades. The Three Way Deluxe with interchangeable handles. The light but rugged Boss. And check out the state-of-the-art Trackball: many owners use it for serious programming, where it gives them effortless cursor control.

Ask your dealer to let you handle a Wico.® Quality (you'll find) costs money.

But if you want to have less trouble fighting your controls, and more power for fighting the forces of darkness . . . only Wico.® is worthy of your hand.

WICO.®

THE FINEST HAND CONTROLS
IN THE KNOWN UNIVERSE

CGL HOUSE, GOLDINGS HILL, LOUGHTON, ESSEX IG10 2RR. 01-508 5600. LOOK FOR THE WICO NAME IN ALL GOOD SHOPS AND CATALOGUES.

Nasty Nazis are why the Dungeon Master is stuck atop of a ski run. But Mike Gerrard is by no means off the piste.

Valkyrie 17 is the name of the adventure, the RamJam Corporation's first release, in which 'The red kipper flies at midnight' — a phrase whose meaning may be revealed at some point. Valkyrie 17 is a group of ex-Nazis with the simple aim of taking over the world.

They plan to achieve this by manufacturing a super-weapon, to help re-establish the Third Reich. Or will it be the Fourth? Time enough for such questions afterwards. For now you must concentrate on stopping them, bearing in mind that they have already murdered one of your colleagues.

You have no idea how you hope to foil the fanatics, but some clues are given in an ingenious idea — side one of the cassette contains the program (Spectrum 48K at the moment, Commodore 64 soon), and when this is loaded you flip the tape which then becomes the cassette you find in your Answerphone when you get home. You listen to several breathless messages from a contact, read the accompanying dossier and set off, maybe even wearing the metal badge to get you into the spirit of the game.

If you hadn't spent £9.95 on the adventure, you might have had some cash for a drink in the first location, the bar of the Glitz Hotel. A remark to the woman seated there produces the response 'I'd lof a trink, dollink. Unfortunately, trinks cost cash and you have no Grotniks, as the barman reminds you. This location has accompanying graphics in the top half of the screen, as do about half the places you visit: those that don't, have reasonably lengthy text descriptions about the locations.

SLIPPERY SLOPES

The bar of the Glitz Hotel: but drinks cost cash.

The graphics are nicely done, although slowly drawn, and the option to switch them off would have been welcome. In some places where you can open things (safes, windows) the picture is redrawn to illustrate this, and altogether there are over 100 places to visit.

Roaming the hotel you find the manager is also after your Grotniks, for he won't let you leave without paying your bill. In the reception area there's a telephone, which sometimes rings with a pleasing double-trill from the Spectrum. Sound is also added to the responses, which scroll up the bottom half of the screen, in the form of a mini-chord

which plays to tell you the 'What now?' prompt has appeared.

The responses are rather slow, unfortunately, and a little tidying-up could have been done here, too.

Get knotted

More tidying-up needed in the broom cupboard, where your clothes get covered in dust. Happily, a solicitous chambermaid appears to ask if you've been standing in a broom cupboard, and dusts you off. Could this be one of your mysterious contacts? Sadly, she disappears before you can talk to her. And what of the voices you can hear through the ventilation grille

in the laundry room? And what's this... sheets in the laundry room? Not allowed out of the front door of the hotel? Looks like the old knotted sheets routine has been programmed into this one.

A full exploration of the hotel is necessary before attempting to flee. However, escaping isn't exactly straightforward. Entering one of the bedrooms reveals a blonde wig and a black silk dress. Can you wear them? Yes, of course, and very fetching you are, too. But I'm not sure that the manager is convinced, for the next time he sees you he offers you his lipstick. And he still won't let you leave.

The adventure has a healthy helping of humour, and I especially liked the swear-word routine, but I'll leave you to discover what that one is. Some of the responses definitely raise a smile, such as the one you get if you try wearing skis and snowshoes at the same time. Skis suggest a ski run, and outside the hotel, if you make it, there is indeed a ski run, but marked 'For experts only.' I'd read the book hidden in the hotel and believed I knew everything about skiing. Skis donned, I issued the fearless command DOWN (having cautiously saved first, of course) only to be told my footwear needed attention. This is where I remain, too, after exploring every location in the hotel I could, spoken to everyone I've met, and unsure what it is about my footwear that's wrong. I've donned my show-shoes and tramped across the ravine to the little hut, but that is firmly padlocked.

Most commands are of two words, but you can enter brief sentences, and as well as saving the game to tape you can transfer it to Microdrive. It loads quite quickly from tape, and the loading screen includes a lightning flash effect. RamJam is evidently concerned about software copying, as when the game is loaded you're asked, strictly for their files, if you're using a pirated copy. I'm not sure how many people will be taken in by this and type 'Yes,' but if you do, you get what you get for swearing at the program. My only advice: don't pirate it, buy it. ■

MOVABLE FEAST

The Zenith Z160 enters the portable-weight class of IBM compatible. From his ring-side seat, Brendin Lewis weighs up the chances of a possible prize-fighter.

The IBM-compatible market is becoming increasingly crowded as more and more companies release new machines. One of the latest is the Zenith Z160, a portable version of the popular Z150 PC. The system boasts 100 per cent IBM compatibility and offers twin 5¼in half-height floppy disk drives, four IBM compatible expansion slots, a built-in amber screen, colour graphics, two serial and one parallel ports and up to 640K or RAM. So how does it measure up?

First impressions

My suspicions were first aroused when I

set eyes on the package. Too large for a portable, I thought. These suspicions were confirmed as soon as I opened the box and removed the packing material. Grasping the bull by the horns (as it were), I grabbed the large metal handle. I braced myself and heaved the system onto the desk.

Someone really should redefine the word 'portable'. This system is not so much portable as 'movable'. In appearance, it resembles a large 'ghetto blaster', mainly because of the carrying handle (which also doubles up as a tilt support for the whole unit once it's on the desk).

As usual with this type of system, nothing is visible from outside except the rear-mounted connectors and, of course, the clips. This machine has six; the two on the front disengage the keyboard while the two on top don't seem to do very much except act as a dust cover for the gap between the disk drive assembly and the rest of the unit. Flicking the final two clips gives the best surprise of all — the disk assembly pops up almost toaster fashion to reveal the two drives. These spring loaded drives are held down, (yes down), by two pegs. When the assembly is up it can be further raised, for removal, by releasing them. Also inside are two small compartments which house the keyboard and mains cables. One of these is just a gap beside the disk drives; the other is on the front, covered by a sliding door which also hides the brightness control for the monitor.

The keyboard has the standard 84 key IBM layout. This includes ten function keys, alphanumeric keys and the dual mode numeric keypad which also doubles up as a set of cursor and text movement keys. The swap from one to another is carried out by the use of a key marked 'Num Lck'.

One possible problem is the large gap between the keys and the case. All sorts of things could get lodged inside. The keyboard is connected to the rest of the unit by a spiral cable with five pin DIN plugs at each end. Incidentally, it's the highest quality keyboard cable I've come across.

The Zenith Z160 is more of a movable desk top machine than a portable. Note the brown screen which is comfortable to use for long periods.

The disk drives 'pop-up' from the top of the machine and are supported by two 'bed springs'.

Documentation

Though not as voluminous as the manuals supplied with the Z100 system (which consisted of seven ring-bound volumes), the two boxed manuals included with this system are of the same high quality. The first, and larger of the two, is the standard MSDOS v.20 documentation. This covers all aspects of the operating system including both the built-in and the disk-based utilities.

The second, and initially the more important, is the operators manual. It has three main headings: hardware, operation, and general service. The hardware section contains specifications, internal switch settings, motherboard and expansion slot information, and a small section on both floppy and hard disks. Operations takes you through the commonly used MSDOS commands, plus basic information on system set-up and configuration of the various I/O ports. The final section, general service, discusses internal diagnostics and diagrams on how to open the system up for PC board replacement. Another nice feature is a table of simple questions and answers for the user to work through when the system fails.

Only two other points dealing with documentation are worthy of a mention — the tiny manual dealing with the differences between Z160 (movable) and the Z150 (standard) PC designs. Last, but by no means least, are the all important licence agreements.

Hardware

Opening up the system is simplicity

The small screen makes the graphics look better.

itself. Simply remove the disk drive assembly, undo four screws and the top of the case lifts off revealing the interior. The unit is split into three main sections: monitor and video driver board; power supply with a built-in cooling fan; and the mother board and main printed circuit boards (PCBs). Access to all sections is good, except to the video driver board, which is mounted horizontally below the monitor tube. It could have been mounted vertically to one side

The keyboard cable and the controls for the screen are hidden behind a sliding panel.

of the tube, as there appears to be enough space.

The power supply, which looks very safe, is totally enclosed in a metal case. The mains socket, switch and voltage selector are mounted directly into the power supply which again increases safety.

The 'business end' of the system is the main PCBs which plug directly into the mother board. The eight sockets on the mother board are all IBM PC XT compatible and may be extended by fitting an expansion chassis. Four boards make up the basic system — the floppy disk controller, the video controller, the cpu board, and one memory board.

The standard system comes with 128K of RAM, but the review model had the full complement of 640K on two boards. One connector is mounted to each of the memory boards. These, like all the rear mounted connectors, are unmarked, unfortunately. They are 25-way D-type connectors, configured as a standard Centronics parallel printer port. If the

machine can drive two separate parallel printers (one from each board), it has definite word processing applications. A fast draft printer could be connected to one port, while a slower letter quality printer would be connected to the other.

The cpu board contains the 8088 microprocessor with an empty socket beside it for the 8087 coprocessor. An interesting feature is the six diagnostic LEDs mounted on it. These would be used when system failure prevents built-in diagnostics from operating. The LEDs, when lit, indicate a failure in one or more of the following sections: cpu, ROM, RAM, interrupts, and disks. The final LED is the ready or working indicator. The connectors mounted on this board are externally, a five pin DIN socket for the keyboard and internally, the 2in 80hm speaker.

