BY PERMISSION

TO

HER MOST GRACIOUS MAJESTY

THE QUEEN

VI

CONTENTS OF VOLUME II.

	Pages
XI. NOTES ON SCULPTURE	1—24
Some practical hints (706—709).—Notes on the casting of the Sforza monument (710—715).—Models for the horse of the Sforza monument (716—718).—Occasional references to the Sforza monument (719—724).—The project of the Trivulzio monument (725).—The mint of Rome (726).—On the coining of medals (727, 728).—On plaster (729, 730).—On bronze casting generally (731—740).	
INTRODUCTORY OBSERVATIONS ON THE ARCHITECTURAL DESIGNS AND WRITINGS ON ARCHITECTURE	25. 26
XII. ARCHITECTURAL DESIGNS	27—74
I. Plans for towns (741—744).—II. Plans for canals and streets in a town (745—747).—III. Castles and villas.—A. Castles.—B. Projects for palaces.—C. Plans for small castles or villas (748—752).—IV. Ecclesiastical Architecture.—A. General observations (753—755).—B. The theory of constructing Domes.—1. Churches formed on the plan of a Greek cross.—Group I. Domes rising from a circular base.—Group II. Domes rising from a square base.—Group III. Domes rising from a square base and four pillars.—Group IV. Domes rising above an octagonal base.—Group V. Suggested by S. Lorenzo at Milan (756).—2. Churches formed on the plan of a Latin cross.—A. Studies after existing monuments.—B. Designs or Studies (757).—C. Studies for a form of church most proper for preaching.—D. Design for a mausoleum.—E. Studies for the Central tower or Tiburio of Milan Cathedral (758).—F. The Project for lifting up the Battistero of Florence and setting it on a basement.—G. Description of an unknown temple (759).—V. Palace architecture (760—763).—VI. Studies of architectural details (764—769).	
XIII. THEORETICAL WRITINGS ON ARCHITECTURE	75—99
I. On Fissures in walls (770—776).—II. On Fissures in niches (777—778).—III. On the nature of the arch (779—788).—IV. On Foundations, the nature of the ground and supports (789—792).—V. On the resistance of beams (793—795).	

REMARKS ON THE STYLE OF LEONARDO'S ARCHITECTURE

Pages
100—104

XIV.

ANATOMY, ZOOLOGY AND PHYSIOLOGY

105—133

- I. ANATOMY:—A general introduction (796).—Plans and suggestions for the arrangement of materials (797—802).—Plans for the representation of muscles by drawings (803—809).—On corpulence and leanness (809—811).—The divisions of the head (812. 813).—Physiological problems (814. 815).—II. ZOOLOGY AND COMPARATIVE ANATOMY:—The divisions of the animal kingdom (816. 817).—Miscellaneous notes on the study of Zoology (818—821).—Comparative study of the structure of bones and of the action of muscles (822—826).—III. PHYSIOLOGY:—Comparative study of the organs of sense in men and animals (827).—Advantages in the structure of the eye in certain animals (828 to 831).—Remarks on the organs of speech (832. 833).—On the conditions of sight (834. 835).—The seat of the common sense (836).—On the origin of the soul (837).—On the relations of the soul to the organs of sense (838).—On involuntary muscular action (839).—Miscellaneous physiological observations (840—842).—The laws of nutrition and the support of life (843—848).—On the circulation of the blood (848—850).—Some notes on medicine (851—855).

XV.

ASTRONOMY

135—172

- I. THE EARTH AS A PLANET:—The earth's place in the universe (857. 858).—The fundamental laws of the solar system (859—864).—How to prove that the earth is a planet (865—867).—The principles of astronomical perspective (868 to 873).—On the luminosity of the earth in the universal space (874—878).—II. THE SUN:—The question of the true and of the apparent size of the sun (879—884).—Of the nature of sunlight (885).—Considerations as to the size of the sun (886—891).—III. THE MOON:—On the luminosity of the moon (892 to 901).—Explanation of the lumen cinereum of the moon (902).—On the spots in the moon (903—907).—On the moon's halo (908).—On instruments for observing the moon (909. 910).—IV. THE STARS:—On the light of the stars (911—913).—Observations on the stars (914).—On the history of astronomy (915).—Of time and its divisions (916—918).

XVI.

PHYSICAL GEOGRAPHY

173—221

- INTRODUCTION.—Schemes for the arrangement of the materials (919—928).—General introduction (929).—I. OF THE NATURE OF WATER:—The arrangement of Book I (930).—Definitions (931. 932).—Of the surface of the water in relation to the globe (933—936).—Of the proportion of the mass of water to that of the earth (937. 938).—The theory of Plato (939).—That the flow of rivers proves the slope of the land (940).—Theory of the elevation of water within the mountains (941).—The relative height of the surface of the sea to that of the land (942—945).—II. ON THE OCEAN:—Refutation of Pliny's theory as to the saltiness of the sea (946. 947).—The characteristics of sea water (948. 949).—On the formation of gulfs (950. 951).—On the encroachments of the sea on the land and vice versa (952—954).—The ebb and flow of the tide (955—960).—III. SUBTERRANEAN WATER COURSES:—Theory of the circulation of the waters (961. 962).—Observations in support of the hypothesis (963—969).—IV. OF RIVERS:—On the way in which the sources of rivers are fed (970).—The tide in estuaries (971).—On the alterations caused in the courses of rivers by their confluence (972—974).—Whirlpools (975).—On the alterations in the channels of rivers (976).—The origin of sand in rivers (977. 978).—V. ON MOUNTAINS:—The formation of mountains (979—983).—The authorities for the study

	Pages
of the structure of the earth (984).—VI. GEOLOGICAL PROBLEMS:—Programme (985).—Doubts about the Deluge (986).—That marine shells could not go up the mountains (987).—The marine shells were not produced away from the sea (988).—Further researches (989—991).—Other problems (992—994).—VII. On the atmosphere:—Constituents of the atmosphere (995).—On the motion of air (996—999).—The globe an organism (1000).	223—270

XVII.

TOPOGRAPHICAL NOTES

223—270

I. ITALY:—Canals in connection with the Arno (1001—1008).—Canals in the Milanese (1009—1013).—Estimates and preparatory studies for canals (1014—1015).—Notes on buildings at Milan (1016—1019).—Remarks on natural phenomena in and near Milan (1021. 1022).—Note on Pavia (1023).—Notes on the Sforzesca near Vigevano (1024—1028).—Notes on the North Italian lakes (1029—1033).—Notes on places in Central Italy, visited in 1502 (1034—1054).—Alessandria in Piedmont (1055. 1056).—The Alps (1057—1062).—The Appenines (1063—1068).—II. FRANCE (1069—1079).—On the Germans (1080. 1081).—The Danube (1082).—III. THE COUNTRIES OF THE WESTERN END OF THE MEDITERRANEAN:—The straits of Gibraltar (1083—1085).—Tunis (1086).—Libya (1087).—Majorca (1088).—The Tyrrhene Sea (1089).—IV. THE LEVANT.—The Levantine Sea (1090).—The Red Sea (1091. 1092).—The Nile (1093—1098).—Customs of Asiatic Nations (1099. 1100).—Rhodes (1101. 1102).—Cyprus (1103. 1104).—The Caspian Sea (1105. 1106).—The sea of Azov (1107).—The Dardanelles (1108).—Constantinople (1109).—The Euphrates (1110).—Central Asia (1111).—On the natives of hot countries (1112).

XVIII.

NAVAL WARFARE.—MECHANICAL APPLIANCES.—MUSIC

271—282

The ship's log of Vitruvius, of Alberti and of Leonardo (1113).—Methods of staying and moving in waters (1114).—On naval warfare (1115. 1116).—The use of swimming belts (1117).—On the gravity of water (1118).—Diving apparatus and skating (1119—1121).—On flying-machines (1122—1126).—On mining (1127).—On Greek fire (1128).—On music (1129. 1130).

XIX.

PHILOSOPHICAL MAXIMS. MORALS. POLEMICS AND SPECULATIONS

283—311

I. PHILOSOPHICAL MAXIMS:—Prayers to God (1132. 1133).—The powers of Nature (1134—1139).—Psychology (1140—1147).—Science, its principles and rules (1148—1161).—II. MORALS:—What is life? (1162. 1163).—Death (1164).—How to spend life (1165—1179).—On foolishness and ignorance (1180—1182).—On riches (1183—1187).—Rules of life (1188—1202).—Politics (1203. 1204).—III. POLEMICS.—SPECULATION:—Against speculators (1205. 1206).—Against alchimists (1207. 1208).—Against friars (1209).—Against writers of epitomes (1210).—On spirits (1211—1215).—Nonentity (1216).—Reflections on Nature (1217—1219).

XX.

HUMOROUS WRITINGS

313—379

I. STUDIES ON THE LIFE AND HABITS OF ANIMALS (1220—1264).—II. FABLES:—Fables on animals (1265—1270).—Fables on lifeless objects (1271—1274).—Fables on plants (1275—1279).—III. JESTS AND TALES (1280—1292).—IV. PROPHECIES (1293—1313).—V. DRAUGHTS AND SCHEMES FOR THE HUMOROUS WRITINGS: Schemes for Fables &c. (1314—1323); Schemes for Prophecies (1324—1329); Irony (1331. 1332).—Tricks (1333—1335).

XXI.	Pages
LETTERS. PERSONAL RECORDS. DATED NOTES	381—417
Draughts of letters and reports referring to Armenia (1336. 1337).—Notes about adventures abroad (1338. 1339).—Draughts of letters to Lodovico il Moro (1340—1345).—Draught of letter to a Commission at Piacenza (1346 to 1347).—Letter to the Cardinal Ippolito d'Este (1348).—Draught of letter to the French Governor of Milan (1349).—Draughts of letters to the Superintendent of canals and to Melzi (1350).—Draughts of letter to Giuliano de' Medici (1351. 1352).—Draught of a letter written at Rome (1353).—A fanciful letter (1354).—Miscellaneous draughts of letters and personal records (1355 to 1368).—Notes bearing dates (1369—1378).	
XXII.	
MISCELLANEOUS NOTES	419—472
Memoranda before the year 1500 (1379—1413).—Memoranda after the year 1500 (1414—1434).—Memoranda of unknown dates (1435—1457).—Notes on pupils and artisans (1458—1468).—Quotations and notes on books and authors (1469—1508).—Inventories and Accounts (1509—1545).—Notes in unknown handwriting among the Manuscripts (1546—1565).—Leonardo's will (1566).	
REFERENCE TABLE TO THE NUMERICAL ORDER OF THE CHAPTERS	473—478
APPENDIX	479—499
History of the Manuscripts. Bibliography.	

LIST OF ILLUSTRATIONS IN VOLUME II.

Pl. CIV.	Architectural Drawing; from the Arundel Manuscript, British Museum, London—see text No. 770	To face 77
Pl. CV.	Two Architectural Drawings; from the Arundel Manuscript, British Museum, London—see text Nos. 771, 775, 778	To face 84
Pl. CVI.	Architectural Drawing; from the Arundel Manuscript, British Museum, London—see text Nos. 772, 789	To face 94
	Architectural Drawing; from the Codex Atlanticus, Milan	on page 104
Pl. CVII.	Anatomical Drawing, drawn with the pen and washed with Indian ink; from the Royal Library, Windsor Castle	To face 110
Pl. CVIII.	Four Anatomical Drawings; No. 1—see text No. 809—and No. 4—see text No. 814—from the Royal Library, Windsor Castle; No. 2—see text No. 824—from Manuscript K ³ , Institut de France, Paris; No. 3—see text No. 813—from Manuscript III, South Kensington Museum; and an Astronomical Drawing—see text No. 902—from the Leicester Manuscript, Holkam Hall	To face 120
Pl. CIX.	Sketch Map of Milan; from the Codex Atlanticus, Milan—see text No. 1016	To face 233
Pl. CX.	Four Topographical Drawings from Manuscripts in the Institut de France, Paris: No. 1 (Constantinopel)—see text No. 1109—from Manuscript L; No. 2 (Vigevano)—see text No. 1024—in red chalk, from Manuscript H ² ; No. 3 (Siena, Urbino)—see text Nos. 765 and 1038—and No. 4 (Cesena)—see text No. 1040—from Manuscript L	To face 237
Pl. CXI.	Two Maps: No. 1 representing the Town of Imola from the Royal Library, Windsor Castle,—see text No. 1051—; No. 2 representing the Mediterranean Sea; from the Codex Atlanticus—see text No. 1092—between pp. 240 and	241
Pl. CXII.	Coloured Map of part of Tuscany, from the Royal Library, Windsor Castle	between pp. 240 and 241
Pl. CXIII.	Coloured Map of part of Central Italy; from the Royal Library, Windsor Castle	between pp. 248 and 249
Pl. CXIV.	Coloured Map of the sea shore between Rome and Naples; from the Royal Library, Windsor Castle	between pp. 248 and 249

		Page
Pl. CXV.	Sketch Map of the Loire at Amboise; from the Arundel Manuscript, British Museum—see text No. 1074	To face 251
Pl. CXVI.	Sketch of Armenian Mountains; from the Codex Atlanticus, Milan—see text No. 1336	To face 385
Pl. CXVII.	Sketch of Armenian Mountains; from the Codex Atlanticus, Milan,—see text No. 1336	To face 388
Pl. CXVIII.	Sketch of a Peak in Armenia, and Sketch Map of Armenia; from the Codex Atlanticus, Milan—see text No. 1336	To face 391
Pl. CXIX.	Sketch Map of Armenia; from the Codex Atlanticus, Milan—see text No. 1336	To face 392
Pl. CXX.	Drawing of Oriental Heads, in red chalk; from the Royal Library, Turin	To face 394
Pl. CXXI.	Drawing of Musical Instruments &c.; from the Arundel Manuscript, British Museum, London—see text Nos. 1128 and 860 . . .	To face 411
Pl. CXXII.	Drawing of Caricatures; from the Royal Library, Windsor Castle	To face 411

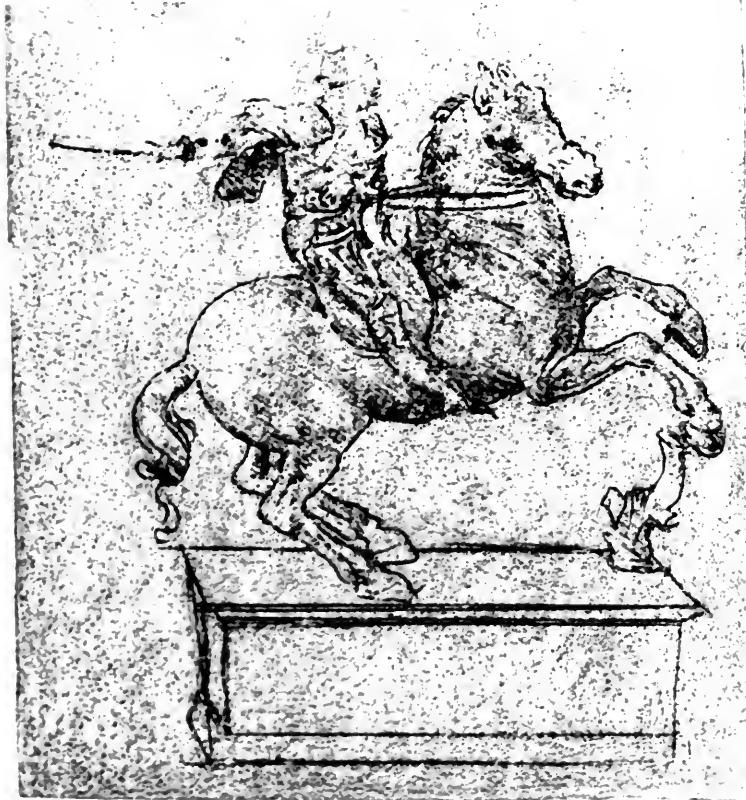

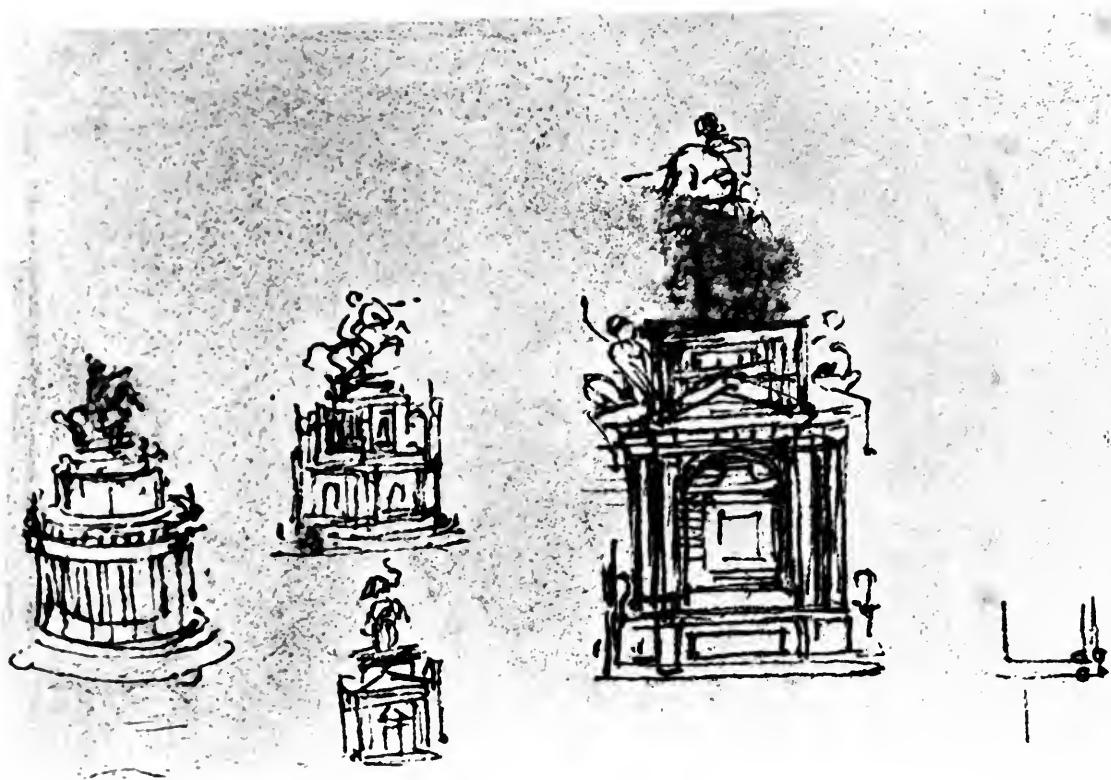

The size of the original drawings has been reduced on Plates LXVI, CVII, CIX, CXI No. 1, CXII, CXIII, CXIV, CXVI, CXVII, CXVIII and CXXII. On Plate CXIX it has been enlarged. The colour and tone of the paper have in every case been faithfully imitated, in order to give to the facsimiles a perfect and complete resemblance to the originals, whether drawn in charcoal, red chalk or pen and ink. It is to be understood that all Drawings here reproduced are in pen-and-ink, unless otherwise stated.

XI.

The notes on Sculpture.

Compared with the mass of manuscript treating of Painting, a very small number of passages bearing on the practice and methods of Sculpture are to be found scattered through the note books; these are here given at the beginning of this section (Nos. 706—709). There is less cause for surprise at finding that the equestrian statue of Francesco Sforza is only incidentally spoken of; for, although Leonardo must have worked at it for a long succession of years, it is not in the nature of the case that it could have given rise to much writing. We may therefore regard it as particularly fortunate that no fewer than thirteen notes in the master's handwriting can be brought together, which seem to throw light on the mysterious history of this famous work. Until now writers on Leonardo were acquainted only with the passages numbered 712, 719, 720, 722 and 723.

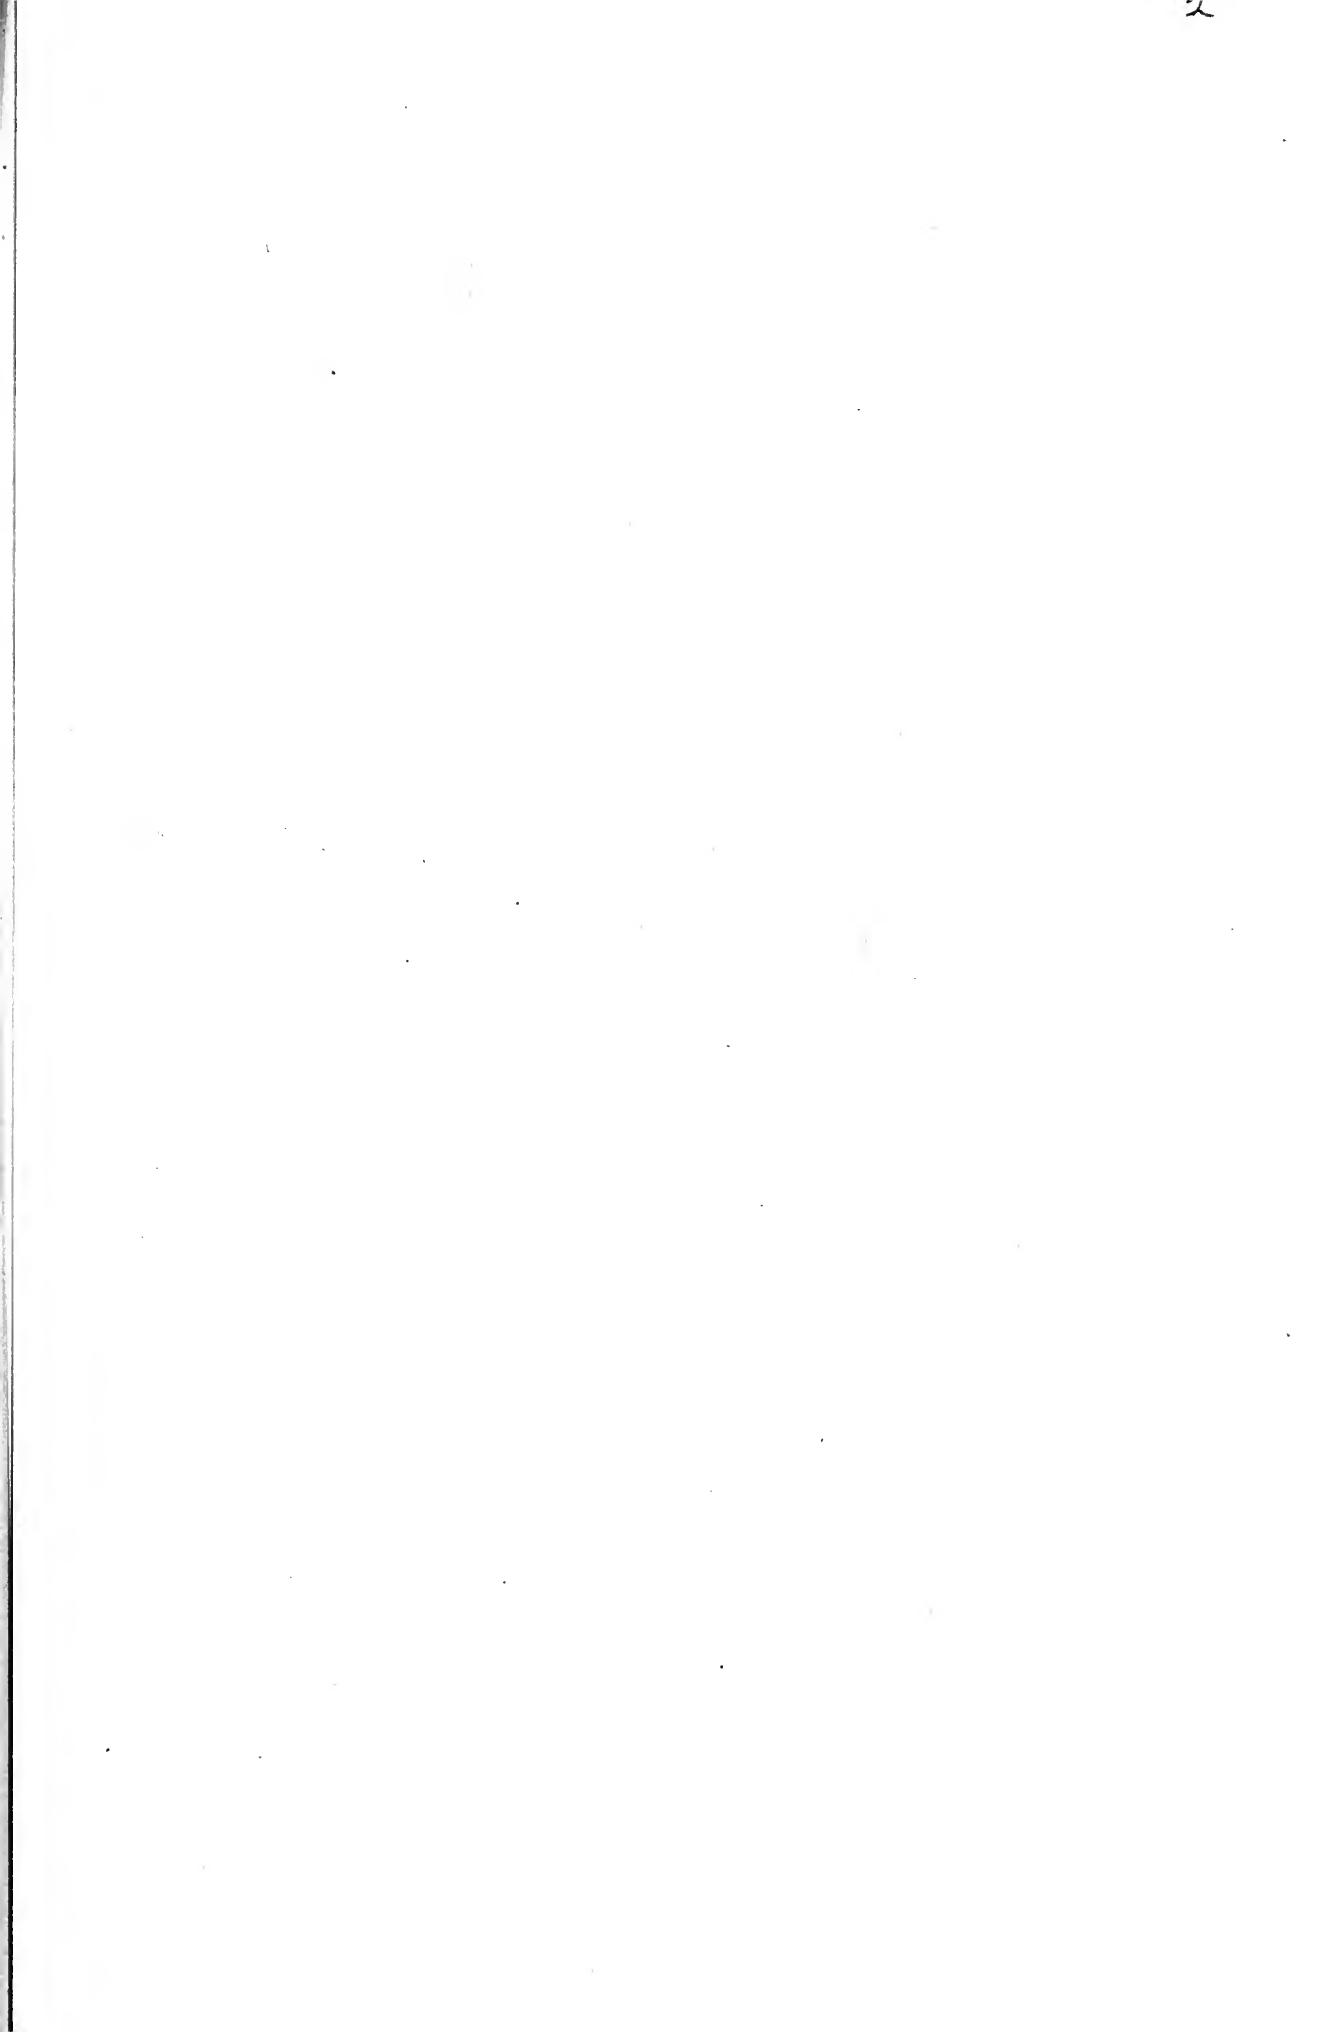

In arranging these notes on sculpture I have given the precedence to those which treat of the casting of the monument, not merely because they are the fullest, but more especially with a view to reconstructing the monument, an achievement which really almost lies within our reach by combining and comparing the whole of the materials now brought to light, alike in notes and in sketches.

A good deal of the first two passages, Nos. 710 and 711, which refer to this subject seems obscure and incomprehensible; still, they supplement each other and one contributes in no small degree to the comprehension of the other. A very interesting and instructive commentary on these passages may be found in the fourth chapter of Vasari's

*Introduzione della Scultura under the title „Come si fanno i modelli per fare di bronzo le figure grandi e picciole, e come le forme per buttarle; come si armino di ferri, e come si gettino di metallo,” &c. Among the drawings of models of the moulds for casting we find only one which seems to represent the horse in the act of galloping—No. 713. All the other designs show the horse as pacing quietly; and as these studies of the horse are accompanied by copious notes as to the method of casting, the question as to the position of the horse in the model finally selected, seems to be decided by preponderating evidence. “Il cavallo dello Sforza”—C. Boito remarks very appositely in the *Saggio* on page 26, “doveva sembrare fratello al cavallo del Colleoni. E si direbbe che questo fosse figlio del cavallo del Gattamelata, il quale pare figlio di uno dei quattro cavalli che stava forse sull’Arco di Nerone in Roma” (now at Venice). The publication of the *Saggio* also contains the reproduction of a drawing in red chalk, representing a horse walking to the left and supported by a scaffolding, given here on Pl. LXXVI, No. 1. It must remain uncertain whether this represents the model as it stood during the preparations for casting it, or whether—as seems to me highly improbable—this sketch shows the model as it was exhibited in 1493 on the Piazza del Castello in Milan under a triumphal arch, on the occasion of the marriage of the Emperor Maximilian to Bianca Maria Sforza. The only important point here is to prove that strong evidence seems to show that, of the numerous studies for the equestrian statue, only those which represent the horse pacing agree with the schemes of the final plans.*

The second group of preparatory sketches, representing the horse as galloping, must therefore be considered separately, a distinction which, in recapitulating the history of the origin of the monument seems justified by the note given under No. 720.

Galeazzo Maria Sforza was assassinated in 1476 before his scheme for erecting a monument to his father Francesco Sforza could be carried into effect. In the following year Lodovico il Moro the young aspirant to the throne was exiled to Pisa, and only returned to Milan in 1479 when he was Lord (Governatore) of the State of Milan, in 1480 after the minister Cecco Simonetta had been murdered. It may have been soon after this that Lodovico il Moro announced a competition for an equestrian statue, and it is tolerably certain that Antonio del Pollajuolo took part in it, from this passage in Vasari’s Life of this artist: “E si trovò, dopo la morte sua, il disegno e modello che a Lodovico Sforza egli aveva fatto per la statua a cavallo di Francesco Sforza, duca di Milano; il quale disegno è nel nostro Libro, in due modi: in uno egli ha sotto Verona; nell’altro, egli tutto armato, e sopra un basamento pieno di battaglie, fa saltare il cavallo addosso a un armato; ma la cagione perchè non mettesse questi disegni in opera, non ho già potuto sapere.” One of Pollajuolo’s drawings, as here described, has lately been discovered by Senatore Giovanni Morelli in the Munich Pinacothek. Here the profile of the horseman is a portrait of Francesco Duke of Milan, and under the horse, who is galloping to the left, we see a warrior thrown and lying on the ground; precisely the same idea as we find

in some of Leonardo's designs for the monument, as on Pl. LXVI, LXVII, LXVIII, LXIX and LXXII No. 1; and, as it is impossible to explain this remarkable coincidence by supposing that either artist borrowed it from the other, we can only conclude that in the terms of the competition the subject proposed was the Duke on a horse in full gallop, with a fallen foe under its hoofs.

Leonardo may have been in the competition there and then, but the means for executing the monument do not seem to have been at once forthcoming. It was not perhaps until some years later that Leonardo in a letter to the Duke (No. 719) reminded him of the project for the monument. Then, after he had obeyed a summons to Milan, the plan seems to have been so far modified, perhaps in consequence of a remonstrance on the part of the artist, that a pacing horse was substituted for one galloping, and it may have been at the same time that the colossal dimensions of the statue were first decided on. The designs given on Pl. LXX, LXXI, LXXII, 2 and 3, LXXIII and LIV and on pp. 4 and 24, as well as three sketches on Pl. LXIX may be studied with reference to the project in its new form, though it is hardly possible to believe that in either of these we see the design as it was actually carried out. It is probable that in Milan Leonardo worked less on drawings, than in making small models of wax and clay as preparatory to his larger model. Among the drawings enumerated above, one in black chalk, Pl. LXXIII—the upper sketch on the right hand side, reminds us strongly of the antique statue of Marcus Aurelius. If, as it would seem, Leonardo had not until then visited Rome, he might easily have known this statue from drawings by his former master and friend Verrocchio, for Verrocchio had been in Rome for a long time between 1470 and 1480. In 1473 Pope Sixtus IV had this antique equestrian statue restored and placed on a new pedestal in front of the church of San Giovanni in Laterano. Leonardo, although he was painting independently as early as in 1472 is still spoken of as working in Verrocchio's studio in 1477. Two years later the Venetian senate decided on erecting an equestrian statue to Colleoni; and as Verrocchio, to whom the work was entrusted, did not at once move from Florence to Venice—where he died in 1488 before the casting was completed—but on the contrary remained in Florence for some years, perhaps even till 1485, Leonardo probably had the opportunity of seeing all his designs for the equestrian statue at Venice and the red chalk drawing on Pl. LXXIV may be a reminiscence of it.

The pen and ink drawing on Pl. LXXII, No. 3, reminds us of Donatello's statue of Gattamelata at Padua. However it does not appear that Leonardo was ever at Padua before 1499, but we may conclude that he took a special interest in this early bronze statue and the reports he could procure of it, form an incidental remark which is to be found in C. A. 145^a; 432^a, and which will be given in Vol. II under Ricordi or Memoranda.

Among the studies—in the widest sense of the word—made in preparation for this statue we may include the Anatomy of the Horse which Lomazzo and Vasari both mention; the most important parts of this work still exist in the Queen's Library at

Windsor. It was beyond a doubt compiled by Leonardo when at Milan; only a few interesting records to be found among these designs are reproduced in Nos. 716 and 717; but it must be pointed out that out of 40 sheets of studies of the movements of the horse belonging to that treatise, a horse in full gallop occurs but once.

If we may trust the account given by Paulus Jovius—about 1527—Leonardo's horse was represented as “vehementer incitatus et anhelatus”. Jovius had probably seen the model exhibited at Milan; but, need we, in fact, infer from this description that the horse was galloping? Compare Vasari's description of the Gattamelata monument at Padua: “Egli [Donatello] vi andò ben volentieri, e fece il cavallo di bronzo, che è in sulla piazza di Sant Antonio, nel quale si dimostra lo sbuffamento ed il fremito del cavallo, ed il grande animo e la fieraZZa vivacissimamente espressa dall'arte nella figura che lo cavalca”.

These descriptions, it seems to me, would only serve to mark the difference between the work of the middle-ages and that of the renaissance.

We learn from a statement of Sabbà da Castiglione that, when Milan was taken by the French in 1499, the model sustained some injury; and this informant, who, however is not invariably trustworthy, adds that Leonardo had devoted fully sixteen years to this work (*la forma del cavallo, intorno a cui Leonardo avea sedici anni continui consumati*). This often-quoted passage has given ground for an assumption, which has no other evidence to support it, that Leonardo had lived in Milan ever since 1483. But I believe it is nearer the truth to suppose that this author's statement alludes to the fact that about sixteen years must have past since the competition in which Leonardo had taken part.

I must in these remarks confine myself strictly to the task in hand and give no more of the history of the Sforza monument than is needed to explain the texts and drawings I have been able to reproduce. In the first place, with regard to the drawings, I may observe that they are all, with the following two exceptions, in the Queen's Library at Windsor Castle; the red chalk drawing on Pl. LXVI No. 1 is in the MS. C. A. (see No. 712) and the fragmentary pen and ink drawing on page 4 is in the Ambrosian Library. The drawings from Windsor on Pl. LXVI have undergone a trifling reduction from the size of the originals.

There can no longer be the slightest doubt that the well-known engraving of several horsemen (Passavant, *Le Peintre-Graveur*, Vol. V, p. 181, No. 3) is only a copy after original drawings by Leonardo, executed by some unknown engraver; we have only to compare the engraving with the facsimiles of drawings on Pl. LXV, No. 2, Pl. LXVII, LXVIII and LXIX which, it is quite evident, have served as models for the engraver.

On Pl. LXV No. 1, in the larger sketch to the right hand, only the base is distinctly visible, the figure of the horseman is effaced. Leonardo evidently found it unsatisfactory and therefore rubbed it out.

The base of the monument—the pedestal for the equestrian statue—is repeatedly sketched on a magnificent plan. In the sketch just mentioned it has the character of a shrine or aedicula to contain a sarcophagus. Captives in chains are here represented on the entablature with their backs turned to that portion of the monument which more

strictly constitutes the pedestal of the horse. The lower portion of the aedicula is surrounded by columns. In the pen and ink drawing Pl. LXVI—the lower drawing on the right hand side—the sarcophagus is shown between the columns, and above the entablature is a plinth on which the horse stands. But this arrangement perhaps seemed to Leonardo to lack solidity, and in the little sketch on the left hand, below, the sarcophagus is shown as lying under an arched canopy. In this the trophies and the captive warriors are detached from the angles. In the first of these two sketches the place for the trophies is merely indicated by a few strokes; in the third sketch on the left the base is altogether broader, buttresses and pinnacles having been added so as to form three niches. The black chalk drawing on Pl. LXVIII shows a base in which the angles are formed by niches with pilasters. In the little sketch to the extreme left on Pl. LXV, No. 1, the equestrian statue serves to crown a circular temple somewhat resembling Bramante's tempietto of San Pietro in Montorio at Rome, while the sketch above to the right displays an arrangement faintly reminding us of the tomb of the Scaligers in Verona. The base is thus constructed of two platforms or slabs, the upper one considerably smaller than the lower one which is supported on flying buttresses with pinnacles.

On looking over the numerous studies in which the horse is not galloping but merely walking forward, we find only one drawing for the pedestal, and this, to accord with the altered character of the statue, is quieter and simpler in style (Pl. LXXIV). It rises almost vertically from the ground and is exactly as long as the pacing horse. The whole base is here arranged either as an independent baldaquin or else as a projecting canopy over a recess in which the figure of the deceased Duke is seen lying on his sarcophagus; in the latter case it was probably intended as a tomb inside a church. Here, too, it was intended to fill the angles with trophies or captive warriors. Probably only No. 724 in the text refers to the work for the base of the monument.

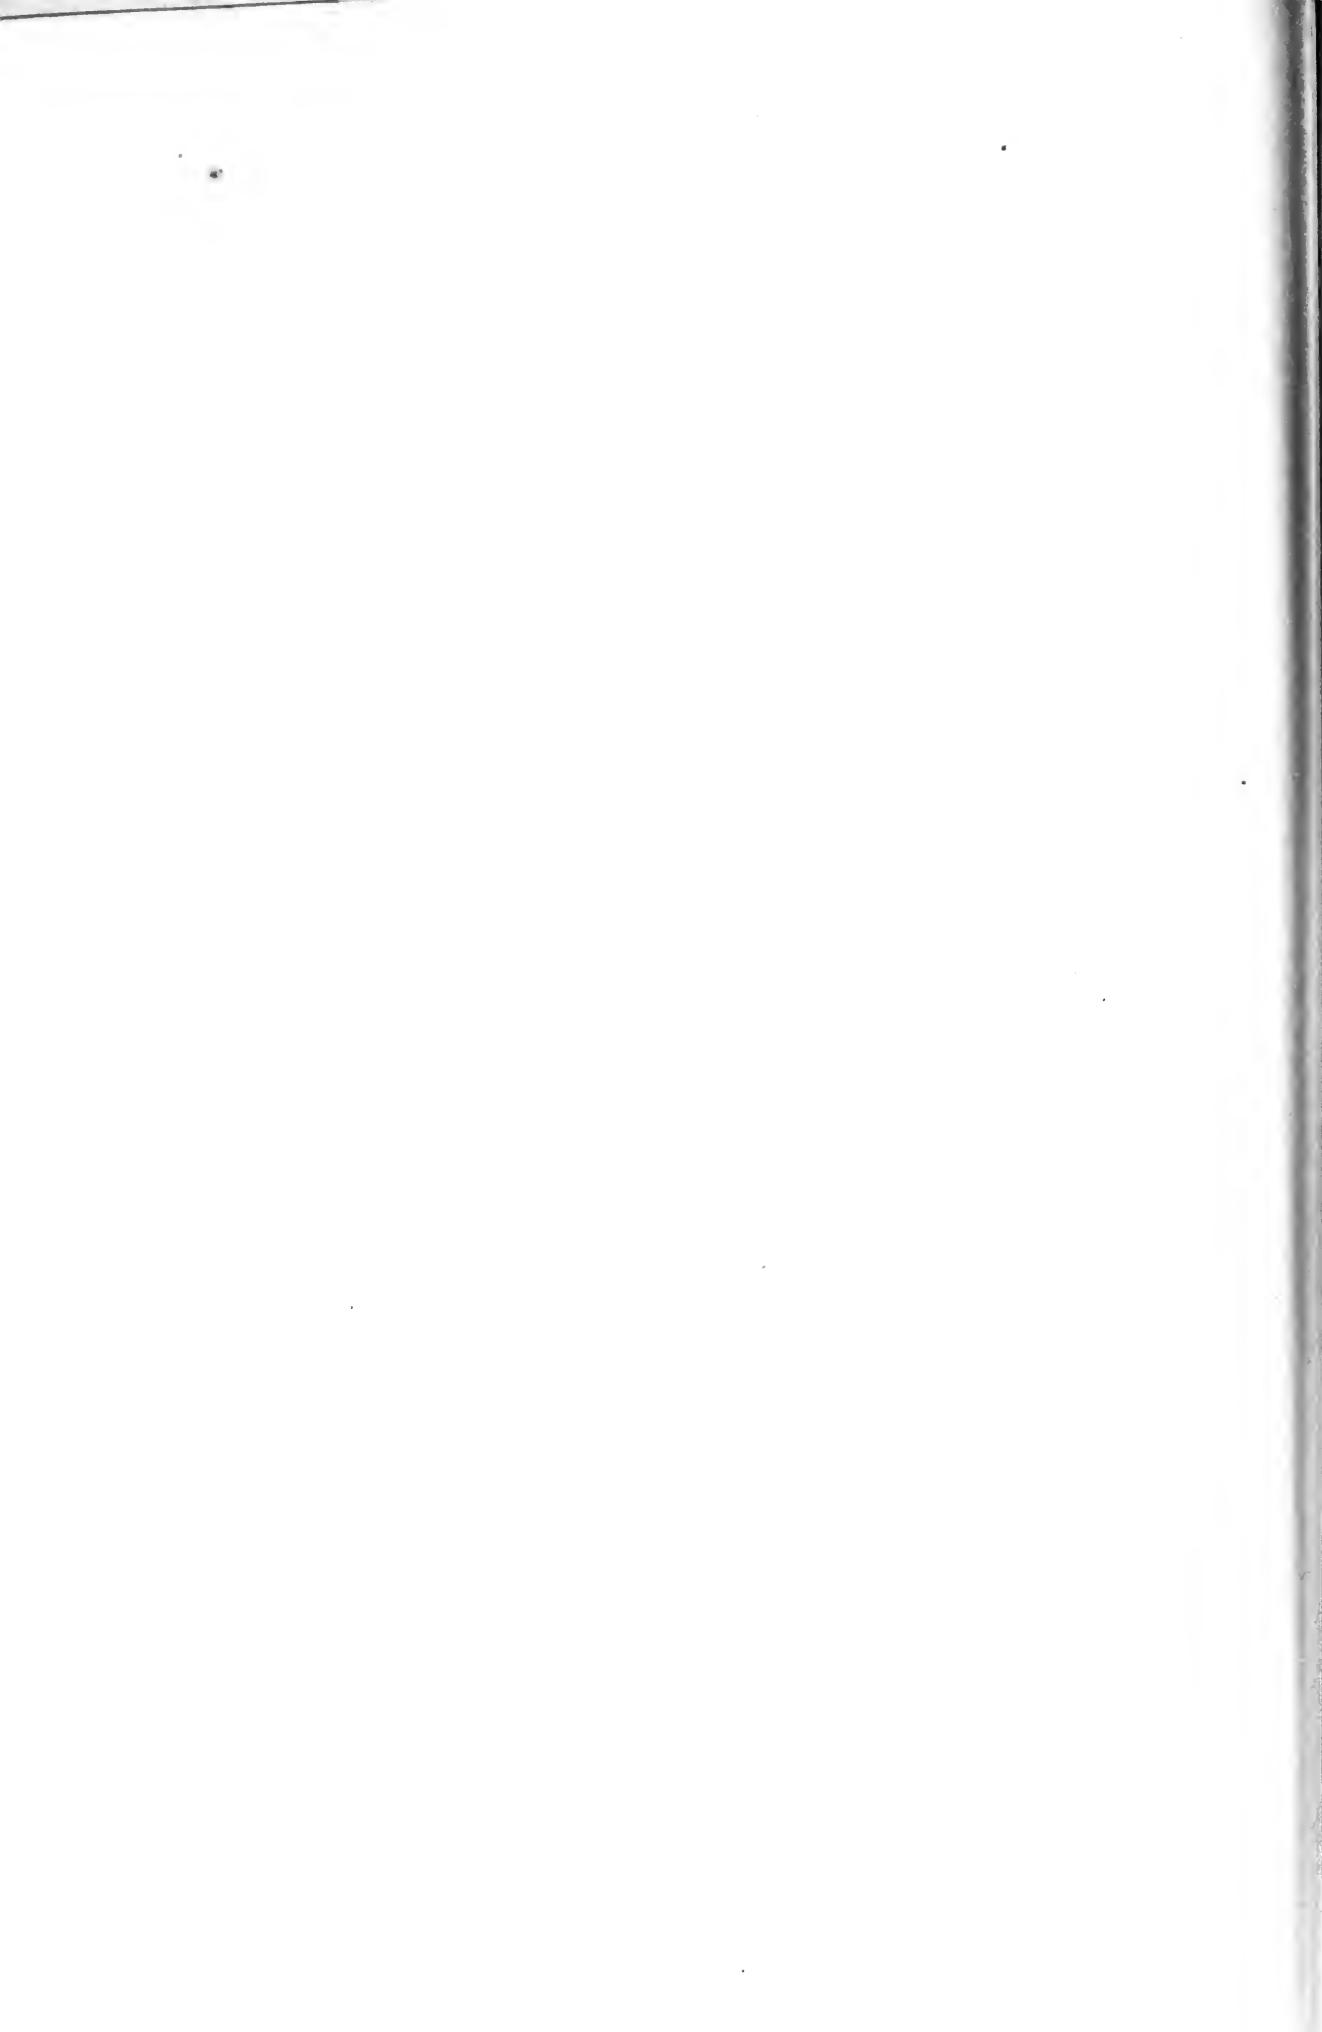

If we compare the last mentioned sketch with the description of a plan for an equestrian monument to Gian Giacomo Trivulzio (No. 725) it seems by no means impossible that this drawing is a preparatory study for the very monument concerning which the manuscript gives us detailed information. We have no historical record regarding this sketch nor do the archives in the Trivulzio Palace give us any information. The simple monument to the great general in San Nazaro Maggiore in Milan consists merely of a sarcophagus placed in recess high on the wall of an octagonal chapel. The figure of the warrior is lying on the sarcophagus, on which his name is inscribed; a piece of sculpture which is certainly not Leonardo's work. Gian Giacomo Trivulzio died at Chartres in 1518, only five months before Leonardo, and it seems to me highly improbable that this should have been the date of this sketch; under these circumstances it would have been done under the auspices of Francis I, but the Italian general was certainly not in favour with the French monarch at the time. Gian Giacomo Trivulzio was a sworn foe to Ludovico il Moro, whom he strove for years to overthrow. On the 6th September 1499 he marched victorious into Milan at the head

PL. LXVIII.

Heliogravure Dujardin

Imp. Eudes

of a French army. In a short time, however, he was forced to quit Milan again when Ludovico il Moro bore down upon the city with a force of Swiss troops. On the 15th of April following, after defeating Lodovico at Novara, Trivulzio once more entered Milan as a Conqueror, but his hopes of becoming Governatore of the place were soon wrecked by intrigue. This victory and triumph, historians tell us, were signalised by acts of vengeance against the dethroned Sforza, and it might have been particularly flattering to him that the casting and construction of the Sforza monument were suspended for the time.

It must have been at this moment—as it seems to me—that he commissioned the artist to prepare designs for his own monument, which he probably intended should find a place in the Cathedral or in some other church. He, the husband of Margherita di Nicolino Colleoni, would have thought that he had a claim to the same distinction and public homage as his less illustrious connection had received at the hands of the Venetian republic. It was at this very time that Trivulzio had a medal struck with a bust portrait of himself and the following remarkable inscription on the reverse: **DEO FAVENTE · 1499 · DICTVS · IO · IA · EXPVLIT · LVDOVICVS · SF · (Sfortiam) DVC · (ducem) MLI (Mediolani) · NOīE (nomine) · REGIS · FRANCORVM · EODEM · ANN · (anno) RED'T (redit) · LVS (Ludovicus) · SVPERATVS ET CAPTVS · EST · AB · EO.** In the Library of the Palazzo Trivulzio there is a MS. of Callimachus Siculus written at the end of the XVth or beginning of the XVIth century. At the beginning of this MS. there is an exquisite illuminated miniature of an equestrian statue with the name of the general on the base; it is however very doubtful whether this has any connection with Leonardo's design.

Nos. 731—740, which treat of casting bronze, have probably a very indirect bearing on the arrangements made for casting the equestrian statue of Francesco Sforza. Some portions evidently relate to the casting of cannon. Still, in our researches about Leonardo's work on the monument, we may refer to them as giving us some clue to the process of bronze casting at that period.

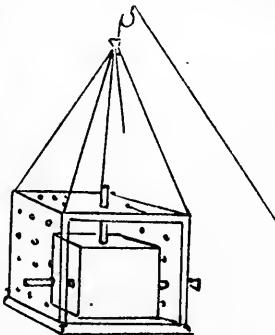

DE' STATUA.

Se vuoi fare vna figura di marmo fa ne prima vna ³di terra, la quale, finita che l'ài, secca e mettila in vna ⁴cassa che sia ancora capace, dopo la figura tratta ⁵d'esso loco, a ricieuere il marmo che vuoi scoprir⁶vi dentro la figura alla similitudine di quella di terra; di poi ⁷messa la figura di terra in detta cassa abbi bacchette ch'ètrino ⁸appunto per i sua busi, e spingile dentro tato per ciascuno ⁹buso che ciascuna bacchetta biaca tocca la figura in ¹⁰diuersi lochi, e la parte d'esse bacchette, che resta fori della ¹¹cassa, tigni di nero, e fa il cōtrassegno alla bacchetta e al ¹²suo buso in modo che a tua posta si scotrì; ¹³e trai d'essa cassa la figura di terra emettivi il tuo ¹⁴pezzo di marmo, e tato leua del marmo, che tutte le ¹⁵tue bacchette si nascondino sino al loro segnjo in detti busi, ¹⁶e per potere questo meglio fare fa che tutta la cassa si po¹⁷ssa leuare in alto, e'l fondo d'essa cassa resti sēpre sotto ¹⁸il marmo ed a questo modo ne potrai leuare coi ferri ¹⁹con grā facilità.

OF A STATUE.

If you wish to make a figure in marble, Some practical hints (706-709). first make one of clay, and when you have finished it, let it dry and place it in a case which should be large enough, after the figure is taken out of it, to receive also the marble, from which you intend to reveal the figure in imitation of the one in clay. After you have put the clay figure into this said case, have little rods which will exactly slip in to the holes in it, and thrust them so far in at each hole that each white rod may touch the figure in different parts of it. And colour the portion of the rod that remains outside black, and mark each rod and each hole with a countersign so that each may fit into its place. Then take the clay figure out of this case and put in your piece of marble, taking off so much of the marble that all your rods may be hidden in the holes as far as their marks; and to be the better able to do this, make the case so that it can be lifted up; but the bottom of it will always remain under the marble and in this way it can be lifted with tools with great ease.

709. *figure di rilievo.* Leonardo applies this term exclusively to wholly detached figures, especially to those standing free. This note apparently refers to some particular case, though we have no knowledge of what that may have been. If we suppose it to refer to the first model of the equestrian statue of Francesco Sforza (see the introduction to the notes on Sculpture) this observation may be regarded

as one of his arguments for abandoning the first scheme of the Sforza Monument, in which the horse was to be galloping (see page 2). It is also in favour of this theory that the note is written in a manuscript volume already completed in 1492. Leonardo's opinions as to the shortcomings of plastic works when compared with paintings are given under No. 655 and 656.

⁴³Ritasa cō ⁴⁴colla e terra ⁴⁵over chiara d'ovo ⁴⁶e mattone e ro¹⁷sume.

iron as may be necessary. Moreover take off the mould and then make the thickness. Then fill the mould by degrees and make it good throughout; encircle and bind it with its irons and bake it inside where it has to touch the bronze.

OF MAKING THE MOULD IN PIECES.

Draw upon the horse, when finished, all the pieces of the mould with which you wish to cover the horse, and in laying on the clay cut it in every piece, so that when the mould is finished you can take it off, and then recompose it in its former position with its joins, by the countersigns.

The square blocks *a b* will be between the cover and the core, that is in the hollow where the melted bronze is to be; and these square blocks of bronze will support the intervals between the mould and the cover at an equal distance, and for this reason these squares are of great importance.

The clay should be mixed with sand.

Take wax, to return [what is not used] and to pay for what is used.

[27] Dry it in layers [28].

Make the outside mould of plaster, to save time in drying and the expense in wood; and with this plaster enclose the irons [props] both outside and inside to a thickness of two fingers; make terra cotta.

And this mould can be made in one day; half a boat load of plaster will serve you.

[42] Good.

Dam it up again with glue and clay, or white of egg, and bricks and rubbish.

714: VASARI repeatedly states, in the fourth chapter of his *Introduzione della Scultura*, that in preparing to cast bronze statues horse-dung was frequently used by sculptors. If, notwithstanding

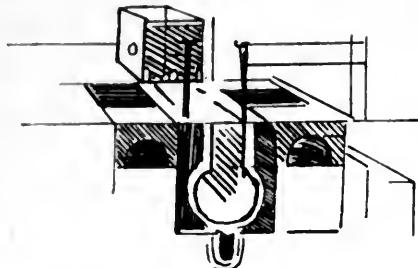

this, it remains doubtful whether I am justified in having introduced here this text of but little interest, no such doubt can be attached to the sketch which accompanies it.

Salt may be made from human excrements, burnt and calcined, made into lees and dried slowly at a fire, and all the excrements produce salt in a similar way and these salts when distilled, are very strong.

722. This passage is quoted from a letter to a committee at Piacenza for whom Leonardo seems to have undertaken to execute some work. The letter is given entire in section XXI.; in it Leonardo remonstrates as to some unreasonable demands.

723. This passage occurs in a rough copy of a letter to Ludovico il Moro, without date (see below among the letters).

724. This possibly refers to the works for the pedestal of the equestrian statue concerning which we have no farther information in the MSS. See p. 6.

725. In the original, lines 2—5, 12—14, 33—35, are written on the margin. This passage has been

721.

There is to be seen, in the mountains of Parma and Piacenza, a multitude of shells and corals full of holes, still sticking to the rocks, and when I was at work on the great horse for Milan, a large sackful of them, which were found thereabout, was brought to me into my workshop, by certain peasants.

722.

Believe me, Leonardo the Florentine, who has to do the equestrian bronze statue of the Duke Francesco that he does not need to care about it, because he has work for all his life time, and, being so great a work, I doubt whether he can ever finish it.

723.

Of the horse I will say nothing because I know the times.

724.

During ten years the works on the marbles have been going on I will not wait for my payment beyond the time, when my works are finished.

725.

THE MONUMENT TO MESSER GIOVANNI JACOMO DA TREVULZO.

[2] Cost of the making and materials for ^{The project of the Tri-} the horse [5]. ^{vulzio monument.}

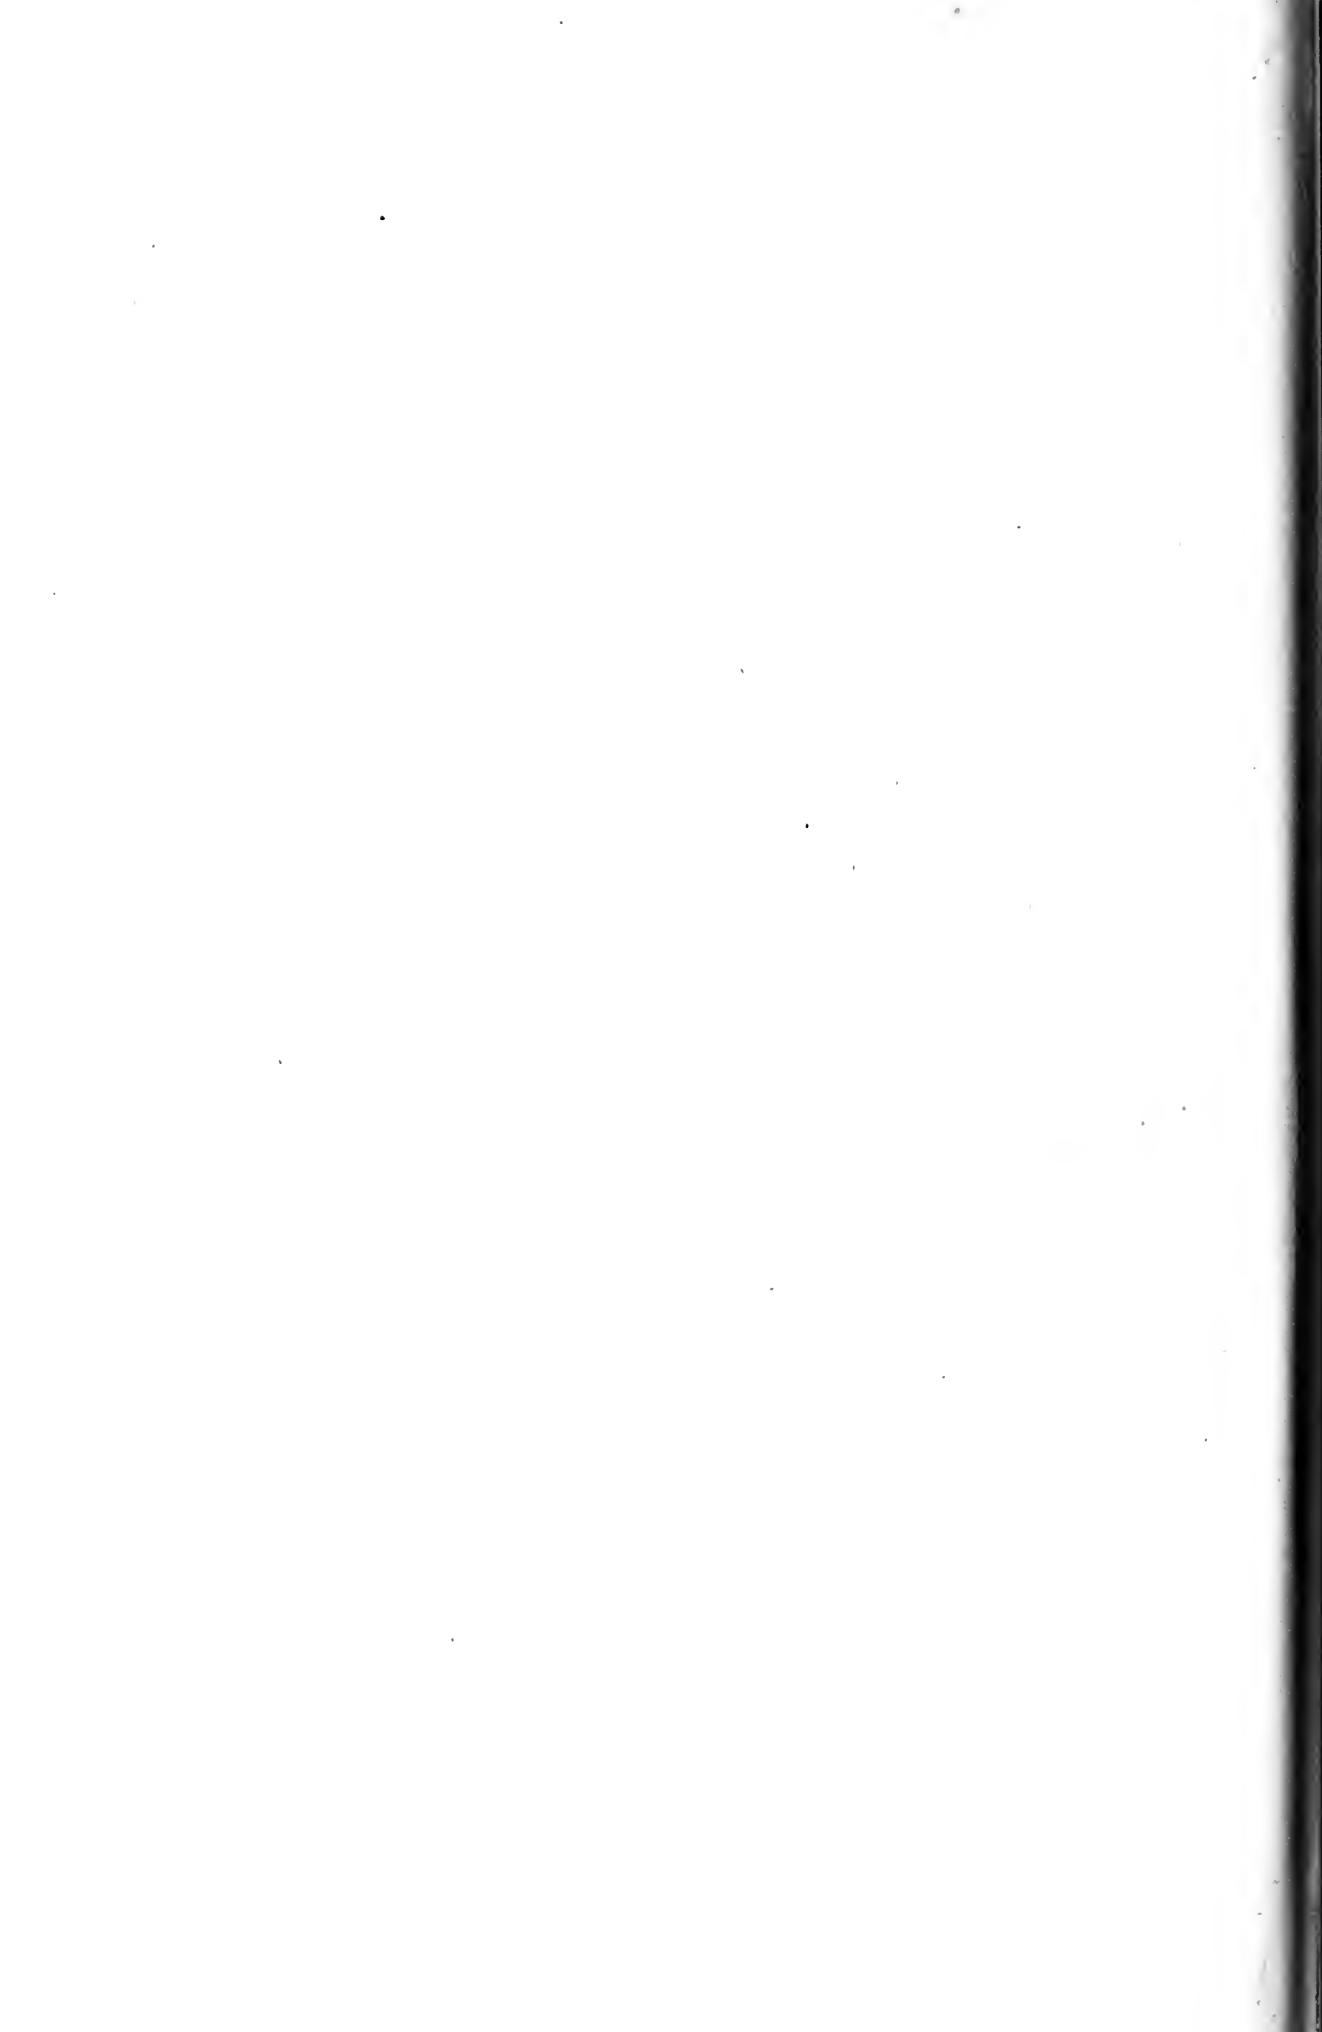

recently published by G. Govi in Vol. V, Ser. 3^a, of *Transunti, Reale Accademia dei Lincei, sed. del 5 Giugno, 1881*, with the following introductory note: "Desidero intanto che siano stampati questi pochi frammenti perchè so che sono stati trascritti ultimamente, e verranno messi in luce tra poco fuori d'Italia. Li ripubblicherò pure chi vuole, ma si sappia almeno che anche tra noi si conoscevano, e s'eran raccolti da anni per comporne, quando che fosse, una edizione ordinata degli scritti di Leonardo."

The learned editor has left out line 22 and has written 3 *piedi* for 8 *piedi* in line 25. There are other deviations of less importance from the original.'

⁶ Vno corsiero grāde al naturale coll'omo sopra vuole per la spesa del metallo	500.	A courser, as large as life, with the rider requires for the cost of the metal, duc. 500.

^{726.} See Pl. LXXVI No. 2. The text of lines 31—35 stands parallel l. 24—27.

Farther evidence of Leonardo's occupations and engagements at Rome under Pope Leo X. may be gathered from some rough copies of letters which

All coins which do not have the rim complete, are not to be accepted as good; and to secure the perfection of their rim it is requisite that, in the first place, all the coins should be a perfect circle; and to do this a coin must before all be made perfect in weight, and size, and thickness. Therefore have several plates of metal made of the same size and thickness, all drawn through the same gauge so as to come out in strips. And out of [24]these strips you will stamp the coins, quite round, as sieves are made for sorting chestnuts[27]; and these coins can then be stamped in the way indicated above; &c.

[31]The hollow of the die must be uniformly wider than the lower, but imperceptibly[35].

This cuts the coins perfectly round and of the exact thickness, and weight; and saves the man who cuts and weighs, and the man who makes the coins round. Hence it passes only through the hands of the gauger and of the stamper, and the coins are very superior.

727.

POWDER FOR MEDALS.

The incombustible growth of soot on wicks reduced to powder, burnt tin and all the metals, alum, isinglass, smoke from a brass forge, each ingredient to be moistened, with aqua vitae or malmsey or strong malt vinegar, white wine or distilled extract of turpentine, or oil; but there should be little moisture, and cast in moulds.

728.

OF TAKING CASTS OF MEDALS.

A paste of emery mixed with aqua vitae, or iron filings with vinegar, or ashes of walnut leaves, or ashes of straw very finely powdered.

will be found in this volume. Hitherto nothing has been known of his work in Rome beyond some doubtful, and perhaps mythical, statements in Vasari.

^{727.} The meaning of *scagliuolo* in this passage is doubtful.

⁴Il diametro si presta in uolto in nel piōbo, è battuto con martello ⁵e disteso piv volte; tal piōbo è raddoppiato e si tiene involto nel la carta, acciochè tal poluere nō si versi, e poi fondi il piōbo e la polv'ere vi è di sopra al pionbo fonduto, la qual poi sia fregata infra due ⁸piastre d'acciaio tanto si poluerizi bene, di poi lauala coll' acqua da partire ⁹e risoluerassi la negreza del ferro, e lasciera la poluere netta;

¹⁰Lo smeriglio in pezzi grossi si ro pe col metterlo sopra vn panno in moliti doppi, e si percuote per fianco col martello, e così se ne va; poi mischia li ¹²a poco a poco, e poi si pesta cō facilità, e se tu lo tenessi sopra l'ancu¹³dine, mai lo rōperesti, essendo cosi grosso.

¹⁴Chi macina li smalti debbe fare tale esercitio sopra le pias¹⁵tre d'acciaio, temperato col macinatojo da conio, e poi metter¹⁶lo nell' acqva forte, la qual risolue tutto esso acciaio che si è ¹⁷cōsumato e misto con esso smalto e lo fece nero, onde poi ¹⁸rimā purificato e netto, e se tu lo macini sul porfido, esso ¹⁹porfido si consuma e si mischia collo smalto e lo guasta, ²⁰e l'acqua da partire mai lo lieva da dosso, perchè nō può ²¹risoluere tale porfido.

²²Se volli fare colore bello azzurro risolui lo smalto, fatto ²³col tartaro, e po' li leva il sal da dosso.

²⁴L'ottone vetrificato fa bello rosso.

G. 75^b]

STUCCO.

²Fa stucco sopra il gobbo del di giesso, ³il quale sia cōposto di venere e ⁴mercurio, e impasta bene sopra esso gobbo ⁵con equal grossezza di costa di coltello fatta colla ⁶sagoma, e questa copri cō coperchio di canpa⁷na da stillare, e riavrai il tuo vmodo cō ⁸che inpastasti, el rimanēte asciugga bene e poi i⁹foca e batti oyer

... ella pol. 7. bere vi e. 8. piasstre dacao .. lavolo chollacq^{"a"}. 9. la negredine del ferro ellascieara. 10. lossmerriglio .. chol .. imol. 11. essi perchote per fiancho .. misscagle. 12. a pocho appochio .. esettu. 13. rōperestti .. chosi. 14. lis-smalti. 15. chol macintatio. 16. accaio chesse. 17. missto .. ello. 18. purifichato ennetto esettullo. 19. essimissca col-lossmalto ello. 20. ellae qua dosso [s] perche nō po. 22. azurro .. lossmalto. 24. vetrificato.

729. In this passage a few words have been written in a sort of cipher—that is to say backwards; as in l. 3 *erenev* for *Venere*, l. 4 *oirucrem* for *Mercurio*, l. 12 *il orreve cō ecarob* for *il everro (?) cō borace*. The meaning of the word before “di giesso”

The diameter is given in the lead enclosed; it is beaten with a hammer and several times extended; the lead is folded and kept wrapped up in parchment so that the powder may not be spilt; then melt the lead, and the powder will be on the top of the melted lead, which must then be rubbed between two plates of steel till it is thoroughly pulverised; then wash it with aqua fortis, and the blackness of the iron will be dissolved leaving the powder clean.

Emery in large grains may be broken by putting it on a cloth many times doubled, and hit it sideways with the hammer, when it will break up; then mix it little by little and it can be founded with ease; but if you hold it on the anvil you will never break it, when it is large.

Any one who grinds smalt should do it on plates of tempered steel with a cone shaped grinder; then put it in aqua fortis, which melts away the steel that may have been worked up and mixed with the smalt, and which makes it black; it then remains purified and clean; and if you grind it on porphyry the porphyry will work up and mix with the smalt and spoil it, and aqua fortis will never remove it because it cannot dissolve the porphyry.

If you want a fine blue colour dissolve the smalt made with tartar, and then remove the salt.

Vitrified brass makes a fine red.

729.

STUCCO.

Place stucco over the prominence of ^{On stucco} the which may be composed of ^{(729. 730).} Venus and Mercury, and lay it well over that prominence of the thickness of the side of a knife, made with the ruler and cover this with the bell of a still, and you will have again the moisture with which you applied the paste. The rest you may dry

in l. 1 is unknown; and the sense, in which *sagħoma* is used here and in other passages is obscure.—*Venere* and *Mercurio* may mean ‘marble’ and ‘lime’, of which stucco is composed.

12. The meaning of *orreve* is unknown.

brunisci cō buon brunitoio e fa ¹⁰grosso inverso la costa.

STUCCO.

¹²Poluerizza il . . . cō borace e acqua, in ¹³pasta e fa stucco, e poi scalda in modo si sec¹⁴chi, e poi vernica con foco in modo che lustri.

C. A. 313^a; 951^a

well; afterwards fire it, and beat it or burnish it with a good burnisher, and make it thick towards the side.

STUCCO.

Powder . . . with borax and water to a paste, and make stucco of it, and then heat it so that it may dry, and then varnish it, with fire, so that it shines well.

¶LA CAGIONE DEL CÖGIELARSI.¶

⁸Dico · la cagione · d'essa cögialtione derivar · spesse volte · da troppo foco ⁹e ancora da legnie · mal secche.

¶A CONOSCIERE LA DISPOSIZIONE DEL FOCO.¶

¹¹Il foco · conoscerai, quâdo fia bono e vtile · alle fiamme · chiare, e se uedrai ¹²le

mitro. ¹⁴e i ... grossenza ... ella. ¹⁵esse ... di br 700 ... balotta ... diamitro. ¹⁶grossezza ... sella ... diamitro. ¹⁷esse ... | e ese. ¹⁸lügeza. ¹⁹i ballotta ... lügeza. ²⁰essella ... fussi. ²¹essela ... fussi. ²³avesse . la bocha. ²⁴grossezza. ²⁵grossezza ... debono. ²⁶diamitro ... lügeza.
740. 1. ilotare. 2. chetti ... tera di valenza. 4. uolesse fredare. 5. chögialare ... sciapate. 6. chö. 8. dicho la chagione.. dirivar. 9. anchora .. seche. 10. focho. 11. conoscerai .. ale .. esse uedrai. 12. effinire co. 13. arai .. acq"a". 14. alegare.

740. 1. 2. Terra di Valenza.—Valenza is north of Alessandria on the Po.

divide it into 6 parts and one of these parts will be its thickness at the muzzle; but at the breech it must always be half. And if the ball is to be 700 lbs., ^{1/7}th of the diameter of the ball must be its thickness in front; and if the ball is to be 800, the eighth of its diameter in front; and if 900, ^{1/8}th and ^{1/2} [3/16], and if 1000, ^{1/9}th.

OF THE LENGTH OF THE BODY OF THE GUN.

If you want it to throw a ball of stone, make the length of the gun to be 6, or as much as 7 diameters of the ball; and if the ball is to be of iron make it as much as 12 balls, and if the ball is to be of lead, make it as much as 18 balls. I mean when the gun is to have the mouth fitted to receive 600 lbs. of stone ball, and more.

OF THE THICKNESS OF SMALL GUNS.

The thickness at the muzzle of small guns should be from a half to one third of the diameter of the ball, and the length from 30 to 36 balls.

OF LUTING THE FURNACE WITHIN.

The furnace must be luted before you put the metal in it, with earth from Valenza, and over that with ashes.

OF RESTORING THE METAL WHEN IT IS BECOMING COOL.

When you see that the bronze is congealing take some willow-wood cut in small chips and make up the fire with it.

THE CAUSE OF ITS CURDLING.

I say that the cause of this congealing often proceeds from too much fire, or from ill-dried wood.

TO KNOW THE CONDITION OF THE FIRE.

You may know when the fire is good and fit for your purpose by a clear flame,

pūte · d'esse · fiañe turbe e finire cō molto · fumo · nō te ne fidare, e massime ¹³quādo · avrai il bagnio · quasi · in acqua.

¶ DELLO ALLEGARE IL METALLO. ¶

¹⁵ Il metallo · si uole fare vniuersalmēte nelle bōbarde cō · 6 · o uisino 8 ¹⁶per ciēto ·, cioè 6 di stagnio · sopra · ciēto · di rame, e quāto meno ve ne metti, ¹⁷piv sicura fia · la bōbara.

¶ QUÀDO SI DEBE ACCÒPAGNIARE · LO STAGNIO · COL RAME. ¶

¹⁸ Lo stagnio · col rame si debbe · mettere · quādo · ài il rame cōdotto in acqua.

¶ COME SI DEBE AVMĒTARE IL FONDERE. ¶

²¹ Il fondere fia da te avmētato · quādo sarà cōdotto il rame in $\frac{2}{3}$ ²²in acqua ·, allora · con v legnio di castagnio ispesso rimaneggerai il rima²³nēte del rame ancora itero · ifra la · parte · sonduta.

15. metallo. 17. sichura. 18. acòpagniare . . chol. 19. acq“a”. 21. datte. 22. chastagnio . . rimanerai.

and if you see the tips of the flames dull and ending in much smoke do not trust it, and particularly when the flux metal is almost fluid.

OF ALLOYING THE METAL.

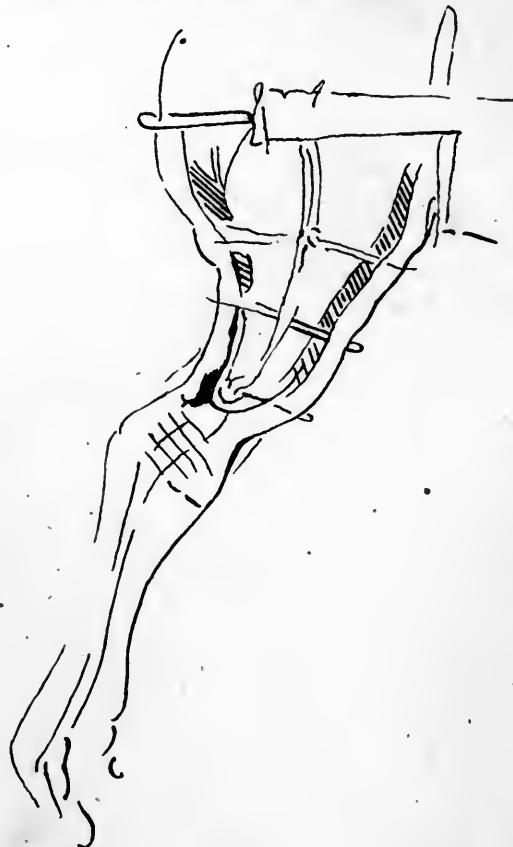

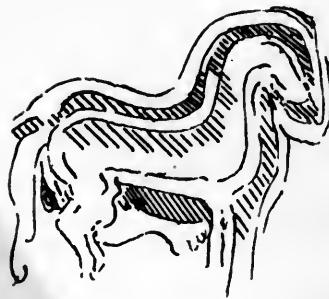

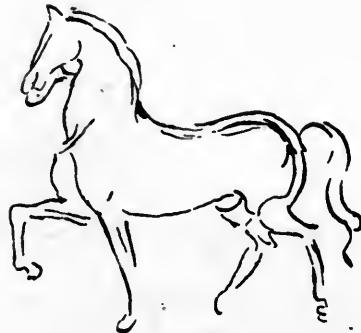

Metal for guns must invariably be made with 6 or even 8 per cent, that is 6 of tin to one hundred of copper, for the less you put in, the stronger will the gun be.

WHEN THE TIN SHOULD BE ADDED TO THE COPPER.

The tin should be put in with the copper when the copper is reduced to a fluid.

HOW TO HASTEN THE MELTING.

You can hasten the melting when $\frac{2}{3}$ ds of the copper is fluid; you can then, with a stick of chestnut-wood, repeatedly stir what of copper remains entire amidst what is melted.

Introductory Observations on the Architectural Designs (XII), and Writings on Architecture (XIII).

Until now very little has been known regarding Leonardo's labours in the domain of Architecture. No building is known to have been planned and executed by him, though by some contemporary writers incidental allusion is made to his occupying himself with architecture, and his famous letter to Lodovico il Moro,—which has long been a well-known document,—in which he offers his service as an architect to that prince, tends to confirm the belief that he was something more than an amateur of the art. This hypothesis has lately been confirmed by the publication of certain documents, preserved at Milan, showing that Leonardo was not only employed in preparing plans but that he took an active part, with much credit, as member of a commission on public buildings; his name remains linked with the history of the building of the Cathedral at Pavia and that of the Cathedral at Milan.

Leonardo's writings on Architecture are dispersed among a large number of MSS., and it would be scarcely possible to master their contents without the opportunity of arranging, sorting and comparing the whole mass of materials, so as to have some comprehensive idea of the whole. The sketches, when isolated and considered by themselves, might appear to be of but little value; it is not till we understand their general purport, from comparing them with each other, that we can form any just estimate of their true worth.

Leonardo seems to have had a project for writing a complete and separate treatise on Architecture, such as his predecessors and contemporaries had composed—Leon Battista Alberti, Filarete, Francesco di Giorgio, and perhaps also Bramante. But, on the other hand, it cannot be denied that possibly no such scheme was connected with the isolated notes and researches, treating on special questions, which are given in this work; that he was merely working at problems in which, for some reason or other he took a special interest.

A great number of important buildings were constructed in Lombardy during the period between 1472 and 1499, and among them there are several by unknown architects,

of so high an artistic merit, that it is certainly not improbable that either Bramante or Leonardo da Vinci may have been, directly or indirectly, concerned in their erection.

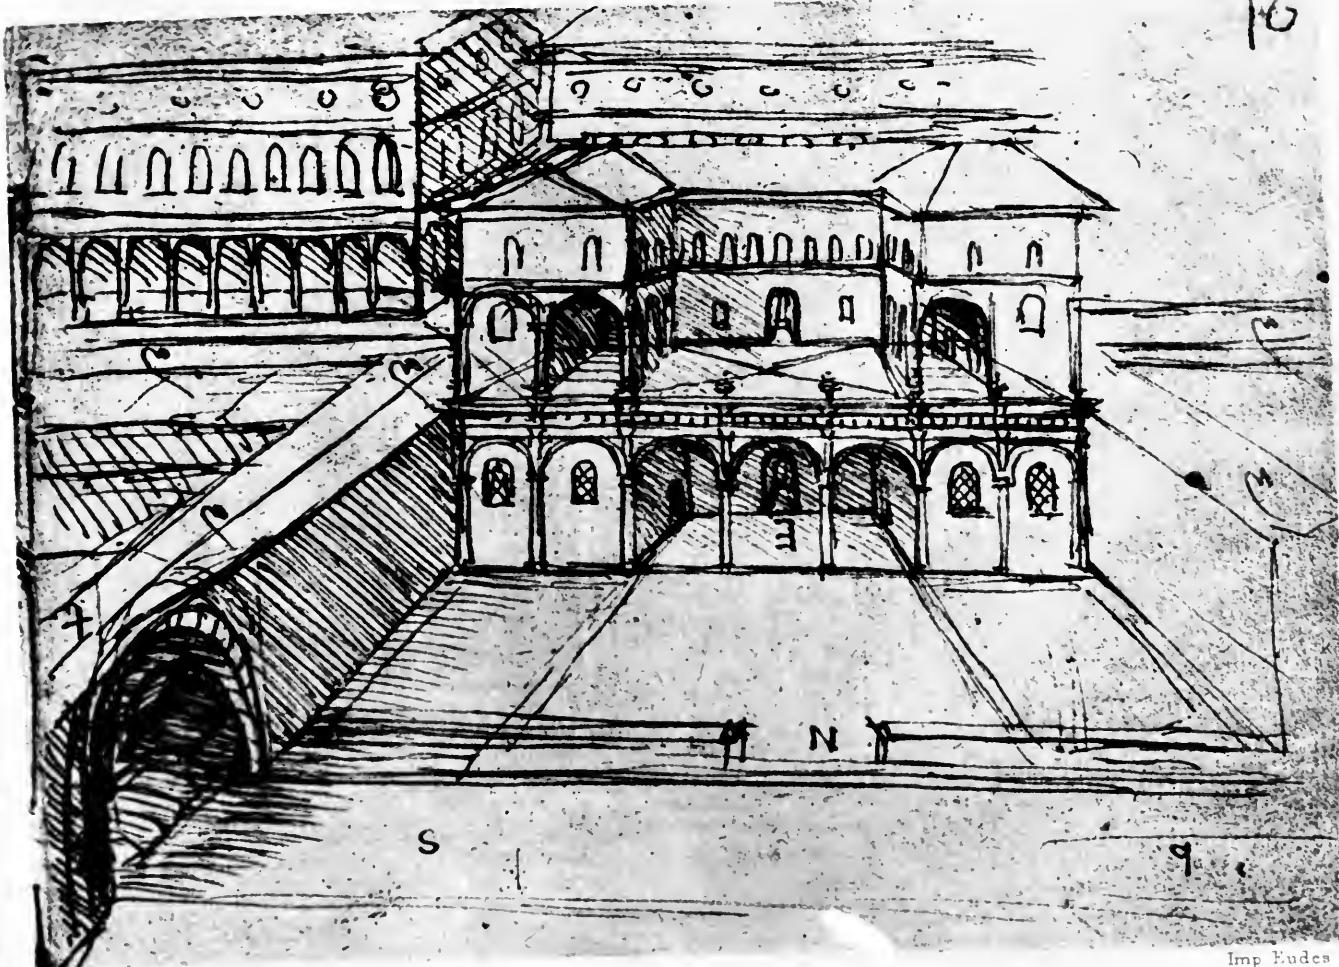

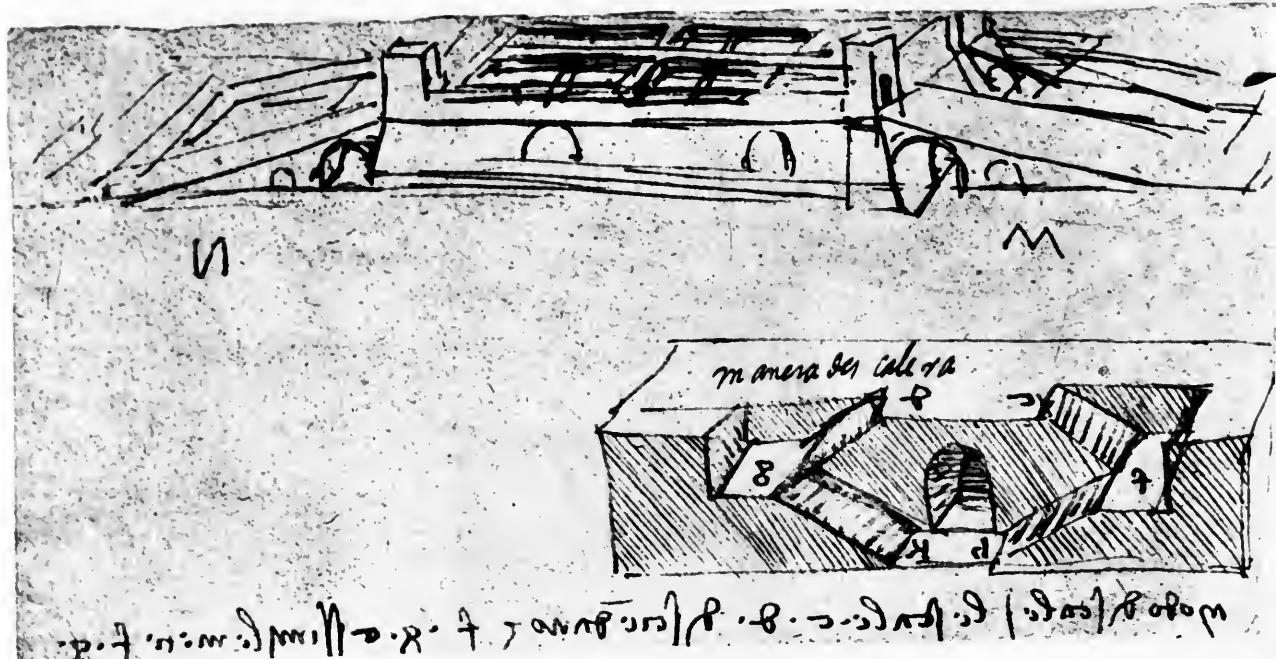

Having been engaged, for now nearly twenty years, in a thorough study of Bramante's life and labours, I have taken a particular interest in detecting the distinguishing marks of his style as compared with Leonardo's. In 1869 I made researches about the architectural drawings of the latter in the Codex Atlanticus at Milan, for the purpose of finding out, if possible the original plans and sketches of the churches of Santa Maria delle Grazie at Milan, and of the Cathedral at Pavia, which buildings have been supposed to be the work both of Bramante and of Leonardo. Since 1876 I have repeatedly examined Leonardo's architectural studies in the collection of his manuscripts in the Institut de France, and some of these I have already given to the public in my work on "Les Projets Primitifs pour la Basilique de St. Pierre de Rome", Pl. 43. In 1879 I had the opportunity of examining the manuscript in the Palazzo Trivulzio at Milan, and in 1880 Dr Richter showed me in London the manuscripts in the possession of Lord Ashburnham, and those in the British Museum. I have thus had opportunities of seeing most of Leonardo's architectural drawings in the original, but of the manuscripts themselves I have deciphered only the notes which accompany the sketches. It is to Dr Richter's exertions that we owe the collected texts on Architecture which are now published, and while he has undertaken to be responsible for the correct reading of the original texts, he has also made it his task to extract the whole of the materials from the various MSS. It has been my task to arrange and elucidate the texts under the heads which have been adopted in this work. MS. B. at Paris and the Codex Atlanticus at Milan are the chief sources of our knowledge of Leonardo as an architect, and I have recently subjected these to a thorough re-investigation expressly with a view to this work.

A complete reproduction of all Leonardo's architectural sketches has not, indeed, been possible, but as far as the necessarily restricted limits of the work have allowed, the utmost completeness has been aimed at, and no efforts have been spared to include every thing that can contribute to a knowledge of Leonardo's style. It would have been very interesting, if it had been possible, to give some general account at least of Leonardo's work and studies in engineering, fortification, canal-making and the like, and it is only on mature reflection that we have reluctantly abandoned this idea. Leonardo's occupations in these departments have by no means so close a relation to literary work, in the strict sense of the word as we are fairly justified in attributing to his numerous notes on Architecture.

Leonardo's architectural studies fall naturally under two heads:

I. Those drawings and sketches, often accompanied by short remarks and explanations, which may be regarded as designs for buildings or monuments intended to be built. With these there are occasionally explanatory texts.

II. Theoretical investigations and treatises. A special interest attaches to these because they discuss a variety of questions which are of practical importance to this day. Leonardo's theory as to the origin and progress of cracks in buildings is perhaps to be considered as unique in its way in the literature of Architecture.

XII.

Architectural Designs.

I. Plans for towns.

A. Sketches for laying out a new town with a double system of high-level and low-level road-ways.

Pl. LXXVII, No. 1 (MS. B, 15^b). A general view of a town, with the roads outside it sloping up to the high-level ways within.

Pl. LXXVII, No. 3 (MS. B, 16^b, see No. 741; and MS. B, 15^b, see No. 742) gives a partial view of the town, with its streets and houses, with explanatory references.

Pl. LXXVII, No. 2 (MS. B, 15^b; see No. 743). View of a double staircaise with two opposite flights of steps.

Pl. LXXVIII, Nos. 2 and 3 (MS. B, 37^a). Sketches illustrating the connection of the two levels of roads by means of steps. The lower galleries are lighted by openings in the upper road way.

B. Notes on removing houses (MS. Br. M., 270^b, see No. 744).

B. 16a]

741.

Le strade . m . sono . piv . alte . che le strade
· p . s . braccia 6 . , e ciascuna 2 strada · de' es-
sere larga braccia 20 , e avere 1/2 braccio
di calo dalle stremità 3 al mezzo , e in esso
mezzo sia a ogni braccio uno braccio di
4 fessura , largo uno dito , dove l'acqua che

The roads *m* are 6 braccia higher than
the roads *p s*, and each road must be 20
braccia wide and have 1/2 braccio slope from
the sides towards the middle; and in the
middle let there be at every braccio an
opening, one braccio long and one finger
wide, where the rain water may run off into

pioue debba scolare nelle case fatte al medesimo piano di p. s., e da ogni stremità della larghezza di detta strada sia uno portico di larghezza di braccia 6 i sulle colonne, e sappi che, chi volesse andare per tutta la terra per le strade alte, potrà a suo acconcio usarle, e chi volesse andare per le basse, ancora il simile; per le strade alte non devono andare carri, nè altre simili cose, anzi siano solamente per li giēteli o mini; per le basse deono andare i carri e altre some al uso e commodità del popolo; l'una casa de' volgiere le schiene all'altra, lasciādo la strada bassa in mezzo, ed agli usci n si mettano le vettovaglie, come legnie, vino e simili cose; per le vie sotterrane si devotare destri, stalle e simili cose fetide dall'uno arco all'altro

hollows made on the same level as p. s. And on each side at the extremity of the width of the said road let there be an arcade, 6 braccia broad, on columns; and understand that he who would go through the whole place by the high level streets can use them for this purpose, and he who would go by the low level can do the same. By the high streets no vehicles and similar objects should circulate, but they are exclusively for the use of gentlemen. The carts and burdens for the use and convenience of the inhabitants have to go by the low ones. One house must turn its back to the other, leaving the lower streets between them. Provisions, such as wood, wine and such things are carried in by the doors n, and privies, stables and other fetid matter must be emptied away underground. From one arch to the next

B. 58]

de' essere braccia 300, cioè ciascuna via che ricieve il lume dalle fessure delle strade di sopra, e a ogni arco de' essere una scala a lumaca tōda, perchè ne' cātoni delle quadre si piscia, e larga, e nella prima uolta sia vn uscio ch'entri i destri e pisciatoi comuni, e per scalas si disciēda dalla strada alta alla bassa, e le strade alte si comincino fori delle porte, e givnte a esse porte abbia no composto l'altezza di braccia 6; Fia fatta detta terra o presso a mare o altro fiume grosso, acciocchè le brulture della città, menate dall'acqua sieno portate via.

742.

must be 300 braccia, each street receiving its light through the openings of the upper streets, and at each arch must be a winding stair on a circular plan because the corners of square ones are always fouled; they must be wide, and at the first vault there must be a door entering into public privies and the said stairs lead from the upper to the lower streets and the high level streets begin outside the city gates and slope up till at these gates they have attained the height of 6 braccia. Let such a city be built near the sea or a large river in order that the dirt of the city may be carried off by the water.

because such houses are at first made in pieces on the open places, and can then be fitted together with their timbers in the site where they are to be permanent.

⁹Li omini del paese abitino le nuove case in parte, ¹²quando nō v'è la cor¹³te.

[9] Let the men of the country [or the village] partly inhabit the new houses when the court is absent[12].

744. On the same page we find notes referring to Romolontino and Villafranca with a sketch-map of the course of the "Sodro" and the "(Lo)era" (both are given in the text farther on). There can hardly be a doubt that the last sentence of the passage

given above, refers to the court of Francis I. King of France.—L.9—13 are written inside the larger sketch, which, in the original, is on the right hand side of the page by the side of lines 1—8. The three smaller sketches are below. J. P. R.

II. Plans for canals and streets in a town.

Pl. LXXIX, 1. and 2, (MS. B, 37^b, see No. 745, and MS. B. 36^a, see No. 746). A Plan for streets and canals inside a town, by which the cellars of the houses are made accessible in boats.

The third text given under No. 747 refers to works executed by Leonardo in France.

B. 37^b]

La faccia a^2m darà il lume 3 alle stāze; $^5a \cdot e$ sarà braccia 6, $a \cdot b$ fia braccia 8, $b \cdot e$ fia braccia 30; acciochè le stanze sotto i portici siano 6 luminose, $c \cdot d \cdot f$ fia il loco donde se vadi a scaricare le navi in nel^{le} case; A volere che questa cosa abbia effetto bisogna che la inondatione 8 de' fiumi non mādasse l' acqua alle canove; è neciessario elegiere sito accomodato, 9 come porsi uicino a vno fiume, il quale ti dia i canali, che nō si possino nè per 10 inōdatione o secchezza delle acque dare mutatione alle altezze d'esse acque, 11 e il modo è qui di sotto figurato, e facciasi eletione di bel fiume che nō intorbidi, nè 12 per pioggia, come Tesino Adda e molti altri; il modo che l'acque senpre

745.

The front $a \cdot m$ will give light to the rooms; $a \cdot e$ will be 6 braccia— $a \cdot b$ 8 braccia— $b \cdot e$ 30 braccia, in order that the rooms under the porticoes may be lighted; $c \cdot d \cdot f$ is the place where the boats come to the houses to be unloaded. In order to render this arrangement practicable, and in order that the inundation of the rivers may not penetrate into the cellars, it is necessary to chose an appropriate situation, such as a spot near a river which can be diverted into canals in which the level of the water will not vary either by inundations or drought. The construction is shown below; and make choice of a fine river, which the rains do not render muddy, such as the Ticino, the Adda and many others. [12]The construction

745. 2. ilume. 5. br. 6 . . br. 8 . . chelle . . sucto. 6. donde [si dia lum] se . . asscharicare . . ine. 7. chuesta . . abbi effetto bisogna accio chella nōdatione. 8. mādassi . . achomodato. 9. vissino. 10. rinōdatione ossecheza . . alteze. 11. el modo . . soto . . effaci . . nōnintorbidine. 12. per piogge chome tesino adda . . chellacque. 13. alteza . . disucto. 14. tera . . sare . . disfacingino.

745. L. 1—4 are on the left hand side and within the sketch given on Pl. LXXIX, No. 1. Then follows after line 14, the drawing of a sluicegate—*conca*—of which the use is explained in the text below it.

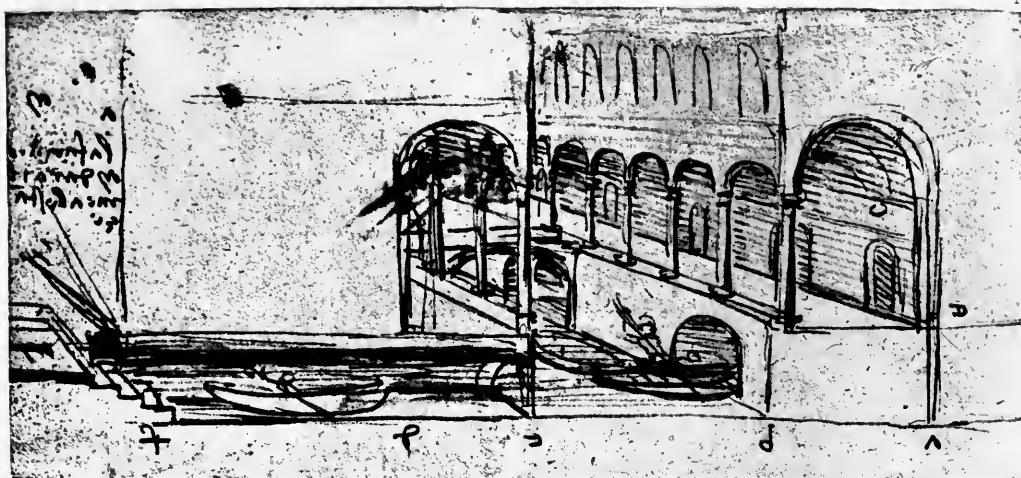

12 *Tesino, Adda e molti altri, i.e.* rivers coming from the mountains and flowing through lakes.

On the page 38^a, which comes next in the original MS. is the sketch of an oval plan of a town over which is written “modo di canali per la città” and through the longer axis of it “canale magior” is written with “*Tesino*” on the prolongation of the canal.

747. In the original this text comes immediately after the passage given as No. 744. The remainder of the writing on the same page refers to the construction of canals and is given later, in the "Topographical Notes".

10. *Romolontino* is Romorantin, South of Orleans in France.

Lines 1—11 are written to the right of the plan lines 11—13 underneath it. J. P. R.

III. Castles and Villas.

A. Castles.

Pl. LXXX, No. 1 (P. V. fol. 39^b; No. d'ordre 2282). The fortified place here represented is said by Vallardi to be the "castello" at Milan, but without any satisfactory reason. The high tower behind the "rivellino" ravelin—seems to be intended as a watch-tower.

Pl. LXXX, No. 2 (MS. B, 23^b). A similarly constructed tower probably intended for the same use.

Pl. LXXX, No. 3 (MS. B). Sketches for corner towers with steps for a citadel.

Pl. LXXX, No. 4 (W. XVI). A cupola crowning a corner tower; an interesting example of decorative fortification. In this reproduction of the original pen and ink drawing it appears reversed.

B. Projects for Palaces.

Pl. LXXXI, No. 2 (MS. C. A, 75^b; 221^a, see No. 748): Project for a royal residence at Amboise in France.

Pl. LXXXII, No. 1 (C. A 308^a; 939^a). A plan for a somewhat extensive residence, and various details; but there is no text to elucidate it; in courts are written the three names:

Sām (St. Mark) cosi (Cosmo) giovā (John),
arch mo nino

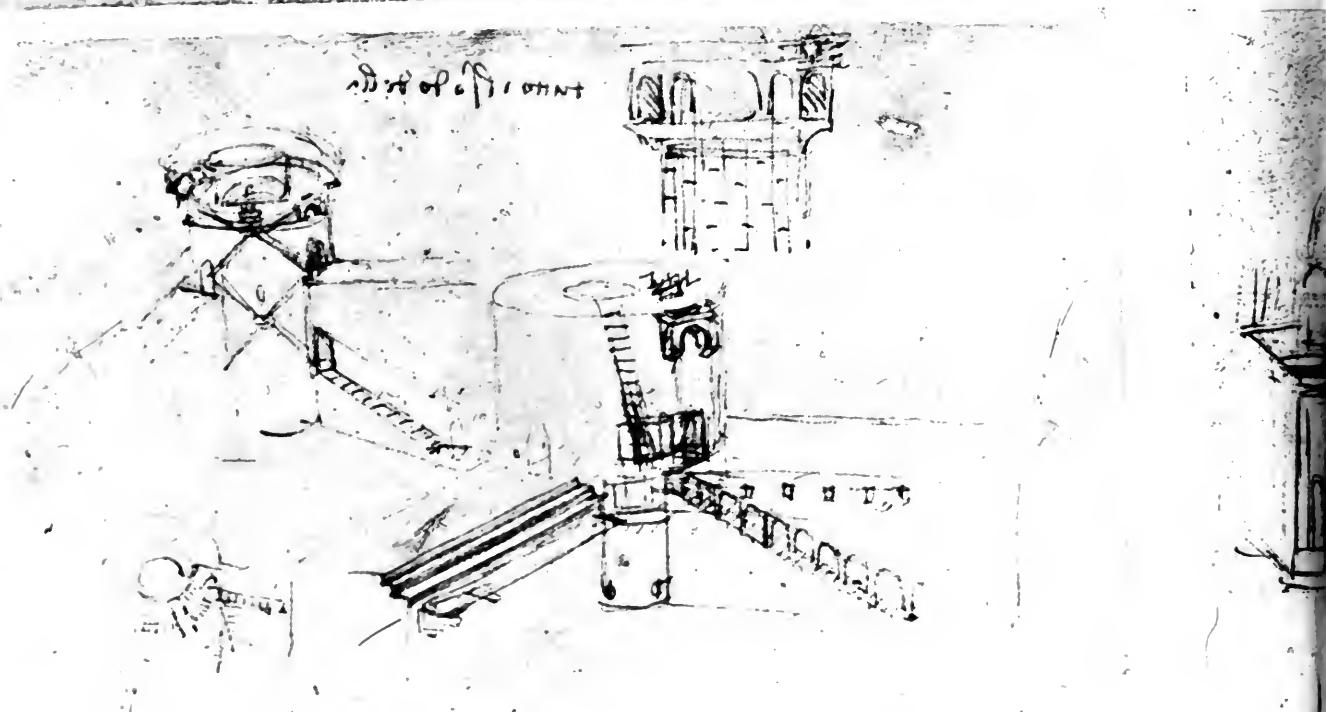

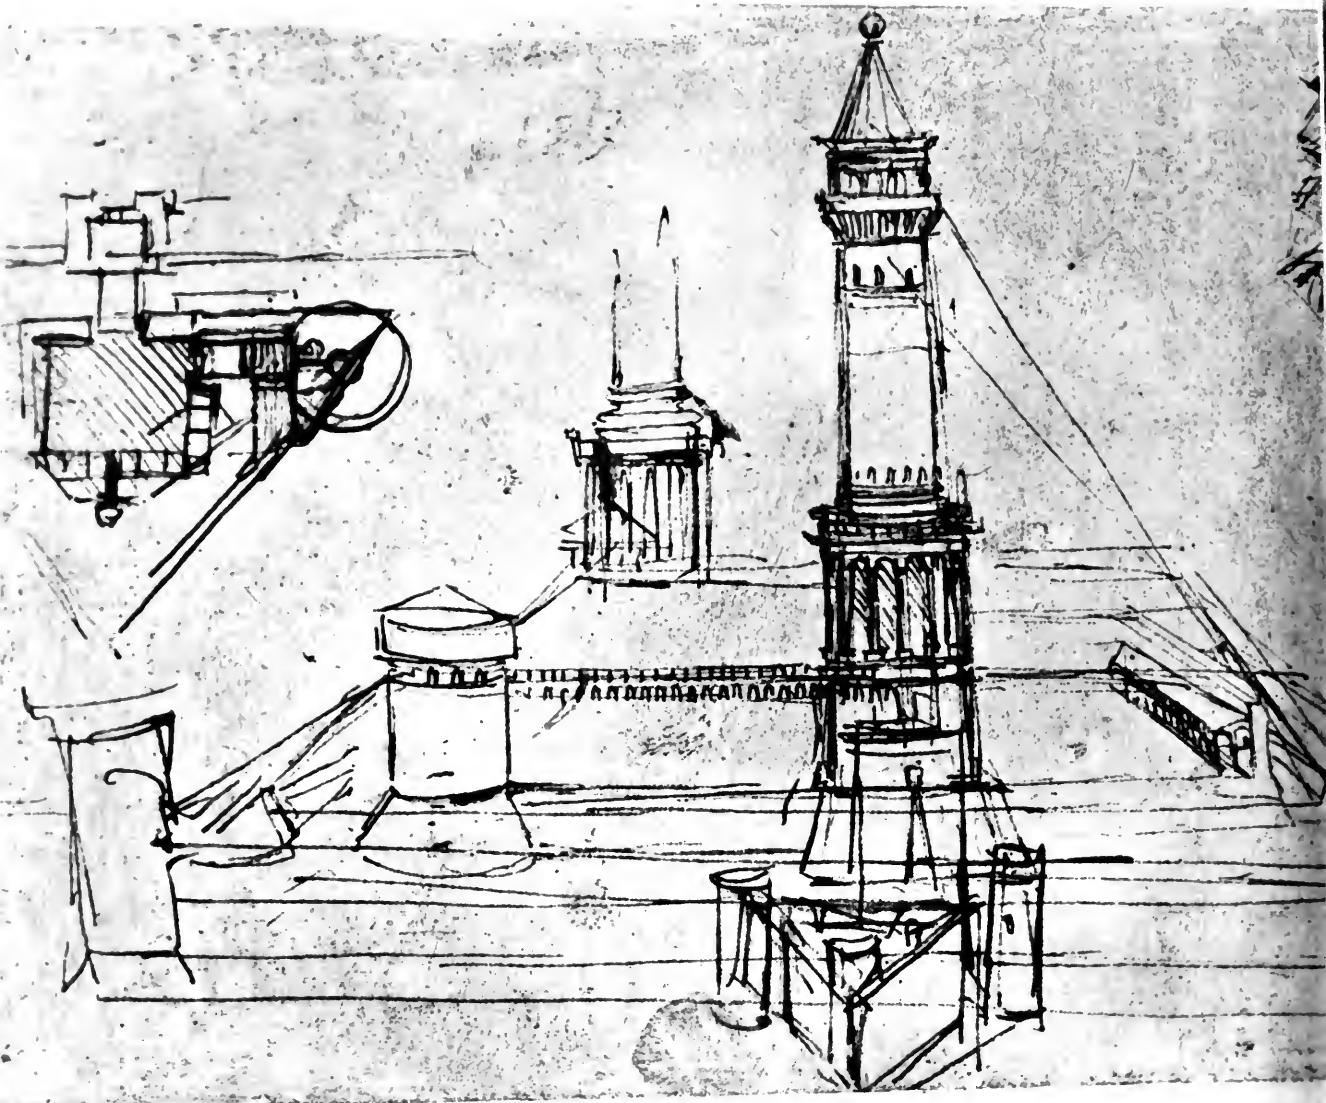

o

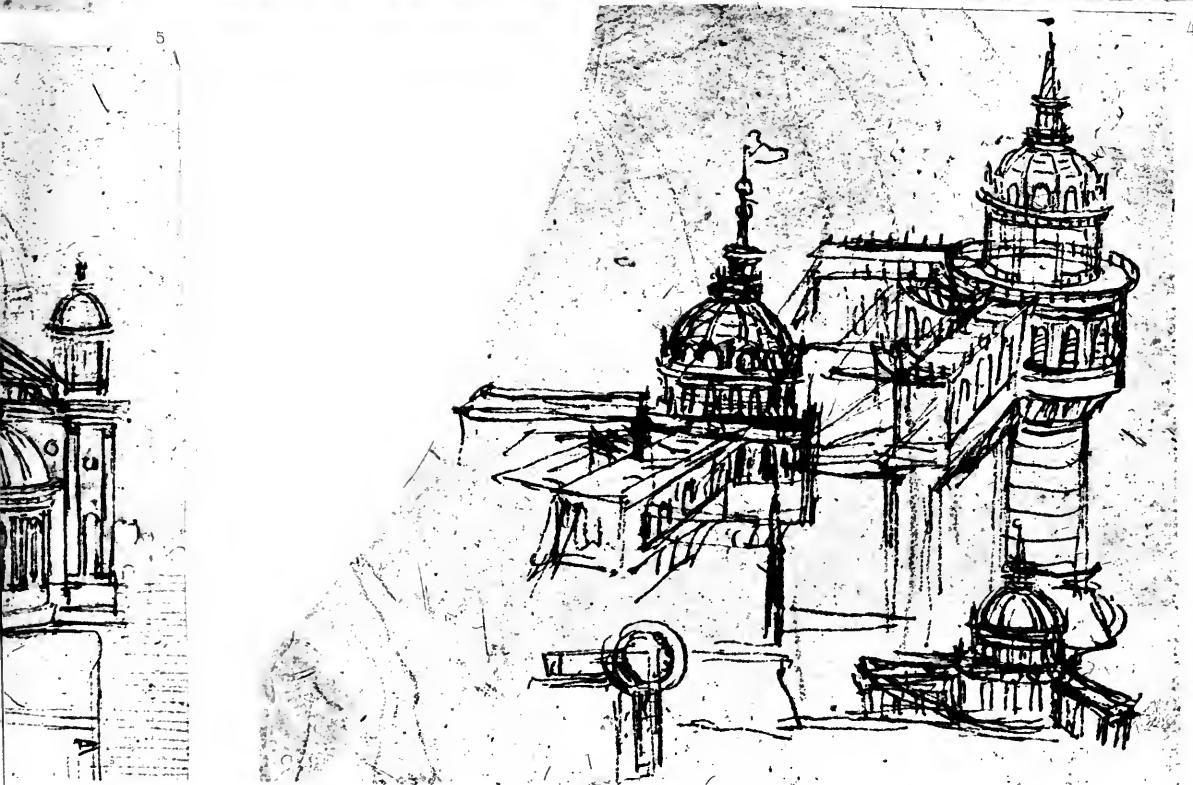

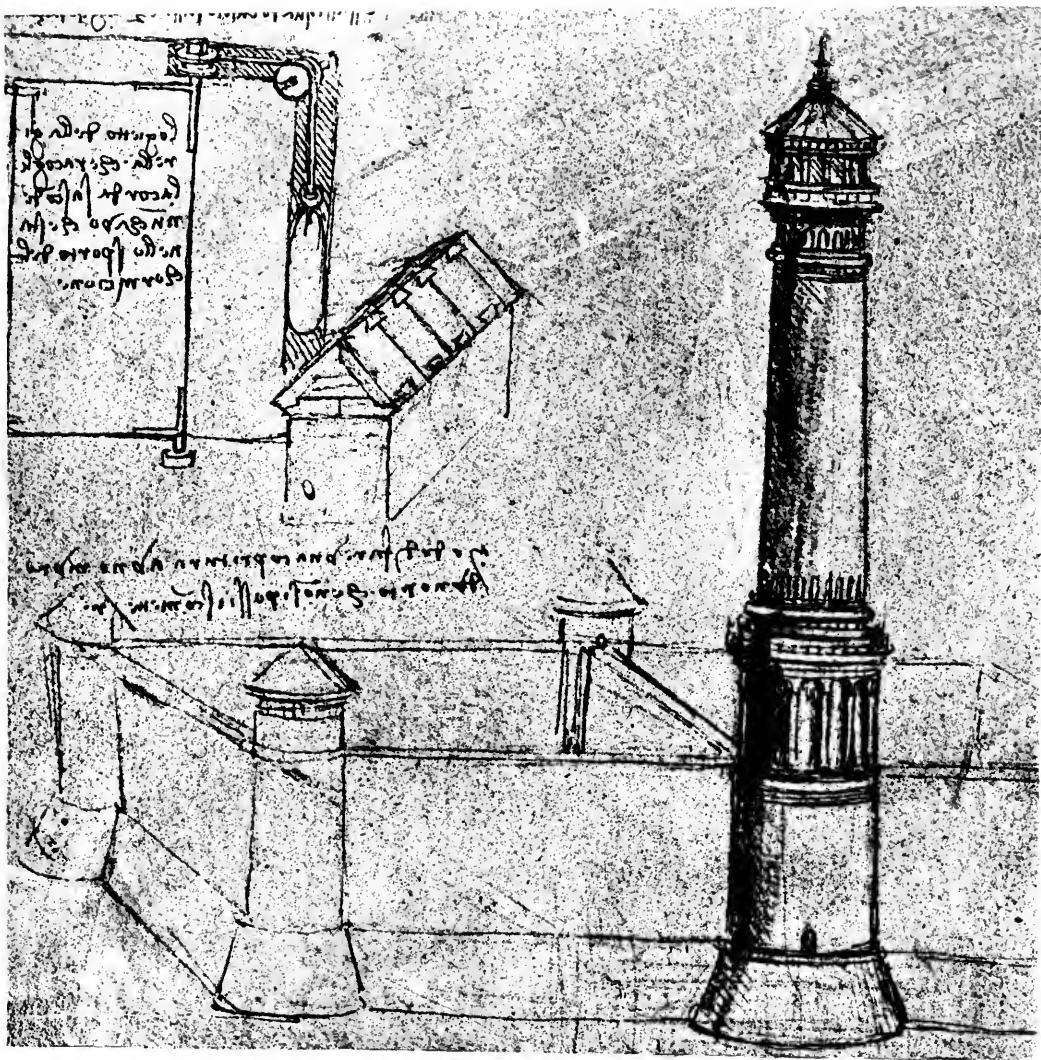

C. Plans for small castles or Villas.

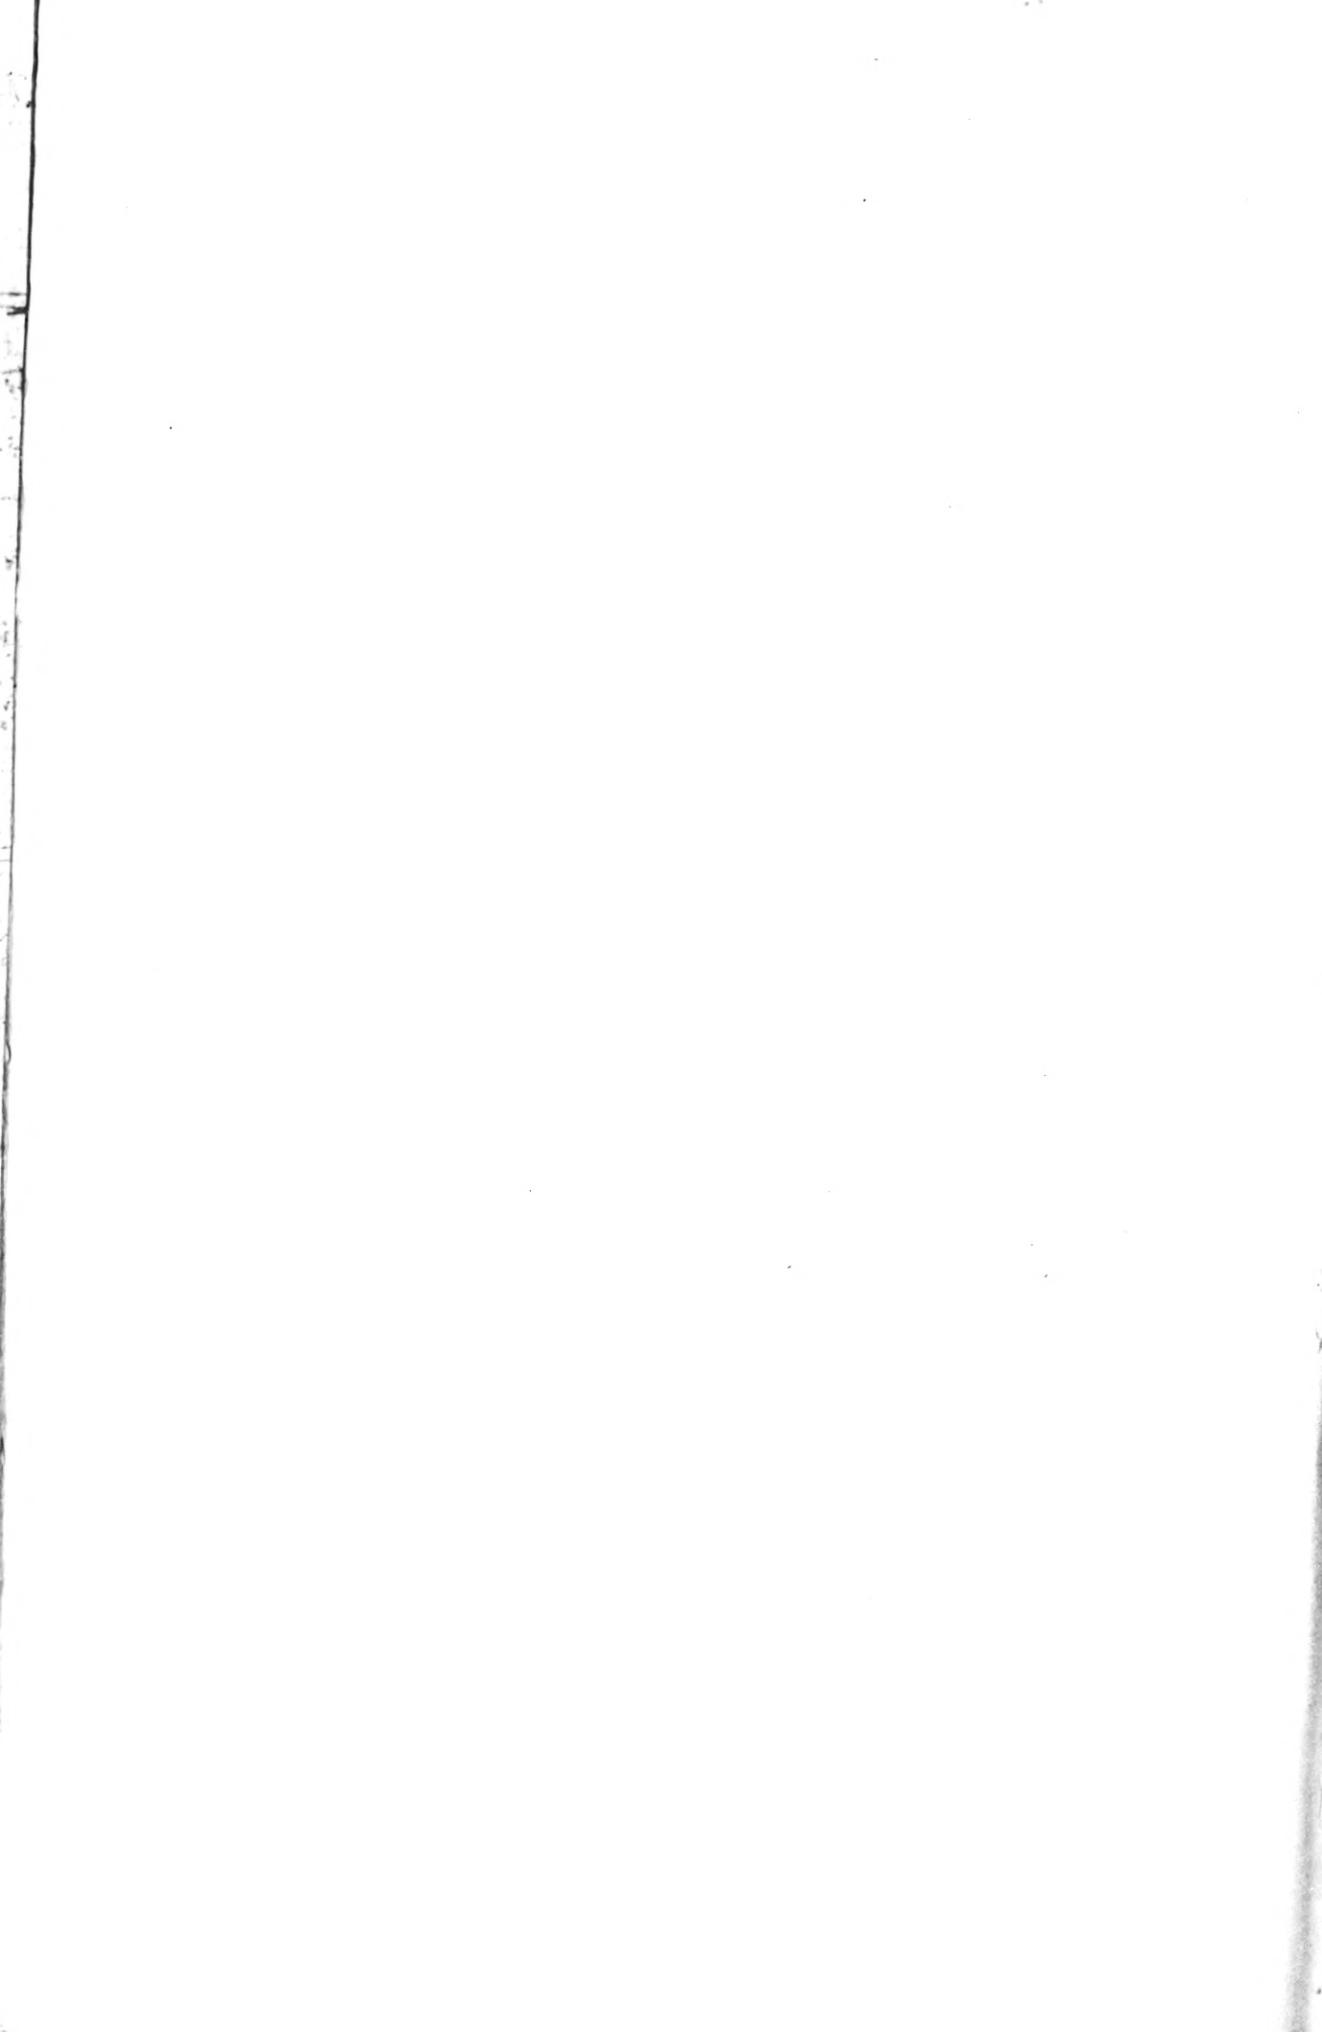

The three following sketches greatly resemble each other.

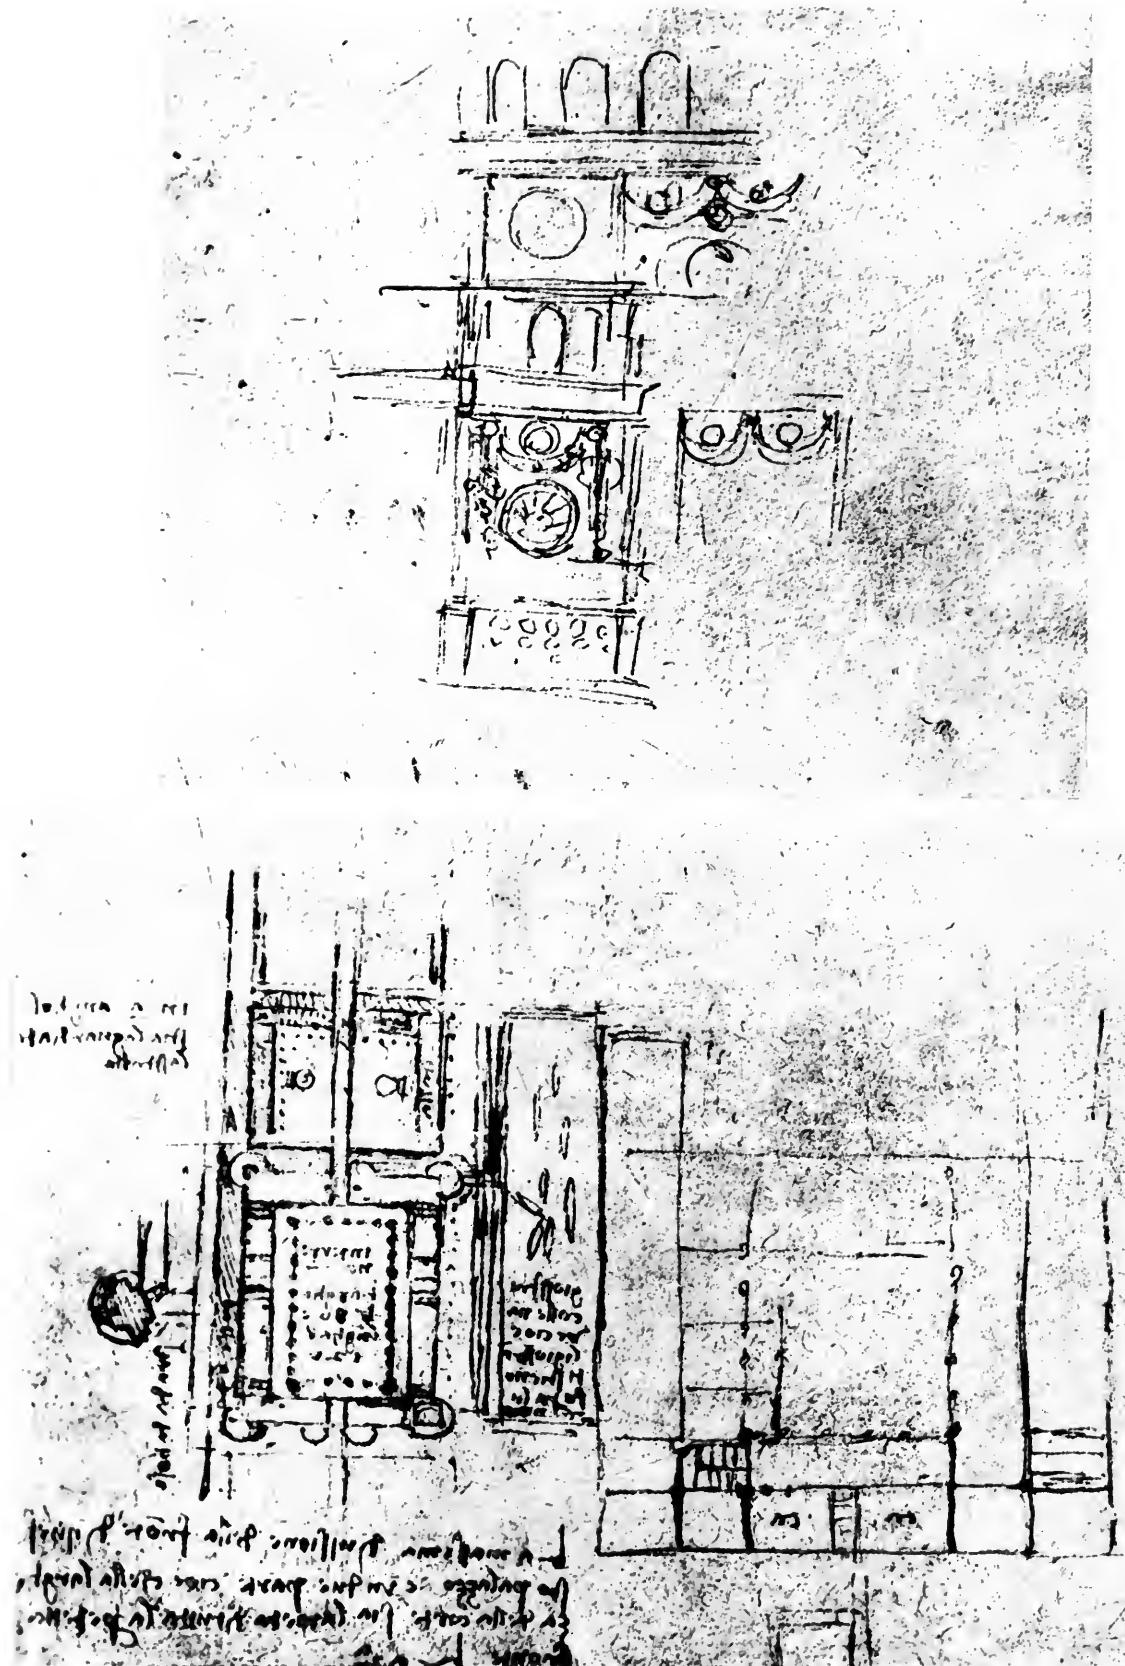

Pl. LXXXII, No. 2 (MS. K³ 36^b; see No. 749).

32'

amico, con il suffisso, che
muro

Pl. LXXXII, No. 3 (MS. B 60^a; see No. 750).

Pl. LXXXIII (W. XVII). The text on this sheet refers to Cyprus (see Topographical Notes No. 1103), but seems to have no direct connection with the sketches inserted between.

Pl. LXXXVIII, Nos. 6 and 7 (MS. B, 12^a; see No. 751). A section of a circular pavilion with the plan of a similar building by the side of it. These two drawings have a special historical interest because the text written below mentions the Duke and Duchess of Milan.

The sketch of a villa on a terrace at the end of a garden occurs in C. A. 150; and in C. A. 77^b; 225^b is another sketch of a villa somewhat resembling the Belvedere of Pope Innocent VIII, at Rome. In C. A. 62^b; 193^b there is a Loggia.

Pl. LXXXII, No. 4 (C. A. 387^a; 1198^a) is a tower-shaped Loggia above a fountain. The machinery is very ingeniously screened from view.

C. A. 75^b; 221^a

748.

[Il palazzo del principe de' auere dinati vna piazza.]

²Le abitationi doue s'abbia a ballare o fare diuersi ³salti o uari movimenti con moltitudine di gente sieno terrene, perchè già n'ò veduto ruinare colla morte di ⁵molti; E sopra tutto fa che ogni muro, per sottile che ⁶sia, abbia fondamēto in terra o sopra archi bene ⁷fondati.

⁸Sieno li mezzanelli delli abitacoli ⁹disusi da muri fatti di stretti mattoni e sanza legnami per ri¹¹spetto del fuoco.

751. This passage was first published by AMORETTI in *Memorie Storiche Cap. X: Una sua opera da riportarsi a quest' anno fu il bagno fatto per la duchessa Beatrice nel parco o giardino del Castello. Leonardo non solo ne disegnò il piccolo edificio a foglia di padiglione, nel cod. segnato Q. 3, dandone anche separatamente la pianta; ma sotto vi scrisse: Padiglione del giardino della duchessa; e sotto la pianta: Fondamento del padiglione ch'è nel mezzo del labirinto del duca di Milano; nessuna data è presso il padiglione, disegnato nella pagina 12, ma poco sopra fra molti circoli intrecciati vedes = 10 Lu-*
glio 1492 = e nella pagina 2 presso ad alcuni disegni di legumi qualcheduno ha letto Settembre 1482 in vece di 1492, come dovea scriverevi, e probabilmente scrisse Leonardo.

The original text however hardly bears the interpretation put upon it by AMORETTI. He is mis-

taken as to the mark on the MS. as well as in his statements as to the date, for the MS. in question has no date; the date he gives occurs, on the contrary, in another note-book. Finally, it appears to me quite an open question whether Leonardo was the architect who carried out the construction of the dome-like Pavilion here shown in section, or of the ground plan of the Pavilion drawn by the side of it. Must we, in fact, suppose that "il duca di Milano" here mentioned was, as has been generally assumed, Ludovico il Moro? He did not hold this title from the Emperor before 1494; till that date he was only called *Governatore* and Leonardo in speaking of him, mentions him generally as "il Moro" even after 1494. On January 18, 1491, he married Beatrice d'Este the daughter of Ercole I, Duke of Ferrara. She died on the 2nd January 1497, and for the reasons I have given it seems improbable that it should be this princess who is here spoken of as the "Duchessa di Milano". From the style of the handwriting it appears to me to be beyond

IV. Ecclesiastical Architecture.

A. General Observations.

B. 39 δ]

753.

Senpre vno edifitio vole · essere ²spicato dintorno a volere dimostra³re la sua vera forma.

Ash. II. 8δ]

Qui nō si può nè si debe fare ²cāpanile, anzi debe ³stare separato come à il do⁴mo e Sā Giovanni di Firēze, ⁵e così il domo di Pisa · che mo⁶stra il cāpanile per se dispicca⁷to i circa e così il domo, e o⁸gni vno per se può mostrare la sua ⁹perfet¹⁰ione, e chi lo uolesse pure ¹⁰fare colla chiesa, faccia la lā¹¹terna scusare cāpanile ¹²come è la chiesa di Chiaravalle.

A building should always be detached on all sides so that its form may be seen.

754.

Here there cannot and ought not to be any *campanile*; on the contrary it must stand apart like that of the Cathedral and of San Giovanni at Florence, and of the Cathedral at Pisa, where the campanile is quite detached as well as the dome. Thus each can display its own perfection. If however you wish to join it to the church, make the lantern serve for the campanile as in the church at Chiaravalle.

753. 2. ispitchato.

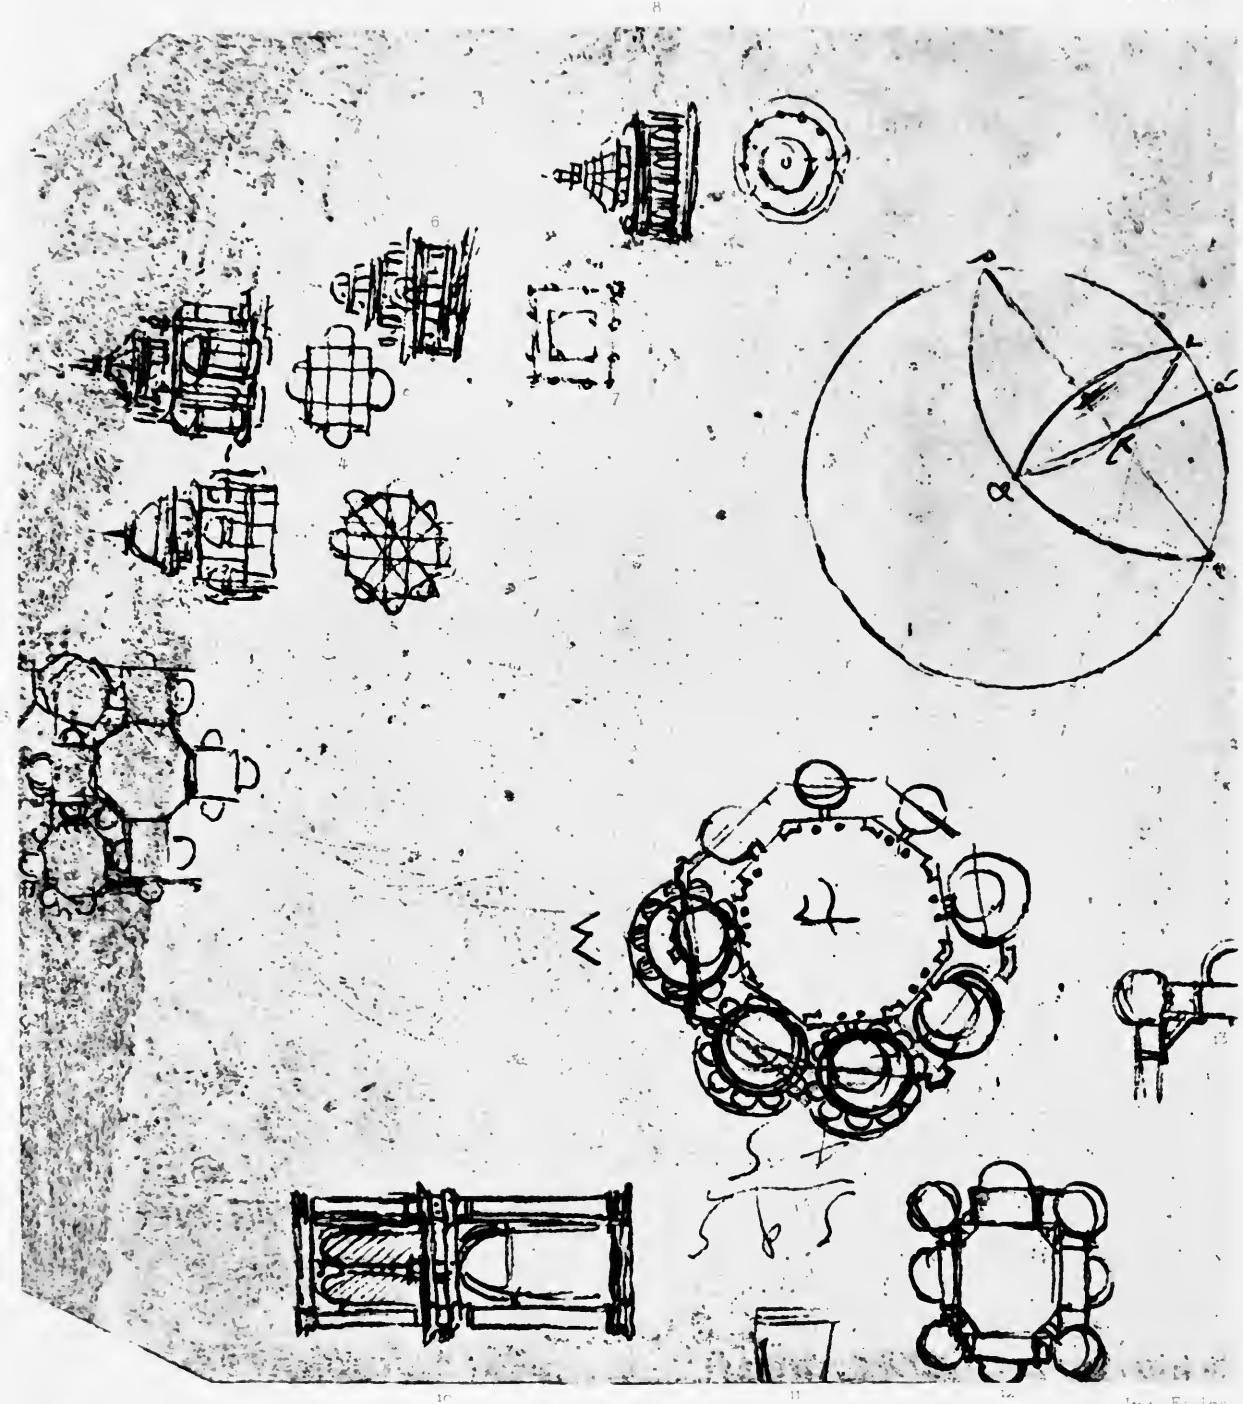

754. 1. po nessi. 2. chāpanile. 3. chome. 4. essāgiovani. 6. chāpanile . . displicha. 7. circho e chosi. 8. po. 9. perfectione. 10. colla. 11. schusare chāpanile.

753. The original text is reproduced on Pl. XCII, No. 1 to the left hand at the bottom.

754. This text is written by the side of the plan given on Pl. XCI. No. 2.

12. The Abbey of Chiaravalle, a few miles from Milan, has a central tower on the intersection of the

cross in the style of that of the Certosa of Pavia, but the style is mediaeval (A. D. 1330). Leonardo seems here to mean, that in a building, in which the circular form is strongly conspicuous, the campanile must either be separated, or rise from the centre of the building and therefore take the form of a lantern.

B. 18 b]

755. This text is to the left of the domed church reproduced on Pl. LXXXVII, No. 2.

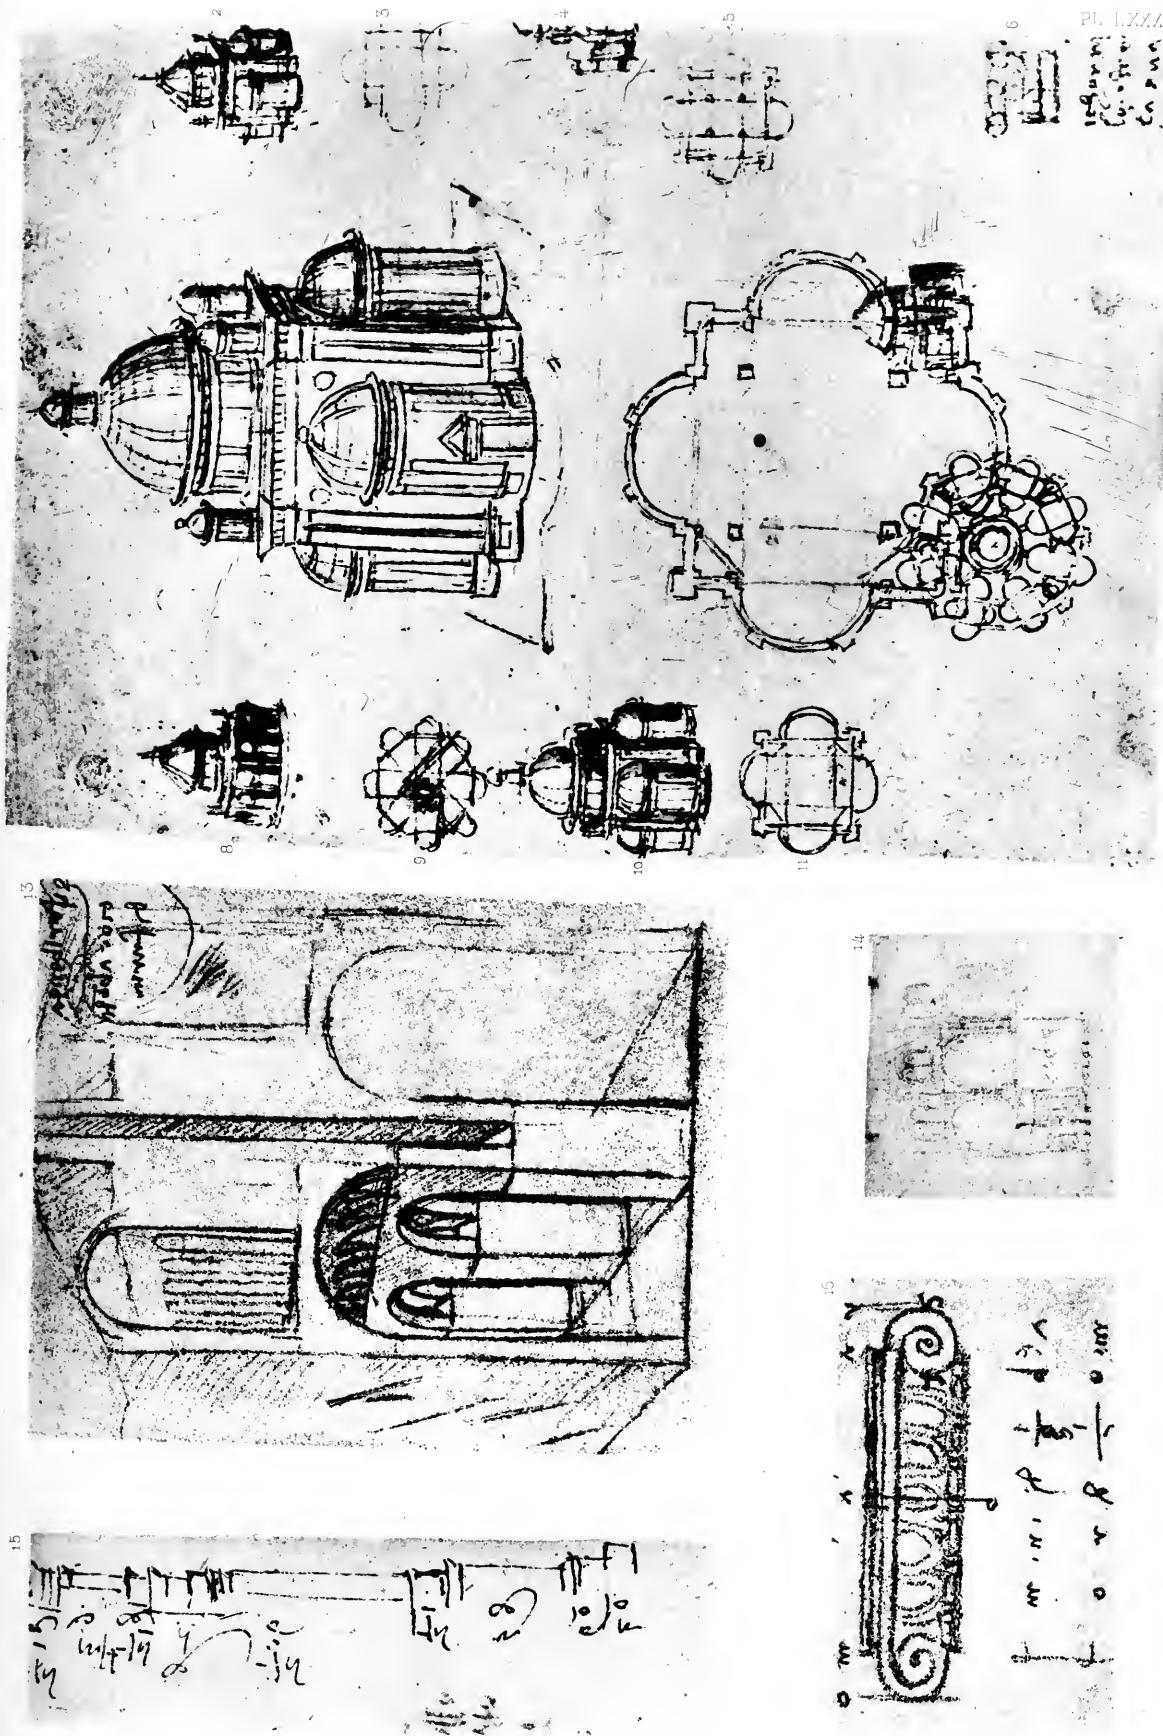

B. *The theory of Dome Architecture.*

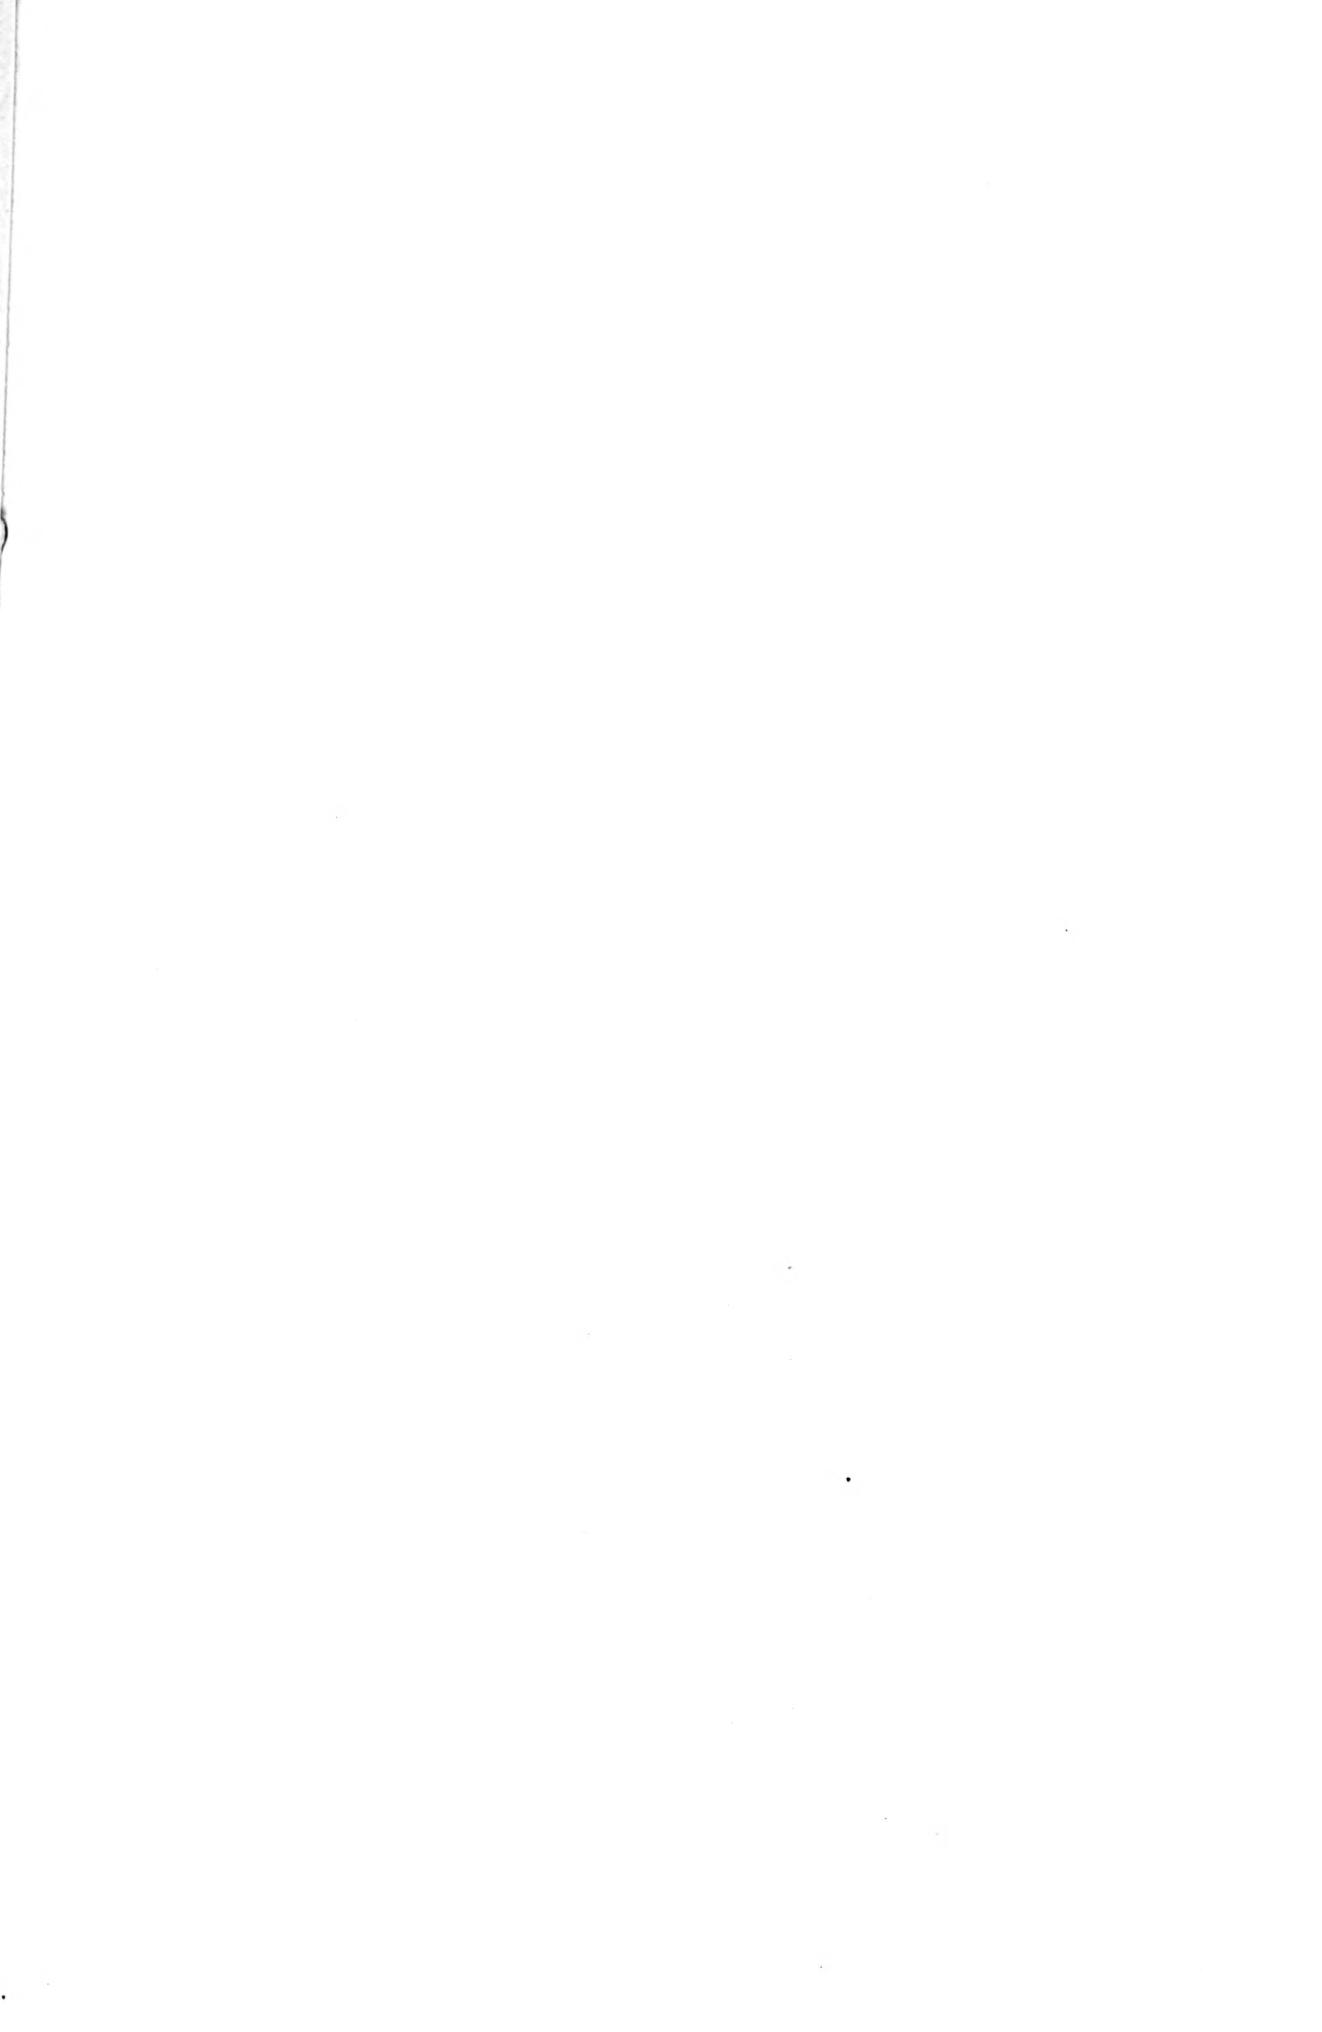

This subject has been more extensively treated by Leonardo in drawings than in writing. Still we may fairly assume that it was his purpose, ultimately to embody the results of his investigation in a "Trattato delle Cupole." The amount of materials is remarkably extensive. MS. B is particularly rich in plans and elevations of churches with one or more domes—from the simplest form to the most complicated that can be imagined. Considering the evident connexion between a great number of these sketches, as well as the impossibility of seeing in them designs or preparatory sketches for any building intended to be erected, the conclusion is obvious that they were not designed for any particular monument, but were theoretical and ideal researches, made in order to obtain a clear understanding of the laws which must govern the construction of a great central dome, with smaller ones grouped round it; and with or without the addition of spires, so that each of these parts by itself and in its juxtaposition to the other parts should produce the grandest possible effect.

In these sketches Leonardo seems to have exhausted every imaginable combination.¹ The results of some of these problems are perhaps not quite satisfactory; still they cannot be considered to give evidence of a want of taste or of any other defect in Leonardo's architectural capacity. They were no doubt intended exclusively for his own instruction, and, before all, as it seems, to illustrate the features or consequences resulting from a given principle.

¹ In MS. B, 32^b (see Pl. C III, No. 2) we find eight geometrical patterns, each drawn in a square; and in MS. C. A., fol. 87 to 98 form a whole series of patterns done with the same intention.

جی
بی
لی

I have already, in another place,¹ pointed out the law of construction for buildings crowned by a large dome: namely, that such a dome, to produce the greatest effect possible, should rise either from the centre of a Greek cross, or from the centre of a structure of which the plan has some symmetrical affinity to a circle, this circle being at the same time the centre of the whole plan of the building.

Leonardo's sketches show that he was fully aware, as was to be expected, of this truth. Few of them exhibit the form of a Latin cross, and when this is met with, it generally gives evidence of the determination to assign as prominent a part as possible to the dome in the general effect of the building.

While it is evident, on the one hand, that the greater number of these domes had no particular purpose, not being designed for execution, on the other hand several reasons may be found for Leonardo's perseverance in his studies of the subject.

Besides the theoretical interest of the question for Leonardo and his Trattato and besides the taste for domes prevailing at that time, it seems likely that the intended erection of some building of the first importance like the Duomos of Pavia and Como, the church of Sta. Maria delle Grazie at Milan, and the construction of a Dome or central Tower (Tiburio) on the cathedral of Milan, may have stimulated Leonardo to undertake a general and thorough investigation of the subject; whilst Leonardo's intercourse with Bramante for ten years or more, can hardly have remained without influence in this matter. In fact now that some of this great Architect's studies for S. Peter's at Rome have at last become known, he must be considered henceforth as the greatest master of Dome-Architecture that ever existed. His influence, direct or indirect even on a genius like Leonardo seems the more likely, since Leonardo's sketches reveal a style most similar to that of Bramante, whose name indeed, occurs twice in Leonardo's manuscript notes. It must not be forgotten that Leonardo was a Florentine; the characteristic form of the two principal domes of Florence, Sta. Maria del Fiore and the Battisterio, constantly appear as leading features in his sketches.

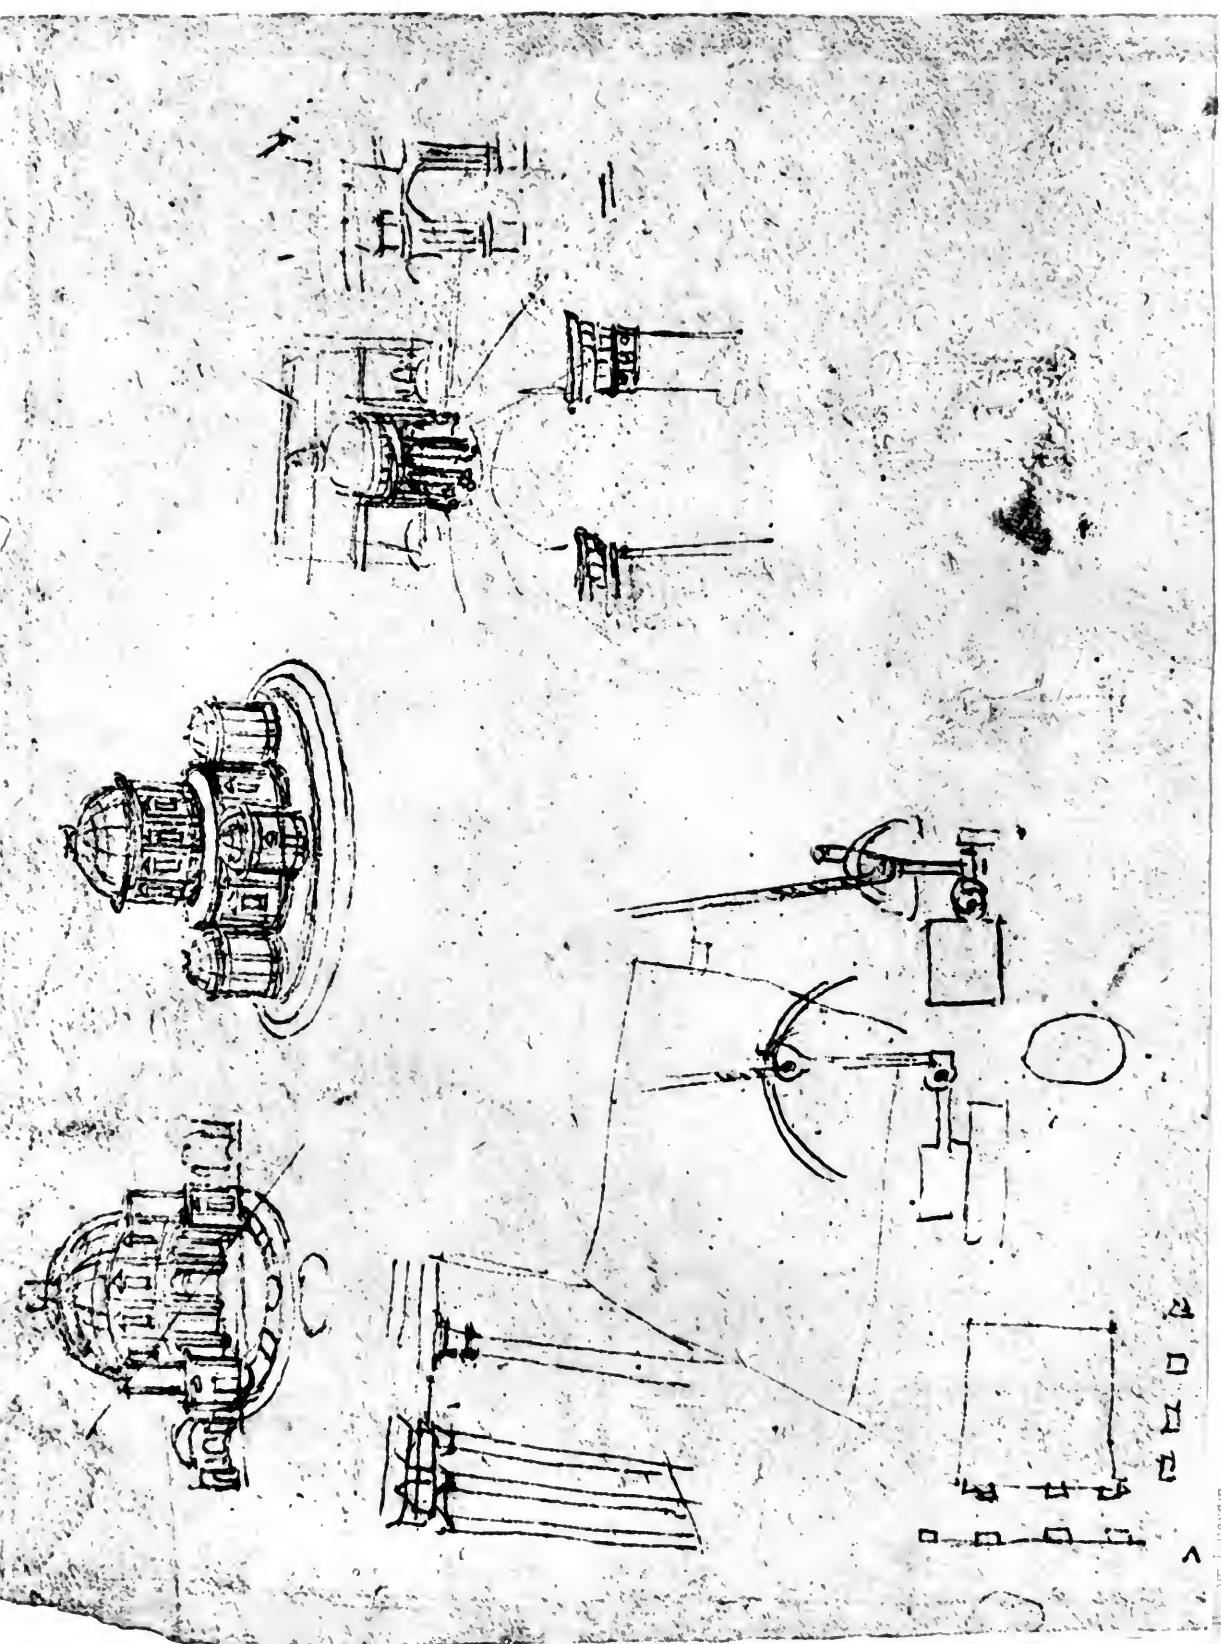

The church of San Lorenzo at Milan, was at that time still intact. The dome is to this day one of the most wonderful cupolas ever constructed, and with its two smaller domes might well attract the attention and study

¹ Les Projets Primitifs pour la Basilique de St. Pierre de Rome, par Bramante, Raphael etc., Vol. I, p. 2.

of a never resting genius such as Leonardo. A whole class of these sketches betray in fact the direct influence of the church of S. Lorenzo, and this also seems to have suggested the plan of Bramante's dome of St. Peter's at Rome.

In the following pages the various sketches for the construction of domes have been classified and discussed from a general point of view. On two sheets: *Pl. LXXXIV* (*C. A.* 354^b; 118^a) and *Pl. LXXXV*, Nos. 1—11 (*Ash. II*, 6^b) we see various dissimilar types, grouped together; thus these two sheets may be regarded as a sort of nomenclature of the different types, on which we shall now have to treat.

1. Churches formed on the plan of a Greek cross.

Group I.

Domes rising from a circular base.

The simplest type of central building is a circular edifice.

Pl. LXXXIV, No. 9. Plan of a circular building surrounded by a colonnade.

Pl. LXXXIV, No. 8. Elevation of the former, with a conical roof.

Pl. XC. No. 5. A dodecagon, as most nearly approaching the circle.

Pl. LXXXVI, No. 1, 2, 3. Four round chapels are added at the extremities of the two principal axes;—compare this plan with fig. 1 on p. 44 and fig. 3 on p. 47 (W. P. 5^b) where the outer wall is octagonal.

Group II.

Domes rising from a square base.

The plan is a square surrounded by a colonnade, and the dome seems to be octagonal.

Pl. LXXXIV. The square plan below the circular building No. 8, and its elevation to the left, above the plan: here the ground-plan is square, the upper storey octagonal. A further development of this type is shown in two sketches C. A. 3^a (not reproduced here), and in

Pl. LXXXVI, No. 5 (which possibly belongs to No. 7 on Pl. LXXXIV).

Pl. LXXXV, No. 4, and p. 45, Fig. 3, a Greek cross, repeated p. 45, Fig. 3, is another development of the square central plan.

The remainder of these studies show two different systems; in the first the dome rises from a square plan,—in the second from an octagonal base.

Group III.

Domes rising from a square base and four pillars.¹

a) **First type.** *A Dome resting on four pillars in the centre of a square edifice, with an apse in the middle, of each of the four sides. We have eleven variations of this type.*

- aa) *Pl. LXXXVIII, No. 3.*
- bb) *Pl. LXXX, No. 5.*
- cc) *Pl. LXXXV, Nos. 2, 3, 5.*
- dd) *Pl. LXXXIV, No. 1 and 4 beneath.*
- ee) *Pl. LXXXV, Nos. 1, 7, 10, 11.*

b) **Second type.** *This consists in adding aisles to the whole plan of the first type; columns are placed between the apses and the aisles; the plan thus obtained is very nearly identical with that of S. Lorenzo at Milan.*

Fig. 1 on p. 56. (MS. B, 75^a) shows the result of this treatment adapted to a peculiar purpose about which we shall have to say a few words later on.

Pl. XCV, No. 1, shows the same plan but with the addition of a short nave. This plan seems to have been suggested by the general arrangement of S. Sepolcro at Milan.

MS. B. 57^b (see the sketch reproduced on p. 51). By adding towers in the four outer angles to the last named plan, we obtain a plan which bears the general features of Bramante's plans for S. Peter's at Rome.² (See p. 51 Fig. 1.)

Group IV.

Domes rising from an octagonal base.

This system, developed according to two different schemes, has given rise to two classes with many varieties.

In a) On each side of the octagon chapels of equal form are added.

In b) The chapels are dissimilar; those which terminate the principal axes being different in form from those which are added on the diagonal sides of the octagon.

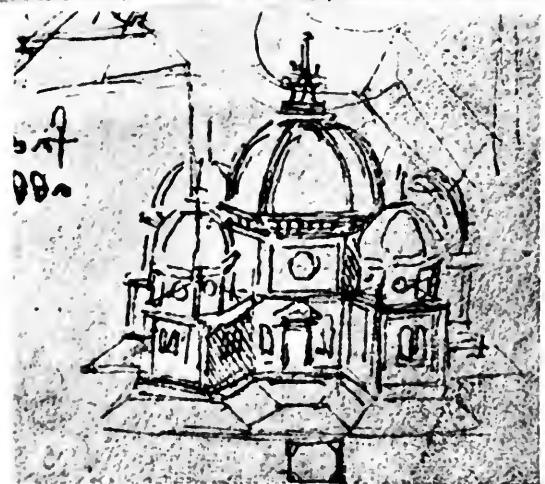

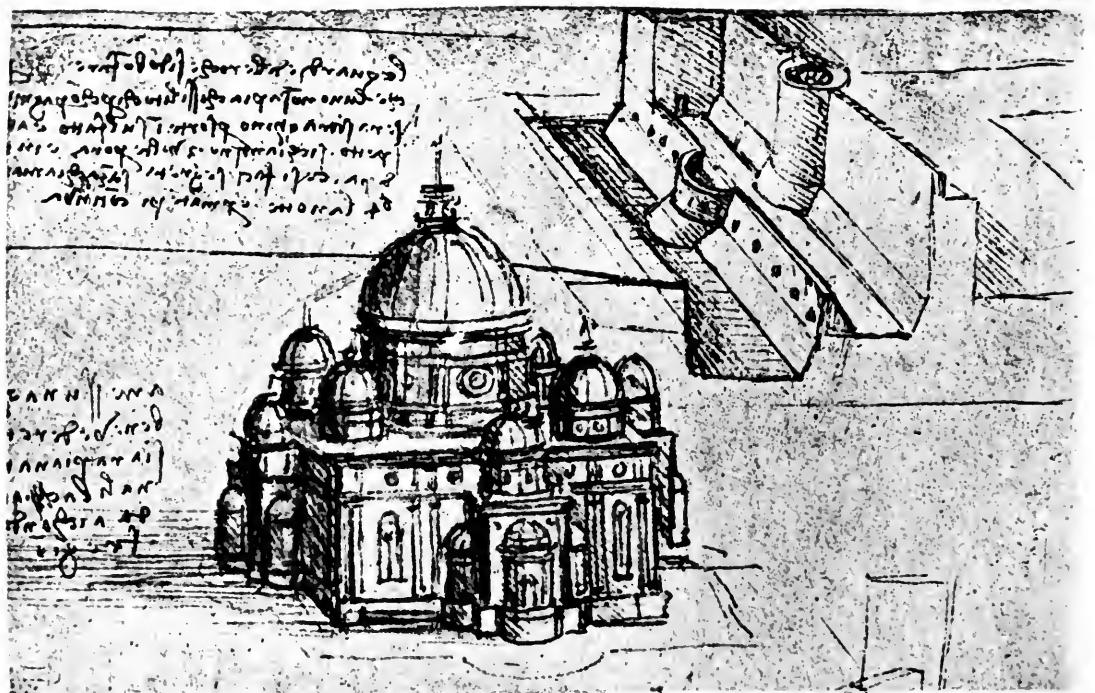

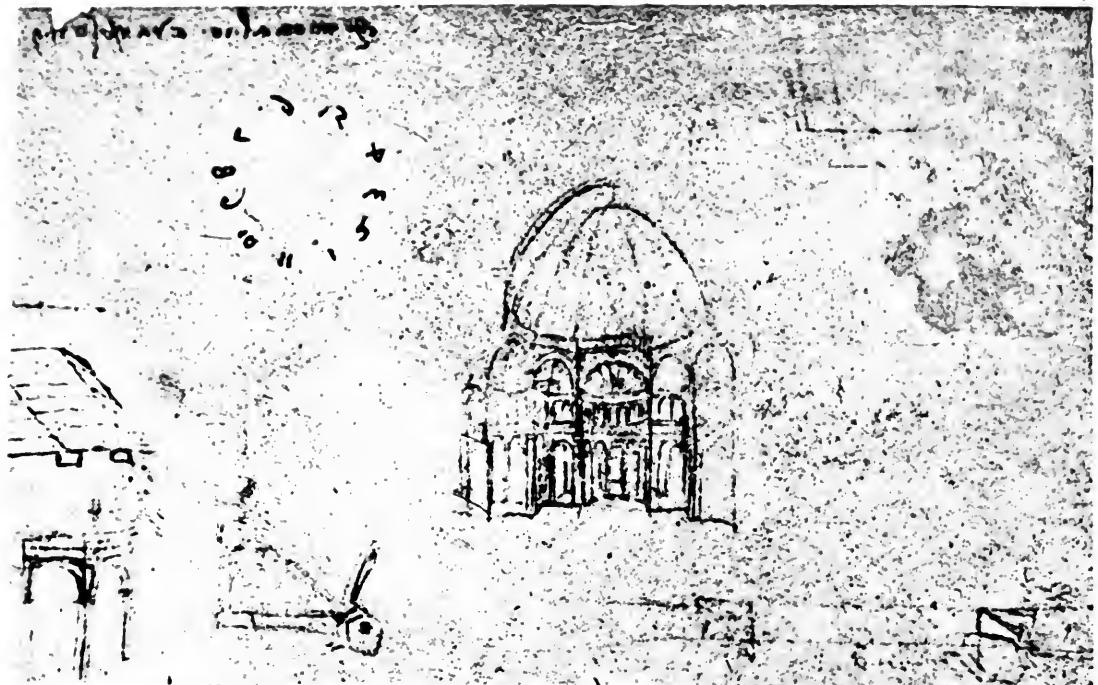

a. First Class.

The Chapel "degli Angeli," at Florence, built only to a height of about 20 feet by Brunellesco, may be considered as the prototype of this group; and, indeed it probably suggested it. The fact that we see in MS. B. 11^b

¹ *The ancient chapel San Satiro, via del Falcone, Milan, is a specimen of this type.*

² *See Les projets primitifs etc., Pl. 9—12.*

42'

(*Pl. XCIV*, No. 3) by the side of Brunellesco's plan for the Basilica of Sto. Spirito at Florence, a plan almost identical with that of the Capella degli Angeli, confirms this supposition. Only two small differences, or we may say improvements, have been introduced by Leonardo. Firstly the back of the chapels contains a third niche, and each angle of the Octagon a folded pilaster like those in Bramante's Sagrestia di S. M. presso San Satiro at Milan, instead of an interval between the two pilasters as seen in the Battistero at Florence and in the Sacristy of Sto. Spirito in the same town and also in the above named chapel by Brunellesco.

The first set of sketches which come under consideration have at first sight the appearance of mere geometrical studies. They seem to have been suggested by the plan given on page 44 Fig. 2 (MS. B, 55^a) in the centre of which is written "Santa Maria in perticha da Pavia", at the place marked A on the reproduction.

a) (MS. B, 34^b, page 44 Fig. 3). In the middle of each side a column is added, and in the axes of the intercolumnar spaces a second row of columns forms an aisle round the octagon. These are placed at the intersection of a system of semicircles, of which the sixteen columns on the sides of the octagon are the centres.

b) The preceding diagram is completed and becomes more monumental in style in the sketch next to it (MS. B, 35^a, see p. 45 Fig. 1). An outer aisle is added by circles, having for radius the distance between the columns in the middle sides of the octagon.

c) (MS. B, 96^b, see p. 45 Fig. 2). Octagon with an aisle round it; the angles of both are formed by columns. The outer sides are formed by 8 niches forming chapels. The exterior is likewise octagonal, with the angles corresponding to the centre of each of the interior chapels.

Pl. XCII, No. 2 (MS. B. 96^b). Detail and modification of the preceding plan—half columns against piers—an arrangement by which the chapels of the aisle have the same width of opening as the inner arches between the half columns. Underneath this sketch the following note occurs: questo vole avere 12 facce . co 12 tabernaculi . come . a . b. (This will have twelve sides with twelve tabernacles as a b.) In the remaining sketches of this class the octagon is not formed by columns at the angles.

The simplest type shows a niche in the middle of each side and is repeated on several sheets, viz: MS. B 3; MS. C.A. 354^b (see *Pl. LXXXIV*, No. 11), and MS. Ash II 6^b; (see *Pl. LXXXV*, No. 9 and the elevations No. 8; *Pl. XCII*, No. 3; MS. B: 4^b [not reproduced here] and *Pl. LXXXIV*, No. 2).

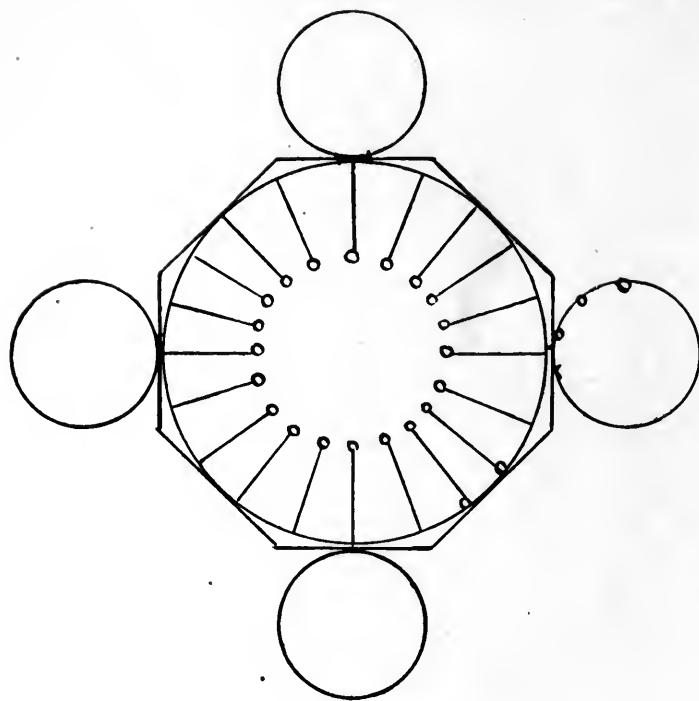

Fig. 1.

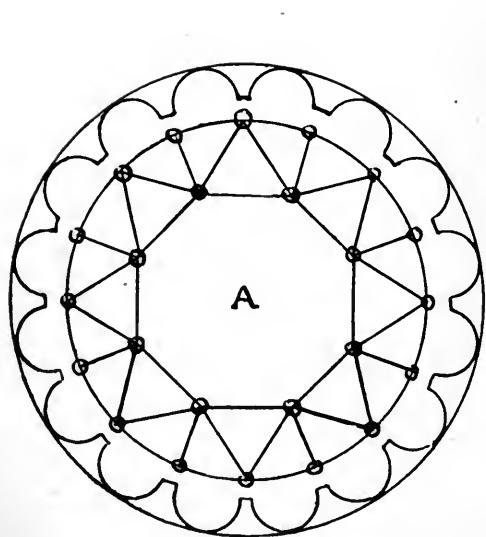

Fig. 2.

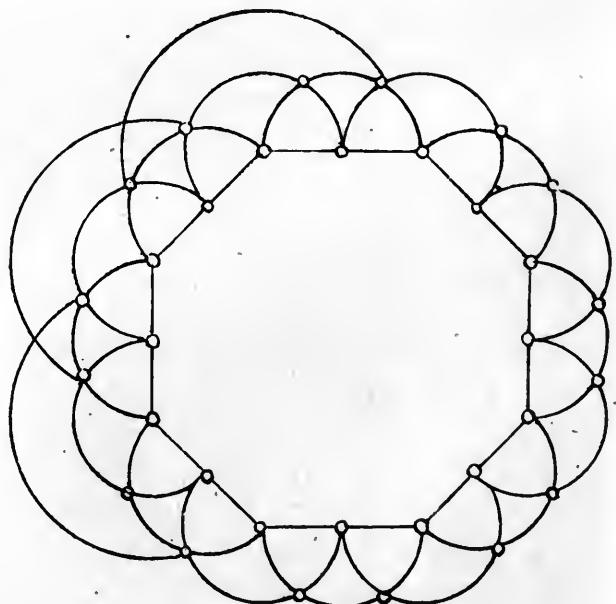

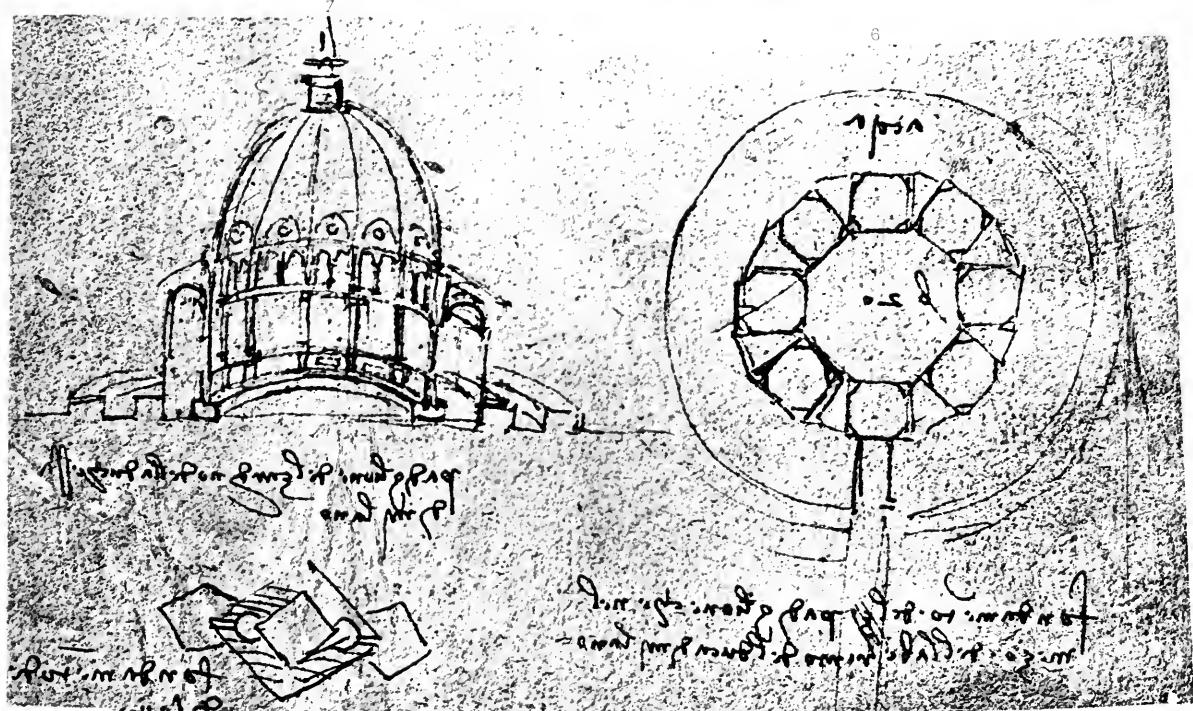

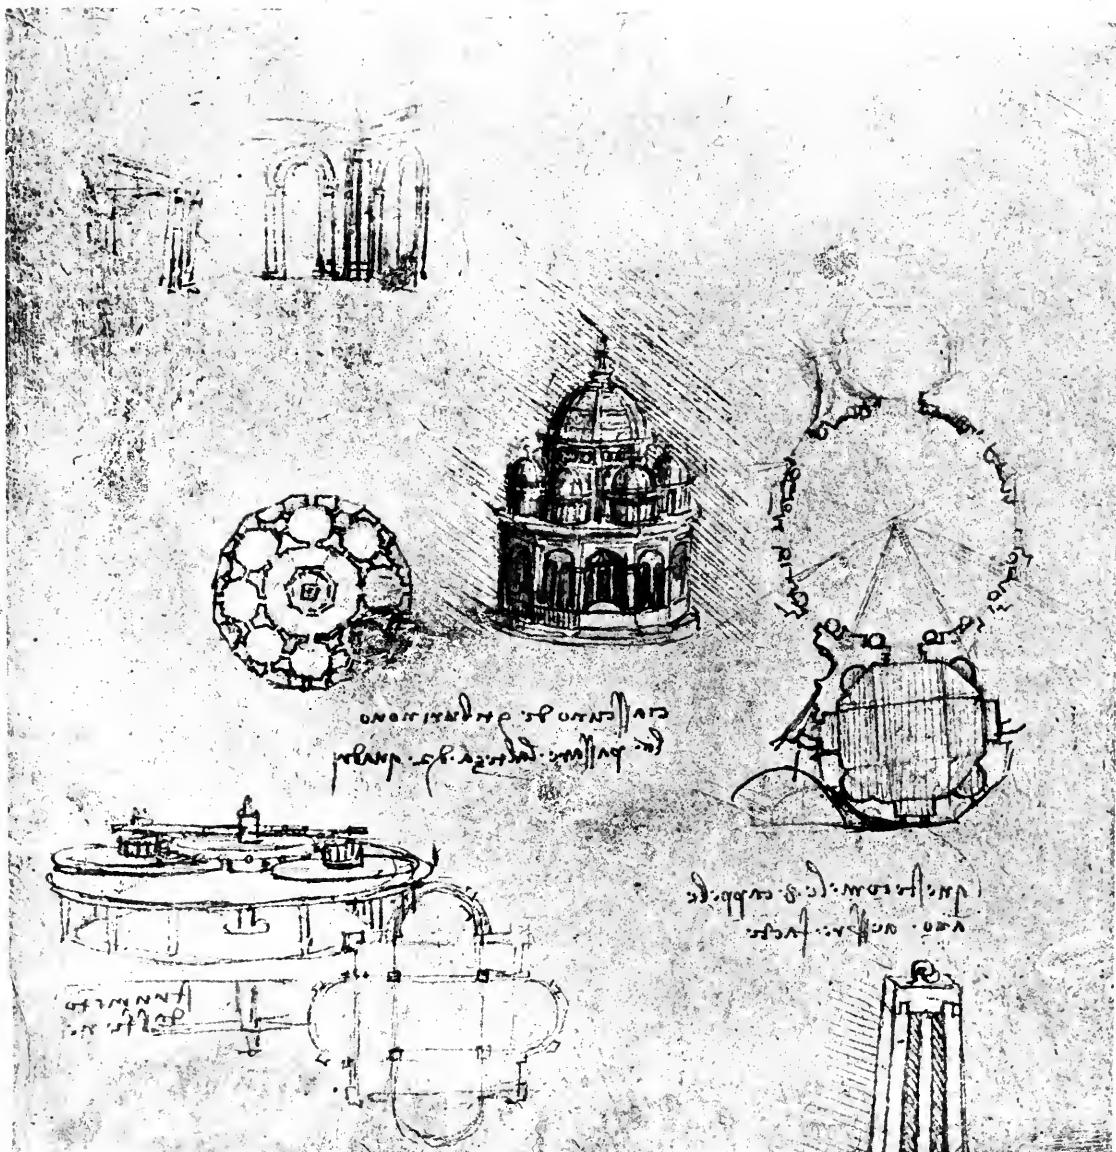

Fig. 3.

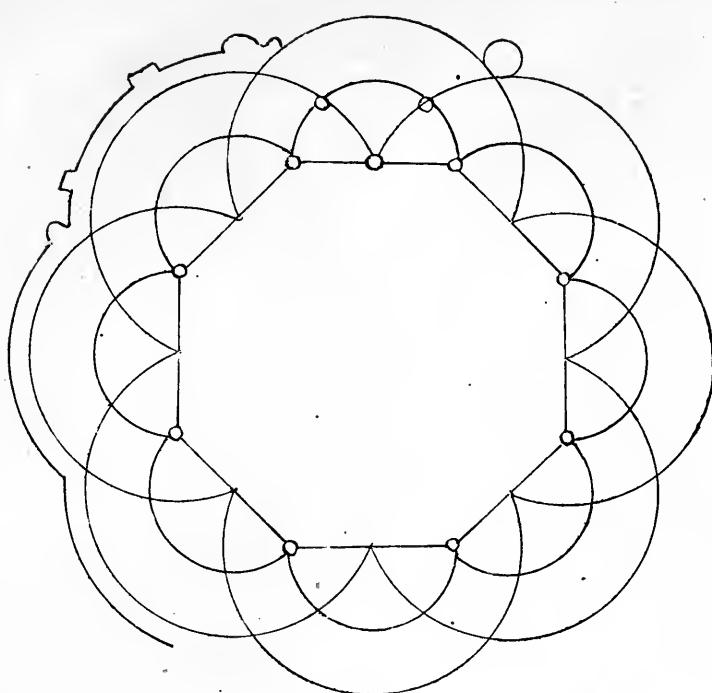

Fig. 1.