The video board uses the ubiquitous 6845 video chip offering a versatile video interface for any user. Seven video modes are available, four are text and three are graphics offering different colour/monochrome/resolution combinations. The graphics modes, as so often is the case, correspond with the

pixel resolution of the text in a given mode. For example, medium would be 40*25-320*200 and in high it is 80*25-640*200.

Text on the screen conforms with the IBM character set, though this can be altered by changing the position of a jumper on the board. Other characteristics of the video can also be changed by swapping around another set of jumpers. These include synchronisation signals for both external video monitors and for the light pen strobe. Three connectors are mounted to this board. Internally, there is the signal lead to the built-in monitor. The two rear mounted sockets are both for external monitors. A phono-type socket carries the monochrome output while a nine pin D-type carries the RGBI (red, green, blue, intensity) output. Both are designed for Zenith monitors, so their characteristics may need to be altered if using a different monitor.

The final board is the floppy disk controller, capable of controlling up to four disk drives, each of 360K capacity. Strangely enough, the two serial ports

ARDWARE PRO-TEST: ZENITH Z160

are also connected via this board. Both are standard RS232 ports capable of driving serial devices at up to 96500 baud including printers, plotters, modems and the Microsoft mouse.

The hard disk and its controller, although not on the review system, is available and the documentation contains a section on its use. The controller board would sit in one of the expansion slots, leaving three slots on the standard system for any of the plethora of IBM expansion boards available.

In use

When powered up the system attempts to read a disk in drive A. It spends about 30 seconds doing this, giving adequate time to put a disk in. If at the end of this time no disk is found, a 'drive not ready' message is displayed on the monitor. At this point you can jump to the system monitor program by pressing escape. When in monitor mode, the screen clears and a version number and the memory size are displayed.

The program allows various commands to be typed without the need of an operating system. Facilities include read or write to an I/O port, display, examine, fill and search memory, execute from a memory location, run diagnostic tests and display a colour bar. All command syntax is shown on the help screen, making it quite simple to

The Zenith Z160 folds away neatly but could have done with wheels.

quite a while longer to finish the task.

Software

Four disks arrived with the review system, three marked MSDOS 2.0 demo disks and the other marked user demo disk. Why one of the disks is marked MSDOS 2.0, I don't know because it is simply a v1 system disk.

The user demo disk offers help and information on graphics and software. A features and graphics demo are also included. The graphics demo, because of the small screen size, looks better than it

sectors, partitioning and restoring a hard disk unit. A utility for moving the heads over an unused track for shipping purposes is also included.

Applications software for any IBM compatible covers a vast range, and this is no exception. Zenith produces a list of available software obtainable from any Zenith dealer. The list is updated bi-monthly and all the software has been tested by Zenith.

The only piece of software I had was a copy of Microsoft Word, the word processing package. My main criticism of it is the persistent reference to press cancel (for example) when no key is marked cancel. I found out later that this is the escape key. Software should be documented to be consistent with the hardware it's being used on, or at least come with a mask.

Verdict

Apart from this so-called portable being built like a tank and weighing almost as much, I liked it. Once it was on the desk it was a joy to work with. The disk drives are serenely quiet, the monitor clearly readable for long periods, and I especially liked the pop-up disk drive assembly.

There is little one can say about the IBM standard that has not been said before. When it comes down to the nitty gritty, it is the quality of the software packages running on the IBM that wins in the end. With the number of packages available for the IBM the Z160 can't fail although it will be a close finish. ▀

Plenty of room for IBM-style expansion at the rear.

use. This is quite a useful tool but its effectiveness is hampered by the lack of one important facility, a hardware test reset button.

If a problem occurs during execution of a program, the reset button can normally be pressed as a last resort. At that point the monitor would be invoked and various tests could be run to isolate the fault. The Z160, on the other hand, uses a software reset (alt, ctrl and del keys together). If the software locks out the keyboard, all you can do is power down/power up, and, of course, all stored data is lost.

The system automatically tries to boot from drive A, though drive B can be selected from the monitor. The operating system loads very quickly (about five secs) when using MSDOS v1, which is a huge improvement on some systems. MSDOS v2.0, on the other hand, takes

really is. One thing Zenith shouldn't have bothered showing was the smooth scroll — it's pretty awful.

The others were an MSDOS v2.0 system disk, an MSDOS v1.19 system disk, and a hard disk utilities disk which takes care of formatting, detecting bad

NO HOME COMPUTER IS COMPLETE WITHOUT IT

Because Touchmaster opens up the home computer.

First, to the full range of users, even the very young.

Secondly, to a whole new style of software ("Touchware"), which is not limited by the keyboard.

Touchware goes all the way from early education packages to sophisticated graphic programs.

What's more, comparable pads are limited because their surface is composed of either a bank of switches of finite size or carbon tracks laid in a grid.

Or they need a delicate electronic stylus. Or they offer a limited working surface. Touchmaster's full A4 printed surface, by comparison, is totally linear.

It has a resolution of 256 x 256 points (that's what makes Touchmaster so flexible).

Now anyone can master the home computer

Would you like to transfer your Spectrum programs from
 ① MICRODRIVE TO MICRODRIVE ③ TAPE TO TAPE
 ② TAPE TO MICRODRIVE ④ MICRODRIVE TO TAPE

Then do it with

TRANS-EXPRESS

TRANS-EXPRESS is the most comprehensive package of four m/c utilities for transferring Spectrum programs. They are user-friendly, simple to use, reliable & very efficient! They will enable you to transfer any kind of programs up to the full 48.0k length. TAPE TO MICRODRIVE will also automatically, if necessary, modify re-structures & relocate both BASIC and m/c to RUN from microdrives.

TRANS-EXPRESS is an essential microdrive companion and an invaluable software back-up utility.

You can buy each of the four programs separately for **£ 5.50** or TAPE TO MICRODRIVE & MICRODRIVE TO MICRODRIVE for **£ 7.50** or an entire package of all four programs on one tape for **£ 9.95** or on a microdrive cartridge for **£ 14.95** only.

ROMANTIC ROBOT 113 Melrose Ave, London NW2

DIAL STRAITS

Brendin Lewis hooks up the Telemod 3 modem and places a few calls.

The Telemod 3 features ten LED indicators, and two switches for auto or manual answer. A bit of a waste as only three positions are used.

Multi-mode modems for micros are not a new idea but only a small number have been given the all important British Telecom seal of approval. The Telemod 3 from OEL, is one of the lucky ones. It offers multiple speeds (1200/1200 half duplex, 300/300 full duplex and 1200/75) with answer (both auto and manual) or originate modes.

First impressions

After wading through the usual cardboard and polystyrene packing I found, to my surprise, a very neat and attractive black plastic-cased modem. Gone, it seems, are the days when such equipment looked as though it was made by the average soldering iron-wielding hobbyist.

All controls and cables are located on the front and rear of the case. The front panel contains all LED indicators, of which there are ten. There is one for each of the speed settings — not entirely necessary — but a nice feature nonetheless. The other five indicators deal with the line conditions, seize, DTR (data terminal ready), RTS (ready to send), ring and carrier. The latter four are also marked with their relevant CCITT V24 circuit numbers, for example 108 = DTR. Next to these indicators are two switches which are used for auto or manual answer. The use of two switches seems wasteful to me, as only three position combinations are used. They could be replaced by a single three position switch.

At the rear can be found the mains cable (no plug), switch and fuse, a 25-way D-type serial connector and a British Telecom-type 600 phone socket. The use of this type of socket is quite a

recent innovation. Previously BT, which used them itself, deemed that they were unsuitable for mounting on the modem. Now the installation is much neater, because the phone can plug directly into the back of the modem and the modem directly into the line (for which a cable is built in).

Whether it is becoming a trend or not, I don't know but the documentation available with modems seems rather meagre. This one is no exception. All is revealed on six sides of A5 paper. This comes down to five and a half sheets if you already know how to put on a mains plug. What there is, however, is brief though understandable.

Providing everything works first time there should be no problems. If, on the other hand, they don't you'll be using your phone to talk to OEL and not to Prestel.

One of the problems concerning BT approval is that a modem must not produce the dialling tones for the Bell telephone network used in America. This is not the fault of OEL because it uses a standard modem chip which can supply both of these tones. Hopefully BT will look into this matter in the near future, as it prevents users dialling the US.

In use

Installing the modem looked a simple task and proved to be just a case of plugging the bits together and powering up. Nothing ever goes wrong until a unit is powered up, which is just what happened with this one. The manual states that on power up one of the speed indicators should light up if all is well. It didn't. Power down/up and there was still no change. I changed the position of

the switch and hey presto! It was fine. Apparently there are five speed indicators but six switch positions — so beware.

Another strange thing happens with the other set of indicators involving DTR and CTS. They were both illuminated, indicating that the terminal and modem are ready for communication, but the terminal wasn't switched on. These two pins should be asserted by the local terminal or micro and therefore should not light until the DTE is ready.

Leaving these problems aside, I reached for the phone, unable to test all modes (my fault, not the machine's). I decided to call the local mainframe at 300 baud. After wrangling with the different buttons on both phone and modem, I finally got the log-on message.

Verdict

It seems the only thing the Telemod 3 has to offer over other modems is BT approval, which is a shame. Though the specifications sound good, there are a few obvious omissions. The most basic is the lack of a local loopback switch for test purposes. Also missing is an auto-dial facility, which would be far more useful than auto-answer. However, these drawbacks with the Telemod 3 can easily be ironed out, and I look forward to seeing Telemod 4.

SPEAKING UP

Your 64 can be made to speak volumes with this American gadget, The Voicemaster. Kenn Garroch linked it up to his machine for a test conversation.

One of the good things about the Commodore 64 is its sound synthesis chip (SID). Many games are beginning to use this for speech synthesis, to make the games a little more interesting. One thing that may be puzzling a few people is how the speech is coded and set up for use.

The Voicemaster from Covox can be used to input speech, via a microphone, store it in files, and modify it to a certain extent. The gadget is American and can be ordered only from the US.

Presentation

The device itself consists of a small, flashy-looking, brushed aluminium box (10cm x 6cm), a disk or cassette, an electric condenser microphone, and a manual. This comes all wrapped up in a box about the size of a 'ten pack' of disks.