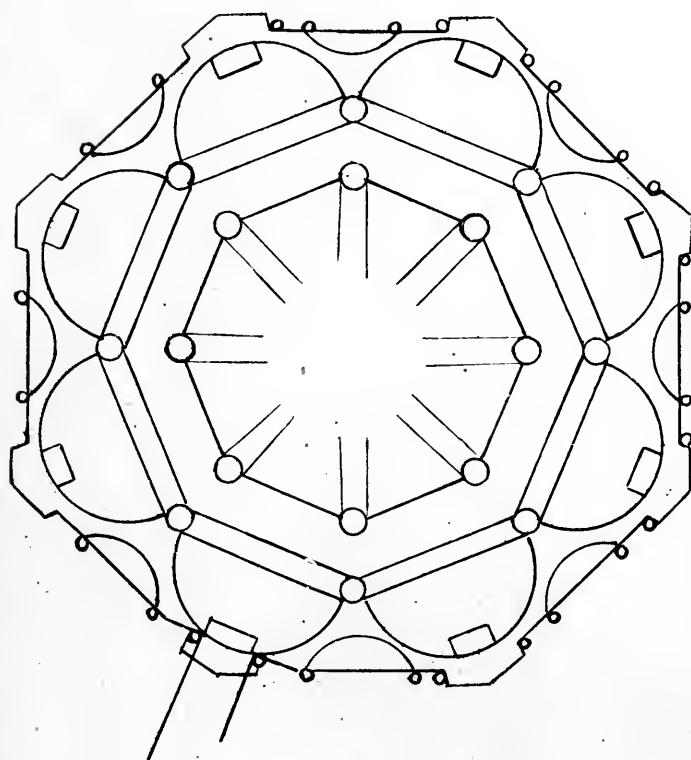

Fig. 2.

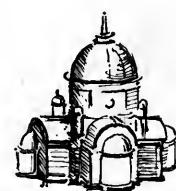

Fig. 3.

Pl. XCII, 3 (MS. B, 56^b) corresponds to a plan like the one in MS. B 35^a, in which the niches would be visible outside or, as in the following sketch, with the addition of a niche in the middle of each chapel.

Pl. XC, No. 6. The niches themselves are surrounded by smaller niches (see also No. 1 on the same plate).

Octagon expanded on each side.

A. by a square chapel:

MS. B. 34^b (not reproduced here).

B. by a square with 3 niches:

MS. B. 11^b (see Pl. XCIV, No. 3).

C. by octagonal chapels:

a) MS. B, 21^a; Pl. LXXXVIII, No. 14.

b) No. 2 on the same plate. Underneath there is the remark: "quest'è come le 8 cappele àno a essere facte" (this is how the eight chapels are to be executed).

c) Pl. LXXXVIII, No. 5. Elevation to the plans on the same sheet, it is accompanied by the note: "ciasscuno de' 9 tiburi no' uole passare l'alteza · di · 2 · quadri" (neither of the 9 domes must exceed the height of two squares).

d) Pl. LXXXVIII, No. 1, Inside of the same octagon.

MS. B, 30^a, and 34^b; these are three repetitions of parts of the same plan with very slight variations.

D. by a circular chapel:

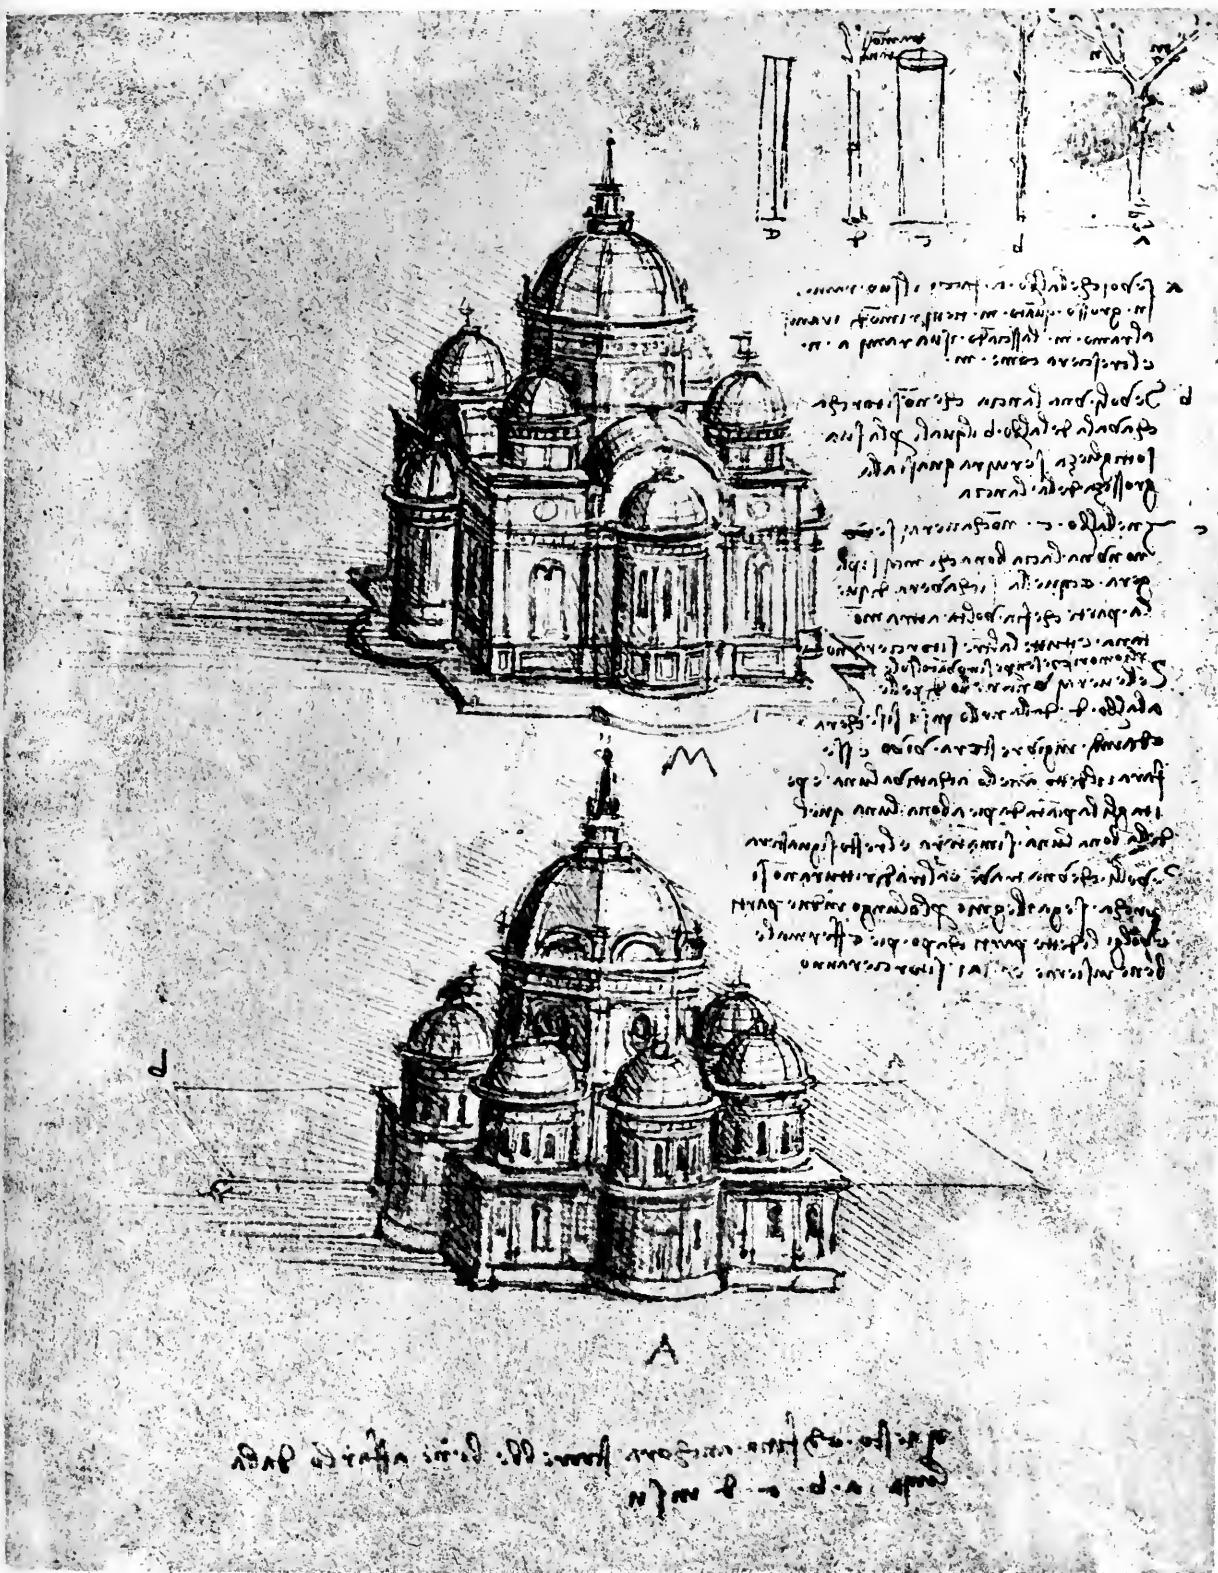

MS. B, 18^a (see Fig. 1 on page 47) gives the plan of this arrangement in which the exterior is square on the ground floor with only four of the chapels projecting, as is explained in the next sketch.

Pl. LXXXIX, MS. B, 17^b. Elevation to the preceding plan sketched on the opposite side of the sheet, and also marked A. It is accompanied by the following remark, indicating the theoretical character of these studies: questo · edifitio · anchora · starebbe · bene affarla dalla linja · a · b · c · d · insù. ("This edifice would also produce a good effect if only the part above the lines a b, c d, were executed").

Pl. LXXXIV, No. 11. The exterior has the form of an octagon, but the chapels project partly beyond it. On the left side of the sketch they appear larger than on the right side.

Pl. XC, No. 1, (MS. B, 25^b); Repetition of Pl. LXXXIV, No. 11.

Pl. XC, No. 2. Elevation to the plan No. 1, and also to No. 6 of the same sheet.

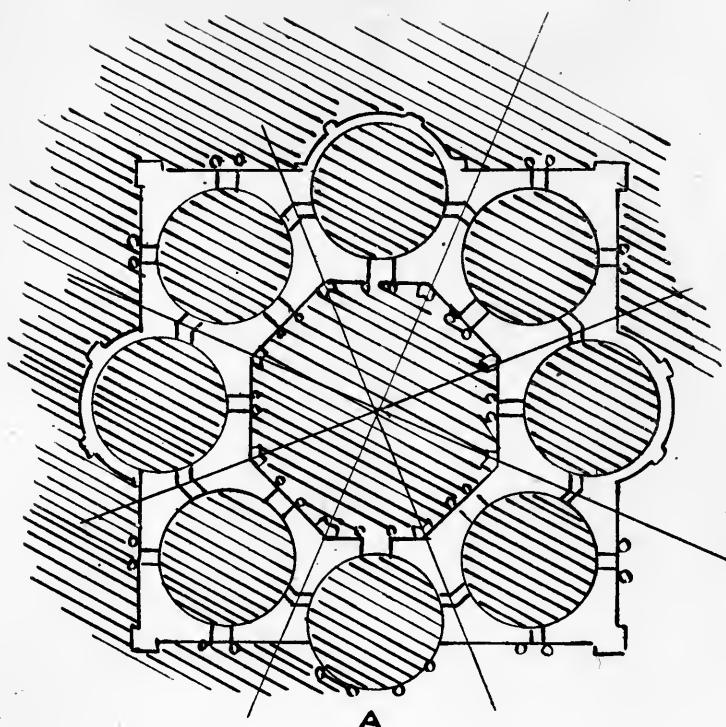

Fig. 1.

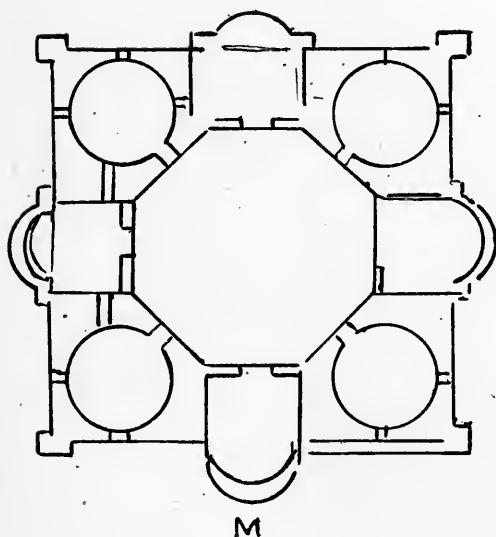

Fig. 2.

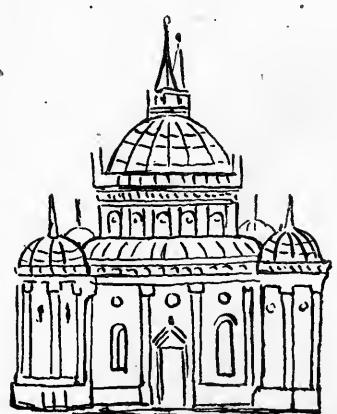

Fig. 3.

E. By chapels formed by four niches:

Pl. LXXXIV, No. 7 (the circular plan on the left below) shows this arrangement in which the central dome has become circular inside and might therefore be classed after this group.¹

The sketch on the right hand side gives most likely the elevation for the last named plan.

F. By chapels of still richer combinations, which necessitate an octagon of larger dimensions:

Pl. XCI, No. 2 (MS. Ash. II. 8^b)²; on this plan the chapels themselves appear to be central buildings formed like the first type of the third group. Pl. LXXXVIII, No. 3.

Pl. XCI, No. 2 above; the exterior of the preceding figure, particularly interesting on account of the alternation of apses and niches, the latter containing statues of a gigantic size, in proportion to the dimension of the niches.

b. Second Class.

Composite plans of this class are generally obtained by combining two types of the first class—the one worked out on the principal axes, the other on the diagonal ones.

MS. B. 22 shows an elementary combination, without any additions on the diagonal axes, but with the dimensions of the squares on the two principal axes exceeding those of the sides of the octagon.

In the drawing W. P. 5^b (see page 44 Fig. 1) the exterior only of the edifice is octagonal, the interior being formed by a circular colonnade; round chapels are placed against the four sides of the principal axes.

The elevation, drawn on the same sheet (see page 47 Fig. 3), shows the whole arrangement which is closely related with the one on Pl. LXXXVI No. 1, 2.

MS. B. 21^a shows:

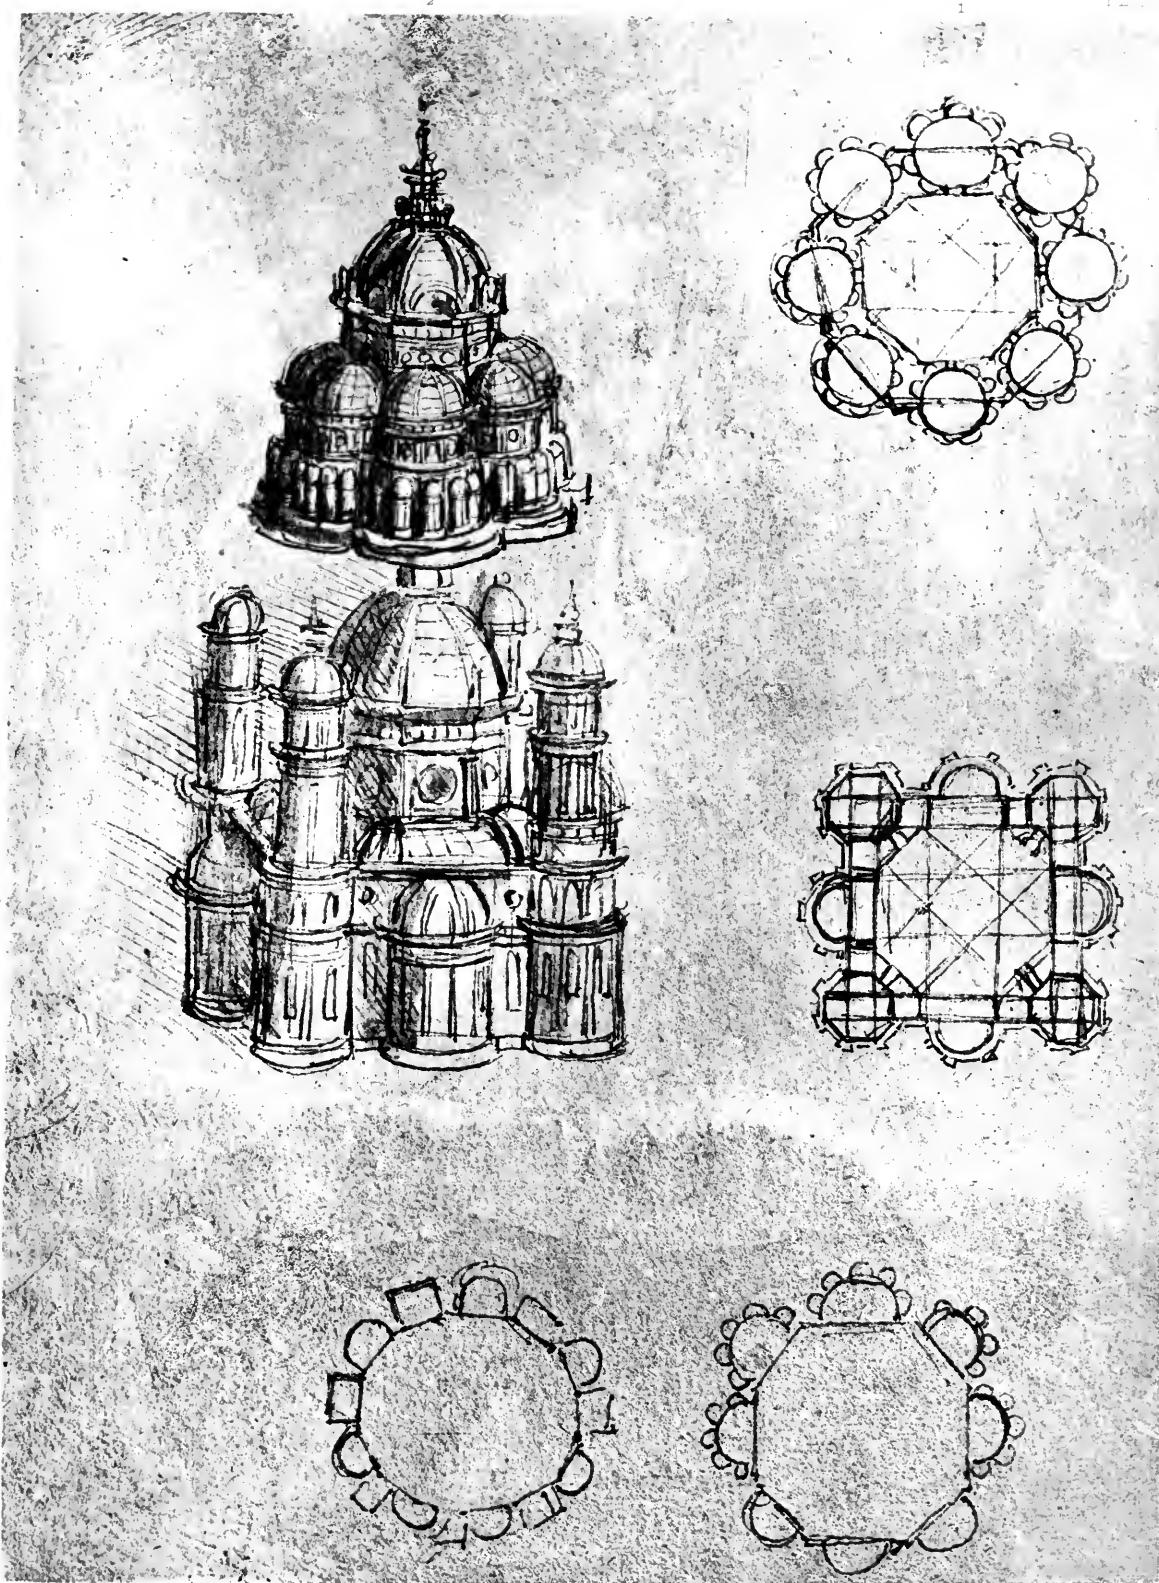

*a) four sides with rectangular chapels crowned by pediments
Pl. LXXXVII No. 3 (plan and elevation);*

*b) four sides with square chapels crowned by octagonal domes.
Pl. LXXXVII No. 4; the plan underneath.*

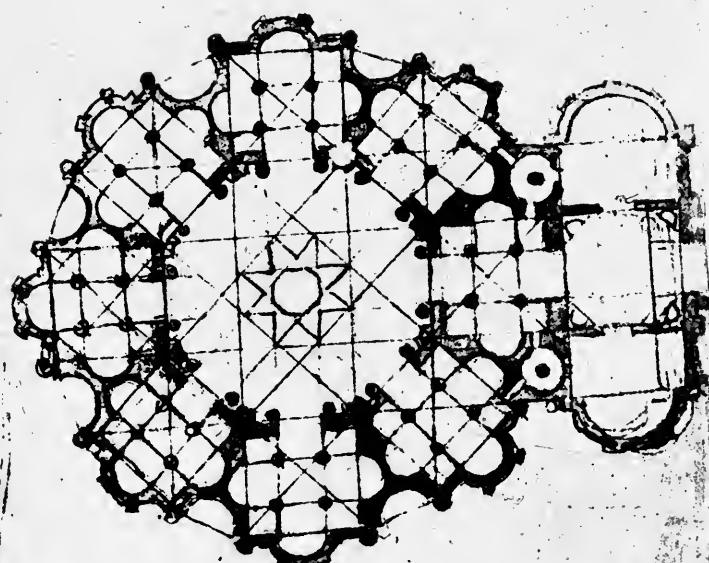

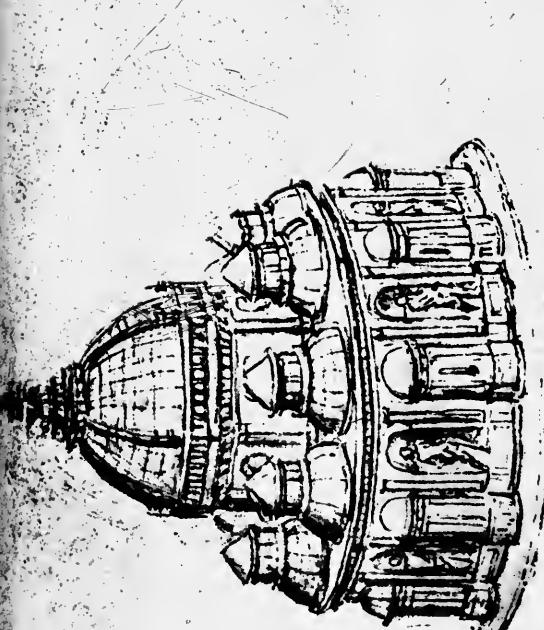

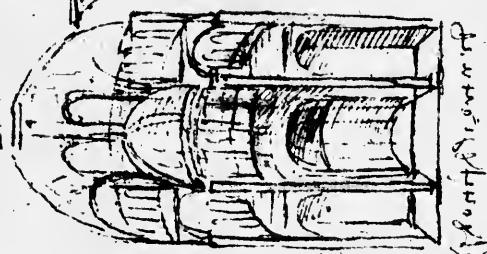

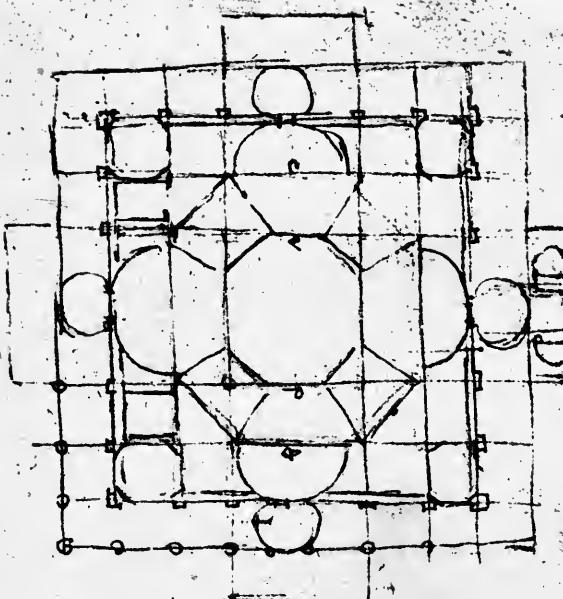

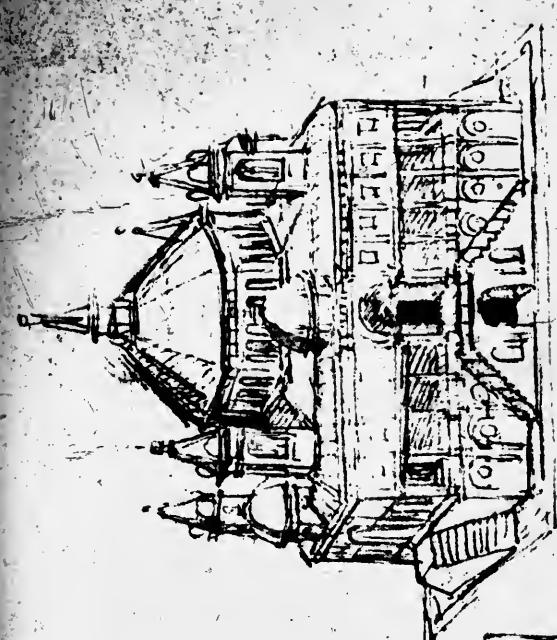

MS. B. 18^a shows a variation obtained by replacing the round chapels in the principal axes of the sketch MS. B. 18^a by square ones, with an

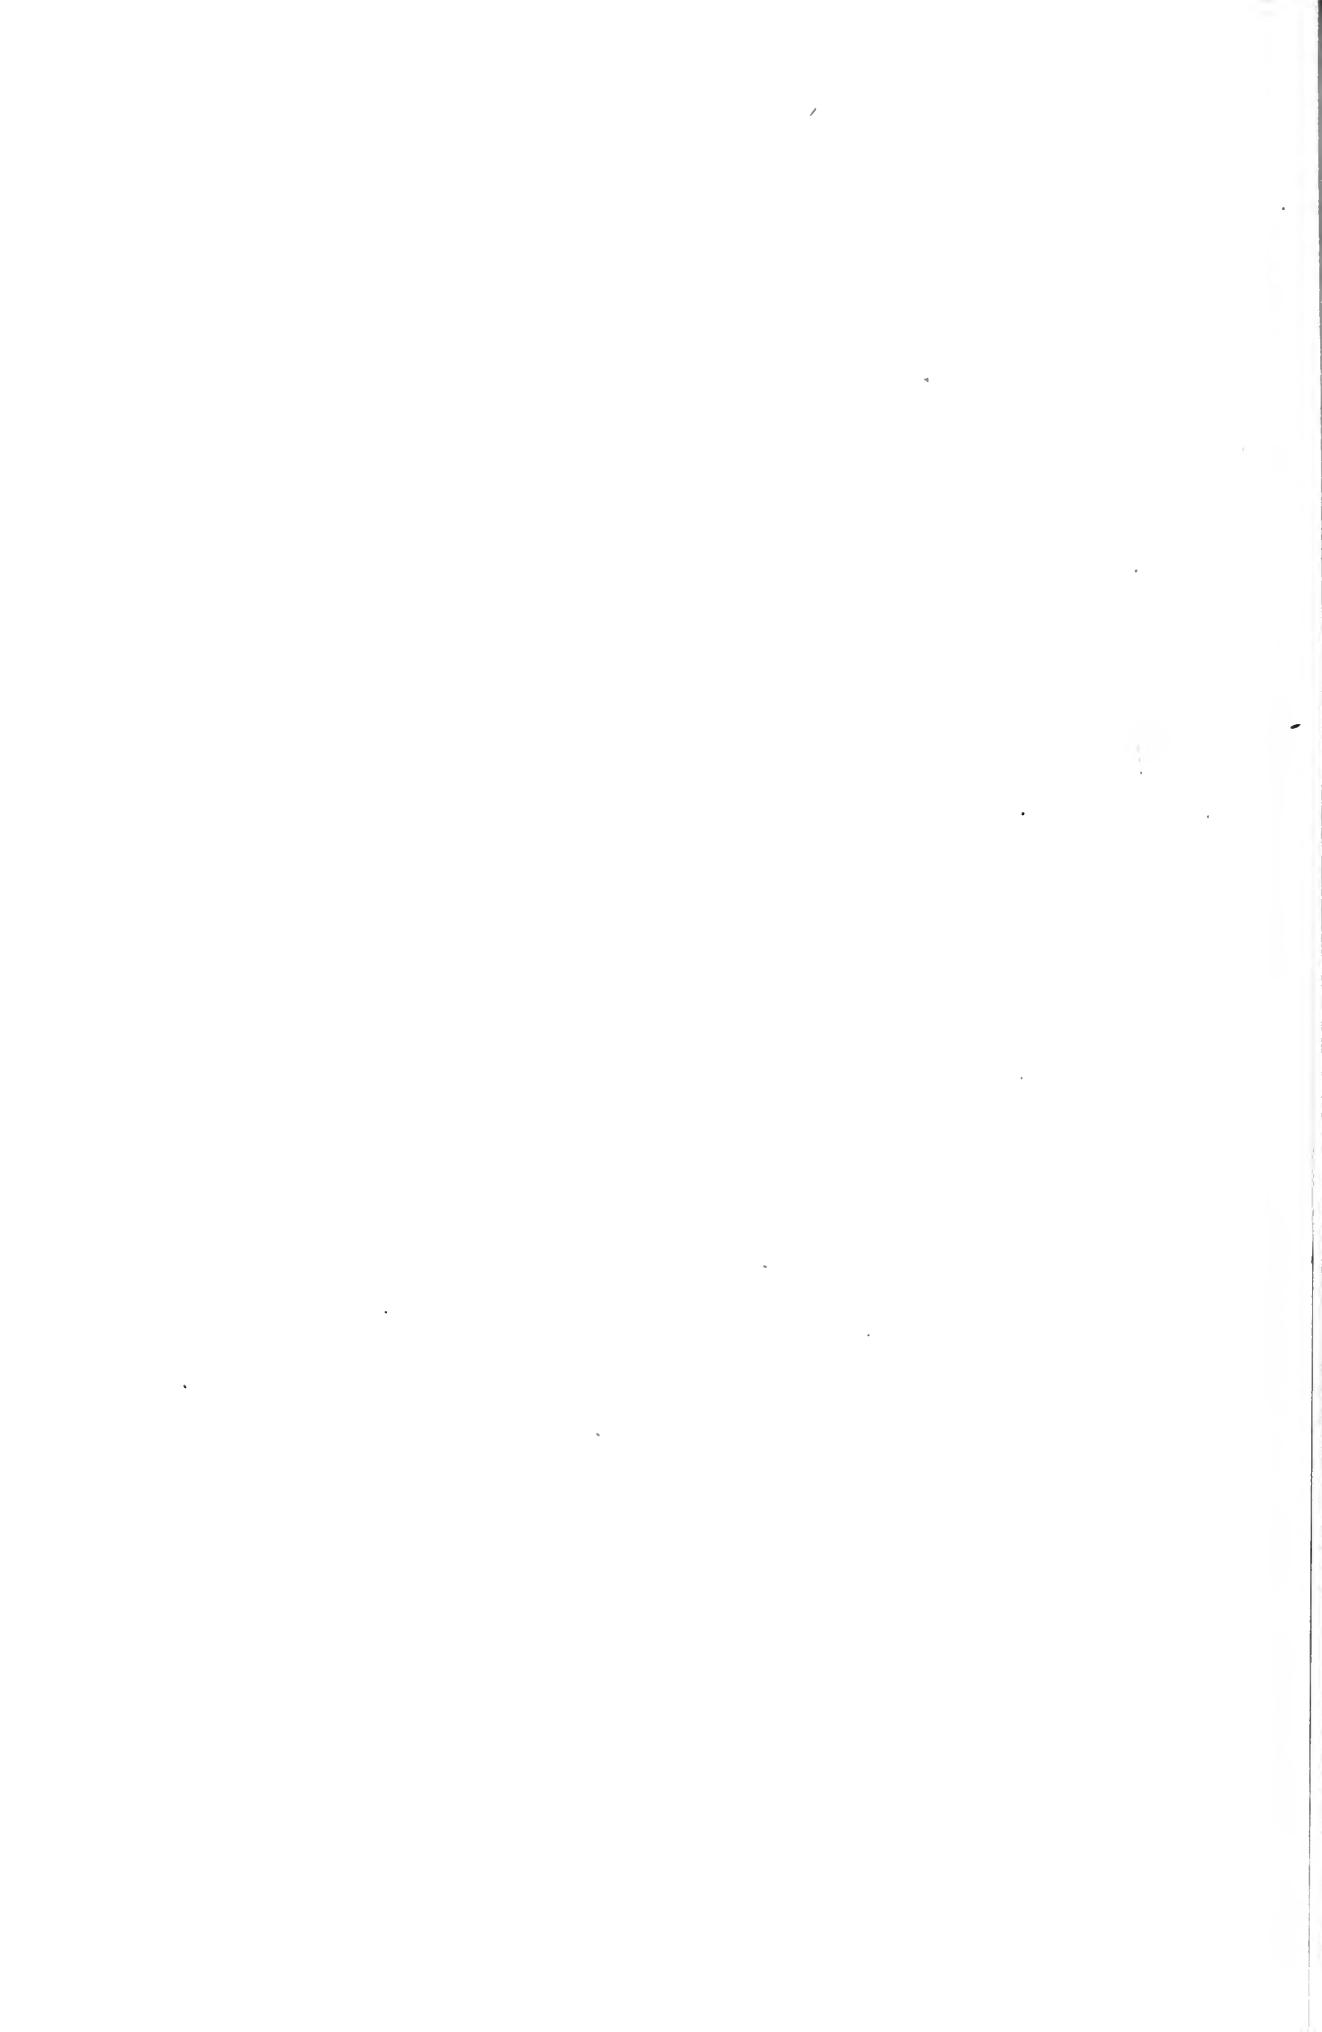

¹ This plan and some others of this class remind us of the plan of the Mausoleum of Augustus as it is represented for instance by Durand. See Cab. des Estampes, Bibliothèque Nationale, Paris, Topographie de Rome, V, 6, 82.

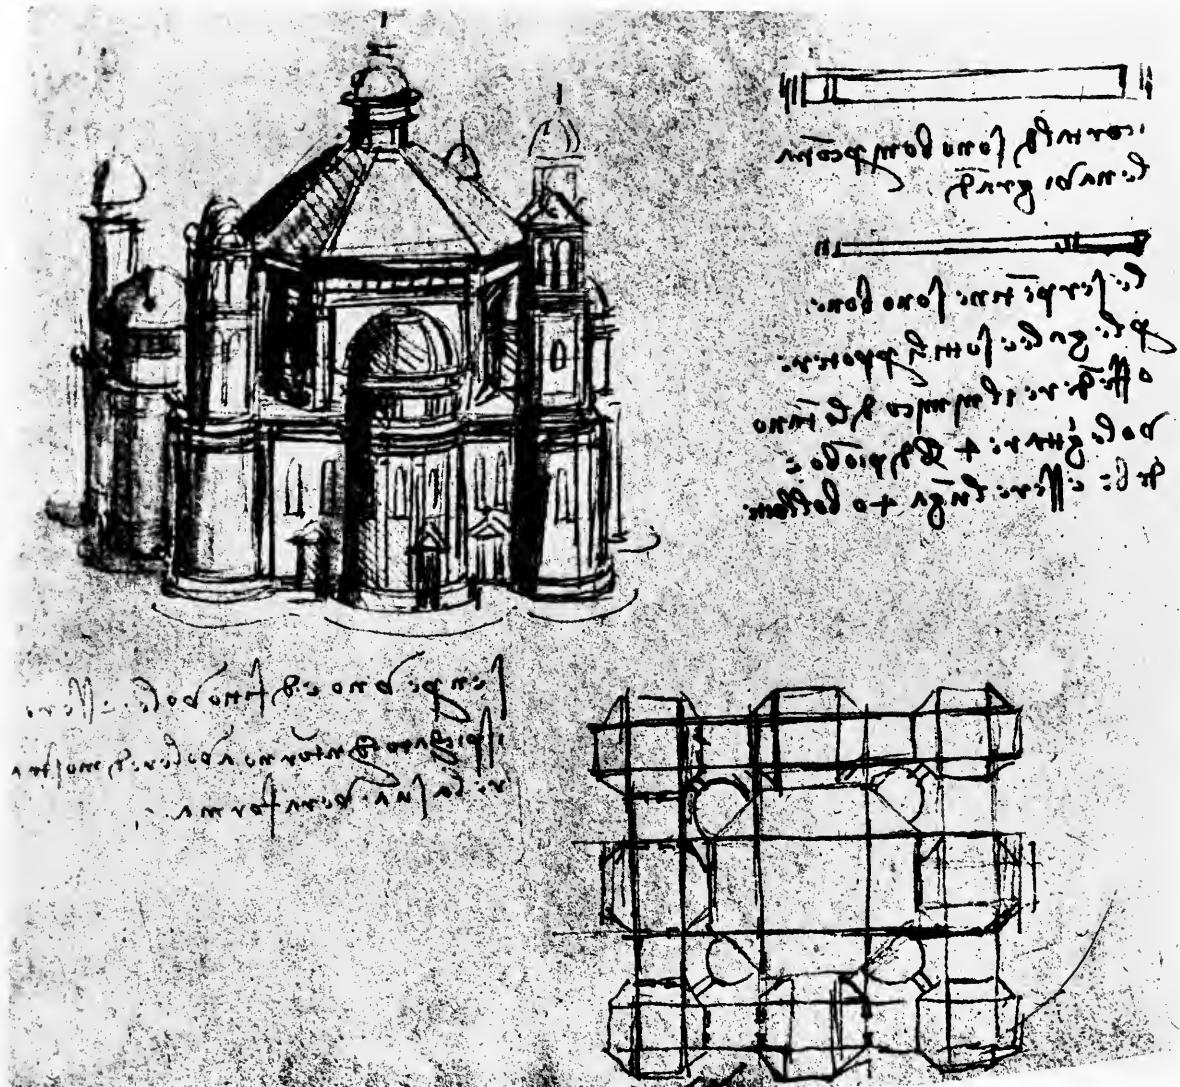

² The note accompanying this plan is given under No. 754.

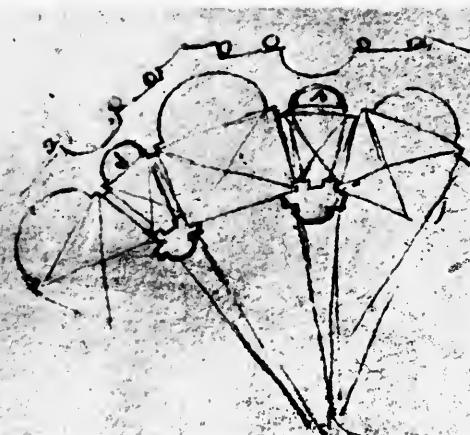

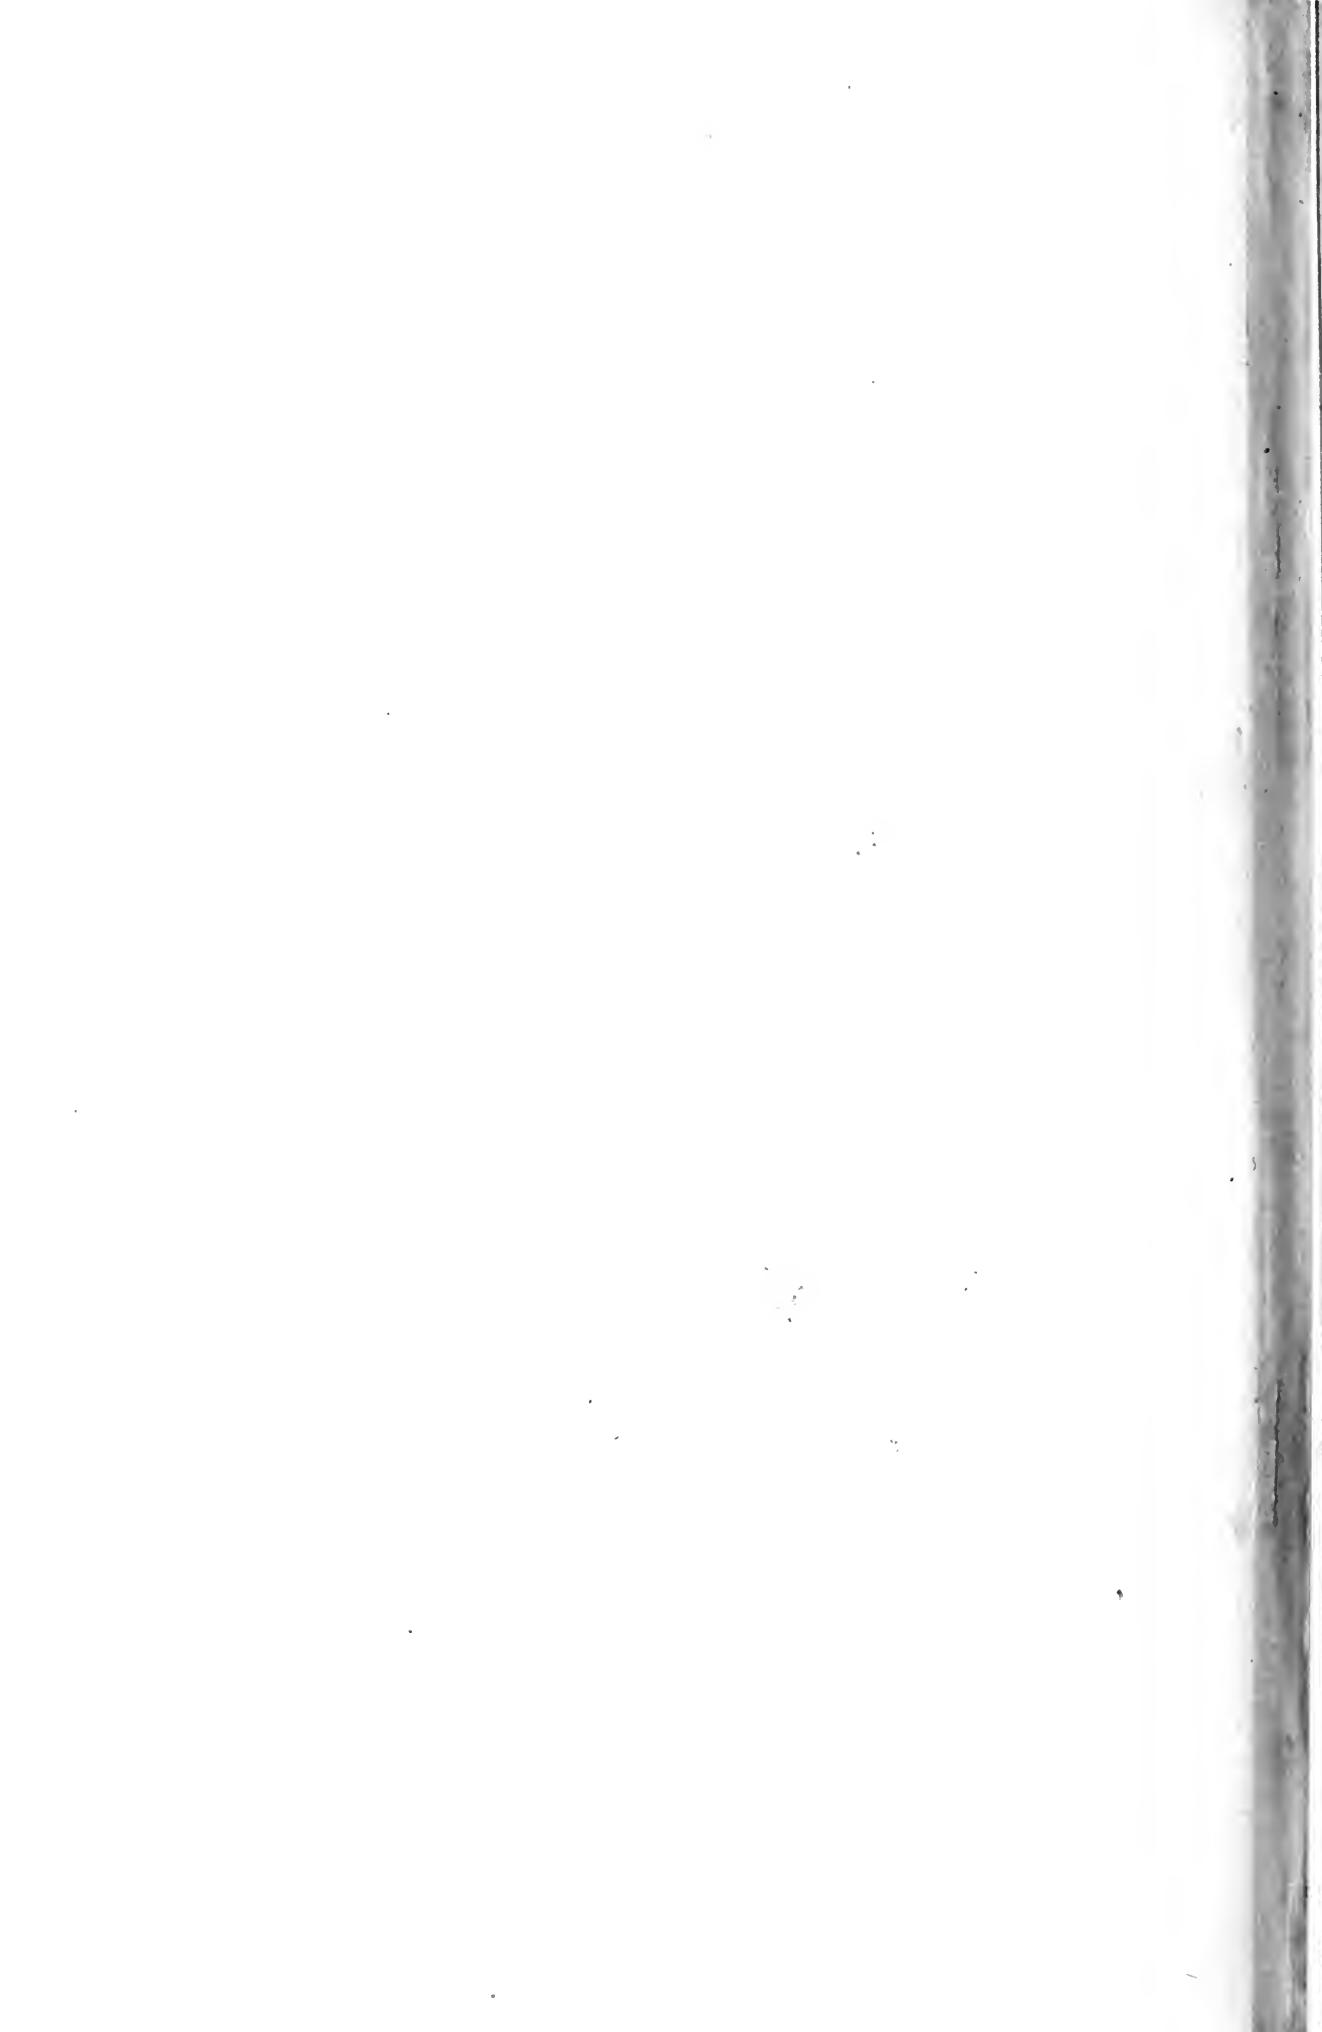

3

2

apse. Leonardo repeated both ideas for better comparison side by side, see page 47. Fig. 2.

Pl. LXXXIX (MS. B. 17^b). Elevation for the preceding figure. The comparison of the drawing marked *M.* with the plan on page 47 Fig. 2, bearing the same mark, and of the elevation on *Pl. LXXXIX* below (marked *A*) with the corresponding plan on page 47 is highly instructive, as illustrating the spirit in which Leonardo pursued these studies.

Pl. LXXXIV No. 12 shows the design *Pl. LXXXVII No. 3* combined with apses, with the addition of round chapels on the diagonal sides.

Pl. LXXXIV No. 13 is a variation of the preceding sketch.

Pl. XC No. 3. *MS. B. 25^b.* The round chapels of the preceding sketch are replaced by octagonal chapels, above which rise campaniles.

Pl. XC No. 4 is the elevation for the preceding plan.

Pl. XCII No. 1. (*MS. B. 39^b.*); the plan below. On the principal as well as on the diagonal axes are diagonal chapels, but the latter are separated from the dome by semicircular recesses. The communication between these eight chapels forms a square aisle round the central dome.

Above this figure is the elevation, showing four campaniles on the angles.¹

Pl. CXXXIV No. 3. On the principal axes are square chapels with three niches; on the diagonals octagonal chapels with niches. *Cod. Atl. 340^b* gives a somewhat similar arrangement.

MS. B. 30. The principal development is thrown on the diagonal axes by square chapels with three niches; on the principal axes are inner recesses communicating with outer ones.

The plan *Pl. XCIII No. 2* (*MS. B. 22*) differs from this only in so far as the outer semicircles have become circular chapels, projecting from the external square as apses; one of them serves as the entrance by a semicircular portico.

The elevation is drawn on the left side of the plan.

MS. B. 19. A further development of *MS. B. 18*, by employing for the four principal chapels the type *Pl. LXXXVIII No. 3*, as we have already seen in *Pl. XCI No. 2*; the exterior presents two varieties.

a) The outer contour follows the inner.²

b) It is semicircular.

Pl. LXXXVII No. 2 (*MS. B. 18^b*) Elevation to the first variation *MS. B. 19.* If we were not certain that this sketch was by Leonardo, we might feel tempted to take it as a study by Bramante for St. Peter's at Rome.³

¹ The note accompanying this drawing is reproduced under No. 753.

² These chapels are here sketched in two different sizes; it is the smaller type which is thus formed.

³ See *Les projets primitifs* Pl. 43.

MS. P. V. 39^b. In the principal axes the chapels of MS. B. 19, and semicircular niches on the diagonals. The exterior of the whole edifice is also an octagon, concealing the form of the interior chapels, but with its angles on their axes.

Group V.

Suggested by San Lorenzo at Milan.

In MS. C. A. 266 II^b, 812^b there is a plan almost identical with that of San Lorenzo.—The diagonal sides of the irregular octagon are not indicated. If it could be proved that the arches which, in the actual church, exist on these sides in the first story, were added in 1574 by Martimo Bassi, then this plan and the following section would be still nearer the original state of San Lorenzo than at present. A reproduction of this slightly sketched plan has not been possible. It may however be understood from Pl. LXXXVIII No. 3, by suppressing the four pillars corresponding to the apses.

Pl. LXXXVII No. 1 shows the section in elevation corresponding with the above-named plan. The recessed chapels are decorated with large shells in the halfdomes like the arrangement in San Lorenzo, but with proportions like those of Bramante's Sacristy of Santa Maria presso S. Satiro.

MS. C. A. 266; a sheet containing three views of exteriors of Domes. On the same sheet there is a plan similar to the one above-named but with uninterrupted aisles and with the addition of round chapels in the axes (compare Pl. XCVII No. 3 and page 44 Fig. 1), perhaps a reminiscence of the two chapels annexed to San Lorenzo.—Leonardo has here sketched the way of transforming this plan into a Latin cross by means of a nave with side aisles.

Pl. XCI No. 1. Plan showing a type deprived of aisles and comprised in a square building which is surrounded by a portico. It is accompanied by the following text:

Ash. II. 7a]

756.

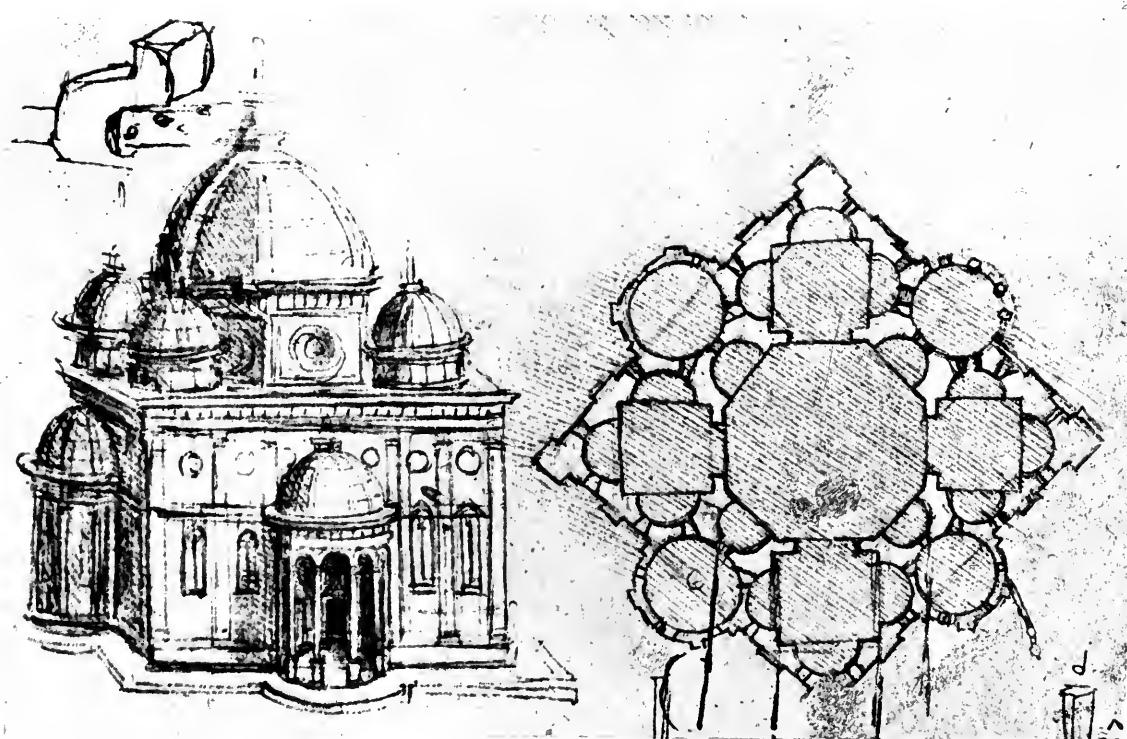

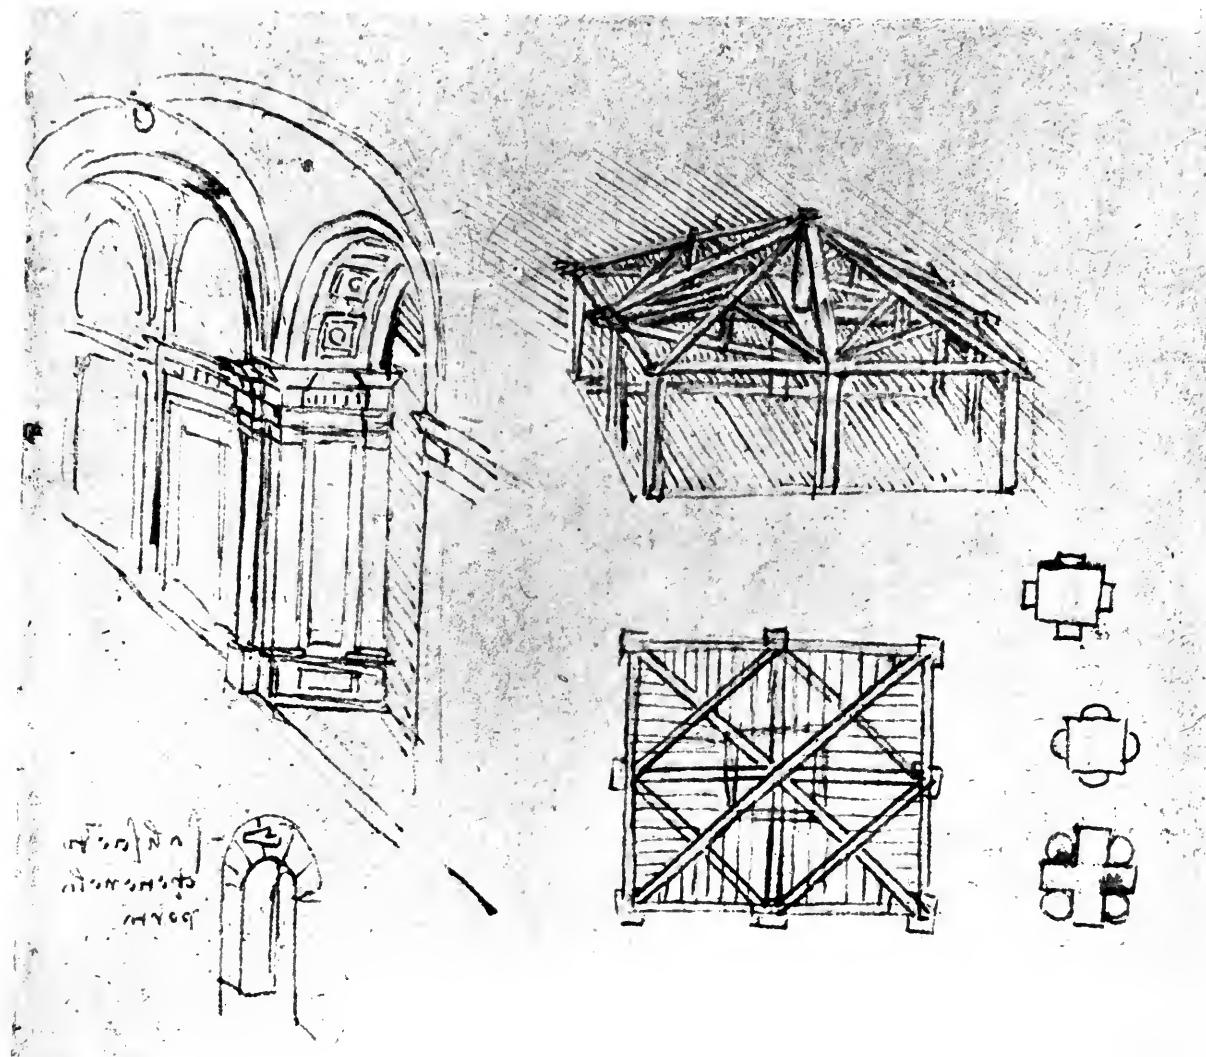

Questo edifitio è abitato di sotto e di sopra come è san Sepolcro, ²ed è sopra come sotto, saluo che 'l di sopra al tiburio ^{c d} e'l di sotto ³al tiburio ^{a b} e quādo

This edifice is inhabited [accessible] below, and above, like San Sepolcro, and it is the same above as below, except that the upper story has the dome ^{c d}; and the

756. 1. sucto . . chome . . sansepulchro. 2. chome. 3. a . b . e ecquādo. 4. nela . . sucto. 4. chali 10 schalini. 5. schalini ..

756. The church of San Sepolcro at Milan, founded in 1030 and repeatedly rebuilt after the middle

of the XVIth century, still stands over the crypt of the original structure.

entri nella chiesa di sotto, tu cali 10 scalini, e quando mōti in quello di sopra tu sali 20 scalini, che a $\frac{1}{3}$ l'uno fano 10 braccia, e questo è lo spatio ch'è 'nfra i piani dell'una e l'altra chiesa.

lower has the dome *a b*, and when you enter into the crypt, you descend 10 steps, and when you mount into the upper you ascend 20 steps, which, with $\frac{1}{3}$ braccio for each, make 10 braccia, and this is the height between one floor of the church and the other.

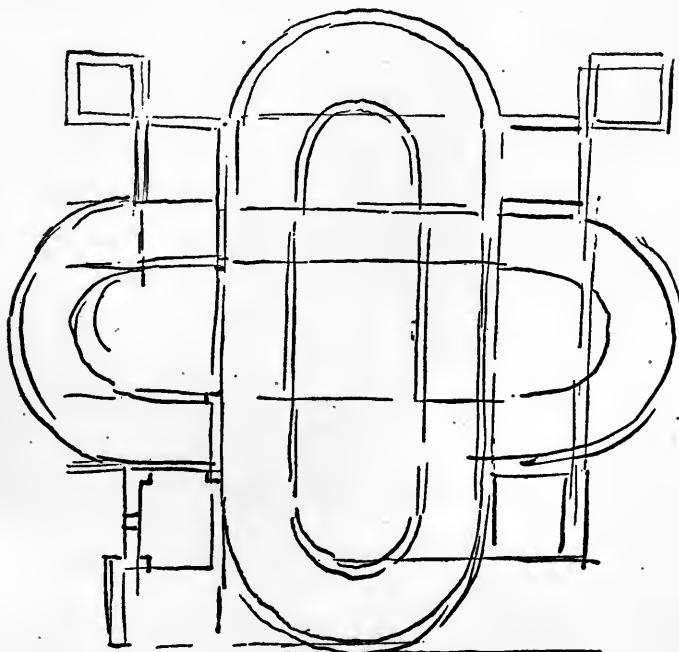

10. br . e. 11. ellaltra.

Above the plan on the same sheet is a view of the exterior. By the aid of these two figures and the description, sections of the edifice may easily be reconstructed. But the section drawn on the left side of the building seems not to be in keeping with the same plan, notwithstanding the explanatory note written underneath it: "dentro il difitio di sopra" (interior of the edifice above)¹.

Before leaving this group, it is well to remark that the germ of it seems already indicated by the diagonal lines in the plans Pl. LXXXV No. 11 and No. 7. We shall find another application of the same type to the Latin cross in Pl. XCVII No. 3.

¹ The small inner dome corresponds to *a b* on the plan —it rises from the lower church into the upper—, above, and larger, rises the dome *c d*. The aisles above and below thus correspond (è di sopra come di sotto, salvoche etc.). The only difference is, that in the section Leonardo has not taken the trouble to make the form octagonal, but has merely sketched circular lines in perspective.

J. P. R.

2. Churches formed on the plan of a Latin cross.

We find among Leonardo's studies several sketches for churches on the plan of the Latin cross; we shall begin by describing them, and shall add a few observations.

A. Studies after existing Monuments.

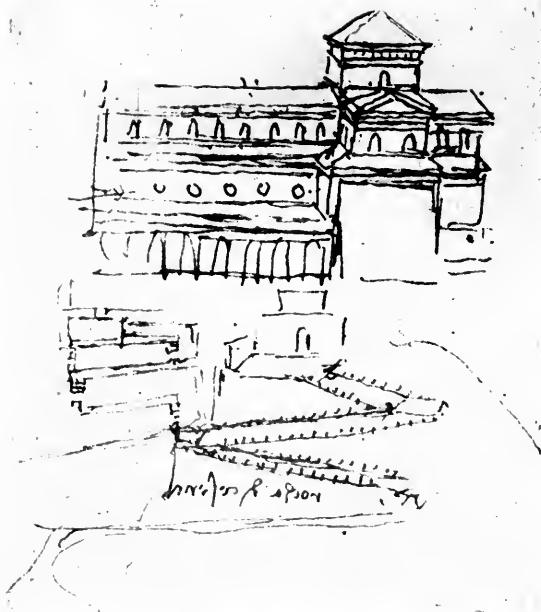

Pl. XCIV No. 2. (MS. B. 11^b.) Plan of Santo Spirito at Florence, a basilica built after the designs of Brunellesco.—Leonardo has added the indication of a portico in front, either his own invention or the reproduction of a now lost design.

Pl. XCV No. 2. Plan accompanied by the words: "A è santo sepolcro di milano di sopra" (A is the upper church of S. Sepolcro at Milan); although since Leonardo's time considerably spoilt, it is still the same in plan.

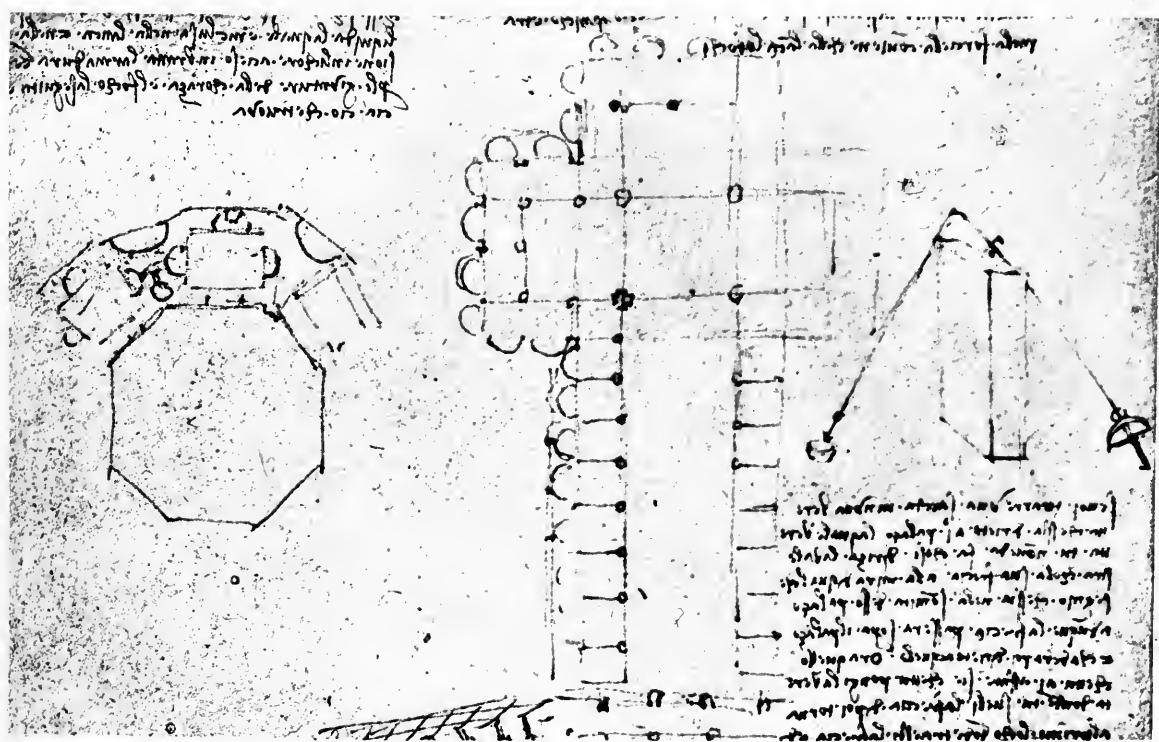

The second plan with its note: "B è la sua parte socto tera" (B is its subterranean part [the crypt]) still corresponds with the present state of this part of the church as I have ascertained by visiting the crypt with this plan. Excepting the addition of a few insignificant walls, the state of this interesting part of the church still conforms to Leonardo's sketch; but in the Vestibolo the two columns near the entrance of the winding stairs are absent.

B. Designs or Studies.

Pl. XCV No. 1. Plan of a church evidently suggested by that of San Sepolcro at Milan. The central part has been added to on the principle of the second type of Group III. Leonardo has placed the "coro" (choir) in the centre.

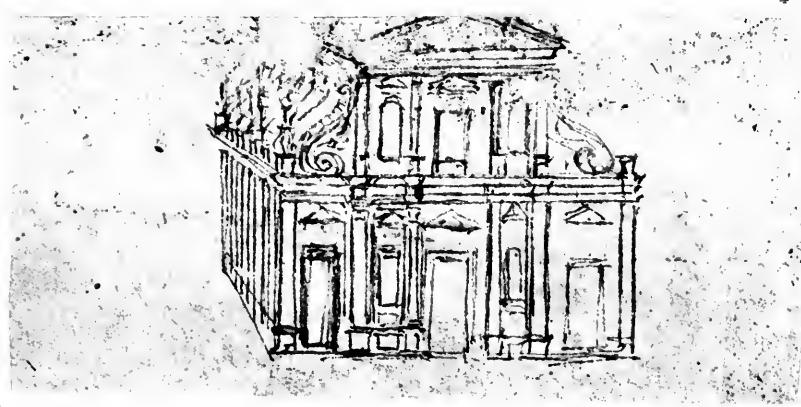

1

3

2

4

Pl. XCVI No. 2. In the plan the dome, as regards its interior, belongs to the First Class of Group IV, and may be grouped with the one in MS. B. 35^a. The nave seems to be a development of the type represented in Pl. XCV No. 2, B. by adding towers and two lateral porticos¹.

On the left is a view of the exterior of the preceding plan. It is accompanied by the following note:

B. 24^a]

757.

Questo edifitio è abitato di sopra e di sotto; ²di sopra si va per li campanili e uassi sù per lo piano ³dove sono fondati i 4 tiburi, e detto piano ⁴à uno parapetto dinäzi, e di detti tiburi nessuno ⁵ne riesce in chiesa, anzi sono separati ī tutto.

This building is inhabited below and above; the way up is by the campaniles, and in going up one has to use the platform, where the drums of the four domes are, and this platform has a parapet in front, and none of these domes communicate with the church, but they are quite separate.

757. 4. a ī parapecto. 5. nerissie . . tucto.

Pl. XCVI No. 1 (MS. C. A. 16^b; 65^a). Perspective view of a church seen from behind; this recalls the Duomo at Florence, but with two campaniles².

Pl. XCVII No. 3 (MS. B. 52^a). The central part is a development of S. Lorenzo at Milan, such as was executed at the Duomo of Pavia. There is sufficient analogy between the building actually executed and this sketch to suggest a direct connection between them. Leonardo accompanied Francesco di Giorgio³ when the latter was consulted on June 21st, 1490 as to this church; the fact that the only word accompanying the plan is: "sagrestia", seems to confirm our supposition, for the sacristies were added only in 1492, i. e. four years after the beginning of the Cathedral, which at that time was most likely still sufficiently unfinished to be capable of receiving the form of the present sketch.

Pl. XCVII No. 2 shows the exterior of this design. Below is the note: edifitio al proposito del fòdameto figurato di socto (edifice proper for the ground plan figured below).

Here we may also mention the plan of a Latin cross drawn in MS. C. A. fol. 266 (see p. 50).

Pl. XCIV No. 1 (MS. L. 15^b). External side view of Brunellesco's Florentine basilica San Lorenzo, seen from the North.

Pl. XCIV No. 4 (V. A. V, 1). Principal front of a nave, most likely of a church on the plan of a Latin cross. We notice here not only the

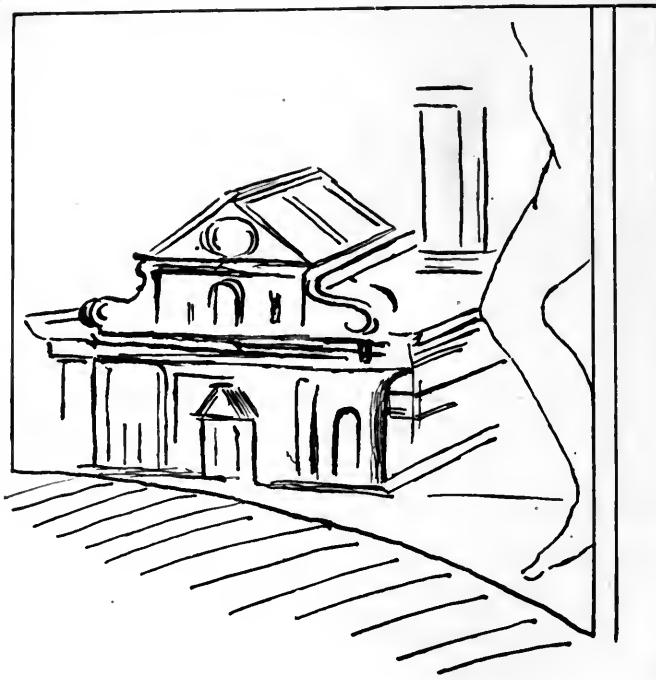

¹ Already published in Les projets primitifs Pl. IX.

² Already published in the Saggio Pl. IX.

³ See MALASPINA, il Duomo di Pavia. Documents.

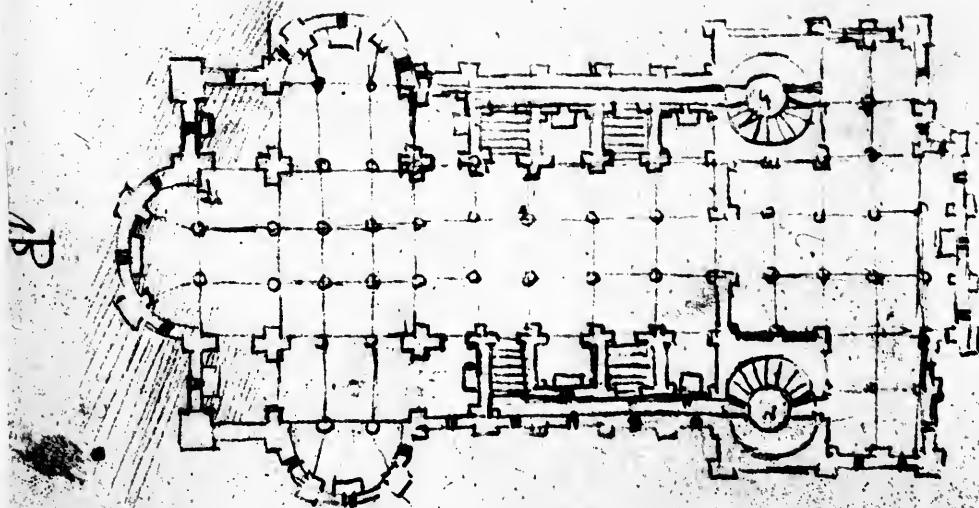

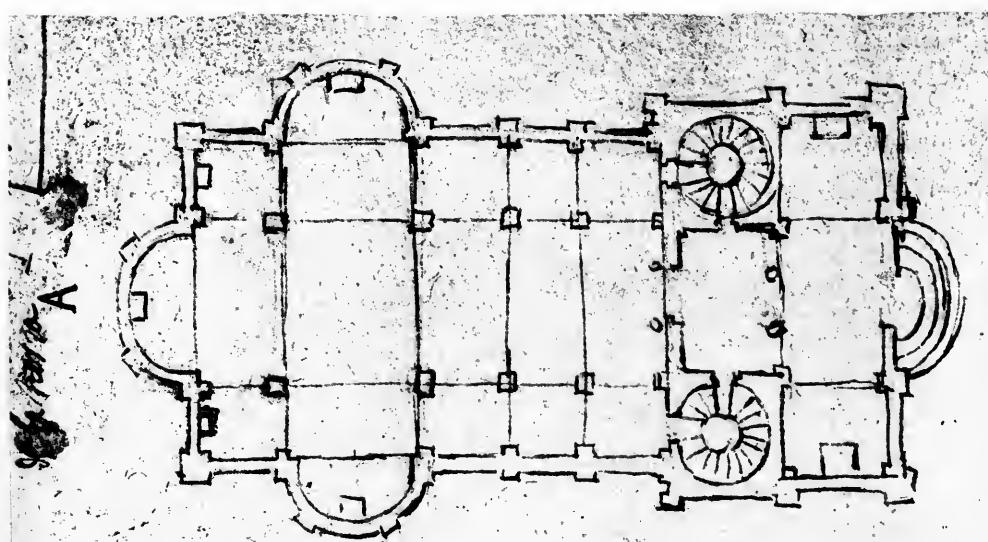

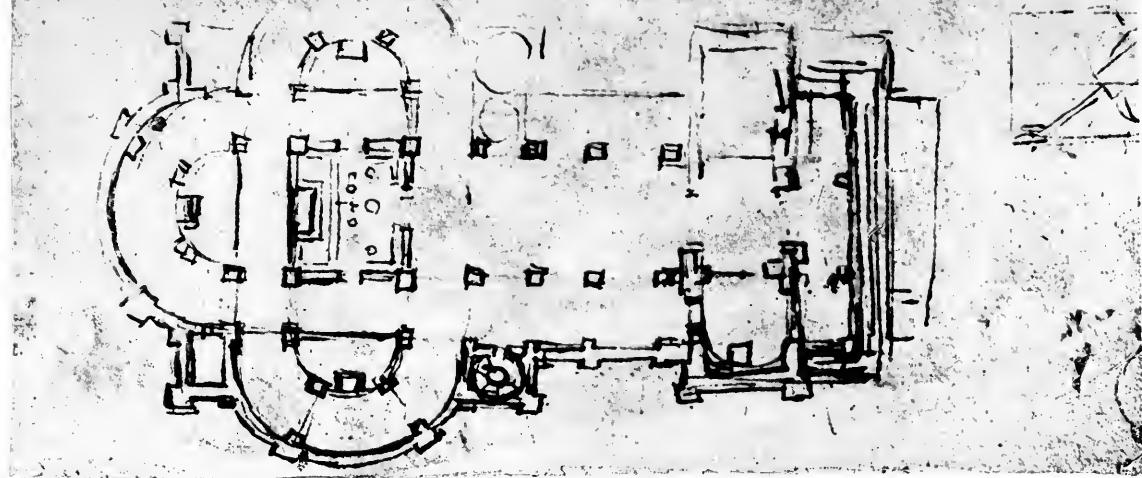

principal features which were employed afterwards in Alberti's front of S. Maria Novella, but even details of a more advanced style, such as we are accustomed to meet with only after the year 1520.

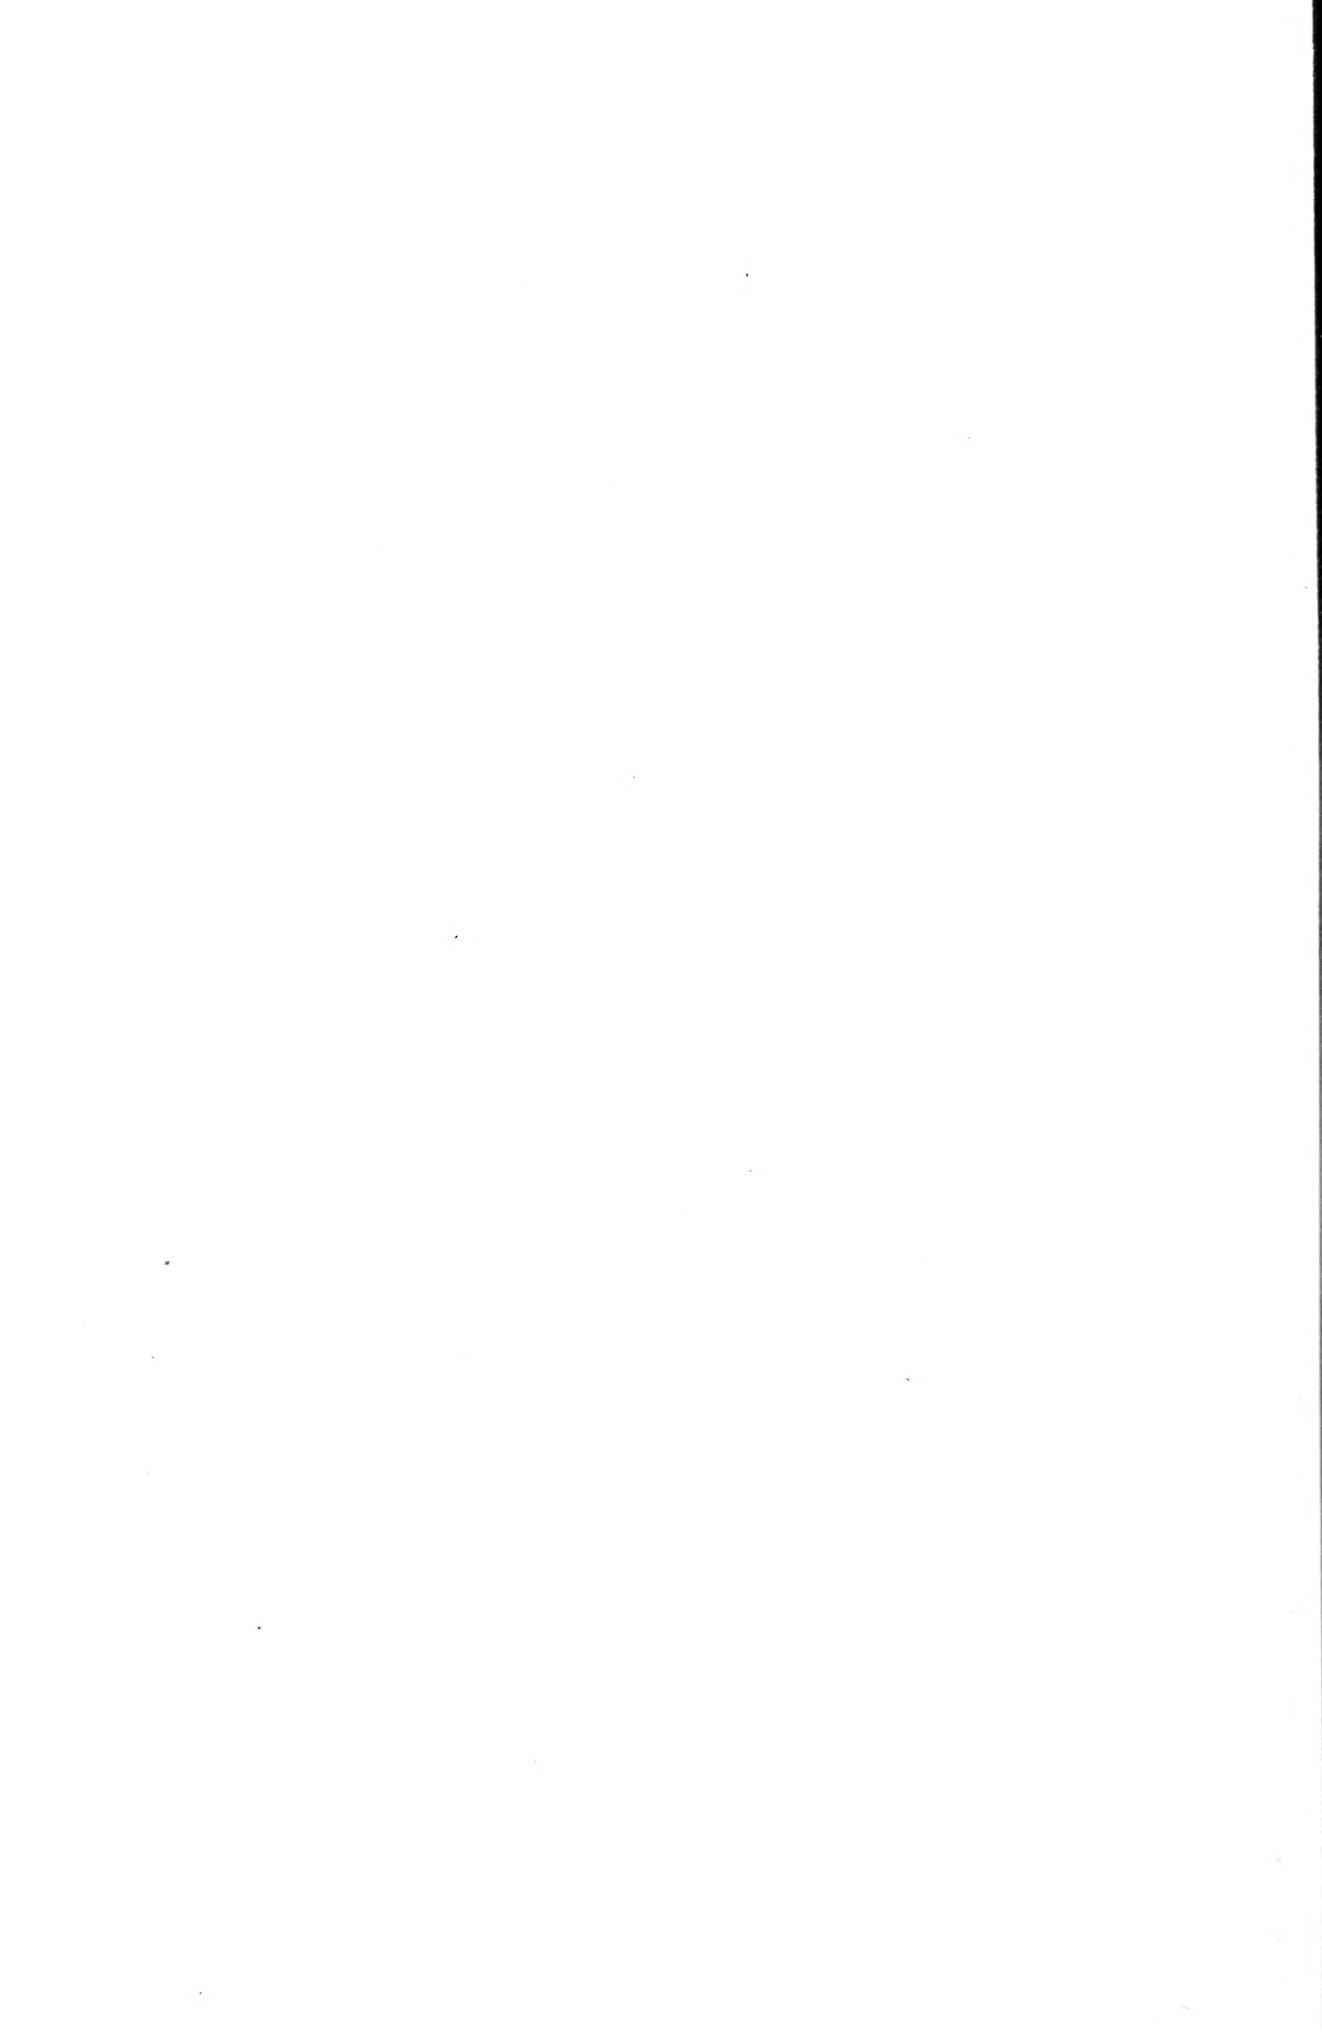

In the background of Leonardo's unfinished picture of St. Jerome (Vatican Gallery) a somewhat similar church front is indicated (see the accompanying sketch).

The view of the front of a temple, apparently a dome in the centre of four Corinthian porticos bearing pediments (published by Amoretti Tav. II. B as being by Leonardo), is taken from a drawing, now at the Ambrosian Gallery. We cannot consider this to be by the hand of the master.

C. *Studies for a form of a Church most proper for preaching.*

The problem as to what form of church might answer the requirements of acoustics seems to have engaged Leonardo's very particular attention. The designation of "teatro" given to some of these sketches, clearly shows which plan seemed to him most favourable for hearing the preacher's voice.

Pl. XCVII, No. 1 (MS. B, 52). Rectangular edifice divided into three naves with an apse on either side, terminated by a semicircular theatre with rising seats, as in antique buildings. The pulpit is in the centre. Leonardo has written on the left side of the sketch: "teatro da predicare" (Theatre for preaching).

MS. B, 55^a (see page 56, Fig. 1). A domed church after the type of Pl. XCV, No. 1, shows four theatres occupying the apses and facing the square "coro" (choir), which is in the centre between the four pillars of the dome.¹ The rising arrangement of the seats is shown in the sketch above. At the place marked B Leonardo wrote teatri per uldire messa (rows of seats to hear mass), at T teatri, and at C coro (choir).

In MS. C.A. 260, are slight sketches of two plans for rectangular choirs and two elevations of the altar and pulpit which seem to be in connection with these plans.

In MS. Ash II, 8^a (see p. 56 and 57, Fig. 2 and 3). "Locho dove si predica" (Place for preaching). A most singular plan for a building. The interior is a portion of a sphere, the centre of which is the summit of a column destined to serve as the preacher's pulpit. The inside is somewhat

¹ The note teatro de predicar, on the right side is, I believe, in the handwriting of Pompeo Leoni. J. P. R.

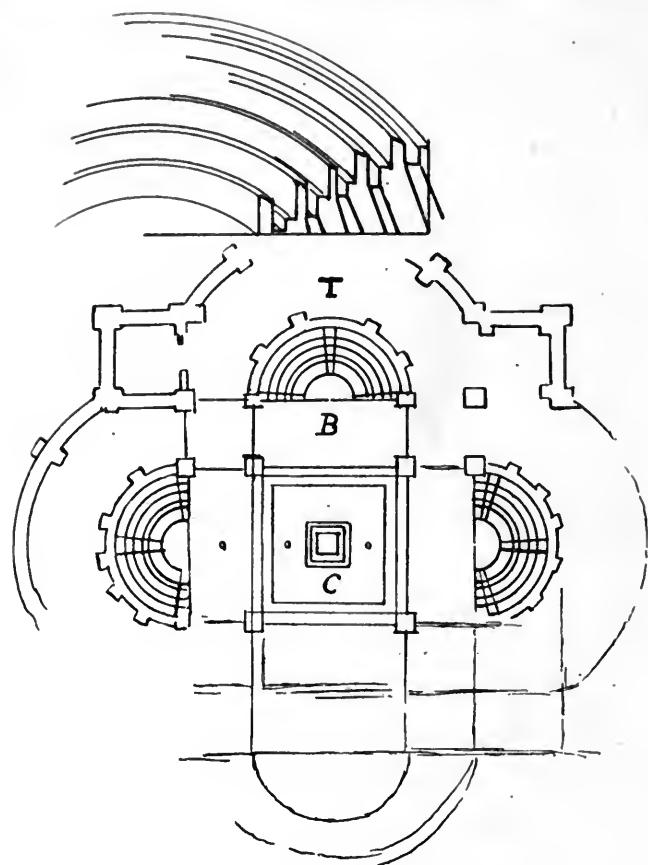

Fig. 1.

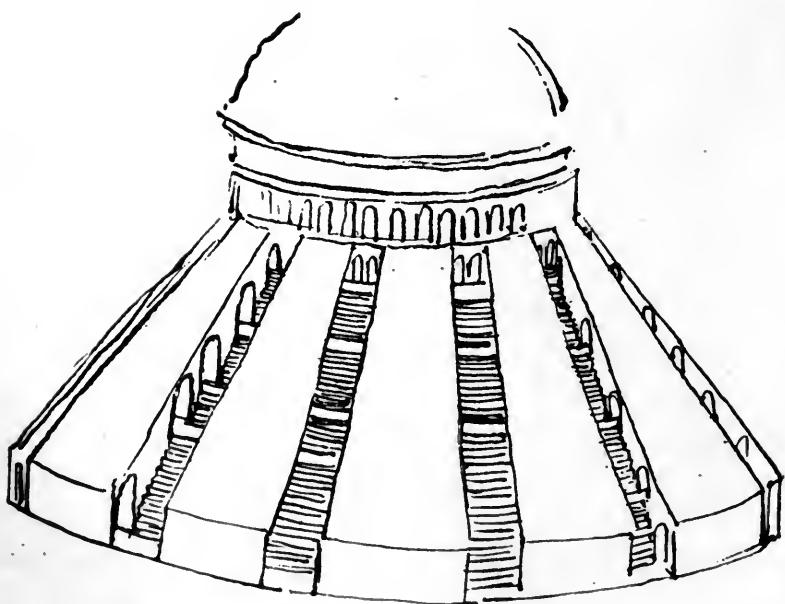

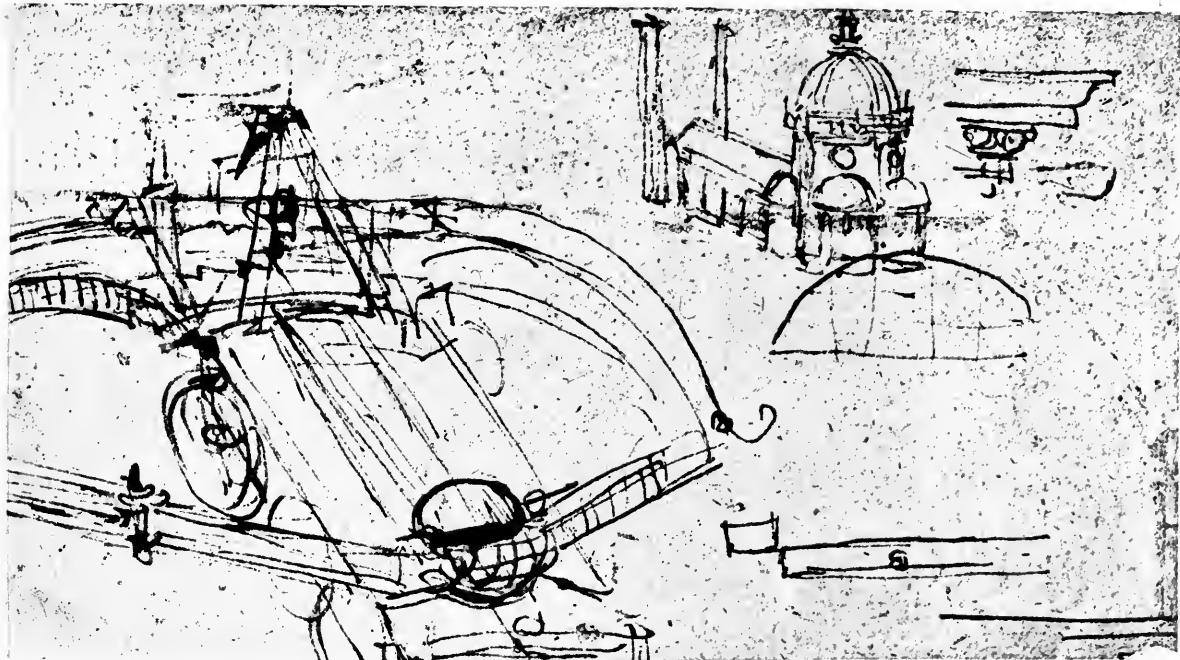

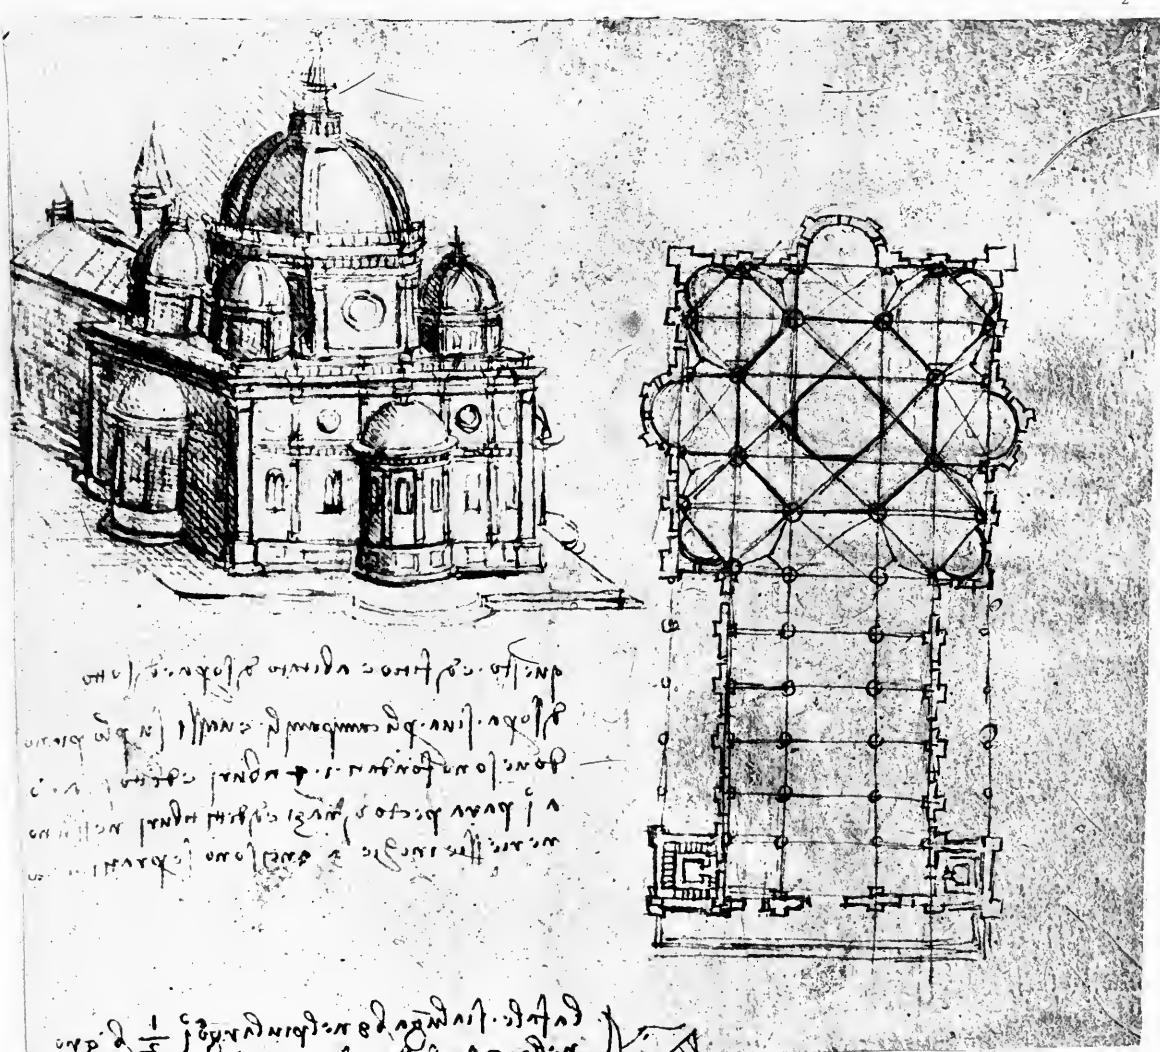

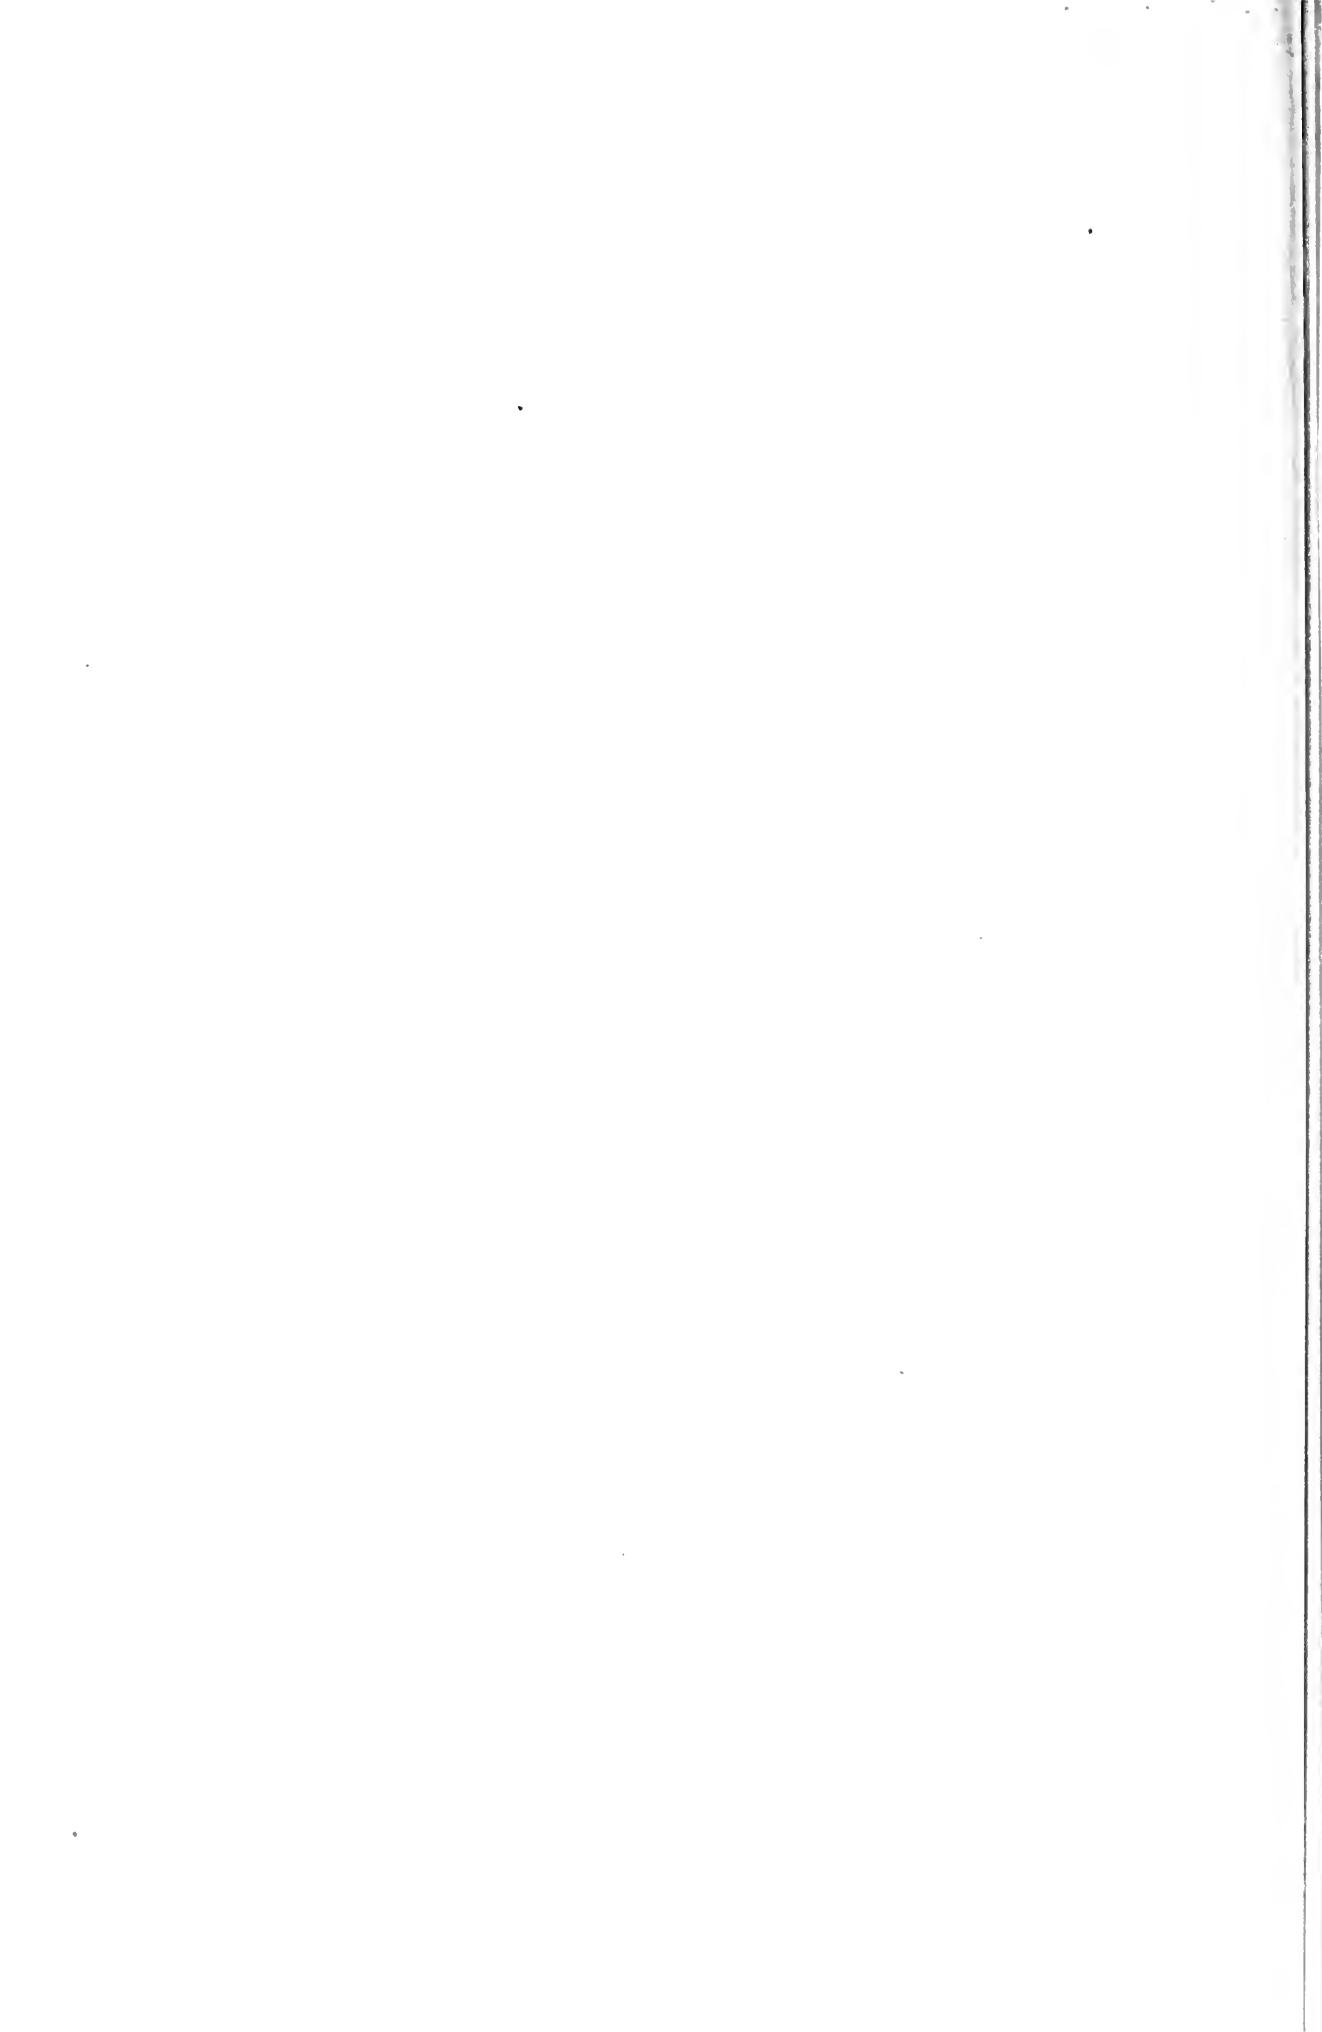

Fig. 2.

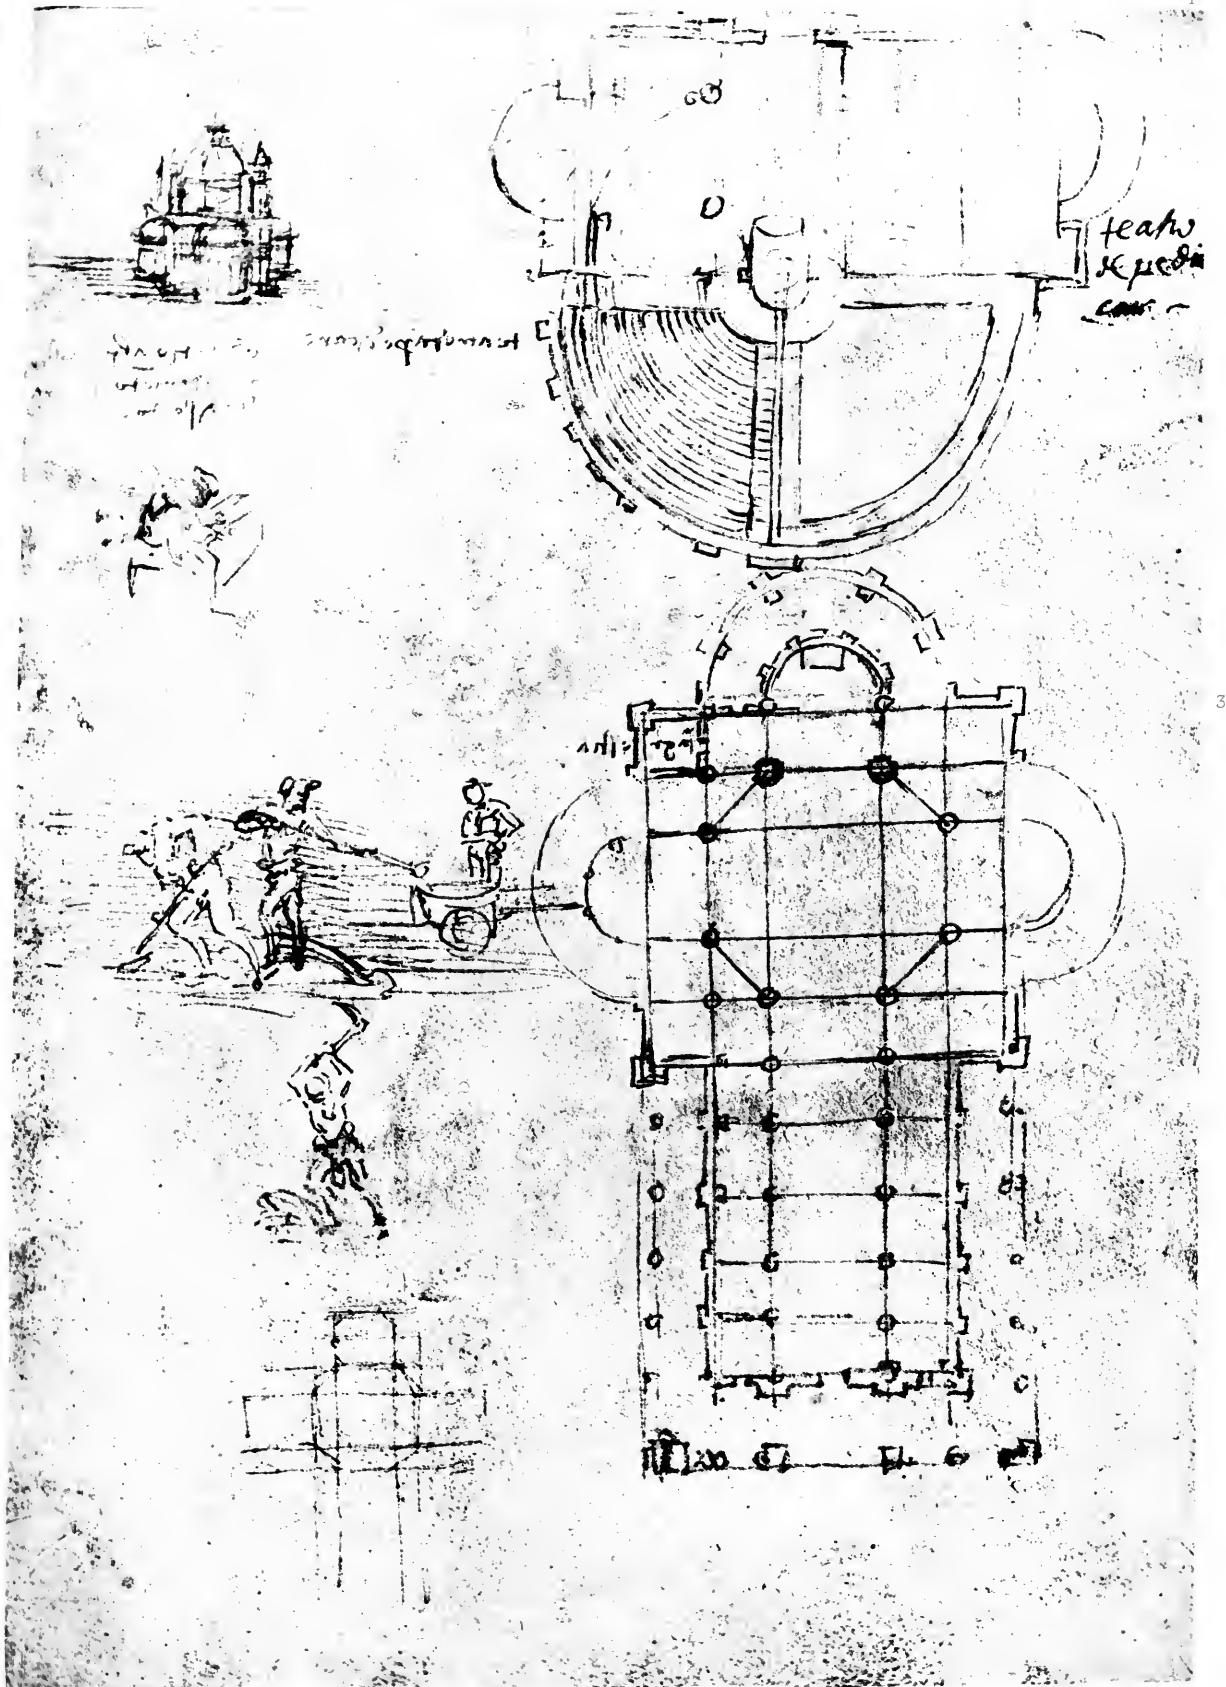

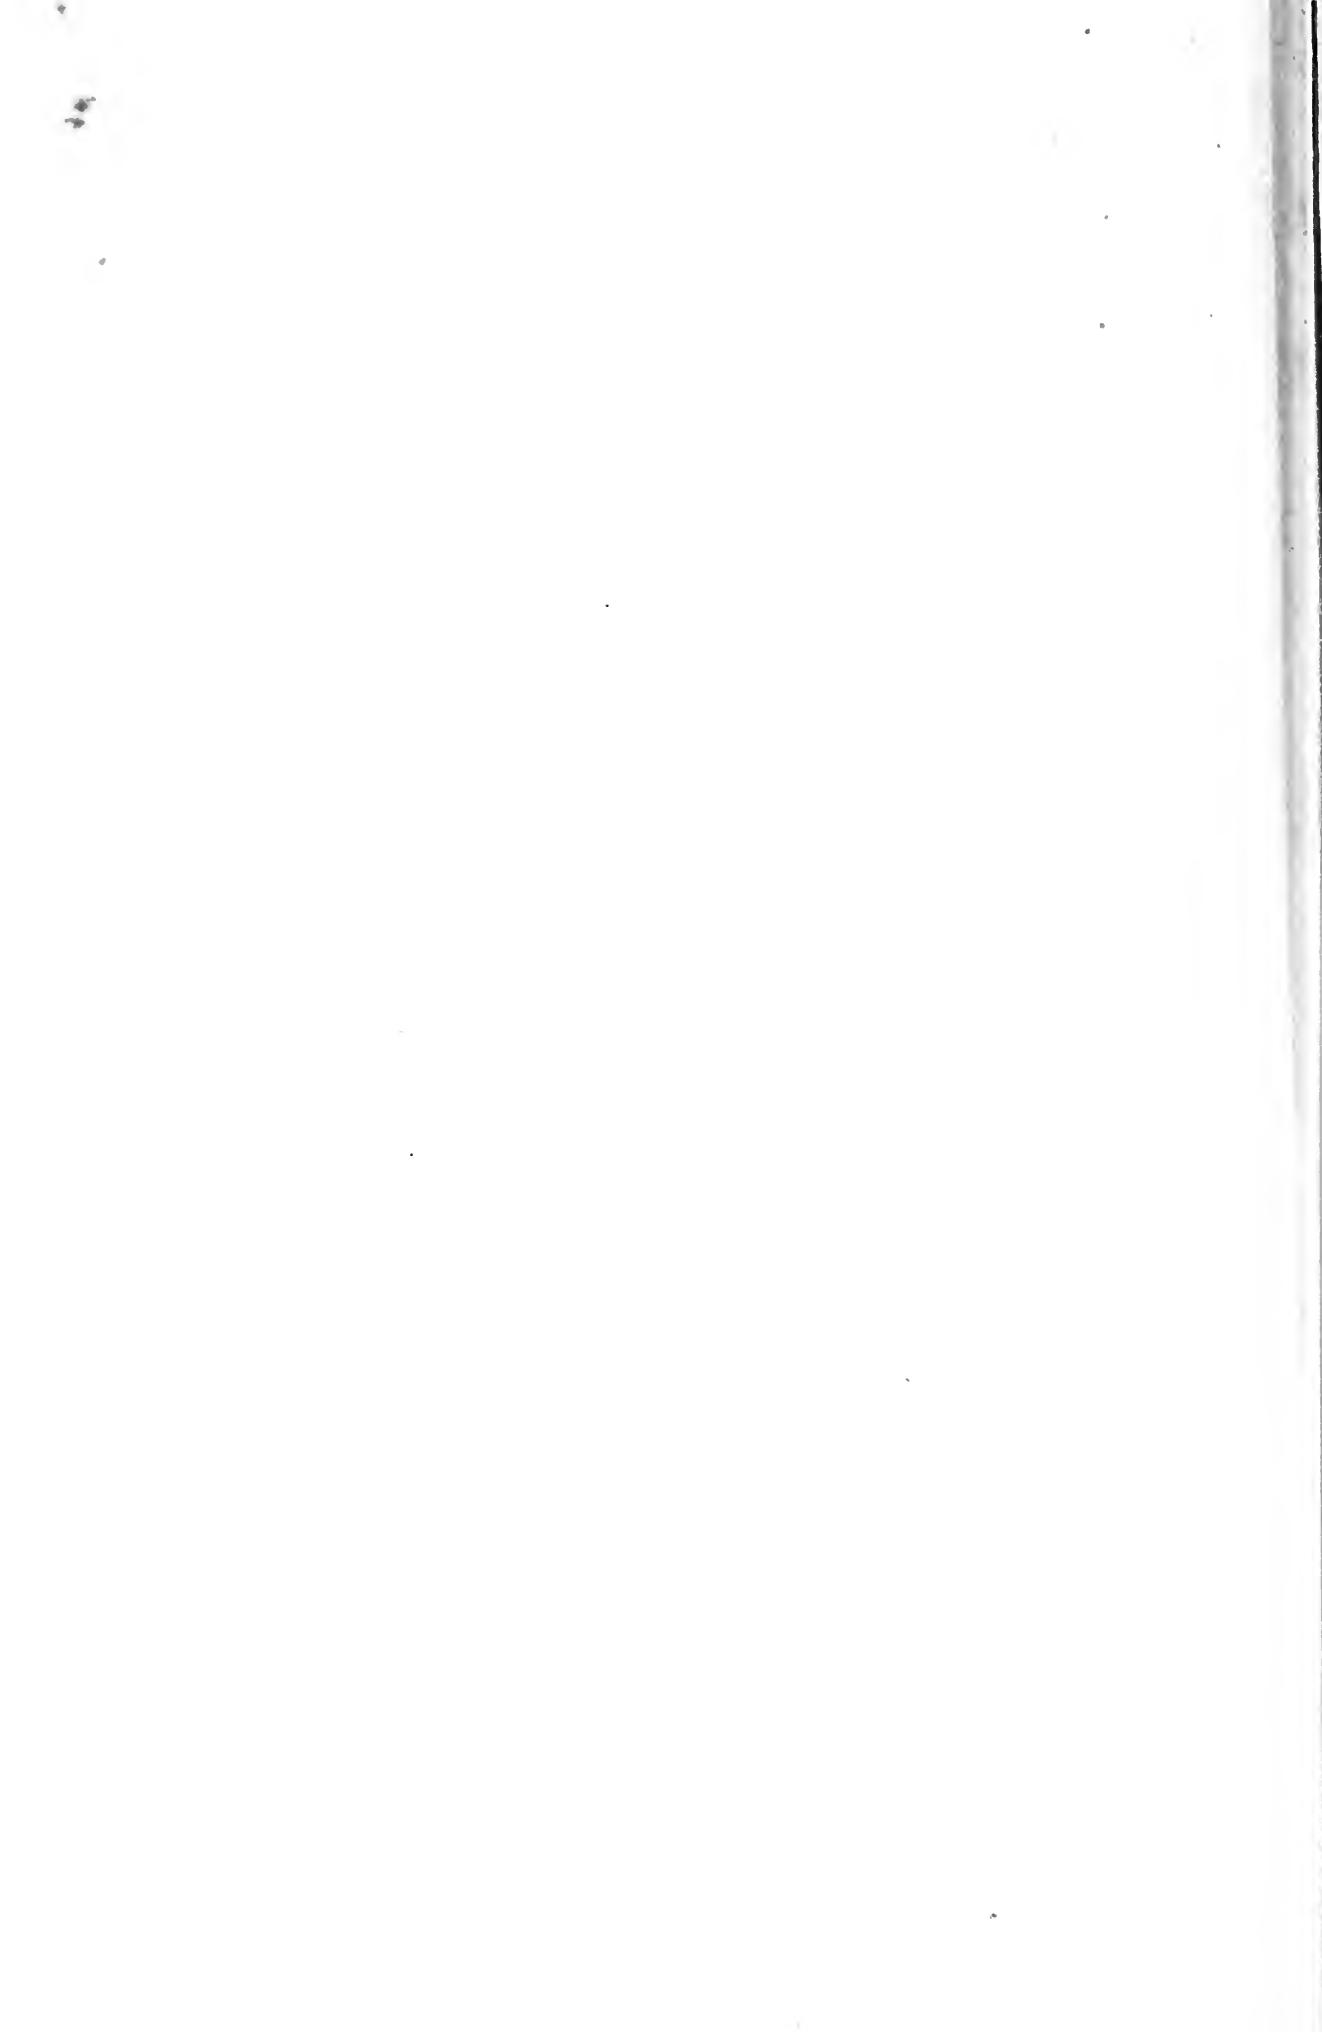

2

Imp. Eudes

like a modern theatre, whilst the exterior and the galleries and stairs recall the ancient amphitheatres.

Page 57, Fig. 4. A plan accompanying the two preceding drawings. If this gives the complete form Leonardo intended for the edifice, it would

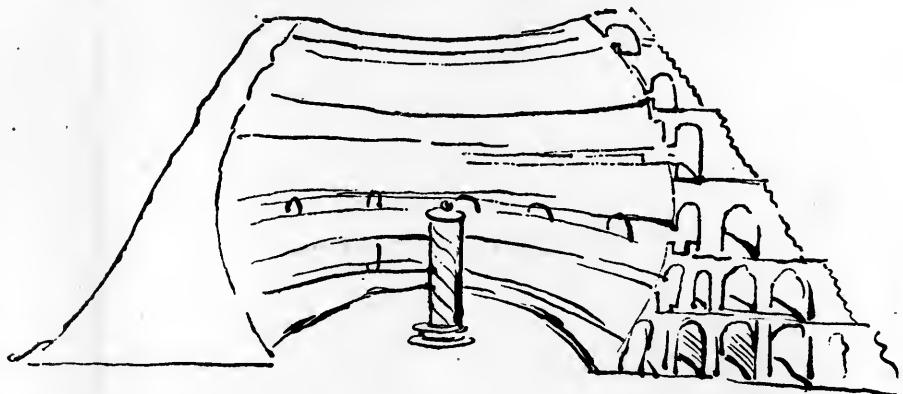

Fig. 3.

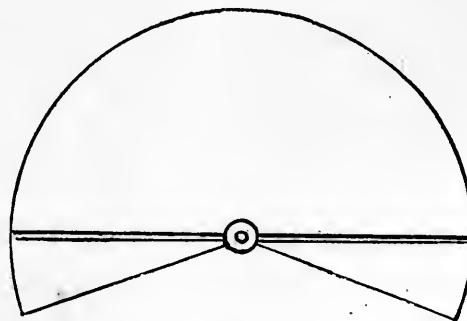

Fig. 4.

have comprised only about two thirds of the circle. Leonardo wrote in the centre "fondamento"; a word he often employed for plans, and on the left side of the view of the exterior: locho dove si predicha (a place for preaching in).

D. Design for a Mausoleum.

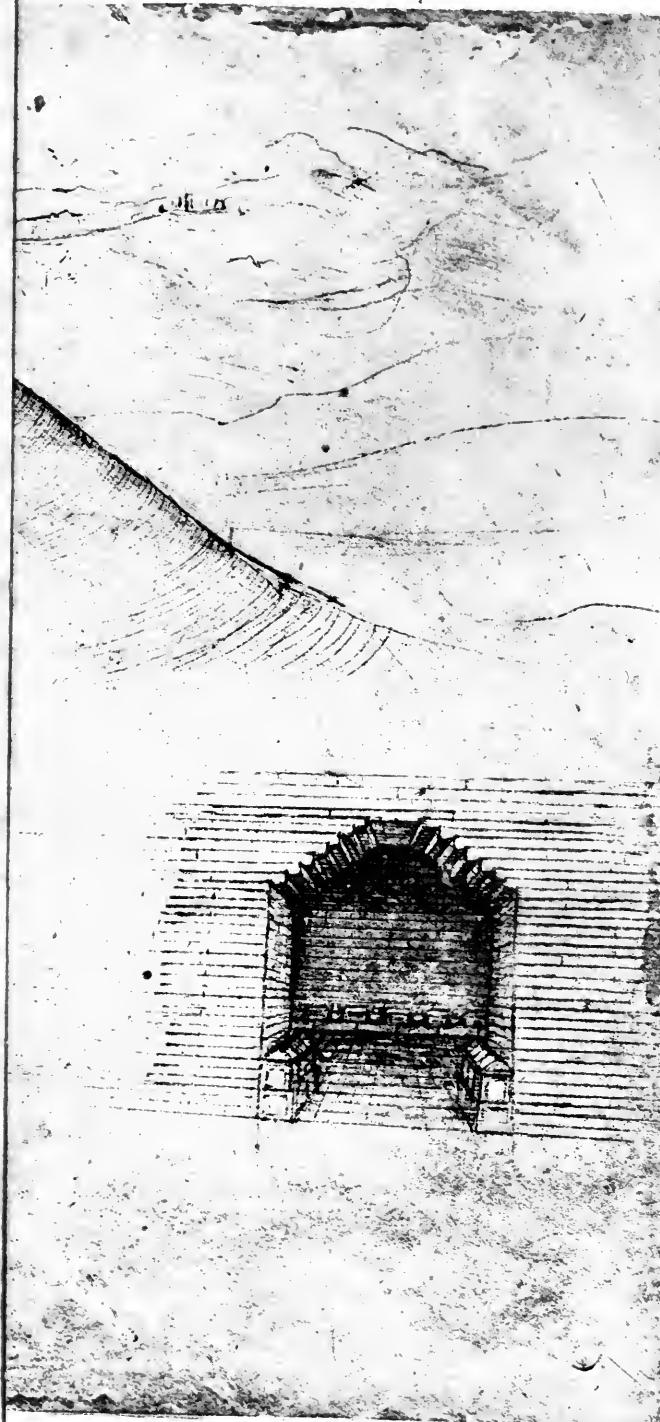

Pl. XC VIII (P. V., 182. No. d'ordre 2386). In the midst of a hilly landscape rises an artificial mountain in the form of a gigantic cone, crowned by an imposing temple. At two thirds of the height a terrace is cut out with six doorways forming entrances to galleries, each leading to three sepulchral halls, so constructed as to contain about five hundred funeral urns, disposed in the customary antique style. From two opposite sides steps ascend to the terrace in a single flight and beyond it to the temple above. A large circular opening, like that in the Pantheon, is in the dome above what may be the altar, or perhaps the central monument on the level of the terrace below.

The section of a gallery given in the sketch to the right below shows the roof to be constructed on the principle of superimposed horizontal layers, projecting one beyond the other, and each furnished with a sort of heel, which appears to be undercut, so as to give the appearance of a beam from within. Granite alone would be adequate to the dimensions here given to the key stone, as the thickness of the layers can hardly be considered to be less than a foot. In taking this as the basis of our calculation for the dimensions of the whole construction, the width of the chamber would be about 25 feet but, judging from the number of urns it contains—and there is no reason to suppose that these urns were larger than usual—it would seem to be no more than about 8 or 10 feet.

The construction of the vaults resembles those in the galleries of some etruscan tumuli, for instance the Regolini Galeassi tomb at Cervetri (lately discovered) and also that of the chamber and passages of the pyramid of Cheops and of the treasury of Atreus at Mycenae.

The upper cone displays not only analogies with the monuments mentioned in the note, but also with Etruscan tumuli, such as the Cocumella

Pl. 1

Imp. Eudes

tomb at Vulci, and the Regolini Galeassi tomb¹. The whole scheme is one of the most magnificent in the history of Architecture.

It would be difficult to decide as to whether any monument he had seen suggested this idea to Leonardo, but it is worth while to enquire, if any monument, or group of monuments of an earlier date may be supposed to have done so.²

¹ See FERGUSON, *Handbook of Architecture*, I, 291.

² There are, in Algiers, two Monuments, commonly called "Le Madracen" and "Le tombeau de la Chrétienne," which somewhat resemble Leonardo's design. They are known to have served as the Mausolea of the Kings of Mauritania. Pomponius Mela, the geographer of the time of the Emperor Claudius, describes them as having been "Monumentum commune regiae gentis." See Le Madracen, Rapport fait par M. le Grand Rabbin AB. CAHEN, Constantine 1873—Mémoire sur les fouilles exécutées au Madras'en .. par le Colonel BRUNON, Constantine 1873.—Deux Mausolées Africains, le Madracen et le tombeau de la Chrétienne par M. J. DE LAURIÈRE, Tours 1874.—Le tombeau de la Chrétienne, Mausolée des rois Mauritaniens par M. BERBRUGGER, Alger 1867.—I am indebted to M. LE BLANC, of the Institut, and M. LUD. LALANNE, Bibliothécaire of the Institut for having first pointed out to me the resemblance between these monuments; while M. ANT. HÉRON DE VILLEFOSSE of the Louvre was kind enough to place the abovementioned rare works at my disposal. Leonardo's observations on the coast of Africa are given later in this work. The Herodium near Bethlehem in Palestine (Jebel el Fureidis, the Frank Mountain) was, according to the latest researches, constructed on a very similar plan. See Der Frankenbergs, von Baurath C. SCHICK in Jerusalem, Zeitschrift des Deutschen Palästina-Vereins, Leipzig 1880, Vol. III, pages 88—99 and Plates IV and V.

J. P. R.

E. Studies for the Central Tower, or Tiburio of Milan Cathedral.

Towards the end of the fifteenth century the Fabbricceria del Duomo had to settle on the choice of a model for the crowning and central part of this vast building. We learn from a notice published by G. L. Calvi¹ that among the artists who presented models in the year 1488 were: Bramante, Pietro da Gorgonzola, Luca Paperio (*Fancelli*), and Leonardo da Vinci.—

Several sketches by Leonardo refer to this important project:

Pl. CXIX, No. 2 (MS. S. K. III, No. 36^a) a small plan of the whole edifice.—The projecting chapels in the middle of the transept are wanting here. The nave appears to be shortened and seems to be approached by an inner “vestibolo”.—

Pl. C, No. 2 (Tr. 21). Plan of the octagon tower, giving the disposition of the buttresses; starting from the eight pillars adjoining the four principal piers and intended to support the eight angles of the Tiburio. These buttresses correspond exactly with those described by Bramante as existing in the model presented by Omodeo.²

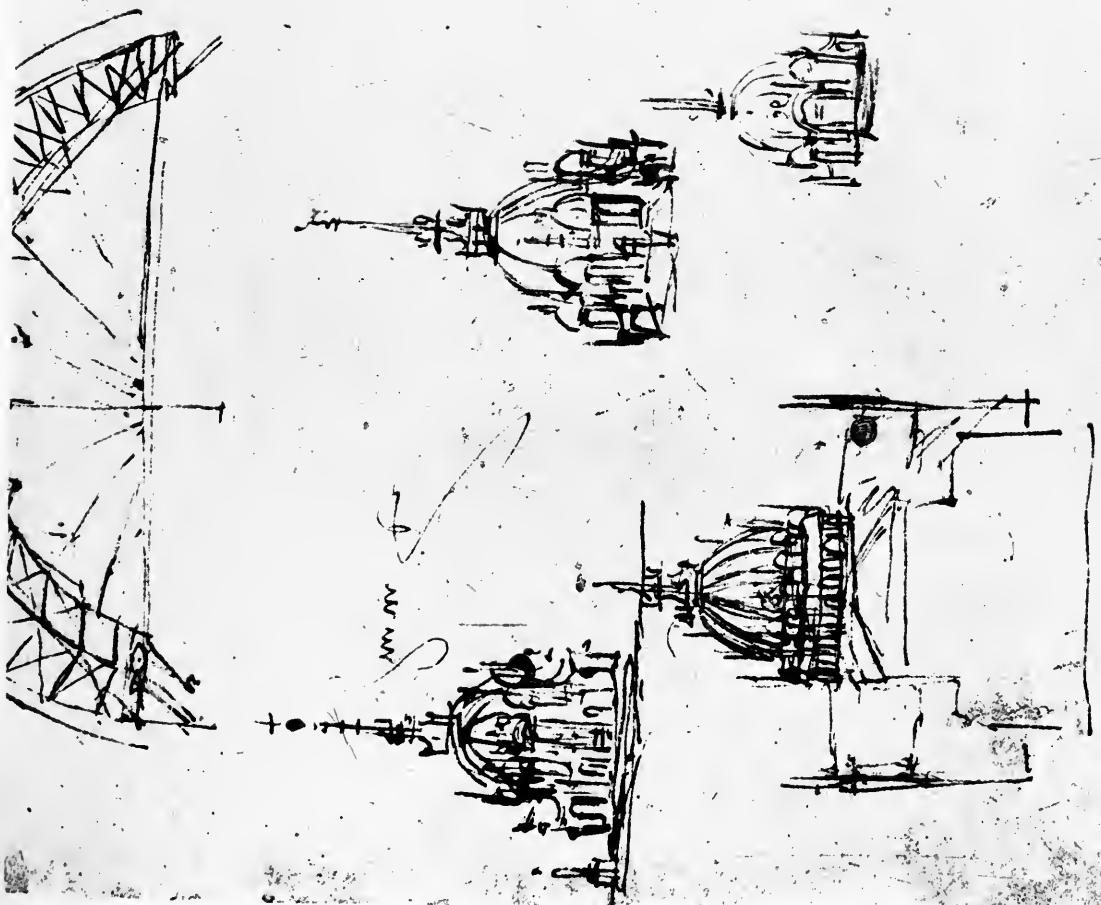

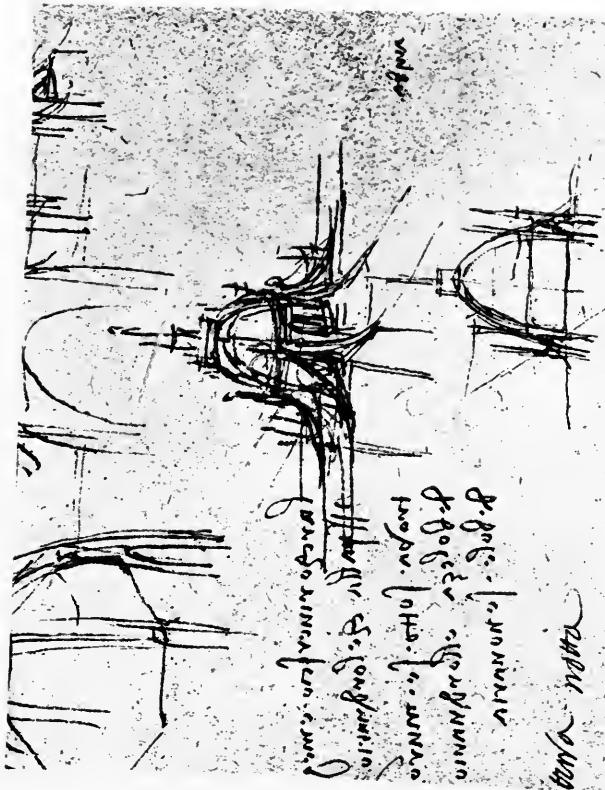

Pl. C, 3 (MS. Tr. 16). Two plans showing different arrangements of the buttresses, which seem to be formed partly by the intersection of a system of pointed arches such as that seen in

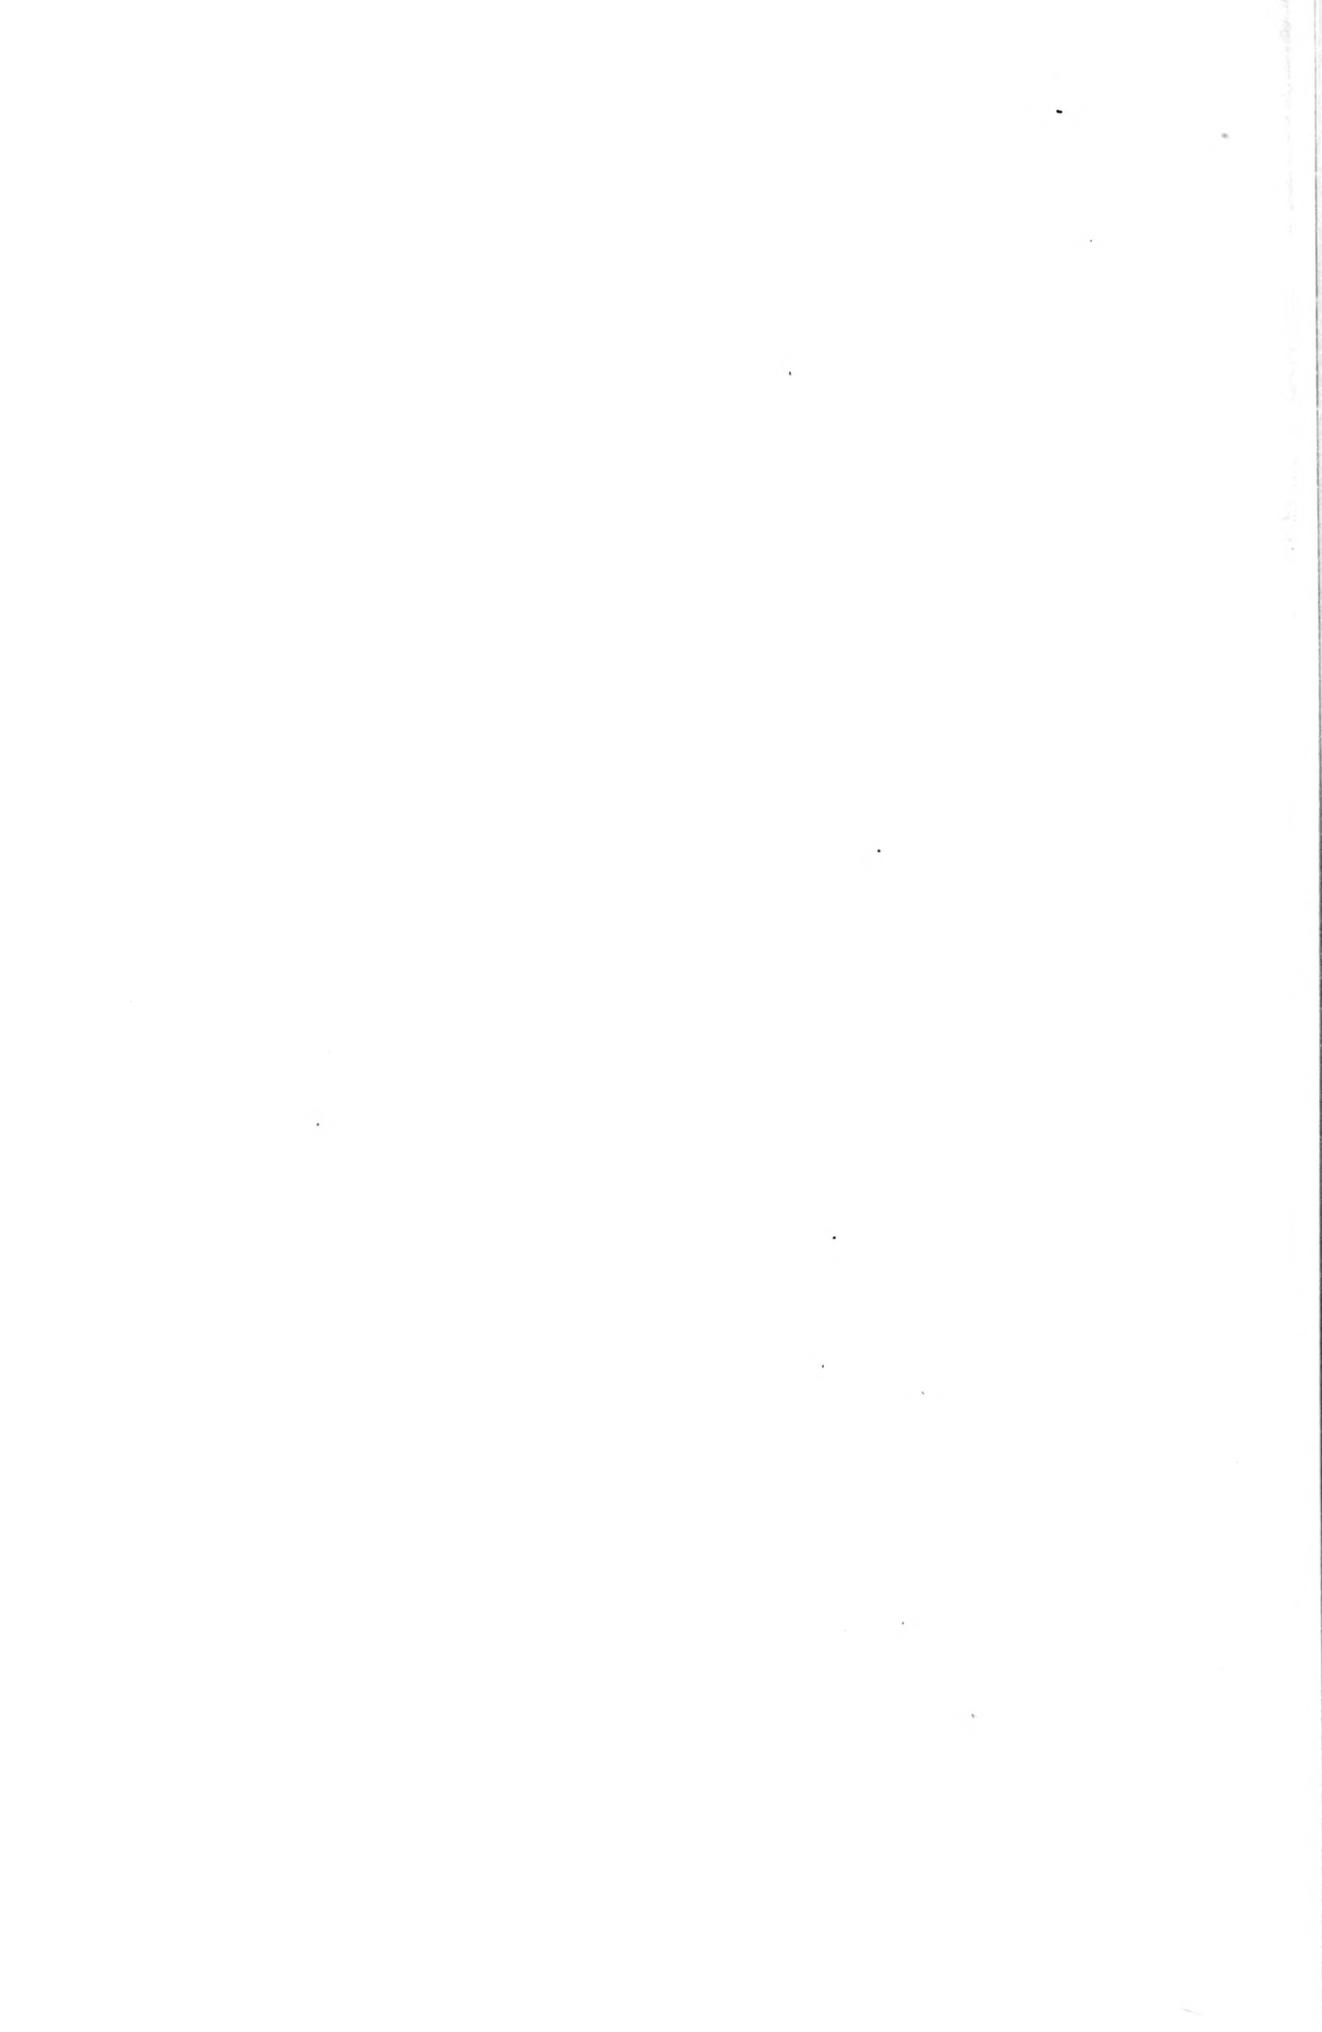

Pl. C, No. 5 (MS. B, 27^a) destined to give a broader base to the drum. The text underneath is given under No. 788.

MS. B, 3—three slight sketches of plans in connexion with the preceding ones.

¹ G. L. CALVI, Notizie sulla vita e sulle opere dei principali architetti scultori e pittori che fiornirono in Milano, Part III, 20. See also: H. DE GEYMÜLLER, Les projets primitifs etc. I, 37 and 116—119.—The Fabbricceria of the Duomo has lately begun the publication of the archives, which may possibly tell us more about the part taken by Leonardo, than has hitherto been known.

² Bramante's opinion was first published by G. MONGERI, Arch. stor. Lomb. V, fasc. 3 and afterwards by me in the publication mentioned in the preceding note.

Pl. XCIX, No. 1 (MS. Tr. 15) contains several small sketches of sections and exterior views of the Dome; some of them show buttress-walls shaped as inverted arches. Respecting these Leonardo notes:

Tr. 15]

L'arco rivescio è migliore per fare
spalla che l'ordinario, perchè il rovescio
trova sotto se muro resistete alla sua
debolezza, e l'ordinario nō trova nel suo
debole se non aria.

758. 1. larcho. 2. isspalla . . . riverscio. 4. deboleza ellordinario.

758.

The inverted arch is better for giving a shoulder than the ordinary one, because the former finds below it a wall resisting its weakness, whilst the latter finds in its weak part nothing but air.

Three slight sketches of sections on the same leaf—above those reproduced here—are more closely connected with the large drawing in the centre of

Pl. C, No. 4 (MS. Tr. 41) which shows a section of a very elevated dome, with double vaults, connected by ribs and buttresses ingeniously disposed, so as to bring the weight of the lantern to bear on the base of the dome.

A sketch underneath it shows a round pillar on which is indicated which part of its summit is to bear the weight: "il pilastro sarà charicho in a b." (The column will bear the weight at a b.) Another note is above on the right side: Larcho regierà tanto sotto asse chome di sopra se (The arch supports as much below it [i. e. a hanging weight] as above it).

Pl. C, No. 1 (C. A. 303^a). Larger sketch of half section of the Dome, with a very complicated system of arches, and a double vault. Each stone is shaped so as to be knit or dovetailed to its neighbours. Thus the inside of the Dome cannot be seen from below.

MS. C. A. 303^b. A repetition of the preceding sketch with very slight modifications.

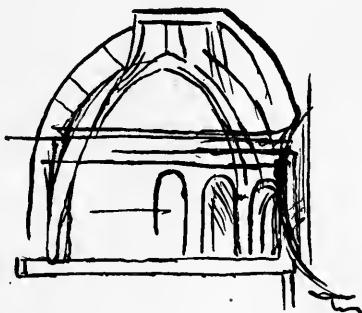

Fig. 1.

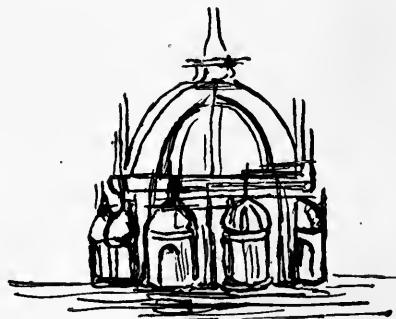

Fig. 2.

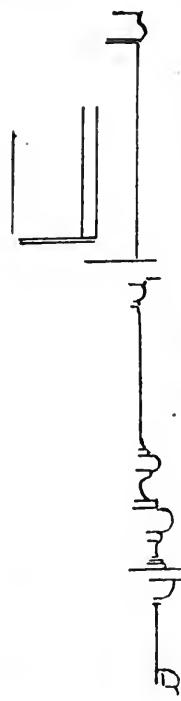

MS. Tr. 9 (see Fig. 1 and 2). Section of the Dome with reverted buttresses between the windows, above which iron anchors or chains seem to be intended. Below is the sketch of the outside.

Pl. XCIX, No. 3 (C. A., 262^a) four sketches of the exterior of the Dome.

C. A. 12. Section, showing the points of rupture of a gothic vault, in evident connection with the sketches described above.

It deserves to be noticed how easily and apparently without effort, Leonardo manages to combine gothic details and structure with the more modern shape of the Dome.

The following notes are on the same leaf, oni cosa pōderosa, and oni cosa pōderosa desidera de(scendere); farther below, several multiplications

most likely intended to calculate the weight of some parts of the Dome, thus $16 \times 47 = 720$; $720 \times 800 = 176000$, next to which is written: peso del pilastro di 9 teste (weight of the pillar 9 diameters high).

Below: $176000 \times 8 = 1408000$; and below:

Sēmjlō e se cē 80 (?) il peso del tiburio
(six millions six hundred (?) 80 the weight of the Dome),

Bossi hazarded the theory that Leonardo might have been the architect who built the church of Sta. Maria delle Grazie, but there is no evidence to support this, either in documents or in the materials supplied by Leonardo's manuscripts and drawings. The sketch given at the side shows the arrangement of the second and third socle on the apses of the choir of that church; and it is remarkable that those sketches, in MS. S. K. M. II², 2^a and 1^b, occur with the passage given in Volume I as No. 665 and 666 referring to the composition of the Last Supper in the Refectory of that church.

F. The Project for lifting up the Battistero of Florence and setting it on a basement.

Among the very few details Vasari gives as to the architectural studies of Leonardo, we read: "And among these models and designs there was one by way of which he showed several times to many ingenious citizens who then governed Florence, his readiness to lift up without ruining it, the church of San Giovanni in Florence (the Battistero, opposite the Duomo) in order to place under it the missing basement with steps; he supported his assertions with reasons so persuasive, that while he spoke the undertaking seemed feasible, although every one of his hearers, when he had departed, could see by himself the impossibility of so vast an undertaking."¹

In the MS. C. A. fol. 293, there are two sketches which possibly might have a bearing on this bold enterprise. We find there a plan of a circular or polygonal edifice surrounded by semicircular arches in an oblique position. These may be taken for the foundation of the steps and of the new platform. In the perspective elevation the same edifice, forming a polygon, is shown as lifted up and resting on a circle of inverted arches which rest on an other circle of arches in the ordinary position, but so placed that the inverted arches above rest on the spandrels of the lower range.

What seems to confirm the supposition that the lifting up of a building is here in question, is the indication of engines for winding up, such as jacks, and a rack and wheel. As the lifting apparatus represented on this sheet does not seem particularly applicable to an undertaking of such magnitude, we may consider it to be a first sketch or scheme for the engines to be used.

¹ This latter statement of Vasari's must be considered to be exaggerated. I may refer here to some data given by LIBRI, Histoire des sciences mathématiques en Italie (II, 216, 217): "On a cru dans ces derniers temps faire un miracle en mécanique en effectuant ce transport, et cependant dès l'année 1455, Gaspard Nadi et Aristote de Fioravantio avaient transporté, à une distance considérable, la tour de la Magione de Bologne, avec ses fondements, qui avait presque quatre-vingts pieds de haut. Le continuateur de la chronique de Pugliola dit que le trajet fut de 35 pieds et que durant le transport auquel le chroniqueur affirme avoir assisté, il arriva un accident grave qui fit pencher de trois pieds la tour pendant qu'elle était suspendue, mais que cet accident fut promptement réparé (Muratori, Scriptores rer. ital. Tom. XVIII, col. 717, 718). Alidosi a rapporté une note où Nadi rend compte de ce transport avec une rare simplicité. D'après cette note, on voit que les opérations de ce genre n'étaient pas nouvelles. Celle-ci ne coûta que 150 livres (monnaie d'alors) y compris le cadeau que le Légat fit aux deux mécaniciens. Dans la même année, Aristote redressa le clocher de Cento, qui penchait de plus de cinq pieds (Alidosi, instruzione p. 188 — Muratori, Scriptores rer. ital., tom. XXIII, col. 888. — Bossii, chronica Mediol., 1492, in-fol. ad ann. 1455). On ne conçoit pas comment les historiens des beaux-arts ont pu négliger de tels hommes." J. P. R.

G. Description of an unknown Temple.

C. A. 280a; 852a]

759.

Per dodici gradi di scale al magno tempio si saliva, il quale otto cento braccia circundava, e con ottangolare ²figura era fabricato, e sopra li otto anguli otto gran base si posauano a un braccio e mezzo, e grosse 3, ³e lunghe 6 nel suo sodo, coll'angolo in mezzo, sopra delle quali si fondaiano 8 grā pilastri: sopra del sodo della basa si le⁴vava per ispatio di 24 braccia, e nel suo termine erano stabiliti 8 capitelli di 3 braccia l'uno, e largo 6, sopra di questi se⁵guiva architraue fregio e cornice con altezza di 4 braccia e ¹/₂, il quale per retta linia ⁶dall'un pilastro all'altro s'astendea, e così con circuito d'otto cento braccia il tempio circundava infra l' ⁷ū pilastro e l'altro; per sostentacolo di tal mēbro erano stabiliti dieci gran colōne dell'altezza de' pilastri e cō ⁸grossezza di 3 braccia sopra le base, le quali erā alte vn braccio e ¹/₂.

⁹Salivasi a questo tempio per 12 gradi di scale, il quale tempio era sopra il dodecimo grado fondato in figura ottangolare, e sopra ciascuno angulo nasceva vn gran pilastro; e infra li pilastri erano inframessi ¹¹dieci

Twelve flights of steps led up to the great temple, which was eight hundred braccia in circumference and built on an octagonal plan. At the eight corners were eight large plinths, one braccia and a half high, and three wide, and six long at the bottom, with an angle in the middle; on these were eight great pillars, standing on the plinths as a foundation, and twenty four braccia high. And on the top of these were eight capitals three braccia long and six wide, above which were the architrave frieze and cornice, four braccia and a half high, and this was carried on in a straight line from one pillar to the next and so, continuing for eight hundred braccia, surrounded the whole temple, from pillar to pillar. To support this entablature there were ten large columns of the same height as the pillars, three braccia thick above their bases which were one braccia and a half high.

The ascent to this temple was by twelve flights of steps, and the temple was on the twelfth, of an octagonal form, and at each angle rose a large pillar; and between the pillars were placed ten columns of the

V. Palace architecture.

But a small number of Leonardo's drawings refer to the architecture of palaces, and our knowledge is small as to what style Leonardo might have adopted for such buildings.

Pl. CII No. 1 (W. XVIII). A small portion of a façade of a palace in two stories, somewhat resembling Alberti's Palazzo Rucellai.—Compare with this Bramante's painted front of the Casa Silvestri, and a painting by Montorfano in San Pietro in Gessate at Milan, third chapel on the left hand side and also with Bramante's palaces at Rome. The pilasters with arabesques, the rustica between them, and the figures over the window may be painted or in sgraffito. The original is drawn in red chalk.

Pl. LXXXI No. 1 (MS. Tr. 42). Sketch of a palace with battlements and decorations, most likely graffiti; the details remind us of those in the Castello at Vigevano.¹

MS. Mz. o⁴, contains a design for a palace or house with a loggia in the middle of the first story, over which rises an attic with a Pediment reproduced on page 67. The details drawn close by on the left seem to indicate an arrangement of coupled columns against the wall of a first story.

Pl. LXXXV No. 14 (MS. S. K. M. III 79^a) contains a very slight

¹ Count GIULIO PORRO, in his valuable contribution to the Archivio Storico Lombardo, Anno VIII, Fasc. IV (31 Dec. 1881): Leonardo da Vinci, Libro di Annotazioni e Memorie, refers to this in the following note: "Alla pag. 41 vi è uno schizzo di volta ed accanto scrisse: 'il pilastro sarà chiaro in su 6' e potrebbe darsi che si riferisse alla cupola della chiesa delle Grazie tanto più che a pag. 42 vi è un disegno che rassomiglia assai al basamento che oggi si vede nella parte esterna del coro di quella chiesa." This may however be doubted. The drawing, here referred to, on page 41 of the same manuscript, is reproduced on Pl. C No. 4 and described on page 61 as being a study for the cupola of the Duomo of Milan.

sketch in red chalk, which most probably is intended to represent the façade of a palace. Inside is the short note 7 he 7 (7 and 7).

MS. J² 8^a (see pages 68 Fig. 1 and 2) contains a view of an unknown palace. Its plan is indicated at the side.

In MS. Br. M. 126^a (see Fig. 3 on page 68) there is a sketch of a house, on which Leonardo notes: casa con tre terrazi (house with three terraces).

Pl. CX, No. 4 (MS. L. 36^b) represents the front of a fortified building drawn at Cesena in 1502 (see No. 1040).

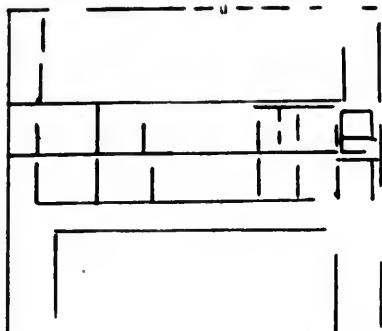

Fig. 2.

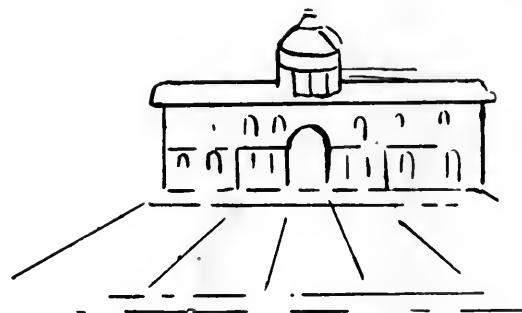

Fig. 1.

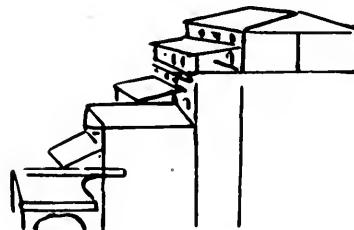

Fig. 3.

Here we may also mention the singular building in the allegorical composition represented on Pl. LVIII in Vol. I. In front of it appears the head of a sphinx or of a dragon which seems to be carrying the palace away.

The following texts refer to the construction of palaces and other buildings destined for private use:

Sur le dessin précédent nous
avons vu comment les architectes
avaient commencé à utiliser
les éléments de la tradition grecque
dans leur œuvre. Nous allons
maintenant voir comment ces mêmes
architectes ont commencé à utiliser
les éléments de la tradition romaine.
Nous verrons que les éléments
qui avaient été utilisés dans les
édifices grecs étaient toujours
utilisés dans les édifices romains,
mais que les Romains avaient
aussi développé de nouveaux
éléments qui étaient caractéristiques
de leur style.

761.

FOR MAKING A CLEAN STABLE.

The manner in which one must arrange ^{On the} dispositions a stable. You must first divide its width in of a stable. 3 parts, its depth matters not; and let these 3 divisions be equal and 6 braccia broad for each part and 10 high, and the middle part shall be for the use of the stablemasters; the 2 side ones for the horses, each of which must be 6 braccia in width and 6 in length, and be half a braccio higher at the head than behind. Let the manger be at 2 braccia from the ground, to the bottom of the rack, 3 braccia; and the top of it 4 braccia. Now, in order to attain to what I promise, that is to make this place, contrary to the general custom, clean and neat: as to the upper part of the stable, i. e. where the hay is, that part must have at its outer end a window 6 braccia high and 6 broad, through which by simple means the hay is brought up to the loft, as is shown by the machine *E*; and let this be erected in a place 6 braccia wide, and as long as the stable, as seen at *k p*. The other two parts, which are on either side of this, are again divided; those nearest to the hay-loft are 4 braccia, *p s*, and only for the use and circulation of the servants belonging to the stable; the other two which reach to the outer walls are 2 braccia, as seen at *s k*, and these are made for the purpose of giving hay to the mangers, by means of funnels, narrow at the top and wide over the manger, in order that the hay should not choke them. They must be well plastered and clean and are represented at *4 f s*. As to the giving the horses water, the troughs must be of stone and above them [cisterns of] water. The mangers may be opened as boxes are uncovered by raising the lids.

763. Other drawings of fountains are given on Pl. CI (W. XX); the original is a pen and ink drawing on blue paper; on Pl. CIII (MS. B.) and Pl. LXXXII.

VI. Studies of architectural details.

Several of Leonardo's drawings of architectural details prove that, like other great masters of that period, he had devoted his attention to the study of the proportion of such details. As every organic being in nature has its law of construction and growth, these masters endeavoured, each in his way, to discover and prove a law of proportion in architecture. The following notes in Leonardo's manuscripts refer to this subject.

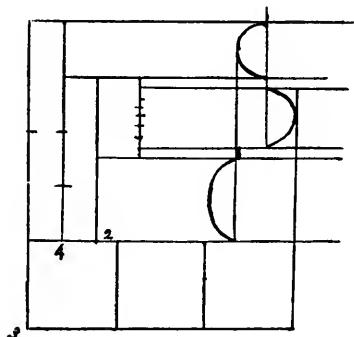

Fig. 1.

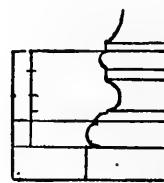

Fig. 2.

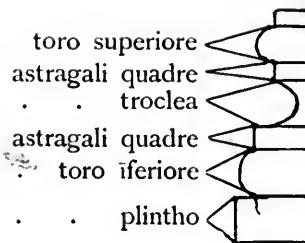

MS. S. K. M. III, 47^b (see Fig. 1). A diagram, indicating the rules as given by Vitruvius and by Leon Battista Alberti for the proportions of the Attic base of a column.

SCALE D' URBINO.

³Il latastro deve ⁴essere largo quāsto la grossezza di qua⁶lūque muro dove ⁷tale latastro s'ap⁸poggia.

C. A. 318a; 961a]

I nostri antichi architettori cominciando in prima dagli Egitti, i quali secondo che descrive Diodoro Siculo ²furō i primi edificatori e componitori di città grandissime e di castelli ed edifizi publici e privati di forma, grandezza ³e qualità per le quali i loro antecedēti riguardevoli con stupefazione e maraviglia ⁴le eleuate e grandissime macchine parēdo loro

⁵La colonna ch' à la sua grossezza nel terzo ⁶quella che fusse sottile nel mezzo ronperassi nelle . . . ; ⁷quella ch' è di pari grossezza e di pari fortezza è migliore per l'edifizio, ⁸seconda di bontà sarà quella ch' à la maggior grossezza dov' ella si cōgivgnie colla ⁹basa.

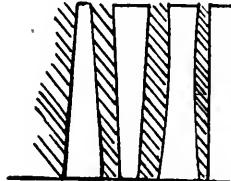

765.

STEPS OF URBINO.

The plinth must be as broad as the thickness of the wall against which the plinth is built.

766.

The ancient architects beginning with the Egyptians (?) who, as Diodorus Siculus writes, were the first to build and construct large cities and castles, public and private buildings of fine form, large and well proportioned

The column, which has its thickness at the third part The one which would be thinnest in the middle, would break . . . ; the one which is of equal thickness and of equal strength, is better for the edifice. The second best as to usefulness will be the one whose greatest thickness is where it joins with the base.

764. 1. toro superio . . super. 2. nestroli. 3. torclea. 5. inferior 6. [plato] plinto.

765. 2. [il muro]. 3. illatastro debbe. 4. [g] largo. 5. grosseza di qu'a". 7. latastro. 8. pogga.

766. 1—. written from left to right. 1. nostri . . otalecine chomiciando . . daglitii . . sechōdo . . desscriue . . sicholo. 2. edi' ficatori e chomponitori di cita . . chasstella. 4. grandeza . . anticedēti [gestupessani che] righuardevoli chonnistupesfazione . . loro; here the text breaks off. 5. cholonna . . groseza terzo qui . ve ana aroper se (?) 6. . . mezo . . nelle 2 ispasia.

764. No explanation can be offered of the meaning of the letter B, which precedes each name. It may be meant for *basa* (base). Perhaps it refers to some author on architecture or an architect (Bramante?) who employed the designations, thus marked for the mouldings.

*3. *troclea*. Philander: *Trochlea sive trochalia aut rechanum*.

6. *Laterculus* or *latastrum* is the Latin name for *Plinthus* ($\pi\lambda\gamma\thetaος$), but Vitruvius adopted this Greek name and "latastro" seems to have been little

in use. It is to be found besides the text given above, as far as I am aware, only on two drawings of the Uffizi Collection, where, in one instance, it indicates the *abacus* of a Doric capital.

765. See Pl. CX No. 3. The hasty sketch on the right hand side illustrates the 'unsatisfactory' effect produced when the plinth is narrower than the wall.

766. See Pl. CIII, No. 3, where the sketches belonging to lines 10—16 are reproduced, but reversed. The sketch of columns, here reproduced by a wood cut, stands in the original close to lines 5—8.

¹⁰ Il capitello à a essere j questo formato, dividi la sua grossezza da capo j 8 d' ù piè ¹¹ e fa ché sia alto $\frac{5}{7}$ e verrà a essere quadro, dipoi dividi l'altezza j 8, come facesti la colonna, di poi poni $\frac{1}{8}$ l'uovo ¹² e un altro ottavo la grossezza della tavola che sta di sopra al capitello; ¹³ i corni della tavola del capitello àno a sportare fuori dalla maggior larghezza della cāpana $\frac{2}{7}$, ¹⁴ cioè settimi del di sopra della cāpana che tocca a ciascū corno di sporto $\frac{1}{7}$, ¹⁵ e la mozzatura de' corni vuole essere largha quāt' è alta, cioè $\frac{1}{8}$; jl resto degli ornamenti lascio ¹⁶jn libertà degli scultori; ¹⁷ ma per tornare alle colonne, e provare la ragione secondo la forma di lor fortezza ¹⁸ o debolezza, dico così, che quādo le linie si partiranno dalla sommità della ¹⁹colonna e termineranno nel suo nascimēto e la lor uia e lūghezza sia di pari ²⁰distanzia o latitudine, dico che questa colonna

The capital must be formed in this way. Divide its thickness at the top into 8; at the foot make it $\frac{5}{7}$, and let it be $\frac{5}{7}$ high and you will have a square; afterwards divide the height into 8 parts as you did for the column, and then take $\frac{1}{8}$ for the echinus and another eighth for the thickness of the abacus on the top of the capital. The horns of the abacus of the capital have to project beyond the greatest width of the bell $\frac{2}{7}$, i.e. sevenths of the top of the bell; so $\frac{1}{7}$ falls to the projection of each horn. The truncated part of the horns must be as broad as it is high. I leave the rest, that is the ornaments, to the taste of the sculptors. But to return to the columns and in order to prove the reason of their strength or weakness according to their shape, I say that when the lines starting from the summit of the column and ending at its base and their direction and length . . . , their distance apart or width may be equal; I say that this column

Ash. III. 138]

767.

Il cilindro d'vn corpo di figura colōnale, e le sua opposite fronti sō due cierchi ³d'interpositione paralella ⁴e infra li lor ciētri s'estēde una linia ⁵retta, che passa per il mezzo della grossezza ⁶del cilindro e termina nelli ciētri ⁷d'essi cierchi, la quale linia dalli antichi è detta axis.

The cylinder of a body columnar in shape and its two opposite ends are two circles enclosed between parallel lines, and through the centre of the cylinder is a straight line, ending at the centre of these circles, and called by the ancients the axis.

^{767.} Leonardo wrote these lines on the margin of a page of the Trattato di Francesco di Giorgio, where there are several drawings of columns, as well as a head drawn in profile inside an outline sketch of a capital.

^{768.} See Pl. LXXXV, No. 16. In the original the drawing and writing are both in red chalk.
VOL. II.

Pl. LXXXV No. 6 (MS. Ash. II 6^b) contains a small sketch of a capital with the following note, written in three lines: I chorni del capitelo deono essere la quarta parte d'uno quadro (The horns of a capital must measure the fourth part of a square).

MS. S. K. M. III 72^b contains two sketches of ornamentations of windows.

In MS. C. A. 308^a; 938^a (see Pl. LXXXII No. 1) there are several sketches of columns. One of the two columns on the right is similar to those employed by Bramante at the Canonica di S. Ambrogio. The same columns appear in the sketch underneath the plan of a castle. There they appear coupled, and in two stories one above the other. The archivolts which seem to spring out of the columns, are shaped like twisted cords, meant perhaps to be twisted branches. The walls between the columns seem to be formed out of blocks of wood, the pedestals are ornamented with a reticulated pattern. From all this we may suppose that Leonardo here had in mind either some festive decoration, or perhaps a pavilion for some hunting place or park. The sketch of columns marked "35" gives an example of columns shaped like candelabra, a form often employed at that time, particularly in Milan, and the surrounding districts for instance in the Cortile di Casa Castiglione now Silvestre, in the cathedral of Como, at Porta della Rana &c.

769. The text is incomplete in the original.

The Proportions of the stories of a building are indicated by a sketch in MS. S. K. M. II² 11^b (see Pl. LXXXV No. 15). The measures are written on the left side, as follows: br $1\frac{1}{2}$ — $6\frac{3}{4}$ —br $1\frac{1}{12}$ —2 br—9 e $1\frac{1}{2}$ —1 $\frac{1}{2}$ —br 5—ō 9—ō 3 [br = braccia; ō = oncie].

Pl. LXXXV No. 13 (MS. B. 62^a) and Pl. XCIII No. 1. (MS. B. 15^a) give a few examples of arches supported on piers.

XIII.

Theoretical writings on Architecture.

Leonardo's original writings on the theory of Architecture have come down to us only in a fragmentary state; still, there seems to be no doubt that he himself did not complete them. It would seem that Leonardo entertained the idea of writing a large and connected book on Architecture; and it is quite evident that the materials we possess, which can be proved to have been written at different periods, were noted down with a more or less definite aim and purpose. They might all be collected under the one title: "Studies on the Strength of Materials". Among them the investigations on the subject of fissures in walls are particularly thorough, and very fully reported; these passages are also especially interesting, because Leonardo was certainly the first writer on architecture who ever treated the subject at all. Here, as in all other cases Leonardo carefully avoids all abstract argument. His data are not derived from the principles of algebra, but from the laws of mechanics, and his method throughout is strictly experimental.

Though the conclusions drawn from his investigations may not have that precision which we are accustomed to find in Leonardo's scientific labours, their interest is not lessened. They prove at any rate his deep sagacity and wonderfully clear mind. No one perhaps, who has studied these questions since Leonardo, has combined with a scientific mind anything like the artistic delicacy of perception which gives interest and lucidity to his observations.

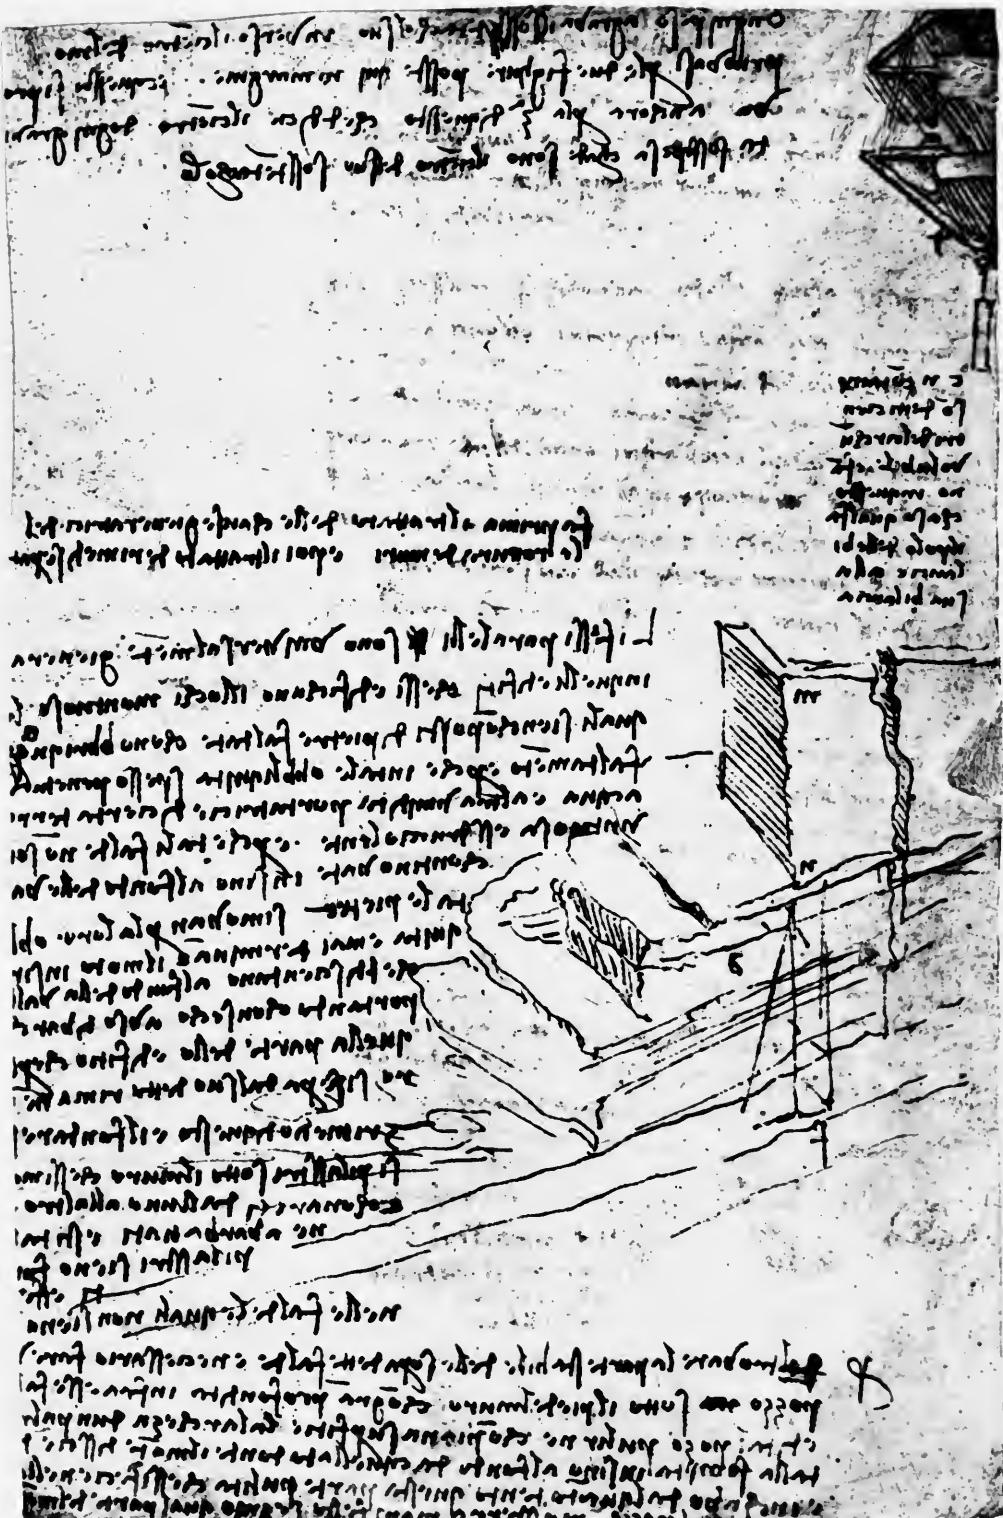

I do not assert that the arrangement here adopted for the passages in question is that originally intended by Leonardo; but their distribution into five groups was suggested by the titles, or headings, which Leonardo himself prefixed to most of these notes. Some of the longer sections perhaps should not, to be in strict agreement with this divi-

sion, have been reproduced in their entirety in the place where they occur. But the comparatively small amount of the materials we possess will render them, even so, sufficiently intelligible to the reader; it did not therefore seem necessary or desirable to subdivide the passages merely for the sake of strict classification.

The small number of chapters given under the fifth class, treating on the centre of gravity in roof-beams, bears no proportion to the number of drawings and studies which refer to the same subject. Only a small selection of these are reproduced in this work since the majority have no explanatory text.

I.

ON FISSURES IN WALLS.

Br. M. 157 a]

770.

Fa prima il trattato delle cause gienetratrici del'le rotture de' muri, e poi il trattato de'rimedi separato.

³ Li fessi parallelli sono vniuersalmēte gienerati ⁴in quelli edifiti che si edificano in lochi montuosi, li ⁵quali sien cōposti di pietre faldate con obblquo ⁶faldamēto, e perchè in tale obbluità spesso penetra ⁷acqua e altra vmidità portatrice di cierta terra ⁸vntuosa e sdrucciolante, e perchè tali falde nō sono ⁹continuate insino al fondo delle valli, ¹⁰tali pietre si muovono per la loro obli¹¹quitā e mai termināo il moto insin ¹²che discendono al fondo della valle, ¹³portando con seco a vso di barca ¹⁴quella parte dello edifitio che per lo¹⁵ro si separa dal suddetto rimanēte;

¹⁶ Il rimedio di questo è il fondare spes-
¹⁷si pilastri sotto il muro che si move,
¹⁸e con archi dall'uno all'altro e be¹⁹ne abarbaricati, e questi tali ²⁰pilastri sieno fundati e fermi ²²nelle falde le quali non sieno rotte;

²³ Per trovare la parte stabile delle sopra dette falde è neciessario fare vn ²⁴pozzo sotto il piè del muro cō grā profondità infra esse falde ²⁵e di tal pozzo pulirne cō piana superficie la larghezza d'un palmo

First write the treatise on the causes of the giving way of walls and then, separately, treat of the remedies.

Parallel fissures constantly occur in buildings which are erected on a hill side, when the hill is composed of stratified rocks with an oblique stratification, because water and other moisture often penetrates these oblique seams carrying in greasy and slippery soil; and as the strata are not continuous down to the bottom of the valley, the rocks slide in the direction of the slope, and the motion does not cease till they have reached the bottom of the valley, carrying with them, as though in a boat, that portion of the building which is separated by them from the rest. The remedy for this is always to build thick piers under the wall which is slipping, with arches from one to another, and with a good scarp and let the piers have a firm foundation in the strata so that they may not break away from them.

In order to find the solid part of these strata, it is necessary to make a shaft at the foot of the wall of great depth through the strata; and in this shaft, on the side from which the hill slopes, smooth and flatten a

771. Lines 1—5 refer to Pl. CV, No. 2.

Line 9 alle due anteciedēti, see on the same page.

Lines 16—18. The translation of this is doubt-

space one palm wide from the top to the bottom; and after some time this smooth portion made on the side of the shaft, will show plainly which part of the hill is moving.

771.

The cracks in walls will never be parallel unless the part of the wall that separates from the remainder does not slip down.

WHAT IS THE LAW BY WHICH BUILDINGS HAVE STABILITY.

The stability of buildings is the result of the contrary law to the two former cases. That is to say that the walls must be all built up equally, and by degrees, to equal heights all round the building, and the whole thickness at once, whatever kind of walls they may be. And although a thin wall dries more quickly than a thick one it will not necessarily give way under the added weight day by day and thus, [16] although a thin wall dries more quickly than a thick one, it will not give way under the weight which the latter may acquire from day to day. Because if double the amount of it dries in one day, one of double the thickness will dry in two days or thereabouts; thus the small addition of weight will be balanced by the smaller difference of time [18].

The adversary says that *a* which projects, slips down.

And here the adversary says that *r* slips and not *c*.

HOW TO PROGNOSTICATE THE CAUSES OF CRACKS IN ANY SORT OF WALL.

The part of the wall which does not slip is that in which the obliquity projects and overhangs the portion which has parted from it and slipped down.

ON THE SITUATION OF FOUNDATIONS AND IN WHAT PLACES THEY ARE A CAUSE OF RUIN.

When the crevice in the wall is wider at the top than at the bottom, it is a manifest sign, that the cause of the fissure in the wall is remote from the perpendicular line through the crevice.

ful, and the meaning in any case very obscure.

Lines 19—23 are on the right hand margin close to the two sketches on Pl. CII, No. 3.

772.

OF CRACKS IN WALLS, WHICH ARE WIDE AT THE BOTTOM AND NARROW AT THE TOP AND OF THEIR CAUSES.

That wall which does not dry uniformly in an equal time, always cracks.

A wall though of equal thickness will not dry with equal quickness if it is not everywhere in contact with the same medium. Thus, if one side of a wall were in contact with a damp slope and the other were in contact with the air, then this latter side would remain of the same size as before; that side which dries in the air will shrink or diminish and the side which is kept damp will not dry. And the dry portion will break away readily from the damp portion because the damp part not shrinking in the same proportion does not cohere and follow the movement of the part which dries continuously.

OF ARCHED CRACKS, WIDE AT THE TOP, AND NARROW BELOW.

Arched cracks, wide at the top and narrow below are found in walled-up doors, which shrink more in their height than in their breadth, and in proportion as their height is greater than their width, and as the joints of the mortar are more numerous in the height than in the width.

The crack diminishes less in *r o* than in *m n*, in proportion as there is less material between *r* and *o* than between *n* and *m*.

Any crack made in a concave wall is wide below and narrow at the top; and this originates, as is here shown at *b c d*, in the side figure.

1. That which gets wet increases in proportion to the moisture it imbibes.

2. And a wet object shrinks, while drying, in proportion to the amount of moisture which evaporates from it.

inside the sketch No. 2. L. 41—46 are partly written over the sketch No. 3 to which they refer.

773.

DELLA CAUSA DEL RONPERE DELL EDIFITI
PUBLICI E PRIVATI.OF THE CAUSES OF FISSURES IN [THE WALLS
OF] PUBLIC AND PRIVATE BUILDINGS.

² Romponsi li muri per fessure, che àno del diretto e alcune che ³àno dello obliquo; le rotture che àno del diretto ⁴ son gienerate dalli muri novi ⁵in cõgiutiō de' muri vecchi ditti o cõ morse giûte alli ⁶muri vecchi, perchè tali morse, nô potendo resistere allo ⁷insopportabile peso del muro a lor'cõgiuto, è necies ⁸sario a quelle ronpersi e dar loco al dissieō del predet⁹to muro novo, il quale cala vn braccio per ogni 10 braccia, o più ¹⁰o meno, secondo la maggiore o minore somâ di calcina ¹¹interposta infra le pietre murate e cõ calcina più ¹²o mē liquida; E nota che senpre si debbe iprima fare ¹³li muri e poi vestirli delle pietre che li àno a vestire, ¹⁴perchè se cosi nô si faciesse, il muro facciédo maggiore calo che ¹⁵la crosta di fori, e' sarebbe neciessario che le morse fatte ¹⁶nelli lati de' muri si röppessino; perchè le pietre che vestono li mu¹⁷ri, essendo di maggiore grandezza che le pietre da quel¹⁸le vestite, è neciessario che ricievino minor quâtitâ di calcina ¹⁹nelle loro comessure e per cõsegüëza faccino minore calo, ²⁰il che accadere nô può, essendo murate tali croste poi ch'el mu²¹ro è secco.

²²a b muro nuo²³vo, c è muro vechio ²⁴che già à fatto il calo, ²⁵e lo a. b fa il calo poi, ²⁶bêchè a, essêdo fonda²⁷to sopra il c muro ²⁸vechio, nô si può in nes²⁹sù modo röpere per ave³⁰re stabile fondamēto ³¹sopra del muro ve³²chio, ma sol si ronpe³³rà il rimanëte del mu³⁴ro nvovo b cõ³⁵ciosia ch'elli è murato di ³⁶sopra dalla sommità del edifitio insino al fondo, ³⁷facciédo il rimanëte del muro nuovo beccatello ³⁸sopra il muro che diciéde.

The walls give way in cracks, some of which are more or less vertical and others are oblique. The cracks which are in a vertical direction are caused by the joining of new walls, with old walls, whether straight or with indentations fitting on to those of the old wall; for, as these indentations cannot bear the too great weight of the wall added on to them, it is inevitable that they should break, and give way to the settling of the new wall, which will shrink one braccia in every ten, more or less, according to the greater or smaller quantity of mortar used between the stones of the masonry, and whether this mortar is more or less liquid. And observe, that the walls should always be built first and then faced with the stones intended to face them. For, if you do not proceed thus, since the wall settles more than the stone facing, the projections left on the sides of the wall must inevitably give way; because the stones used for facing the wall being larger than those over which they are laid, they will necessarily have less mortar laid between the joints, and consequently they settle less; and this cannot happen if the facing is added after the wall is dry.

a b the new wall, c the old wall, which has already settled; and the part a b settles afterwards, although a, being founded on c, the old wall, cannot possibly break, having a stable foundation on the old wall. But only the remainder b of the new wall will break away, because it is built from top to bottom of the building; and the remainder of the new wall will overhang the gap above the wall that has sunk.

DELLE PIETRE CHE SI DIS²GIÙGONO DALLA LOR CALCINA.

³Le pietre d'equal numero nella loro altezza, mu⁴rate con equal quātā di calcina, fāno equal ⁵calo nella partita dell' umido che mollifīcò essa calcina.

⁷Per lo passato si prova che la poca quātā ⁸del muro nuovo interposta infra *A* · *n* farà po⁹co calo rispetto alla quātā del medesimo mu¹⁰ro che s'interpone infra *c* · *d*, e tal fia la pro¹¹portione che ànno infra loro le raretà delle ¹²dette calcine qual' è la proportiōe delli ¹³nvmeri over delle quātā delle calcine interpo¹⁴ste nelle cōmesure delle pietre murate so¹⁵pra le varie altezze delli muri vecchi.

OF STONES WHICH DISJOIN THEMSELVES FROM THEIR MORTAR.

Stones laid in regular courses from bottom to top and built up with an equal quantity of mortar settle equally throughout, when the moisture that made the mortar soft evaporates.

By what is said above it is proved that the small extent of the new wall between *A* and *n* will settle but little, in proportion to the extent of the same wall between *c* and *d*. The proportion will in fact be that of the thinness of the mortar in relation to the number of courses or to the quantity of mortar laid between the stones above the different levels of the old wall.

ON FISSURES IN NICHES.

Br. M. 158a]

777.

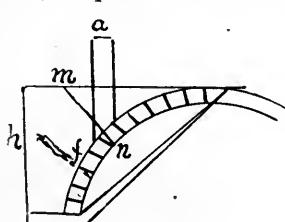

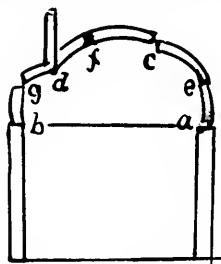

DELLE ROTTURE DELLI NICHI.

²L'arco fatto del semicircolo, il quale fia carico nelli ³due oppisiti terzi della sua curvità, rōperà in ⁴cinque lochi della sua curvità; provasi e sieno li pesi *n m*, li quali rompono esso arco *a b f*, dico per lo ⁶passato come *c a* stremi sono equalmēte aggravati dal peso *n*, ⁷seguita per la ⁵a che l'arco ronperà nella parte più remota dalle ⁸due potentie che lo premono, il quale è il mezzo *e*, e altre⁹tanto intēdo aver detto dell'arco opposito *d g b*; adū¹⁰que *n m* pesi vēgono a discēdere, e discēder nō posso¹¹no per la ⁷a che non si facci più vicini, e avicinar nō si pos¹²sano, se l'arco che infra lor s'interpone non avicini li sua ¹³stremi, li quali nō si possono accostare sanza rottura del ¹⁴suo mezzo; adūque l'arco si ronperà in 2 lochi come fu primo ¹⁵posto ecc.

¹⁶Domāda del peso dato in *a*, che parte ne risponde *i n f* linia, e cō che peso s'ā a vinciere il peso posto in *f*.

An arch constructed on a semicircle and bearing weights on the two opposite thirds of its curve will give way at five points of the curve. To prove this let the weights be at *n m* which will break the arch *a b f*. I say that, by the foregoing, as the extremities *c* and *a* are equally pressed upon by the thrust *n*, it follows, by the ⁵th, that the arch will give way at the point which is furthest from the two forces acting on them and that is the middle *e*. The same is to be understood of the opposite curve, *d g b*; hence the weights *n m* must sink, but they cannot sink by the ⁷th, without coming closer together, and they cannot come together unless the extremities of the arch between them come closer, and if these draw together the crown of the arch must break; and thus the arch will give way in two places as was at first said &c.

I ask, given a weight at *a* what counteracts it in the direction *n f* and by what weight must the weight at *f* be counteracted.

DELLA DIMINUITIOME DE' CORPI VMIDI ² DI
GROSSEZZA O LARGHEZZA DIFFORME.

³ La finestra *a* è causa della rottura del *b* e questa tal rotta è aumentata dal peso *n m*, il quale più si ficca ovvero penetra intra la ter^{ra} che riceve il suo fondamento, che nō fa la leuità del *b*, e ancora il fō-⁶damēto vechio che sta sotto *b* à fatto il calo, il che fatto non aveā li pi⁷lastri *n m* e la parte *b* non disciède perpendiculare, anzi si gitta info⁸ri per obliquo e non si può per l'avversario gittare in dētro, perchè tal parte disunita dal tutto è più larga di fori che di dentro e li labri del rimanente ¹⁰e della medesima figura, e se tal parte disunita avesse a ētrare in dentro, ¹¹il maggiore entrerebbe nel minore, il che sarebbe impossibile; adunque ¹²è cōcluso che per necessità la parte di tale emiciclo si disunisce dal tutto col ¹³gittarsi colla parte inferiore infori e non indētro come vole ¹⁴l'auersario ecc.