Setting up

The main box plugs into the user port on the back of the 64 (make sure the machine is switched off). The microphone goes into a 3.5mm jack socket on the left side, and the 64 can then be switched on.

The review model came with its software on disk and was loaded from Basic with the command LOAD "VOICE-MASTER", 8 and then RUN. As well as loading the machine code and initialising it, it also asks you whether you want to turn off the SID filter. To the innocents among you, the SID chip contains a set of tone generators to produce the sound, some envelope generators to alter the volume with time, and some filters to alter the shapes of the waveform (effectively giving the different vowel sounds of 'ee' and 'oo' but with shades in between). Also included are a few other features and FX to make the SID a bit more flexible.

Turning the filter on or off didn't seem to make a great deal of difference, although the 64 I was using was fairly new and the Covox manual vaguely mentions something about older

machines not having the same SID as the newer versions. Anyway, with an ordinary everyday television the speech was more or less intelligible.

After selecting the filter off option, another disk access is performed and the computer speaks.

In use

The whole idea of the Covox is that you can input speech, save it, and then be able to reproduce it without add-ons.

There are a number of programs on the disk — Demo, Calculataor, and Clock.

Demo is a simple program that allows you to input speech and then play it back.

on (N +ve or true) or off during voice playback. When the screen is on, the speech is slowed down a little but this can be offset somewhat by using SPEED. CLEAR deletes the current vocabulary, unlike the command NEW (normal Basic) which leaves it intact. It also resets all current settings such as speed and volume.

SPEED N changes the speed of playback where N is in the range 0 to 9, with 5 being the norm. The highest speed makes the voice playback sound like Pinky and Perky (remember them?), while the slowest is like the belt slipping on a record deck.

VOLUME N sets the volume in the range 0 to 15 with 15 being the loudest.

RATE N changes the sampling rate at which the voice or sounds are recorded. So the sound quality improves the faster it is sampled.

The Covox can incorporate up to 64

The flashy Covox showing the manuals and software. Unfortunately, we can't reproduce the sound.

It also allows some of the added effects to be demonstrated, such as altering the speed of the playback, which changes the pitch of the sound rather like speeding up, or slowing down a record player. The calculator turns your Commodore into a speaking adding machine and Clock is more or less the same as dialling the speaking clock.

After you have become fed up with the demo programs, you can try writing your own. This is very easily achieved from Basic, since the software gives you a whole new set of commands to use. These are:

SPEAK N, where N is the word number previously placed into memory, with LEARN N which analyses the voice input from the microphone and stores it in memory.

PUT "filename", 8 stores the current vocabulary onto disk.

FIND "filename", 8 loads a vocabulary from disk.

SCREEN N selects whether the screen is

(familiar number) sounds in memory. These can be brought back, at will, with the SPEAK command. Incorporating speech into your programs is simply a matter of executing a SPEAK at the appropriate time.

Verdict

The Covox is a pretty good gadget. If you can think of a good use for it, I really could not think of a great deal of use for a computer that talks, unless you can talk to it and hold a conversation. ▀

342 1271. Mail order add \$4.00 pp.

Really inexpensive way of writing down whatever comes up on your computer screen.

Lightweight and totally portable — independent power source!

Normal, **EMPHASIZED**, CONDENSED and ENLARGED print.

Works perfectly in the dark even during a power cut!

45 characters per second (only in optional "totally-illegible-squiggly-line" mode).

Dear Me,
Even writes letters!

The new, portable Epson P40.

Now the home computer user can have a true business quality printer, from Epson – maker of the world's most popular printers.

Our new P40 is only £99.95 – that's including VAT and recharger. It's suitable for BBC, Sinclair, Commodore, Oric and almost any

other popular home computer, as well as virtually any portable or desk top micro.

Running off its own rechargeable batteries as well as mains, your P40 is totally portable and being Epson, an absolute doddle to use. And though particularly compact it even gives

you 80-column width printing in condensed mode.

So wherever and whenever you want to print, now you can – with the new, portable Epson P40. In fact, anything a ball-point does, it can do – better. See it at selected branches of Boots, or ring 01-200 0200 for details.

EPSON

'Sinclair QL User Guide' by Lionel Fleetwood, published by Sigma Technical Press at £7.50 (paperback, 211 pages).

QL books aplenty are about to hit the streets. Or at least that's one way I could deal with the mountain cluttering my desk. But at the back of my mind there's always been the voice of responsibility, telling me first that these are good, honest authors out there, and second that I'd better review a couple before the pile gets any bigger.

Putting them in order of complexity you come to Lionel Fleetwood's Sinclair QL User Guide first. This is one of the better value QL books, as it is mostly for the first time user who wants an explanation of the applications packages. It does a quick overview of SuperBasic in the first forty-odd pages, and for the rest of the distance concentrates on the applications packages that come with the machine.

These later sections aren't bad, but there are cavernous gaps. Say you've just gone down to the shops, bought a QL and Mr Fleetwood's user guide. Boot up the Quill, type some stuff, then you want to print it out. You tear through the index of the book, which refers you to page 17, which tells you how to choose a printer.

Undaunted, you head for the section on the Quill, which tells you: 'Once you've designed your document with headers and footers, you're ready to print: this you do by (a) making sure you have a printer and (b) hitting F3 P.'

With RS232—pull the other one, Lionel!

A couple of other points might make you doubtful—the cover picture is an enhanced version of an early Sinclair PR shot, complete with non-existent RAMpack, and there's a particularly woful paragraph on the jacket which refers to the technical section on the 68010 processor, the Motorola instruction set and the QDOS operating system.' None of these things are actually in the book (we reckon the 68010 is a 68000 with a 16-bit data bus) and there's a sticker over the

paragraph, or there was. Memo to Sigma—send books to reviewers with bitten fingernails. . . **IL**

'QL SuperBasic' by Dr A Berk, published by Granada at £6.95 (paperback, 165 pages).

QL SuperBasic, by Dr A Berk, is a sort of combination guide to SuperBasic and introduction to computers. As far as the latter is concerned it's no worse than some, but as a guide to SuperBasic it might as well be a guide to the ZX81.

Get this for an introduction to loops:
10 LET N=0 PRINT 12*N: LET N=N+1: GOTO 10
Fine as it goes, perhaps, but Dr Berk sees fit to spin this one out to 17 lines including REM statements. He makes a virtue of this soon after by introducing multi-statement lines, but I suspect many people will have nodded off by then.

But my major objection is that the book seems upside down to me. Dr Berk approaches the QL just as you'd approach a 'normal' machine, and the most important thing about the QL is that it isn't normal. QL SuperBasic is radically different from most dialects of Basic, and is surely an opportunity to teach newcomers more about structured programming. I'd say it's a grave mistake to start out teaching boring old Basic, and not introduce the structures until later. **IL**

'The Computer Dictionary' by Jon Wedge, published by Adam & Charles Black at £3.95 (paperback, 128 pages).

Somebody—either the author or his publishers—has a damned odd idea about what computers are. You and I know what computers are... they are relatively small things that sit on a desk or the dining table. If you've used one for more than a few weeks you'll have picked up on most of the jargon you'll ever need.

On the other hand, you may be a complete newcomer, in which case you may find this book a godsend. Or you may not. Consider the following: 'MICR stands for Magnetic Ink Character recognition. The most common use of magnetic ink is on the bottom line of bank cheques.' Not exactly the kind of thing to bring enlightenment as you struggle with your Spectrum.

You see, Mr Wedge sees no difference between your kind of computer and the Ministry of Defence's kind of computer, so you'll find lots of references to things like punched cards, batch processing, something called fallback, switched packet networks and other terms relating to the near-extinct dinosaurs of yesteryear.

This is a pity since the book is amusing—downright funny in parts—and worth buying for the single reference: 'Jackson, Michael—see structured programming.' **PW**

'Personal Computers & Special Needs' by F Bowe, published by Sybex Computer Books at £6.95 (paperback, 171 pages).

Although low cost personal computers have been around for a while, little has been done to exploit the technology to assist the disabled. This book is therefore a welcome addition to the bookshelves.

As a US import it has its limitations for a UK audience. It often refers, for instance, to specific pieces of equipment not available over here.

However, Frank Bowe does have a deep insight into this field as he has written widely about the disabled and using technology to meet their special needs.

It's a relatively brief book with chapters on employment, education and independent living. Further chapters deal with vision impairments, hearing losses, mobility limitations and learning disabilities.

The book can be recommended to those seeking an introduction to the subject or wishing to benefit from American experience in this important field.

It is also a valuable source book of ideas for those wanting to use micro to assist the disabled. **RB**

'Expert Systems—Principles and Case Studies' edited by Richard Forsyth, published by Chapman and Hall at £9.95 (paperback, 231 pages).

Tales of sales of millions of home micros occasionally lead you to suppose that computers are no longer strange intelligences understood only by a highly trained priesthood. But the next step is always there to be taken, and the pioneers will invent a new line in gibberish for it.

So it is with the fifth generation, artificial intelligence, and

expert systems. This particular volume is written in English but draws on so many terms from earlier work that a new vocabulary is necessary.

The text isn't unreadable, rather it is accidentally obscure in the best traditions of computer literature. But this is a book for the committed student of computer sciences, a reference work to be read for its value to a course of study. If you want to create your own expert system the book might provide a first step but it won't take you all the way—it may even deter you.

The book is in four parts—background, inference, knowledge engineering, and learning. Various distinguished contributors address themselves to specific topics within these sections, and if you make it to the end you'll emerge with the feeling that there can't be much left to know about the subject. But will you be able to make use of your knowledge? You may need an expert system to help you out. . . **DG**

'A Practical Guide to Designing Expert Systems' by Weiss & Kulikowski, published by Chapman and Hall at £15 (hardback, 174 pages).

With a sigh of relief you'll note that this crucial word 'practical' in the title and sharpen your coding pencil to get stuck into some expert designing. Sharpen your wits first. There are scene-setting chapters and enough contextual information to sink a ship before you reach the practical work.

Don't be put off by the assertion early on that 'this is an engineer's book'. An engineer in this field means a software engineer, which is just a fancy word for a programmer who takes the work seriously.

The greater part of the book, though, concentrates on the practical aspect, using the authors' own general system called innocently Expert. There is a touch of old-world academic charm about this, but nothing so patronising as a listing. The expert system you create will be your own—Expert is used merely to point the way. The authors then illustrate the lesson with several applications, and finally look ahead to the implications of the kind of research area in which by now you should count yourself a co-worker.

This is not the best book on expert system design, nor the most accessible, nor the most direct. But it is a serious attempt at a serious subject and you're unlikely to consider your money wasted. **DG**

HISOFT

for the ZX Spectrum

Hisoft is pleased to announce a new compiler for this popular and effective systems programming language. Not a tiny-C but an extensive, easy-to-use implementation of the language. Allows direct execution of compiled statements. Supplied with function library. Available direct from Hisoft for £25, or write for further details.

All prices, UK delivered, relate to 48K ZX Spectrum versions. Our software is available for many other 280 machines e.g. Amstrad CPC 464, MSX, Memotech, SHARP MZ700, New-Brain, CP/M etc. Please write for details.

SOFTWARE PRE-VIEW

We take a peek at the new software packages, and give you a taste of things to come. Note to software publishers: If you wish your company's product to be included, please send only the very latest releases to Bryan Skinner, Software editor, PCN, 62 Oxford Street, London W1A 2HG. Don't forget to include prices and telephone numbers.

SPECTRUM

Ocean's latest new release, *Chinese Juggler* is a real test of skill and strategy as you try to balance the eight plates on rods.

Cylon Attack did quite well on the BBC, and now A&F has converted it for the Spectrum. Improvements include better graphics and faster and smoother movement.

Spectrum games are getting larger and larger. *Xavior* claims some 4096 rooms, 266 different creatures, 32 room designs etc. Your task is to collect as many DNA fragments as possible to ensure the survival of your species. Due for release on November 19, we'll carry a review as soon as we can.

The Staff of Zaranol isn't the Martian version of *Upstairs, Downstairs*. It's an adventure which could have been called the Sorcerer's Apprentice. That's the part you play. Your task is to banish the demon you've accidentally released.

The aim of *Plummet* is to save a mayor, stranded in the lift shaft of a New York skyscraper. To do this you have to carry lengths of rope to the top of the shaft. Needless to say the journey is fraught with perils.

CCS continues to expand its Charlie Charlie Sugar budget range. *Nuke Lear* involves deflecting barrels of radioactive material into the correct locations. Too many in the wrong place and the situation gets critical. Fair at the price, but not quite up to the standard of other budget games — like those from Firebird or Software Projects.

For those tackling machine code, *Gener-80* looks handy. It's an editor assembler with some unusual features. For one it processes input immediately, syntax-error checking just like Sinclair Basic.

There's a 40-column full-screen editor and string search, block move and the like. Microdrives are supported and source, text and object code can be located at will in memory, allowing the use of a co-resident monitor.

New Cylon Attack	£5.75	A&F 0706-341111

BBC

DEVELOPERS
Mineshaft

Funny how the games market often borrows from media events like the Olympics,

even if accidentally. One such is *Mineshaft*, and it's nice to see the BBC version on one side of the cassette and one for the Electron on the other. Your aim is to collect all the lumps of coal in the 20 rooms in the pit. The rooms have unlikely names such as The Derelict Place, Ghosties Revenge and The Junkhouse Mk II. You only have a limited air supply, so

time is of the essence and you can move to the next screen at will. The screens are a bit bare, but the graphics and the animation are among the best.

Only seven weeks to Xmas, and the theme games are rolling in. Latest is *Merry Xmas Santa*. Your festive task is to help him make safe deliveries, avoiding marauding snowmen, jumping over snowballs and dodging falling icicles. Bonus points are available for collecting plum pudding and sherry.

Wongo's unusual scenario is the Great Wall of China, with a bouncing Chinaman defusing bombs along its length, evading arrows, gremlins and boulders.

Holy Horrors	£6.99	Romik 0753-71535
Mineshaft	£6.95	Durrell 0823-54489
Merry Xmas Santa	£7.95	Icon Software 091-2846966
Ultron	£7.95	Icon Software
Wongo	£7.95	Icon Software

AMSTRAD

It's a pity that the standard of Amstrad games released to date simply hasn't done justice to the machine's capabilities. Particularly so when you consider their high price.

Unfortunately, the latest Amsoft releases do nothing to improve the situation. True there are some good graphic

touches in *Astro Attack*, but the space ships which travel round the maze are rather chunky, and the game is too simple in concept. *Bridge It* has better graphics, but that's about all. *Software Projects* is shortly to release *Jet Set Willy* on the machine, and let's hope that will show just what can be done.

Bridge It	£8.95	Amsoft 0277-230222
Astro Attack	£8.95	Amsoft 0277-230222

COMMODORE

Yet another space attack game — this one, *Invaders*, from Live Wire is in the usual style. Earth is threatened by alien invaders and you must destroy them with your laser.

On paper at least, the *Expert Sprite Editor* looks very good indeed. Features include sprite attribute data compression, moving and stationary anima-

tion, sprite layering, 224 sprites available from Basic or machine code, as well as all the editing commands you could want.

That the 64 is being seriously considered as suitable for a small business is shown by Kuma's latest spreadsheet. The model can support up to 26 columns by 50 rows — rather limited, but the package costs only £14.99 and uses colour coding for totals, sub-totals, formulae etc, which makes it easier to use than some.

Expert Sprite Editor	£8.95	Android Dreams 021-458 4475
Spreadsheet	£14.99	Kuma 07357-4335

LET'S GET DOWN TO BUSINESS

OCP ANNOUNCE ALL PROGRAMS COMPLETELY REWRITTEN FOR ZX MICRODRIVE COMPATIBILITY & PLUS 80's FOR USE WITH 15 DIFFERENT CENTRONICS/RS232 INTERFACES INCLUDING ZX INTERFACE 1

★ **FINANCE MANAGER** ★
★ **ADDRESS MANAGER** ★

£8.95

(BOTH LESS £3 REBATE FOR EXISTING USERS ON RETURN OF OLD CASSETTE)

★ ★ **80 COLUMN - 'PLUS 80' VERSIONS** ★ ★ £19.95

(LESS £5.00 REBATE FOR EXISTING USERS ON RETURN OF OLD CASSETTE)

Write to us for a quotation for the software, the interface and the latest high performance Japanese Dot Matrix Printer — you will find our prices very competitive.

Both programs are available in standard form which work only with ZX™ and Alphacom 32 column printers, and Plus 80 which work in conjunction with most Centronics/RS232 Interfaces and 80 column printers.

ADDRESS MANAGER and **FINANCE MANAGER** utilise the same "on the page" presentation and offer 48K Spectrum owners a "professional standard" address filing, indexing retrieval, and financial analysis system. Below are examples of the screen presentations.

Both have been carefully constructed to provide the user with a tool that is extremely friendly and easy to use, the speed and presentation of these programs are second to none.

ADDRESS MANAGER features MULTIPLE INDEXING via our 3 way 3 character index, an ability to store over 400 full names and addresses or 1500 individual names/titles.

USES include storing and updating names, addresses and phone numbers, printing out Xmas card lists, etc, mail order work, customer classification by type size (doctors have used this program to catalogue patients by treatment).

FINANCE MANAGER is a powerful, flexible and fast MENU DRIVEN general purpose program carefully designed to handle up to 255 separate accounts for domestic and business accounting applications. The magic of MACHINE CODE has enabled us to produce the very latest "on the page" presentation which lets you enter and edit data naturally, as if with a pencil and paper. That's not all, not by a long way. This program automatically raises a corresponding debit or credit for every entry, and will even open up a new account if an entry features an unrecorded account name.

Voted "The best value financial program available" by Sinclair user.

Accounts can be MERGED, DELETED, ANALYSED, MARKED as priority, RENAMED, EDITED and SCROLLED. Transactions can be RECONCILED, AMENDED, DELETED, PRINTED, DESCRIBED for analysis and RENAMED. Standing orders can be APPLIED, REMOVED, DESCRIBED, AMENDED, DELETED and even DUMMIED for planning purposes. Other features include DATE CHANGE, RUNNING TOTALS, 2 KEYBOARD MODES, PRINT PAGE/ LINE/BLOCK/FROM END/FROM START/FROM DATE etc., LIST BALANCES, FIELD ERASE/INSERT/DELETE, EXIT TO BASIC. You may not want all these features but they are there just in case.

DELTA WING

Naturally they called me when they heard. A hush-hush new high-performance jet fighter from Thorn EMI was parked on the tarmac, and as the only PCN operative with F15 experience I was ideal for the job.

Not that this was going to help much. For a start the cockpit was oddly-shaped — no matter where I looked my knees always seemed to be poking up into the windscreen, and as I moved the joystick I could see my right hand trembling on it. Odd really, especially when you consider I'm left-handed.

The basic mission's easy enough to grasp. You have to take your jet-powered fighter-bomber into the air and perform a small miracle that combines using bombs to destroy all the enemy bases and shooting down the enemy intruders trying to bomb your bases.

In common with most of the other new jet-powered flight simulators the weapons technology is fairly old hat, and you have to mess around with boring old conventional bombs and cannons. We're still waiting for a software house to come up with Sidewinder missiles and napalm, but when it does it's certainly got my vote.

In *Delta Wing* you start off playing for take off, with an enemy aircraft fairly close to your airfield, so it's important

to deal with this one before you go waltzing off on bombing raids. My first try wasn't a great success. While taking off I spotted an alien shape of some sort at the end of the runway, so instead of pulling the stick back and getting airborne I started pumping bullets into it. It was only when I crashed into it that I realised this was in fact some kind of end of runway marker.

Nothing daunted I had another bash at reaching for the skies, this time with a little more success. Normally you get a representation of the control panel, complete with the aforementioned knees and hands. The top of the screen is taken up by a view out of the cockpit, although you can switch to a radar map of the whole playing area.

The combat radar screen in the centre of the console is fairly

standard, showing where you are and the nearest base or intruder in relation to you in terms of angle and height. You can switch this between short and long range.