¹⁵ Quando le tribune intere o mezze ¹⁶sarā di sopra vinte da superchio peso, al-¹⁷lora le sue volte si aprirāno ¹⁸cō apritura diminuitiva ¹⁹dalla parte di sopra e larga di sot²⁰to e stretta dalla parte di dentro e ²¹larga di fuori, a similitudine della ²²scorza del pomio ovvero meleracia ²³divisa in molte parti per la sua lūgheza²⁴za, chè quāto ella sarà premuta dal²⁵le opposite parti della sua lūghezza, ²⁶quella parte delle giūture più si a²⁷prirà, che fia più distāte alla causa ²⁸che la prieme, e per questo mai si ²⁹debbono caricare li archi delle volte ³⁰di qualche emiciclo dalli archi dello ³¹suo edifitio massimo, perchè quel che ³²più pesa più prieme sopra ciò che li è di³³sotto, e più disciende sopra li sua fon³⁴damēti, il che interuenire nō può ³⁵alle cose più lieui come sono li emi³⁶cicli predetti.

778.

ON THE SHRINKING OF DAMP BODIES OF
DIFFERENT THICKNESS AND WIDTH.

The window *a* is the cause of the crack at *b*; and this crack is increased by the pressure of *n* and *m* which sink or penetrate into the soil in which foundations are built more than the lighter portion at *b*. Besides, the old foundation under *b* has already settled, and this the piers *n* and *m* have not yet done. Hence the part *b* does not settle down perpendicularly; on the contrary, it is thrown outwards obliquely, and it cannot on the contrary be thrown inwards, because a portion like this, separated from the main wall, is larger outside than inside and the main wall, where it is broken, is of the same shape and is also larger outside than inside; therefore, if this separate portion were to fall inwards the larger would have to pass through the smaller—which is impossible. Hence it is evident that the portion of the semicircular wall when disunited from the main wall will be thrust outwards, and not inwards as the adversary says.

When a dome or a half-dome is crushed from above by an excess of weight the vault will give way, forming a crack which diminishes towards the top and is wide below, narrow on the inner side and wide outside; as is the case with the outer husk of a pomegranate, divided into many parts lengthwise; for the more it is pressed in the direction of its length, that part of the joints will open most, which is most distant from the cause of the pressure; and for that reason the arches of the vaults of any apse should never be more loaded than the arches of the principal building. Because that which weighs most, presses most on the parts below, and they sink into the foundations; but this cannot happen to lighter structures like the said apses.

778. The figure on Pl. CV, No. 4 belongs to the first paragraph of this passage, lines 1—14; fig. 5 is sketched by the side of lines 15—and

following. The sketch below of a pomegranate refers to line 22. The drawing fig. 6 is, in the original, over line 37 and fig. 7 over line 54.

After stages (2) different
implies a greater number of
cases of omission, and it is
likely that other signs remain
undrawn or are not
represented by others, especially
when we find many cases of
omission of signs which are
otherwise present, and
therefore it is difficult to determine
the exact number of cases.
However, there are some
indications of the presence of
certain signs which are
not drawn, and these are
considered to be important.

³⁷ Qual di questi due cubi dimi³⁸uirà più vniiformemēte, o ³⁹il cvbo *A* posato sopra il pavi¹⁰mēto, o'l cubo *b* sospeso ⁴¹infra l'aria, essēdo l'uno ⁴²e l'altro cubo equali in peso ⁴³e in quantità e di terra mista ⁴⁴con equale vmidità? —

⁴⁵ Quel cubo che si posa sopra ⁴⁶il pavimēto più diminui⁴⁷scie della sua altezza che per la ⁴⁸sua larghezza, il che ⁴⁹far nō può il cubo ch'è di ⁵⁰sopra e sospeso infra l'aria; ⁵¹pruovasi così; il cubo pos⁵²ato sopra questa medesima ⁵³sta meglio qui di sotto.

⁵⁴ Il fine dell'i due cilindri di ⁵⁵terra fresca cioè *a*, *b* sa⁵⁶rā le figure piramidali di ⁵⁷sotto *c d* || provasi co⁵⁸sl: il cilindro *a*, posato ⁵⁹sopra il suo pavimēto per esse⁶⁰re lui di terra assai mista ⁶¹coll'umido, va calādo me⁶²dante il suo peso che da di se ⁶³alla sua basa, e tāto più ca⁶⁴lerà e ingrosserà, quāto e'sa⁶⁵rà colle sua parti più presso ⁶⁶alla sua basa, perchè lì si cari⁶⁷ca il suo tutto ecc; E si⁶⁸mile farà il peso *b*, il quale pi⁶⁹ù s'astēderà, quāto elli à maggi⁷⁰or peso sotto se, la qual maggiorità ⁷¹è ne'cōfini del suo sostētaculo.

Which of these two cubes will shrink the more uniformly: the cube *A* resting on the pavement, or the cube *b* suspended in the air, when both cubes are equal in weight and bulk, and of clay mixed with equal quantities of water?

The cube placed on the pavement diminishes more in height than in breadth, which the cube above, hanging in the air, cannot do. Thus it is proved. The cube shown above is better shown here below.

The final result of the two cylinders of damp clay that is *a* and *b* will be the pyramidal figures below *c* and *d*. This is proved thus: The cylinder *a* resting on block of stone being made of clay mixed with a great deal of water will sink by its weight, which presses on its base, and in proportion as it settles and spreads all the parts will be somewhat nearer to the base because that is charged with the whole weight, &c.; and the case will be the same with the weight of *b* which will stretch lengthwise in proportion as the weight at the bottom is increased and the greatest tension will be the neighbourhood of the weight which is suspended by it.

III.

ON THE NATURE OF THE ARCH.

A. 50 a]

779.

CHE COSA È ARCO.

² Arco non è altro che una fortezza cavata da due debolezze, jpero³chè l'arco negli edifiti è cōposto di 2 quarti di circulo, i quali ⁴quarti circuli, ciascuno debolissimo per se, desiderā cadere, e opponē⁵dosi alla ruina l'uno dell'altro de'due debolezze, si cōvertono in vni⁶ca fortezza.

The arch is nothing else than a force originated by two weaknesses, for the arch in buildings is composed of two segments of a circle, each of which being very weak in itself tends to fall; but as each opposes this tendency in the other, the two weaknesses combine to form one strength.

DELLA QUALITÀ DEL PESO DELL'ARCHI.

⁸Poichè l'arco fia cōposto, quello ri-mane in equilibrio, jpero⁹chè tāto spī-gie l'uno l'altro quāto l'altro l'uno, e se pesa piv l'uno ¹⁰quarto circulo che l'altro, qui fia leuata e negata la permanēza, "imperochè l' maggiore vīcierà il minore peso.

OF THE KIND OF PRESSURE IN ARCHES.

As the arch is a composite force it remains in equilibrium because the thrust is equal from both sides; and if one of the segments weighs more than the other the stability is lost, because the greater pressure will outweigh the lesser.

DEL CARICO DATO AGLI ARCHI.

¹³Dopo il peso equale de' quarti circuli è neciessario dare loro equale ¹⁴peso di sopra, altremēti si correbbe nel sopra detto errore.

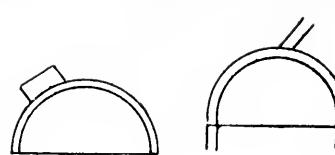

OF DISTRIBUTING THE PRESSURE ABOVE AN ARCH.

Next to giving the segments of the circle equal weight it is necessary to load them equally, or you will fall into the same defect as before.

Br. M. 1588]

785.

DELLA POTÉTIA DELL'ARCO NELL'ARCHITETTURA.

² La permanéza dell'arco fabbricato dallo architetto consiste nella corda e nelle spalle sue.

DELLA SITUATIONE DELLA CORDA NEL SOPRA DETTO ARCO.

⁵ La situatione della corda à equale necessità nel princi⁶pio dell'archo, e nel fine della rettitudine del pilastro ⁷dove si posa; pruovasi per la ²a delli sostētaculi che dicie: ⁸Quella parte del sostentaculo manco resiste che è più remota dal fermamēto del suo tutto; adunque essendo la ¹⁰sōmità del pilastro vltima remotione dal suo fermamēto, e l'si¹¹mile accadēdo nelli oppositi stremi dell'arco, che sono vltima distantia dal mezzo, suo vero fermamēto, noi abbia con¹³cluso, che tal corda *a b* di neciessità richiede la situatione delli ¹⁴sua oppositi stremi infra li 4 oppositi stremi predetti;

¹⁵Dicie l'auersario che tale arco vole essere più che mezzo ¹⁶tondo, e allora non avrà bisognio di corda perchè tali stremi ¹⁷nō spigneranno infuori, ma indentro, come si di-¹⁸mostra nello ecciesso *a c b d*; Qui si risponde, tale ¹⁹inventione essere trista per 5 cause, e la prima è in quanto ²⁰alla fortezza, perchè è provato jl parallelo cir-²¹culare, essendo cōposto di due semicirculi, sol rōpersi dove ²²taли semicirculi insieme si congiūgono, come mo²³stra la figura *n m*; oltre a di questo seguita, ch'egli è mag-²⁴giore spatio infra li stremi del semicirculo che infra le pa²⁵rieti delli muri; terza è che l' peso posto per cōtro alla fortezza ²⁶dell'arco diminuiscie tanto di peso, quāto le poste dell'arco ²⁷sono più larghe che detto spatio interposto infra li pilastri, 4^a è ²⁸che li pilastri indeboliscono per tāto quāto la parte loro

ON THE STRENGTH OF THE ARCH IN ARCHITECTURE.

The stability of the arch built by an architect resides in the tie and in the flanks.

ON THE POSITION OF THE TIE IN THE ABOVE NAMED ARCH.

The position of the tie is of the same importance at the beginning of the arch and at the top of the perpendicular pier on which it rests. This is proved by the ²nd "of supports" which says: that part of a support has least resistance which is farthest from its solid attachment; hence, as the top of the pier is farthest from the middle of its true foundation and the same being the case at the opposite extremities of the arch which are the points farthest from the middle, which is really its [upper] attachment, we have concluded that the tie *a b* requires to be in such a position as that its opposite ends are between the four above-mentioned extremes.

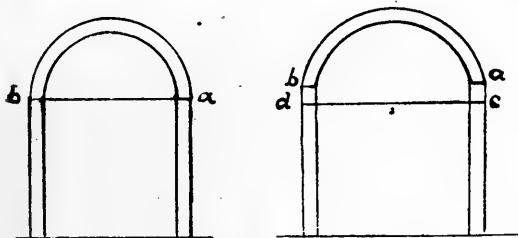

The adversary says that this arch must be more than half a circle, and that then it will not need a tie, because then the ends will not thrust outwards but inwards, as is seen in the excess at *a c, b d*. To this it must be answered that this would be a very poor device, for three reasons. The first refers to the strength of the arch, since it is proved that the circular parallel being composed of two semicircles will only break where these semicircles cross each other, as is seen in the figure *n m*; besides this it follows that there is a wider space between the extremes of the semicircle than between the plane of the walls; the third reason is that the weight placed to counterbalance the strength of the arch diminishes in proportion as the piers of the arch are wider than the space between the piers. Fourthly in proportion as the parts at *c a b d* turn outwards, the piers are weaker to support the arch above them. The 5th is that all the material and weight of the

785. 1. dellarcho. 2. premanéza dellarcho fabricato . . architettoch |||||. 3. chorda. 4. chorda . . archo. 3. chorda allaq"^a" neciessita. 6. rectitudine del pilastro. 7. dovessi . . pella . . sostētachuli cheddice. 8. sostentachulo mā. 9. iucto . . essendo [la sōmità delli] la. 10. somita . . pilastro . . repotione. 11. achadēdo [nellarcho] nelli . . archo chessono . . chon. 13. chlusò chettal chorda "a b" di. 14. infralli . . predecki. 15. chettale archo. 16. ara . . chorda. 17. nō [gitte- ranno] inspigneranno . . indréto. 18. mosstra . . rispotale. 19. trissta per "5" [tre] chause ella . . e inq. 20. provato [larcho sol] jl. 21. chulare . . chōposto . . semice . . 22. semicirchuli . . chongiughano . . mos. 23. fighura . . quessto . . ema. 24. infralli . . semics . . infralle. 25. riete . . possto perchōtro. 26. archo diminuiscie . . posste dellarcho. 27. e più largha . . interposto infralli pilastri|||||. 28. ||||| ellí pilastri indebolisschano. 29. larcho . . la 5^a he. 30. chettutta.

c a²⁹ b d si piegha indirieto nel ritiénere sopra di se l'arco; la 5^a è ³⁰che tutta la spesa e 'l peso dell'arco che eccede il mezzo tondo ³¹è inutile e dañoso, ed è qui da notare, che il peso ³²sopra posto all'arco róperà cō più facilità l'arco in *a b* trouā³³do la curuatura dell'eccieso che al mezzo circulo s'agiugnie ³⁴che essendo dirieto il pilastro insino al cōtatto del semicirculo.

LARCHO IL QUALE È CARICO SOPRA IL SUO MEZZO RÓPERÀ ³⁵NEL SUO QUARTO DESTRO E SINISTRO.

³⁶Prouasi per la 7^a di questo che dicie ³⁷¶le opposite stremità dell'i sostētaculi sono equalmēte agra³⁸vate dal peso che per lor si sospēde; adūque il peso dato in *f* si ⁴⁰sēte in *b c* cioè mezzo per ciascuno stremo, e per la terza che dicie: ⁴¹Quella parte del sostētacolo d'equal potētia più presto si rompe ⁴²che è più distante al suo fermamēto, òde seguita che ⁴³per essere *d* equalmente distāte al *f e* ferma

³⁵Se l'armadura dell'arco nō cala insieme ³⁶col calo dell'arco, la cal³⁸cina nel seccarsi restri³⁹gnie in se medesima e ⁴⁰si spicca dall'ū de'matto⁴¹ni, alli quali ella per col⁴²legarli è interpo⁴³sta, e così li lascia dis⁴⁴legati, per la qual co⁴⁵sa la uolta resta disu⁴⁶nita e le pioggie in brie⁴⁷ve la ruinano.

A. 49b]

DELLA · FORTEZZA · E QUALITÀ · DELLI ARCHI, E
DOVE SONO FORTI · O DEBOLI · E COSÌ LE
COLONNE.

¶³Quella · parte dell'arco che fia · piv · piana, farà minore resistētia ⁴al peso · so-
pra · postoli. ¶

arch which are in excess of the semicircle are useless and indeed mischievous; and here it is to be noted that the weight placed above the arch will be more likely to break the arch at *a b*, where the curve of the excess begins that is added to the semicircle, than if the pier were straight up to its junction with the semicircle [spring of the arch].

AN ARCH LOADED OVER THE CROWN WILL GIVE WAY AT THE LEFT HAND AND RIGHT HAND QUARTERS.

This is proved by the 7th of this which says: The opposite ends of the support are equally pressed upon by the weight suspended to them; hence the weight shown at *f* is felt at *b c*, that is half at each extremity; and by the third which says: in a support of equal strength [throughout] that portion will give way soonest which is farthest from its attachment; whence it follows that *d* being equally distant from *f, e*

If the centering of the arch does not settle as the arch settles, the mortar, as it dries, will shrink and detach itself from the bricks between which it was laid to keep them together; and as it thus leaves them disjoined the vault will remain loosely built, and the rains will soon destroy it.

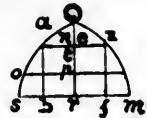

786.

ON THE STRENGTH AND NATURE OF ARCHES,
AND WHERE THEY ARE STRONG OR WEAK; AND
THE SAME AS TO COLUMNS.

That part of the arch which is nearer to the horizontal offers least resistance to the weight placed on it.

tati appūto .

When the triangle a z n ,

by settling, drives backwards the $\frac{2}{3}$ of each $\frac{1}{2}$ circle that is a s and in the same way z m , the reason is that a is perpendicularly over b and so likewise z is above f .

Either half of an arch, if overweighted, will break at $\frac{2}{3}$ of its height, the point which corresponds to the perpendicular line above the middle of its bases, as is seen at a b; and this happens because the weight tends to fall past the point r.—And if, against its nature it should tend to fall towards the point s the arch n s would break precisely in its middle. If the arch n s were of a single piece of timber, if the weight placed at n should tend to fall in the line n m , the arch would break in the middle of the arch e m , otherwise it will break at one third from the top at the point a because from a to n the arch is nearer to the horizontal than from a to o and from o to s , in proportion as p t is greater than t n , a o will be stronger than a n and likewise in proportion as s o is stronger than o a , r p will be greater than p t .

The arch which is doubled to four times of its thickness will bear four times the weight that the single arch could carry, and more in proportion as the diameter of its thickness goes a smaller number of times into its length. That is to say that if the thickness of the single arch goes ten times into its length, the thickness of the doubled arch will go five times into its length. Hence as the thickness of the double arch goes only half as many times into its length as that of the single arch does, it is reasonable that it should carry half as much more weight as it would have to carry if it were in direct proportion to the single arch. Hence as this double arch has 4 times the thickness of the single arch, it would seem that it ought to bear 4 times the weight; but by the above rule it is shown that it will bear exactly 8 times as much.

THAT PIER, WHICH IS CHARGED MOST UNEQUALLY, WILL SOONEST GIVE WAY.

The column *c b*, being charged with an equal weight, [on each side] will be most durable, and the other two outward columns require on the part outside of their centre as much pressure as there is inside of their centre, that is, from the centre of the column, towards the middle of the arch.

Arches which depend on chains for their support will not be very durable.

THAT ARCH WILL BE OF LONGER DURATION WHICH HAS A GOOD ABUTMENT OPPOSED TO ITS THRUST.

The arch itself tends to fall. If the arch be 30 braccia and the interval between the walls which carry it be 20, we know that 30 cannot pass through the 20 unless 20 becomes likewise 30. Hence the arch being crushed by the excess of weight, and the walls offering insufficient resistance, part, and afford room between them, for the fall of the arch.

But if you do not wish to strengthen the arch with an iron tie you must give it such abutments as can resist the thrust; and you can do this thus: fill up the spandrels *m n* with stones, and direct the lines of the joints between them to the centre of the circle of the arch, and the reason why this makes the arch durable is this. We know very well that if the arch is loaded with an excess of weight above its quarter as *a b*, the wall *f g* will be thrust outwards because the arch would yield in that direction; if the other quarter *b c* were loaded, the wall *f g* would be thrust inwards, if it were not for the line of stones *x y* which resists this.

787.

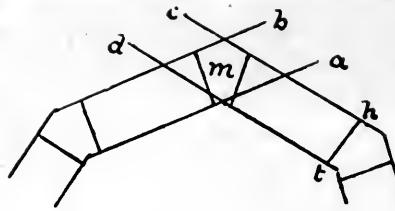

PLAN.

Here it is shown how the arches made in the side of the octagon thrust the piers

La sperieza che vn peso posto sopra vno arco nō si carica tutto sopra alle sua colon^{ne}, anzi quāto è maggior peso frapposto sopra l'archi, tanto mē pesa ³l'arco il peso alle colōne; la sperienza siè questa: sia messo vn omo ⁴sopra le stadere in mezzo la trōba d'uno pozzo; fa dipoi che questo allarghi le mani ⁵e piedi infra le parieti di detto pozzo, vedrai questo pesare alla stadera mol^{to} meno; da li vno peso alle spalle, uedrai per sperieza quāto maggior ⁷peso ti darà, maggiore forza farà in aprire le braccia e ganbe, e piv pō⁸dare nelle parieti, e piv mācare il pōdo alle stadere.

An Experiment to show that a weight placed on an arch does not discharge itself entirely on its columns; on the contrary the greater the weight placed on the arches, the less the arch transmits the weight to the columns. The experiment is the following. Let a man be placed on a steel yard in the middle of the shaft of a well, then let him spread out his hands and feet between the walls of the well, and you will see him weigh much less on the steel yard; give him a weight on the shoulders, you will see by experiment, that the greater the weight you give him the greater effort he will make in spreading his arms and legs, and in pressing against the wall and the less weight will be thrown on the steel yard.

IV.

ON FOUNDATIONS, THE NATURE OF THE GROUND AND SUPPORTS.

Br. M. 138a]

789.

La prima parte neciessarissima è la loro permanētia.

²Delli fondamēti che àno le mēbrificazioni componi³trici delli tēpli e altri edifici publici, tal proporti⁴one deve essere da profondità a profondità quale ⁵è da peso a peso che scaricare si deve sopra essi mē⁶bri.

⁷Ogni parte della pro⁸fondità, che à la terra ⁹per alquāto spatio, è ¹⁰fatta a suoli, e ¹¹ogni suolo è cōposto di ¹²parti, più grave ¹³e piv leue l'una chel'al¹⁴tra; nel profondarsi è più grave, e questo si prova, ¹⁵perchè questi tali soli sō cō¹⁷posti dalle turbulentie ¹⁶delle acque scaricate i ¹⁸mare dal corso de' fumi, ¹⁹che in quello versano, ²⁰delle quali turbulentie ²¹la parte più grave fu ²²quella che prima ²³si scaricò successiva²⁴mēte, e questo fa l'ac²⁵qua, dov' ella si ferma, le²⁶vādo prima dove es²⁷sa si move; E di que²⁸sti tali soli di terra ²⁹si manifesta nelli lati ³⁰di fumi che coi lor con³¹tinui corsi àno secati ³²e partiti con grā pro³³fondità di tagli l'ū mō³⁴te dall'altro, doue per li ³⁵ghiajosi soli l'acque so³⁶no scolate e per questo ³⁷la materia si è sec-

The first and most important thing is stability.

As to the foundations of the component parts of temples and other public buildings, the depths of the foundations must bear the same proportions to each other as the weight of material which is to be placed upon them.

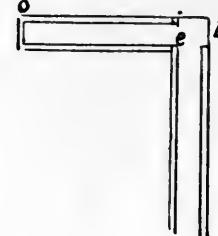

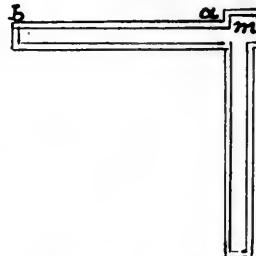

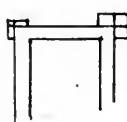

Every part of the depth of earth in a given space is composed of layers, and each layer is composed of heavier or lighter materials, the lowest being the heaviest. And this can be proved, because these layers have been formed by the sediment from water carried down to the sea, by the current of rivers which flow into it. The heaviest part of this sediment was that which was first thrown down, and so on by degrees; and this is the action of water when it becomes stagnant, having first brought down the mud whence it first flowed. And such layers of soil are seen in the banks of rivers, where their constant flow has cut through them and divided one slope from the other to a great depth; where in gravelly strata the waters have run off, the ma-

cata ³⁸e coüertita in dura ³⁹pietra, e massime di ⁴⁰quel fago, che era più ⁴¹sottile, e questo ci ⁴²fa cöcludere, che ogni par⁴³te della terreste superficie fu ⁴⁴già cietro della terra e ⁴⁵così de cōverso ecc.

A. 50a]

¶ Quella parte del fondamēto dell'i edifiti che piv pesa ²piv si ficca e lascia in alto il piv leggiero disunito da se; ¶ ³¶ E quel terreno ch'è piv premvto, sendo poroso; piv acconsente; ¶ ⁴Senpre tu devi fare i fondamēti che sportino egualmēte fori del carico de lor mvri e pilastri come appare in *m a b*; e se ⁶farai come molti fanno, cioè di fare uno fondamēto d'equale larghezza in sino alla superficie della terra, e di sopra li danno diseguale ⁸carico come

si dimostra in *b e e* in *e o*, la parte del fonda⁹mēto *b e*, perchè è piena dal pilastro del catone, piv pesa e piv spigie ¹⁰in basso il suo fōdamēto che nō fa il muro *e o* che non occupa ¹¹interamēte il suo fōdamēto, e però meno spegnie e mē si ficca, ¹²onde ficcādosi il pilastro *b e* e si diunisce e parte dal mv¹³ro *e o* come si uede nel piv dell'i edifiti che sono spicati intorno a detti pilastri.

terials have, in consequence, dried and been converted into hard stone, and this happened most in what was the finest mud; whence we conclude that every portion of the surface of the earth was once at the centre of the earth, and *vice versa* &c.

790.

The heaviest part of the foundations of buildings settles most, and leaves the lighter part above it separated from it.

And the soil which is most pressed, if it be porous yields most.

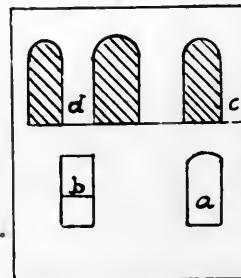

You should always make the foundations project equally beyond the weight of the walls and piers, as shown at *m a b*. If you do as many do, that is to say if you make a foundation of equal width from the bottom up to the surface of the ground, and charge

it above with unequal weights, as shown at *b e* and at *e o*, at the part of the foundation at *b e*, the pier of the angle will weigh most and thrust its foundation downwards, which the wall at *e o* will not do; since it does not cover the whole of its foundation, and therefore thrusts less heavily and settles less. Hence, the pier *b e* in settling cracks and parts from the wall *e o*. This may be seen in most buildings which are cracked round the piers.

A. 53a]

La finestra *a* sta bene sotto ²la finestra *c* e la finestra ³*b*. sta male sotto lo spatio ⁴*d*, perchè detto spatio è sanza sostegnio e fondamēto, ⁶si chè ricordati di nō rōpere mai sotto li spati delle finestre.

791.

The window *a* is well placed under the window *c*, and the window *b* is badly placed under the pier *d*, because this latter is without support and foundation; mind therefore never to make a break under the piers between the windows.

792.

DEL SOSTĒTACULO.

²Il pilastro moltiplicato per grossezza . crescerà tanto piv che la sua debita potētia ³quāto . e' māca . della ragionevole altezza.

ESENPLIO.

⁵Se uno pilastro . debe . essere . alto . 9 . grossezze , cioè . che s'egli . sarà . grosso . uno braccio , la regola ⁶lo pone di . 9 . braccia ; se ne collegherai . 100 . insieme . per grossezza . fia grosso braccia 10 e alto . 9 , ⁷e se il primo pilastro regieva 10000 libbre , perchè questo secōdo non è alto se non è circa ⁸a una grossezza , e mācādoli . 8 parti della lunghezza . e' regierà . piv otto volte , ⁹cioè ogni . pilastro collegato . li toccherà a regire piv 8 volte che dislegato , cioè ¹⁰che se prima regieva dieci mila libbre , adesso ne sosterrà 90 mila .

OF THE SUPPORTS.

A pillar of which the thickness is increased will gain more than its due strength, in direct proportion to what it loses in relative height.

EXAMPLE.

If a pillar should be nine times as high as it is broad—that is to say, if it is one braccio thick, according to rule it should be nine braccia high—then, if you place 100 such pillars together in a mass this will be ten braccia broad and 9 high; and if the first pillar could carry 10000 pounds the second being only about as high as it is wide, and thus lacking 8 parts of its proper length, it, that is to say, each pillar thus united, will bear eight times more than when disconnected; that is to say, that if at first it would carry ten thousand pounds, it would now carry 90 thousand.

remember, that the part built into the wall
should be steeped in hot pitch and filleted
with oak boards likewise so steeped. Each
beam must pass through its walls and be
secured beyond the walls with sufficient
chaining, because in con-
sequence of earthquakes
the beams are often seen
to come out of the walls
and bring down the walls

and floors; whilst if they are chained they will
hold the walls strongly together and the
walls will hold the floors. Again I remind
you never to put plaster over timber.
Since by expansion and shrinking of
the timber produced by damp and dryness
such floors often crack, and once cracked
their divisions gradually produce dust and
an ugly effect. Again remember not to
lay a floor on beams supported on arches;
for, in time the floor which is made on
beams settles somewhat in the middle
while that part of the floor which rests on
the arches remains in its place; hence, floors
laid over two kinds of supports look, in
time, as if they were made in hills [19].

795. 19. M. RAVAISON, in his edition of MS. A gives a very different rendering of this passage translating it thus: *Les planchers qui sont soutenus par deux différentes natures de supports paraissent avec le temps faits en voûte [a choli].*

Remarks on the style of Leonardo's architecture.

A few remarks may here be added on the style of Leonardo's architectural studies. However incomplete, however small in scale, they allow us to establish a certain number of facts and probabilities, well worthy of consideration.

When Leonardo began his studies the great name of Brunellesco was still the inspiration of all Florence, and we cannot doubt that Leonardo was open to it, since we find among his sketches the plan of the church of Santo Spirito¹ and a lateral view of San Lorenzo (Pl. XCIV No. 1), a plan almost identical with the chapel Degli Angelii, only begun by him (Pl. XCIV, No. 3) while among Leonardo's designs for domes several clearly betray the influence of Brunellesco's Cupola and the lantern of Santa Maria del Fiore².

The beginning of the second period of modern Italian architecture falls during the first twenty years of Leonardo's life. However the new impetus given by Leon Battista Alberti either was not generally understood by his contemporaries, or those who appreciated it, had no opportunity of showing that they did so. It was only when taken up by Bramante and developed by him to the highest rank of modern architecture that this new influence was generally felt. Now the peculiar feature of Leonardo's sketches is that, like the works of Bramante, they appear to be the development and continuation of Alberti's.

¹ See Pl. XCIV, No. 2. Then only in course of erection after the designs of Brunellesco, though he was already dead; finished in 1481.

² A small sketch of the tower of the Palazzo della Signoria (MS. C. A. 309) proves that he also studied mediaeval monuments.

But a question here occurs which is difficult to answer. Did Leonardo, till he quitted Florence, follow the direction given by the dominant school of Brunellesco, which would then have given rise to his "First manner", or had he, even before he left Florence, felt Alberti's influence—either through his works (*Palazzo Ruccellai*, and the front of *Santa Maria Novella*) or through personal intercourse? Or was it not till he went to Milan that Alberti's work began to impress him through Bramante, who probably had known Alberti at Mantua about 1470 and who not only carried out Alberti's views and ideas, but, by his designs for St. Peter's at Rome, proved himself the greatest of modern architects. When Leonardo went to Milan Bramante had already been living there for many years. One of his earliest works in Milan was the church of *Santa Maria presso San Satiro*, *Via del Falcone*¹.

Now we find among Leonardo's studies of Cupolas on Plates *LXXXIV* and *LXXXV* and in *Pl. LXXX* several sketches which seem to me to have been suggested by Bramante's dome of this church.

The MSS. *B* and *Ash. II* contain the plans of *S. Sepolcro*, the pavilion in the garden of the duke of Milan, and two churches, evidently inspired by the church of *San Lorenzo* at Milan.

MS. *B.* contains besides two notes relating to *Pavia*, one of them a design for the sacristy of the Cathedral at *Pavia*, which cannot be supposed to be dated later than 1492, and it has probably some relation to Leonardo's call to *Pavia* June 21, 1490². These and other considerations justify us in concluding, that Leonardo made his studies of cupolas at Milan, probably between the years 1487 and 1492 in anticipation of the erection of one of the grandest churches of Italy, the Cathedral of *Pavia*. This may explain the decidedly Lombardo-Bramantesque tendency in the style of these studies, among which only a few remind us of the forms of the cupolas of *S. Maria del Fiore* and of the Baptistry of *Florence*. Thus, although when compared with Bramante's work, several of these sketches plainly reveal that master's influence, we find, among the sketches of domes, some, which show already Bramante's classic style, of which the *Tempietto* of *San Pietro in Montorio*, his first building executed at *Rome*, is the foremost example³.

On Plate *LXXXIV* is a sketch of the plan of a similar circular building; and the Mausoleum on *Pl. XCIII*, no less than one of the pedestals for the statue of *Francesco Sforza* (*Pl. LXV*), is of the same type.

¹ Evidence of this I intend to give later on in a Life of Bramante, which I have in preparation.

² The sketch of the plan of Brunellesco's church of *Santo Spirito* at *Florence*, which occurs in the same Manuscript, may have been done from memory.

³ It may be mentioned here, that in 1494 Bramante made a similar design for the lantern of the Cupola of the Church of *Santa Maria delle Grazie*.

The drawings *Pl. LXXXIV No. 2*, *Pl. LXXXVI No. 1 and 2* and the ground flour of the building in the drawing *Pl. XCI No. 2*, with the interesting decoration by gigantic statues in large niches, are also, I believe, more in the style Bramante adopted at Rome, than in the Lombard style. Are we to conclude from this that Leonardo on his part influenced Bramante in the sense of simplifying his style and rendering it more congenial to antique art? The answer to this important question seems at first difficult to give, for we are here in presence of Bramante, the greatest of modern architects, and with Leonardo, the man comparable with no other. We have no knowledge of any buildings erected by Leonardo, and unless we admit personal intercourse—which seems probable, but of which there is no proof—, it would be difficult to understand how Leonardo could have affected Bramante's style. The converse is more easily to be admitted, since Bramante, as we have proved elsewhere, drew and built simultaneously in different manners, and though in Lombardy there is no building by him in his classic style, the use of brick for building, in that part of Italy, may easily account for it.

Bramante's name is incidentally mentioned in Leonardo's manuscripts in two passages (*Nos. 1414 and 1448*). On each occasion it is only a slight passing allusion, and the nature of the context gives us no due information as to any close connection between the two artists.

It might be supposed, on the ground of Leonardo's relations with the East given in sections *XVII* and *XXI* of this volume, that some evidence of oriental influence might be detected in his architectural drawings. I do not however think that any such traces can be pointed out with certainty unless perhaps the drawing for a Mausoleum, *Pl. XC VIII*.

Among several studies for the construction of cupolas above a Greek cross there are some in which the forms are decidedly monotonous. These, it is clear, were not designed as models of taste; they must be regarded as the results of certain investigations into the laws of proportion, harmony and contrast.

The designs for churches, on the plan of a Latin cross are evidently intended to depart as little as possible from the form of a Greek cross; and they also show a preference for a nave surrounded with outer porticos.

The architectural forms preferred by Leonardo are pilasters coupled (*Pl. LXXXII No. 1*) or grouped (*Pl. LXXX No. 5 and XC VI No. 4*), often combined with niches. We often meet with orders superposed, one in each story, or two small orders on one story, in combination with one great order (*Pl. XC VI No. 2*).

The drum (*tamburo*) of these cupolas is generally octagonal, as in the cathedral of Florence, and with similar round windows in its sides. In Pl. LXXXVII No. 2 it is circular like the model actually carried out by Michael Angelo at St. Peter's.

The cupola itself is either hidden under a pyramidal roof, as in the Baptistry of Florence, San Lorenzo of Milan and most of the Lombard churches (Pl. XCI No. 1 and Pl. XCII No. 1); but it more generally suggests the curve of Sta Maria del Fiore (Pl. LXXXVIII No. 5; Pl. XL No. 2; Pl. LXXXIX, M; Pl. XL No. 4, Pl. XCVI No. 2). In other cases (Pl. LXXX No. 4; Pl. LXXXIX; Pl. XC No. 2) it shows the sides of the octagon crowned by semicircular pediments, as in Brunellesco's lantern of the Cathedral and in the model for the Cathedral of Pavia.

Finally, in some sketches the cupola is either semicircular, or as in Pl. LXXXVII No. 2, shows the beautiful line, adopted sixty years later by Michael Angelo for the existing dome of St. Peter's.

It is worth noticing that for all these domes Leonardo is not satisfied to decorate the exterior merely with ascending ribs or mouldings, but employs also a system of horizontal parallels to complete the architectural system. Not the least interesting are the designs for the tiburio (cupola) of the Milan Cathedral. They show some of the forms, just mentioned, adapted to the peculiar gothic style of that monument.

The few examples of interiors of churches recall the style employed in Lombardy by Bramante, for instance in S. Maria di Canepanova at Pavia, or by Dolcebuono in the Monastero Maggiore at Milan (see Pl. CI No. 1 [C. A. 181^b; 546^b]; Pl. LXXXIV No. 10).

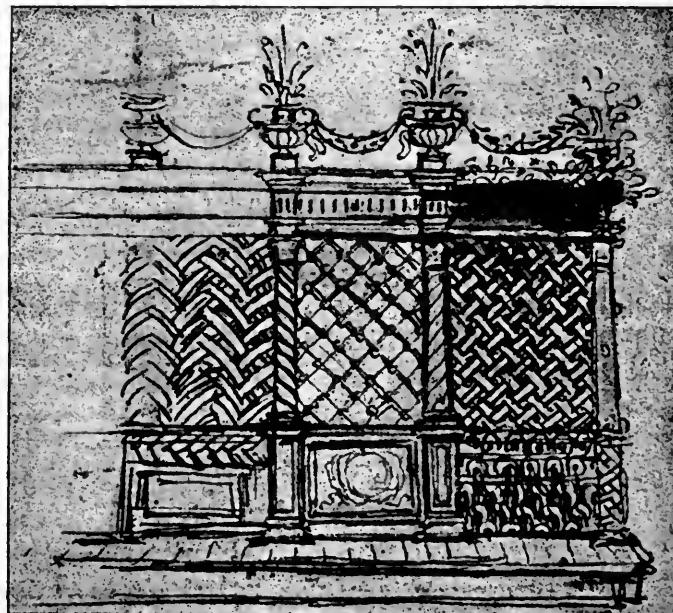

The few indications concerning palaces seem to prove that Leonardo followed Alberti's example of decorating the walls with pilasters and a flat *rustica*, either in stone or by *graffitti* (Pl. CII No. 1 and Pl. LXXXV No. 14).

By pointing out the analogies between Leonardo's architecture and that of other masters we in no way pretend to deprecate his individual and original inventive power. These are at all events beyond dispute. The project for the Mausoleum (Pl. XC VIII) would alone suffice to rank him among the greatest architects who ever lived. The peculiar shape of the tower (Pl. LXXX), of the churches for preaching (Pl. XC VII No. 1 and pages 56 and 57, Fig. 1—4), his curious plan for a city with high and low level streets (Pl. LXXVII and LXXVIII No. 2 and No. 3), his Loggia with fountains (Pl. LXXXII No. 4) reveal an originality, a power and facility of invention for almost any given problem, which are quite wonderful.

In addition to all these qualities he probably stood alone in his day in one department of architectural study,—his investigations, namely, as to the resistance of vaults, foundations, walls and arches.

As an application of these studies the plan of a semicircular vault (Pl. CIII No. 2) may be mentioned here, disposed so as to produce no thrust on the columns on which it rests: volta ī botte e non ispignie īfori le colonne. Above the geometrical patterns on the same sheet, close to a circle inscribed in a square is the note: la ragiō d'una volta cioè il terzo del diamitro della sua . . . del tedesco in domo.

There are few data by which to judge of Leonardo's style in the treatment of detail. On Pl. LXXXV No. 10 and Pl. CIII No. 3, we find some details of pillars; on Pl. CI No. 3 slender pillars designed for a fountain and on Pl. CIII No. 1 M.S. B, is a pen and ink drawing of a vase which also seems intended for a fountain. Three handles seem to have been intended to connect the upper parts with the base. There can be no doubt that Leonardo, like Bramante, but unlike Michael Angelo, brought infinite delicacy of motive and execution to bear on the details of his work.

XIV.

Anatomy, Zoology and Physiology.

Leonardo's eminent place in the history of medicine, as a pioneer in the sciences of Anatomy and Physiology, will never be appreciated till it is possible to publish the mass of manuscripts in which he largely treated of these two branches of learning. In the present work I must necessarily limit myself to giving the reader a general view of these labours, by publishing his introductory notes to the various books on anatomical subjects. I have added some extracts, and such observations as are scattered incidentally through these treatises, as serving to throw a light on Leonardo's scientific attitude, besides having an interest for a wider circle than that of specialists only.

VASARI expressly mentions Leonardo's anatomical studies, having had occasion to examine the manuscript books which refer to them. According to him Leonardo studied Anatomy in the companionship of Marc Antonio della Torre "aiutato e scambievolmente aiutando."—This learned Anatomist taught the science in the universities first of Padua and then of Pavia, and at Pavia he and Leonardo may have worked and studied together. We have no clue to any exact dates, but in the year 1506 Marc Antonio della Torre seems to have not yet left Padua. He was scarcely thirty years old when he died in 1512, and his writings on anatomy have not only never been published, but no manuscript copy of them is known to exist.

This is not the place to enlarge on the connection between Leonardo and Marc Antonio della Torre. I may however observe that I have not been able to discover in Leonardo's manuscripts on anatomy any mention of his younger contemporary. The few quotations which occur from writers on medicine—either of antiquity or of the middle ages are printed in Section XXII. Here and there in the manuscripts mention is made of an anonymous "adversary" (avversario) whose views are opposed and refuted by Leonardo, but there is no ground for supposing that Marc Antonio della Torre should have been this "adversary".

Only a very small selection from the mass of anatomical drawings left by Leonardo have been published here in facsimile, but to form any adequate idea of their scientific

merit they should be compared with the coarse and inadequate figures given in the published books of the early part of the XVI. century.

William Hunter, the great surgeon—a competent judge—who had an opportunity in the time of George III. of seeing the originals in the King's Library, has thus recorded his opinion: "I expected to see little more than such designs in Anatomy as might be useful to a painter in his own profession. But I saw, and indeed with astonishment, that Leonardo had been a general and deep student. When I consider what pains he has taken upon every part of the body, the superiority of his universal genius, his particular excellence in mechanics and hydraulics, and the attention with which such a man would examine and see objects which he has to draw, I am fully persuaded that Leonardo was the best Anatomist, at that time, in the world . . . Leonardo was certainly the first man, we know of, who introduced the practice of making anatomical drawings" (Two introductory letters. London 1784, pages 37 and 39).

The illustrious German Naturalist Johan Friedrich Blumenbach esteemed them no less highly; he was one of the privileged few who, after Hunter, had the chance of seeing these Manuscripts. He writes: Der Scharfsblick dieses grossen Forschers und Darstellers der Natur hat schon auf Dinge geachtet, die noch Jahrhunderte nachher unbemerkt geblieben sind" (see Blumenbach's medicinische Bibliothek, Vol. 3, St. 4, 1795, page 728).

These opinions were founded on the drawings alone. Up to the present day hardly anything has been made known of the text, and, for the reasons I have given, it is my intention to reproduce here no more than a selection of extracts which I have made from the originals at Windsor Castle and elsewhere. In the Bibliography of the Manuscripts, at the end of this volume a short review is given of the valuable contents of these Anatomical note books which are at present almost all in the possession of her Majesty the Queen of England. It is, I believe, possible to assign the date with approximate accuracy to almost all the fragments, and I am thus led to conclude that the greater part of Leonardo's anatomical investigations were carried out after the death of della Torre.

Merely in reading the introductory notes to his various books on Anatomy which are here printed it is impossible to resist the impression that the Master's anatomical studies bear to a very great extent the stamp of originality and independent thought.

I wish to work miracles;—it may be A general introduction that I shall possess less than other men of more peaceful lives, or than those who want to grow rich in a day. I may live for a long time in great poverty, as always happens, and to all eternity will happen, to alchemists, the would-be creators of gold and silver, and to engineers who would have dead water stir itself into life and perpetual motion, and to those supreme fools, the necromancer and the enchanter.

[23] And you, who say that it would be better to watch an anatomist at work than to see these drawings, you would be right; if it were possible to observe all the things which are demonstrated in such drawings in a single figure, in which you, with all your cleverness, will not see nor obtain knowledge of more than some few veins, to obtain a true and perfect knowledge of which I have dissected more than ten human bodies, destroying

796. 3. quieti ecq. 4. voliano a. 5. richire nūdi. 6. lungho. 9. intervera. 10. archimisti. 14. voglia. 15. cq“a” morta. 17. asse. 20. somo. 23. “e” ettu che di. 27. fussi. 31. mosstrano. 35. e non arai. 37. vene de. 43. destrugendo.

796. Lines 1—59 and 60—89 are written in two parallel columns. When we here find Leonardo putting himself in the same category as the Alchemists and Necromancers, whom he elsewhere mocks at so bitterly, it is evidently meant ironically. In the same way Leonardo, in the introduction to the

Books on Perspective sets himself with transparent satire on a level with other writers on the subject.

Line 23 and the following seem to be directed against students of painting and young artists rather than against medical men and anatomists.

struggendo ogni ⁴⁴ altri mēbri, consu⁴⁵mando con minutis⁴⁶sime particule ⁴⁷tutta la carne che ⁴⁸d'intorno a esse ⁴⁹vene si troava, ⁵⁰sanza insanguinarle, se non d'i⁵²sensibile insanguinamēto delle vene capillari; ⁵³e vn sol corpo nō ⁵⁵bastava a tanto tēpo, che bisos⁵⁶gnava procedere di mano in mano ⁵⁷in tanti corpi, che si finisca la intes⁵⁸ra cognitione; le qual repli ⁵⁹caia 2 volte per vedere le differentie.

84. Leonardo frequently, and perhaps habitually, wrote in note books of a very small size and only moderately thick; in most of those which have been preserved undivided, each contains less than fifty leaves. Thus a considerable number of such volumes must have gone to make up a volume of the bulk of the '*Codex Atlanticus*' which now contains nearly 1200 detached leaves. In the passage under consideration, which was evidently written at a late

all the other members, and removing the very minutest particles of the flesh by which these veins are surrounded, without causing them to bleed, excepting the insensible bleeding of the capillary veins; and as one single body would not last so long, since it was necessary to proceed with several bodies by degrees, until I came to an end and had a complete knowledge; this I repeated twice, to learn the differences [59].

And if you should have a love for such things you might be prevented by loathing, and if that did not prevent you, you might be deterred by the fear of living in the night hours in the company of those corpses, quartered and flayed and horrible to see. And if this did not prevent you, perhaps you might not be able to draw so well as is necessary for such a demonstration; or, if you had the skill in drawing, it might not be combined with knowledge of perspective; and if it were so, you might not understand the methods of geometrical demonstration and the method of the calculation of forces and of the strength of the muscles; patience also may be wanting, so that you lack perseverance. As to whether all these things were found in me or not [84], the hundred and twenty books composed by me will give verdict Yes or No. In these I have been hindered neither by avarice nor negligence, but simply by want of time. Farewell [89].

OF THE ORDER OF THE BOOK.

This work must begin with the conception of man, and describe the nature of the womb and how the foetus lives in it, up to what stage it resides there, and in what way it quickens into life and feeds. Also its growth and what interval there is between

period of his life, Leonardo speaks of his Manuscript note-books as numbering 120; but we should hardly be justified in concluding from this passage that the greater part of his Manuscripts were now missing (see *Prolegomena*, Vol. I, pp. 5-7).

797. The meaning of the word *nervo* varies in different passages, being sometimes used for *muscolo* (muscle).

da · uno grado d'accrescimēto · a · uno · altro, e che cosa lo spigna fori ⁵ del corpo · della madre ·, e per che · cagione qualche · uolta · lui · uēga fori · dal uētro di sua madre ināti al debito ⁶tēpo.

⁷Poi discriuerai quali mēbra sieno · quelle · che crescono · poi · che'l putto è nato · piv che l'altre, ⁸e da la misura d'ū putto · d'un anno.

⁹Poi discrivi l'omo cresciuto e la fēmina · e sue · misure · e nature di complessione colore ¹⁰e fisonomie.

¹¹Di poi descrivi com'egli è cōposto · di uene ·, nerui ·, muscoli e ossa; Questo farai nell'ultimo del libro; ¹²di poi figura · in · 4 storie · quattro vnumerati casi dell'i omini, cioè letitia con uari atti di ridere, ¹³e figura · la cagiō · del riso ·; piāto in vari modi colla · sua · cagione ·; cōtētione cō uari movi¹⁴mēti d'uccisione ·, fughe ·, pavre ·, ferocità ·, ardimēti, micidi · e tutte cose appartenēti a simil casi; ¹⁵di poi figura · vna fatica cō tirare, spiegniere · portare, fermare, sostenere e simil ¹⁶cose;

¹⁷Di poi discriui attitudine · e movimēto; ¹⁸di poi prospettiva · per l'ofitio e effetti dell'ochio e dell'udito,—dirai di mvsicha—e descrivi dell'i altri sēsi.

¹⁹Di poi discrivi la natura · de' sensi.

²⁰Questa figura strumētale dell'omo dimostreremo in .. figure, delle ²¹quali le 3 prime saranno la ramificatione delle ossa, cioè vna dināzi · che ²²dimostrî l'altitudine de' siti e figure dell'i ossi, la seconda sarà veduta in ²³profilo e mostrerà la profondità del tutto e delle parti e loro sito; La 3^a ²⁴figura fia dimostratrice delle ossa dalla parte dirieto; Di poi faremo ²⁵3 altre figure ne' simili aspetti colle ossa segate, nelle quali si vedranno le lor ²⁶grossezze e uacuità; 3 altre figure faremo dell' ossa intere e de' nerui che na²⁷scono dalla nuca, e in che mēbra ramificano; E 3 altre de'ossa e vene e do²⁸ve ramificano, poi 3 con muscoli e 3 con pelle, e figure proportionate, e 3 della fēmina per dimostrare matrice e vene mestruali, ³⁰che vanno alle poppe.

one stage of growth and another. What it is that forces it out from the body of the mother, and for what reasons it sometimes comes out of the mother's womb before the due time.

Then I will describe which are the members, which, after the boy is born, grow more than the others, and determine the proportions of a boy of one year.

Then describe the fully grown man and woman, with their proportions, and the nature of their complexions, colour, and physiognomy.

Then how they are composed of veins, tendons, muscles and bones. This I shall do at the end of the book. Then, in four drawings, represent four universal conditions of men. That is, Mirth, with various acts of laughter, and describe the cause of laughter. Weeping in various aspects with its causes. Contention, with various acts of killing; flight, fear, ferocity, boldness, murder and every thing pertaining to such cases. Then represent Labour, with pulling, thrusting, carrying, stopping, supporting and such like things.

Further I would describe attitudes and movements. Then perspective, concerning the functions and effects of the eye; and of hearing—here I will speak of music—, and treat of the other senses.

And then describe the nature of the senses.

This mechanism of man we will demonstrate in ... figures; of which the three first will show the ramification of the bones; that is: first one to show their height and position and shape: the second will be seen in profile and will show the depth of the whole and of the parts, and their position. The third figure will be a demonstration of the bones of the backparts. Then I will make three other figures from the same point of view, with the bones sawn across, in which will be shown their thickness and hollowness. Three other figures of the bones complete, and of the nerves which rise from the nape of the neck, and in what limbs they ramify. And three others of the bones and veins, and where they ramify. Then three figures with the muscles and three with the skin, and their proper proportions; and three of woman, to illustrate the womb and the menstrual veins which go to the breasts.

e in alcuna è grosso, e in alcuna buso, o

THE ORDER OF THE BOOK.

This depicting of mine of the human body will be as clear to you as if you had the natural man before you; and the reason is that if you wish thoroughly to know the parts of man, anatomically, you—or your eye—require to see it from different aspects, considering it from below and from above and from its sides, turning it about and seeking the origin of each member; and in this way the natural anatomy is sufficient for your comprehension. But you must understand that this amount of knowledge will not continue to satisfy you; seeing the very great confusion that must result from the combination of tissues, with veins, arteries, nerves, sinews, muscles, bones, and blood which, of itself, tinges every part the same colour. And the veins, which discharge this blood, are not discerned by reason of their smallness. Moreover integrity of the tissues, in the process of the investigating the parts within them, is inevitably destroyed, and their transparent substance being tinged with blood does not allow you to recognise the parts covered by them, from the similarity of their blood-stained hue; and you cannot know everything of the one without confusing and destroying the other. Hence, some further anatomy drawings become necessary. Of which you want three to give full knowledge of the veins and arteries, everything else being destroyed with the greatest care. And three others to display the tissues; and three for the sinews and muscles and ligaments; and three for the bones and cartilages; and three for the anatomy of the bones, which have to be sawn to show which are hollow and which are not, which have marrow and which are spongy, and which are thick from the outside inwards, and which are thin. And some are extremely thin in some parts and thick in others, and in some parts hollow or filled up with bone, or full of marrow, or spongy. And all these conditions are sometimes found

piena ²⁴d'osso, o midollosa, o spugnosa; e così tutte queste cose saranno alcuna volta trovate in un medesimo osso, e alcuno osso fia che non à nessuna; e 3 te ne bisogna fare per la donna, nella quale è grā misterio, mediante la matrice e suo feto; ²⁷adunque per il mio disegno ti fia noto ogni parte e ogni tutto mediante la di²⁸mostratione di 3 diuersi aspetti di ciascuna parte, perchè quando tu avrai veduto alcun mēbro dalla parte dinanzi con qualche neruo, corda, o vena che ³⁰nasca dalla opposita parte, ti fia dimostro il medesimo mēbro volto per lato ³¹o dirieto; non altremēti che se tu auessi in mano il medesimo mēbro e andas³²si lo voltādo di parte in parte insino a tanto che tu auessi piena notitia di quel³³lo che tu desideri sapere, e così similmente ti fia posto inanti in tre o ³⁴4 dimostrationi di ciascū mēbro per diuersi aspetti in modo che tu resterai con³⁵vera e piena notitia di quello che tu vuoi sapere della figura dell'omo.

³⁶Adunque qui con 12 figure intere ti sarà mostrata la cosmografia del minor ³⁷mōdo col medesimo ordine che ināzi a me fu fatto da Tolomeo nella sua cosmografia, e così diuidero poi quelle in mēbra, come lui diuisse il tutto in provincie; ³⁹e poi dirò l'ufitio delle parti per ciascū verso, mettēdoti dināti alli ochi la notitia ⁴⁰di tutta la figura e valitudine dell'omo inquāto a moto locale mediante le sue parti, ⁴¹E così piacesse al nostro autore che io potessi dimostrare la natura dell'omini e lo⁴²ro costumi nel modo che io descrivo la sua figura.

⁴³E ricordoti che la notomia dell'nerui non ti darà la situazione della loro ramificatione, nè in quali muscoli essi si ramificano mediante li corpi disfatti in acqua corrēte, o in acqua di calcina, perchè, ancorchè ti rimāga la origine de'l'or nascenti ⁴⁶sanza tale acqua come coll' acqua, le ramifications loro pel corso dell'acqua si ⁴⁷vengono a vnire, non altremēti che si fascia il lino o canapa pettinata per filare, ⁴⁸tutto in vn fascio in modo che impossibile è a ritrovare in quali muscoli o cō quale ⁴⁹o cō quāte ramifications li nerui s'infondino ne' predetti muscoli.

in one and the same bone, and in some bones none of them. And three you must have for the woman, in which there is much that is mysterious by reason of the womb and the foetus. Therefore by my drawings every part will be known to you, and all by means of demonstrations from three different points of view of each part; for when you have seen a limb from the front, with any muscles, sinews, or veins which take their rise from the opposite side, the same limb will be shown to you in a side view or from behind, exactly as if you had that same limb in your hand and were turning it from side to side until you had acquired a full comprehension of all you wished to know. In the same way there will be put before you three or four demonstrations of each limb, from various points of view, so that you will be left with a true and complete knowledge of all you wish to learn of the human figure[35].

Thus, in twelve entire figures, you will have set before you the cosmography of this lesser world on the same plan as, before me, was adopted by Ptolemy in his cosmography; and so I will afterwards divide them into limbs as he divided the whole world into provinces; then I will speak of the function of each part in every direction, putting before your eyes a description of the whole form and substance of man, as regards his movements from place to place, by means of his different parts. And thus, if it please our great Author, I may demonstrate the nature of men, and their customs in the way I describe his figure.

And remember that the anatomy of the nerves will not give the position of their ramifications, nor show you which muscles they branch into, by means of bodies dissected in running water or in lime water; though indeed their origin and starting point may be seen without such water as well as with it. But their ramifications, when under running water, cling and unite—just like flat or hemp carded for spinning—all into a skein, in a way which makes it impossible to trace in which muscles or by what ramification the nerves are distributed among those muscles.

798. 35. Compare Pl. CVII. The original drawing at Windsor is $28\frac{1}{2} \times 19\frac{1}{2}$ centimètres. The upper figures are slightly washed with Indian ink. On the back of this drawing is the text No. 1140.

W. 210]

ORDINE DI NOTOMIA.

³Fa prima l'ossa come dire le braccia, e poni il motore dalla spalla al ³gomito per tutte le linee; Di poi dal gomito al braccio; Di poi dal ⁴braccio alla mano e dalla mano alli diti.

⁵E nel · braccio porrai li motori de' diti che s'aprano, e ⁶questi nella lor dimostratione porrai soli; nella ²a dimostratione vestirai questi muscoli delli secondi motori de' diti, ⁸e così farai a grado a grado per non confondere: ma primo poⁿni sopra dell' ossa quelli muscoli che con essi ossa si congiungono, ¹⁰sanza altra confusione d'altri muscoli, e con quelli porrai ¹¹li nerui e uene, e che li nutriscono, auendo prima fatto l'albero delle ue¹²ne e nerui sopra delle semplici ossa.

799.

THE ARRANGEMENT OF ANATOMY.

First draw the bones, let us say, of the arm, and put in the motor muscle from the shoulder to the elbow with all its lines. Then proceed in the same way from the elbow to the wrist. Then from the wrist to the hand and from the hand to the fingers.

And in the arm you will put the motors of the fingers which open, and these you will show separately in their demonstration. In the second demonstration you will clothe these muscles with the secondary motors of the fingers and so proceed by degrees to avoid confusion. But first lay on the bones those muscles which lie close to the said bones, without confusion of other muscles; and with these you may put the nerves and veins which supply their nourishment, after having first drawn the tree of veins and nerves over the simple bones.

800.

W. An. IV, XXI]

Comicia la notomia alla testa e finiscola nella piata del piede.

Begin the anatomy at the head and finish at the sole of the foot.

W. An. II. 39^b (o)]

³· uomini finiti, ²3 · con ossa e nerui, ³3 · con ossa semplici; ⁴Queste sono 12 dimostrationi di figure ¹⁶tere.

801.

³ men complete, ³ with bones and nerves, ³ with the bones only. Here we have 12 demonstrations of entire figures.

W. An. IV. 151a]

Quādo · tu · ài · finito di ²crescere l'omo · tu ³farai · la statua · cō tu'tte · sue misure · ⁵superfitali.

When you have finished building up the man, you will make the statue with all its superficial measurements.

800. effiniscila.

801. 1. homini. 2. chon. 3. ssenplici. 6. tiere.

802. 2. cresciere . . ettu. 3. lasstatua . chō.

802. Crescere l'omo. The meaning of this expression appears to be different here and in the passage C. A. 157^a, 468^a (see No. 526, Note 1. 2). Here it can hardly mean anything else than modelling, since the sculptor forms the figure by degrees, by adding wet clay and the figure consequently increases or grows. *Tu farai la statua* would

then mean, you must work out the figure in marble. If this interpretation is the correct one, this passage would have no right to find a place in the series on anatomical studies. I may say that it was originally inserted in this connection under the impression that *di crescere* should be read *descrivere*.

W. AU. III, XXII]

Farai tutti li moti dell' ossa ² colle giunture loro dopo ³ la dimostratione delle pri^{me} tre figure dell' ossa, e⁵ questo si deve fare nel primo ⁶ libro.

W. XXIII]

Ricordati che per farti certo del nascimento di qualunque muscolo, che tu tiri ² la corda, partorita da esso muscolo, in modo che tu veda movere esso ³ muscolo e ¹ il suo nascimēto sopra delle legature delli ossi.

NOTANDO.

⁵Tu non farai mai se nō confusione nella ^{di}⁶mostratione de' muscoli e lor siti, nascimēti ⁷e fini, se prima non fai vna dimostratione di ⁸muscoli sottili a uso di fila di refe, e così potrai ⁹figurare l'¹⁰natura, e così li potrai nominare secōdo il mēbro ¹¹al quale lor seruono, cioè il motore della pū¹²ta del dito grosso e del suo osso di mezzo o del primo ecc; ¹³e dato che tu ài tale notitia, figurerai al lato a ¹⁴questa la uera forma e quātità e sito di ciascū muscolo; ¹⁵ma ricordati di fare li fili, che insegnano li muscoli, neg¹⁶li medesimi siti che son le linie centrali di ciascū mu¹⁷scolo, e così tali fili dimostraranno la figura della ganba ¹⁸ e la loro distantia spedita e nota.

¹⁹Ho spogliato di pelle vno il quale per una mala²⁰tia s'era tanto diminuito che li muscoli erā ²¹consumati e restati a uso di pellicola sottile, ²²in modo che le corde in scābio del conuertirsi ²³in muscolo si convertivano in larga pelle, ²⁴e quādo l'ossa erā uestite di pelle, poco acqui²⁵stauā della lor naturale grossezza.

803.

You must show all the motions of the bones with their joints to follow the demonstration of the first three figures of the bones, and this should be done in the first book. (Plans for the representation of muscles by drawings (803-809).)

804.

Remember that to be certain of the point of origin of any muscle, you must pull the sinew from which the muscle springs in such a way as to see that muscle move, and where it is attached to the ligaments of the bones.

NOTE.

You will never get any thing but confusion in demonstrating the muscles and their positions, origin, and termination, unless you first make a demonstration of thin muscles after the manner of linen threads; and thus you can represent them, one over another as nature has placed them; and thus, too, you can name them according to the limb they serve; for instance the motor of the point of the great toe, of its middle bone, of its first bone, &c. And when you have the knowledge you will draw, by the side of this, the true form and size and position of each muscle. But remember to give the threads which explain the situation of the muscles in the position which corresponds to the central line of each muscle; and so these threads will demonstrate the form of the leg and their distance in a plain and clear manner.

I have removed the skin from a man who was so shrunk by illness that the muscles were worn down and remained in a state like thin membrane, in such a way that the sinews instead of merging in muscles ended in wide membrane; and where the bones were covered by the skin they had very little over their natural size.

805.

Which nerve causes the motion of the eye so that the motion of one eye moves the other?

Of frowning the brows, of raising the brows, of lowering the brows,—of closing the eyes, of opening the eyes,—of raising the nostrils, of opening the lips, with the teeth shut, of pouting with the lips, of smiling, of astonishment.—

Describe the beginning of man when it is caused in the womb and why an eight months child does not live. What sneezing is. What yawning is. Falling sickness, spasms, paralysis, shivering with cold, sweating, fatigue, hunger, sleepiness, thirst, lust.

Of the nerve which is the cause of movement from the shoulder to the elbow, of the movement from the elbow to the hand, from the joint of the hand to the springing of the fingers. From the springing of the fingers to the middle joints, and from the middle joints to the last.

Of the nerve which causes the movement of the thigh, and from the knee to the foot, and from the joint of the foot to the toes, and then to the middle of the toes and of the rotary motion of the leg.

806.

ANATOMY.

Which nerves or sinews of the hand are those which close and part the fingers and toes latteraly?

807.

Remove by degrees all the parts of the front of a man in making your dissection, till you come to the bones. Description of the parts of the bust and of their motions.

808.

Give the anatomy of the leg up to the hip, in all views and in every action and in

808. A straightened leg in profile is sketched by the side of this text.

tutte le spoglie, ⁵vene, arterie, nerui, ⁶corde e mvscoli, pel'le e ossa, e poi dell'ossa ⁸segate per uedere la gros⁹sezza dell'ossa.

every state; veins, arteries, nerves, sinews and muscles, skin and bones; then the bones in sections to show the thickness of the bones.

W. A. II. 768]

Farai regola e misura di ciascun muscolo, ²e renderai ragione di tutti li loro vfiti, e in che modo s'adoperano e che li muove ecc.

⁴Farai prima la spina del dosso, di poi va vestendo ⁵a gradi l'un sopra dell'altro di ciascū di questi musco⁶li, e poni li nervi all'arterie e vene a ciascun ⁷muscolo per se, e oltre a di questo nota a quā⁸ti spondili si congiugono, e che intestini sono ⁹loro a riscōtro e che ossi e altri strumēti organici ecc.

¹¹Le parti più alte de' magri son più alte nelli mu¹²scolosi, e similmēte ne' grassi; Ma la differētia, che è ¹³dalla figura de'muscoli che àno li grossi a rispetto ¹⁴delli muscolosi, sarà qui di sotto descritta.

W. An IV. 7 (A. A.)

Descriui quali mu²scoli si perdono nello ¹³grossare, e nel dimagra⁴re quali muscoli si sco⁵prono.

⁶E nota che quel loco dell'a superficie del grasso ⁸che sarà più cōcauata, ⁹quādo si disagrassa fia ¹⁰più eleuato.

¹¹Doue li muscoli ¹²si separano l'ū dal l'altro, farai p¹⁴rossili, e doue s¹⁵appiccano insieme . . .

W. 239 (= W. L. 131)]

DE FIGURA VMANA.

²Qual parte è quella nell'omo ché nel suo ingrassare mai cresce carne?

⁴Quale è quella parte che nel dimagrare dell'omo ⁵mai nō dimagra con dimagratō troppo sēsibile? ⁶infra le parti che ingrassano qual'è quella che più ⁷ingrassa?

8IO.

OF THE HUMAN FIGURE.

Which is the part in man, which, as he grows fatter, never gains flesh?

Or what part which as a man grows lean never falls away with a too perceptible diminution? And among the parts which grow fat which is that which grows fattest?

809. 1. reghola . . ciascū musscolo. 3. he chilli. 4. lasspina . . vavessendo. 5. hagradi . . ciascū di questi. 6. ciascū. 7. musscholo . . addi questo . . acquā. 8. chongiughano . . intessini. 9. arrisscōtro . . orgha. 11. parte . . mus. 12. scho-losi essimilmēte . . 809. The two drawings given on Pl. CVIII no. 1 come between lines 3 and 4. A good and very early copy of this drawing without the written text

exists in the collection of drawings belonging to Christ's College Oxford, where it is attributed to Leonardo.

Make the rule and give the measurement of each muscle, and give the reasons of all their functions, and in which way they work and what makes them work &c.

[4] First draw the spine of the back; then clothe it by degrees, one after the other, with each of its muscles and put in the nerves and arteries and veins to each muscle by itself; and besides these note the vertebrae to which they are attached; which of the intestines come in contact with them; and which bones and other organs &c.

The most prominent parts of lean people are most prominent in the muscular, and equally so in fat persons. But concerning the difference in the forms of the muscles in fat persons as compared with muscular persons, it shall be described below.

On corpulence and leanness
(809—811).

⁸Infra le parti che dimagrano qual'è quella che si fa ⁹più magra?

¹⁰Degli omini potéti in forze quali muscoli son di mag¹¹giore grossezza e più eleuati?

¹¹Tu ài a figurare nella tua anatomia tutti li gradi ¹²delle mēbra dalla creatiō dell'omo insino alla sua ¹⁴morte, e insino alla morte dell'osso, e qual parte d'esso ¹⁵prima si cōsuma e qual più si cōserua.

¹⁶E similmente dall'ultima magrezza all'ultima grassezza.

Among those which grow lean which is that which grows leanest?

In very strong men which are the muscles which are thickest and most prominent?

In your anatomy you must represent all the stages of the limbs from man's creation to his death, and then till the death of the bone; and which part of him is first decayed and which is preserved the longest.

And in the same way of extreme leanness and extreme fatness.

S. K. M. III. 66a]

Here I make a note to demonstrate the difference there is between man and the horse and in the same way with other animals. And first I will begin with the bones, and then will go on to all the muscles which spring from the bones without tendons and end in them in the same way, and then go on to those which start with a single tendon at one end.

825.

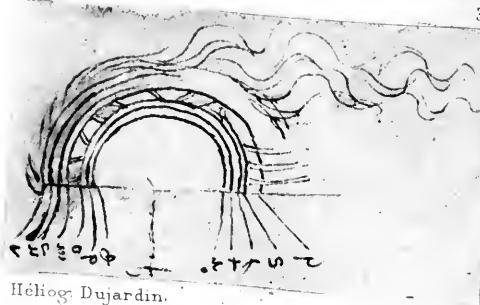

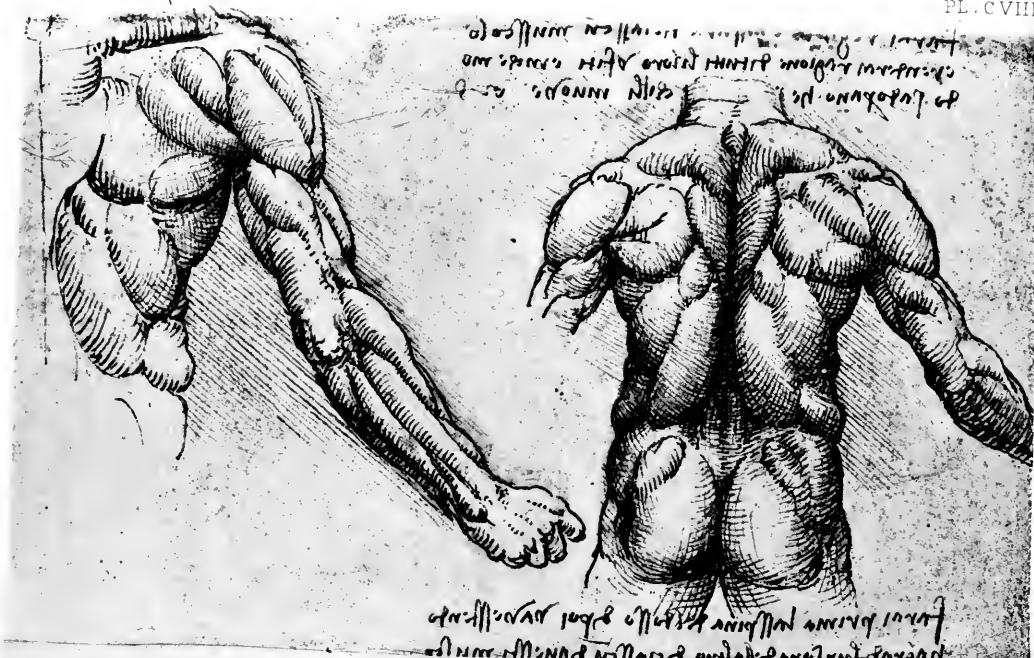

Note on the bendings of joints and in what way the flesh grows upon them in their flexions or extensions; and of this most important study write a separate treatise: in the description of the movements of animals with four feet; among which is man, who likewise in his infancy crawls on all fours.

826.

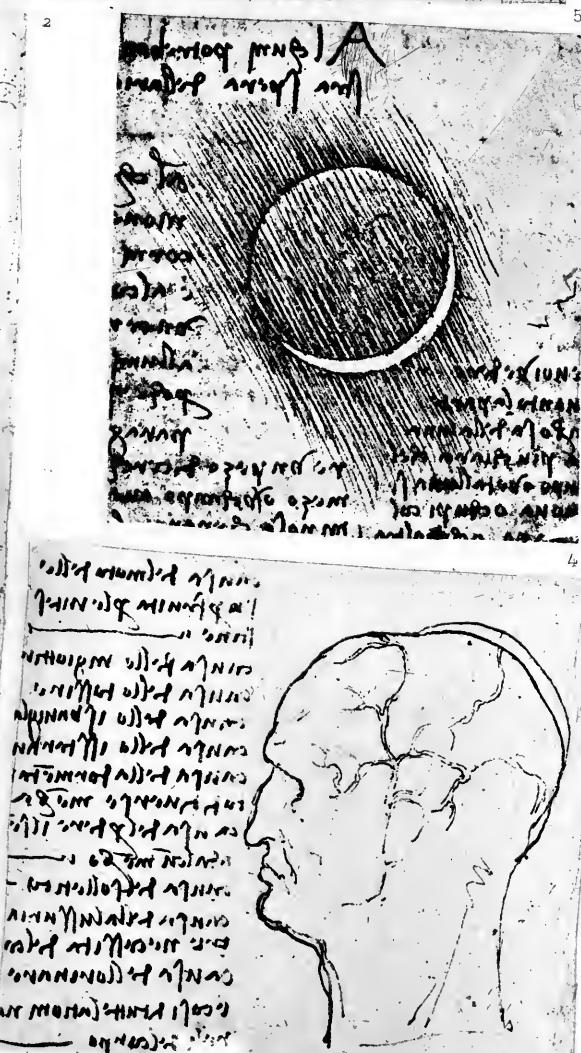

OF THE WAY OF WALKING IN MAN.

The walking of man is always after the universal manner of walking in animals with 4 legs, inasmuch as just as they move their feet crosswise after the manner of a horse in trotting, so man moves his 4 limbs crosswise; that is, if he puts forward his right foot in walking he puts forward, with it, his left arm and vice versa, invariably.

Hélio G. Dujardin.

III.

PHYSIOLOGY.

W. An. IV. 173 a]

827.

Ho trovato nella compositione del corpo vmano che, come in tutte ²le compositioni delli animali, esso è di piv ottusi e grossi sentimēti; ³così è composto di strumēto manco ingegnoso e di lochi māco ⁴capaci a ricevere la uirtù de' sensi; ò veduto nella spetie leonina il senso dell'odorato auere parte della sustantia del celabro, e discēdere li narici, capace ricettaculo contro al senso dello odorato, ⁷il quale entra infra grā nvmero di saccoli cartilaginosi con assai ⁸vie contro all'avenimento del predetto celabro.

⁹Li ochi della spetie leonina ànno gran parte della lor testa per lor ¹⁰ricettacolo, e li nerui ottici inmmediate congiugnersi col celabro; il che al¹¹li omini si uede in contrario, perchè le casse delli ochi sono vna picco¹²la parte del capo, e li nerui ottici sono sottili e lunghi e deboli, e per debo¹³le operatione si uede di loro il dì, e peggio la notte, e li predetti animali ¹⁴vedono in nella notte che 'l giorno; ¹⁵e 'l segno se ne uede, perchè predano di notte ¹⁶e dormono il giorno come fano ancora li uccelli notturni.

I have found that in the composition of the human body as compared with the bodies of animals the organs of sense are duller and coarser. Thus it is composed of less ingenious instruments, and of spaces less capacious for receiving the faculties of sense. I have seen in the Lion tribe that the sense of smell is connected with part of the substance of the brain which comes down the nostrils, which form a spacious receptacle for the sense of smell, which enters by a great number of cartilaginous vesicles with several passages leading up to where the brain, as before said, comes down.

The eyes in the Lion tribe have a large part of the head for their sockets and the optic nerves communicate at once with the brain; but the contrary is to be seen in man, for the sockets of the eyes are but a small part of the head, and the optic nerves are very fine and long and weak, and by the weakness of their action we see by day but badly at night, while these animals can see as well at night as by day. The proof that they can see is that they prowl for prey at night and sleep by day, as nocturnal birds do also.

II. 2. 384]

Advantages in the structure of the eye in certain animals (828-831). Tutte le cose vedute parranno ² maggiori di mezza notte, che di ³ mezzo di e maggiori di mattina che ⁴ di mezzodì. ⁵ Questo accade perchè la pupilla ⁶ dell'occhio è minore assai di mezzo ⁷ dì che di nessuno altro tempo.

Tanto quanto è maggiore l'occhio ⁸ over pupilla del gufo a proporzione ¹⁰ dello animale, che non è quella dell'uomo, tanto più lume vede di notte che ¹² nō fa l'omo; òde di mezzo dì nō vede niente, selui nō diminuisce sua pupil ¹⁴ la, e similmente vede di notte le cose maggiori che di dì.

G. 41a]

DELLI OCCHI DELL' ANIMALI.

Li occhi di tutti li animali àno le lor popille, le quali per loro medesime crescono e diminuiscono secôdo il maggiore e minore lume del sole o altro chiarore; Ma nelli uccelli fa maggiore differetia, e massima nelli notturni, come gufi, barbagianni, e all'occhi ⁹ che son di spetie di civetta; a questi cresce ¹⁰ la popilla in modo che quasi occupa tutt'io l'occhio, e diminuisce insino alla grādezza d'ū grā di miglio e sempre osser ¹³ va figura circulare; Ma la spetie leonina come pâtere, pardi, leóze, tigri, lupi, cieruieri, gatti di Spagna e altri simili diminuiscono ¹⁷ la lucie dal perfetto circulo ¹⁸ alla figura biagolare, cioè questa ¹⁹ è come si dimostra in margine; Ma l'uomo ²⁰ per avere più debole vista che nessuno altro animale, meno è offeso dalla superchia luce, ²² e mē s'avmēta nelli lochi tenebrosi; ma ²³ alli occhi deli detti animali notturni,—al gufo veciello cornuto, il quale è ¹ massimo nella spetie deli uccelli notturni: a questo s'aumenta tanto la uirtù vi ²⁷ siva, che nel minimo

828.

Every object we see will appear larger at midnight than at midday, and larger in the morning than at midday.

This happens because the pupil of the eye is much smaller at midday than at any other time.

In proportion as the eye or the pupil of the owl is larger in proportion to the animal than that of man, so much the more light can it see at night than man can; hence at midday it can see nothing if its pupil does not diminish; and, in the same way, at night things look larger to it than by day.

829.

OF THE EYES IN ANIMALS.

The eyes of all animals have their pupils adapted to dilate and diminish of their own accord in proportion to the greater or less light of the sun or other luminary. But in birds the variation is much greater; and particularly in nocturnal birds, such as horned owls, and in the eyes of one species of owl; in these the pupil dilates in such a way as to occupy nearly the whole eye, or diminishes to the size of a grain of millet, and always preserves the circular form. But in the Lion tribe, as panthers, pard, ounces, tigers, lynxes, spanish cats and other similar animals the pupil diminishes from the perfect circle to the figure of a pointed oval such as is shown in the margin. But man having a weaker sight than any other animal is less hurt by a very strong light and his pupil increases but little in dark places; but in the eyes of these nocturnal animals, the horned owl—a bird which is the largest of all nocturnal birds—the power of vision increases so much that in the faintest nocturnal light (which we call darkness) it sees

with much more distinctness than we do in the splendour of noon day, at which time these birds remain hidden in dark holes; or if indeed they are compelled to come out into the open air lighted up by the sun, they contract their pupils so much that their power of sight diminishes together with the quantity of light admitted.

Study the anatomy of various eyes and see which are the muscles which open and close the said pupils of the eyes of animals.

830.

a b n is the membrane which closes the eye from below, upwards, with an opaque film, *c n b* encloses the eye in front and behind with a transparent membrane.

It closes from below, upwards, because it [the eye] comes downwards.

When the eye of a bird closes with its two lids, the first to close is the nictitating membrane which closes from the lacrymal duct over to the outer corner of the eye; and the outer lid closes from below upwards, and these two intersecting motions begin first from the lacrymatory duct, because we have already seen that in front and below birds are protected and use only the upper portion of the eye from fear of birds of prey which come down from above and behind; and they uncover first the membrane from the outer corner, because if the enemy comes from behind, they have the power of escaping to the front; and again the muscle called the nictitating membrane is transparent, because, if the eye had not such a screen, they could not keep it open against the wind which strikes against the eye in the rush of their rapid flight. And the pupil of the eye dilates and contracts as it sees a less or greater light, that is to say intense brilliancy.

831.

If at night your eye is placed between the light and the eye of a cat, it will see the eye look like fire.

W. AN. IV. 184 a (7)

Remarks on the organs of speech (832. 833.)

La lingua è trouata auere 24 muscoli li quali rispondono alli sei muscoli di che è composta la quātità della lingua che si move per la bocca.

833.

If you draw in breath by the nose and send it out by the mouth you will hear the sound made by the division that is the membrane in[5] . . .

834.

OF THE NATURE OF SIGHT.

I say that sight is exercised by all animals, by the medium of light; and if any one adduces, as against this, the sight of nocturnal animals, I must say that this in the same way is subject to the very same natural laws. For it will easily be understood that the senses which receive the images of things do not project from themselves any visual virtue[4]. On the contrary the atmospheric medium which exists between the object and the sense incorporates in itself the figure of things, and by its contact with the sense transmits the object to it. If the object—whether by sound or by odour—presents its spiritual force to the ear or the nose, then light is not required and does not act. The forms of objects do not send their images into

étrano per similitudine jfra l'aria, ⁸ se quelli nō sono l̄vminosi; essēdo così l'ochio nō la può ricevere da quell'aria che nō l'ā e che tocca la sua superficie; ⁹ se tu volessi dire di molti animali j quali predano di notte, dico che quando in questi manca la poca luce ¹⁰che basta alla natura de' loro ochi, che questi s'avitano colla potētia dello udito e dello odorato, ¹¹i quali nō sono ipediti dalle tenebre, e de' quali avāzano di grā lūga l'omo; Se porrai mēte a una gatta ¹²di giorno saltare jfra molte vasellamēti, vedrai quelli rimanere salui, e se farai questo medesimo ¹³di notte, ronperā ne assai; li vcelli notturni nō volano, se nō lucie tutta o ī parte la luna, āzi si pasco¹⁴no jfra il coricare del sole e la itera oscurità della notte; —

¹⁵Nessuno corpo si può cōprendere sāza lume e ōbra; lume e ōbra sono cauate dalla luce.

G. 90a]

835.

PERCHÈ NELL'OMINI ATTÉPATI ²IL UEDERE È MEGLIO DISCOSTO.

³Il uedere è meglio discosto che da preso in quelli omini, li quali s'attēpano, ⁵perchè vna medesima cosa ⁶māda di se minore impressione nell'occhio, essendo remota che quādo li è vi⁸cina.

C. At. 89a; 258a]

Il sēso comnune è quello che giudica le cose a lui date dalli altri sensi; ²Li antichi speculatori àno cōcluso che quella parte del giudicio che è data all'omo, sia causata ³da vno strumēto, al quale referiscono li altri ⁵mediāte la ipressiva, e a detto strumēto àno posto nome sēso comvne, ⁴e dicono questo sēso essere situato in mezzo il capo jfra la ipressiva e la memoria; E questo nome di sēso ⁵comvne dicono solamēte, perchè è

the air if they are not illuminated[8]; and the eye being thus constituted cannot receive that from the air, which the air does not possess, although it touches its surface. If you choose to say that there are many animals that prey at night, I answer that when the little light which suffices the nature of their eyes is wanting, they direct themselves by their strong sense of hearing and of smell, which are not impeded by the darkness, and in which they are very far superior to man. If you make a cat leap, by daylight, among a quantity of jars and crocks you will see them remain unbroken, but if you do the same at night, many will be broken. Night birds do not fly about unless the moon shines full or in part; rather do they feed between sun-down and the total darkness of the night.

No body can be apprehended without light and shade, and light and shade are caused by light.

WHY MEN ADVANCED IN AGE SEE BETTER AT A DISTANCE.

Sight is better from a distance than near in those men who are advancing in age, because the same object transmits a smaller impression of itself to the eye when it is distant than when it is near.

836.

The Common Sense, is that which judges ^{The seat of} things offered to it by the other senses. ^{the common sense.} The ancient speculators have concluded that that part of man which constitutes his judgment is caused by a central organ to which the other five senses refer everything by means of impressibility; and to this centre they have given the name Common Sense. And they say that this Sēse is situated in the centre of the head between Sensation and Memory. And this name of Common Sense

is given to it solely because it is the common judge of all the other five senses *i.e.* Seeing, Hearing, Touch, Taste and Smell. This Common Sense is acted upon by means of Sensation which is placed as a medium between it and the senses. Sensation is acted upon by means of the images of things presented to it by the external instruments, that is to say the senses which are the medium between external things and Sensation. In the same way the senses are acted upon by objects. Surrounding things transmit their images to the senses and the senses transfer them to the Sensation. Sensation sends them to the Common Sense, and by it they are stamped upon the memory and are there more or less retained according to the importance or force of the impression. That sense is most rapid in its function which is nearest to the sensitive medium and the eye, being the highest is the chief of the others. Of this then only we will speak, and the others we will leave in order not to make our matter too long. Experience tells us that the eye apprehends ten different natures of things, that is: Light and Darkness, one being the cause of the perception of the nine others, and the other its absence:— Colour and substance, form and place, distance and nearness, motion and stillness [15].

²L'anima · pare · risedere · nella parte iuditiale, · e la · parte · iuditiale pare essere ³nel loco · doue · concorrono · tutti i sēsi ·, il quale è detto · senso comvne, e non è tutta ⁴per tutto · il corpo ·, come molti · àno · creduto ·, anzi · tutto in nella · parte ·, inpercchè se ella ⁵fusse · tutta per tutto · e tutta · in ogni · parte ·, non era · necessario · li stru⁶mēti · de'sensi fare infra loro · uno · medesimo cōcorso a uno · solo loco ·, anzi · basta⁷va · che l'ochio operasse · l'ufitio · del sentimēto · sulla · sua superficie · e nō mandare per la uia ⁸delli nerui · ottici la similitudine · delle cose · vedute · al sēso ·, che l'anima · alla · sopra ⁹detta ragione le poteua comprēdere · in essa · superficie del'o-

and under the tutelage of the soul of the mother, who nourishes and vivifies it by the umbilical vein, with all its spiritual parts, and this happens because this umbilicus is joined to the placenta and the cotyledons, by which the child is attached to the mother. And these are the reason why a wish, a strong craving or a fright or any other mental suffering in the mother, has more influence on the child than on the mother; for there are many cases when the child loses its life from them, &c.

This discourse is not in its place here, but will be wanted for the one on the composition of animated bodies—and the rest of the definition of the soul I leave to the imaginations of friars, those fathers of the people who know all secrets by inspiration.

[57]I leave alone the sacred books; for they are supreme truth.

838.

HOW THE FIVE SENSES ARE THE MINISTERS OF THE SOUL.

The soul seems to reside in the judgment, and the judgment would seem to be seated in that part where all the senses meet; and this is called the Common Sense and is not all-pervading throughout the body, as many have thought. Rather is it entirely in one part. Because, if it were all-pervading and the same in every part, there would have been no need to make the instruments of the senses meet in one centre and in one single spot; on the contrary it would have sufficed that the eye should fulfil the function of its sensation on its surface only, and not transmit the image of the things seen, to the sense, by means of the optic nerves, so that the soul—for the reason given above—may perceive it in the surface of the eye. In the same way as to the sense of hearing, it would have sufficed if the voice had mere-

838. The peculiar use of the words *nervo*, *muscolo*, *corda*, *senso comune*, which are here literally ren-

ly sounded in the porous cavity of the indurated portion of the temporal bone which lies within the ear, without making any farther transit from this bone to the common sense , where the voice confers with and discourses to the common judgment. The sense of smell, again, is compelled by necessity to refer itself to that same judgment. Feeling passes through the perforated cords and is conveyed to this common sense. These cords diverge with infinite ramifications into the skin which encloses the members of the body and the viscera. The perforated cords convey volition and sensation to the subordinate limbs. These cords and the nerves direct the motions of the muscles and sinews, between which they are placed; these obey, and this obedience takes effect by reducing their thickness; for in swelling, their length is reduced, and the nerves shrink which are interwoven among the particles of the limbs; being extended to the tips of the fingers, they transmit to the sense the object which they touch.

The nerves with their muscles obey the tendons as soldiers obey the officers, and the tendons obey the Common [central] Sense as the officers obey the general. [27] Thus the joint of the bones obeys the nerve, and the nerve the muscle, and the muscle the tendon and the tendon the Common Sense. And the Common Sense is the seat of the soul[28], and memory is its ammunition, and the impressibility is its referendary since the sense waits on the soul and not the soul on the sense. And where the sense that ministers to the soul is not at the service of the soul, all the functions of that sense are also wanting in that man's life, as is seen in those born mute and blind.

HOW THE NERVES SOMETIMES ACT OF THEMSELVES WITHOUT ANY COMMANDS FROM THE OTHER FUNCTIONS OF THE SOUL.

This is most plainly seen; for you will see palsied and shivering persons move,

dered by nerve, muscle cord or tendon and Common Sense may be understood from lines 27 and 28.

freddolosi, ⁴e assiderati · le loro · tremāti · mēbra come · testa · e mani · sanza · liciēza · dell' anima ·, la quale ⁵anima cō tutte · sue · forze nō potrà · vietare a essi · menbri · che nō tremino; Questo medesimo ⁶accade nel malcaduco e ne' mēbra tagliati come code di lucierte; ⁷la idea · over imaginatiua · è · timone e briglia de' sensi ·, imperochè la cosa iñaginata ⁸move il sēso; ⁹preimaginare · è lo imaginare · le cose che saranno; ¹⁰post-imaginare è imaginare · le cose passate.

and their trembling limbs, as their head and hands , quake without leave from their soul and their soul with all its power cannot prevent their members from trembling. The same thing happens in falling sickness, or in parts that have been cut off, as in the tails of lizards. The idea or imagination is the helm and guiding-rein of the senses, because the thing conceived of moves the sense. Pre-imagining, is imagining the things that are to be. Post-imagining, is imagining the things that are past.

849. From this passage it is quite plain that Leonardo had not merely a general suspicion of the circulation of the blood but a very clear conception of it. Leonardo's studies on the muscles of the heart are to be found in the MS. W. An. III. but no information about them has hitherto been made public. The limits of my plan in this work exclude all purely anatomical writings, therefore

848.

Death in old men, when not from fever, is caused by the veins which go from the spleen to the valve of the liver, and which thicken so much in the walls that they become closed up and leave no passage for the blood that nourishes it.

[6]The incessant current of the blood through the veins makes these veins thicken and become callous, so that at last they close up and prevent the passage of the blood.

849.

The waters return with constant motion from the lowest depths of the sea to the utmost height of the mountains, not obeying the nature of heavier bodies; and in this they resemble the blood of animated beings which always moves from the sea of the heart and flows towards the top of the head; and here it may burst a vein, as may be seen when a vein bursts in the nose; all the blood rises from below to the level of the burst vein. When the water rushes out from the burst vein in the earth, it obeys the law of other bodies that are heavier than the air since it always seeks low places.

850.

That the blood which returns when the heart opens again is not the same as that which closes the valves of the heart.

851.

Make them give you the definition and remedies for the case . . . and you will see that men are selected to be doctors for diseases they do not know.

only a very brief excerpt from this note book can be given here. WILLIAM HARVEY (born 1578 and Professor of Anatomy at Cambridge from 1615) is always considered to have been the discoverer of the circulation of the blood. He studied medicine at Padua in 1598, and in 1628 brought out his memorable and important work: *De motu cordis et sanguinis*.

W. XIII 8]

852.

Medicina da grattature insegniomela l'araldo ² del rè di Frācia: oncie 4 ciera nova, òcie 4, ³ pece greca, òcie 2 inciēso e ogni cosa ⁴ stia separata, e fondi la ciera, e poi vi metti denistro l'inciēso, e poi la pece; fa ne pe⁶verada e metti sopr'al male.

A remedy for scratches taught me by the Herald to the King of France. 4 ounces of virgin wax, 4 ounces of colophony, 2 ounces of incense. Keep each thing separate; and melt the wax, and then put in the incense and then the colophony, make a mixture of it and put it on the sore place.

Astronomy.

Ever since the publication by Venturi in 1797 and Libri in 1840 of some few passages of Leonardo's astronomical notes, scientific astronomers have frequently expressed the opinion, that they must have been based on very important discoveries, and that the great painter also deserved a conspicuous place in the history of this science. In the passages here printed, a connected view is given of his astronomical studies as they lie scattered through the manuscripts, which have come down to us. Unlike his other purely scientific labours, Leonardo devotes here a good deal of attention to the opinions of the ancients, though he does not follow the practice universal in his day of relying on them as authorities; he only quotes them, as we shall see, in order to refute their arguments. His researches throughout have the stamp of independent thought. There is nothing in these writings to lead us to suppose that they were merely an epitome of the general learning common to the astronomers of the period. As early as in the XIVth century there were chairs of astronomy in the universities of Padua and Bologna, but so late as during the entire XVIth century Astronomy and Astrology were still closely allied.

It is impossible now to decide whether Leonardo, when living in Florence, became acquainted in his youth with the doctrines of Paolo Toscanelli the great astronomer and mathematician (died 1482), of whose influence and teaching but little is now known, beyond the fact that he advised and encouraged Columbus to carry out his project of sailing round the world. His name is nowhere mentioned by Leonardo, and from the dates of the manuscripts from which the texts on astronomy are taken, it seems highly probable that Leonardo devoted his attention to astronomical studies less in his youth than in his later years. It was evidently his purpose to treat of Astronomy in a connected form and in a separate work (see the beginning of Nos. 866 and 892; compare also No. 1167). It is quite in accordance with his general scientific thoroughness that he should propose to write a special treatise on Optics as an introduction to Astronomy (see Nos. 867 and 877). Some of the chapters belonging to this Section bear the title

"*Prospettiva*" (see Nos. 869 and 870), this being the term universally applied at the time to Optics as well as Perspective (see Vol. I, p. 10, note to No. 13, l. 10).

At the beginning of the XVIth century the Ptolemaic theory of the universe was still universally accepted as the true one, and Leonardo conceives of the earth as fixed, with the moon and sun revolving round it, as they are represented in the diagram to No. 897. He does not go into any theory of the motions of the planets; with regard to these and the fixed stars he only investigates the phenomena of their luminosity. The spherical form of the earth he takes for granted as an axiom from the first, and he anticipates Newton by pointing out the universality of Gravitation not merely in the earth, but even in the moon. Although his acute research into the nature of the moon's light and the spots on the moon did not bring to light many results of lasting importance beyond making it evident that they were a refutation of the errors of his contemporaries, they contain various explanations of facts which modern science need not modify in any essential point, and discoveries which history has hitherto assigned to a very much later date.

The ingenious theory by which he tries to explain the nature of what is known as earth shine, the reflection of the sun's rays by the earth towards the moon, saying that it is a peculiar refraction, originating in the innunerable curved surfaces of the waves of the sea may be regarded as absurd; but it must not be forgotten that he had no means of detecting the fundamental error on which he based it, namely: the assumption that the moon was at a relatively short distance from the earth. So long as the motion of the earth round the sun remained unknown, it was of course impossible to form any estimate of the moon's distance from the earth by a calculation of its parallax.