Once you're in the air it's a matter of getting to the same height as the intruder then engaging it. The ensuing dogfight, provided you can stay alive for long enough, is an entertaining affair. Part of its charm is that, unlike the enemy in *Fighter Pilot*, this one will try to stay with you, so your spells of twisting and turning are liable to be a lot more prolonged.

I'm not sure how accurate the simulation is, but it does a fair impersonation of a full dogfight. Unfortunately you need to hit the beggars seven times before they go down, and either I didn't hit them at all or there's

no way to tell how many times you've hit them.

My precision bombing experiment was also a flop. I went in at 200 feet, dropped the bomb right over the airfield and . . . blew myself up. Apparently you do this if you bomb from lower than 250 feet, even if you're going at twice the speed of sound. Anyone sending me an algorithm proving this is nonsense will be lightly rewarded.

All in all I found *Delta Wing* curiously unsatisfying. The controls are more leaden than those of *Fighter Pilot*, and I found the lack of a rudder particularly annoying in dog-fights.

It's also possible to fly off the screen, and if you can't remember where you left from you're in big trouble.

Finally, bombing. I find it difficult to believe that in this day and age the cream of Strike Command is being sent into action without a proper bomb sight. Peering over the side may have been OK in 1914, but at 1,400 knots it isn't really an option.

Delta Wing would have been excellent six months ago, but on balance I'd say you'd be better off now with *Fighter Pilot*.

SPECTRUM

ALL OR NOTHING

All or Nothing looks promising from the cassette cover, but playing it — well, that's another story.

You're an enemy spy whose mission is to obtain the plans of a secret matter transporter, held somewhere on your competitor's industrial site. As you approach the landing patch on the site by parachute, your watch loosens and falls to the ground.

Your first task is to find the watch before you can continue your mission. To control your SAS-type character you can use the keyboard, define your own keys or use a joystick.

The instructions are pretty lengthy and you'll need about

1Mb of brainpower to remember what key does what and how to play the game. You've got to digest a number of screens of text before you can get stuck in — a demo game gives a few tips.

Playing the game proved to be a killer. On starting, out of the sky drops the hero hanging from a parachute. It's the next bit that gets difficult. Controlling him to go in the direction I wanted to took a lot of practice.

To the patter of running feet off he goes to find the key that gives access to the secret documents. It took several attempts to find the key before my man

was either shot, bitten by snarling dogs or caught. Quite often he was running aimlessly avoiding his pursuers.

The idea of this game is pretty good and the 3D graphics are an added bonus. You can also use a Currah Speech add-on, although the sound is poor.

I found this strategy/adventure game a bit hard to play and it wasn't long before I got bored.

COMMODORE 64

ANKH

This game is something else but exactly what I'm not sure. Put at its simplest (and this game is anything but simple), *Ankh* is a series of logic puzzles, some unbelievably tough.

The game environment is described as the 'Metareal world of Ankh where logic works but doesn't rule'. The idea is to find your way through 64 connecting rooms, each of which is different and holds a

puzzle. Sometimes you can pass through a room's doorway with no trouble but mostly you need to find a way to open up the exit before you can pass.

Each room must be prodded, poked and probed to yield up its secrets. Solving a room's puzzle may bring forth a treasure, a tool or (groan) yet a further object. You control a spherical object, your Mindprobe. It can be moved around and fire missiles. You gain power by performing certain actions (gaining access to a new room, for example) and lose it at a rate of

knots when you collide with your environment. The game is over when you lose all power — or when you solve it.

At start-up you have the opportunity to experiment on an abstract set-up — a confi-

dence-sapping experience in my case. You may also select the level of perplexity of the puzzles (from mindboggling to mindshattering).

A real headache inducer, *Ankh* is like nothing you've played before. There's no middle way — you either love it madly or stick it straight under a steamhammer.

SPECTRUM

BATTLECARS

Death Race 2000 on a micro — that's the excellent *Battlecars*. You know you've got a

winner the instant you open the package — two keyboard overlays and a hefty instruction booklet to make your mouth water and your fingers twitch.

Set in the year 2081, with the *Highway Code* flung in the gutter, it's down to you to equip your battlecar and duel to the death with fellow gladiators. Numerous options mean you must take some time over the manual before getting started. The main menu gives you five choices. First up is *Solo Practice* (mastering these monster vehicles takes more than a few spins with BSM) in which you take a few leisurely turns round the track, alone or racing against the computer.

Or you can check out your lap speeds in trial mode. Then there's *Autodrome* for some solo combat against the computer, a simple two-player game and, best of all *Slug City*.

Each battlecar has six steering functions, turning through 45 or 90 degrees to left or right and drifting — handy for corners. There are four fire controls, one for projectile devices like shells, guns, flames and lasers, the others for the 'passive' weapons systems housed in the left, right and rear pods, containing goodies like oil, spikes, mines and smoke.

Firing isn't as simple as it looks, due partly to a limited quantity of ammo, and partly because shots are accurate only to 15 degrees (unless you've a gunner computer aboard which brings this down to 10 degrees). And of course there

are throttle and brakes — it takes a long time to get used to all this lot.

The display during an *Autodrome* duel comprises five main sections; at bottom left and right the two cars are shown from above, and damaged areas flash orange. To the side of these are fuel gauges, and just above is a speed indicator. Aerial views of each car take up most of the screen which changes colour to give a rough idea of speed. Turning too quickly damages the tyres which further reduces your safe cornering speed. At bottom centre the two cars are shown as moving white dots, so you can

plan engagements ahead of an encounter. When you're hit, the damage display becomes a weapon display of what weaponry is still active, and the damage points to each car. You can stop a bout at any point, such as when your car stops moving and there's an orange blob in the centre of the car — you're dead.

There are eight cars set up, but you have money to invest in a really hot rod, so you can select chassis size, engine type, armament and armour, and even save car specifications to tape for use in later games. And there's some crazy kit — for instance, the auto-steer which increases your safe cornering speed by 10mph.

The *Slug City*, where you battle with an opponent in the streets, take time out for refuelling and repairs (if you can find the pit stops, that is). The graphics and action are tremendous.

It's about time someone came out with an original idea for a computer game. Go out and buy it today, there's so much in it.

SPECTRUM

CAT WALK

Spectrum games are getting better by leaps and bounds. This one makes the Spectrum look like a Commodore 64, its graphics are so good.

If I say that you start the game with nine lives you'd probably guess that there's a cat about and you'd be dead right.

Your task is to take Snooky out for his nightly prowling, gobbling mice and birds, looking out for tins of cat-food, and steering clear of dogs and humans. Control is configurable, left and right, up and

down, and not jump but pounce, of course.

The first scene is the garden. Here two brutish black mastiffs patrol from left to right and mice scuttle about. Contact with the mice is what Snooky's after, but the dogs are best left alone. You also have to dodge a veritable hail of domestic debris that flies out of the win-

dows of the red-brick houses at the back of the picture. Take out all the mice and it's on to the building site and a different diet.

Here we're into a lift and platform scenario. The construction work is shown as a system of girders, and some cleverly animated brown birds flap and strut about. Watch out for the workmen. They climb rapidly from one level to the next and take strolls about each level.

At the centre is the hoist, and Snooky has to leap onto this to get at the tasty morsels in the upper reaches of the building. Don't fall too far or it's curtains for you.

The graphics are fairly simple, but incredibly well done — very clear, good choice of colours and very well animated indeed.

The only criticism I have is that when Snooky pops his clogs and floats to that great feline rest-home in the sky, much of him seems to get left behind — still I guess it's his spirit ascending, complete with catty halo.

Still, it's not a bad game for the money.

COMMODORE 64

HERO

Could Roderick Hero be the man to let the miners live to fight another day? It seems there is trouble at the old mine. A group of miners have been trapped in the labyrinthine mineshafts of Mount Leone by the lava and debris of a hyperactive volcano and super-hero Roderick plans to live up to his name by coming to their rescue.

The trouble is Roderick Hero is a bit like a fish out of water... all his special gear is close by but he needs your guiding hand to point him in the right direction. So plug in the joystick and

away he'll go on his search.

To assist his movement in the vertical shafts and cavernous voids, Roderick has a propeller pack strapped to his back turning him instantly into a human helicopter and enabling him to step into any abyss without hesitation. But this is not all. There's his microlaser beam which he uses to blast his way, although somewhat slowly, through any obstructive walls in the mine, as well as dispose of the 'vile vermin' liberally scattered in the passages and intent on bringing his rescue mission to a premature end.

And there is dynamite, too. Six sticks of it which can be placed at the base of any wall to

effect a much quicker demolition job. But be careful. Roderick, too, can be blown away by the blast and there are only three of him in the game.

A further advantage comes in the shape of heat resistant rafts. These are there to help Roderick effect a safe passage on the white hot lava rivers.

But let's not forget the object

of the game — the miners. Roderick has to locate one on every level before being allowed to move deeper into the mine. The quicker he does it, the more points there are to be had and at every 20,000ft there's an extra Roderick.

A nice touch is that the instruction leaflet contains six tips for playing the game.

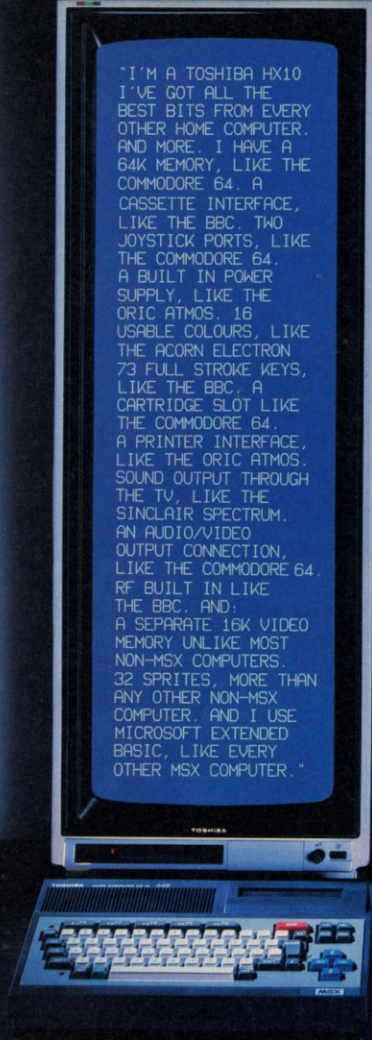

Hero isn't particularly brilliant and lacks that addictive quality necessary for a chart-topper, but it's quite nicely done.