Before the discovery of the telescope accurate astronomical observations were only possible to a very limited extent. It would appear however from certain passages in the notes here printed for the first time, that Leonardo was in a position to study the spots in the moon more closely than he could have done with the unaided eye. So far as can be gathered from the mysterious language in which the description of his instrument is wrapped, he made use of magnifying glasses; these do not however seem to have been constructed like a telescope—telescopes were first made about 1600. As LIBRI pointed out (*Histoire des Sciences mathématiques III*, 101) Fracastoro of Verona (1473—1553) succeeded in magnifying the moon's face by an arrangement of lenses (compare No. 910, note), and this gives probability to Leonardo's invention at a not much earlier date.

I.

THE EARTH AS A PLANET.

Br. M. 176a]

857.

Linia d'equalità, ²linia dell'orizzōte,
³linia giacēte, ⁴linia equigiacēte;

⁵Queste linie sō quelle ⁶che con sua
stremi sō ⁷equidistanti al cē⁸tro del mondo.

The equator, the line of the horizon, the ^{The earth's place in the} ecliptic, the meridian; ^{universe}

These lines are those which in all their parts ^{(857. 858).} are equidistant from the centre of the globe.

F. 41b]

858.

Come la terra non è nel mezzo del cerchio del ²sole, nè nel mezzo del mōdo, ma è ben nel mez³zo de' sua elemēti, compagni e vnti cō lei, e chi ⁴stesse nella luna, quād'ella insieme col sole ⁵è sotto a noi, questa nostra terra coll'ele⁶mento dell'acqua parrebbe e farebbe ofitio tal ⁷qual fa la luna a noi.

The earth is not in the centre of the Sun's orbit nor at the centre of the universe, but in the centre of its companion elements, and united with them. And any one standing on the moon, when it and the sun are both beneath us, would see this our earth and the element of water upon it just as we see the moon, and the earth would light it as it lights us.

Br. M. 151a]

859.

La forza da carestia · o · douitia · è gie-
nerata; ²questa è figliola del moto · materi-
ale · e nepote ³del moto · spirituale · e madre
e origine del peso; ⁴e esso peso è finito
nell'elemēto dell'acqua e terra, ⁵e essa ·

Force arises from dearth or abundance; ^{The fundamental laws of the solar system} it is the child of physical motion, and the grand-child of spiritual motion, and the mother and origin of gravity. Gravity is limited to the elements of water and

859. Only part of this passage belongs, strictly speaking, to this section. The principle laid down in

the second paragraph is more directly connected with the notes given in the preceding section on Physiology.

forza · è infinita, perchè con essa infiniti modi si mouerebbero · se strumenti farsi potessero, ⁷doue essa forza gienereare si potesse.

⁸La forza col moto materiale e l' peso colla percussione ⁹son le quattro accidētali potētie, colle quali tutte l'opere ¹⁰de' mortali ànno loro essere e lor morte;

¹¹La forza · dal moto · spirituale · à origine; il quale moto, ¹²scorrēdo · per le mēbra degli animali · sensibili · ingrossa ¹³i muscoli di quelli ·, onde ingrossati · essi muscoli si uē ¹⁴gono a raccortare e trarsi dirieto i nervi che con essi ¹⁵sō cōgiunti ·, e di qui si causa la forza per le mēbra umane.

¹⁶La qualità e quātità delle forze · d'uno uomo potrà ¹⁷partorire · altra forza ·, la quale sarà proportio ¹⁸nevolmēte tanto maggiore quāto essa sarà di piv ¹⁹lūgo moto, l'una che l'altra.

Br. M. 175a]

Il peso · o · perchè non resta nel suo sito? ²non resta perchè non à resistētia; e dōde si moverà? Moverassi · inverso il ⁴centro; e perchè nō per altre linie? perchè ⁵il peso, che non à resistētia, discenderà ⁶in basso per la uia piv brieva, e l' più bas⁷so sito è il cietro del mondo; e perchè lo sa ⁸così tal peso trovarlo con tanta breuità? ⁹perchè non va come insensibile prima ¹⁰vagando per diverse linie.

F. 228]

Movasi la terra da che parte voglia, ²mai la superficie dell'acqua uscirà fori della ³sua spera, ma sempre sarà equidistante al ⁴centro del mondo;

⁵¶ Dato che la terra · si rimovessi dal centro ⁶del mondo, che farebbe l'acqua? ¶

⁷Resterebbe intorno a esso centro ⁸con equal grossezza, ma minore diametro, che quando ella auea la terra in corpo.

860.

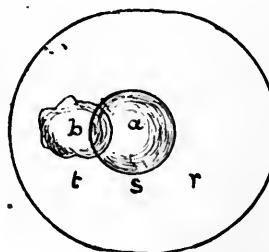

Why does not the weight *o* remain in its place? It does not remain because it has no resistance. Where will it move to? It will move towards the centre [of gravity]. And why by no other line? Because a weight which has no support falls by the shortest road to the lowest point which is the centre of the world. And why does the weight know how to find it by so short a line? Because it is not independant and does not move about in various directions.

861.

Let the earth turn on which side it may the surface of the waters will never move from its spherical form, but will always remain equidistant from the centre of the globe.

Granting that the earth might be removed from the centre of the globe, what would happen to the water?

It would remain in a sphere round that centre equally thick, but the sphere would have a smaller diameter than when it enclosed the earth.

864. 10. 11. *Antipodi orientali cogli occidentali.* The word *Antipodes* does not here bear its literal sense, but—as we may infer from the simultaneous reference to inhabitants of the North and South—

is used as meaning men living at a distance of 90 degrees from the zenith of the rational horizon of each observer.

F. 258]

ORDINE DEL PROVARE LA TERRA ESSERE
2 VNA STELLA.

In prima definisci l'occhio, poi mostra come il battere d'alcuna stella viene dall'occhio, e perchè il battere ⁵d'esse stelle è più nell'una che nell'altra, e come li ⁶razzi delle stelle nascono dall'occhio, e dì, che se 'l batte⁷re delle stelle fusse come pare nelle stelle, che tal bat⁸timeto mostra d'essere di tanta dilatatione, quāt'è ⁹il corpo di tale stella; essendo adūque maggiore della ter¹⁰ra che tal moto fatto in istante sarebbe troppo veloce ¹¹a raddoppiare la grādezza di tale stella; Di poi pro¹²va come la superficie dell'aria ne' cōfini del foco, e ¹³la superficie del foco nel suo termine è quel¹⁴la, nella qual penetrādo li razzi solari portano la ¹⁵similitudine di corpi celesti grāde nel lor leuca¹⁶re, e però è piccola, essendo esse nel mezzo del celo; ¹⁷sia la terra *a* | *n d m* sia ¹⁸la superficie dell'aria che ¹⁹confina colla spera del ²⁰foco; *h f g* sia il corso ²¹della luna o vuoi del sole; ²²dico che quādo il sole appari²³sce al'orizzōte *g*, che lì sono ueduti ²⁴li sua razzi passare per la superficie ²⁵dell'aria infra ḁgoli inequali cioè *o m*, il che non è in *d k*, e ancora ²⁶passa per maggiore grossezza d'aria; tutto *e m* è aria più spessa.

THE METHOD OF PROVING THAT THE EARTH
IS A STAR.

First describe the eye; then show how the twinkling of a star is really in the eye and why one star should twinkle more than another, and how the rays from the stars originate in the eye; and add, that if the twinkling of the stars were really in the stars—as it seems to be—that this twinkling appears to be an extension as great as the diameter of the body of the star; therefore, the star being larger than the earth, this motion effected in an instant would be a rapid doubling of the size of the star. Then prove that the surface of the air where it lies contiguous to fire, and the surface of the fire where it ends are those into which the solar rays penetrate, and transmit the images of the heavenly bodies, large when

they rise, and small, when they are on the meridian. Let *a* be the earth and *n d m* the surface of the air in contact with the sphere of fire; *h f g* is the orbit of the moon or, if you please, of the sun; then I say that when the sun appears on the horizon *g*, its rays are seen passing through the surface of the air at a slanting angle, that is *o m*; this is not the case at *d k*. And so it passes through a greater mass of air; all of *e m* is a denser atmosphere.

The principles of astronomical perspective (868—873).

20 and fol. Telescopes were not in use till a century later. Compare No. 910 and page 136.

diminished as in natural perspective, which diminishes them by reason of the convexity of the eye which necessarily intersects, at its surface, the pyramid of every image conveyed to the eye at a right angle on its spherical surface. But by the method I here teach in the margin[9] these pyramids are intersected at right angles close to the surface of the pupil. The convex pupil of the eye can take in the whole of our hemisphere, while this will show only a single star; but where many small stars transmit their images to the surface of the pupil those stars are extremely small; here only one star is seen but it will be large. And so the moon will be seen larger and its spots of a more defined form[20]. You must place close to the eye a glass filled with the water of which mention is made in number 4 of Book 113 "On natural substances"[23]; for this water makes objects which are enclosed in balls of crystalline glass appear free from the glass.

OF THE EYE.

Among the smaller objects presented to the pupil of the eye, that which is closest to it, will be least appreciable to the eye. And at the same time, the experiments here made with the power of sight, show that it is not reduced to speck if the &c.[32].

Read in the margin.

[34] Those objects are seen largest which come to the eye at the largest angles.

But the images of the objects conveyed to the pupil of the eye are distributed to the pupil exactly as they are distributed in the air: and the proof of this is in what follows; that when we look at the starry sky, without gazing more fixedly at one star than another, the sky appears all strewn with stars; and their proportions to the eye are the same as in the sky and likewise the spaces between them[61].

23. libro 113. This is perhaps the number of a book in some library catalogue. But it may refer, on the other hand, to one of the 120 Books mentioned in No. 796. l. 84.

32. Compare with this the passage in Vol. I, No. 52, written about twenty years earlier.

propositione; accade dūque che il più vicino
¹⁶all'ochio avrà doppiata la distantia, e per
la penulti¹⁷ma di questo esso è diminuito
la metà del suo tutto, ¹⁸e 'l corpo *e* per
lo medesimo moto è diminuito ^{1/5} ¹⁹d'esso
suo tutto; adūque per la detta penultima
²⁰è vero quel che in questa vltima s'è pro-
posto; ²¹e questo dico per li moti de' corpi
celesti ²²in 3500 miglia di distātia che piv
essē²³do in oriēte che sopra di noi, non
crescono o diminuiscono ²⁴con sensibile
dimostratione.

Among objects moved from the eye at equal distance, that undergoes least diminution which at first was most remote.

When various objects are removed at equal distances farther from their original position, that which was at first the farthest from the eye will diminish least. And the proportion of the diminution will be in proportion to the relative distance of the objects from the eye before they were removed.

That is to say in the object *t* and the object *e*, the proportion of their distances from the eye *a* is quintuple. I remove each from its place and set it farther from the eye by one of the 5 parts

into which the proposition is divided. Hence it happens that the nearest to the eye has doubled the distance and according to the last proposition but one of this, is diminished by the half of its whole size; and the body *e*, by the same motion, is diminished ^{1/5} of its whole size. Therefore, by that same last proposition but one, that which is said in this last proposition is true; and this I say of the motions of the celestial bodies which are more distant by 3500 miles when setting than when overhead; and yet do not increase or diminish in any sensible degree.

874. 10. Here the text breaks off; lines 11 and fol. are written in the margin.

875. In the original sketch, inside the circle in

the first diagram, is written *Sole* (sun), and to the right of it *luna* (moon). Thus either of these heavenly bodies may be supposed to fill that space. Within the lower circle is written *simulacro* (image). In the two next diagrams at the spot here marked *L* the word *Luna* is written, and in the last *sole* is written in the top circle at *a*.

della mia prospettiva), e tanto più occuperrebbe d'acqua quanto esso simulacro fusse più distate dal'occhio.

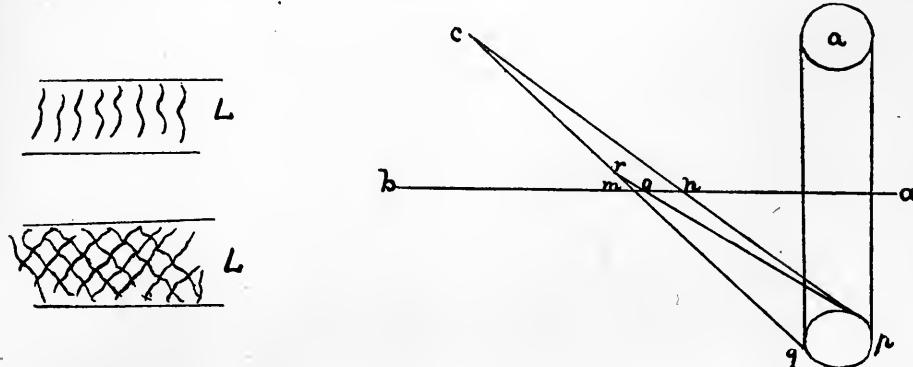

¹¹ Il simulacro del sole si dimostrerà più lucido nell'onde mi¹²nute che nelle onde grandi¹³; E questo accade perchè le similitudini over simulacri del sole sono più spesse nell'onde minute¹⁴ che nelle grandi, e li più spessi splendori rendono maggiore¹⁵ lume che li splendori più rari.

¹⁶ L'onde intersegate a uso di scorza di pigna rendono il si¹⁷mulacro del sole di grandissimo splendore,¹⁸ e questo accade perchè tanto son li simulacri quanto son li gio¹⁹ghi del'onde vedute dal sole, e

"Perspective") [9] and it will cover more of the water in proportion as the reflected image is remote from the eye[10].

The image of the sun will be more brightly shown in small waves than in large ones—and this is because the reflections or images of the sun are more numerous in the small waves than in large ones, and the more numerous reflections of its radiance give a larger light than the fewer.

Waves which intersect like the scales of a fir cone reflect the image of the sun with the greatest splendour; and this is the case because the images are as many as the ridges of the waves on which the sun

l'onbre che infra esse onde s'interpongono sōn piccole e di poca oscurità, e li splendori di tanti²¹ simulacri insieme s'infondono nelle similitudini che di lor²² viene all'occhio, in modo tale che esse obre sono insensibili;²³

²³ Quel simulacro del sole occuperà²⁴ più lochi nella superficie dell'acqua, che²⁵ sarà più distante dall'occhio che lo uede;
²⁶ a sia il sole, p q è il simulacro d'esso²⁷ sole, a b è la superficie dell'acqua dove il sol²⁸ si specchia, r sia l'occhio che uede esso si²⁹mulacra nella superficie dell'acqua occupare³⁰ lo spatio o m; c è l'occhio più remoto³¹ da essa superficie dell'acqua, e così dal simulacro, onde esso simulacro³² occupa maggiore spatio d'acqua,—quāto è lo spatio n o.

shines, and the shadows between these waves are small and not very dark; and the radiance of so many reflections together becomes united in the image which is transmitted to the eye, so that these shadows are imperceptible.

That reflection of the sun will cover most space on the surface of the water which is most remote from the eye which sees it.

Let a be the sun, p q the reflection of the sun; a b is the surface of the water, in which the sun is mirrored, and r the eye which sees this reflection on the surface of the water occupying the space o m. c is the eye at a greater distance from the surface of the water and also from the reflection; hence this reflection covers a larger space of water, by the distance between n and o.

9. *Nel quarto della mia prospettiva.* If this reference is to the diagrams accompanying the text—as is usual with Leonardo—and not to some particular work, the largest of the diagrams here given

must be meant. It is the lowest and actually the fifth, but he would have called it the fourth, for the text here given is preceded on the same page of the manuscript by a passage on whirlpools, with

Br. M. 28.41

J'possibile è ²che tanto quanto il sole allumina ⁴dello specchio sferico, ⁵tanto d'esso specchio abbia a risplendere, ⁷se già esso specchio ⁸non fusse odate o globulato;

¹⁰Vedi qui il sole allumina ¹²re la luna, ¹³specchio sferico, e tanto quanto es' so sole ne ¹⁷uede, tanto ne ¹⁸fa splendere;

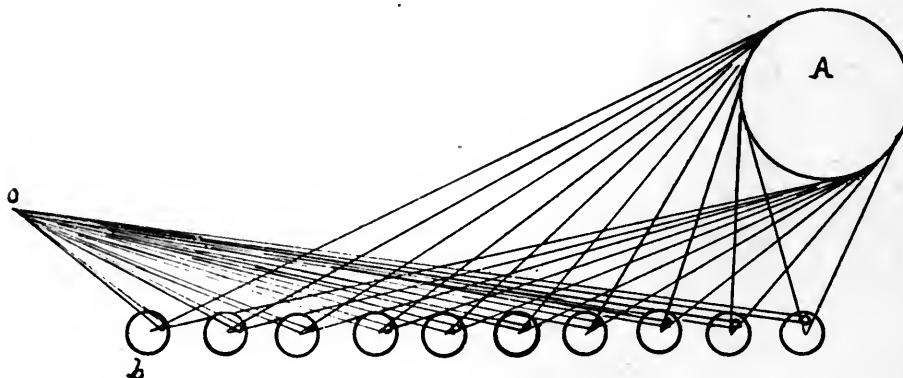

¹⁹Qui si concluderà che ciò che della luna ²⁰splende è acqua simile a quella degli nostri mari, e così inodata, ciò ²²clic di lei non splende sono isole e terra ferma.

876.

It is impossible that the side of a spherical mirror, illuminated by the sun, should reflect its radiance unless this mirror were undulating or filled with bubbles.

You see here the sun which lights up the moon, a spherical mirror, and all of its surface, which faces the sun is rendered radiant.

Whence it may be concluded that what shines in the moon is water like that of our seas, and in waves as that is; and that portion which does not shine consists of islands and terra firma.

²⁴Questa dimostrazione di tanti corpi sferici interposti infra l'occhio ²⁵e 'l sole è fatta per mostrare che, siccome in ciascuno d'essi ²⁶corpi si uede il simulacro del sole, così si può vedere esso simulacro in ciascuna globosità dell'onde del mare; come in molti di questi sferici si ²⁸uedono molti soli, così in molte onde si uedono molti lustri, li quali in molta ²⁹distanzia, ciascū lustro per se, si fanno gradi all' occhio e, così faciendo ciascu³⁰na onda, si uengono a con-

This diagram, of several spherical bodies interposed between the eye and the sun, is given to show that, just as the reflection of the sun is seen in each of these bodies, in the same way that image may be seen in each curve of the waves of the sea; and as in these many spheres many reflections of the sun are seen, so in many waves there are many images, each of which at a great distance is much magnified to the eye. And, as this happens with each wave, the spaces

879.

LAUDE DEL SOLE.

^{The question of the true size of the sun (879-884).} Se guarderai le stelle sanza razzi (come si fa a vederle per un piccolo foro fatto colla strema pūta da⁴la sottile aguglia, e questo posto quasi a toccare l'occhio), stu uedrai esse stelle essere tanto minime che nul⁶la cosa pare essere minore, e ueramente la lūga di⁷tātia le fa ragionevolmente diminuire, ancorachè ⁸molte vi sono che son moltissime volte maggiori che la ⁹stella cioè la terra coll'acqua.; ora pensa quel che par¹⁰rebbe essa nostra stella in tata distantia, e conside¹¹ra poi, quāte stelle si metterebbero e per longitudine e la¹²titudine infra esse stelle, le quali sono semi-na¹³te per esso spatio tenebroso; mai nō posso fare ¹⁴ch'io non biasimi molti di quelli antichi, li quali disse¹⁵ro che l' sole non avea altra grādezza che quella che ¹⁶mostra, ifra quali fu Epicuro, e credo che caua¹⁷si tale ragione da vn lume posto in questa nostra a¹⁸ria, equidistāte al cētro; chi lo uede, non lo uede mai di¹⁹minuito di grādezza in nessuna distātia; e le ragi-

IN PRAISE OF THE SUN.

If you look at the stars, cutting off the rays (as may be done by looking through a very small hole made with the extreme point of a very fine needle, placed so as almost to touch the eye), you will see those stars so minute that it would seem as though nothing could be smaller; it is in fact their great distance which is the reason of their diminution, for many of them are very many times larger than the star which is the earth with water. Now reflect what this our star must look like at such a distance, and then consider how many stars might be added—both in longitude and latitude—between those stars which are scattered over the darkened sky. But I cannot forbear to condemn many of the ancients, who said that the sun was no larger than it appears; among these was Epicurus, and I believe that he founded his reason on the effects of a light placed in our atmosphere equidistant from the centre of the earth. Any one looking at it never sees it diminished in size at whatever distance; and the rea-

sons of its size and power I shall reserve for Book 4. But I wonder greatly that Socrates[2] should have depreciated that solar body, saying that it was of the nature of incandescent stone, and the one who opposed him as to that error was not far wrong. But I only wish I had words to serve me to blame those who are fain to extol the worship of men more than that of the sun; for in the whole universe there is nowhere to be seen a body of greater magnitude and power than the sun. Its light gives light to all the celestial bodies which are distributed throughout the universe; and from it descends all vital force, for the heat that is in living beings comes from the soul [vital spark]; and there is no other centre of heat and light in the universe as will be shown in Book 4; and certainly those who have chosen to worship men as gods—as Jove, Saturn, Mars and the like—have fallen into the gravest error, seeing that even if a man were as large as our earth, he would look no bigger than a little star which appears but as a speck in the universe; and seeing again that these men are mortal, and putrid and corrupt in their sepulchres.

Marcellus[23] and many others praise the sun.

880. 2. *Socrates*; I have little light to throw on this reference. Plato's Socrates himself declares on more than one occasion that in his youth he had turned his mind to the study of celestial phenomena (*Μετέωρα*) but not in his later years (see G. C. LEWIS, *The Astronomy of the ancients*, page 109; MÄDLER, *Geschichte der Himmelskunde*, page 41). Here and there in Plato's writings we find incidental notes on the sun and other heavenly bodies. Leonardo may very well have known of these, since the Latin version by Ficinus was printed as early as 1491; indeed an undated edition exists which may very likely have appeared between 1480–90.

There is but one passage in Plato, *Epinomis* (p. 983) where he speaks of the physical properties of the sun and says that it is larger than the earth.

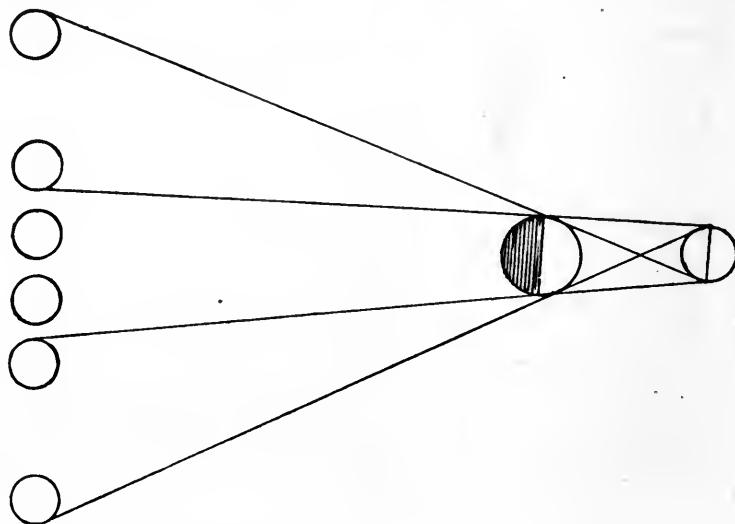

Aristotle who goes very fully into the subject says the same. A complete edition of Aristotle's works was first printed in Venice 1495–98, but a Latin version of the Books *De Coelo et Mundo* and *De Physica* had been printed in Venice as early as in 1483 (H. MÜLLER-STRÜBING).

23. I have no means of identifying *Marcello* who is named in the margin. It may be Nonius Marcellus, an obscure Roman Grammarian of uncertain date (between the IInd and Vth centuries A. C.) the author of the treatise *De compendiosa doctrina per litteras ad filium* in which he treats *de rebus omnibus et quibusdam aliis*. This was much read in the middle ages. The *editio princeps* is dated 1470 (H. MÜLLER-STRÜBING).

881. In the original the writing is across the diagram.

tale òbra; essendo adunque il cōco⁴rso dell'òbre paralello dall'suo nascimēto al suo fine, ⁵li parue da giudicare che 'l sole an-⁶cora lui fusse frôte di tal paralello, e per cōseguëza non essere piv gros⁸so di tal colonna, e nō s'avvide che tal ⁹diminuitione

shadows were cast; and the breadth of the shadows being parallel from beginning to end, he thought he might infer that the sun also was directly opposite to this parallel and that consequently its breadth was not greater than that of the column; not perceiving that the diminution in the shadow was

d'òbra era insēibile ¹⁰per la lunga distan-
tia del sole; ¹¹se 'l sole fusse minore della
terra, le stelle ¹²di grā parte del nostro
emisperio sarebbero sâ¹³za lume; cōtro a
Epicuro che dice, tâto è ¹⁴grâde il sole,
quâto e' pare.

insensibly slight by reason of the remoteness of the sun. If the sun were smaller than the earth, the stars on a great portion of our hemisphere would have no light, which is evidence against Epicurus who says the sun is only as large as it appears.

F. 88]

882.

Dice Epicuro il sole essere tâto quâto esso si dimostra; a²dunque e' pare essere vn piê, e cosi l'abbiamo a tenere; ³segui-
rebbe che la luna quâd'ella fa oscurare il
sole, il so⁸le non l'avâzerebbe di grâdezza
come e'fa, onde, sendo ⁵la luna minor del
sole, essa luna sarebbe meno d'un piede,
⁶e per conseguëza quando il nostro môdo
fa oscurare la lu⁷na, sarebbe minore a un
dito ⁸del piedi, conciò sia se 'l so⁸le è un
piede, e la nostra terra fa onbra piramidale
in⁹verso la luna, egli è necessario che sia
maggiore il lumi¹⁰noso, causa della pira-
mide òbrosa, che l'opaco, causa d'essa ¹¹pi-
ramide.

Epicurus says the sun is the size it looks. Hence as it looks about a foot across we must consider that to be its size; it would follow that when the moon eclipses the sun, the sun ought not to appear the larger, as it does. Then, the moon being smaller than the sun, the moon must be less than a foot, and consequently when our world eclipses the moon, it must be less than a foot by a finger's breadth; inasmuch as if the sun is a foot across, and our earth casts a conical shadow on the moon, it is inevitable that the luminous cause of the cone of shadow must be larger than the opaque body which casts the cone of shadow.

882. 2. labia no attenere. 3. seguirebbe chella. 4. nollauâzerebbe . . grâdeza chome. 5. medun piedi. 6. chonsequëza . . oscurar. 7. concosia. 8. piedi ella. 9. luna "la" egli . . magore. 10. caua della.

F. 108]

Misura quāti soli si metterebbero ² nel corso suo di 24 ore.

³ Fa vn circulo e voltalo a mezzodi, come sō ⁴li orilogi da sole, e metti vna bacchetta in ⁵mezzo, in modo che la sua lūgezza si di⁶rizzi al cētro di tal cerchio, e nota l'on⁷bra che fa il sole d'essa bacchetta sopra la ⁸circūferentia di tale cerchio, che sarà ⁹l'onbra larga, diciamo tutto *a n*; ora ¹⁰misura quante volte tale ūbra entra in ¹¹tale circūferētia di cerchio, e tāte vol¹²te fia il numero che 'l corpo solare entrerà nel ¹³corso suo in 24 ore; e qui si potrà ¹⁴vedere, se Epicuro disse, che 'l sole era ¹⁵tanto *a* grande quāto esso parea | che, pa-
¹⁶rendo il diametro del sole vna misura ¹⁷pedale, e che esso sole entrasse mille ¹⁸volte nel suo corso di 24 ore, egli avre¹⁹bbe corso mille piedi, cioè 300 braccia che ²⁰è vn sesto di miglio; ora ecco che ²¹cor²¹so del sole infra dì e notte sarebbe ²²la sesta parte d'ū miglio, ²³e questa venerabile lumaca del sole av²⁴rebbe caminato 25 braccia per ora.

883.

To measure how many times the diameter of the sun will go into its course in 24 hours.

Make a circle and place it to face the south, after the manner of a sundial, and place a rod in the middle in such a way as that its length points to the centre of this circle, and mark the shadow cast in the sunshine by this rod on the circumference of the circle, and this shadow will be—let us say—as broad as from *a* to *n*. Now measure how many times this shadow will go into this circumference of a circle, and that will give you the number of times that the solar body will go into its orbit in 24 hours. Thus you may see whether Epicurus was [right in] saying that the sun was only as large as it looked; for, as the apparent diameter of the sun is about a foot, and as that sun would go a thousand times into the length of its course in 24 hours, it would have gone a thousand feet, that is 300 braccia, which is the sixth of a mile. Whence it would follow that the course of the sun during the day would be the sixth part of a mile and that this venerable snail, the sun will have travelled 25 braccia an hour.

884. Poseidonius of Apamea, commonly called the Rhodian, because he taught in Rhodes, was a Stoic philosopher, a contemporary and friend of Cicero's, and the author of numerous works on natural science, among them: Φυσικὸς λόγος, περὶ κόσμου, περὶ μετεώρων.

Strabo quotes no doubt from one of his works, when he says that Poseidonius explained how it was that the sun looked larger when it was rising or setting than during the rest of its course (III, p. 135).

Kleomedes, a later Greek Naturalist also mentions this observation of Poseidonius' without naming the title of his work; however, as Kleomedes' Cyclia Theorica was not printed till 1535, Leonardo must have derived his quotation from Strabo. He probably wrote this note in 1508, and as the original Greek was first printed in Venice in 1516, we must suppose him to quote here from the translation by Guarinus Veronensis, which was printed as early as 1471, also at Venice (H. MÜLLER-STRÜBING).

per solo splendore del corpo solare, nel qual nō si può fermare l'occhio vmano, e oltre a di questo manifestissima⁸mēte lo dimostrano li sua razzi refle⁹ssi dalli specchi concavi, li quali, quā¹⁰do la lor percussione sarà di tāto sp¹¹lendore, che l'occhio non lo possa soppo¹²rtare, allora essa percussione ¹³avrà splendore simile al sole nel ¹⁴suo proprio sito; e che sia vero, pro¹⁵vo che se tale specchio à la sua ¹⁶cōcavità tal qual si richiede alla ¹⁷generatione di tale razzo, allora ¹⁸nessuna cosa creata reggerà ¹⁹alla caldezza di tale percussione ²⁰di razzo reflesso d'alcuno specchio; ²¹e se tu dirai che lo specchio anco²²ra lui è freddo e gitta i razzi caldi, io ²³ti rispondo, che 'l razzo viē dal sole ed è ²⁴il razzo ²⁵dello specchio conca²⁶vo, passa²⁸to ²⁹a traverso della ³¹finestra.

action] is abundantly proved by the radiance of the solar body on which the human eye cannot dwell and besides this no less manifestly by the rays reflected from a concave mirror, which—when they strike the eye with such splendour that the eye cannot bear them—have a brilliancy equal to the sun in its own place. And that this is true I prove by the fact that if the mirror has its concavity formed exactly as is requisite for the collecting and reflecting of these [rays], no created being could endure the heat that strikes from the reflected rays of such a mirror. And if you argue that the mirror itself is cold and yet send forth hot rays, I should reply that those rays come really from the sun and that it is the ray of the concave mirror after having passed through the window.

9'l'ochio in tanta larghezza nell'āgolo dell'ochio quanto nell'ultima somma ¹⁰dell'ōde all'orizzōte, e per questo nō māca che tale splendore solare ri¹¹flesso dall'ōde marittime nō sia di figura piramidale e per conseguē¹²za in ogni grado di distātia non acquisti gradi di larghezza ācorachè ¹³in-quāto al nostro vedere si dimostri parallelo.

¹⁴ I^a ¶ Nessū lievissimo ¹⁵è opaco; ¶

¹⁶ 2^a ¶ Nessū più lieve sta ¹⁷sotto al mē lieve; ¶

¹⁸ 3^a ¶ Se la luna à sito ¹⁹in mezzo ai sua elemē²⁰mēti o no;

²¹ e s'ella non à sito ²²particulare co-²³me la terra nelli sua ²⁴elemēti, perchè nō ca²⁵de al ciento de' nostri ²⁶elemēti?

²⁷ E se la luna non è ²⁸in mezzo alli sua elemē²⁹ti e nō discēde, ³⁰adūque ella è più ³¹lieve che altro elemē³²to;

³³ E se la luna è più liev³⁴ve che altro elemēto, per³⁵chè è solida e nō traspare.

³⁶ ¶ Delle cose di varie grādezze che, poste in varie distātie, ³⁷si mostrano equali, tal proportione fia da distātia a distā³⁸tia, qual fia da magnitudine a magnitudine. ¶

width at the angle nearest to the eye, as at the highest line of the waves on the horizon; but notwithstanding this the solar rays reflected from the waves of the sea assume the pyramidal form and consequently, at each degree of distance increase proportionally in size, although to our sight, they appear as parallel.

1st. Nothing that has very little weight is opaque.

2^{dly}. Nothing that is excessively weight can remain beneath that which is heavier.

3^{dly}. As to whether the moon is situated in the centre of its elements or not.

And, if it has no proper place of its own, like the earth, in the midst of its elements, why does it not fall to the centre of our elements [26]?

And, if the moon is not in the centre of its own elements and yet does not fall, it must then be lighter than any other element.

And, if the moon is lighter than the other elements why is it opaque and not transparent?

When objects of various sizes, being placed at various distances, look of equal size, there must be the same relative proportion in the distances as in the magnitudes of the objects.

F. 93a]

893.

DELLA LUNA E SE ELLA È PULITA E SPERICA.

²Il simulacro del sole in lei è potēte-
men³te luminoso ed è in piccola parte della su⁴a superficie; E la prova vedrai a tor⁵re vna palla d'oro brunito, posta nel⁶e tene-
bre, con vn lume da lei remoto, ⁷il quale ancorachè esso allumini circa ⁸la metà d'essa palla, l'ochio non lo uede, se nō ⁹in piccola parte della sua superficie, e tut¹⁰to il resto di tal superficie specchia le tenebre ¹¹che la circūdano, e per questo in lei solo appā-¹²risce il simulacro dél lume e tutto il re¹³sto rimane invisibile, stando l'ochio remo¹⁴to da tal palla; Questo medesimo interue-¹⁵rrebbe nella superficie della luna, essendo po¹⁶lita, lustra e densa, come son corpi che spe¹⁷chiano;

OF THE MOON AND WHETHER IT IS POLISHED AND SPHERICAL.

The image of the sun in the moon is powerfully luminous, and is only on a small portion of its surface. And the proof may be seen by taking a ball of burnished gold and placing it in the dark with a light at some distance from it; and then, although it will illuminate about half of the ball, the eye will perceive its reflection only in a small part of its surface, and all the rest of the surface reflects the darkness which surrounds it; so that it is only in that spot that the image of the light is seen, and all the rest remains invisible, the eye being at a distance from the ball. The same thing would happen on the surface of the moon if it were polished, lustrous and opaque, like all bodies with a reflecting surface.

895. 13. At A, in the diagram, Leonardo wrote "sole" (the sun), and at B "luna o noi terra" (the moon or our earth). Compare also the text of No. 876.

Br. M. 948]

896.

DEELA LUNA.

²La luna non à lume da se, se nō
quāto ne vede il sole tanto l'allumina,
³della qual luminosità tanto ne vediamo
quāto è quella che vede noi; ⁴E la sua
notte riceve tanto di splēdore, quāto è
quello che li prestano le nostre acque nel
refletterli il simulacro del sole, che in
⁶tutte quelle che vedono il sole e la luna,
si specchia; ⁷La pelle over superficie dell'
acqua, di che si copone il mare della luna
e il ⁸mare della nostra terra, è sempre
rugoso, ⁹o poco o assai, o più, o meno, e
tale rugosità è causa di dilatare l'innu-
merabili simulaci del sole, che nei colli e
cōcavità e la¹¹ti e frōti delle innumerabili
rughe si specchiano, cioè in tāti vari siti di
ciascuna ¹²ruga quāto son vari li siti che
anno li ochi che le vedono, jl che ac¹³ca-
dere nō potrebbe, se la spera dell' acqua,
che i grā parte di se veste la ¹⁴luna fusse
d'uniforme sphericità, perchè allora il simu-
lacro del ¹⁵sole sarebbe uno a ciascuno
occhio, e la sua reflexione sarebbe particu-
¹⁶lare e sempre sarebbe splēdore sperico,
come manifestamē¹⁷te ci assegnano le palle
dorate, poste nelle sommità delli alti edi-
fitti; Ma ¹⁸se tali palle dorate fussino rugose
o globulēti come son le mo¹⁹re, frutti neri
conposti di minute globosità rotonde, allora
ciascuna delle parti d'essa ²⁰globosità, ve-
dute dal sole e dall'occhio, mostrerà a esso
occhio il lustro ²¹gieneratoro dal simulacro
d'esso sole, e così in ū medesimo corpo si
ue²²drebbbero molti minimi soli, li quali
spesse sō le volte che per lunga distātia
²³si uniscono e paiono cōtinuati; E 'l lustro
della luna nuova è più lucido e più ²⁴potēte
che quādo è in plenilunio, e questo si ca-
²⁵vsa perchè l'angolo della incidētia è molto
più ottuso nella luna nuo²⁶va che nella
vecchia, doue tali angoli sono acutissimi;
e l'onde della ²⁷luna specchiano il sole così
nelle lor ualli come nelli colli, e li lati
²⁸restano oscuri; ma ne' lati della luna li
fondi dell'onde non ²⁹vedono il sole, ma

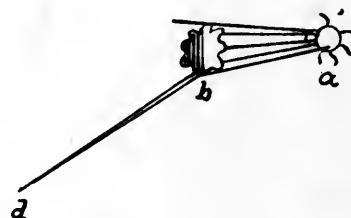

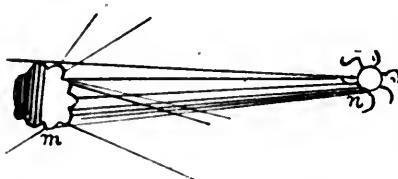

OF THE MOON.

The moon has no light in itself; but so much of it as faces the sun is illuminated, and of that illumined portion we see so much as faces the earth. And the moon's night receives just as much light as is lent it by our waters as they reflect the image of the sun, which is mirrored in all those waters which are on the side towards the sun. The outside or surface of the waters forming the seas of the moon and of the seas of our globe is always ruffled little or much, or more or less—and this roughness causes an extension of the numberless images of the sun which are repeated in the ridges and hollows, the sides and fronts of the innumerable waves; that is to say in as many different spots on each wave as our eyes find different positions to view them from. This could not happen, if the aqueous sphere which covers a great part of the moon were uniformly spherical, for then the images of the sun would be one to each spectator, and its reflections would be separate and independent and its radiance would always appear circular; as is plainly to be seen in the gilt balls placed on the tops of high buildings. But if those gilt balls were rugged or composed of several little balls, like mulberries, which are a black fruit composed of minute round globules, then each portion of these little balls, when seen in the sun, would display to the eye the lustre resulting from the reflection of the sun, and thus, in one and the same body many tiny suns would be seen; and these often combine at a long distance and appear as one. The lustre of the new moon is brighter and stronger, than when the moon is full; and the reason of this is that the angle of incidence is more obtuse in the new than in the full moon, in which the angles [of incidence and reflection] are highly acute. The waves of the moon therefore mirror the sun in the hollows of the waves as well as on the ridges, and the sides remain in shadow. But at the sides

solo uedono le cime d'esse òde, e per questo li simu³⁰lacri son più rari e più misti coll'onbre delle valli, e tal misticione ³¹delle spetie òbrose e luminose, così insieme infuse, vengono all'o³²chio cō poco splēdore, e nelli stremi sarā piv oscure per essere ³³la curuità de' lati di tale òde insuffitiē a riflettere all'ochio li ri³⁴cievuti razzi; La luna nova per natura riflette li ³⁵razzi solari più inverso l'ochio per tali

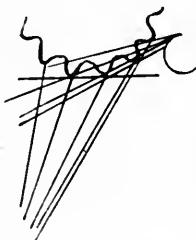

of the moon the hollows of the waves do not catch the sunlight, but only their crests; and thus the images are fewer and more mixed up with the shadows in the hollows; and this intermingling of the shaded and illuminated spots comes to the eye with a mitigated splendour, so that the edges will be darker, because the curves of the sides of the waves are insufficient to reflect to the eye the rays that fall upon them. Now the new moon naturally reflects the solar rays more directly towards the eye from the

òde streme, ³⁶che per nessuno altro loco, come mostra la figura della luna che ³⁷percuotēdo con razzi *a* nell'onda *b* riflette in *b d*, dou' è situa³⁸to l'ochio *d*; E questo accadere nō può nel plenilunio dove ³⁹il razzo solare, stando all'occidēte, percuote l'onde streme della ⁴⁰luna all'oriēte dal *n* in *m*, e non riflette inverso l'oc⁴¹chio occidētale, ma risalta all'oriēte, poco piegādo la rettitudine d'esso razzo solare, e così l'angolo della incidētia è grossissimo.

⁴²La luna è corpo opa⁴⁴co e solido, e se per lo a⁴⁵versario ella fusse traspā⁴⁶rente, ella nō riceverebbe ⁴⁷il lume del sole.

⁴⁸Il rossume over tuorlo dell'o⁴⁹vo sta ⁵⁰in mezzo al suo al⁵¹bume senza discēdere ⁵²d'alcuna parte, ed è pi⁵³v lieve o più grave o equale d'esso ⁵⁴albume; e s'elli è più lis⁵⁵eve egli doverebbe surgie⁵⁶re sopra tutto l'albume e ⁵⁷fermarsi in cōtatto del-

crests of the waves than from any other part, as is shown by the form of the moon, whose rays *a* strike the waves *b* and are reflected in the line *b d*, the eye being situated at *d*. This cannot happen at the full moon, when the solar rays, being in the west, fall on the extreme waters of the moon to the East from *n* to *m*, and are not reflected to the eye in the West, but are thrown back eastwards, with but slight deflection from the straight course of the solar ray; and thus the angle of incidence is very wide indeed.

The moon is an opaque and solid body and if, on the contrary, it were transparent, it would not receive the light of the sun.

The yellow or yolk of an egg remains in the middle of the albumen, without moving on either side; now it is either lighter or heavier than this albumen, or equal to it; if it is lighter, it ought to rise above all the albumen and stop in contact with the shell

in such a way as that so much of its surface as is illuminated by the sun, should reflect the sun unless the moon had a surface adapted to reflect it—in waves and ridges, like the surface of the sea when its surface is moved by the wind.

The waves in water multiply the image of the object reflected in it.

These waves reflect light, each by its own line, as the surface of the fir cone does [14].

These are 2 figures one different from the other; one with undulating water and the other with smooth water.

It is impossible that at any distance the image of the sun cast on the surface of a spherical body should occupy the half of the sphere.

Here you must prove that the earth produces all the same effects with regard to the moon, as the moon with regard to the earth.

The moon, with its reflected light, does not shine like the sun, because the light of the moon is not a continuous reflection of that of the sun on its whole surface, but only on the crests and hollows of the waves of its waters; and thus the sun being confusedly reflected, from the admixture of the shadows that lie between the lustrous waves, its light is not pure and clear as the sun is.

[38]The earth between the moon on the fifteenth day and the sun. [39]Here the sun is in the East and the moon on the fifteenth day in the West. [40]The moon on the fifteenth [day] between the earth and the sun. [41]Here it is the moon which has the sun to the West and the earth to the East.

898.

WHAT SORT OF THING THE MOON IS.

The moon is not of itself luminous, but is highly fitted to assimilate the character of light after the manner of a mirror, or of water, or of any other reflecting body; and it grows larger in the East and in the West, like the sun and the other planets. And the reason is that every luminous body looks

VOL. II. X.

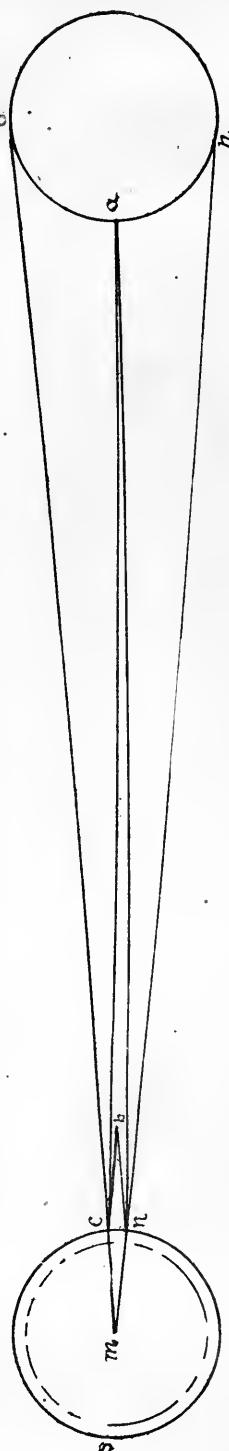

larger in proportion as it is remote. It is easy to understand that every planet and star is farther from us when in the West than when it is overhead, by about 3500 miles, as is proved on the margin[7], and if you see the sun or moon mirrored in the water near to you, it looks to you of the same size in the water as in the sky. But if you recede to the distance of a mile, it will look 100 times larger; and if you see the sun reflected in the sea

reflected in the sea at sunset, its image would look to you more than 10 miles long; because that reflected image extends over more than 10 miles of sea. And if you could stand where the moon is, the sun would look to you, as if it were reflected from all the sea that it illuminates by day; and the land amid the water would appear just like the dark spots that are on the moon, which, when looked at from our earth, appears to men the same as our earth would appear to any men who might dwell in the moon.

OF THE NATURE OF THE MOON.

When the moon is entirely lighted up to our sight, we see its full daylight; and at that time, owing to the reflection of the solar rays which fall on it and are thrown off towards us, its ocean casts off less moisture towards us; and the less light it gives the more injurious it is.

OF THE MOON.

I say that as the moon has no light in itself and yet is luminous, it is inevitable but that its light is caused by some other body.

Leic. 368]

DELLA LUNA.

Tutte le cōtradizioni dell' auersario a dir che nella lunā non è acqua.

Leic. 18]

Risposta a maestro Andrea da Imola, che disse come li razzi solari riflessi dal corpo dello specchio convesso si confondono e si consumano in brieue spatio, e che per questo si negaua al tutto la parte luminosa della luna non essere di natūra di specchio, e per consequenza non essere nato tale lume dalla innumerabile multitudine dell'onde di quel mare, il quale io proponeuo essere quella parte della luna che s'allumina per li razzi solari;

sop sia il corpo del sole, *cns* sia la luna, *b* sia l'occhio, che in sù la basa *c n* del cateto *c n m* vede specchia^{re} il corpo del sole infra li equali angoli *c n*, e'l simile fa remouendosi l'occhio da *b* in *a*.

Leic. 2a]

DELLA LUNA.

[¶] Nessun denso è più lieue che l'aria.

³ Avendo noi provato come la parte della luna che risplende è acqua, che *Explanation of the lumen cinereum in the moon.* specchia il corpo del sole, ⁴la quale ci riflette lo splendore da lui ricevuto; E come, se tale acqua fusse sanza òde, ch'ella ⁵piccola si dimostrerebbe, ma di splendore quasi simile al sole; Al presente bisogna provare, se essa ⁶luna è corpo grave o lieve, inperochè se fusse grave,—confessando che dalla terra in sù in ogni grado d'altezza s'acquista gradi di leuità, cōciosiachè l'acqua è più lieue che la terra, e l'aria che l'acqua, e'l foco che l'aria, e così ⁸seguitando successiuamēte,—e'parrebbe che, se là luna auesse densità com'ella à, ch'ella auesse gravità, e avēdo ⁹gravità che lo

901. The large diagram on the margin of page 161 belongs to this chapter.

900.

OF THE MOON.

All my opponent's arguments to say that there is no water in the moon.

901.

Answer to Maestro Andrea da Imola, who said that the solar rays reflected from a convex mirror are mingled and lost at a short distance; whereby it is altogether denied that the luminous side of the moon is of the nature of a mirror, and that consequently the light is not produced by the innumerable multitude of the waves of that sea, which I declared to be the portion of the moon which is illuminated by the solar rays.

Let *op* be the body of the sun, *cns* the moon, and *b* the eye which, above the base *c n* of the cathetus *c n m*, sees the body of the sun reflected at equal angles *c n*; and the same again on moving the eye from *b* to *a*.

902.

OF THE MOON.

No solid body is less heavy than the atmosphere.

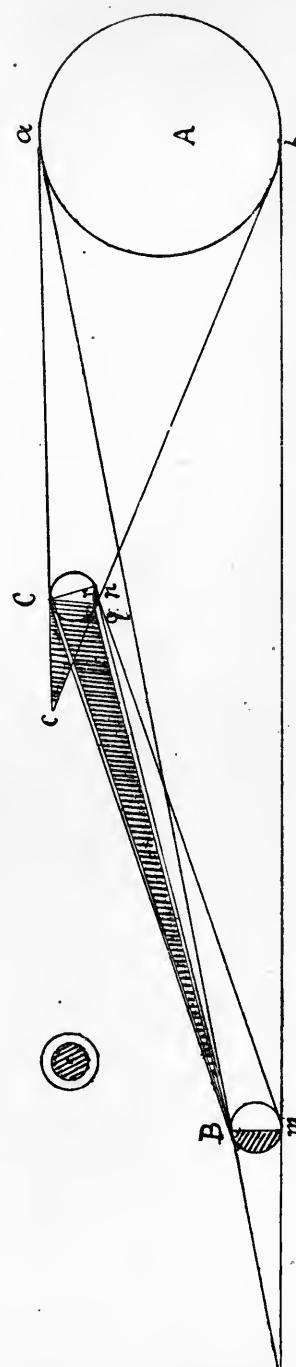

Having proved that the part of the moon that shines consists of water, which mirrors the body of the sun and reflects the radiance it receives from it; and that, if these waters were devoid of waves, it would appear small, but of a radiance almost like the sun; —[5] It must now be shown whether the moon is a heavy or a light body: for, if it were a heavy body—admitting that at every grade of distance from the earth greater levity must prevail, so that water is lighter than the earth, and air than water, and fire than air and so on successively—it would seem that if the moon had density as it really has, it would have weight, and having weight, that it could not be sustained in the space

902. 1. On the margin are the words *tola romantina*, *tola = ferro stagnato* (tinned iron); *romantina* is some special kind of sheet-iron no longer known by that name.

spatio, ove essa si troua, non la potesse sostenere, e per conseguēza avesse a discendere ¹⁰inverso il centro dell' universo, e congiugnersi colla terra, e se nō lei, al māco le sue acque aues¹¹sino a cadere e spogliarla di se e cadere inverso il cētro e lasciar di se la luna spogliata e sanza lus¹²stro; òde, nō seguitando quel che di lei la ragione ci promette, egli è manifesto segno che tal luna è vestita de'sua ¹³elemēti, cioè acqua, aria e foco, e così in se, per se si sostenga in quello spatio come fa la nostra ter¹⁴ra coi sua elemēti in quest' altro spatio, e chè tale ofitio faccino le cose gravi ne' sua elemēti, qual fanno l'altre cose gravi nelli elemēti nostri.

¹⁶ Quando l'ochio in oriēte vede la luna in occidente vicina al tramōtato sole, esso la vede ¹⁷colla sua parte onbrosa circundata da parte lumīnosa, del quale lume la parte laterale ¹⁸e superiore deriuia dal sole, e la parte inferiore deriva dallo oceano occidentale, il qual ¹⁹ancora lui riceue li razzi solari e li riflette nelli inferiori mari della luna, e ancora per ²⁰tutta la parte onbrosa della luna dà tanto di splendore, qual'è quel che dà la luna alla terra nella mez²¹zanotte, e perciò nō resta integralmēte scura, e di qui à alcuno creduto, che la ²²luna abbia in parte lume da se oltre a quel che gli è dato dal sole, il quale lume diriuia dalla ati²³detta causa dell'i nostri mari alluminati dal sole.

²⁴ Ancora si potrebbe dire che'l cerchio dello splendore

where it is, and consequently that it would fall towards the centre of the universe and become united to the earth; or if not the moon itself, at least its waters would fall away and be lost from it, and descend towards the centre, leaving the moon without any and so devoid of lustre. But as this does not happen, as might in reason be expected, it is a manifest sign that the moon is surrounded by its own elements: that is to say water, air and fire; and thus is, of itself and by itself, suspended in that part of space, as our earth with its element is in this part of space; and that heavy bodies act in the midst of its elements just as other heavy bodies do in ours[15].

When the eye is in the East and sees the moon in the West near to the setting sun, it sees it with its shaded portion surrounded by luminous portions; and the lateral and upper portion of this light is derived from the sun, and the lower portion from the ocean in the West, which receives the solar rays and reflects them on the lower waters of the moon, and indeed affords the part of the moon that is in shadow as much radiance as the moon gives the earth at midnight. Therefore it is not totally dark, and hence some have believed that the moon must in parts have a light of its own besides that which is given it by the sun; and this light is due, as has been said, to the above-mentioned cause,—that our seas are illuminated by the sun.

Again, it might be said that the circle of radiance

15. This passage would certainly seem to establish Leonardo's claim to be regarded as the original discoverer of the cause of the ashy colour of the new moon (*lumen cinereum*). His observations

che fa la luna, quand'el'è col sole in ²⁵ occidente, dirivasse dal sole integralmente, quando essa col sole e coll' occhio è situata nel ²⁶ modo che qui disopra si dimostra.

²⁷ Alcuni potrebbero dire che l'aria, elemēto della luna, pigliando il lume del sole, come fa la no²⁸stra spera dell'aria, fusse quella che finisce il cerchio luminoso al corpo della luna.

²⁹ Alcuni àn creduto che la luna abbia alquanto di lume da se, la quale ope³⁰nione è falsa, perchè l'anno fondata sopra quel chiarore che si uede in mezzo ali ³¹ corni quando la luna è nova, la quale alli confini dello splendore pare oscura, ³² e al confine della oscurità del campo pare si chiara, che molti credono essere ³³ vn cerchio di nouo splendore, che finisca di circundare, dove le punte de' corni ³⁴ alluminati dal sole terminano il loro splendore; e questa varietà di campo nasce ³⁵ perchè quella parte d'esso campo, che termina colla parte luminosa della luna, per tal ³⁶ paragone di splendore si dimostra piv oscura che non è, e quella parte di sopra, dove ³⁷ pare vn pezzo di cerchio luminoso d'uniforme larghezza, nasce chè quiui la luna, essendo più chiara che ³⁸ il mezzo over il campo, oue essa si troua; pel paragō di tale oscurità si dimostra in tale confine piv lu³⁹minosa che non è, la qual luminosità in tal tempo nasce dal nostro oceano colli altri mediterrani ⁴⁰ che in quel tēpo è alluminato dal sole che già è tramōtato, in modo che il mare allora fa tale ofitio alla ⁴¹ parte oscura della luna, qual fa la luna in quīta decima a noi,

however, having hitherto remained unknown to astronomers, Moestlin and Kepler have been credited with the discoveries which they made independently a century later.

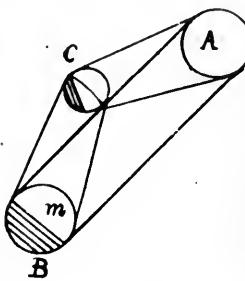

Some disconnected notes treat of the same subject in MS. C. A. 239^b; 718^b and 719^b: "Perchè la luna cinta della parte alluminata dal sole in ponente, tra maggior splendore in mezo a tal cerchio, che quando essa eclissava il sole. Questo accade perchè nell' eclissare il sole ella ombrava il nostro oceano, il qual caso non accade essendo in ponente, quando il sole alluma esso oceano." The editors of the "Saggio" who first published this passage (page 12) add another short

shown by the moon when it and the sun are both in the West is wholly borrowed from the sun, when it, and the sun, and the eye are situated as is shown above.

Some might say that the air surrounding the moon as an element, catches the light of the sun as our atmosphere does, and that it is this which completes the luminous circle on the body of the moon.

Some have thought that the moon has a light of its own, but this opinion is false, because they have founded it on that dim light seen between the horns of the

new moon, which looks dark where it is close to the bright part, while against the darkness of the background it looks so light that many have taken it to be a ring of new radiance completing the circle where the tips of the horns illuminated by the sun cease to shine [34]. And this difference of background arises from the fact that the portion of that background which is conterminous with the bright part of the moon, by comparison with that brightness looks darker than it is; while at the upper part, where a portion of the luminous circle is to be seen of uniform width, the result is that the moon, being brighter there than the medium or background on which it is seen by comparison with that darkness it looks more luminous at that edge than it is. And that brightness at such a time itself is derived from our ocean and other inland-seas. These are, at that time, illuminated by the sun which is already setting in such a way as that the sea then fulfils the same function to the dark side of the moon as the moon at its fifteenth day does to us when the

one about the seasons in the moon which I confess not to have seen in the original manuscript: "La luna ha ogni mese un verno e una state, e ha maggiori freddi e maggiori caldi, e i suoi equinozii son più freddi de' nostri."

23. 24. The larger of the two diagrams reproduced above stands between these two lines, and the smaller one is sketched in the margin. At the spot marked *A* Leonardo wrote *corpo solare* (solar body) in the larger diagram and *Sole* (sun) in the smaller one. At *C* *luna* (moon) is written and at *B* *terra* (the earth).

34. See Pl. CVIII, No. 5.

quando il sol' è tramōtato, e tal proporzione è da quel poco lume che à la parte oscura della luna alla chiarezza della parte alluminata, qual è dalla . . .

⁴³ Se uoi vedere ⁴⁴ quanto la parte ⁴⁵ onbrosa della luna ⁴⁶ sia più chiara che'l ⁴⁷ canpo, ove tal luna si ⁴⁸ trova, occupa col⁴⁹ la mano, o con altro ⁵⁰ obietto più distate ⁵¹ all'occhio, la parte lus⁵² minosa della luna.

sun is set. And the small amount of light which the dark side of the moon receives bears the same proportion to the light of that side which is illuminated, as that . . . [42].

If you want to see how much brighter the shaded portion of the moon is than the background on which it is seen, conceal the luminous portion of the moon with your hand or with some other more distant object.

903.

MACULE DELLA LUNA.

² Alcuni dissero leuarsi da essa vapori a modo di ³nugoli e interporri infra la luna e li ochi no⁴stri; il che, se così fusse, mai tali macule sarebbero stabili nè di siti nè di figura, e vedendo la ⁶luna in diuersi aspetti, ancor che tal macule ⁷nō fossero variate, esse muterebbero figura come ⁸fa quella cosa che si vede per più versi.

THE SPOTS ON THE MOON.

Some have said that vapours rise from the moon, after the manner of clouds and are interposed between the moon and our eyes. But, if this were the case, these spots would never be permanent, either as to position or form; and, seeing the moon from various aspects, even if these spots did not move they would change in form, as objects do which are seen from different sides.

F. 84b]

904.

DELLE MACHIE DELLA LUNA.

² Altri dissero che la luna era composta di parti più ³o mē transparenti, come se una parte fusse a modo ⁴d'alabastro, e alcuna altra a modo di cristallo o vetro, ⁵che ne seguirebbe che 'l sole, ferēdo colli sua razzi ⁶nella parte mē transparēte, il lume rimarrebbe in ⁷superficie, e così la parte più densa resterebbe allū⁸minata, e la parte transparēte mostrerebbe le ⁹onbre delle profondità sue oscure, e così si cōpon¹⁰ne la qualità della luna; e questa opinione è ¹¹piaciuta a molti filosofi, e massime a Aristotele, e ¹²pure ella è falsa opinione, perchè ne' di¹³versi aspetti, che si trovano spesso la luna e il so¹⁴le alli nostri occhi, noi vedremmo variare tal ma¹⁵cule, e quando

OF THE SPOTS ON THE MOON.

Others say that the moon is composed of more or less transparent parts; as though one part were something like alabaster and others like crystal or glass. It would follow from this that the sun casting its rays on the less transparent portions, the light would remain on the surface, and so the denser part would be illuminated, and the transparent portions would display the shadow of their darker depths; and this is their account of the structure and nature of the moon. And this opinion has found favour with many philosophers, and particularly with Aristotle, and yet it is a false view—for, in the various phases and frequent changes of the moon and sun to our eyes, we should see these spots vary, at one time looking dark and at another light: they would be dark when the sun is in the West and the

si farebbono oscure, e quādo chi¹⁶are; scure si farebbono, quādo il sole è in oc¹⁷cidēte e la luna nel mezzo del celo, chè allora le cōcauità transparēti piglierebbono l'onbre in¹⁸sino alle sommità de' labbri di tal cōcauità trās²⁰parēti, perchè il sole nō potrebbe penetrare li²¹sua razzi dentro alle boche di tali cōcauità, ²²le quali parrebbono chiare nel plenilunio, ²³doue la luna in oriēte guarda il sole all'occidēte; allora il sole alluminerebbe insino ne' fō²⁵di di tali transparētie, e così, nō generādosi ²⁶onbre, la luna non ci mostrerebbe in tal tempo ²⁷le predette machie, e così ora piv ora meno, ²⁸secondo le mutatiō del sol dalla luna e della lu²⁹na dai lochi nostri, come di sopra dissì.

F. 85a]

DELLE MACULE DELLA LUNA.

²Si è detto che le macule della luna son create in essa luna, ³da essere in se di uaria rarità e dēsità, il che se così fusse, ⁴nell'eclissi della luna i razzi solari pene- trebbono per ⁵alcuna parte della predetta rarità, e, nō si ueden⁶do tale effetto, detta opinione è falsa;

⁷Altri dicono che la superficie della luna, essendo tersa ⁸e pulita, che essa, a similitudine di specchio, riceue in ⁹se la similitudine della terra; Questa openione ¹⁰è falsa, conciosiachè la terra, scoperta dall'acqua, per diuer¹¹si aspetti à diuerse figure; adunque, quando la luna ¹²è all'oriēte, essa specchierebbe altre machie, che quā¹³do essa ci è di sopra, o quādo essa è in occidēte; però ¹⁴le machie della luna, come si uede nel plenilunio, ¹⁵mai si uariano nel moto da lei fatto nel nostro emi¹⁶sperio; ²a ragione è, che la cosa specchia¹⁷ta nella con- vessità piglia piccola parte d' es¹⁸so specchio, com'è provato in prospettiva; ³a ragione ¹⁹li è, che nel plenilunio la luna vede solo il mezzo ²⁰della

moon in the middle of the sky; for then the transparent hollows would be in shadow as far as the tops of the edges of those transparent hollows, because the sun could not then fling his rays into the mouth of the hollows; which however, at full moon, would be seen in bright light, at which time the moon is in the East and faces the sun in the West; then the sun would illuminate even the lowest depths of these transparent places and thus, as there would be no shadows cast, the moon at these times would not show us the spots in question; and so it would be, now more and now less, according to the changes in the position of the sun to the moon, and of the moon to our eyes, as I have said above.

905.

OF THE SPOTS ON THE MOON.

It has been asserted, that the spots on the moon result from the moon being of varying thinness or density; but if this were so, when there is an eclipse of the moon the solar rays would pierce through the portions which were thin as is alleged [5]. But as we do not see this effect the opinion must be false.

Others say that the surface of the moon is smooth and polished and that, like a mirror, it reflects in itself the image of our earth. This view is also false, inasmuch as the land, where it is not covered with water, presents various aspects and forms. Hence when the moon is in the East it would reflect different spots from those it would show when it is above us or in the West; now the spots on the moon, as they are

seen at full moon, never vary in the course of its motion over our hemisphere. A second reason is that an object reflected in a convex body takes up but a small portion of that body, as is proved in perspective [18]. The

third reason is that when the moon is full, it only faces half the hemisphere of the

del sole e di ciascuna stel³¹la a lei op-
posta.

illuminated earth, on which only the ocean and other waters reflect bright light, while the land makes spots on that brightness; thus half of our earth would be seen girt round with the brightness of the sea lighted up by the sun, and in the moon this reflection would be the smallest part of that moon. Fourthly, a radiant body cannot be reflected from another equally radiant; therefore the sea, since it borrows its brightness from the sun,—as the moon does,—could not cause the earth to be reflected in it, nor indeed could the body of the sun be seen reflected in it, nor indeed any star opposite to it.

onbra tolgo⁶no i razzi del sole a tale acqua,
onde essa acqua viene a ri⁷manere oscura,
per non potere specchiare il corpo solare.

If you keep the details of the spots of the moon under observation you will often find great variation in them, and this I myself have proved by drawing them. And this is caused by the clouds that rise from the waters in the moon, which come between the sun and those waters, and by their shadow deprive these waters of the sun's rays. Thus those waters remain dark, not being able to reflect the solar body.

quaedam specilla ocularia fiunt tantae densitatis, ut si per ea quis aut lunam, aut aliud siderum spectet, adeo propinqua illa iudicet, ut ne turres ipsas excedant" (sect. II c. 8 and sect. III, c. 23).

VI.

THE STARS.

F. 58]

Veggonsi le stelle di notte e nō di dì, per esser noi sotto ²la grossezza dell'aria, la quale è piena d'infinte particule d'umidità, le quali, ciascuna per se quādo è percossa ⁴dalli razzi del sole, rendono splendore, e così l'innumerabili splendori occupano esse stelle, e se ⁶tale aria nō fusse, il celo senpre ci mostrerebbe ⁷le stelle nelle sua tenebre.

911.

The stars are visible by night and not by day, because we are beneath the dense atmosphere, which is full of innumerable particles of moisture, each of which independently, when the rays of the sun fall upon it, reflects a radiance, and so these numberless bright particles conceal the stars; and if it were not for this atmosphere the sky would always display the stars against its darkness.

F. 57a]

SE LE STELLE ÀNNO LUME DAL SOLE O DA SE.

²Dicono di auere il lume da se, alle-gando ³che se Venere e Mercurio non avessino ⁴il lume da se, quādo essa s'inter-pone infra ⁵l'ochio nostro e ⁶l' sole, esse oscurerebbero tan⁶to d'esso sole, quāto esse ne coprono al ochio ⁷nostro; E quest'è falso, perch'è prouato ⁸come l'onbroso, posto nel luminoso, è cinto e coper⁹to tutto da razzi laterali del rimanēte di tal lu¹⁰minoso, e così resta inuisibile, come si

912.

WHETHER THE STARS HAVE THEIR LIGHT FROM THE SUN OR IN THEMSELVES.

Some say that they shine of themselves, alledging that if Venus and Mercury had not a light of their own, when they come between our eye and the sun they would darken so much of the sun as they could cover from our eye. But this is false, for it is proved that a dark object against a luminous body is enveloped and entirely concealed by the lateral rays of the rest of that luminous body and so remains invisible. As may be seen

911. See Vol. I, No. 296, which also refers to starlight.

1. 34 &c.) it is clear that Leonardo was familiar with the phenomena of Irradiation.

912. From this and other remarks (see No. 902,

VOL. II.

di¹¹ mostra: quando il sole è veduto per la ra¹²mificatione delle piāte sanza foglie in lūga di¹³stantia, essi rami non occupano parte al¹⁴cuna d'esso sole alli occhi nostri; j'l simile ¹⁵accade a' predetti pianeti, li quali ancora ¹⁶che da se sieno sanza luce, eglino non oc¹⁷cupano, com'è detto, parte alcuna del sole ¹⁸all'occhio nostro.

SECONDA ²⁰ PROVA.

²¹ Dicono le stelle nella notte parere lucidissime ²²quāto più ci sō superiori, e che, se esse nō auessino lume ²³da se, che l'ombra che fa la terra, che s'interpone ²⁴fra loro e 'l sole, verrebbe a scurarle, non vedē^{sdo} esse, nè sēdo vedute dal corpo solare; Ma ²⁶questi non ànno considerato, che l'onbra piramidale de²⁷lla terra non aggiugne infra troppe stelle, e in ²⁸quelle ch'ella aggiugne, la piramide è tanto dimi²⁹nuita, che poco occupa del corpo della stella; e 'l ri³⁰manēte è alluminato dal sole.

F. 60 a]

Perchè li pianeti appariscono maggiori ²in oriēte che sopra di noi, che dovrebbe essere il contrario, essendo ⁴3500 miglia pù vicini a noi, essendo ⁵nel mezzo del celo, che essendo all'o⁶rizzōte.

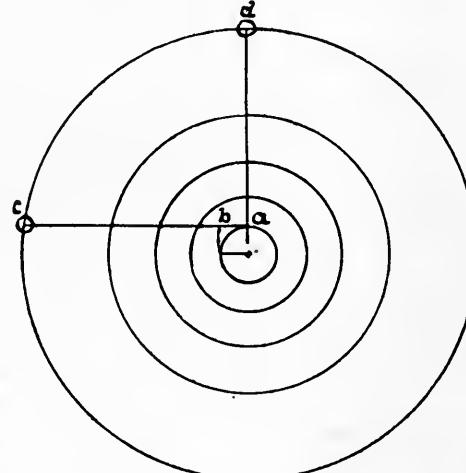

⁷ Tutti li gradi dell'i elemēti, donde passa⁸no le spetie de' corpi celesti, ⁹che vengono all'occhio, sono ¹⁰equali, e li angoli, ¹¹donde li penetra ¹²la linea cētrale di tali spetie, so¹³no inequali, e la distantia è ¹⁴maggiori, come mostra l'eccesso *a b* so¹⁵pra *a d*, e per la ⁹a del ⁷° la grandezza ¹⁶d'essi corpi celesti nell'orizzonte è provata.

when the sun is seen through the boughs of trees bare of their leaves, at some distance the branches do not conceal any portion of the sun from our eye. The same thing happens with the above mentioned planets which, though they have no light of their own, do not—as has been said—conceal any part of the sun from our eye[18].

SECOND ARGUMENT.

Some say that the stars appear most brilliant at night in proportion as they are higher up; and that if they had no light of their own, the shadow of the earth which comes between them and the sun, would darken them, since they would not face nor be faced by the solar body. But those persons have not considered that the conical shadow of the earth cannot reach many of the stars; and even as to those it does reach, the cone is so much diminished that it covers very little of the star's mass, and all the rest is illuminated by the sun.

913.

Why the planets appear larger in the East than they do overhead, whereas the contrary should be the case, as they are 3500 miles nearer to us when in mid sky than when on the horizon.

All the degrees of the elements, through which the images of the celestial bodies pass to reach the eye, are equal curves and the angles by which the central line of those images passes through them, are unequal angles [13]; and the distance is greater, as is shown by the excess of *a b* beyond *a d*; and the enlargement of these celestial bodies on the horizon is shown by the 9th of the 7th.

914. 4. *basa*. This probably alludes to some instrument, perhaps the Camera obscura.

915. The statement that CICERO, *De Divin.* ascribes the discovery of astrology to a period 57000 years before the Trojan war I believe to be quite erroneous. According to ERNESTI, *Clavis Ciceroniana*, CH. G. SCHULZ (*Lexic. Cicer.*) and the edition of *De Divin.* by GIESE the word Astrologia occurs only twice in CICERO: *De Divin.*, II, 42. *Ad Chaldaeorum monstra veniamus, de quibus Eudoxus, Platonis auditor, in astrologia judicio doctissimorum hominum facile princeps, sic opinatur (id quod scriptum reliquit): Chaldeis in prædictione et in notatione cuiusque vita*

ex natali die minime esse credendum." He then quotes the condemnatory verdict of other philosophers as to the teaching of the Chaldaeans but says nothing as to the antiquity and origin of astronomy. CICERO further notes *De oratore* I, 16 that Aratus was "*ignarus astrologie*" but that is all. So far as I know the word occurs nowhere else in CICERO; and the word *Astronomia* he does not seem to have used at all. (H. MÜLLER-STRÜBING.)

916. This passage is repeated word for word on page 190^b of the same manuscript and this is accounted for by the text in Vol. I, No. 4. Compare also No. 1216.

sō termine e principio di qualūche dato spatio di tempo;—e se ⁹la linia è diuisibile in infinito, lo spatio d'ū tempo di tal diuisione non è alieno, ¹⁰e se le parti diuise della linia sono proportionabili infra se, ancora le parti del tempo ¹¹saraño proportionabili infra loro.

begins and terminates in an instant. And whereas a line is infinitely divisible, the divisibility of a space of time is of the same nature; and as the divisions of the line may bear a certain proportion to each other, so may the divisions of time.

Physical Geography.

Leonardo's researches as to the structure of the earth and sea were made at a time, when the extended voyages of the Spaniards and Portuguese had also excited a special interest in geographical questions in Italy, and particularly in Tuscany. Still, it need scarcely surprise us to find that in deeper questions, as to the structure of the globe, the primitive state of the earth's surface, and the like, he was far in advance of his time.

The number of passages which treat of such matters is relatively considerable; like almost all Leonardo's scientific notes they deal partly with theoretical and partly with practical questions. Some of his theoretical views of the motion of water were collected in a copied manuscript volume by an early transcriber, but without any acknowledgment of the source whence they were derived. This copy is now in the Library of the Barberini palace at Rome and was published under the title: "De moto e misura dell'acqua," by FRANCESCO CARDINALI, Bologna 1828. In this work the texts are arranged under the following titles: Libr. I. Della spera dell'acqua; Libr. II. Del moto dell'acqua; Libr. III. Dell'onda dell'acqua; Libr. IV. Dei retroi d'acqua; Libr. V. Dell'acqua cadente; Libr. VI. Delle rotture fatte dall'acqua; Libr. VII. Delle cose portate dall'acqua; Libr. VIII. Dell'oncia dell'acqua e delle canne; Libr. IX. De molini e d'altri ordigni d'acqua.

The large number of isolated observations scattered through the manuscripts, accounts for our so frequently finding notes of new schemes for the arrangement of those relating to water and its motions, particularly in the Codex Atlanticus: I have printed several of these plans as an introduction to the Physical Geography, and I have actually arranged the texts in accordance with the clue afforded by one of them which is undoubtedly one of the latest notes referring to the subject (No. 920). The text given as No. 930 which is also taken from a late note-book of Leonardo's, served as a basis for the arrangement of the first of the seven books—or sections—, bearing the title: *Of the Nature of Water* (Dell'acque in se).

As I have not made it any part of this undertaking to print the passages which refer to purely physical principles, it has also been necessary to exclude those practical researches which, in accordance with indications given in 920, ought to come in as Books 13, 14 and 15. I can only incidentally mention here that Leonardo—as it seems to me, especially in his youth—devoted a great deal of attention to the construction of mills. This is proved by a number of drawings of very careful and minute execution, which are to be found in the *Codex Atlanticus*. Nor was it possible to include his considerations on the regulation of rivers, the making of canals and so forth (No. 920, Books 10, 11 and 12); but those passages in which the structure of a canal is directly connected with notices of particular places will be found duly inserted under section XVII (*Topographical notes*). In Vol. I, No. 5 the text refers to canal-making in general.

On one point only can the collection of passages included under the general heading of Physical Geography claim to be complete. When comparing and sorting the materials for this work I took particular care not to exclude or omit any text in which a geographical name was mentioned even incidentally, since in all such researches the chief interest, as it appeared to me, attached to the question whether these acute observations on the various local characteristics of mountains, rivers or seas, had been made by Leonardo himself, and on the spot. It is self-evident that the few general and somewhat superficial observations on the Rhine and the Danube, on England and Flanders, must have been obtained from maps or from some informants, and in the case of Flanders Leonardo himself acknowledges this (see No. 1008). But that most of the other and more exact observations were made, on the spot, by Leonardo himself, may be safely assumed from their method and the style in which he writes of them; and we should bear it in mind that in all investigations, of whatever kind, experience is always spoken of as the only basis on which he relies. Incidentally, as in No. 984, he thinks it necessary to allude to the total absence of all recorded observations.

I.

INTRODUCTION.

Leic. 5^a]

919.

Questi libri contēgono in ne' primi ² della natura dell'acqua in se ne' ³ sua moti, li altri contēgono delle ⁴cose fatte dai sua corsi, ⁵che mv⁶tano il mondo di centro e di figura.

These books contain in the beginning: Schemes for Of the nature of water itself in its motions; the arrangement of the others treat of the effects of its currents, materials which change the world in its centre and (919—928). its shape.

Leic. 15^b]

920.

DIVISIō DEL LIBRO.

Libro p^o dell'acque in se,
libro 2^o del mare,
libro 3^o delle ueue,
5 libro 4^o de' fiumi;
libro 5^o delle nature de' fōdi,
libro 6 delli obbietti,
libro 7 delle ghiaje,
libro 8^o della superficie del'acqua,
10 libro 9 delle cose che in quella
son messe;
libro 10^o de' ripari de' fiumi,
libro 11^o delli condotti,
libro 12 de' canali,
libro 13 delli strumēti volti dall'acqua,
15 libro 14 del far mōtare l'acque,
libro 15 delle cose cōsumate dall'acque.

DIVISIONS OF THE BOOK.

Book 1 of water in itself.
Book 2 of the sea.
Book 3 of subterranean rivers.
Book 4 of rivers.
Book 5 of the nature of the abyss.
Book 6 of the obstacles.
Book 7 of gravels.
Book 8 of the surface of water.
Book 9 of the things placed therein.
Book 10 of the repairing of rivers.
Book 11 of conduits.
Book 12 of canals.
Book 13 of machines turned by water.
Book 14 of raising water.
Book 15 of matters worn away by water.

919 .1. cōtēgano. 3. cōtēgano. 4. dae sua.
920. 8. giare. 9. delle . . acq“a”. 10. quella. 16. dell cose . . acq“e”.

Leic. 9a]

Farai prima un libro ²che tratti de' lochi ³occupati dall'acque ⁴dolci, e 'l ²o dal s'acque saline, e 'l ⁶³ come, per la partita di quelle, queste ⁸nostre parti son ⁹fatte piv lieui, e ¹⁰per conseguēza piv ¹¹remosse dal cen¹²tro del mōdo.

F. 87³]

Descriui in prima tutta l'acqua in ciascuno suo moto, di poi ²descriui tutti li sua fondi e le lor materie, sempre al³legando le propositioni delle predette acque, e fia bu⁴ono ordine, che altrimēti l'opera sarebbe cōfusa.

⁵Descriui tutte le figure che fa l'acqua dalla sua ⁶maggior^e alla sua minore onda e le lor cause.

F. 88^a]

Libro 9 de' surgimenti accidentali dell'acqua.

F. 90³]

ORDINE DEL LIBRO.

²Poni nel principio ciò che può fare vn fiume.

Br. M. 35^a]

Libro d'abbattere li eserciti col'impeto de' diluui fatti dall'acque disgorgate,

²Libro che l'acque cōducino a saluamento li legniami tagliati ne' mōti,

³Libro delle barche condotte contro all'impeto de' fiumi,

⁴Libro dell'alzare li gran ponti col senplice accrescimēto dell'acque,

⁵Libro del riparare all'impeto de' fiumi che le città da quelli nō siē percossesse.

921.

First you shall make a book treating of places occupied by fresh waters, and the second by salt waters, and the third, how by the disappearance of these, our parts of the world were made lighter and in consequence more remote from the centre of the world.

922.

First write of all water, in each of its motions; then describe all its bottoms and their various materials, always referring to the propositions concerning the said waters; and let the order be good, for otherwise the work will be confused.

Describe all the forms taken by water from its greatest to its smallest wave, and their causes.

923.

Book 9, of accidental risings of water.

924.

THE ORDER OF THE BOOK.

Place at the beginning what a river can effect.

925.

A book of driving back armies by the force of a flood made by releasing waters.

A book showing how the waters safely bring down timber cut in the mōntains.

A book of boats driven against the impetus of rivers.

A book of raising large bridges higher. Simply by the swelling of the waters.

A book of guarding against the impetus of rivers so that towns may not be damaged by them.

921. 1. p⁴a" vn libr. 3. ochupati. 7. quele. 8. parte.

922. 1. scriui in p⁴a" . . lacq⁴a" . . ciasscuno. 2. desscriui . . elle. 4. altremēti. 5. cheffa lacq⁴a". 6. magore . . elle.

923. acq⁴a".

924. 2. co che po.

925. The head of each line is marked by the letter d which is crossed out. 1. dabatter . . chol inpito . . dilumi . . dellacq⁴a" discorghate. 2. chellacque . . assaluamento. 4. acresscimēto. 5. chelle cita dacquelli . . percossi.

Br. M. 358]

Libro della dispositiō de' fiumi a cōseruatiō dell'argine sue,

² Libro delli monti, che si spiccherāno, e fia la terra sotto il nostro emisperio scoperta dall'acqua,

³ Libro del terreno portato dal'acqua a riēpiere la grā profondità de' pelaghi,

⁴ Libro de' modi che la fortuna per se netti li riēpiuti porti del mare,

⁵ Libro dell'argine de' fiumi e lor permanentia,

⁶ Libro del fare che li fiumi con lor corso tēgin netti li fondi loro per le città dōde passano,

⁷ Libro del fare o rifondare li ponti sopra li fiumi,

⁸ Libro di ripari che farsi debbō alli muri e argini de' fiumi percossi dall'acqua,

⁹ Libro del generare li colli dall'arena o ghiaja sopra le gran profondità dell'acque.

926.

A book of the ordering of rivers so as to preserve their banks.

A book of the mountains, which would stand forth and become land, if our hemisphere were to be uncovered by the water.

A book of the earth carried down by the waters to fill up the great abyss of the seas.

A book of the ways in which a tempest may of itself clear out filled up sea-ports.

A book of the shores of rivers and of their permanency.

A book of how to deal with rivers, so that they may keep their bottom scoured by their own flow near the cities they pass.

A book of how to make or to repair the foundations for bridges over the rivers.

A book of the repairs which ought to be made in walls and banks of rivers where the water strikes them.

A book of the formation of hills of sand or gravel at great depths in water.

Br. M. 122 a]

927.

L'acqua dà principio al moto suo,

² Libro liuellamenti d'acque per diuersi modi,

³ Libro del discostare li fiumi dai lochi da loro offesi,

⁴ Libro del dirizzar li fiumi che occupano superchio terreno,

⁵ Libro del diuidere li fiumi in molti rami e farli guadabili,

⁶ Libro dell'acque che cō diuersi moti passā pe' pelaghi loro,

⁷ Libro del profondare li letti alli fiumi cō uari corsi d'acque,

⁸ Libro di disporre li fiumi i modo che li piccoli principj de' sua danni non accrescino,

⁹ Libro de' uari moti dell'acque che passan per diuerse figure di canali,

¹⁰ Libro del fare che li piccoli fiumi non pieghino il maggiore percocco dalle loro acque,

¹¹ Libro della maggior bassezza che trouar si possa nella corrēte della superficie de' fiumi,

Water gives the first impetus to its motion.

A book of the levelling of waters by various means.

A book of diverting rivers from places where they do mischief.

A book of guiding rivers which occupy too much ground.

A book of parting rivers into several branches and making them fordable.

A book of the waters which with various currents pass through seas.

A book of deepening the beds of rivers by means of currents of water.

A book of controlling rivers so that the little beginnings of mischief, caused by them, may not increase.

A book of the various movements of waters passing through channels of different forms.

A book of preventing small rivers from diverting the larger one into which their waters run.

A book of the lowest level which can be found in the current of the surface of rivers.

926. 2. chessi spich[a] erāno effia la terra "sotto il nostro emisperio" scoperta dell'acqua. 3. terē. 4. perse nettili riēpiuti porta del mare. 5. ellor premanentia. 6. chelli . . collor . . tēginetti . . fondi "lor". 7. orrifondare. 8. cheffarsi. 9. ghiaia . . acq"e".

THE BEGINNING OF THE TREATISE ON WATER.

By the ancients man has been called the world in miniature; and certainly this name is well bestowed, because, inasmuch as man is composed of earth, water, air and fire, his body resembles that of the earth; and as man has in him bones the supports and framework of his flesh, the world has its rocks the supports of the earth; as man has in him a pool of blood in which the lungs rise and fall in breathing, so the body of the earth has its ocean tide which likewise rises and falls every six hours, as if the world breathed; as in that pool of blood veins have their origin, which ramify all over the human body, so likewise the ocean sea fills the body of the earth with infinite springs of water. The body of the earth lacks sinews and this is, because the sinews are made expressly for movements and, the world being perpetually stable, no movement takes place, and no movement taking place, muscles are not necessary.—But in all other points they are much alike.

gement of
Book I.
Difinisci prima che cosa è altezza e bassezza anzi come sō situati ³li elemēti l'ū dentro all'altro; Di poi che cosa è gravità dē⁴a e che è gravità liquida, ma prima che cosa è in se gravità e leuità; Di poi descrivi perchè l'acqua si move e perchè ter⁵mina il moto suo, poi perchè si fa più tarda o veloce, oltre ⁷a questo come ella senpre disciède, essendo in cōfine d'aria più bassa di lei | E come l'acqua si leua in aria mediante ⁹il calore del sole e poi ricade in pioggia; ancora perchè l'acqua ¹⁰surgie dalle cime de' monti e se l'acqua di nessuna vena più alta ¹¹che l'oceanò mare può uersare acqua più alta che la superficie ¹²d'esso oceano; E come tutta l'acqua che torna all'oceanò è più alta ¹³della spera dell'acqua | e come l'acqua delli mari equinotiali è più alta ¹⁴che le acque settētrionali, ed è più alta sotto il corpo del sole ¹⁵che in nessuna parte del circulo equinotiale come si spri¹⁶mēta sotto il calore dello stizzo infocato, l'acqua che mediā¹⁷te tale stizzo bolle e l'acqua circustāte al ciētro di tal bol¹⁸lore senpre

THE ORDER OF THE FIRST BOOK ON WATER.

Define first what is meant by height and depth; also how the elements are situated one inside another. Then, what is meant by solid weight and by liquid weight; but first what weight and lightness are in themselves. Then describe why water moves, and why its motion ceases; then why it becomes slower or more rapid; besides this, how it always falls, being in contact with the air but lower than the air. And how water rises in the air by means of the heat of the sun, and then falls again in rain; again, why water springs forth from the tops of mountains; and if the water of any spring higher than the ocean can pour forth water higher than the surface of that ocean. And how all the water that returns to the ocean is higher than the sphere of waters. And how the waters of the equatorial seas are higher than the waters of the North, and higher beneath the body of the sun than in any part of the equatorial circle; for experiment shows that under the heat of a burning brand the water near the brand boils, and the water surrounding this ebullition always sinks with

OF WHAT IS WATER.

Among the four elements water is the ^{Definitions} second both in weight and in instability. (931. 932).

932.

THE BEGINNING OF THE BOOK ON WATER.

Sea is the name given to that water which is wide and deep, in which the waters have not much motion.

933.

The centres of the sphère of water are of the two, one universal and common to all water, ^{water in relation to the globe.} the other particular. The universal one is to the that which is common to all waters not in motion, which exist in great quantities. As canals, ditches, ponds, fountains, wells, dead rivers, lakes, stagnant pools and seas, which, although they are at various levels, have each in itself the limits of their superficies equally distant from the centre of the earth, such as lakes placed at the tops of high mountains; as the lake near Pietra Pana and the lake of the Sybil near Norcia; and all the lakes that give rise to great rivers, as the Ticino from Lago Maggiore, the Adda from the lake of Como, the Mincio from the lake of Garda, the Rhine from the lakes of Constance and of Chur, and from the lake of Lucerne, like the Tigris which passes through Asia Minor carrying with it the waters of three lakes, one above the other at different heights of which the highest is Munace, the middle one Pallas, and the lowest Triton; the Nile again flows from three very high lakes in Ethiopia.

932. 2. pellago . . affigura.

the Etruscan city near Viterbo, there can be no doubt that by 'Lago della Sibilla'—a name not known elsewhere, so far as I can learn—Leonardo meant Lago di Vico (Lacus Ciminus, Aen. 7).

E. 46]

DEL MARE CHE MUTA ²IL PESO DELLA TERRA.

³ Li nichi, ostrighe e altri simili animali, ⁴che nascono nelli fanghi marini, ci testifīcano la mutatiō della terra intorno al ⁶ciētro de' nostri elemēti; prouasi cosi: ⁷Li fiumi reali senpre corrono con torbidu⁸me, tinto dalla terra, che per lor si leua mediāte la cō⁹fregatiō delle sue acque sopra il fondo e nelle sue ¹⁰riue, e tal cōsumatiōne scopre le fronti de' gradi ¹¹fatti a' suoli di quelli nichi, che stan nella superficie ¹²del fango marino, li quali in tal sito na- scierono, quā¹³ndo l'acque salse li coprivano, e questi tali gradi erano ri¹⁴coperti di tempo in tempo dalli fanghi di uarie grossezz¹⁵e o condotti al mare dalli fiumi cō diluvi di diverse grā¹⁶dezze; e così tali fāghi furono composti in tāta altezza, che dal fondo si ¹⁷scopriua all'aria; Ora questi tali fondi sono in tāta ¹⁸altezza che son fatti colli, o alti mōti, e li fiumi, ¹⁹consuma²⁰tori de' lati ²¹d'essi monti, ²²scoprano ²³li gradi d'es²⁴si nichi, e co²⁵si il leni²⁶ficato lato ²⁷della terra ²⁸al cōtinuo ²⁹s'inalza, e ³⁰li antipodi³¹di s'accosta³²no più al ³³ciētro del ³⁴mondo, ³⁵e li anti³⁶chi fondi del ³⁷mare son fatti ³⁸gioghi di monti.

934.

OF THE CENTRE OF THE OCEAN.

The centre of the sphere of waters is the true centre of the globe of our world, which is composed of water and earth, having the shape of a sphere. But, if you want to find the centre of the element of the earth, this is placed at a point equidistant from the surface of the ocean, and not equidistant from the surface of the earth; for it is evident that this globe of earth has nowhere any perfect rotundity, excepting in places where the sea is, or marshes or other still waters. And every part of the earth that rises above the water is farther from the centre.

935.

OF THE SEA WHICH CHANGES THE WEIGHT OF THE EARTH.

The shells, oysters, and other similar animals, which originate in sea-mud, bear witness to the changes of the earth round the centre of our elements. This is proved thus: Great rivers always run turbid, being coloured by the earth, which is stirred by the friction of their waters at the bottom and on their shores; and this wearing disturbs the face of the strata made by the layers of shells, which lie on the surface of the marine mud, and which were produced there when the salt waters covered them; and these strata were covered over again from time to time, with mud of various thickness, or carried down to the sea by the rivers and floods of more or less extent; and thus these layers of mud became raised to such a height, that they came up from the bottom to the air. At the present time these bottoms are so high that they form hills or high mountains, and the rivers, which wear away the sides of these mountains, uncover the strata of these shells, and thus the softened side of the earth continually rises and the antipodes sink closer to the centre of the earth, and the ancient bottoms of the seas have become mountain ridges.

F. 27.a]

FIGURA D'ELEMÉTI.

^{The theory of Plato.} Della figura delli elemēti, e prima che dicono che se essi elemēti vestisero l'un l'altro, colle figure che mette Platone, che si ca³vserebbe vacuo infra l'uno e l'altro; e non è vero, e ⁶qui lo provo, ma prima bisogna proporre alcuna cō⁷clusione: Non è necessario che nessuno ele⁸mento, che veste l'ū l'altro, sia d'equa grossezza in tu⁹tta la sua quantità infra la parte che ueste e quel¹⁰la ch'è uestita; Noi vediamo la spera dell'acqua ma¹¹nifestamēte essere di uarie grossezze dalla sua ¹²superficie al fondo, e che, nō che essa vestisse ¹³la terra quando fusse di figura cuba cioè di 8 angoli come ¹⁴vole Platone, essa veste la terra che à innumerabili ¹⁵angoli di scogli coperti dall'acqua e varie globosità e cō¹⁶cavità, e non si genera vacuo infra l'acqua e la terra; Ancora l'aria veste la spera dell'acqua ¹⁷insieme colli monti e valli che superano essa spera, e nō ¹⁸rimane vacuo infra la terra e l'aria, sicchè chi disse ¹⁹generarsi vacuo, ebbe tristo discorso.

A Platō si rispōde che la superficie delle figure che avrebbero li elemēti, ²¹che lui pone, non potrebbero sta²³re.

the sea does not show this; so that there must be a great deal of water inside the earth, besides that which rises into the lower air and which flows through rivers and springs.

939.

THE FIGURES OF THE ELEMENTS.

Of the figures of the elements; and first as against those who deny the opinions of Plato, and who say that if the elements include one another in the forms attributed to them by Plato they would cause a vacuum one within the other. I say it is not true, and I here prove it, but first I desire to propound some conclusions. It is not necessary that the elements which include each other should be of corresponding magnitude in all the parts, of that which includes and of that which is included. We see that the sphere of the waters varies conspicuously in mass from the surface to the bottom, and that, far

from investing the earth when that was in the form of a cube that is of 8 angles as Plato will have it, that it invests the earth which has innumerable angles of rock covered by the water and various prominences and concavities, and yet no vacuum is generated between the earth and water; again, the air invests the sphere of waters together with the mountains and valleys, which rise above that sphere, and no vacuum remains between the earth and the air, so that any one who says a vacuum is generated, speaks foolishly.

But to Plato I would reply that the surface of the figures which according to him the elements would have, could not exist.

940.

PROVES HOW THE EARTH IS NOT GLOBULAR AND NOT BEING GLOBULAR CANNOT HAVE A COMMON CENTRE.

VOL. II.

3000 miles and flow into the Mediterranean by the shores of Egypt; and if we will give to this a fall of ten braccia a mile, as is usually allowed to the course of rivers in general, we shall find that the Nile must have its mouth ten miles lower than its source. Again, we see the Rhine, the Rhone and the Danube · starting from the German parts, almost the centre of Europe, and having a course one to the East, the other to the North, and the last to Southern seas. And if you consider all this you will see that the plains of Europe in their aggregate are much higher than the high peaks of the maritime mountains; think then how much their tops must be above the sea shores.

941.

OF THE HEAT THAT IS IN THE WORLD.

Where there is life there is heat, and where vital heat is, there is movement of vapour. This is proved, inasmuch as we see that the element of fire by its heat always draws to itself damp vapours and thick mists as opaque clouds, which it raises from seas as well as lakes and rivers and damp valleys; and these being drawn by degrees as far as the cold region, the first portion stops, because heat and moisture cannot exist with cold and dryness; and where the first portion stops the rest settle, and thus one portion after another being added, thick and dark clouds are formed. They are often wafted about and borne by the winds from one region to another, where by their density they become so heavy that they fall in thick rain; and if the heat of the sun is added to the power of the element of fire, the clouds are drawn up higher still and find a greater degree of cold, in which they form ice and fall in storms of hail. Now the same heat which holds up so great a weight of water as is seen to rain from the clouds, draws them from below upwards, from the foot of the mountains, and leads and holds them within the summits of the mountains, and these, finding some fissure, issue continuously and cause rivers.

DEL MARE CHE A MOLTI² SENPLICI PAR PIÙ
ALTO³ CHE LA TERRA CHE GLI FA LITI.

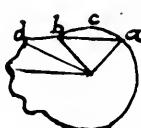

The relative height of the surface of the sea to that of the land (942-945).

⁴b d è vna pianvra, donde corre ⁵vn fiume al mare, la qual pianu⁶ra à per termine esso mare; e perchè in vero essa terra scoperta nò⁸ è nel sito dell'equality,—perchè, seco⁹sifusse, ilfiume non avrebbe mo¹⁰to—, onde, movendosi, questo sito¹¹ à piutosto da essere detto spiaggia che pianvra; e così essa pia¹³nura d b termina in tal modo¹⁴ colla spera dell'acqua che, chi la produ¹⁵cesse in continua rettitudine in b a,¹⁶ essa entrerebbe sotto il mare, e¹⁷ di qui nasce che l mar a c b pare più alto che la terra scoperta.

¹⁸Naturalmète nes¹⁹suna parte della²⁰terra scoperta da²¹l'acqua fia mai²² più bassa che la²³superficie della²⁴spera d'essa acqua.

942.

OF THE SEA, WHICH TO MANY FOOLS APPEARS TO BE HIGHER THAN THE EARTH WHICH FORMS ITS SHORE.

b d is a plain through which a river flows to the sea; this plain ends at the sea, and since in fact the dry land that is uncovered is not perfectly level—for, if it were, the river would have no motion—as the river does move, this place is a slope rather than a plain; hence this plain *d b* so ends where the sphere of water begins that if it were extended in a continuous line to *b a* it would go down beneath the sea, whence it follows that the sea *a c b* looks higher than the dry land.

Obviously no portions of dry land left uncovered by water can ever be lower than the surface of the watery sphere.

943.

OF CERTAIN PERSONS WHO SAY THE WATERS WERE HIGHER THAN THE DRY LAND.

Certainly I wonder not a little at the common opinion which is contrary to truth, but held by the universal consent of the judgment of men. And this is that all are agreed that the surface of the sea is higher than the highest peaks of the mountains; and they allege many vain and childish reasons, against which I will allege only one simple and short reason: We see plainly that if we could remove the shores of the sea, it would invest the whole earth and make it a perfect sphere. Now, consider how much earth would be carried away to enable the waves of the sea to cover the world; therefore that which would be carried away must be higher than the sea-shore.

ON THE OCEAN.

G. 48 A]

946.

PERCHÉ L'ACQUA È SALSA.

²Dicie Plinio nel ^{2º} suo libro, al ¹⁰³ capitulo, che l'acqua del mare è salata perché ⁴l'ardore del sole secca l'umido e quello succia, e questo al mare, che ⁶molto s'allarga, dà sapore di sale; ⁷Ma questo nō si cōciede, perchè se la salsedine ⁸del mare avesse causa dallo ardore del sole, ⁹e' non è dubbio che tanto maggiormente li laghi, stagnie paduli ¹⁰sarebbono più insalati, quanto ¹¹le loro acque son manco mobili e di ¹²minore profondità, e la esperiēzia ci mostra ¹³il contrario; tali paduli ci mostrā ¹⁴le loro acque essere al tutto private di salsedine; Ancora s'assegnia da Plinio nel medesimo ¹⁶capitolo che tal salsedine

Refutation of Pliny's theory as to the saltiness of the sea (946. 947).

WHY WATER IS SALT.

Pliny says in his second book, chapter 103, that the water of the sea is salt because the heat of the sun dries up the moisture and drinks it up; and this gives to the wide stretching sea the savour of salt. But this cannot be admitted, because if the saltiness of the sea were caused by the heat of the sun, there can be no doubt that lakes, pools and marshes would be so much the more salt, as their waters have less motion and are of less depth; but experience shows us, on the contrary, that these lakes have their waters quite free from salt. Again it is stated by Pliny in the same chapter that this saltiness might originate,

desime ²⁴sopradette ragioni, cioè che il
medesimo ac²⁵caderebbe alli paduli e altre
acque che per il cal²⁶do s'asciugano; Acora
fu detto che ²⁷la salsedine del mare è
sudore della terra; ²⁸a questo si risponde
che tutte le uene dell'acque ²⁹che pene-
trano la terra, sarebbono insalate; Ma ³⁰si
cōclude la salsedine del mare esser nata
dalle molte vene d'acqua le quali nel
penetrare la ter³⁵ra trovano ³⁶le mini-
ere del sale, e ³⁸quelle in parte ³⁹si sol-
uono e por⁴⁰ta seco all' o⁴¹ciano e li altri
mari, d'ō⁴³de mai ⁴⁴li nuvo⁴⁴li, seminatori
d'elli fiumi ⁴⁶lo leuano; ed e'sarebbe
più salato il ma⁴⁸re alli nostri tē⁴⁹pi che
mai per ⁵⁰alcun altro tē⁵¹po fusse, e se
per ⁵²l'auersario si dis⁵³cesse, che il tempo
infinito seccherebbe over cōgielerebbe
il mare in sa⁵⁷le, a questo ⁵⁸si risponde,
che ⁵⁹tal sale si rē⁶⁰de alla terra ⁶¹colla
liberatione ⁶²d'essa terra, che ⁶³s'inalza col
suo ⁶⁴acquistato sale, ⁶⁵e li fiumi lo rendo-
no alla sōmersa terra.

because all the sweet and subtle portions which the heat attracts easily being taken away, the more bitter and coarser part will remain, and thus the water on the surface is fresher than at the bottom [22]; but this is contradicted by the same reason given above, which is, that the same thing would happen in marshes and other waters, which are dried up by the heat. Again, it has been said that the saltiness of the sea is the sweat of the earth; to this it may be answered that all the springs of water which penetrate through the earth, would then be salt. But the conclusion is, that the saltiness of the sea must proceed from the many springs of water which, as they penetrate into the earth, find mines of salt and these they dissolve in part, and carry with them to the ocean and the other seas, whence the clouds, the begetters of rivers, never carry it up. And the sea would be saltier in our times than ever it was at any time; and if the adversary were to say that in infinite time the sea would dry up or congeal into salt, to this I answer that this salt is restored to the earth by the setting free of that part of the earth which rises out of the sea with the salt it has acquired, and the rivers return it to the earth under the sea.

G. 49a]

947.

Terza e vlti^{ma} ragione di^{remo}, il sale
essere in tutte ⁵le cose create ⁶e questo
c' i⁷segiano ⁸le acque passate per tutte

947. l. 27. That is, on the supposition that salt, once consumed, disappears for ever.

would not suffice for all human food [27]; whence we are forced to admit, either that the species of salt must be everlasting like the world, or that it dies and is born again like the men who devour it. But as experience teaches us that it does not die, as is evident by fire, which does not consume it, and by water which becomes salt in proportion to the quantity dissolved in it,—and when it is evaporated the salt always remains in the original quantity—it must pass through the bodies of men either in the urine or the sweat or other excretions where it is found again; and as much salt is thus got rid of as is carried every year into towns; therefore salt is dug in places where there is urine.—Sea hogs and sea winds are salt.

We will say that the rains which penetrate the earth are what is under the foundations of cities with their inhabitants, and are what restore through the internal passages of the earth the saltiness taken from the sea; and that the change in the place of the sea, which has been over all the mountains, caused it to be left it there in the mines found in those mountains, &c.

948.

The waters of the salt sea are fresh at the greatest depths.

949.

THAT THE OCEAN DOES NOT PENETRATE UNDER THE EARTH.

The ocean does not penetrate under the earth, and this we learn from the many and various springs of fresh water which, in many parts of the ocean make their way up from the bottom to the surface. The same thing is farther proved by wells dug beyond the distance of a mile from the said ocean, which fill with fresh water; and this happens because the fresh water is lighter than salt water and consequently more penetrating.

Which weighs most, water when frozen or when not frozen?

Più penetra l'acqua dolce cōtro¹⁸ all'acqua salsa, che la salsa cōtro al¹⁹la dolcie.

²⁰Che l'acqua dolcie penetri più cōtro all'acqua salsa, che essa salsa cōtro alla dolcie, ci²¹lo manifesta vna sottile tela asciutta e²³ vecchia, pendente con equal bassezza²⁴ colli sua oppositi stremi nelle due varie²⁵ acque, delle quali le lor superficie siē²⁶ d'equal bassezza, e allor si vedrà elevar²⁹si in alto infra essa pezza tanto più l'acqua²⁸ dolcie, che la salsa, quanto la dolcie è più²⁹ lieve che essa salsa.

FRESH WATER PENETRATES MORE AGAINST SALT WATER THAN SALT WATER AGAINST FRESH WATER.

That fresh water penetrates more against salt water, than salt water against fresh is proved by a thin cloth dry and old, hanging with the two opposite ends equally low in the two different waters, the surfaces of which are at an equal level; and it will then be seen how much higher the fresh water will rise in this piece of linen than the salt; by so much is the fresh lighter than the salt.

950.

All inland seas and the gulfis of those on the form^{ation} of seas, are made by rivers which flow into Gulfs (950. 951).

951.

HERE THE REASON IS GIVEN OF THE EFFECTS PRODUCED BY THE WATERS IN THE ABOVE MENTIONED PLACE.

All the lakes and all the gulfis of the sea and all inland seas are due to rivers which distribute their waters into them, and from impediments in their downfall into the Mediterranean—which divides Africa from Europe and Europe from Asia by means of the Nile and the Don which pour their waters into it. It is asked what impediment is great enough to stop the course of the waters which do not reach the ocean.

952.

OF WAVES.

A wave of the sea always breaks in front of its base, (952—954). and that portion of the crest will then be lowest which before was highest.

Leic. 20a]

Come le rive del mare al continuo acquistano terreno in verso il mezzo del mare; Come li scogli e promontori ³de' mari al continuo ruinano e si consumano; Come i mediterrani scopriranno i lor fondi all'aria e sol riserberanno il canale al maggior fiume, che dentro vi metta, il quale correrà all'oceano e iui uerserà le sue acque insieme con quelle di tutti i fiumi, che cō seco s'accōgnano.

953.

That the shores of the sea constantly acquire more soil towards the middle of the sea; that the rocks and promontories of the sea are constantly being ruined and worn away; that the Mediterranean seas will in time discover their bottom to the air, and all that will be left will be the channel of the greatest river that enters it; and this will run to the ocean and pour its waters into that with those of all the rivers that are its tributaries.

Leic. 27b]

Come il fiume del Po in breve tempo secca il mare Adriano nel ²medesimo modo ch'elli assecò grā parte di Lombardia.

954.

How the river Po, in a short time might dry up the Adriatic sea in the same way as it has dried up a large part of Lombardy.

C. A. 162b; 482a]

^{The ebb and flow of the tide} ¶ Dove è maggior quātità d'acqua, ²qui
è maggior flusso e riflusso; e 'l ³contrario
fa nelle acque strette. ¶

956. 1. Allusion may here be made to the mythological explanation of the ebb and flow given in the Edda. Utgardloki says to Thor (Gylfaginning 48): "When thou wert drinking out of the horn, and it seemed to thee that it was slow in emptying a wonder befell, which I should not have believed possible: the other end of the horn lay in

the sea, which thou sawest not; but when thou shalt go to the sea, thou shalt see how much thou hast drunk out of it. And that men now call the ebb tide."

Several passages in various manuscripts treat of the ebb and flow. In collecting them I have been guided by the rule only to transcribe those which named some particular spot.

Leic. 68]

958.

DEL FLUSSO E RIFLUSSO.

²Tutti li mari ànno il lor flusso e riflusso in v medesimo tempo; ma pare variarsi, perchè li giorni nō co^minciano in vn medesimo tempo in tutto l'universo, cōciosiachè, quādo nel nostro emisperio è mezzo ⁴giorno, nell'opposito emisperio è mezzanotte, e nelle congiuntioni oriéltali dell'uno e del'altro emisphērio comincia la notte che corre dirieto al giorno, e nelle congiūtioni occidentali d'essi emisperi comincia ⁶il giorno che seguita la notte dalla sua opposita parte; adunque è concluso che, ancora che ¹l ⁷detto accrescimēto e diminitione delle altezze de' mari sien fatte in vn ⁸medesimo tempo, essi mostrano variarsi per le già dette cagioni; sono adunque sōmerse le acque ⁹nelle uene partite dai fondi de' mari, le quali ramificano dentro al corpo della terra, e rispondono ¹⁰al nascimento de' fiumi, i quali al continvo tolgonon dal fondo il mare al mare andato; è tolto invmē¹¹rabilmente volte nella superficie un mare al mare; E se tu volessi, che la luna, apprendo all'orientale parte ¹²del Mare Mediterrano, comiciasse ad attrarre a se l'acque del mare, ne seguirebbe che immediate ¹³se ne vedrebbe la speriēza al fine oriéltale di tal mare predetto; Ancora essendo il Mar Medi¹⁴terrano circa alla ottava parte della circūferenza della spera dell'acqua, per essere lui ¹⁵lungo 3 mila miglia, e l'flusso e riflusso nō fa se nō 4 volte in 24 ore, e' nō s'accorderebbe tale ¹⁶effetto col tempo d'esse 24 ore, se esso Mare Mediterrā nō fusse lungo semila miglia, perchè ¹⁷se lo spogliamēto di tanto mare avesse a passare per lo stretto di Gibilter nel correr dietro ¹⁸alla luna, e' sarebbe si grāde il corso delle acque per tale stretto, e s'alzerebbe in tāta altezza, ¹⁹che dopo esso stretto farebbe tal corso, che per molte miglia infra l'oceano farebbe inōdatione e bolli²⁰menti grandissimi, per la qual cosa sarebbe impossibile passarui, e dopo questo subito l'oceano rēderebbe colla medesima furia l'acque ricevute, donde esso le riceve;

OF THE FLOW AND EBB.

All seas have their flow and ebb in the same period, but they seem to vary because the days do not begin at the same time throughout the universe; in such wise as that when it is midday in our hemisphere, it is midnight in the opposite hemisphere; and at the Eastern boundary of the two hemispheres the night begins which follows on the day, and at the Western boundary of these hemispheres begins the day, which follows the night from the opposite side. Hence it is to be inferred that the above mentioned swelling and diminution in the height of the seas, although they take place in one and the same space of time, are seen to vary from the above mentioned causes. The waters are then withdrawn into the fissures which start from the depths of the sea and which ramify inside the body of the earth, corresponding to the sources of rivers, which are constantly taking from the bottom of the sea the water which has flowed into it. A sea of water is incessantly being drawn off from the surface of the sea. And if you should think that the moon, rising at the Eastern end of the Mediterranean sea must there begin to attract to herself the waters of the sea, it would follow that we must at once see the effect of it at the Eastern end of that sea. Again, as the Mediterranean sea is about the eighth part of the circumference of the aqueous sphere, being 3000 miles long, while the flow and ebb only occur 4 times in 24 hours, these results would not agree with the time of 24 hours, unless this Mediterranean sea were six thousand miles in length; because if such a superabundance of water had to pass through the straits of Gibraltar in running behind the moon, the rush of the water through that strait would be so great, and would rise to such a height, that beyond the straits it would for many miles rush so violently into the ocean as to cause floods and tremendous seething, so that it would be impossible to pass through. This agitated ocean would afterwards return the waters it

ecco che adūque mai si ²² passerebbe per tale stretto, e la speriēza mostra che d'ogni ora vi si passa, saluo che quādo il uento ²³ viē per la linia della corrēte, allora il riflusso forte s'aumēta; Il mare non alza l'acqua nelli ²⁴ strettī che ànno vscita ma ben s'ingorga e si ritarda dināti a quelli, onde con furioso moto ²⁵ poi ristora il tempo del suo ritardamēto insino al fin del suo moto riflesso.

Leic. 13a]

Come jl flusso e riflusso non è generale, perchè ²in riuiera di Genova non fa niête, a Vinegia due braccia, tra la Inghilterra e Fiandra fa 18 braccia; ³Come per lo stretto di Sicilia la corrēte è grādissima, perchè di lì passā tutte l'acque de' fiumi che uersā ⁴nel Mare Adriatico.

Leic. 35a]

Nelle parti occidentali, appresso alla Fiandra, il mare cresce e māca ogni 6 ore circa 20 braccia, ²e 22 quādo la luna è in suo favore, ma le 20 braccia è il suo ordinario, il quale ordinario manifestamēte si uede ³non essere per cavsa della luna; Questa varietà del crescere e discrescere del mare ogni 6 ore può ⁴accadere per le ringorgazioni delle acque, le quali son condotte nel Mare Meditarrano da quella quantità de' fiumi dell'Africa Asia ed Evropa, chie in esso mare versano le loro acque, le quali per lo stretto di Giblitar infra Abila

had received with equal fury to the place they had come from, so that no one ever could pass through those straits. Now experience shows that at every hour they are passed in safety, but when the wind sets in the same direction as the current, the strong ebb increases [23]. The sea does not raise the water that has issued from the straits, but it checks them and this retards the tide; then it makes up with furious haste for the time it has lost until the end of the ebb movement.

959.

That the flow and ebb are not general; for on the shore at Genoa there is none, at Venice two braccia, between England and Flanders 18 braccia. That in the straits of Sicily the current is very strong because all the waters from the rivers that flow into the Adriatic pass there.

960.

In the West, near to Flanders, the sea rises and decreases every 6 hours about 20 braccia, and 22 when the moon is in its favour; but 20 braccia is the general rule, and this rule, as it is evident, cannot have the moon for its cause. This variation in the increase and decrease of the sea every 6 hours may arise from the damming up of the waters, which are poured into the Mediterranean by the quantity of rivers from Africa, Asia and Europe, which flow into that sea, and the waters which are given to it by those rivers; it pours them to the ocean

958. 23. In attempting to get out of the Mediterranean, vessels are sometimes detained for a considerable time; not merely by the causes mentioned by Leonardo but by the constant current flowing eastwards through the middle of the straits of Gibraltar.

959. A few more recent data may be given here to facilitate comparison. In the Adriatic the tide rises 2 and $\frac{1}{2}$ feet, at Terracina $1\frac{1}{4}$. In the English channel between Calais and Kent it rises from 18 to 20 feet. In the straits of Messina it rises no more than $2\frac{1}{2}$ feet, and that only in stormy weather, but the current is all the stronger. When Leo-

nardo accounts for this by the southward flow of all the Italian rivers along the coasts, the explanation is at least based on a correct observation; namely that a steady current flows southwards along the coast of Calabria and another northwards, along the shores of Sicily; he seems to infer, from the direction of the first, that the tide in the Adriatic is caused by it.

960. 5. *Abila*, Lat. *Abyla*, Gr. Ἀβύλη, now *Sierra Ximiera* near Ceuta; *Calpe*, Lat. *Calpe*, Gr. Κάλπη, now Gibraltar. Leonardo here uses the ancient names of the rocks, which were known as the Pillars of Hercules.

e Calpe⁶ promotori rende all'oceano le acque che da essi fiumi li son date, j'l quale oceano, astendendosi⁷ infra le isole d'Inghilterra e l'altre più settentrionali, si uiene a ringorgare e tenere in collo per diuersi golfi,⁸ li quali, essendo tali mari discostatisi colla lor superficie dal centro del mōdo, ànno acquistato peso, il quale,⁹ poichè supera la potentia dell'avenimēto delle acque che lo cavauano, essa acqua ripiglia impeto in contrario al suo avenimēto, e fa impeto contro alli stretti, che li davano l'acque e massime fa¹¹ contra lo stretto di Gibiltar, il quale per alquāto spatio di tempo rimā ringorgato e viene a riseruarsi tutt' te l'acque che di novo in tal tempo li sō date dalli già detti fiumi, e questa mi pare una delle ragioni chē¹³ si potrebbe assegnare della causa d'esso flusso e riflusso, come nella 21^a del 4^a della mia teori¹⁴ ca è provato.

through the straits of Gibraltar, between Abila and Calpe[5]. That ocean extends to the island of England and others farther North, and it becomes dammed up and kept high in various gulfs. These, being seas of which the surface is remote from the centre of the earth, have acquired a weight, which as it is greater than the force of the incoming waters which cause it, gives this water an impetus in the contrary direction to that in which it came and it is borne back to meet the waters coming out of the straits; and this it does most against the straits of Gibraltar; these, so long as this goes on, remain dammed up and all the water which is poured out meanwhile by the aforementioned rivers, is pent up [in the Mediterranean]; and this might be assigned as the cause of its flow and ebb, as is shown in the 21st of the 4th of my theory.

alla altezza della rotta vena; ⁵ Quando l'acqua escie della rotta vena della terra, essa osservava la natura dell'altre cose più gravi ⁶che l'aria, onde sempre cerca i lochi bassi. ⁷Vaño ⁸le uene scorrendo con infinità ramificatione pel corpo della terra.

from below rises to the level of the burst vein. When the water rushes out of a burst vein in the earth it obeys the nature of other things heavier than the air, whence it always seeks the lowest places. [7] These waters traverse the body of the earth with infinite ramifications.

Br. M. 233δ]

Quella cavsa, che move li umori in tutte le spetie de' corpi animati e che cō quelle soccorre a ogni lesione, ²move l'acqua dall'infimā profōditā del mare alla sōma altezza de' mōti, ³e come l'acqua si leua dalle ⁴inferiori parti della vite all'alte tagliature.

964.

The same cause which stirs the humours in every species of animal body and by which every injury is repaired, also moves the waters from the utmost depth of the sea to the greatest heights.

Br. M. 236δ]

L'acqua è proprio quella che per vitale umore ²di questa arida terra è dedicata, e ³quella cavsa che la move per le sue ramiificate vene contro al natural corso delle cose gravi, è proprio quella che mo've li umori in tutte le spetie de' corpi ⁷animati; Ma quella, con sōma āmī⁸ratiō de' sua contemplanti, dall'infima profondità del mare all'altissime somitā ¹⁰de' mōti si leua, e per le rotte vene ver¹¹sando al basso mare ritorna, e di novo ¹²con celerità sormōta, e all'ātiddetto de¹³sceso ritorna, così dalle parti intrī¹⁴siche all'esteriori, così dalle infime alle ¹⁵superiori, voltādo quādo con naturale cor¹⁶so ruina, così insieme cōgiunta, cō ¹⁷cōtinua revolutione, ¹⁸per li terrestri meati si ua raggrādo.

965.

It is the property of water that it constitutes the vital human of this arid earth; and the cause which moves it through its ramified veins, against the natural course of heavy matters, is the same property which moves the humours in every species of animal body. But that which crowns our wonder in contemplating it is, that it rises from the utmost depths of the sea to the highest tops of the mountains, and flowing from the opened veins returns to the low seas; then once more, and with extreme swiftness, it mounts again and returns by the same descent, thus rising from the inside to the outside, and going round from the lowest to the highest, from whence it rushes down in a natural course. Thus by these two movements combined in a constant circulation, it travels through the veins of the earth.

966. 11, 17. Cicognola, Syphon. See Vol. I, Pl. XXIV, No. 1.

967. 968. This conception of the rising of the

which bound it, but only so much rises as the dryness of the mountain attracts. And if, on the contrary, the rain, which penetrates from the summit of the mountain to the base, which is the boundary of the sea; descends and softens the slope opposite to the said mountain and constantly draws the water, like a syphon[11] which pours through its longest side, it must be this which draws up the water of the sea; thus if *s n* were the surface of the sea, and the rain descends

from the top of the mountain *a* to *n* on one side, and on the other sides it descends from *a* to *m*, without a doubt this would occur after the manner of distilling through felt, or as happens through the tubes called syphons[17]. And at all times the water which has softened the mountain, by the great rain which runs down the two opposite sides, would constantly attract the rain *a n*, on its longest side together with the water from the sea, if that side of the mountain *a m* were longer than the other *a n*; but this cannot be, because no part of the earth which is not submerged by the ocean can be lower than that ocean.

967.

OF SPRINGS OF WATER ON THE TOPS OF MOUNTAINS.

It is quite evident that the whole surface of the ocean—when there is no storm—is at an equal distance from the centre of the earth, and that the tops of the mountains are farther from this centre in proportion as they rise above the surface of that sea; therefore if the body of the earth were not like that of man, it would be impossible that the waters of the sea—being so much lower than the mountains—could by their nature rise up to the summits of these mountains. Hence it is to be believed that the same cause which keeps the blood at the top of the head in man keeps the water at the summits of the mountains.

blood, which has given rise to the comparison, was recognised as erroneous by Leonardo himself at a later period. It must be remembered that

968.

IN CONFIRMATION OF WHY THE WATER GOES
TO THE TOPS OF MOUNTAINS.

I say that just as the natural heat of the blood in the veins keeps it in the head of man,—for when the man is dead the cold blood sinks to the lower parts—and when the sun is hot on the head of a man the blood increases and rises so much, with other humours, that by pressure in the veins pains in the head are often caused; in the same way veins ramify through the body of the earth, and by the natural heat which is distributed throughout the containing body, the water is raised through the veins to the tops of mountains. And this water, which passes through a closed conduit inside the body of the mountain like a dead thing, cannot come forth from its low place unless it is warmed by the vital heat of the spring time. Again, the heat of the element of fire and, by day, the heat of the sun, have power to draw forth the moisture of the low parts of the mountains and to draw them up, in the same way as it draws the clouds and collects their moisture from the bed of the sea.

969.

That many springs of salt water are found at great distances from the sea; this might happen because such springs pass through some mine of salt, like that in Hungary where salt is hewn out of vast caverns, just as stone is hewn.

are veins, or branched streams, on the side of the hill, like those on the skull Pl. CVIII, No. 4.

969. The great mine of Wieliczka in Galicia, out of which a million cwt. of rock-salt are annually dug out, extends for 3000 mètres from West to East, and 1150 mètres from North to South.

IV.

OF RIVERS.

Leic. 33δ]

DELLE DIRIUTIONI DE' FIUMI.

² Il corpo della terra, a similitudine de' corpi deli animali, è tessuto di ramificationi di uene, le quali son tutte insieme cōgiunte, e son constituite a nvtrimento e viuificazione d'essa terra e de' sua creati; partono dalle profondità del mare, e a quelle dopo molta revolutio^{ne} ànno a tornare per li fiumi creati dalle alte rotture d'esse uene; e se tu volessi dire, le piose il uerno o la resolutione della neue l'estate essere causa del nascimento de' fiumi, e' si ti potrebbe allegare ⁶li fumi, che ànno origine ne' paesi focosi dell'Africa, nella quale non piove e meno nevica, perchè il superchio ⁷caldo senpre risolute in aria tutti li nuvoli, che da uèti in là son sospinti; e se tu diciessi che tali fumi, che uè⁸gono grossi il Luglio e l'Agosto, son delle nevi che si risoluzzano il Maggio e l'Giugnio per l'appressamèto del sole alle neui delle montagnie di Scitia, e che tali resolutioni si riducono in certe valli e fanno laghi, doue poi entrano per le ¹⁰vene e caue sotterane, le

On the way
in which the

rivers are
fed.

970.

OF THE ORIGIN OF RIVERS.

The body of the earth, like the bodies of animals, is intersected with ramifications of waters which are all in connection and are constituted to give nutriment and life to the earth and to its creatures. These come from the depth of the sea and, after many revolutions, have to return to it by the rivers created by the bursting of these springs; and if you chose to say that the rains of the winter or the melting of the snows in summer were the cause of the birth of rivers, I could mention the rivers which originate in the torrid countries of Africa, where it never rains—and still less snows—because the intense heat always melts into air all the clouds which are borne thither by the winds. And if you chose to say that such rivers, as increase in July and August, come from the snows which melt in May and June from the sun's approach to the snows on the mountains of Scythia[9], and that such meltings come down into certain valleys and form lakes, into which they enter by springs and subter-

VOL. II.

ranean caves to issue forth again at the sources of the Nile, this is false; because Scythia is lower than the sources of the Nile, and, besides, Scythia is only 400 miles from the Black sea and the sources of the Nile are 3000 miles distant from the sea of Egypt into which its waters flow.

971.

Book 9, of the meeting of rivers and of ^{The tide in estuaries.} their ebb and flow. The cause is the same in the sea, where it is caused by the straits of Gibraltar; and again it is caused by whirlpools.

[3] If two rivers meet together to form a straight line, and then below two right angles take their course together, the flow and ebb will happen now in one river and now in the other above their confluence, and principally if the outlet for their united volume is no swifter than when they were separate. Here occur 4 instances.

972.

When a smaller river pours its waters ^{On the alterations, caused in the courses of rivers by their confluence (972-974).} into a larger one, and that larger one flows from the opposite direction, the course of the smaller river will

bend up against the approach of the larger river; and this happens because, when the larger river fills up all its bed with water, it makes an eddy in front of the mouth of the other river, and so carries the water poured in by the smaller river with its own. When the smaller river pours its waters into the larger one, which runs across the current

at the mouth of the smaller river, its waters will bend with the downward movement of the larger river.

972. In the original sketches the word *Arno* is written at the spot here marked *A*, at *R. Rifredi*, and at *M. Mignone*.

CC

Leic. 168]

Quando le piene de' fiumi sō ²diminuite, allor li angoli acuti, che si generā nelle congiuntioni de' sua rami, si fanno piv cor³ti nelli lor lati e più grossi nelle lor punte, come sia la corrente *a n*, e la corrente *d n*, le quali si congiunghino insieme in *n*, quando il fiume è nelle sue gran piene; dico che, quando sia nella predetta dispositione, che se *d n* avanti la piena era piv basso che *a n*, che nel tempo della piena ⁶*d n* sarà piē di rena e fango, il quale nel calare delle acque *d n* porterà uia il fango e rimarrà col fondo basso, e 'l canale *a n*, trovandosi alto, scolerà le sue acque nel basso *d n* e consumerà tutta ⁸la punta del renaio *b c n*, e così rimarrà l'angolo *a c d* piv grosso che l'angolo *a n d*, e di lati più corti, come ⁹prima dissi.

973.

G. 49 b]

DELLA VIBRATIONE DELLA TERRA.

²Li corsi sotterranei ³delle acque, sicome quelli che son fatti infra ⁴l'aria e la terra, son quelli che al continuo ⁵cōsumano e profondano li letti del⁶li lor corsi.

Leic. 62]

Il fiume che esce de' mōti pone gran quātitā di sassi grossi in nel suo ghiareto, i quali fatti sono ancora ²con parte de' sua angoli e lati, e nel processo del corso conduce pietre minori con angoli piv cōsumati, cioè le grā ³pietre fa minori, e piv oltre pō ghaia grossa, e poi minvta; e seguita rena grossa, e poi minvta, dipoi procede ⁴litta grossa, e poi piv sottile, e così seguēdo giugne al mare l'acqua turba di rena e di litta; la rena scarica sopra de' ⁵liti marini per il rigurgitamēto dell'ōde salse, e segue la litta di tanta sottilitā che par di natura d'acqua, la qual non si ferma sopra de' mari liti, ma ritorna indietro coll'acqua per la sua leuitā, perch'è nata di foglie marcie e d'altre cose leuissime, si ⁷che, essendo quasi, com'è detto, di natura d'acqua, essa poi in tempo di bonaccia si scarica e si ferma sopra del ⁸fondo del mare, ove per la sua sottilitā si condensa e resiste all'onde che sopra vi passano per la sua lubricità, e ⁹qui stanno i nichi e quest'è terra bianca da far boccali.

976.

OF THE VIBRATION OF THE EARTH.

The subterranean channels of waters, like those which exist between the air and the earth, are those which unceasingly wear away and deepen the beds of their currents.

On the alterations in the channels of rivers.

977.

A river that flows from mountains deposits a great quantity of large stones in its bed, which still have some of their angles and sides, and in the course of its flow it carries down smaller stones with the angles more worn; that is to say the large stones become smaller. And farther on it deposits coarse gravel and then smaller, and as it proceeds this becomes coarse sand and then finer, and going on thus the water, turbid with sand and gravel, joins the sea; and the sand settles on the sea-shores, being cast up by the salt waves; and there results the sand of so fine a nature as to seem almost like water, and it will not stop on the shores of the sea but returns by reason of its lightness, because it was originally formed of rotten leaves and other very light things. Still, being almost—as was said—of the nature of water itself, it afterwards, when the weather is calm, settles and becomes solid at the bottom of the sea, where by its fineness it becomes compact and by its smoothness resists the waves which glide over it; and in this shells are found; and this is white earth, fit for pottery.

Leic. 31 b]

978.

Tutte l'uscite dell'acque dal monte nel mare portā cō seco li sassi del monte in es'so mare, e per la inōdatione dell'acque marine contro alli sua monti, esse pietre erā ributta³te inverso il mōte, e nell'ādere e nel ritornare indietro delle acque al mare, le pietre insieme cō quel⁴la tornavano, e nel ritornare li angoli loro insieme si percuoteano, e come parte men ⁵resistente alle percosse si cōsumavano e facean le pietre sanza angoli, in figu⁶ra rotonda, come ne' liti dell'Elsa si dimostra, e quelle rimanevā piv grosse, che manco sarā remosse ⁷dal lor

All the torrents of water flowing from the mountains to the sea carry with them the stones from the hills to the sea, and by the influx of the sea-water towards the mountains; these stones were thrown back towards the mountains, and as the waters rose and retired, the stones were tossed about by it and in rolling, their angles hit together; then as the parts, which least resisted the blows, were worn off, the stones ceased to be angular and became round in form, as may be seen on the banks of the Elsa. And those remained larger which were less removed

from their native spot; and they became smaller, the farther they were carried from that place, so that in the process they were converted into small pebbles and then into sand and at last into mud. After the sea had receded from the mountains the brine left by the sea with other humours of the earth made a concretion of these pebbles and this sand, so that the pebbles were converted into rock and the sand into tufa. And of this we see an example in the Adda where it issues from the mountains of Como and in the Ticino, the Adige and the Oglio coming from the German Alps, and in the Arno at Monte Albano[13], near Monte Lupo and Capraia where the rocks, which are very large, are all of conglomerated pebbles of various kinds and colours.

¶Li mōti son fatti dalli cor²si de' fiumi; ¶

³¶Li mōti son disfatti dalli cor⁴si de' fiumi. ¶

Mountains are made by the currents of rivers.

Mountains are destroyed by the currents of rivers.

Leic. 10a]

980.

Come le ²radici settentrionali di qualunque alpe non sono ancora petrificate; e questo si vede ma³nifestamente doue i fiumi, che le tagliano, corrano inverso settentrione, li quali taglia ⁴nell'altezze de' mōti le falde delle pietre viue, e nell'congiugniersi colle pianure le predette falde ⁵son tutte di terra da fare boccali, come si dimostra in Val di Lamona al fiume Lamona nel⁶l'uscire del Mōte Appenino fargli le predette cose nelle sue rive;

Come li fiumi ànno tutti segati ⁷e diuisi li menbri delle grand'alpi l'uno dall'altro, e questo si manifesta per lo ordine delle ⁸pietre faldate, chè dalla sommità del monte insino al fiume si vedono le corrispondenze delle falde essere ⁹così da l'un de' lati del fiume come dall'altro; Come

That the Northern bases of some Alps are not yet petrified. And this is plainly to be seen where the rivers, which cut through them, flow towards the North; where they cut through the strata in the living stone in the higher parts of the mountains; and, where they join the plains, these strata are all of potter's clay; as is to be seen in the valley of Lamona where the river Lamona, as it issues from the Appenines, does these things on its banks.

That the rivers have all cut and divided the mountains of the great Alps one from the other. This is visible in the order of the stratified rocks, because from the summits of the banks, down to the river the correspondence of the strata in the rocks is visible on either side of the river. That the

The summits of mountains for a long time rise constantly.

The opposite sides of the mountains always approach each other below; the depths of the valleys which are above the sphere of the waters are in the course of time constantly getting nearer to the centre of the world.

In an equal period, the valleys sink much more than the mountains rise.

The bases of the mountains always come closer together.

In proportion as the valleys become deeper, the more quickly are their sides worn away.

GEOLOGICAL PROBLEMS.

Leic. 3^a]

985.

In questa tua opera tu ài jn prima a provare, come li nichi in mille braccia d'altura nō ui furò ²portati dal diluui, perchè si uedono a ù medesimo liuello, e si vedono auāzare assai möti sopra ³esso liuello, e a dimädare se 'l diluvio fù per pioggia o per ringorgamēto di mare, e poi ài ⁴mostrare, che nè per pioggia che ingrossi i fiumi, nè per rigonfiamēto d'esso mare; li nichi, come cosa ⁵grave, non sono sospinti dal mare alli möti, nè tirati a se dalli fiumi cōtro al corso delle ⁶loro acque.

C. A. 152^a; 452^a

DUBITATIONE.

² Mouesi qui vn dubbio e questo è, se Doubts 'l ³diluvio, venuto al tempo di Noè, fù vni- about the deluge. ⁴versale o no; E qui parrà di no, per le

In this work you have first to prove that the shells at a thousand braccia of elevation were not carried there by the deluge, because they are seen to be all at one level, and many mountains are seen to be above that level; and to inquire whether the deluge was caused by rain or by the swelling of the sea; and then you must show how, neither by rain nor by swelling of the rivers, nor by the overflow of this sea, could the shells—being heavy objects—be floated up the mountains by the sea, nor have carried there by the rivers against the course of their waters.

986.

A DOUBTFUL POINT.

Here a doubt arises, and that is: whether the deluge, which happened at the time of Noah, was universal or not. And it would

985. The passages, here given from the MS. Leic., have hitherto remained unknown. Some preliminary notes on the subject are to be found in MS. F 80^a and 80^b; but as compared with the fuller treatment here given, they are, it seems to me, of secondary interest. They contain nothing

that is not repeated here more clearly and fully. LIBRI, *Histoire des Sciences mathématiques III*, pages 218—221, has printed the text of F 80^a and 80^b, therefore it seemed desirable to give my reasons for not inserting it in this work.

ragioni che si assegnieranno; Noi abbiamo nella bibbia, ¹⁶che il predetto diluvio fù composto di 40 ⁷dì e 40 notti di continua e vniversa piog⁸gia, e che tal pioggia alzò dieci ⁹gomiti sopra al più alto mōte dell'univer¹⁰so; E se così fù, che la pioggia fusse vniver¹¹sale, ella vestì di se la nostra ter¹²ra di figura sperica; È la superfi¹³tie sperica in ogni sua parte equalmen¹⁴te distante dal ciētro della sva spe¹⁵ra, onde la spera del'acqua, trovandosi ¹⁶nel modo della detta condizione, ellì è ¹⁷impossibile, che l'acqua sopra di lei si move, ¹⁸perchè l'acqua in se non si move, s'ella non ¹⁹disciēde; addunque l'acqua di tanto dilu²⁰vio come si parti, se qui è provato, non a²¹ver moto? e s'ella si parti, come si mosse, ²²se ella non adava allo insù? e qui ne mācano²³ le ragiō naturali, òde bisogna per soccor²⁴so di tal dvbitatione chiamare il mira²⁵colo per aiuto, o dire che ²⁶tale acqua fu vaporata dal calore del sole.

seem not, for the reasons now to be given: We have it in the Bible that this deluge lasted 40 days and 40 nights of incessant and universal rain, and that this rain rose to ten cubits above the highest mountains in the world. And if it had been that the rain was universal, it would have covered our globe which is spherical in form. And this spherical surface is equally distant in every part, from the centre of its sphere; hence the sphere of the waters being under the same conditions, it is impossible that the water upon it should move, because water, in itself, does not move unless it falls; therefore how could the waters of such a deluge depart, if it is proved that it has no motion? and if it departed how could it move unless it went upwards? Here, then, natural reasons are wanting; hence to remove this doubt it is necessary to call in a miracle to aid us, or else to say that all this water was evaporated by the heat of the sun.

DEL DILUUIO E DE' NICHI MARINI.

²Se tu dirai che li nichì, che per li confini d'Italia lontano dalli mari in tāta altezza si ueggono ³alli nostri tempi, siano stati per causa del diluuiio che li lasciò, io ti rispōdo che, credendo tu che ⁴tal diluuiio superasse il piv alto monte 7 cubiti, come scrisse chi li misurò, tali nichì che senpre ⁵stanno vicini ai liti del mare, e' doueano restare sopra tali mōtagnie, e nō si poco sopra le radi⁶ci de' monti per tutto a vna medesima altezza a suoli a suoli; E se tu dirai che, essendo tali ⁷nichi vaghi di stare vicini alli liti marini e che, crescēdo in tāta altezza, che li nichì si ⁸partirono da esso lor primo sito e seguirarono l'accrescimēto delle acque insino alla lor ⁹soñna altezza, Qui si risponde che, sendo il nichio anima-

OF THE DELUGE AND OF MARINE SHELLS.

If you were to say that the shells which are to be seen within the confines of Italy ^{That marine shells could not go up the mountains.} now, in our days, far from the sea and at such heights, had been brought there by the deluge which left them there, I should answer that if you believe that this deluge rose 7 cubits above the highest mountains—as he who measured it has written—these shells, which always live near the sea-shore, should have been left on the mountains; and not such a little way from the foot of the mountains; nor all at one level, nor in layers upon layers. And if you were to say that these shells are desirous of remaining near to the margin of the sea, and that, as it rose in height, the shells quitted their first home, and followed the increase of the waters up to their highest level; to this I answer, that the cockle is an animal of not more rapid movement than the snail is out of water, or even somewhat

¹⁰le di non più veloce moto, che si sia la lumaca, fori dell'acqua, e qualche cosa più tarda perchè nō nota, ¹¹zi si fa vn solco per l'arena mediante i lati di tal solco ove s'appoggia, caminerà il dì dalle 3 alle 4. braccia; ¹²adunque questo cō tale moto nō sarà caminato dal mare Adriano insino in Mōferrato di Lon¹³bardia, chè v'è 250 miglia di distantia, in 40 giorni, come disse chi tenne cōto d'esso tempo; e se tu dici che ¹⁴l'onde ve li portarono, essi per la lor gravezza non si reggono, se nō sopra il suo fondo; e se questo nō mi ¹⁵concedi, cōfessami al meno ch'elli aueano a rimanere nelle cime de' piv alti mōti e ne' laghi che in ¹⁶fra li mōti si serrano, come lago di Lario o di Como, e 'l Maggiore, e di Fiesole, e di Perugia e simili;

¹⁷E se tu dirai che li nichi son ¹⁸portati dall'onde, essēdo voti e morti, io dico che, dove andauano li morti, poco si rimo-veuano da'uiui, e in que¹⁹ste montagnie sono trovati tutti i uiui che si cognoscono che sono colli gusci appaiati, e sceno ²⁰in vn filo doue non è nessun de' morti, e poco piv alto è trovato doue eran gittati dall'²¹de tutti li morti colle loro scorze separate, apresso a dove li fumi cascavano in ²²mare in grā profondità; come Arno, che cadea dalla Gonfolina apresso a ²³Môte Lupo e quiui lasciaua la ghiaja, la quale ancor si uede, che si è insieme ricōgielata e di pie²⁴tre di uari paesi nature e colori e durezze se n'è fatto vna sola congelatione, e poco più oltre la congelatione dell'are²⁵na s'è fatta tufo, dou'ella s'agiraua inverso Castel Fiorētino, più oltre si scaricava il fango, ²⁶nel quale abitavano i nichi, il quale s'inalzava a gradi, secondo che le piene d'Arno torbido ²⁷in quel mare versauano, e di tempo in tempo s'inalzaua il fondo al mare, jl quale a gradi ²⁸producea essi nichi, come si mostra nel taglio di Colle Gonzoli, dirupato dal fiume d'Arno, ²⁹che il suo piede consuma, nel qual taglio si

slower; because it does not swim, on the contrary it makes a furrow in the sand by means of its sides, and in this furrow it will travel each day from 3 to 4 braccia; therefore this creature, with so slow a motion, could not have travelled from the Adriatic sea as far as Monferrato in Lombardy [13], which is 250 miles distance, in 40 days; which he has said who took account of the time. And if you say that the waves carried them there, by their gravity they could not move, excepting at the bottom. And if you will not grant me this, confess at least that they would have to stay at the summits of the highest mountains, in the lakes which are enclosed among the mountains, like the lakes of Lario, or of Como and il Maggiore [16] and of Fiesole, and of Perugia, and others.

And if you should say that the shells were carried by the waves, being empty and dead, I say that where the dead went they were not far removed from the living; for in these mountains living ones are found, which are recognisable by the shells being in pairs; and they are in a layer where there are no dead ones; and a little higher up they are found, where they were thrown by the waves, all the dead ones with their shells separated, near to where the rivers fell into the sea, to a great depth; like the Arno which fell from the Gonfolina near to Monte Lupo [23], where it left a deposit of gravel which may still be seen, and which has agglomerated; and of stones of various districts, natures, and colours and hardness, making one single conglomerate. And a little beyond the sand-stone conglomerate a tufa has been formed, where it turned towards Castel Florentino; farther on, the mud was deposited in which the shells lived, and which rose in layers according to the levels at which the turbid Arno flowed into that sea. And from time to time the bottom of the sea was raised, depositing these shells in layers, as may be seen in the cutting at Colle Gonzoli, laid open by

987. 13. *Monferrato di Lombardia.* The range of hills of Monferrato is in Piedmont, and Casale di Monferrato belonged, in Leonardo's time, to the Marchese di Mantova.

16. *Lago di Lario.* *Lacus Larius* was the name given by the Romans to the lake of Como. It is evident that it is here a slip of the pen since the

the words in the MS. are: "Come Lago di Lario o'l Magore e di Como." In the MS. after line 16 we come upon a digression treating of the weight of water; this has here been omitted. It is 11 lines long.

23. *Monte Lupo,* compare 970, 13; it is between Empoli and Florence.

uedono manifestamēte li predetti gradi de' nichi in ³⁰ fango azzureggiante, e ui si trova di uarie cose marine; E si è alzata la terra del nostro ³¹ emisperio per tanto più che nō solea, per quāto ella si fece più lieue delle acque, che le manca³²rōno per il taglio di Calpe e d'Abila, e altrettanto piv s'è alzata, perchè il peso dell'acque, che di qui mā³³carono, s'aggiunsero alla terra volta all'altro emisperio, E se li nichi fussero stati ³⁴portati dal Torbido diluui, essi si sarebbero misti, separatamente l'un dal'altro, infra 'l fango e non ³⁵con ordinati gradi a suoli, come alli nostri tempi si vede.

the Arno which is wearing away the base of it; in which cutting the said layers of shells are very plainly to be seen in clay of a bluish colour, and various marine objects are found there. And if the earth of our hemisphere is indeed raised by so much higher than it used to be, it must have become by so much lighter by the waters which it lost through the rift between Gibraltar and Ceuta; and all the more the higher it rose, because the weight of the waters which were thus lost would be added to the earth in the other hemisphere. And if the shells had been carried by the muddy deluge they would have been mixed up, and separated from each other amidst the mud, and not in regular steps and layers—as we see them now in our time.

Leic. 9 a]

988.

Di quelli che dicono che i nichi sono per molto spatio e nati remoti dalli mari per la natura del sito e de' cieli, ²che dispone e influiscie tal loco a simile creatione d'animali; a costor si risponderà che, se tale influētia ³d'animali nō potrebbe accadere in vna sola linia, se nō animali di medesima sorte e età, e non il uechio col gio⁴vane, e nō alcun col coperchio e l'altro essere sanza sua copritura, e nō l'uno esser rotto e l'altro intero, ⁵se nō l'uno ripieno di rena marina e rottame minvto e grosso d'altri nichi dentro alli nichi ⁶interi, che lì son rimasti aperti, e nō le boche de' granchi sanza il rimanēte del suo tutto, e non li ni⁷chi d'altre spetie appiccati con loro in forma d'animale che sopra di quelli si mouesse, perchè ancora resta ⁸il uestigio del suo andamento sopra la scorza che lui già, a uso di tarlo sopra il legname, andò cōsumādo; ⁹nō si trovrebbero infra loro ossa e denti di pescie, li quali alcuni dimandano saette e altri lingue di ser¹⁰penti,

As to those who say that shells existed for a long time and were born at a distance from the sea, from the nature of the place and of the cycles, which can influence a place to produce such creatures—to them it may be answered: such an influence could not place the animals all on one line, except those of the same sort and age; and not the old with the young, nor some with an operculum and others without their operculum, nor some broken and others whole, nor some filled with sea-sand and large and small fragments of other shells inside the whole shells which remained open; nor the claws of crabs without the rest of their bodies; nor the shells of other species stuck on to them like animals which have moved about on them; since the traces of their track still remain, on the outside, after the manner of worms in the wood which they ate into. Nor would there be found among them the bones and teeth of fish which some call arrows and others serpents' tongues, nor would so many

e nō si troverebbero tanti mēbri di diuersi animali insieme vnti se lì da liti marini gittati nō fussino, ¹¹e 'l diluio lì nō gli avrebbe portati, perchè le cose gravi più del'acqua nō stanno a galla sopra l'acqua, e le cose pre¹²dette nō sariano in tanta altezza, se già a nuoto ivi sopra dell'acque portate non furono, la qual cosa è impossibile per la lor gravezza; Dove le uallate non ricievono le acque salse del mare, quiui i nichi mai non si ¹⁴vedono, come manifesto si uede nella gran valle d'Arno di sopra alla Gonfolina, sasso per antico vnto ¹⁵con Monte Albano in forma d'altissimo argine, il quale tenea ringorgato tal fume in modo che prima che versasse nel mare, ¹⁶il quale era dopo ai piedi di tal sasso, componea 2 grandi laghi, de' quali il primo è, dove oggi si uede fiorire la città di Fiorē¹⁷ze insieme con Prato e Pistoia, e Monte Albano seguiva il resto dell'argine insin doue oggi è posto Serravalle; dal Vai d'Arno ¹⁸di sopra insino Arezzo si creava vno secondo lago, il quale nell'atidetto lago versaua le sue acque, ¹⁹chiuso circa dove oggi si uede Girone, e occupaua tutta la detta valle di sopra per ispatio di 40 miglia ²⁰di lūgezza; questa valle riceue sopra il suo fondo tutta la terra portata dall'acqua da quella intorbidata, la quale ²¹ancora si uede a' piedi di Prato Magno restare altissima, doue li fumi nō l'anno consumata, e infra essa terra si uedono le pro²²fonde segature de' fumi che quiui son passati, li quali discēdono dal grā mōte di Prato Magno, nelle quali ²³segature nō si uede vestigio alcuno di nichi e di terra marina; questo lago si congiugnea col lago di Perugia;

²⁴Gran somma di nichi si uede doue li fumi versano in mare, perchè in tali siti l'acque non so²⁵nō tante salse per la mistion dell'acque dolci che con quelle s'uniscono, e 'l segno di ciò si vede doue per antico li Mo²⁶nti Appenini versauano li lor fumi nel mare Adriano, li quali in gran parte mostrano infra li mōti grā ²⁷somma di nichi insieme coll azzurigno terreno di mare,

portions of various animals be found all together if they had not been thrown on the sea shore. And the deluge cannot have carried them there, because things that are heavier than water do not float on the water. But these things could not be at so great a height if they had not been carried there by the water, such a thing being impossible from their weight. In places where the valleys have not been filled with salt sea water shells are never to be seen; as is plainly visible in the great valley of the Arno above Gonfolina; a rock formerly united to Monte Albano, in the form of a very high bank which kept the river pent up, in such a way that before it could flow into the sea, which was afterwards at its foot, it formed two great lakes; of which the first was where we now see the city of Florence together with Prato and Pistoia, and Monte Albano. It followed the rest of its bank as far as where Serravalle now stands. From the Val d'Arno upwards, as far as Arezzo, another lake was formed, which discharged its waters into the former lake. It was closed at about the spot where now we see Girone, and occupied the whole of that valley above for a distance of 40 miles in length. This valley received on its bottom all the soil brought down by the turbid waters. And this is still to be seen at the foot of Prato Magno; it there lies very high where the rivers have not worn it away. Across this land are to be seen the deep cuts of the rivers that have passed there, falling from the great mountain of Prato Magno; in these cuts there are no vestiges of any shells or of marine soil. This lake was joined with that of Perugia[23].

A great quantity of shells are to be seen where the rivers flow into the sea, because on such shores the waters are not so salt owing to the admixture of the fresh water, which is poured into it. Evidence of this is to be seen where, of old, the Appenines poured their rivers into the Adriatic sea; for there in most places great quantities of shells are to be found, among the mountains, together

e tutti li sassi, che di tal loco si cauano, son pieni di nichi;²⁸ Il medesimo si conoscie auere fatto Arno, quando cadea dal sasso della Gonfolina nel mare,²⁹ che dopo quella non troppo basso si trovaua, perchè a quelli tempi superaua laltezza di San Miniato al Tedesco,³⁰ perchè nelle somme altezze di quello si uedono le ripe piene di nichi e ostriche dentro alle sue mvra; non si distesero li niⁿⁱchi inverso Val di Nievole, perchè l'acque dolci d'Arno in là non si astendeano;

Come li nichi nō si ³²partirono dal mare per diluuiio, perchè l'acque, che di uerso la terra veniuano, ācora che esse tirassino il mare ³³inverso la terra, esse erā quelle che percuoteano il suo fondo, perchè l'acqua, che viene diuerso la terra, à ³⁴più corso che quella del mare, e per cōseguenza è piv potente, entra sotto l'altra acqua del mare ³⁵e rimove il fondo e accompagna con seco tutte le cose mobili che in quella trova, come son i predetti ³⁶nichi e altre simili cose, e quanto l'acqua, che viē di terra, è piv torbida che quella del mare, tā³⁷to piv si fa potente e grave che quella; adunque io nō ci vedo modo di tirare i predetti nichi tanto in³⁸fra terra, se quiui nati nō fussino; se tu mi dicessi, il fiume Loira, che passa per la Francia,³⁹ nell'accrescimēto del mare si copre piv di ottanta miglia di paese, perchè è loco di grā pia⁴⁰nvra, e 'l mare s'alza circa braccia 20, e nichi si uengono a trovare in tal pianvra, disco⁴¹sta dal mare essa 80 miglia, qui si rispōde che 'l flusso e refluxo ne' nostri mediterrani ⁴²mari nō fanno tanta varietà, perchè in Genovese nō uaria nvlla, a Vinegia poco, in A⁴³frika poco, e dove poco varia, poco occupa di paese;

Senpre la corrēte dell'acqua de' fiumi ⁴⁴s'inōda sopra del loco doue li è impedito il corso; ancora doue essa si ristrignie per passare sotto ⁴⁵li archi de' ponti.

with bluish marine clay; and all the rocks which are torn off in such places are full of shells. The same may be observed to have been done by the Arno when it fell from the rock of Gonfolina into the sea, which was not so very far below; for at that time it was higher than the top of San Miniato al Tedesco, since at the highest summit of this the shores may be seen full of shells and oysters within its flanks. The shells did not extend towards Val di Nievole, because the fresh waters of the Arno did not extend so far.

That the shells were not carried away from the sea by the deluge, because the waters which came from the earth although they drew the sea towards the earth, were those which struck its depths; because the water which goes down from the earth, has a stronger current than that of the sea, and in consequence is more powerful, and it enters beneath the sea water and stirs the depths and carries with it all sorts of movable objects which are to be found in the earth, such as the above-mentioned shells and other similar things. And in proportion as the water which comes from the land is muddier than sea water it is stronger and heavier than this; therefore I see no way of getting the said shells so far in land, unless they had been born there. If you were to tell me that the river Loire[38], which traverses France, covers when the sea rises more than eighty miles of country, because it is a district of vast plains, and the sea rises about 20 braccia, and shells are found in this plain at the distance of 80 miles from the sea; here I answer that the flow and ebb in our Mediterranean Sea does not vary so much; for at Genoa it does not rise at all, and at Venice but little, and very little in Africa; and where it varies little it covers but little of the country.

The course of the water of a river always rises higher in a place where the current is impeded; it behaves as it does where it is reduced in width to pass under the arches of a bridge.

CONFUTATIONE CH'È CONTRO COLOR CHE DICONO, I NICHI ESSER PORTATI PER MOLTE GIORNATE DISTANTI DALLI MARI PER CAUSA DEL DILUUIO ²TANT'ALTO CHE SUPERASSE TALE ALTEZZA.

*Further
researches
(187—191).*

³Dico che il diluuiio non potè portare le cose nate dal mare alli mōti, se già il mare gonfiando nō creasse inđdazione ⁴in-sino alli lochi sopradetti, la qual gonfia-tione accadere nō può, perchè si darebbe vacuo, e se tu diciessi l'aria quiui ⁵riempierebbe, noi abbiamo concluso il grave non si sostenere sopra il lieue, onde per neciessità si cō⁶clude, esso diluuiio essere cavato dall'acque piovane, e se così è, tutte esse acque corrono al mare, ⁷e nō corre il mare alle montagnie, e se elle corrono al mare, esse spingono li nichi dal lito del mare, e nō le ⁸tirano a se; E se tu diciessi, poichè 'l mare alzò per l'acque piovane, portò essi nichi a tale altezza, ⁹già abbiamo detto che le cose piv gravi dell'acqua nō notā sopra di lei, ma stāno nei fondi, dalle quali nō si ¹⁰rimovono, se nō per cavsa di percussiō d'onda; E se tu dirai che l'onde le portassino in tali lochi alti, noi abbiamo ¹¹prouato che l'onde nelle grā profondità tornano in contrario nel fondo al moto di sopra, la qual cosa ¹²si manifesta per lo intorbidare del mare dal terreno tolto vicino alli liti; Muovesi la cosa piv lieue che l'¹³acqua insieme colla sua onda, ed è lasciata nel piv alto sito della riva dalla piv alta onda; Muouesi la cosa ¹⁴più grave che l'acqua, sospinta dalla sua ōda nella superficie e dal fondo suo e per queste due conclusioni, che ai lochi ¹⁵sua sarā provate a pieno, noi concludiamo che l'onda superfittiale nō può portare nichi, per essere più grieve che ¹⁶l'acqua;

¹⁷Quando il diluuiio auesse avto a por-tare li nichi trecento e quattro cento mi-¹⁸glia distanti dalli mari, esso li avrebbe portati misti con diuerse nature insieme ammontati, e noi vediamo in ¹⁹tal distantie l'ostriche tutte insieme, e le conchilie, e li pesci calamai, e tutti li altri nichi, che stanno insieme a congre²⁰gatione, essere

A CONFUTATION OF THOSE WHO SAY THAT SHELLS MAY HAVE BEEN CARRIED TO A DISTANCE OF MANY DAYS' JOURNEY FROM THE SEA BY THE DELUGE, WHICH WAS SO HIGH AS TO BE ABOVE THOSE HEIGHTS.

I say that the deluge could not carry objects, native to the sea, up to the mountains, unless the sea had already increased so as to create inundations as high up as those places; and this increase could not have occurred because it would cause a vacuum; and if you were to say that the air would rush in there, we have already concluded that what is heavy cannot remain above what is light, whence of necessity we must conclude that this deluge was caused by rain water, so that all these waters ran to the sea, and the sea did not run up the mountains; and as they ran to the sea, they thrust the shells from the shore of the sea and did not draw them towards themselves. And if you were then to say that the sea, raised by the rain water, had carried these shells to such a height, we have already said that things heavier than water cannot rise upon it, but remain at the bottom of it, and do not move unless by the impact of the waves. And if you were to say that the waves had carried them to such high spots, we have proved that the waves in a great depth move in a contrary direction at the bottom to the motion at the top, and this is shown by the turbidity of the sea from the earth washed down near its shores. Anything which is lighter than the water moves with the waves, and is left on the highest level of the highest margin of the waves. Anything which is heavier than the water moves, suspended in it, between the surface and the bottom; and from these two conclusions, which will be amply proved in their place, we infer that the waves of the surface cannot convey shells, since they are heavier than water.

If the deluge had to carry shells three hundred and four hundred miles from the sea, it would have carried them mixed with various other natural objects heaped together; and we see at such distances oysters all together, and sea-snails, and cuttlefish, and all the other shells which congregate together,

trovati tutti insieme morti, e li nichi sole-tari trovarsi distanti l'uno dall'altro, come ne' liti marittimi ²¹tutto il giorno vediamo; E se noi troviamo l'ostriche insieme appa-retate grādissime, infra le quali assai vedi quelle ²²che ànno ancora il coperchio con-giunto, a significare che qui furono lasciate dal mare, che ancor viveano quando fù ²³tagliato lo stretto di Gibilterra; Vedesi in nelle montagnie di Parma e Piacētia le moltitudini di nichi e coralli ²⁴intarlati, an-cora appiccati alli sassi, de' quali, quand'io facevo il grā cavallo di Milano, me ne fù portato vn grā sacco ne²⁵lla mia fabbrica da certi villani, che in tal loco furō trovatì, fralli quali ve n'era assai delli conseruati nella prima bōtā;

²⁶Truvāsī sotto terra e sotto li pro-fondi cavamenti de' lastroni li legniami delle traui lauorati, fatti già neri, li qua²⁷li furō trovatì a mio tempo in quel di Castel Fiorētino, e questi in tal loco profondo v'erano prima che la litta gittata ²⁸dall'Arno nel mare, che quui copriva, fusse abban-donata in tant' altezza, e che le pianvre del Casentino füssi tanto abbassate ²⁹dal terrē che ànno al continuo di lì sgonberato;

³⁰E se tu dicessi, tali ³¹nichi essere crea³²ti e creano a cō³³tinvo in simili lochi per la natura del ³⁴sito e de' cieli, che qui³⁵vi influisce, questa ³⁷talē openione non ³⁸sta in cervelli di trop³⁹po discorso, perchè qui⁴⁰vi s'envmerā li anni ⁴¹del loro acre-scimento ⁴²sulle loro scorze, e se ne ⁴³ve-dono piccoli e grādi, ⁴⁴i quali sanza cibo nō cre⁴⁵scerebbero e non si cibarebbero sā⁴⁶za moto, e quivi mouere nō si po⁴⁷teano.

Leic. 10 a]

Come ²nelle falde, infra l'una e l'altra si trovano ancora li andamēti delli lonbrici, che caminavano infra esse ³quādo non erano ancora asciutte; Come tutti li fanghi marini ritengono ancora de' nichi ⁴ed è petri-ficato il nichio insieme col fango; della

all to be found together and dead; and the solitary shells are found wide apart from each other, as we may see them on sea-shores every day. And if we find oysters of very large shells joined together and among them very many which still have the covering attached, indicating that they were left here by the sea, and still living when the strait of Gibraltar was cut through; there are to be seen, in the mountains of Parma and Piacenza, a multitude of shells and corals, full of holes, and still sticking to the rocks there. When I was making the great horse for Milan, a large sack full was brought to me in my workshop by certain peasants; these were found in that place and among them were many preserved in their first freshness.

Under ground, and under the foundations of buildings, timbers are found of wrought beams and already black. Such were found in my time in those diggings at Castel Fiorentino. And these had been in that deep place before the sand carried by the Arno into the sea, then covering the plain, had been raised to such a height; and before the plains of Casen-tino had been so much lowered, by the earth being constantly carried down from them.

[30]And if you were to say that these shells were created, and were continually being created in such places by the nature of the spot, and of the heavens which might have some influence there, such an opinion cannot exist in a brain of much reason; because here are the years of their growth, numbered on their shells, and there are large and small ones to be seen which could not have grown without food, and could not have fed without motion—and here they could not move[47].

990.

That in the drifts, among one and another, there are still to be found the traces of the worms which crawled upon them when they were not yet dry. And all marine clays still contain shells, and the shells are petri-fied together with the clay. From their firmness and unity some persons will have it that these animals were carried up to

stoltitia e senplicità di quelli, che uogliono che ta^sli animali fussino alli lochi distanti dai mari portati dal diluvio; Come altra setta d'ignoranti ⁶affermano la natura, o i celi auerli in tali lochi creati per i flussi celesti, come in quelli ⁷nō si trovassino l'ossa de' pesci cresciuti cō lūgezza di tempo, come nelle scorze de' nichi e lumache nō si potesse ⁸annvmerare li anni o i mesi della lor uita, come nelle corna de' buoi e de' castroni e nella ramificatione de'le piante, che nō furō mai tagliate in alcuna parte; E auendo con tali segni dimostrato e la lunghezza della lor uita ¹⁰essere manifesta, ecco bisogno confessare, che tali animali nō uiuino sanza moto per cercare ¹¹il loro cibo e in loro non si uede strumēto da penetrare la terra e 'l sasso, ove si trovano rinchiusi.; ¹² Ma in che modo si potrebbe trovare in vna grā lumaca i rottami e parte di molt' altre sorti di nichi di uarie na^tture, se ad essa, sopra de' liti marini già morta, non li fussino state gitte dalle onde del mare, come dell'al¹⁴tre cose lieui, che esso gitta a terra? Perchè si truova tanto rottame e nichi interi fra falda e falda di pie¹⁵tra, se già quella sopra del lito nō fusse stata ricoperta da una terra rigittata dal mare, la qual poi si uenne pe¹⁶trificando? E se 'l diluvio predetto li auesse in tali siti dal mare portato, tu troveresti essi nichi in nel termi¹⁷ne d'una sola falda, e non al termine di molte; deuensi poi annvmerare le uernate delli a¹⁸ni, che 'l mare mvltiplicaua le falde dell'arena e fango, portatoli da fumi vicini, e ch'elli scaricava in sui liti sua, e se ¹⁹tu volessi dire, che piv diluui fussino stati a produrre tali falde e nichi infra loro, e' bisognierebbe, ²⁰che ancora tu affermassi ogni año essere vn tal diluuo accaduto; Ancora infra li rot²¹tami di tal nichi si prosume in tal sito essere spiaggia di mare, doue tutti i nichi son gittati rotti e diuisi e nō ²²mai appaiati, come infra 'l mare viui si trovano con due gusci, che fan coperchio l'uno all'altro; E infra ²³le falde della riuiera e de' liti marittimi son trovati de' rottami; E dentro alli termini delle pietre son trovati ²⁴rari e appaiati de' gusci, come quelli che furō lasciati dal mare sotterrati viui dentro al fango, il qual ²⁵poi si seccò e col tempo petrificò.

places remote from the sea by the deluge. Another sect of ignorant persons declare that Nature or Heaven created them in these places by celestial influences, as if in these places we did not also find the bones of fishes which have taken a long time to grow; and as if, we could not count, in the shells of cockles and snails, the years and months of their life, as we do in the horns of bulls and oxen, and in the branches of plants that have never been cut in any part. Besides, having proved by these signs the length of their lives, it is evident, and it must be admitted, that these animals could not live without moving to fetch their food; and we find in them no instrument for penetrating the earth or the rock where we find them enclosed. But how could we find in a large snail shell the fragments and portions of many other sorts of shells, of various sorts, if they had not been thrown there, when dead, by the waves of the sea like the other light objects which it throws on the earth? Why do we find so many fragments and whole shells between layer and layer of stone, if this had not formerly been covered on the shore by a layer of earth thrown up by the sea, and which was afterwards petrified? And if the deluge before mentioned had carried them to these parts of the sea, you might find these shells at the boundary of one drift but not at the boundary between many drifts. We must also account for the winters of the years during which the sea multiplied the drifts of sand and mud brought down by the neighbouring rivers, by washing down the shores; and if you chose to say that there were several deluges to produce these rifts and the shells among them, you would also have to affirm that such a deluge took place every year. Again, among the fragments of these shells, it must be presumed that in those places there were sea coasts, where all the shells were thrown up, broken, and divided, and never in pairs, since they are found alive in the sea, with two valves, each serving as a lid to the other; and in the drifts of rivers and on the shores of the sea they are found in fragments. And within the limits of the separate strata of rocks they are found, few in number and in pairs like those which were left by the sea, buried alive in the mud, which subsequently dried up and, in time, was petrified.

Leic. 10δ]

E se tu vuoi dire che tale diluvio fu quello che portò tali nichi fuor de' mari cétinaia di miglia, questo nō può acca²dere, essendo stato esso diluvio per cause di pioggie, perchè naturalmente le pioggie spingono i fiumi insieme colle cose da loro portate inuerso il mare, e nō tirano inverso de' mōti le cose morte dai liti maritimi, e se tu dicessi che'l diluvio poi s'alzò colle sue acque sopra de' mōti, il moto del mare fù si tardo col cammino suo contro al corso de' fiumi, che non avrebbe ⁵sopra di se tenuto a noto le cose piv gravi di lui, e se pur l'auesse sostenute, esso nel calare l'avrebbe lasciate in diversi ⁶lochi seminate; Ma come accomoderemo noi li coralli, li quali inverso Mōte Ferrato di Lombardia esser si tutto⁷dì trovati intarlati appiccati alli scogli, scoperti dalle correttⁱ de' fiumi? e li detti scogli sono tutti coperti di parentadi ⁸e famiglie d'ostriche, le quali noi sappiamo che nō si movono, ma stā sempre appicate col' ū de' gusci al sasso, e l'altro apro⁹no per cibarsi d'animaluzzi, che notā per l'acque, li quali, credendo trovar bona pastura, diuentano cibo del predetto nichio; non si ¹⁰trova l'arena mista coll'aliga marina essersi petrificata, poichè l'aliga, che la ramezzaua, venne meno; e di questo ¹¹scopre tutto il giorno il Po nelle ruine delle sue ripe.

991.

And if you choose to say that it was the deluge which carried these shells away from the sea for hundreds of miles, this cannot have happened, since that deluge was caused by rain; because rain naturally forces the rivers to rush towards the sea with all the things they carry with them, and not to bear the dead things of the sea shores to the mountains. And if you choose to say that the deluge afterwards rose with its waters above the mountains, the movement of the sea must have been so sluggish in its rise against the currents of the rivers, that it could not have carried, floating upon it, things heavier than itself; and even if it had supported them, in its receding it would have left them strewn about, in various spots. But how are we to account for the corals which are found every day towards Monte Ferrato in Lombardy, with the holes of the worms in them, sticking to rocks left uncovered by the currents of rivers? These rocks are all covered with stocks and families of oysters, which as we know, never move, but always remain with one of their halves stuck to a rock, and the other they open to feed themselves on the animalcules that swim in the water, which, hoping to find good feeding ground, become the food of these shells. We do not find that the sand mixed with seaweed has been petrified, because the weed which was mingled with it has shrunk away, and this the Po shows us every day in the debris of its banks.

Leic. 20α]

992.

Perchè sono trovate l'ossa ²de' grā pesci e le ostriche e coralli e altri diuersi nichi e chiocciole sopra l'alte cime de' mōti marittimi nel medesimo modo che si trovā ne' bassi mari?

Why do we find the bones of great fishes and oysters and corals and various other shells and sea-snails on the high summits of mountains by the sea, just as we find them in low seas?

Leic. 36α]

993.

Tu ài ora a provare come li nichi nō nascono, se nō in acque salse, quasi tutte le sorte, e che ²li nichi di Lombardia àanno

You now have to prove that the shells cannot have originated if not in salt water, almost all being of that sort; and that the shells in Lombardy are at four levels,

991. 1. Essettu volli . . chettale . . for . . po acha. 2. chause di piogie . . piogie spingano . . dallor. 3. morte de liti . . esse . . diluui. 4. sittardo . . arebe [te]. 5. esse . . lauesi sosstenute . . larebe lassicate. 6. acomodereno. 7. ildi . . XVII.

Topographical Notes.

A large part of the texts published in this section might perhaps have found their proper place in connection with the foregoing chapters on Physical Geography. But these observations on Physical Geography, of whatever kind they may be, as soon as they are localised acquire a special interest and importance and particularly as bearing on the question whether Leonardo himself made the observations recorded at the places mentioned or merely noted the statements from hearsay. In a few instances he himself tells us that he writes at second hand. In some cases again, although the style and expressions used make it seem highly probable that he has derived his information from others—though, as it seems to me, these cases are not very numerous—we find, on the other hand, among these topographical notes a great number of observations, about which it is extremely difficult to form a decided opinion. Of what the Master's life and travels may have been throughout his sixty-seven years of life we know comparatively little; for a long course of time, and particularly from about 1482 to 1486, we do not even know with certainty that he was living in Italy. Thus, from a biographical point of view a very great interest attaches to some of the topographical notes, and for this reason it seemed that it would add to their value to arrange them in a group by themselves. Leonardo's intimate knowledge with places, some of which were certainly remote from his native home, are of importance as contributing to decide the still open question as to the extent of Leonardo's travels. We shall find in these notes a confirmation of the view, that the MSS. in which the Topographical Notes occur are in only a very few instances such diaries as may have been in use during a journey. These notes are mostly found in the MSS. books of his later and quieter years, and it is certainly remarkable that Leonardo is very reticent as to the authorities from whom he quotes his facts and observations: For instance, as to the Straits of Gibraltar, the Nile, the Taurus Mountains and the Tigris and Euphrates. Is it likely that he, who declared that in all scientific research, his own experience should be the foundation of his statements (see XIX Philosophy No. 987—991) should here have made an exception to this rule without mentioning it?

As for instance in the discussion as to the equilibrium of the mass of water in the Mediterranean Sea—a subject which, it may be observed, had at that time attracted the interest and study of hardly any other observer. The acute remarks, in Nos. 985—993, on the presence of shells at the tops of mountains, suffice to prove—as it seems to me—that it was not in his nature to allow himself to be betrayed into wide generalisations, extending beyond the limits of his own investigations, even by such brilliant results of personal study.

Most of these Topographical Notes, though suggesting very careful and thorough research, do not however, as has been said, afford necessarily indisputable evidence that that research was Leonardo's own. But it must be granted that in more than one instance probability is in favour of this idea.

Among the passages which treat somewhat fully of the topography of Eastern places by far the most interesting is a description of the Taurus Mountains; but as this text is written in the style of a formal report and, in the original, is associated with certain letters which give us the history of its origin, I have thought it best not to sever it from that connection. It will be found under No. XXI (Letters).

That Florence, and its neighbourhood, where Leonardo spent his early years, should be nowhere mentioned except in connection with the projects for canals, which occupied his attention for some short time during the first ten years of the XVIth century, need not surprise us. The various passages relating to the construction of canals in Tuscany, which are put together at the beginning, are immediately followed by those which deal with schemes for canals in Lombardy; and after these come notes on the city and vicinity of Milan as well as on the lakes of North Italy.

The notes on some towns of Central Italy which Leonardo visited in 1502, when in the service of Cesare Borgia, are reproduced here in the same order as in the note book used during these travels (MS. L., Institut de France). These notes have but little interest in themselves excepting as suggesting his itinerary. The maps of the districts drawn by Leonardo at the time are more valuable (see No. 1054 note). The names on these maps are not written from right to left, but in the usual manner, and we are permitted to infer that they were made in obedience to some command, possibly for the use of Cesare Borgia himself; the fact that they remained nevertheless in Leonardo's hands is not surprising when we remember the sudden political changes and warlike events of the period. There can be no doubt that these maps, which are here published for the first time, are original in the strictest sense of the word, that is to say drawn from observations of the places themselves; this is proved by the fact—among others—that we find among his manuscripts not only the finished maps themselves but the rough sketches and studies for them. And it would perhaps be difficult to point out among the abundant contributions to geographical knowledge published during the XVIth century, any maps at all approaching these in accuracy and finish.

The interesting map of the world, so far as it was then known, which is among the Leonardo MSS. at Windsor (published in the 'Archaeologia' Vol. XI) cannot be attributed to the Master, as the Marchese Girolamo d'Adda has sufficiently proved; it has not therefore been reproduced here.

Such of Leonardo's observations on places in Italy as were made before or after his official travels as military engineer to Césare Borgia, have been arranged in alphabetical order, under Nos. 1034—1054. The most interesting are those which relate to the Alps and the Appenines, Nos. 1057—1068.

Most of the passages in which France is mentioned have hitherto remained unknown, as well as those which treat of the countries bordering on the Mediterranean, which come at the end of this section. Though these may be regarded as of a more questionable importance in their bearing on the biography of the Master than those which mention places in France, it must be allowed that they are interesting as showing the prominent place which the countries of the East held in his geographical studies. He never once alludes to the discovery of America.

1001.

CANAL OF FLORENCE.

Sluices should be made in the valley of la Chiana at Arezzo, so that when, in the summer, the Arno lacks water, the canal may not remain dry: and let this canal be 20 braccia wide at the bottom, and at the top 30, and 2 braccia deep, or 4, so that two of these braccia may flow to the mills and the meadows, which will benefit the country; and Prato, Pistoia and Pisa, as well as Florence, will gain two hundred thousand ducats a year, and will lend a hand and money to this useful work; and the Lucchese the same, for the lake of Sesto will be navigable; I shall direct it to Prato and Pistoia, and cut through Serravalle and make an issue into the lake; for there will be no need of locks or supports, which are not lasting and so will always be giving trouble in working at them and keeping them up.

Canals in connection with the Arno (1001-1008). And know that in digging this canal where it is 4 braccia deep, it will cost 4 dinari the square braccio; for twice the depth 6 dinari, if you are making 4 braccia

1006. This passage is written by the side of a map washed in Indian ink, of the course of the Arno; it is evidently a sketch for a completer map.

These investigations may possibly be connected with the following documents. *Francesco Guiducci alla Balia di Firenze. Dal Campo contro Pisa 24 Luglio 1503* (*Archivio di Stato, Firenze, Lettere alla Balia*; published by J. GAYE, *Carteggio inedito d'Artisti, Firenze 1840, Tom. II, p. 62*): *Ex Castris, Franciscus Ghuiduccius, 24. Jul. 1503. Appresso fu qui hieri con una di V. Signoria Alessandro degli Albizi insieme con Leonardo da Vinci et certi altri, et veatuto el disegno insieme con el governatore, doppo molte discussioni et dubii conclusesi che l'opera füssi molto al proposito, o si veramente Arno volgersi qui, o restarvi con un canale, che almeno vieterebbe che le colline da nemici non potrebbono essere offese; come tucto referiranno loro a bocha V. S.*

And, *Archivio di Stato, Firenze, Libro d'Entrata e Uscita di cassa de' Magnifici Signori di luglio e agosto*

The ruined wall is 640 braccia; 130 is the wall remaining with the mill; 300 braccia were broken in 4 years by Bisarno.

1006.

They do not know why the Arno will never remain in a channel. It is because the rivers which flow into it deposit earth where they enter, and wear it away on the opposite side, bending the river in that direction. The Arno flows for 6 miles between la Caprona and Leghorn; and for 12 through the marshes, which extend 32 miles, and 16 from La Caprona up the river, which makes 48; by the Arno from Florence beyond 16 miles; to Vico 16 miles, and the canal is 5; from Florence to Fucechio it is 40 miles by the river Arno.

56 miles by the Arno from Florence to Vico; by the Pistoia canal it is 44 miles. Thus it is 12 miles shorter by the canal than by the Arno.

1007.

The eddy made by the Mensola, when the Arno is low and the Mensola full.

1503 a 51 T.: *Andata di Leonardo al Campo sotto Pisa. Spese extraordinarie dieno dare a di XXVI di luglio L. LVI sol. XIII per loro a Giovanni Piffero; e sono per tanti, asegnia avere spexi in vetture di sei cavalli a spese di vitto per andare chon Leonardo da Vinci a levellare Arno in quello di Pisa per levallo del lito suo.* (Published by MILANESI, *Archivio Storico Italiano, Serie III, Tom. XVI.*) VASARI asserts: (*Leonardo*) fu il primo ancora, che giovanetto discorresse sopra il fiume d'Arno per metterlo in canale da Pisa a Firenza (ed. SANSONI, IV, 20).

The passage above is in some degree illustrated by the map on Pl. CXII, where the course of the Arno westward from Empoli is shown.

1007. *Mensola* is a mountain stream which falls into the Arno about a mile and a half above Florence.

1008. The course of the river Arno is also discussed in Nos. 987 and 988.

1009. This observation is written above a washed pen and ink drawing which has been published as Tav. VI in the „Saggio.” The editors of that work explain the drawing as “uno Studio di bocche per estrazione d'acqua.”

1010. “el navilio di Martagano” is also mentioned

in a note written in red chalk, MS. H² 17^a Leonardo has, as it seems, little to do with Lodovico il Moro's scheme to render this canal navigable. The canal had been made in 1460 by Bertonino da Novara. Il Moro issued his decree in 1493, but Leonardo's notes about this canal were, with the exception of one (No. 1343), written about sixteen years later.

fontanili, chè q^{uo}dell'acqua, che è bevuta dalla terra nō fa seruitio a nessuno, nè ancora danno, perchè a nessuno è tolta, e facēdo tali fontanili, l'acqua, che prima era perduta, ritorna di nouo a rifa^{re} seruitio e vtile alli omini.

would be to make several little channels, since the water drunk up by the earth is of no more use to any one, nor mischief neither, because it is taken from no one; and by making these channels the water which before was lost returns again and is once more serviceable and useful to men.

Leic. 18a]

1011.

Nessuno canale, che esca fori de' fiumi, sarà durabile, se l'acqua del fiume, donde nascie, non è integralmēte rinchiusa come il canal di Martisana e quel ch'escie di Tesino.

1012.

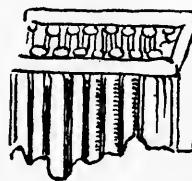

No canal which is fed by a river can be permanent if the river whence it originates is not wholly closed up, like the canal of Martesana which is fed by the Ticino.

1019. On this passage AMORETTI remarks (*Memorie Storiche* chap. IX): *Nell'anno stesso lo veggiamo formare un congegno di carucole e di corde, con cui trasportare in più venerabile e più sicuro luogo, cioè nell'ultima arcata della nave di mezzo della metropolitana, la sacra reliquia del Santo Chiodo, che ivi ancor si venera.*
Al fol. 15 del codice segnato Q. R. in 16, egli ci ha lasciata di tal congegno una doppia figura, cioè una di quattro carucole, e una di tre colle rispettive corde, soggiungandovi: in Domo alla carucola del Chiodo della Croce.

AMORETTI's views as to the mark on the MS. and the date when it was written are, it may be

observed, wholly unfounded. The MS. L, in which it occurs, is of the year 1502, and it is very unlikely that Leonardo was in Milan at that time; this however would not prevent the remark, which is somewhat obscure, from applying to the Cathedral at Milan.

1020. With reference to buildings at Milan see also Nos. 751 and 756, and Pl. XCV, No. 2 (explained on p. 52), Pl. C (explained on pages 60—62). See also pages 25, 39 and 40.

1021. *di arie* is wanting in the original but may safely be inserted in the context, as the formation of clouds is under discussion before this text.

fornia di grandissima mōtagnia, piena di scogli ³infocati; perchè li razzi del sole, che già era all'orizzonte che rosseggiaava, la tigneano del suo colore, e questa tal nugola ⁴attraeva a se tutti li nvgoli piccoli che intorno li stavano, e la nugola grāde nō si mouea di suo loco, anzi ri^seruò nella sua sommità il lume del sole insino a una ora e mezzo di notte, tant'era la sua imēsa grādezza; ⁶e infra due ore di notte gienerò si gran vēto che fu cosa stupēda e inavdita.

cloud in the form of an immense mountain full of rifts of glowing light, because the rays of the sun, which was already close to the horizon and red, tinged the cloud with its own hue. And this cloud attracted to it all the little clouds that were near while the large one did not move from its place; thus it retained on its summit the reflection of the sunlight till an hour and a half after sunset, so immensely large was it; and about two hours after sunset such a violent wind arose, that it was really tremendous and unheard of.

1022.

A dì 10 di diciembre a ore 15 ²fu appicato il fuoco;

1029. 2. 3. The fountain is known by this name to this day: it is near Torno, on the Eastern shore of Como. The waters still rise and fall with the flow and ebb of the tide as Pliny described it (Epist. IV, 30; Hist. Nat. II, 206).

1030. 1031. From the character of the handwriting we may conclude that these observations

In many places there are streams of ^{Notes on the} North Italian lakes ^{(1029-1033).} water which swell for six hours and ebb for six hours; and I, for my part, have seen one above the lake of Como called Fonte Pliniana, which increases and ebbs, as I have said, in such a way as to turn the stones of two mills; and when it fails it falls so low that it is like looking at water in a deep pit.

1030.

LAKE OF COMO. VALLEY OF CHIAVENNA.

Above the lake of Como towards Germany is the valley of Chiavenna where the river Mera flows into this lake. Here are barren and very high mountains, with huge rocks. Among these mountains are to be found the water-birds called gulls. Here grow fir trees, larches and pines. Deer, wild-goats, chamois, and terrible bears. It is impossible to climb them without using hands and feet. The peasants go there at the time of the snows with great snares to make the bears fall down these rocks. These mountains which very closely approach each other are parted by the river. They are to the right and left for the distance of 20 miles throughout of the same nature. From mile to mile there are good inns. Above on the said river there are waterfalls of 400 braccia in height, which are fine to see; and there is good living at 4 soldi the reckoning. This river brings down a great deal of timber.

VAL SASINA.

Val Sasina runs down towards Italy; this is almost the same form and character. There grow here many *mappello* and there are great ruins and falls of water[14].

were made in Leonardo's youth; and I should infer from their contents, that they were notes made in anticipation of a visit to the places here described, and derived from some person (unknown to us) who had given him an account of them.

14. The meaning of *mappello* is unknown.

VALLE D'INTROZZO.

¹⁶ Questa valle produce assai abeti pini e larici, è doue Anbrogio Fereri fa venire il suo legniamē; in testa della Valtellina sono le mōtagnie di Bormio, ¹⁸terribili e piene sēpre di neve; qui nascono erniellini.

A BELLAGGIO.

²⁰ A riscontro a Bellaggio castello è il fiume Latte, el quale cade da alto ²¹piv che braccia 100 dalla vena, donde nascie, a piōbo nel lago cō inestimabile strepito ²²e romore; questa vena versa solamēte agosto e settēbre.

VALTELLINA.

²⁴ Valtellina, com'è detto, valle circūdata d'alti e terribili mōti, fa ²⁵vini potēti e assai, e fa tanto bestiame che da paesani è concluso nascierui ²⁵piv latte che uino; questa è la ualle doue passa Adda, la quale prima corre ²⁷piv che 40 miglia per la Magnia; questo fiume fa il pescie temolo, il quale ²⁸vive d'argiēto, del quale se ne trova assai per la sua rena; ²⁹j questo paese ognivno può vēdere pane. e vino, e'l uino vale al piv uno soldo ³⁰il boccale e la libra della uitella uno soldo, e'l sale 10 dinari, e'l simile il burro, ³¹ed è la loro libbra 30 ōcie e l'oua uno soldo la soldata.

VALLEY OF INTROZZO.

This valley produces a great quantity of firs, pines and larches; and from here Ambrogio Fereri has his timber brought down; at the head of the Valtellina are the mountains of Bormio, terrible and always covered with snow; marmots (?) are found there.

BELLAGGIO.

Opposite the castle Bellaggio there is the river Latte, which falls from a height of more than 100 braccia from the source whence it springs, perpendicularly, into the lake with an inconceivable roar and noise. This spring flows only in August and September.

VALTELLINA.

Valtellina, as it is called, is a valley enclosed in high and terrible mountains; it produces much strong wine, and there is so much cattle that the natives conclude that more milk than wine grows there. This is the valley through which the Adda passes, which first runs more than 40 miles through Germany; this river breeds the fish *temolo* which live on silver, of which much is to be found in its sands. In this country every one can sell bread and wine, and the wine is worth at most one soldo the bottle and a pound of veal one soldo, and salt ten dinari and butter the same and their pound is 30 ounces, and eggs are one soldo the lot.

1031.

A BORMIO.

² A Bormio sono i bagni;—sopra Como otto miglia è la Pliniana, ³la quale crescie e discrescie ogni 6. ore, e'l suo crescere fa ⁴acqua per 2 mvrina e n'avanza, e'l suo calare fa asciugare la fonte; ⁵più su 2 miglia è Nesso terra, dove cade uno fiume cō grāde ⁶enpito per una grādissima fessura di mōte; Queste gite sō da ⁷fare nel mese di maggio; E i maggior sassi scoperti che si trovano ⁸in questi paesi sono le mōtagnie di Mādello, vicine alle mōtagnie di ⁹Lecco e di Gravidona inverso Bellin-

AT BORMIO.

At Bormio are the baths;—About eight miles above Como is the Pliniana, which increases and ebbs every six hours, and its swell supplies water for two mills; and its ebbing makes the spring dry up; two miles higher up there is Nesso, a place where a river falls with great violence into a vast rift in the mountain. These excursions are to be made in the month of May. And the largest bare rocks that are to be found in this part of the country are the mountains of Mandello near to those of Lecco, and

1032. This text has in the original a slight sketch to illustrate it.—3. The statement about the lake Segrino is incorrect; it is situated in the Valle Assina, above the lake of Pusiano.

of Gravidona towards Bellinzona, 30 miles from Lecco, and those of the valley of Chiavenna; but the greatest of all is that of Mandello, which has at its base an opening towards the lake, which goes down 200 steps, and there at all times is ice and wind.

IN VAL SASINA.

In Val Sasina, between Vimognio and Introbbio, to the right hand, going in by the road to Lecco, is the river Troggia which falls from a very high rock, and as it falls it goes underground and the river ends there. 3 miles farther we find the buildings of the mines of copper and silver near a place called Pra' Santo Pietro, and mines of iron and curious things. La Grigna is the highest mountain there is in this part, and it is quite bare.

1032.

The lake of Pusiano flows into the lake of Segrino [3] and of Annone and of Sala. The lake of Annone is 22 braccia higher at the surface of its water than the surface of the water of the lake of Lecco, and the lake of Pusiano is 20 braccia higher than the lake of Annone, which added to the afore said 22 braccia make 42 braccia and this is the greatest height of the surface of the lake of Pusiano above the surface of the lake of Lecco.

1033.

At Santa Maria in the Valley of Ravagnate in the mountains of Brianza are the rods of chestnuts of 9 braccia and one out of an average of 100 will be 14 braccia.

At Varallo di Ponbia near to Sesto on the Ticino the quinces are white, large and hard.

1033. 2. *Ravagnate* (Leonardo writes *Ravagnâ*) in the Brianza is between Oggiono and Brivio, South of the lake of Como. M. Ravaïsson avails himself of this note to prove his hypothesis

that Leonardo paid two visits to France. See Gazette des Beaux Arts, 1881 pag. 528:

Au recto du même feuillet, on lit encore une note relative à une vallée "nemonti brigatia"; il me semble qu'il s'agit bien des monts de Briançon, le Brigantio des anciens. Briançon est sur la route de Lyon en Italie. Ce fut par le mont Viso que passèrent, en août 1515, les troupes françaises qui allaient remporter la victoire de Marignan.

Léonard de Vinci, ingénieur de François Ier, comme il l'avait été de Louis XII, aurait-il été pour quelque chose dans le plan du célèbre passage des Alpes, qui eut lieu en août 1515, et à la suite duquel on le vit accompagner partout le chevaleresque vainqueur? Aurait-il été appellé par le jeune roi, de Rome où l'artiste était alors, dès son avènement au trône?

5. Varallo di Ponbia, about ten miles South of Arona is distinct from Varallo the chief town in the Val di Sesia.

1051. Leonardo inserted this passage on the margin of the circular plan, in water colour, of Imola—see Pl. CXI No. 1.—In the original the fields surrounding the town are light green; the moat, which surrounds the fortifications and the windings of the river Santerno, are light blue. The parts, which have come out blackish close to the river are yellow ochre in the original. The dark groups of houses inside the town are red. At the four points of the compass drawn in the middle of the town Leonardo has written (from right to left): *Mezzodi* (South) at the top; to the left *Scirocco* (South east), *levante* (East), *Greco* (North East), *Septentrione* (North), *Maestral* (North West), *ponente* (West) *Libeco* (South West). The arch in which the plan is drawn is, in the original, 42 centimètres across.

At the beginning of October 1502 Cesare Borgia was shut up in Imola by a sudden revolt of the Condottieri, and it was some weeks before he could release himself from this state of siege (see Gregorovius, *Geschichte der Stadt Rom im Mittelalter*, Vol. VII, Book XIII, 5, 5).

Besides this incident Imola plays no important part in the history of the time. I therefore think myself fully justified in connecting this map, which is at Windsor, with the siege of 1502 and with Leonardo's engagements in the service of Cesare Borgia, because a comparison of these texts, Nos. 1050 and 1051, raise, I believe, the hypothesis to a certainty.

1052. Most of the places here described lie within the district shown in the maps on Pl. CXIII.

1055.

In Candia di Lombardia presso Alessandria della Paglia, facendosi per ² messer Gualtieri di Candia vno pozzo, fu trovato vno principio di navilio grandissimo sotto terra, circa a braccia 10, e perchè ³ il legname era nero e bello, parue a esso messer Gualtieri di fare allungare tal bocca di pozzo in forma che i termini ⁴ di tal navilio si scoprissino.

Alessandria in Piedmont (1055. 1056).

At Candia in Lombardy, near Alessandria della Paglia, in making a well for Messer Gualtieri of Candia, the skeleton of a very large boat was found about 10 braccia underground; and as the timber was black and fine, it seemed good to the said Messer Gualtieri to have the mouth of the well lengthened in such a way as that the ends of the boat should be uncovered.

1054. 3. essere. 4. atte. 5. falle.

1055. 2. pozo . . circha a br. 3. ebbello . . meser . . bocha di pozo. 4. navili si scoprissi.

1054. This passage evidently refers to the making of maps, such as Pl. CXII, CXIII, and CXIV. There is no mention of such works, it is true, excepting in this one passage of MS. L. But this can scarcely be taken as evidence against my view that Leonardo busied himself very extensively at that time in the construction of maps; and all the less since the foregoing chapters clearly prove that at a time so full of events Leonardo would only now and then commit his observations to paper, in the MS. L.