Education's a scream down at Spooky Manor.

Acornsoft have a range of education programs that encourage children to think logically and creatively.

And at the same time, they make learning bags of fun.

SPOOKY MANOR: An adventure game for up to four players. Where exploring the creepy old house and solving mysteries involves co-operation and planning. It is suitable for children aged seven and upwards but many adults will enjoy the challenge it provides.

WORKSHOP: An easy to use and completely captivating program. Full of unusual machinery.

By experiment children discover what each of the machines can do with simple geometric shapes. For ages three or over, Workshop encourages highly creative thinking and experimentation.

ABC: A writing tool designed for young writers aged seven and upwards. It is easily operated and quickly understood and before they realise it children will be creating and reshaping their words and ideas.

TALKBACK: Both entertaining and demanding. It allows children to create their own computer 'characters' capable of holding simple conversations on the screen and provides valuable lessons in both English

and computer literacy. For ages ten and over.

All four programs are available for the BBC Micro computer on either cassette (£9.95) or disc (£11.50).

Talkback and Workshop are also available for the Electron on cassette (£9.20).

For your local Acornsoft stockist or to order by credit card simply ring 0933 79300 during office hours. Alternatively you can order the programs by writing to Acornsoft, c/o Vector Marketing, London Road, Wellingborough, Northants. NN8 2RL, enclosing a cheque or postal order. Please allow 21 days for delivery.

ACORNSOFT

GAMEPLAY

SPECTRUM

BILLY BLUEBOTTLE

Power Software is a new company, and if *Billy Bluebottle* is representative of the standard of the company's games, you'd do well to ask Santa for a sackful.

The game boots up with keyboard/joystick options, but not just a simple menu — the keyboard and stick are drawn, so there's no confusion. Above these icons are three flags, you can select English, French or German, each of which changes the prompts.

Into the game then, with you operating the flying hero, Billy.

The scenario at the first screen is a cross-section through a house and in the basement is a fly, trapped by a rising tide of water. Your first task is to rescue the winged beastie from death by drowning.

You start on the third floor, brick walls terminate the corridor, fly paper hangs between

the green telephone and the yellow vase of flowers, and to cap it all there's a bloke strolling up and down spraying fly spray.

Being supernatural you can push the fixtures and fittings around and temporarily disable the pest control officer, which is just as well as his spray tends to hang around for ages.

On the top floor there's a blue desk, a green kettle and a pot of mouldy old food — just the job to keep a fly's strength up. The trouble is, landing on it skips it down to the third level, so it leads you a merry dance in search of sustenance.

The graphics are extremely

well done — no attribute problems here — and the action's smooth, with the exception of the lift which is a bit jerky. Pity the sound's limited to beeps and chirrups. There are several neat touches — like Billy's colour cycling through the rainbow when he bites the dust, which in my case was every few minutes. It's a very tricky little number, frustrating and so well done that I think I'll just have one more go. . .

SPECTRUM

JASPER

If you've mastered the jungle and platform-type game, you'll feel at home with this one.

Jasper is a jungle rat who goes on a wild adventure through the swamps avoiding all the beasts of the land, in a bid to find his way back home.

In this cartoon adventure you have 22 screens to plough through — each with its own dangers and problems. The scenery of the first screen is quite good. Bees flutter, spiders bob up and down and a killer rabbit bounces towards Jasper

ready to pounce on him. At the top of the screen is the number of lives you have (you start with three) and there's also a timer.

Controlling Jasper needs clever planning, quick thinking and good keyboard control. There's no single way of getting through the dangers as some screens need to be visited more than once.

To save Jasper from the manic rabbit I pressed S to go right, and then Y to jump over the rabbit. But then I ran into trouble: my friendly rat collided with a deadly spider and a wasp, and lost his three precious lives.

I tried another strategy — this time Jasper went left on to

the next screen — jumped over a leopard and skillfully grabbed an apple and traversed towards the riverbank. With the leopard pacing up and down I didn't have a lot of time to get Jasper across.

So I adopted some long-jump tactics. Going quickly up to the riverbank, I pressed Y for jump

then grabbed a rope dangling above the river and pressed B for hold. Then H to climb down the rope, A and S to swing it and when the time was right, I pressed Y to let go and land.

Along Jasper's journey he picks up objects which he can use later. But he can carry only five objects at once. I never got further than the third screen — but there's certainly plenty to keep you going.

SPECTRUM

AMERICAN FOOTBALL

American Football is quite in vogue, and this version of the game from Softstone isn't half bad. It's very like *Football Manager*, and almost as good.

You can select from five levels of play. The lowest is novice, through group level of the team, coach, and finally the team itself. And don't they have great names — The Huston Oilers are my favourites, with the LA Rams a close second.

There are many options in

the game, checking the team's statistics, changing players' names and so on. Sooner or later you'll want to play a match, and it's here that games like this come into their own. The view is from the side and slightly above the pitch. On a green backdrop, the yard lines marked out in

white, the players get to work. The figures are small and a bit stick-like, but move quite well across the pitch. All the action's here as you pray for your team to make touchdown.

The aim of the game is to coach your chosen team to the Superbowl — the peak of the game, like the FA cup. That could take you some time and careful strategy is needed to keep your team ahead of the competition.

You don't need to have any knowledge of the game because all the action's automatic though it would have been an improvement to have informa-

tion about the game rules, as well as some background — the only instructions on the inlay cover loading the game.

I'm not partial to this type of game, where all the choices are menu selection, or name and price entry, but if that's your bag then you should check this game out. You might even win a sovereign should you come across a hidden message.

ANCIPITAL

Oh, weird! Like, this game from Jeff Minter, the *Lord of the Llamas*, is really heavy, man. Let me lay it on you — this one's megafreaky with a capital M. When you play, shake off the sand from your Polaroid shades and put 'em on; the strobe effects make *Top of The Pops* look like dinner by candlelight.

Ancipital is the name of the goat/human creature that first appeared in *Sheep in Space*. Beautifully animated, it roams a number of chambers, blasting away at the bizarre inhabi-

tants. As befits the way-out nature of the game, Ancipital can fly skywards to walk upside down on the ceiling as well as up walls and (dullsville) along the floor.

Music and messages are broadcast while the game loads and a demo mode hints at the lunacy to come. While you battle with the forces of freak, a steady drum beat thumps and the screen is filled with light, colour and action.

Each screen-sized chamber has walls that pulse, glow and do alarming things. A host of unique weirdos occupies each room. Forget about your boring old bomb-dropping aliens,

these creatures are far out. The first room has malicious flying Granny Smiths and I'm not talking about OAPs: apples are the enemy, turning into cores when shot . . . with bananas.

It gets heavier. There are furious floppy disks that must be bombarded with cassettes. Guinea pigs savage your ankles

when fired upon. There are army boots, tube station signs, guitars, camels (of course), skulls and crossbones, rats, nuts (but not bolts), pyramids, pound signs, goats and all manner of other Minteresque oddities.

Weird and wacky, this latest piece of psychedelia from Llamasoft will have you giggling.

It's a hit, man.

You've just thought of a great idea for a new game, you can already hear the tinkle of the money falling into your bank account. It's then you realise your programming isn't up to the standard needed to produce the game yourself. Well, help is at hand in the form of Mirrorsoft's latest release, *Games Creator*.

All the drudgery associated with programming has been removed and through this menu driven program you can define your own background, sprites, music and even the type of game.

With some other games creators you are extremely limited in the type of game you can produce. This is not so with Mirrorsoft's designer, as the demonstration programs show.

First impressions

The best way to evaluate a product such as this is to see some of the games that have been developed using it.

When the *Games Creator* has been loaded into the machine a game called *Bouncer* is present in memory. *Bouncer* is a fairly standard platform game in which our hero Hoppy has to collect keys while jumping over aliens and obstacles. In this game the aliens consist of an elephant, a dalek and a boot, all of which are well animated and colourful. Movement is quick and as smooth as you have come to expect from a Commodore game.

Two other games are included in the package. *Hawk Patrol* is one of those space games that has a scrolling landscape. Harry the hero can move backwards, forwards, up and down in order to rid the skies of the gun ships which appear from the left and right-hand edges of the screen.

The second game is *Snake Pit*, a standard maze game where you must avoid the monsters while trying to reach the exit. The background scenery is particularly impressive — the walls have a 3D aspect to them. All of the

BIG GAME HUNTER

You've had a brainwave for a great game. But, there's one slight problem — you haven't got the programming skills to put it into action. Stuart Cooke says *Games Creator* will put you on the right track.

games are accompanied by jingles and impressive sound effects.

You wouldn't want to pay a fiver for any of these games but they do demonstrate exactly what it is possible to produce with a little thought and effort.

Documentation

Unfortunately, the documentation supplied with the package is sparse. The 28-page manual is clear and every option provided has a section to itself. It doesn't, however, go into enough detail and there are no examples. This is fine if you know a little about how your Commodore 64 works but if you are new to computing then you may struggle. A games designer should enable everyone to produce games easily.

In use

Once you understand what's needed to set up in order to play your game then

design is easy. Choosing scenery from the main menu allows characters to be designed that will make up the background pieces.

There are three sets of characters: characters that you move over; those that block your way, and those nasty ones that kill you. The Sprite option allows you to design the sprites for the missiles, the monsters and your player. For this you simply select a colour for the relevant squares on your sprite.

The music menu allows you to type in your tunes and select from a number of predefined instruments, such as piano and guitar. The tune will play during the game or just when you finish it.

The movement and rules menu are what actually set up the game. From these menus you place your sprites on screen, define how they move and their movement boundaries.

Again, this is easy once you understand what is needed, otherwise you'll probably find yourself going round in circles.

The manual suggests you alter the provided games before developing your own — a good idea as it will demonstrate exactly how all the options work.

Verdict

Games Creator is a very good product. You're not limited to one type of game and you can very quickly produce a good quality one.

If you think there's a budding games designer in you then go out and buy this and find out for sure. ▶

HARDY

OR NET

Using an isolated personal computer in the modern office is rather like using a megaphone to telephone.

The multitude of tasks and diversity of communications calls for a radical new approach.

Logica Networked Office Automation Systems.

Logica Networked Systems are revolutionising working procedures by enabling users to pool resources.

Groups can now work together from consistent data, sharing information and expensive hardware.

Logica offers two comprehensive systems which can be tailored to the needs of all companies.

The Kennet Business Computer and the Polynet Office System.

The Kennet Computer is a powerful multi-function workstation with advanced hardware architecture and a diversity of software.

For the first time, the Kennet range allows personal computer users to reap all the benefits of local area networking.

The Polynet Office System, based on Logica's own high speed local area network, is a total system including all the hardware and software for text processing, data processing and communications.

Its sophisticated network management service also facilitates the sharing of extensive resources such as file storage and printing.

WORK.

TWORK.

The benefit of both systems is that neither is confined to specialised groups such as Accounts or the typing pool.

Both can be used effectively by casual users as well as professionals.

You can start with a single Kennet Computer or cluster using one processor to drive several screens.

Or a Polynet Office System designed as a stand-alone advanced word processor.

And since both systems use local area networks, you have a smooth upgrade path for flexibility and growth in line with your needs.

What's more, there is no need to buy different equipment for different jobs (personal computers, word processors, terminals etc.).

To talk shop, dial our 'user-friendly' hotline on 01-637 7761.

Or alternatively, write to our office automation team at 84 Newman Street, London W1A 4SE.

Logica is Britain's leading independent software, consultancy and products company.

With subsidiaries in eight countries, we know all about networks.

See us at COMPEC, Stand 613/712.

Make new friends,

and enemies.

With Mirrorsoft games, you can make loads of new friends like Mr. Bounce and Caesar the Cat. Or, now, like Dr. Frankenstein, you can create your very own monsters and aliens. As well as friends and heroes to defeat them.

GAMES CREATOR

Invent your own games. As simple or as complex as you care to make them. The only real limit is your imagination.

For the CBM64, the Games Creator comes with a step-by-step manual and three ready-to-play games. Each demonstrates some of the programs exceptional features: shapes, movement, speed, scrolling backgrounds, scoring, music, sound effects and many more. And you don't need to know any program language to work it.

On fast loading cassette for the CBM64. £12.95.

STAR EGGS

A space fantasy. Earth is threatened by attack from Alien life-forms hatching out in space. You must first overcome the Guardians. Then into the Hatchery up and down escalators and ladders to crack the eggs before the aliens escape.

On fast loading cassette for the CBM64. £6.95.

CATASTROPHES

Use a helicopter to build a hotel on an island paradise. But you have to move fast and design your building carefully because earthquakes, floods, storms and lightning can strike at any moment.

For one or two players. On fast loading cassette for the CBM64. £6.95.

HI-BOUNCER

An arcade type game featuring Mr. Bounce and the Mr. Men. But don't get the idea that it's just a kids' game. Far from it. There are four main screens each with eight levels of difficulty and complexity. Don't worry there's also a practice program with slower speeds.

On cassette for the BBC B. £6.95.

CEASAR THE CAT

Cesar's cute and quick. Help him hunt the crowded shelves for mice who eat all the food. He must catch the mice before the food disappears. Outstanding graphics, animation and sound.

On cassette for the CBM64, Spectrum 48K, BBC B. £6.95.

MIRRORSOFT

SOFTWARE FOR ALL THE FAMILY

Available from Boots, W.H. Smith, Spectrum and all good software stockists. Write for a free catalogue to: Mirrorsoft, Holborn Circus, London, EC1P 1DQ.

HIGH C

David Janda hits the high notes with Hisoft's version of C language for the Spectrum.

The language of the '80s is C. At least, that's what the pundits would have us believe, and judging by the amount of publicity it's getting, this could well be the case.

C is usually associated with minicomputers and micros running CP/M, CP/M86 or MSDOS. But now Hisoft, which produces an excellent Pascal for the Spectrum, has released a version of Spectrum C.

The C language is a general purpose, high-level programming language that can be used for a wide variety of programming tasks. Many software houses use C instead of assembly language, because C object code is fast and saves costs.

The other attraction is its portability — a program written in C on one machine can be run on another, providing both machines use compatible Cs (there are dialects of C but the differences are often unimportant). Hisoft's C conforms closely with the definition given in the C programmer's bible — Kernighan & Ritchie's *The C Programming Language* (often abbreviated to K&R). After learning C with Hisoft's version it would be possible to progress to a Unix-based system without too much trouble, and you could run programs written on your Spectrum on a DEC VAX, or vice versa.

Features

The package consists of a tape and manual. On one side of the tape is the C compiler/editor and a front-end program which allows a backup to be made. On the flip side is a standard C function library containing functions for dealing with I/O string, store management and so on.

While Hisoft's implementation is very close to the K&R standard, there are exceptions. The two most notable are that there is no floating point feature, and you can't use identifiers.

Included in the package is the line

editor used in Hisoft's Pascal and Dvpac. Source code can be entered and amended, saved to tape or Microdrive, printed and so on.

Although the compiler and editor are separate, they're loaded into the Spectrum's RAM together. This means that program development is quicker because the two are always resident. Error messages are abundant, and for each an error number is displayed with a brief description. A neat feature is that the error messages can be cleared from memory, just leaving the number; this frees about 2K, and it's easy enough to look up the error meaning in the manual.

Version 1.0 does not allow object code to be run independently of the compiler, but this will be possible in the next version. This will also feature identifiers, and floating point routines are being considered.

In use

The best method of getting to grips with this package is to keep a copy of K&R close to hand. It's a bit pricey at £16.95, but it's essential because Hisoft's manual is written with dozens of references to it. Cross referencing between the two isn't difficult.

The first thing I did was to make a working copy of C on Microdrive. Once the compiler/editor is loaded from tape you're asked whether you wish to make a backup and a single key press will do the job. Unfortunately, this process doesn't also backup the library and I hope Hisoft includes this in future versions.

Entering source code using the line editor is straightforward. It's comprehensive and includes a full set of useful functions, such as search and replace. Source code can be entered directly, but is not recommended for large programs because mistakes cannot be rectified.

One non-standard feature I took a liking to was the ability to use commands in an immediate mode, similar to that of Basic, which allows you to 'test the water' without diving in.

What is C?

The C programming language was developed by Dennis Ritchie on a Unix system running on a DEC PDP-11. It is very much a 'bare bones' language with no inbuilt I/O, string handling or array functions. These are achieved by using routines from function libraries. This system might seem odd, but it has the advantage of making the language compact and due to the minimal set of commands and functions it can be learned quickly.

Fundamental data objects are provided by integers, characters and floating point. Control constructs include IF, WHILE, FOR and DO and there's a case-like statement called SWITCH.

C promotes the use of memory pointers, and address arithmetic is allowed. The result is that although C is not very strongly typed, it is possible to create data types quite easily.

Verdict

Hisoft C is an excellent tool for learning the language, and an important product for the Spectrum. The lack of floating point and identifiers is no hassle if you're learning the language, but I hope floating point will be included in later versions as integer maths is restrictive.

C is a mega-product for the Spectrum, but £25 is quite costly. Ten pounds less and more would buy it. However, to learn C on another machine you'd have to lash out somewhere in the region of a thousand pounds for the kit and a decent compiler.

COMPUTER CONNECTIONS

EVERY PROGRAMMER HAS THE POTENTIAL TO EARN IN EXCESS OF £10,000 WITH US THIS YEAR

Due to expansion in Product Activity, we are in a position to offer unique opportunities to competent programmers. To ascertain if you can fulfill our requirements, simply answer the following questions.

1. ARE YOU A COMPUTER PROGRAMMER?

YES	NO
-----	----
2. DO YOU WISH TO HAVE YOUR PROGRAMS PUBLISHED BY A SOFTWARE HOUSE WITH A MAJOR MARKET SHARE IN YOUR PARTICULAR FIELD?

YES	NO
-----	----
3. DO YOU SEEK PROFESSIONAL ADVICE, BOTH COMMERCIAL AND TECHNICAL?

YES	NO
-----	----
4. DO YOU WISH TO AVOID THE COMPLICATED PROCEDURE OF NEGOTIATING FOR CONTRACTS WITH PUBLISHERS?

YES	NO
-----	----
5. WOULD YOU ACCEPT SPECIFIC CONVERSION WORK, THAT WE CAN OFFER YOU?

YES	NO
-----	----
6. ARE YOU UNHAPPY WITH THE MARKETING YOUR PROGRAMS ARE RECEIVING?

YES	NO
-----	----

If you have answered YES to question 1 and at least one other question and you are not already "rolling" in it, then contact us now.

The company has strong connections in the computer industry with such names as K-Tel and Quicksilva in our portfolios. During the two years we have been in operation, we have gained the confidence of numerous professional programmers.

We are also interested in aspiring programmers, young or old, who require professional help and guidance. Our FREE services include practical advice and ideas designed to improve your programming skills and overall results.

For further details of how Computer Connections can successfully market and develop your ideas, please write with brief personal details and if possible samples of previous work to:-

The Technical Director, Computer Connections, Barmor House, 70 Rhodes Avenue, Pleckgate, Blackburn, Lancashire BB1 8NP.

THE NEW ATARI

EVERYTHING YOU WANT FROM A HOME COMPUTER

1. ATARI 800XL - £169: The Atari 800XL has many facilities and includes such advanced specifications that you will be amazed by its performance. At the new retail price of only £169 for a full specification 64K computer with a proper full stroke keyboard, we believe that the 800XL cannot be beaten. Just look at the following specifications:

COLOR CAPABILITIES: 16 colours and 16 intensities giving 256 different colours (all of the 256 colours can be displayed at the same time).
OPERATING SYSTEM: 24K ROM including Atari Basic programming language and a self diagnostic test program.

KEYBOARD: A special design with 62 keys including help key and 4 special function keys, international character set and 26 graphics keys.

SOUND: 4 independent sound synthesizers each capable of producing music across a 3½ octave range or a wide variety of special sound effects. (Additional programming can achieve an octave range of up to nine octaves).

DISPLAY: 11 graphic modes and 5 text modes. Up to 320x192 resolution. Maximum text display 24 lines by 40 columns.

SPECIAL ATARI INTEGRATED CIRCUIT (ITIA): For graphics display. Priority for sound and controller ports. Antic for screen control and I/O (input/output).

CPU: 800C microprocessor - 650C microprocessor cycle and a clock speed of 1.79 MHz.

EXTENDED GRAPHIC FUNCTION: High resolution graphics. Multi-coloured character set. Software screen switching. Multiple refined character sets.

PLAYER MESSAGE (P)PORT: Fine screen scrolling. Changeable colour registers. Smooth character movement. Simple colour animation facilities.

PROGRAMMING FEATURES: Built on Atari Basic programming language supporting peek, poke and USR plus at least 8 other languages available. The help key will provide additional information and menu screens with certain software. Full on-screen editing is available as well as syntax checking on entry.

INPUT-OUTPUT: External processor bus for expansion with memory and peripherals. Composite video monitor output. Peripheral port for direct connection software. Over 1,500 titles of software are available including self-teaching programs with unique voice over. The range of programs includes Education, Home Management & Programming aids. There is also APX (Atari Program Exchange) and of course Atari's famous entertainment software line not only £9.95. In addition there is a host of support and help available from specialist Atari magazines like Antic and Analog and from over 75 Atari books/manuals.

2. ATARI 800 48K COMPUTER - £99: We have a limited number of the Mk1 model 800 computer with 48K. The price is £99 (as a games machine) or £109 with the Basic Programmer Kit (Basic cartridge & 2 manuals). Both come with a full 12 months guarantee.

3. ATARI 1010 PROGRAM RECORDER - £34: For low cost storage and retrieval capability. Data transmission 800 baud. Storage capacity control/unique soundthrough facility. Also included is built in accidental erase prevention and automatic shutoff after each program as well as a 3 digit tape counter.

4. ATARI 1050 DUAL DENSITY DISK DRIVE - £199: 5¼" disks holding 127K randomly accessible bytes provide both expansion and flexibility for your 400/800 or XL system with new "helpful" DOS 3. All customers who purchase a Disk Drive from Silica Shop will be automatically given a FREE set of 100 programs on 3 Diskettes on both sides.

5. ATARI 1020 COLOUR PRINTER - £99: Printer and Plotter with four colour graphic print capability. 40 column width printing at 10 characters per second. Can print 5, 10 and 20 characters per inch. 64 characters per line. Prints text in 4 directions. Choice of line types.

6. ATARI 1027 LETTER QUALITY PRINTER - £249: For word processing letters in professional type. Print speed of 20 chars per second.

7. ATARI TOUCH TABLET - £49: Enables you to draw and paint pictures on your TV screen with the touch of a stylus.

8. ATARI TRAK BALL CONTROLLER - £19.95: Enables cursor movement in any direction and adds arcade realism to your games.

9. ATARI SUPER CONTROLLER - £14.95: The ultimate joystick with double fire button to give you a greater competitive edge in your games.

SILICA SHOP ARE THE No1 ATARI SPECIALIST

Silica Shop are now firmly established as the No 1 Atari retail/mail order and wholesale specialist in the U.K. We already offer our service to over 120,000 customers, 10,000 of whom have purchased Atari Home Computers. Because we specialise (and with a turnover of £1.5 million), we are able to keep prices low by bulk purchases. Ring one of our 45 staff and we will be glad to be of service to you. Complete the coupon below and we will send you our Atari pack with price list and product catalogue.

EXTENDED TWO YEAR GUARANTEE: We are an Atari Service Centre, able to service and repair Atari equipment and have added a 12 month guarantee to the year offered by Atari, giving you a full 2 year guarantee on your computer if you buy it from us.

SPECIALIST SUPPORT: Our technical staff are always available on the telephone to help and advise you. We endeavour to hold stocks of every Atari computer item available in the U.K. and we stock over 75 Atari books and manuals.

AFTER SALES SERVICE: Your name will automatically be added to our mailing list and you will receive price lists, newsletters and details of new releases and developments as well as special offers which are exclusive to Silica Shop Owners.

LOW PRICES: Our prices are extremely competitive and we will normally match any lower price offered by our competitors.

FREE COMPUTER OWNERS CLUB: This is open to all Atari computer owners irrespective of where you purchased your equipment. Membership is FREE and entitles you to receive bulletins giving details of new releases and developments. Send now for your FREE information pack, price list & colour catalogue.

PAYMENT: We accept cash, cheques, postal orders and all Credit Cards. We also offer credit facilities over 1, 2 or 3 years, please write for a written quotation.

NEXT DAY DELIVERY - FREE: All goods dispatched from Silica Shop are normally sent by first class post or parcel FREE OF CHARGE. As a special introductory offer for a limited period only we will be sending all Computers and Disk Drives by a next day delivery service at our expense.

So fill in the coupon below with a literature enquiry or order and begin to experience a specialist Atari service that is second to none.

TOUCH-TYPE

FOR THE 48K Sinclair Spectrum

DO YOU YEARN TO DO SOMETHING USEFUL ON YOUR SPECTRUM?

Are you fed up with silly games? Make this the moment you take a step forward using your Spectrum into the world of "The Office of the Future!"
 Learn to touch type on any QWERTY keyboard using the Spectrum as the teaching machine.

- Full touch typing (no eyes down to the keyboard) from the first lesson.
- Carefully designed lessons progress from key learning to speed practice at each stage.
- Full ten finger touch typing with correct left and right shift key operation.
- Learning psychology built in to the program to keep you motivated and interested in progressing.
- Full feedback of performance — you know it is working — you are learning to type.
- Learns at your own pace neither hurried nor restricted by other pupils.

In the age of computers isn't it time YOU learned to type!

£8.95 inc p&p and VAT.

To: JCS Software, 1 Pastores Close, Gosham, Surrey KT11 2BQ.
 O.K. I'm ready to step forward and improve my ability. Please send me copy of TOUCH-TYPE for the 48K Spectrum. I enclose a cheque for £8.95 (Please make cheques payable to JCS Software.)

**PERSONAL
COMPUTER**
COMPUTER NEWS LIBRARY

There was an interesting item in PCN's mailbox recently — a copy of the Conservative Computer Forum's newspaper.

The most intriguing bit was tucked away inside the newspaper. Welcoming Geoffrey Pattie as Kenneth Baker's replacement as Minister for Information Technology, the paper says: 'His experience at the Ministry of Defence where he has spearheaded the military application of new technology will serve him well...'

Why? What's the Government planning... missile guidance for A-level? O-level counter espionage?

Amstrad owners will be interested in the latest issue of Your Computer which carries a round-up of software for their machine. Among the products is Amsoft's version of MikroGen's Master Chess which is highly praised for its book openings and other qualities. Unmentioned, but apparent in the photograph, is the fact that the board is the wrong way round so coloured pieces are a case of no check, mate?

BEEFY NUMBER — We receive a lot of press releases here at PCN and most are mundane at best. The one accompanying this photograph grabbed our attention for obvious reasons. Less obvious is the fact that it is not promoting a new package for cattle farmers but a version of Unix from Root Computers running on Comcen's 68000-based system.

So where does the friendly bovine come in? Simply to back up the headline 'Comcen beefs up Unix'. But as Comcen itself admits, it adds a entirely new meaning to the expression 'a load of bull'.

SYNTAX ERROR

Either we're perfect or you're not reading the magazine carefully enough, but there were no syntax errors in last week's issue.

NEXT WEEK

BBC Upgrade

Looking for a second processor for your Beeb? Upgrade Technologies has one that is as good as Acorn's and costs less. We test it out.

Digital Debut

Don't miss our world exclusive on the latest desktop system from Digital.

Professional words on the Spectrum
Turn your Spectrum into a word processor with our listing.

Splitting the 64

Divide your Commodore 64 screen in two by exploiting rasters.

Memotech extras

Make your Memotech more versatile by adding extra routines.

Floating Atari

Atari programmers who miss the ability to use floating numbers, take heart — we provide a series of routines for you to key in.

Peripherals

How does Oasis Electronics' EPROM programmer measure up? Why are we in a fizz over Smith Corona's D200 printed?

Software

As well as a bumper crop of games, we get down to business with a graphics package for the Spectrum and verbalise on two word processing packages for the Amstrad.

The price tag. It's something rather special.
When you take a look at the new Goldstar
MSX you'll find an asking price of around £240.
Quite a bit less than most of the others.
And since you're choosing a micro that's
designed and built to one standard, that'll leave
you a whole lot more for the super new MSX
games or business software.

What is standard, of course, is the superb
MSX specification.

There's one thing about this MSX that isn't quite standard.

State-of-the-art feature like 64K of 'user' RAM and 32K of ROM and 16K Video RAM place the Goldstar right at the top of the MSX league.

Sixteen vivid colours and eight octaves of sound make it a great games player's micro.

And there's a powerful Z-80A processor to take on a world of home office tasks.

Goldstar MSX. The brightest new star among micros that's unbeatable value for money.

You'll find it at above standard computer dealers now.

GoldStar

FIRST AID

for your 64

Computers, like people, are fallible. They need the right combination of code and care to perform effectively in the business or the home. And that requires first hand knowledge from you to create a healthy operating environment for your Commodore 64.

Knowledge about machine language, about the lesser known qualities of the 64, about the disc drives, graphics, and about the tricks and tips to keep your 64 on line. That's why First Publishing has now launched in the UK a series of high quality books and software packages to provide a complete health care kit for your 64. Commodore 64 users throughout Europe have already found it a tonic. We think you will, too.

For a brochure on all the Commodore 64 books and software packages available from First Publishing, please fill in the coupon and send to: Amanda York, First Publishing, Unit 20B, Horseshoe Road, Horseshoe Park, Pangbourne, Berkshire.