By the side of this text we find, in the original, a very indistinct sketch, perhaps a plan of a position. Instead of this drawing I have here inserted a much clearer sketch of a position from the same MS., L. 82b and 83a. They are the only drawings of landscape, it may be noted, which occur at all in that MS.

1055. 2. Messer Gualtieri, the same probably as is mentioned in Nos. 672 and 1344.

Leic. 10δ]

1057. *Saluzzo* at the foot of the Alps South of Turin.

9. 10. *Maestro Benedetto scultore*; probably some native of Northern Italy acquainted with the place here described. Hardly the Florentine sculptor Benedetto da Majano. Amoretti had published this passage, and M. Ravaisson who gave a French translation of it in the *Gazette des Beaux Arts* (1881, pag. 528), remarks as follows: *Le maître sculpteur que Léonard appelle son “comparé” ne serait-il pas Benedetto da Majano, un de ceux qui jugèrent avec lui de la place à donner au David de Michel-Ange, et de qui le Louvre a acquis récemment un buste d'après Philippe Strozzi?*

1056.

At Alessandria della Paglia in Lombardy there are no stones for making lime of, but such as are mixed up with an infinite variety of things native to the sea, which is now more than 200 miles away.

1057.

At Monbracco, above Saluzzo,—a mile ^{The Alps} _(1057—1062) above the Certosa, at the foot of Monte Viso, there is a quarry of flakey stone, which is as white as Carrara marble, without a spot, and as hard as porphyry or even harder; of which my worthy gossip, Master Benedetto the sculptor, has promised to give me a small slab, for the colours, the second day of January 1511.

1058.

That there are springs which suddenly break forth in earthquakes or other convulsions and suddenly fail; and this happened in a mountain in Savoy where certain forests sank in and left a very deep gap, and about four miles from here the earth opened itself like a gulf in the mountain, and threw out a sudden and immense flood of water which scoured the whole of a little valley of the tilled soil, vineyards and houses, and did the greatest mischief, wherever it overflowed.

1059.

The river Arve, a quarter of a mile from Geneva in Savoy, where the fair is held on midsummerday in the village of Saint Gervais.

To this it may be objected that Benedetto da Majano had already lain in his grave fourteen years, in the year 1511, when he is supposed to have given the promise to Leonardo. The colours may have been given to the sculptor Benedetto and the stone may have been in payment for them. From the description of the stone here given we may conclude that it is repeated from hearsay of the sculptor's account of it. I do not understand how, from this observation, it is possible to conclude that Leonardo was on the spot.

1059. An indistinct sketch is to be seen by the text.

Leic. 4a]

E questo vedrà come vid'io, chi àdrà so pra Môboso, giogo dell'Alpi che diuidono la Francia dalla Italia, la qual montagnia à la sua basa che parturisce ³li 4 fiumi che rigâ per 4 aspetti contrari tutta l'Europa, e nessuna montagnia à le sue base in simile altezza; questa si leua in tanta altura che quasi passa tutti li nuvoli e rare volte vi cade neve, ma sol grâdisne d'estate quando li nvvoli sono nella maggiore altezza, e questa grandine vi si còserua in modo, che se nô ⁶fusse la retâ del caderui c del montarui nvuoli, che non accade 2 volte in vna età, egli ui sarebbe altissima quâtitâ di ghiaccio inalzato dari gradi della grâdine, il qua'le di mezzo luglio vi trouai grossissimo, e vidi l'aria sopra di me tenebrosa e 'l sole che percotea la mōta⁸gnia essere piv luminoso quiui assai che nelle basse pianure, perchè minor grossezza d'aria s'interpone in⁹fra la cima d'esso monte e 'l sole.

1060. I have vainly enquired of every available authority for a solution of the mystery as to what mountain is intended by the name Mom boso (Comp. Vol. I Nos. 300 and 301). It seems most obvious to refer it to Monte Rosa. *Rosa* is derived from the Keltic *ros* which survives in Breton and in Gaelic, meaning, in its first sense, a mountain spur, but which also—like *Horn*—means a very high peak; thus Monte Rosa would mean literally the High Peak.

1060.

And this may be seen, as I saw it, by any one going up[5] Monbroso, a peak of the Alps which divide France from Italy. The base of this mountain gives birth to the 4 rivers which flow in four different directions through the whole of Europe. And no mountain has its base at so great a height as this, which lifts itself above almost all the clouds; and snow seldom falls there, but only hail in the summer, when the clouds are highest. And this hail lies [unmelted] there, so that if it were not for the absorption of the rising and falling clouds, which does not happen more than twice in an age, an enormous mass of ice would be piled up there by the layers of hail, and in the middle of July I found it very considerable; and I saw the sky above me quite dark, and the sun as it fell on the mountain was far brighter here than in the plains below, because a smaller extent of atmosphere lay between the summit of the mountain and the sun.

1061.

In the mountains of Verona the red marble is found all mixed with cockle shells turned into stone; some of them have been filled at the mouth with the cement which is the substance of the stone; and in some parts they have remained separate from the mass of the rock which enclosed them, because the outer covering of the shell had interposed and had not allowed them to unite with it; while in other places this cement had petrified those which were old and almost stripped the outer skin.

1062.

Bridge of Goertz—Wilbach (?).

6. *in una età*. This is perhaps a slip of the pen on Leonardo's part and should be read *estate* (summer).

1062. There is a slight sketch with this text, Leonardo seems to have intended to suggest, with a few pen-strokes, the course of the Isonzo and of the Wipbach in the vicinity of Gorizia (Goerz). He himself says in another place that he had been in Friuli (see No. 1077 l. 19).

Leic. 10a]

1063.

Quella parte della terra s'è piv alienata dal centro² del mōdo, la qual s'è fatta piv lieve.; E quella parte della terra s'è fatta piv lieve, per la quale³ è passato maggior concorso d'acque, E si è adūque fatta piv lieue quella parte, donde sco'la piv numero di fiumi, come l'alpi, che diuidono la Magnia e la Francia dalla Italia, delle quali⁵ escie il Rodano a mezzodì, e il Reno a tramōtana, jl Danubio over Danoia a greco, e 'l Po a leuā⁶te con invmerabili fumi che con loro s'accōpagnano, i quali senpre corrono torbidi, dalla terra⁷ da loro portata, al mare;

Mouōsi al continvo i liti marittimi inverso il mezzo del mare e lo⁸ scaccia dal suo primo sito; Riseruerassi la piv bassa parte del Mediterraneo per letto e corso del Nilo, fiume massimo, che versa in esso mare, E con lui s'accompagnieranno tutti li fumi sua¹⁰aderēti, che prima in esso mare le loro acque versar soleano, come far si uede al Po colli aderēti¹¹sua, li quali prima ver sauā nel mare che infra l'Appennino e le Germaniche alpi si era vnito¹² col Mare Adriatico;

Come le alpi galliche son la piv alta parte dell' Europa.

That part of the earth which was lightest The Appenins remained farthest from the centre of the world; and that part of the earth became the lightest over which the greatest quantity of water flowed. And therefore that part became lightest where the greatest number of rivers flow; like the Alps which divide Germany and France from Italy; whence issue the Rhone flowing Southwards, and the Rhine to the North. The Danube or Tanoia towards the North East, and the Po to the East, with innumerable rivers which join them, and which always run turbid with the soil carried by them to the sea.

The shores of the sea are constantly moving towards the middle of the sea and displace it from its original position. The lowest portion of the Mediterranean will be reserved for the bed and current of the Nile, the largest river that flows into that sea. And with it are grouped all its tributaries, which at first fell into the sea; as may be seen with the Po and its tributaries, which first fell into that sea, which between the Appenines and the German Alps was united to the Adriatic sea.

That the Gallic Alps are the highest part of Europe.

E. 1b

1064.

E di questi ò ri²trovato nelli³ sassi dell'alto⁴ Appenino e⁵ massime nel⁶ sasso della Ver⁷na.

And of these I found some in the rocks of the high Appenines and mostly at the rock of La Vernia.

1071. 2. This is obviously an exaggeration founded on inaccurate information. Half of 150 miles would be nearer the mark.

1073. The tenor of this note (see lines 2 and 3) seems to me to indicate that this passage was not written in France, but was written from oral information. We have no evidence as to when this note may have been written beyond the circumstance that Fra Giocondo the Veronese Architect left France not before the year 1505. The greater part of the magnificent Château of Blois has now disappeared. Whether this note was made for a special purpose is uncertain. The original form and extent of the Château is shown in Androvet, *Les plus excellents Bastiments de France, Paris MDCVII*, and it may be observed that there is in the middle of the garden a Pavilion somewhat similar to that shown on Pl. LXXXVIII No. 7.

See S. DE LA SAUSSAYE, *Histoire du Château de Blois* 4ème édition Blois et Paris p. 175: *En mariant sa*

1071.

At Bordeaux in Gascony the sea rises about 40 braccia before its ebb, and the river there is filled with salt water for more than a hundred and fifty miles; and the vessels which are repaired there rest high and dry on a high hill above the sea at low tide.

1072.

The Rhone issues from the lake of Geneva and flows first to the West and then to the South, with a course of 400 miles and pours its waters into the Mediterranean.

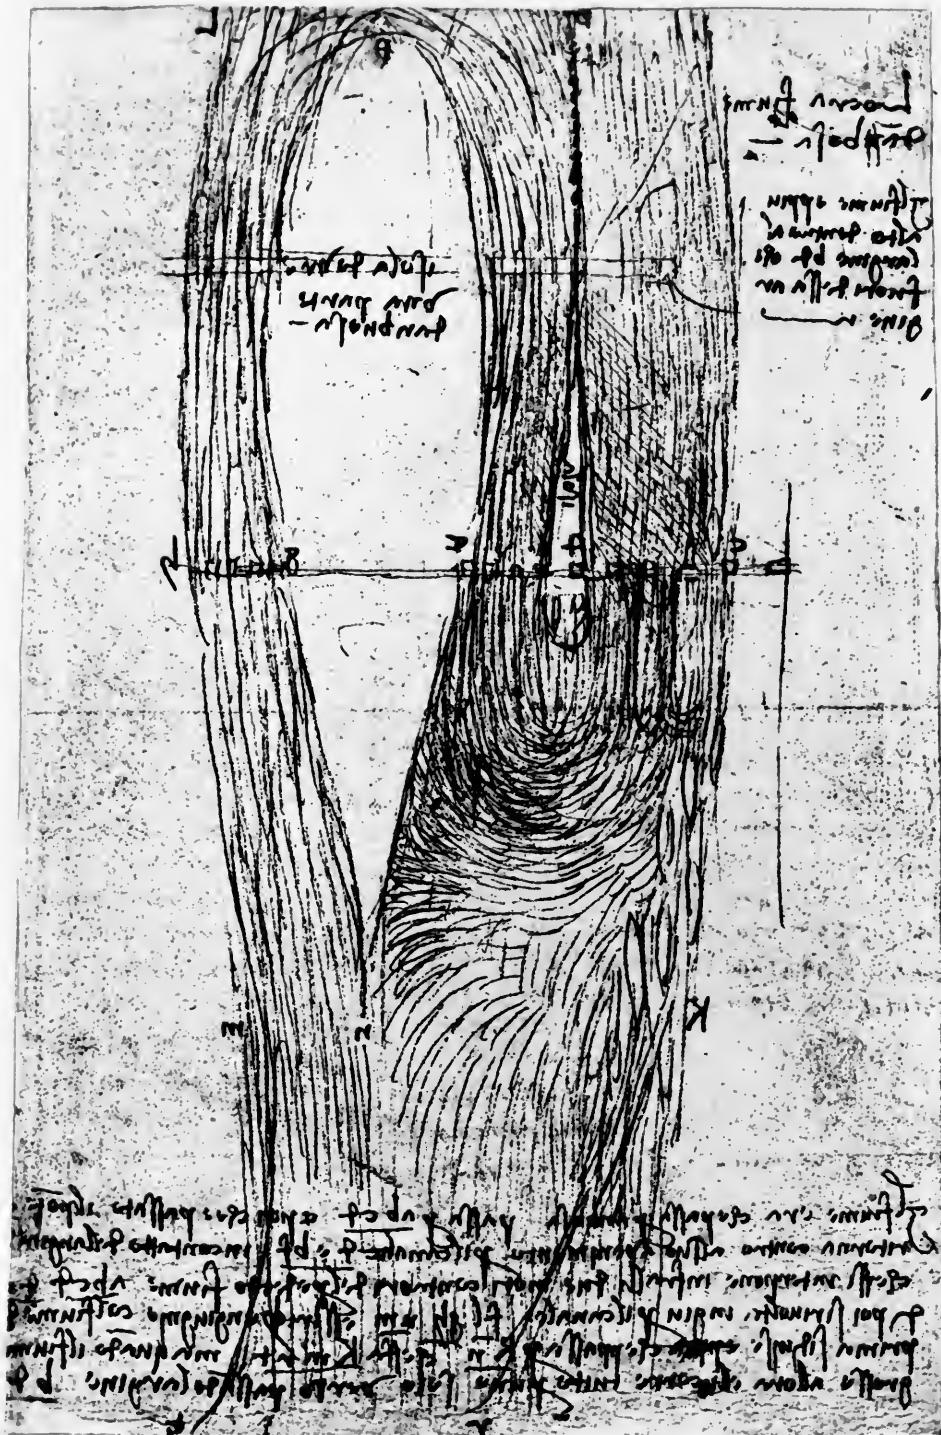

1073.

^{c d} is the garden at Blois; ^{a b} is the conduit of Blois, made in France by Fra Giocondo, ^{b c} is what is wanting in the height of that conduit, ^{c d} is the height of the garden at Blois, ^{e f} is the siphon of the conduit, ^{b c, e f, f g} is, where the siphon discharges into the river.

file ainée à François, comte d'Angoulême, Louis XII lui avait constitué en dot les comtés de Blois, d'Asti, de Coucy, de Montfort, d'Etampes et de Vertus. Une ordonnance de François I. lui laissa en 1516 l'administration du comté de Blois.

Le roi fit commencer, dans la même année, les travaux de cette belle partie du château, connue sous le nom d'aile de François I, et dont nous avons donné la description au commencement de ce livre. Nous trouvons en effet, dans les archives du Baron de Joursanvault, une pièce qui en fixe parfaitement la date. On y lit: "Je, Baymon Philippeaux, commis par le Roy à tenir le compte et faire le payement des bastiments, edifices et reparacions que le dit seigneur fait faire en son chastel de Blois, confesse avoir eu et reçeu . . . la somme de trois mille livres tournois . . . le cinquième jour de juillet, l'an mil cinq cent et seize. P. 24: Les jardins avaient été décorés avec beaucoup de luxe par les différents possesseurs du château. Il ne reste de tous les bâtiments qu'ils y élevèrent que ceux des officiers chargés de l'ad-

ministration et de la culture des jardins, et un pavillon carré en pierre et en brique flanqué de terrasses à chacun de ses angles. Quoique défiguré par des mesures élevées sur les terrasses, cet édifice est très-digne d'intérêt par l'originalité du plan, la décoration architecturale et le souvenir d'Anne de Bretagne qui le fit construire. Félibien describes the garden as follows: Le jardin haut était fort bien dressé par grands compartimens de toutes sortes de figures, avec des allées de meuriers blancs et des palissades de coudriers. Deux grands berceaux de charpenterie séparaient toute la longueur et la largeur du jardin, et dans les quatres angles des allées, où ces berceaux se croisent, il y auoit 4 cabinets, de mesme charpenterie . . . Il y a pas longtemps qu'il y auoit dans ce mesme jardin, à l'endroit où se croisent les allées du milieu, un édifice de figure octogone, de plus de 7 thoises de diamètre et de plus de neuf thoises de haut; avec 4 enfoncements en forme de niches dans les 4 angles des allées. Ce bastiment . . . estoit de charpente mais d'un extraordinairement bien travaillé. On y voyait particulièrement la cordilière qui regnait tout autour en forme de cordon. Car la Reyne affectait de la mettre non seulement à ses armes et a ses chiffres mais de la faire représenter en divers manières dans tous les ouvrages qu'on lui faisait pour elle . . . le bastiment estoit couvert en forme de dôme qui dans son milieu avait encore un plus petit dôme, ou lanterne vitrée au-dessus de laquelle estoit une figure dorée représentant Saint Michel. Les

The river Loire at Amboise.

The river is higher within the bank *b d* than outside that bank.

The island where there is a part of Amboise.

This is the river that passes through Amboise; it passes at *a b c d*, and when it has passed the bridge it turns back, against the original current, by the channel *d e, b f* in contact with the bank which lies between the two contrary currents of the said river, *a b, c d*, and *d e, b f*. It then turns down again by the channel *f l, g h, n m*, and reunites with the river from which it was at first separated, which passes by *k n*, which makes *k m, r t*. But when the river is very full it flows all in one channel passing over the bank *b d*.

1075.

The water may be dammed up above the level of Romorantin to such a height, that in its fall it may be used for numerous mills.

deux dômes estoient proprement couvert d'ardoise et de plomb doré par dehors; par dedans ils estoient lambrisés d'une menuiserie très delicate. Au milieu de ce Salon il y avait un grand bassin octogone de marbre blanc, dont toutes les faces estoient enrichies de différentes sculptures, avec les armes et les chiffres du Roy Louis XII et de la Reine Anne. Dans ce bassin il y en avait un autre posé sur un piédestal lequel auoit sept piedz de diamètre. Il estoit de figure ronde à godrons, avec des masques et d'autres ornements très sçauamment taillés. Du milieu de ce deuxiesme bassin s'y levoit un autre petit piédestal qui portait un troisiesme bassin de trois pieds de diamètre, aussy parfaitement bien taillé; c'estoit de ce dernier bassin que jallisoit l'eau qui se répendoit en suite dans les deux autres bassins. Les beaux ouvrages faits d'un marbre esgalement blanc et poli, furent brisez par la pesanteur de tout l'édifice, que les injures de l'air renver-
sèrent de fond en comble.

1074. See Pl. CXV. Lines 1—7 are above, lines 8—10 in the middle of the large island and the word *Isola* is written above *d* in the smaller island; *a* is written on the margin on the bank of the river above 1. 1; in the reproduction it is not visible. As may be seen from the last sentence, the observation was made after long study of the river's course, when Leonardo had resided for some time at, or near, Amboise.

⁹ Il fiume di Villa¹⁰franca sia cō¹¹dotto a Romorō¹²tino, e sia fatto dal suo ¹³popolo, e li legni¹⁴ami, che compō¹⁵gono le lor case, ¹⁶siē per barche cō¹⁷dotte a Romorō¹⁸tino; e l' fiume ¹⁹sia ringorga²⁰to in tāta altez²¹za, che l'acqua ²²si possa cō co²³modo discie²⁴so riduciere ²⁵a Romorōtino.

The river at Villefranche may be conducted to Romorantin which may be done by the inhabitants; and the timber of which their houses are built may be carried in boats to Romorantin [18]. The river may be dammed up at such a height that the waters may be brought back to Romorantin with a convenient fall.

Br. M. 269δ]

1076.

S'elli è meglio che l'acqua ²vada tutta in alto in una so³la volta, o veramēte in due?

⁴Rispōdesi che in vna sola volta la rota nō potreb⁶be sostenere tutta l'acqua ⁷ch'ella leua in due volte, per⁸chè nella mezza volta della ⁹rota leverebbe 100 libbre, ¹⁰e nō più, e s'ell' auesse a leua¹¹re le 200 libbre la uolta inte¹²re, non le leverebbe, se ¹³tal rota nō raddoppiasse il dia¹⁴metro, e raddoppiando tal ¹⁵diametro raddoppireb¹⁶be il tempo; adūque è meglio ¹⁷e più comodità di spesa a fare ¹⁸tal rota sub ²a che ²a ecc.

¹⁹Il desciēso del mozzo non s'ab²⁰bassa insino alla pelle dell'acqua, ²¹perchè toccādo l'acqua diminuireb²²be il peso suo.

²³E se per l'aversario ²⁴s'ingrossasse il ²⁵fugatore dell'ac²⁶qua dieci tan²⁷ti più, che la ²⁸canna dell'²⁹acqua fuggiē³⁰te d'essi, se li ³¹dieci tanti ³²men moto ³³che a questo, ³⁴che vfitio sareb³⁵be il suo? Ri³⁶spōdesi per la ³⁷9^a di questo ³⁸che dice, che l'acqua ³⁹s'alzerebbe ⁴⁰la decima parte di quel che prima s'alzava ⁴¹nell'altezza di quella canna donde prima sur⁴²gieua.

As to whether it is better that the water should all be raised in a single turn or in two?

The answer is that in one single turn the wheel could not support all the water that it can raise in two turns, because at the half turn of the wheel it would be raising 100 pounds and no more; and if it had to raise the whole, 200 pounds in one turn, it could not raise them unless the wheel were of double the diameter and if the diameter were doubled, the time of its revolution would be doubled; therefore it is better and a greater advantage in expense to make such a wheel of half the size (?) &c.

The going down of the nave of the wheel must not be so low as to touch the surface of the water, because by touching the water its momentum will be lessened.

And if on the contrary the conduit for the water were ten times the size of the pipe for the water escaping from it, and if it had ten times less motion, what would be its office? This is answered by the 9th of this which says that the water would rise in the pipe whence it first flow, to a tenth part of its original height.

pagnie sopra le quali esso adaque⁴rà, e rederà il paese fertile da nutrire li abitatori, e farà canale navicabile e mercantile.

⁶Modo che 'l fiume ⁷col suo corso ⁸netti il fondo del ⁹fiume.

¹⁰Per la nona del ³°; ¹¹Quello ch'è più veloce, più consuma il ¹³suo fondo, e per la cō-¹⁴versa: l'acqua ch'è più ¹⁵tarda piv lascia ¹⁶di quel che la intorbi¹⁷da;

¹⁸E facciasi il serraglio mobile, che io or¹⁹dinai nel Friuli, del quale, aperto vna cāterat²⁰ta, l'acqua che di quella vsciva cavò il fondo; ²¹addunque nelli diluui de' fumi si debbono aprire le cate²²ratte de' molini, acciochè tutto il corso del fiume si renda per ca²³terat²⁴ta in ciascū molino; sieno molte, acciochè ²⁴si faccia maggiore ipeto, e così netterà tutto il fiume; ²⁵e infra le due poste de' moli²⁶ni sia vna delle dette caterat²⁷te; sia vna d'esse poste di tal cate²⁸ratte infra l'uno e l'al²⁹tro molino.

the land which it would water and would render the country fertile to supply food to the inhabitants, and would make navigable canals for mercantile purposes.

The way in which the river in its flow should scour its own channel.

By the ninth of the third; the more rapid it is, the more it wears away its channel; and, by the converse proposition, the slower the water the more it deposits that which renders it turbid.

And let the sluice be movable like the one I arranged in Friuli [19], where when one sluice was opened the water which passed through it dug out the bottom. Therefore when the rivers are flooded, the sluices of the mills ought to be opened in order that the whole course of the river may pass through falls to each mill; there should be many in order to give a greater impetus, and so all the river will be scoured. And below the site of each of the two mills there may be one of the said sluice falls; one of them may be placed below each mill.

C. A. 329b; 993a]

1078.

Vno trabocco è quattro braccia e vno miglio è tre mila d'esse braccia; E 'l braccio si diuide in 12 ōcie; ²e l'acqua de' canali à di calo in ogni cēto trabocchi 2 delle dette oncie; adūque 14 oncie ³di calo son neciessarie a due mila ottocēto braccia di moto ne'detti canali; seguita che 15 oncie ⁴di calo danno debito moto alli corsi dell'acque dei predetti canali, cioè uno braccio e ¹/₂ ⁵per miglio; E per questo cōcluderemo che l'acqua che si toglie dal fiume di Villa

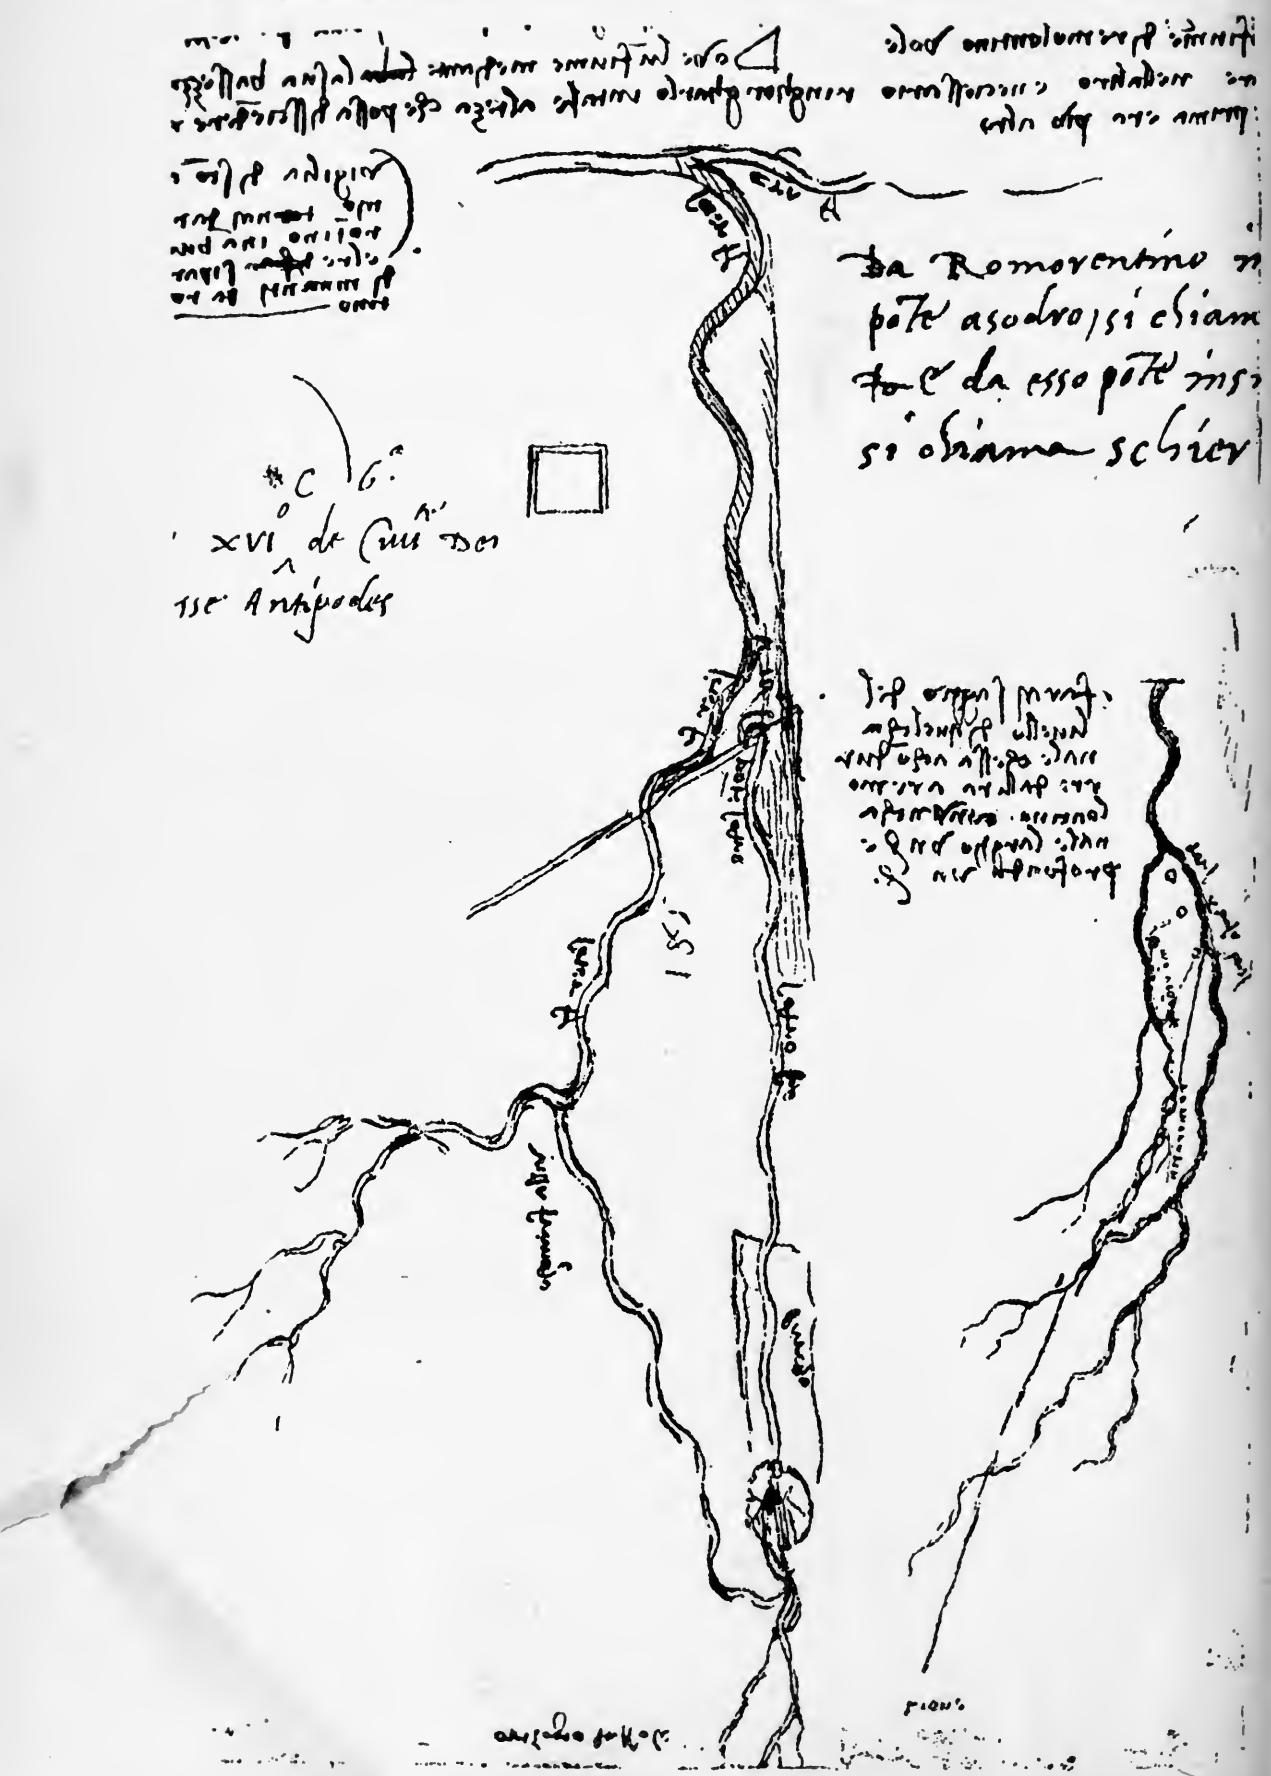

A trabocco is four braccia, and one mile is three thousand of the said braccia. Each braccio is divided into 12 inches; and the water in the canals has a fall in every hundred trabocchi of two of these inches; therefore 14 inches of fall are necessary in two thousand eight hundred braccia of flow in these canals; it follows that 15 inches of fall give the required momentum to the currents of the waters in the said canals, that is one braccio and a half in the mile. And from this it may be concluded that the water taken from the river of Ville-

1077. 19. This passage reveals to us the fact that Leonardo had visited the country of Friuli and that

he had stayed there for some time. Nothing whatever was known of this previously.

Franca e si ⁶ presta al fiume di Romorantino vuole . . . Dove l'ū fiume mediante la sua bassezza nō ⁷ può entrare nell'altro, è necessario ringorgarlo in tale altezza che possa disciēdere ⁸ in quel che prima era piv alto.

⁹¶ Vigilia di Sco Anto¹⁰nio tornai da Romo¹¹rōtino in Abuosa, ¶ ¹²e 'l rē si partì due ¹³dī innanti da Romorō¹⁴tino.

¹⁵ Da Romorontino insino al ¹⁶pōte a Sodro | si chiama Soudro; ¹⁷e da esso pōte insino a Tours ¹⁸si chiama Schier.

¹⁹ Farai saggio del ²⁰liuello di quel ca-²¹nale che si à a cōdur²²re dalla Loira a Romo²³lontino con vn ca²⁴nale largo vn braccio e ²⁵profondo vn braccio.

franche and lent to the river of Romorantin will . . . Where one river by reason of its low level cannot flow into the other, it will be necessary to dam it up, so that it may acquire a fall into the other, which was previously the higher.

The eve of Saint Antony I returned from Romorantin to Amboise, and the King went away two days before from Romorantin.

From Romorantin as far as the bridge at Saudre it is called the Saudre, and from that bridge as far as Tours it is called the Cher.

I would test the level of that channel which is to lead from the Loire to Romorantin, with a channel one braccio wide and one braccio deep.

1078. Lines 6—18 are partly reproduced in the facsimile on p. 254, and the whole of lines 19—25.

The following names are written along the rivers on the larger sketch. era f (the Loire) scier f (the Cher) three times. Pōte Sodro (bridge of the Soudre). Villa franca (Villefranche) banco (sandbank) Sodro (Soudre). The circle below shows the position of Romorantin. The words 'orologio del sole' written below do not belong to the map of the rivers. The following names are written by the side of the smaller sketch-map:—tors (Tours), Abosa (Amboise) bres—for Bles (Blois) mō rica ||| (Montrichard). Lione (Lyons). This map was also published in the 'Saggio' (Milano, 1872) Pl. XXII, and the editors remark: *Forse la linia retta che va da Amboise a Romorantin segna l'andamento proposto d'un Canale, che poi sembra prolungarsi in giù fin dove sta scritto Lione.*

M. Ravaïsson has enlarged on this idea in the *Gazette des Beaux Arts* (1881 p. 530): *Les traces de Léonard permettent d'entrevoir que le canal commençant soit auprès de Tours, soit auprès de Blois et passant par Romorantin, avec port d'embarquement à Villefranche, devait, au delà de Bourges, traverser l'Allier au-dessous des affluents de la Dore et de la Sioule, aller par Moulins jusqu'à Digoin; enfin, sur l'autre rive de la Loire, dépasser les monts du Charolais et rejoindre la Saône auprès de Mâcon.* It seems to me rash, however, to found so elaborate an hypothesis on these sketches of rivers. The slight stroke going to *Lione* is perhaps only an indication of the direction. — With regard to the Loire compare also No. 988. l. 38.

1079. The meaning is obscure; a more important passage referring to France is to be found under No. 744.

B. 61. a]

On the Germans (1080, 1081). Modo come i Tedeschi ingarbugliano e tessano, serādosi insieme, ²le loro targhe lunghe cōtro a nemici ·, abassandosi e mettēdo ³vna delle teste a terra, tenēdo il resto · in mano.

1080.

The way in which the Germans closing up together cross and interweave their broad leather shields against the enemy, stooping down and putting one of the ends on the ground while they hold the rest in their hand.

B. 63. b]

Vsano i Germani · annegare · castellani cō fumo di pivma, solfo ²e risagallo ; e fanno durare detti sumi 7 e 8 ore; ácora la ³pula del frumēto fa assai e durabil fumo; e letame secco ancor lui, ⁴ma fa sia mischiato colla sāsa, cioè vliue tratte nel' olio, o vuoi morchia ⁵d'olio.

1081.

The Germans are wont to annoy a garrison with the smoke of feathers, sulphur and realgar, and they make this smoke last 7 or 8 hours. Likewise the husks of wheat make a great and lasting smoke; and also dry dung; but this must be mixed with olive husks, that is olives pressed for oil and from which the oil has been extracted.

Adula, ⁸doue nascie il Danubio, il quale s'astende a leuante con corso di 1500 miglia, e la sua linia breuissima è circa ⁹mille miglia, e altrettanto o circa è'l ramo del Monte Adula mutato ne' predetti nomi di mōti; sta a tramon¹⁰tana il monte Carpatus, il quale termina la larghezza della valle del Danubio, la qual, come dissi, s'astende ¹¹a leuāte cō lunghezza di circa mille miglia, ed è larga doue 200 e doue 300 miglia; questa si mette pel ¹²mezzo il Danvbio, primo fiume d'Europa per magnitudine, il qual Danvbio si lascia per mezzo di ¹³Austria e Albania e per tramōtana Bauaria, Polonia, Ungheria, Valachia e Bosnia; versaua adunque il Danubio | over Da¹⁴noia nel mare di Ponto, il quale s'astendea insino vicino all'Austria e occupaua tutta la pianvra che oggi ¹⁵discorre esso Danvbio, e'l segno dico ne mostrano l'ostriche e li nichi e bovoli e cappe e ossa di grā pesci, che an¹⁶cora in molti lochi si trouano nell'alte coste de' predetti mōti; ed era tale mare fatto per la ringorgatione dell'i ra¹⁷mi del Monte Adula, che s'astendeano a leuante e si congiugneano colli rami del Mōte Tauro, che s'astendono a po¹⁸nēte, e circa alla Bitinia versauā l'acque d'esso Mare di Poto nel Propontico, caddendo nel Mare Egeo cioè ¹⁹Mar Mediteranno, doue poi il lungo corso spiccò li rami del Mōte Adula dalli rami del Mōte Tauro; li Mare ²⁰di Poto s'abassò e scoperse la Val di Danubio colle prenominate provincie, e tutta l'Asia Minore di là dal monte Ta²¹vro per tramōtana e la pianvra ch'è da Mōte Caucasso al mare di Ponto per ponete, e la pianura del Ta²²nai dentro alli monti Rifei cioè a' piedi loro; Ecco che 'l mare di Ponto abbassò circa a braccia 1000 ²³nello scoprire di tanta pianura.

course of 1500 miles; its shortest line is about 1000 miles, and the same or about the same is that branch of the Adula mountains changed as to their name, as before mentioned. To the North are the Carpathians, closing in the breadth of the valley of the Danube, which, as I have said extends eastward, a length of about 1000 miles, and is sometimes 200 and in some places 300 miles wide; and in the midst flows the Danube, the principal river of Europe as to size. The said Danube runs through the middle of Austria and Albania and northwards through Bavaria, Poland, Hungary, Wallachia and Bosnia and then the Danube or Donau flows into the Black Sea, which formerly extended almost to Austria and occupied the plains through which the Danube now courses; and the evidence of this is in the oysters and cockle shells and scallops and bones of great fishes which are still to be found in many places on the sides of those mountains; and this sea was formed by the filling up of the spurs of the Adula mountains which then extended to the East joining the spurs of the Taurus which extend to the West. And near Bithynia the waters of this Black Sea poured into the Propontis [Marmora] falling into the Aegean Sea, that is the Mediterranean, where, after a long course, the spurs of the Adula mountains became separated from those of the Taurus. The Black Sea sank lower and laid bare the valley of the Danube with the above named countries, and the whole of Asia Minor beyond the Taurus range to the North, and the plains from mount Caucasus to the Black Sea to the West, and the plains of the Don this side—that is to say, at the foot of the Ural mountains. And thus the Black Sea must have sunk about 1000 braccia to uncover such vast plains.

1083.

WHY THE SEA MAKES A STRONGER
CURRENT IN THE STRAITS OF SPAIN
THAN ELSEWHERE.

A river of equal depth runs
with greater speed in a narrow
space than in a wide one, in
proportion to the difference be-
tween the wider and the narrower
one.

This proposition is clearly
proved by reason confirmed
by experiment. Supposing that
through a channel one mile
wide there flows one mile in
length of water; where the river
is five miles wide each of the
5 square miles will require
 $\frac{1}{5}$ of itself to be equal to
the square mile of water re-
quired in the sea, and where
the river is 3 miles wide each
of these square miles will re-
quire the third of its volume
to make up the amount of the
square mile of the narrow part;
as is demonstrated in f g h at
the mile marked n.

1085. 6. *Mēfi*. Leonardo can only mean here the citadel of Cairo on the Mokattam hills.

WHY THE CURRENT OF GIBRALTAR IS ALWAYS GREATER TO THE WEST THAN TO THE EAST.

The reason is that if you put together the mouths of the rivers which discharge into the Mediterranean sea, you would find the sum of water to be larger than that which this sea pours through the straits into the ocean. You see Africa discharging its rivers that run northwards into this sea, and among them the Nile which runs through 3000 miles of Africa; there is also the Bagrada river and the Schelif and others. Likewise Europe pours into it the Don and the Danube, the Po, the Rhone, the Arno, and the Tiber, so that evidently these rivers, with an infinite number of others of less fame, make its great breadth and depth and current; and the sea is not wider than 18 miles at the most westerly point of land where it divides Europe from Africa.

1085.

The gulf of the Mediterranean, as an inland sea, received the principal waters of Africa, Asia and Europe that flowed towards it; and its waters came up to the foot of the mountains that surrounded it and made its shores. And the summits of the Apennines stood up out of this sea like islands, surrounded by salt water. Africa again, behind its Atlas mountains, did not expose uncovered to the sky the surface of its vast plains about 3000 miles in length, and Memphis[6] was on the shores of this sea, and above the plains of Italy, where now birds fly in flocks, fish were wont to wander in large shoals.

1086.

The greatest ebb made anywhere by the Tunis. Mediterranean is above Tunis, being about two and a half braccia and at Venice it falls two braccia. In all the rest of the Mediterranean sea the fall is little or none.

The Tyrrhene Sea. Alcuni nel Mare Tirreno vsarano questo modo, cioè ²appiccauano vn ācora a l'una delle stremità dell'āteña, ³e dall'altra vna corda che ī basso s'appiccava a vn ācora, ⁴e nel pugniare attacavano detta ācora ai remeggi dell'osposito navilio, e per forza d'argano quello mādavano alla bāda ⁶e gittavano sapon tenero e stoppa ipeciata ifocata sulla ⁷prima bāda dou'era l'ācora attaccata, acciochè, per fugir detto ⁸foco, i difenditori d'esso navilio avessino a fugire da l'op^oposita bāda, e faciēdo così facievano avmēto allo spugnia¹⁰tore, perchè la galera piv facilmente per lo cōtrapeso ¹¹andava alla bāda.

1089.

Some at the Tyrrhene sea employ this method; that is to say they fastened an anchor to one end of the yard, and to the other a cord, of which the lower end was fastened to an anchor; and in battle they flung this anchor on to the oars of the opponent's boat and by the use of a capstan drew it to the side; and threw soft soap and tow, daubed with pitch and set ablaze, on to that side where the anchor hung; so that in order to escape that fire, the defenders of that ship had to fly to the opposite side; and in doing this they aided to the attack, because the galley was more easily drawn to the side by reason of the counterpoise.

IV.

THE LEVANT.

Leic. 312]

1090.

Truovāsi nelle rive del Mare Mediter-rano versare fiumi 300, ²e porti 40 mila 200, e esso māre è di lunghezza miglia 3000; Molte volte s'è accozzato l'accrescimēto de'mari del riflusso suo e'l soffiare delli venti occidētali al diluui del Nilo, ed alli fumi che uersā dal mare di Pōto, ed auere alzato tanto li mari che sō ⁵cō grādissimi diluvi discorsi per molti paesi, e questi diluvi accadono nel tempo, che 'l sole ⁶distrugie le neui delli alti mōti d'Etiopia che si leuano alla fredda regiō dell'aria, e si ⁷milmēte fa l'appressamēto del sole alli mōti della Sarmatia Asiatica e quella d'Europa, ⁸in modo che l'accozzamēto di queste 3 dette cose sono, e sono state cagione di grādissimi diluui, cioè il riflusso del mare, e li uenti occidentali, e la distrutio delle nevi; è ogni cosa ¹⁰ringorgata nella Siria, Samaria, la Giudea infra Sinai e il Libano, e 'l resto della Siria infra ¹¹il Libano e Mōte

On the shores of the Mediterranean ³⁰⁰The Lavan-rivers flow, and ⁴⁰, 200 ports. And this sea is 3000 miles long. Many times has the increase of its waters, heaped up by their backward flow and the blowing of the West winds, caused the overflow of the Nile and of the rivers which flow out through the Black Sea, and have so much raised the seas that they have spread with vast floods over many countries. And these floods take place at the time when the sun melts the snows on the high mountains of Ethiopia that rise up into the cold regions of the air; and in the same way the approach of the sun acts on the mountains of Sarmatia in Asia and on those in Europe; so that the gathering together of these three things are, and always have been, the cause of tremendous floods: that is, the return flow of the sea with the West wind and the melting of the snows. So every river will overflow in Syria, in Samaria, in Judea between Sinai and the Lebanon, and in the rest of Syria between the Lebanon and the Taurus mountains, and in Cilicia, in the Armenian mountains, and in Pamphilia and in Lycia within the hills,

Tauro, e la Cilicia dentro alli mōti Armeni e la Pamfilia e Licia dentro alli mōticelli ¹² e l'Egitto insino al mōte Atlante; Il seno di Persia, che già fu lago grādissimo del Tigris e cade¹³a nel mare d'India, ora à consumato il mōte che li facea argine, e si è ragguagliato coll'altezza ¹⁴dello Oceano Indico; E se l'Mare Mediterrano seguiva il moto suo nel sē d'Arabia, ācor facieva il simile, ¹⁵cioè che si ragguagliava l'altezza Mediterranea colla altezza d'esso Mare Indico.

The Red
Sea.
(1091. 1092).

Versò l'acqua Mediterranea lungamente pel Mare Rosso, el quale è ²largo cento miglia e lungo mille cinque cento; è tutto pieno di scogli, e à consumato li la³ti del Mōte Sinai, la qual cosa testifica, nō da inōdatione del Mar d'India, che in tali liti percuso⁴tesse, ma da una ruina d'acqua, la qual portaua con seco tutti li fiumi che soprabbons⁵dauano al Mare Mediterraneo, e oltre a questo il riflusso del mare; ⁶e poi, essendo tagliato nel ponente, 3 mila miglia remoto da questo loco, il mōte Calpe è s⁷piccato dal Mōte Abila, e fu tal taglio fatto bassissimo nelle pianure che si trouauā infr.⁸ Abila ⁹e l'ocean¹⁰ a pié del monte in loco basso, aiutato dal concauamēto di qualche vallata fatta ¹¹da alcun fiume che quiui passasse; venne Ercole ad aprire il mare nel ponēte, e allora ¹⁰l'acque marine cominciarono a uersare nell'ocean¹² occidentale, e per la grā bassezza, il Mare ¹¹Rosso rimase piv alto, onde l'acque ànno abbandonato il corso di quiui; sempre ànno poi vers¹²to l'acque per lo Stretto di Spagna.

C. A. 321^b; 971^a]

La superficie del Mare Rosso è in liuello coll'ocean^o.

and in Egypt as far as the Atlas mountains. The gulf of Persia which was formerly a vast lake of the Tigris and discharged into the Indian Sea, has now worn away the mountains which formed its banks and laid them even with the level of the Indian ocean. And if the Mediterranean had continued its flow through the gulf of Arabia, it would have done the same, that is to say, would have reduced the level of the Mediterranean to that of the Indian Sea.

1091.

For a long time the water of the Mediterranean flowed out through the Red Sea, which is 100 miles wide and 1500 long, and full of reefs; and it has worn away the sides of Mount Sinai, a fact which testifies, not to an inundation from the Indian sea beating on these coasts, but to a deluge of water which carried with it all the rivers which abound round the Mediterranean, and besides this there is the reflux of the sea; and then, a cutting being made to the West 3000 miles away from this place, Gibraltar was separated from Ceuta, which had been joined to it. And this passage was cut very low down, in the plains between Gibraltar and the ocean at the foot of the mountain, in the low part, aided by the hollowing out of some valleys made by certain rivers, which might have flowed here. Hercules came to open the sea to the westward and then the sea waters began to pour into the Western Ocean; and in consequence of this great fall, the Red Sea remained the higher; whence the water, abandoning its course here, ever after poured away through the Straits of Spain.

1092.

The surface of the Red Sea is on a level with the ocean.

³⁴Cioè 3000 il Mediterraneo, 3000 ³⁵il Nilo scoperto, e 3000 il Nilo ³⁶che corre a oriēte ecc.

A mountain may have fallen and closed the mouth of the Red Sea and prevented the outlet of the Mediterranean, and the Mediterranean Sea thus overfilled had for outlet the passage below the mountains of Gades; for, in our own times a similar thing has been seen[6]; a mountain fell seven miles across a valley and closed it up and made a lake. And thus most lakes have been made by mountains, as the lake of Garda, the lakes of Como and Lugano, and the Lago Maggiore. The Mediterranean fell but little on the confines of Syria, in consequence of the Gaditanian passage, but a great deal in this passage, because before this cutting was made the Mediterranean sea flowed to the South East, and then the fall had to be made by its run through the Straits of Gades.

At a the water of the Mediterranean fell into the ocean.

All the plains which lie between the sea and mountains were formerly covered with salt water.

Every valley has been made by its own river; and the proportion between valleys is the same as that between river and river.

The greatest river in our world is the Mediterranean river,

which moves from the sources of the Nile to the Western ocean.

And its greatest height is in Outer Mauritania and it has a course of ten thousand miles before it reunites with its ocean, the father of the waters.

That is 3000 miles for the Mediterranean, 3000 for the Nile, as far as discovered and 3000 for the Nile which flows to the East, &c.

1093.

Therefore we must conclude those moun-
tains to be of the greatest height, above
which the clouds falling in snow give rise
to the Nile.

B. 618]

Gli Egiziani, gli Etiopi · e gli Arabi · nel
passare il Nilo vsano ai camelí ¹appiccare
ai lati del busto 2 baghe cioè otri i questa
forma di sotto.

³In queste 4 maglie di re⁴te mettono i
piè i camelí ⁵di carriaggi.

1094.

The Egyptians, the Ethiopians, and the Arabs,
in crossing the Nile with camels, are accustomed
to attach two bags on the sides of the camel's bo-
dies that is skins in the form shown underneath.

In these four meshes of the net the camels
for baggage place their feet.

Leic. 348]

Il Tigri passa per l'Asia Minore, il
quale ne porta ²con seco l'acqua di 3 pa-
duli, l'un dopo l'altro di uarie altezze, de'
quali il piv alto è Munace, e 'l mezzano
è Pallas, ³e 'l più basso è Triton; ancora
el Nilo diriuia di 3 altissimi paduli in Eti-
opia, il quale cor^{re} a tramötana e versa
nel mare d'Egitto con corso di 4000 miglia,
e la sua breuissima e diritta linia ⁵è 3000
miglia; di quel che s'ā notitia escie de'
mōti della luna con diuersi e incogniti pri-
cipi, e tro⁶vāsi li detti laghi alti sopra la
spera dell'acqua circa a 4000 braccia cioè
vn miglio e $\frac{1}{3}$, a dare ⁷vn braccio di ca-
duta al Nilo per ogni miglio.

1095.

The Tigris passes through Asia Minor
and brings with it the water of three lakes,
one after the other of various elevations;
the first being Munace and the middle
Pallas and the lowest Triton. And the Nile
again springs from three very high lakes in
Ethiopia, and runs northwards towards the
sea of Egypt with a course of 4000 miles,
and by the shortest and straightest line it is
3000 miles. It is said that it issues from
the Mountains of the Moon, and has various
unknown sources. The said lakes are about
4000 braccia above the surface of the sphere
of water, that is 1 mile and $\frac{1}{3}$, giving to
the Nile a fall of 1 braccia in every mile.

Sic Ventus stagnante Pado, fusoque Britannus
Navigat oceano, sic cum tenet omnia Nilus,
Conseritur bibula Memphis cymbo papyro.*

VOL. II.

1097.

Why does the inundation of the Nile occur in the summer, coming from torrid countries?

1098.

It is not denied that the Nile is constantly muddy in entering the Egyptian sea and that its turbidity is caused by soil that this river is continually bringing from the places it passes; which soil never returns in the sea which receives it, unless it throws it on its shores. You see the sandy desert beyond Mount Atlas where formerly it was covered with salt water.

1099.

The Assyrians and the people of Euboea ^{Customs of Asiatic Nations} accustom their horses to carry sacks which they can at pleasure fill with air, and which in case of need they carry instead of the girth of the saddle above and at the side, and they are well covered with plates of cuir bouilli, in order that they may not be perforated by flights of arrows. Thus they have not on their minds their security in flight, when the victory is uncertain; a horse thus equipped enables four or five men to cross over at need.

1100.

SMALL BOATS.

The small boats used by the Assyrians were made of thin laths of willow plaited over rods also of willow, and bent into the form of a boat. They were daubed with fine mud soaked with oil or with turpentine, and reduced to a kind of mud which resisted the water and because pine would split; and always remained fresh; and they covered this sort of boats with the skins of oxen in safely crossing the river Sicuris of Spain, as is reported by Lucan[7].

*His ratibus transacta manus festinat utrimque
Succisam cavare nemus &c.*

Caesar (de bello civ. I, 54) has the same remark about the Britanni (confirmed by Pliny, hist. nat. IV, 15) which Leonardo here makes about the Assyrians.—This and the foregoing text are illustrated by slight sketches.

⁸L'Ispani . li Sciti . e li Arabi , quādo vogliono fare vn subito pōte , ⁹alliganō . li graticci fatti di salice sopra le baghe overo otri di pelli bouine , ¹⁰e così passā sicuramente.

1101. Nello ottanto 9. It is scarcely likely that Leonardo should here mean 89 AD. Dr. H. MÜLLER-STRÜBING writes to me as follows on this subject: "With reference to Rhodes Ross says (*Reise auf den Griechischen Inseln*, III 70 ff. 1840), that ancient history affords instances of severe earthquakes at Rhodes, among others one in the second year of the 138th Olympiad=270 B. C.; a remarkably violent one under Antoninus Pius (A. D. 138—161) and again under Constantine and later. But Leonardo expressly speaks of an earthquake "nel mar di Atalia presso a Rodi", which is singular. The town of Attalia, founded by Attalus, which is what he no doubt means, was in Pamphylia and more than 150 English miles East of Rhodes in a straight line. Leake and most other geographers identify it with the present town of Adalia. Attalia is rarely mentioned by the ancients, indeed only by Strabo and Pliny and no earthquake is spoken of. I think therefore you are justified in assuming that Leonardo means 1489". In the elaborate catalogue of earthquakes in the East by Selale Dshelal eddin Sayouthy

1101.

In [fourteen hundred and] eighty nine there was an earthquake in the sea of Atalia near Rhodes, which opened the sea—that is its bottom—and into this opening such a torrent of water poured that for more than three hours the bottom of the sea was uncovered by reason of the water which was lost in it , and then it closed to the former level.

1102.

Rhodes has in it 5000 houses.

1103.

SITE FOR [A TEMPLE OF] VENUS.

You must make steps on four sides , by which to mount to a meadow formed by nature at the top of a rock which may be hollowed out and supported in front by pilasters and open underneath in a large portico ,

(an unpublished Arabic MS. in the possession of Prof. SCHEFER, (Membre de l'Institut, Paris) mention is made of a terrible earthquake in the year 867 of the Mohamedan Era corresponding to the year 1489, and it is there stated that a hundred persons were killed by it in the fortress of Kerak. There are three places of this name. Kerak on the sea of Tiberias , Kerak near Tahle on the Libanon , which I visited in the summer of 1876—but neither of these is the place alluded to. Possibly it may be the strongly fortified town of Kerak—Kir Moab , to the West of the Dead Sea. There is no notice about this in ALEXIS PERCY, *Mémoire sur les tremblements de terres ressentis dans la péninsule turco-hellénique et en Syrie* (*Mémoires couronnés et mémoires des savants étrangers , Académie Royale de Belgique , Tome XXIII*).

1103. See Pl. LXXXIII. Compare also p. 33 of this Vol. The standing male figure at the side is evidently suggested by Michael Angelo's David. On the same place a slight sketch of horses seems to have been drawn first; there is no reason for

l'acqua in diuersi vasi di graniti porfidi e serpētini, dentro a emicicli, e spāsda l'acqua in se medesimi, e dintorno a tal portico inverso tramōtana sia un lago . con vna isoletta ⁶in mezzo, nella quale sia vn folto e ōbroso bosco; l'acque in testa ai pilastri siē uersate in uasi ai piè ⁷de' sua inbasamēti, de' quali si spargano piccoli riuetti;

⁸ Partendosi dalla ⁹riviera di Cilitia inverso meridio si scopre ¹⁰la bellezza dell'isola di Cipri.

in which the water may fall into various vases of granite, porphyry and serpentine, within semi-circular recesses; and the water may overflow from these. And round this portico towards the North there should be a lake with a little island in the midst of which should be a thick and shady wood; the waters at the top of the pillars should pour into vases at their base, from whence they should flow in little channels.

Starting from the shore of Cilicia towards the South you discover the beauties of the island of Cyprus.

W. XVII^a]

1104.

Dalli meridionali lidi di Cilitia si uede per australe la bell'isola ²di Cipri, la qual fu regnjo della dea Venere, e molti incitati dalla sua bellezza ³anno rotte le loro navili e sarte infra li scogli circundati dalle vertiginose ōde; ⁴quiui la bellezza del dolce colle invita i vagabundi navicanti a reſcrearsi infra le sue fiorite verdure, fralle quali i uēti ragiorādosi enpiono l'i⁶sola e 'l circūstante mare di suaui odori; o quāte nauī quiui già son sommerse! o quanti ⁷navili rotti negli scogli! quiui si potrebbero vedere invmerabili navili; chiè rotto e mezzo ⁸coperto dall'arena, chi si mostra da poppa, e chi da prua, chi da carena e chi da costa, e parà ⁹a similitudine d'un giudizio, che voglia risuscitare navili morti; tant'è la somma di quelli, che ¹⁰copre tutto il lito settentrionale; quiui i uenti d'aquilone resonādo fan uari e paurosi ¹¹soniti.

From the shore of the Southern coast of The Caspian Sea Cilicia may be seen to the South the beautiful island of Cyprus, which was the realm (1105. 1106). of the goddess Venus, and many navigators being attracted by her beauty, had their ships and rigging broken amidst the reefs, surrounded by the whirling waters. Here the beauty of delightful hills tempts wandering mariners to refresh themselves amidst their flowery verdure, where the winds are tempered and fill the island and the surrounding seas with fragrant odours. Ah! how many a ship has here been sunk. Ah! how many a vessel broken on these rocks. Here might be seen barks without number, some wrecked and half covered by the sand; others showing the poop and another the prow, here a keel and there the ribs; and it seems like a day of judgment when there should be a resurrection of dead ships, so great is the number of them covering all the Northern shore; and while the North gale makes various and fearful noises there.

C. A. 256^a; 773^a]

1106.

PERCHÉ L'ACQUA È IN SU MÖTI.

⁴Dallo stretto di Gibilterra al Tanai è miglia^a 3500, edè alto vn miglio e $\frac{1}{6}$, dando vn braccio ^bper miglio di cala a ogni acqua che si move me^cdiocremete, e il Mar Caspio è assai più al^dto; e nessū de' möti d'Europa si leua vn ^emiglio sopra la pelle delli nostri mari; adū^fque si potrebbe dire, che l'acqua ch'è nelle ^gcime de' nostri möti, venisse dall'altezza d'essi ^hmari e de' fiumi che vi versano, che sō più alti.

WHY WATER IS FOUND AT THE TOP OF MOUNTAINS.

From the straits of Gibraltar to the Don is 3500 miles, that is one mile and $\frac{1}{6}$, giving a fall of one braccio in a mile to any water that moves gently. The Caspian sea is a great deal higher; and none of the mountains of Europe rise a mile above the surface of our seas; therefore it might be said that the water which is on the summits of our mountains might come from the height of those seas, and of the rivers which flow into them, and which are still higher.

F. 68 a]

^{The sea of Azov.} Qui seguita che 'l Mare della Tana, che ²confina col Tanai, è la più alta parte ³che abbia il Mare Meditarrano, il qua⁴le è remoto dallo Stretto di Gibilterra ⁵3500 miglia, come mostra la carta da ⁶navicare; e à di calo 3500 braccia, cioè uno ⁷miglio e $\frac{1}{6}$; e è più alto adunque que⁸sto mare che mötc che abbia l'occidēte.

1107.

Hence it follows that the sea of Azov is the highest part of the Mediterranean sea, being at a distance of 3500 miles from the Straits of Gibraltar, as is shown by the map for navigation; and it has 3500 braccia of descent, that is, one mile and $\frac{1}{6}$; therefore it is higher than any mountains which exist in the West.

Leic. 31 b]

1108.

^{The Dardanelles.} In nello stretto di Tratia il Mare di Pôto senpre versa nel Mare Egeo, e mai l'Egeo in lui, e questo diriua, che 'l Mare Caspio, che cō 400 miglia sta per leuāte colli ³fiumi che i lui versano, senpre versa per cave sotterrane in esso Mar di Pôto, e 'l simile fa il Tanai ⁴col Danvbio, in modo che senpre esse acque Pôtiche son piv alte che quelle dello Egeo, ⁵e per ciò le piv alte senpre discendono nelle basse, e nō mai le basse nelle alte.

In the Bosphorus the Black Sea flows always into the Egean sea, and the Egean sea never flows into it. And this is because the Caspian, which is 400 miles to the East, with the rivers which pour into it, always flows through subterranean caves into this sea of Pontus; and the Don does the same as well as the Danube, so that the waters of Pontus are always higher than those of the Egean; for the higher always fall towards the lower, and never the lower towards the higher.

Mounts Caucasus, Comedorum, and Paro-
panisidae are joined together between Bactria
and India, and give birth to the river Oxus
which takes its rise in these mountains and
flows 500 miles towards the North and as
many towards the West, and discharges its
waters into the Caspian sea; and is accom-
panied by the Oxus, Dargados, Arthamis, Xari-
aspes, Dargamaim, Ocus and Margus, all very
large rivers. From the opposite side towards
the South rises the great river Indus which
sends its waters for 600 miles Southwards
and receives as tributaries in this course the
rivers Xaradrus, Hyphasis, Vadris, Vandabal
Bislaspus to the East, Suastes and Coe to
the West, uniting with these rivers, and with
their waters it flows 800 miles to the West;
then, turning back by the Arbiti mountains
makes an elbow and turns Southwards, where

1109. See Pl. CX No. 1. In 1453 by order of Sultan Mohamed II. the Golden Horn was crossed by a pontoon bridge laid on barrels (see Joh. Dukas' History of the Byzantine Empire XXXVIII p. 279). —The biographers of Michelangelo, Vasari as well as Condivi, relate that at the time when Michelangelo suddenly left Rome, in 1506, he entertained some intention of going to Constantinople, there to serve the Sultan, who sought to engage him, by means of certain Franciscan Monks, for the purpose of constructing a bridge to connect Constantinople with Pera. See VASARI, *Vite* (ed. Sansoni VII, 168): *Michelangelo, veduto questa furia del papa, dubitando di lui, ebbe, secondo che si dice, voglia di andarsene in Costantinopoli a servire il Turco, per mezzo di certi frati*

di San Francesco, che desiderava averlo per fare un ponte che passassi da Costantinopoli a Pera. And CONDIVI, *Vita di M. Buonaroti chap. 30:* *Michelangelo allora vedendosi condotto a questo, temendo dell'ira del papa, pensò d'andarsene in Levante; massimamente essendo stato dal Turco ricercato con grandissime promesse per mezzo di certi frati di San Francesco, per volersene servire in fare un ponte da Costantinopoli a Pera ed in altri affari.* Leonardo's plan for this bridge was made in 1502. We may therefore conclude that at about that time the Sultan Bajazet II. had either announced a competition in this matter, or that through his agents Leonardo had first been called upon to carry out the scheme.

XVIII.

Naval Warfare.—Mechanical Appliances.—Music.

Such theoretical questions, as have been laid before the reader in Sections XVI and XVII, though they were the chief subjects of Leonardo's studies of the sea, did not exclusively claim his attention. A few passages have been collected at the beginning of this section, which prove that he had turned his mind to the practical problems of navigation, and more especially of naval warfare. What we know for certain of his life gives us no data, it is true, as to when or where these matters came under his consideration; but the fact remains certain both from these notes in his manuscripts, and from the well known letter to Ludovico il Moro (No. 1340), in which he expressly states that he is as capable as any man, in this very department.

The numerous notes as to the laws and rationale of the flight of birds, are scattered through several note-books. An account of these is given in the Bibliography of the manuscripts at the end of this work. It seems probable that the idea which led him to these investigations was his desire to construct a flying or aerial machine for man. At the same time it must be admitted that the notes on the two subjects are quite unconnected in the manuscripts, and that those on the flight of birds are by far the most numerous and extensive. The two most important passages that treat of the construction of a flying machine are those already published as Tav. XVI, No. 1 and Tav. XVIII in the "Saggio delle opere di Leonardo da Vinci" (Milan 1872). The passages—Nos. 1120—1125—here printed for the first time and hitherto unknown—refer to the same subject and, with the exception of one already published in the Saggio—No. 1126—they are, so far as I know, the only notes, among the numerous observations on the flight of birds, in which the phenomena are incidentally and expressly connected with the idea of a flying machine.

The notes on machines of war, the construction of fortifications, and similar matters which fall within the department of the Engineer, have not been included in this work, for the reasons given on page 26 of this Vol. An exception has been made in favour of the passages Nos. 1127 and 1128, because they have a more general interest, as bearing on

the important question: whence the Master derived his knowledge of these matters. Though it would be rash to assert that Leonardo was the first to introduce the science of mining into Italy, it may be confidently said that he is one of the earliest writers who can be proved to have known and understood it; while, on the other hand, it is almost beyond doubt that in the East at that time, the whole science of besieging towns and mining in particular, was far more advanced than in Europe. This gives a peculiar value to the expressions used in No. 1127.

I have been unable to find in the manuscripts any passage whatever which throws any light on Leonardo's great reputation as a musician. Nothing therein illustrates VASARI'S well-known statement: Avvenne che morto Giovan Galeazzo duca di Milano, e creato Lodovico Sforza nel grado medesimo anno 1494, fu condotto a Milano con gran riputazione Lionardo al duca, il quale molto si dilettava del suono della lira, perchè sonasse; e Lionardo portò quello strumento ch'egli aveva di sua mano fabbricato d'argento gran parte, in forma d'un teschio di cavallo, cosa bizzarra e nuova, acciocchè l'armonia fosse con maggior tuba e più sonora di voce; laonde superò tutti i musici che quivi erano concorsi a sonare.

The only notes on musical matters are those given as Nos. 1129 and 1130, which explain certain arrangements in instruments.

III3.

DEL MOTO DEL MOBILE,—²DEL COGNOSCERE
QUÂTO ³IL NAVILIO SI MOVE PER ORA.

⁴Ànno li nostri antichi vsato diuersi insiegne per vedere che viaggio faccia ò navilio per ciascuna ora, infra li quali Vitruvio ne po'ne vno nella sua opera d'Architettura, il quale modo è fallace insieme cogli altri; e questo è vna rota da mulino tocca dall'onde ¹⁰marine nelle sue stremità, e mediante le ¹¹interne sue revolutioni si descrive vna linia ¹²retta che rappresenta la linia circuferè ¹³tiale di tal rota ridotta in rettitudine; ¹⁴Ma questa tale inventione non è valida, ¹⁵se nō nelle superficie piane e immobili de' ¹⁶laghi; Ma se l'acqua si move insieme col ¹⁷navilio con equal moto, allora tal rota re¹⁸sta inmobile, e se l'acqua è di moto più o mē ¹⁹velocie che'l moto del nauilio, ancora tal ro²⁰ta non à moto equale a quel del navilio, in ²¹modo che tale inventione è di poca valitudine; ²²Ecco vn altro modo fatto colla speriètia d'uno ²³spatio noto da una isola a vn altra, e questo si ²⁴fa con un asse o lieua percossa dal uëto, che la percuote o più o ²⁵men velocie, e questo è in Battista Alberti;

ON MOVEMENTS;—TO KNOW HOW MUCH A SHIP ADVANCES IN AN HOUR.

The ancients used various devices to ascertain the distance gone by a ship each hour, among which Vitruvius [6] gives one in his work on Architecture which is just as fallacious as all the others; and this is a mill wheel which touches the waves of the sea at one end and in each complete revolution describes a straight line which represents the circumference of the wheel extended to a straightness. But this invention is of no worth excepting on the smooth and motionless surface of lakes. But if the water moves together with the ship at an equal rate, then the wheel remains motionless; and if the motion of the water is more or less rapid than that of the ship, then neither has the wheel the same motion as the ship so that this invention is of but little use. There is another method tried by experiment with a known distance between one island and another; and this is done by a board or under the pressure of wind which strikes on it with more or less swiftness. This is in Battista Alberti [25].

III3. 6. See VITRUVIUS, *De Architectura lib. X.* C. 14 (p. 264 in the edition of Rose and Müller-Strübing). The German edition published at Bale in 1543 has, on fol. 596, an illustration of the contrivance, as described by Vitruvius.

25. LEON BATTISTA ALBERTI, *De Architectura lib. V.*, c. 12 treats 'de le navi e parti loro', but there is no VOL. II.

reference to the machine, mentioned by Leonardo. Alberti says here: *Noi abbiamo trattato lungamente in altro luogo de' modi de le navi, ma in questo luogo ne abbiamo detto quel tanto che si bisogna.* To this the following note is added in the most recent Italian edition: *Questo libro è tuttora inedito e porta il titolo, secondo Gesnero di 'Liber navis'.*

²⁶Il modo di Battista ²⁷Alberti è fat²⁸to sopra la speri²⁹entia d'uno spa³⁰tio noto da vn³¹a isola a un'altra; ³²Ma tale inventi³³one nō riesce, ³⁴se nō a vn navi³⁵lio simile a quel ³⁶dove è fatto tale ³⁷speti³⁸tia, ma ³⁸bisogna che sia ³⁹col medesimo ⁴⁰carico, e me⁴¹desima vela, ⁴²e medesima situ⁴³atiō di vela, e ⁴⁴medesime grā⁴⁵dezze d'onde; ma ⁴⁶il mio modo ser⁴⁷ve a ogni navi⁴⁸lio, si di remi co⁴⁹me vela, e sia pi⁵⁰cocco o grāde, ⁵¹o lūgo e alto, ⁵²o basso, sēpre serve.

Battista Alberti's method which is made by experiment on a known distance between one island and another. But such an invention does not succeed excepting on a ship like the one on which the experiment was made, and it must be of the same burden and have the same sails, and the sails in the same places, and the size of the waves must be the same. But my method will serve for any ship, whether with oars or sails; and whether it be small or large, broad or long, or high or low, it always serves [52].

PER FUGIRE IL PERICOLO DELLA RUINA.

²Può accadere la ruina di tali strumenti per 2 modi, de' quali ³il primo è del ronpersi lo strumento, secondario fia quā⁴do lo strumento si uoltasse per taglio o vicino a esso taglio, ⁵perchè senpre debbe discendere per grande obliquità e quasi ⁶per la linia dell'equalità; In quanto al primo, ⁷del ronpersi lo strumento, si riparerà col farlo di somma for⁸tezza, per qualunque linia esso si potesse voltare, e assai distante l'un centro dall'altro, cioè nel⁹lo strumento di 30 braccia di lunghezza essi centri sieno distanti 4 braccia l'un dall'altro.

1124.

TO ESCAPE THE PERIL OF DESTRUCTION.

Destruction to such a machine may occur in two ways; of which the first is the breaking of the machine. The second would be when the machine should turn on its edge or nearly on its edge, because it ought always to descend in a highly oblique direction, and almost exactly balanced on its centre. As regards the first—the breaking of the machine—that may be prevented by making it as strong as possible; and in whichever direction it may tend to turn over, one centre must be very far from the other; that is, in a machine 30 braccia long the centres must be 4 braccia one from the other.

Mz. 13^a]

Baghe dove l'omo in 6 braccia ²d'al-tezza cadendo nō si faccia male, ³cadendo così in acqua come ⁴in terra; e queste baghe le⁵gate a vso di paternostri s'avvol⁶gino altrui addosso:

1125.

Bags by which a man falling from a height of 6 braccia may avoid hurting himself, by a fall whether into water or on the ground; and these bags, strung together like a rosary, are to be fixed on one's back.

derio di bruciare, che seguìta il legniame sin sotto l'acque; ⁶e se aggivgnierai in essa conpositione vernice liquida, ⁷e olio petrolio, e tremētina, e acieto forte, mischia ⁸ogni cosa īsieme, e secca al sole o nel forno quādo n'è trat^to'l pane, e poi volta intorno alla stoppa di canapa o altra, ¹⁰riduciēdola in forma rotonda, e ficcati da ogni pa^rte i chiodi acutissimi, solamēte lascia ī detta palla vn ¹²buco come razzo; poi la copri di colofonio e di solfo;

¹³Ancora questo foco appiccato in sommità d'una lunga asta, ¹⁴la quale abbi uno braccio di pūta di ferro acciò nō sia bruciato da det^tto foco, è bono per evitare e proibire ifra le nauī ostili, per ¹⁶non essere soprafatti da ipito;

¹⁷Ācora gittati vasi di uetro pieni di pegola sopra ¹⁸li aversi navili,—itendenti li omini di quelli alla battaglia,—¹⁹e poi gittato dirieto simili palle accese ànno potēza a brucia²⁰re ogni navilio.

fire is so ready to burn that it clings to the timbers even under water. And add to this composition liquid varnish, and bituminous oil, and turpentine and strong vinegar, and mix all together and dry it in the sun, or in an oven when the bread is taken out; and then stick it round hempen or other tow, moulding it into a round form, and studding it all over with very sharp nails. You must leave in this ball an opening to serve as a fusee, and cover it with rosin and sulphur.

Again, this fire, stuck at the top of a long plank which has one braccio length of the end pointed with iron that it may not be burnt by the said fire, is good for avoiding and keeping off the ships, so as not to be overwhelmed by their onset.

Again throw vessels of glass full of pitch on to the enemy's ships when the men in them are intent on the battle; and then by throwing similar burning balls upon them you have it in your power to burn all their ships.

1128. Venturi has given another short text about the Greek fire in a French translation (*Essai § XIV*). He adds that the original text is to be found in MS. B. 30 (?). Libri speaks of it in a note as follows (*Histoire des sciences mathématiques en Italie Vol. II* p. 129): *La composition du feu grégeois est une des choses qui ont été les plus cherchées et qui sont encore les plus douteuses. On dit qu'il fut inventé au septième siècle de l'ère chrétienne par l'architecte Callinique (Constantini Porphyrogenetæ opera, Lugd. Batav. 1617, — in-8 vo; p. 172, de admin. imper. exp. 48), et il se trouve souvent mentionné par les Historiens Byzantins. Tantôt on le lançait avec des machines, comme on lancerait une bouche, tantôt on le soufflait avec de longs tubes, comme on soufflerait un gaz ou un liquide enflammé (Annae Comnenae Alexias, p. 335, lib. XI.—Aelian et Leonis, imperatoris tactica, Lugd.-Bat. 1613, in-4. part. 2^a, p. 322, Leonis tact. cap. 19.—Joinville, histoire du Saint Louis collect. Petilat tom. II, p. 235). Les écrivains contemporains disent que l'eau ne pouvait pas éteindre ce feu, mais qu'avec du vinaigre et du sable on y parvenait.*

VOL. II.

Suivant quelques historiens le feu grégeois était composé de soufre et de résine. Marcus Graecus (Liber ignium, Paris, 1804, in-4) donne plusieurs manières de le faire qui ne sont pas très intelligibles, mais parmi lesquelles on trouve la composition de la poudre à canon. Léonard de Vinci (MSS. de Léonard de Vinci, vol. B. f. 30) dit qu'on le faisait avec du charbon de saule, du salpêtre, de l'eau de vie, de la résine, du soufre, de la poix et du camphre. Mais il est probable que nous ne savons pas qu'elle était sa composition, surtout à cause du secret qu'en faisaient les Grecs. En effet, l'empereur Constantin Porphyrogénète recommande à son fils de ne jamais en donner aux Barbares, et de leur répondre, s'ils en demandent, qu'il avait été apporté du ciel par un ange et que le secret en avait été confié aux Chrétiens (Constantini Porphyrogenetæ opera, p. 26—27, de admin. imper., cap. 12).

1129. This chapter consists of explanations of the sketches shown on Pl. CXXI. Lines 1 and 2 of the text are to be seen at the top at the left hand side of the first sketch of a drum. Lines 3—5 refer to the

NN

³Tanburo quadro, del quale ⁴si tira e allenta la sua car^ata colla lieua *a b*;

⁶Tanburo a cōsonāza;

⁷Vna tabella a cōsonāza, cioè ³3 tabelle insieme;

⁹Siccome vn medesimo ¹⁰tanburo fa voci ¹¹graui e acute, ¹²secondo le carte più o mē ¹³tirate, così queste carte, ¹⁴variamente tirate sopra ¹⁵vn medesimo corpo di tā-¹⁶buro, farā uarie uoci;

1130. In the original there are some more sketches, to which the text, from line 6, refers. They are studies for a contrivance exactly like the cylinder in our musical boxes.

XIX.

Philosophical Maxims. Morals. Polemics and Speculations.

Vasari indulges in severe strictures on Leonardo's religious views. He speaks, among other things, of his "capricci nel filosofar delle cose naturali" and says on this point: "Per il che fece nell'animo un concetto si eretico che e' non si accostava a qualsi voglia religione, stimando per avventura assai più lo esser filosofo che cristiano" (see the first edition of 'Le Vite'). But this accusation on the part of a writer in the days of the Inquisition is not a very serious one—and the less so, since, throughout the manuscripts, we find nothing to support it.

Under the heading of "Philosophical Maxims" I have collected all the passages which can give us a clear comprehension of Leonardo's ideas of the world at large. It is scarcely necessary to observe that there is absolutely nothing in them to lead to the inference that he was an atheist. His views of nature and its laws are no doubt very unlike those of his contemporaries, and have a much closer affinity to those which find general acceptance at the present day. On the other hand, it is obvious from Leonardo's will (see No. 1566) that, in the year before his death, he had professed to adhere to the fundamental doctrines of the Roman Catholic faith, and this evidently from his own personal desire and impulse.

The incredible and demonstrably fictitious legend of Leonardo's death in the arms of Francis the First, is given, with others, by Vasari and further embellished by this odious comment: "Mostrava tuttavia quanto avea offeso Dio e gli uomini del mondo, non avendo operato nell'arte come si conveniva." This last accusation, it may be remarked, is above all evidence of the superficial character of the information which Vasari was in a position to give about Leonardo. It seems to imply that Leonardo was disdainful of diligent labour. With regard to the second, referring to Leonardo's morality and dealings with his fellow men, Vasari himself nullifies it by asserting the very contrary in several passages. A further refutation may be found in the following sentence from

the letter in which Melzi, the young Milanese nobleman, announces the Master's death to Leonardo's brothers: Credo siate certificati della morte di Maestro Leonardo fratello vostro, e mio quanto optimo padre, per la cui morte sarebbe impossibile che io potesse esprimere il dolore che io ho preso; e in mentre che queste mia membra si sosterranno insieme, io possederò una perpetua infelicità, e meritamente perchè sviscerato et ardentissimo amore mi portava giornalmente. È dolto ad ognuno la perdita di tal uomo, quale non è più in podestà della natura, ecc.

It is true that, in April 1476, we find the names of Leonardo and Verrocchio entered in the "Libro degli Uffiziali di notte e de' Monasteri" as breaking the laws; but we immediately after find the note "Absoluti cum condizione ut retamburentur" (Tamburini was the name given to the warrant cases of the night police). The acquittal therefore did not exclude the possibility of a repetition of the charge. It was in fact repeated, two months later, and on this occasion the Master and his pupil were again fully acquitted. Verrocchio was at this time forty and Leonardo four-and-twenty. The documents referring to this affair are in the State Archives of Florence; they have been withheld from publication, but it seemed to me desirable to give the reader this brief account of the leading facts of the story, as the vague hints of it, which have recently been made public, may have given to the incident an aspect which it had not in reality, and which it does not deserve.

The passages here classed under the head "Morals" reveal Leonardo to us as a man whose life and conduct were unfailingly governed by lofty principles and aims. He could scarcely have recorded his stern reprobation and unmeasured contempt for men who do nothing useful and strive only for riches, if his own life and ambitions had been such as they have so often been misrepresented.

At a period like that, when superstition still exercised unlimited dominion over the minds not merely of the illiterate crowd, but of the cultivated and learned classes, it was very natural that Leonardo's views as to Alchemy, Ghosts, Magicians, and the like should be met with stern reprobation whenever and wherever he may have expressed them; this accounts for the argumentative tone of all his utterances on such subjects which I have collected in Subdivision III of this section. To these I have added some passages which throw light on Leonardo's personal views on the Universe. They are, without exception, characterised by a broad spirit of naturalism of which the principles are more strictly applied in his essays on Astronomy, and still more on Physical Geography.

To avoid repetition, only such notes on Philosophy, Morals and Polemics, have been included in this section as occur as independent texts in the original MSS. Several moral reflections have already been given in Vol. I, in section "Allegorical representations, Mottoes and Emblems". Others will be found in the following section. Nos. 9 to 12, Vol. I, are also passages of an argumentative character. It did not seem requisite to repeat here these and similar passages, since their direct connection with the context is far closer in places where they have appeared already, than it would be here.

I.

PHILOSOPHICAL MAXIMS.

S. K. M. III. 64^a

II32.

Io t' ubidisco, Signore, prima per l'amore che ragionevolmente portare ³ti debo, secōdariamente chè tu sai ⁴abbreviare o prolungare le uite ⁵ali omni.

I obey Thee Lord, first for the love I Prayers to God ought, in all reason to bear Thee; secondly (^{1132. 1133.}) for that Thou canst shorten or prolong the lives of men.

W. An. IV. 172^a

II33.

¶ ORATIO.

²Tu o Iddio ci vèndi ³tutti li beni per prez⁴zo di fatica. ¶

Thou, O God, dost sell us all good things at the price of labour.

A. 24^a

II34.

19. In MS. I¹ 15^a is the note: *chi nō stima la vita, non la merita.*

Tr. 78]

1141.

L'anima mai si può corrōpere nella corruttio del corpo, ma fa nel corpo ²a similitudine del uēto che cavsa il suono del organo, ³chè guastādosi vna canna, nō resultava per quella del uēto ⁴buono effetto.

The soul can never be corrupted with the corruption of the body, but is in the body as it were the air which causes the sound of the organ, where when a pipe bursts, the wind would cease to have any good effect.

C. A. 58a; 180a]

1142.

Ogni parte à inclinati ²di ricōgiugnersi al suo ³tutto per fugire dalla ⁴sua imperfettione;

The part always has a tendency to reunite with its whole in order to escape from its imperfection.

⁵L'anima desidera stare ⁶col suo corpo, perchè sanza ⁷li strumēti organici di tal ⁸corpo nulla può operare ⁹nè sētire.

The spirit desires to remain with its body, because, without the organic instruments of that body, it can neither act, nor feel anything.

C. A. 75a; 219a]

1143.

Chi vuole vedere come l'anima abita nel suo ²corpo; guardi come esso corpo vsa la ³sua cotidiana abitazione, cioè se quella ⁴è sanza ordine e confusa, disordina⁵to e cōfuso fia il corpo tenvto dalla sua anima.

If any one wishes to see how the soul dwells in its body, let him observe how this body uses its daily habitation; that is to say, if this is devoid of order and confused, the body will be kept in disorder and confusion by its soul.

Br. M. 278b]

1144.

Perchè vede piv certa la cosa l'ochio ne' sogni ²che colla imaginatione, stando desto?

Why does the eye see a thing more clearly in dreams than with the imagination being awake?

Tr. 65]

1145.

I sensi sono terrestri, la ragione sta ²fuer di quelli, quādo cōtenpla.

The senses are of the earth; Reason, stands apart in contemplation.

Tr. 70]

1146.

Ogni attione bisognia che s'esercita ²per moto;

Every action needs to be prompted by a motive.

³¶Cognoscere e volere sō ²operationi ⁴vmane; ¶

To know and to will are two operations of the human mind.

⁵Discernere, givdicare, cōsigliare ⁶sono atti ymani.

Discerning, judging, deliberating are acts of the human mind.

appaete . . acquesto. 7. charesstia e dovitia di mvsscoli.

1155. 1. dela mechanicha. 2. mechanicha. 3. perchche chō . . matema^ticho".

1156. 1. ciasscuno. 2. cholla essperiēza.

1157. 1. certezza delle. 2. matematiche si pasce. 3. [e mati] e mai.

1158. 1. certezza "dele sciētie" e do. 2. po applichare.

1155. Compare No. 660, ll. 19—22 (Vol. I., p. 332).

VOL. II.

II54.

Instrumental or mechanical science is of all the noblest and the most useful, seeing that by means of this all animated bodies that have movement perform all their actions; and these movements are based on the centre of gravity which is placed in the middle deviding unequal weights, and it has dearth and wealth of muscles and also lever and counter-lever.

II55.

OF MECHANICS.

Mechanics are the Paradise of mathematical science, because here we come to the fruits of mathematics.

II56.

Every instrument requires to be made by experience.

II57.

The man who blames the supreme certainty of mathematics feeds on confusion, and can never silence the contradictions of sophistical sciences which lead to an eternal quackery.

II58.

There is no certainty in sciences where one of the mathematical sciences cannot be applied, or which are not in relation with these mathematics.

C. A. 75a; 219a]

1159.

Chi disputa allegādo l'autorità, non adopera ²lo ingiegno, ma pītosto la memoria; ³le buone lettere son nate da vn bono naturale, ⁴e perchè si de' piv laudare la cagiō che l'effetto, ⁵piv lauderai vn buon naturale sanza lettere, ⁶che vn bon letterato sanza naturale.

Any one who in discussion relies upon authority uses, not his understanding, but rather his memory. Good culture is born of a good disposition; and since the cause is more to be praised than the effect, I will rather praise a good disposition without culture, than good culture without the disposition.

I. 2 82a]

La sciētia è il capitano, e la pratica sono i soldati.

1160.

Science is the captain, and practice the soldiers.

G. 8a]

DELI' ERRORE DI QUELLI CHE VSANO ²LA PRACTICA SANZA SCIÉTIA.

³Quelli che s'inamorā di pratica ⁴sāza sciētia sō come 'l nocchiere che ē⁵tra navilio sanza timone e bussola, ⁶chè mai à certezza dove si vada.

OF THE ERRORS OF THOSE WHO DEPEND ON PRACTICE WITHOUT SCIENCE.

Those who fall in love with practice without science are like a sailor who enters a ship without a helm or a compass, and who never can be certain whither he is going.

1159. 1. laturita. 2. longieguo. 3. sonate. 4. laldare la chagiō chelle fetto. 5. lalderai vn bo. 6. literato.

ceua il cibo, e donde esso ⁵esca, chè in vero altro che un transito di cibo non sō da essere giudicati, ⁶perchè niente mi pare che essi participino di spetie vmana altro, che la voce ⁷e la figvra, e tutto il resto è assai manco che bestia.

sack in which their food may be stowed and whence it may issue, since they cannot be judged to be any thing else than vehicles for food; for it seems to me they have nothing about them of the human species but the voice and the figure, and for all the rest are much below beasts.

S. K. M. III. 17a]

1179.

Ecco alcuni che non altramente che trāsito di cibo e avmētatori di ster³co e riempitori di destri chiamarsi debono, perchè per ⁴loro non altro nel mōdo o pure alcuna virtù in opera si ⁵mette, perchè di oro altro ⁶che pieni destri non resta.

C. A. 153b; 455b]

Il massimo ingāno dell' omni ²è nelle loro oppinioni.

Some there are who are nothing else than a passage for food and augmentors of excrement and fillers of privies, because through them no other things in the world, nor any good effects are produced, since nothing but full privies results from them.

1180.

The greatest deception men suffer is ^{On foolishness and ignorance} from their own opinions. (1180—1182).

Tr. 56]

1181.

La stoltitia è scudo della vergognia, come la imprōtidine ²della povertà glorificata.

Folly is the shield of shame, as unreadiness is that of poverty glorified.

Tur. 17b]

1182.

La ciecca igniorāza così ci cōduce ²cō effetto de' lascivi sollazzi
³{per nō conoscere la uera luce.
⁴{per nō conoscere qual sia la uera luce.
⁵E'l uano splendor ci toglie l'esser
⁶....; ⁷vedi che per lo splendor nel fuoco
andiamo, ⁸come ciecca jgnorāza ci cō-
duce.
¹⁰O miseri mortali aprite li occhi.

Blind ignorance misleads us thus and delights with the results of lascivious joys.
{Because it does not know the true light.
{Because it does not know what is the true light.

Vain splendour takes from us the power of being behold! for its vain splendour we go into the fire, thus blind ignorance does mislead us. That is, blind ignorance so misleads us that ...

O! wretched mortals, open your eyes.

Ash. I. 1a]

1183.

Nō si dimāda · richezza · quello · che si può perdere; ²la uirtù · è vero · nostro · bene ed è vero premio ³del suo · possessore ·; lei nō si può · perdere ·, lei ⁴nō ci abbandona ·,

That is not riches, which may be lost; ^{On riches} virtue is our true good and the true reward of its possessor. That cannot be lost; that never deserts us, but when life leaves us. As

to property and external riches, hold them with trembling; they often leave their possessor in contempt, and mocked at for having lost them.

F. 968]

Ogni omo desidera far capitale per dare a medici destruttori di uite, adūque debono essere richi;

³L'uomo à grande discorso, del quale la più parte ⁴è vana e falsa, li animali l'anno piccolo, ma è vtisle e vero, e meglio è la piccola certezza che la grā ⁶bugia.

1184.

Every man wishes to make money to give it to the doctors, destroyers of life; they then ought to be rich^[2].

Man has much power of discourse which for the most part is vain and false; animals have but little, but it is useful and true, and a small truth is better than a great lie.

C. A. 1088; 3388]

Chi piv possiede piv debbe ²temere di nō perdere.

1185.

He who possesses most must be most afraid of loss.

W. XIII]

Chi uuole essere ricco in v dì ²e impicato in vn anno.

1186.

He who wishes to be rich in a day will be hanged in a year.

S. K. M. III. 77a]

E questo uomo à vna somma ²pazzia cioè che sēpre stēta per ³non stētare, e la uita a lui ⁴fugie sotto sperāza di godeſre i beni con somma fatica ac⁶quistati.

1187.

That man is of supreme folly who always wants for fear of wanting; and his life flies away while he is still hoping to enjoy the good things which he has with extreme labour acquired.

B. 38]

Se tu · avessi · il corpo secōdo la virtù ·
Rules of Life
(1188—1202). tu . nō carpesti ²in questo mōdo;
³Tu cresci i reputatione come il pane
i mano a' putti.

1188.

If you governed your body by the rules of virtue you would not walk on all fours in this world.

You grow in reputation like bread in the hands of a child.

Tr. 2]

Saluatico è quel che si salua.

1189.

Savage he is who saves himself.

E. 318]

1190.

Non si debbe desiderare lo impossibile.

We ought not to desire the impossible.

H.3 708]

1191.

Dimāda cōsiglio a chi bē si corregge;
2 Givstitia vuol potētia, intelligētia e
volontà, e si assomigglia al rè delle api;

5 Chi nō punisce il male, co⁶māda che
si facci;

7 Chi piglia la biscia per la coda 8 quella
poi lo morde;

9 Chi cava la fossa, quella 10 gli ruina
adosso.

Ask counsel of him who rules himself well.
Justice requires power, insight, and will;
and it resembles the queen-bee.

He who does not punish evil commands
it to be done.

He who takes the snake by the tail will
presently be bitten by it.

The grave will fall in upon him who
digs it.

H.3 71a]

1192.

1 Chi nō rafrena la uoluttà, colle bestie
2 s'acōpagni;

3 Nō si può avere maggior nè minor
signio⁴ria che quella di se medesimo;

5 Chi poco pēsa, molto erra;

6 Più facilmente si cōtesta al prīcipio,
7 che al fine;

8 Nessuno cōsiglio è piv leale che 9 quello
che si da alle navi che so¹⁰no in pericolo;

11 Aspetti danno quel che si regie per 12 gio-
vane sconsigliato.

The man who does not restrain wantonness,
allies himself with beasts.

You can have no dominion greater or less
than that over yourself.

He who thinks little, errs much.

It is easier to contend with evil at the
first than at the last.

No counsel is more loyal than that given
on ships which are in peril: He may expect
loss who acts on the advice of an inex-
perienced youth.

Tr. 39]

1193.

Dov'è piv sentimēto, lì è piv martirio;
grā martire.

Where there is most feeling, there is the
greatest martyrdom;—a great martyr.

H.1 168]

1194.

La memoria de' benifitj apres²so l'īgra-
titudine è fragile;

3 Reprédi l'amico ī segre⁴to, e laudalo
ī paleso;

5 Non essere bugiardo del 6 preterito.

The memory of benefits is a frail de-
fence against ingratitude.

Reprove your friend in secret and praise
him openly.

Be not false about the past.

VOL. II.

PP

C. A. 115^b; 357^b]

CÖOPERATIONE DELLA PATIËTIA.

²La patiëtia fa cōtra alle ingiurie non altramenti che si faccino i panni ³contra del freddo, jnperochè se ti mvltiplicherai li pañi secondo la mvl⁴tiplicatione · del fred- do ·, esso freddo · nocere nō · potrà ·; simili- mēte alle ⁵grādi ingivrie · cresci la patiëtia · e esse ingiurie offendere nō ti po⁶tranno la tua mēte.

S. K. M. II.² 24^a]

Tanto è a dire bē d'ū tristo, ²quanto a dire male d'ū bono.

H. 2 128]

La invidia offede colla fitta ²infamia, cioè col detrarre, ³la qual cosa spavēta la virtù.

L. o^a]

Decipimur votis et tempore fallimur et mos
²deridet curas; anxia vita nihil.

L. 90^b]

¶ La pavra nascie piv tosto ²che altra cosa. ¶

C. A. 75^b; 219^b]

Siccome l'animosità è pericolo di uita · così la paura · è sicurità di quella;
²Le minaccie sol sono ³arme dello minacciato;

⁴¶Dov'entra la uētura, la invidia · vi pone lo assedio e lo cōbatte, e dond'ella si parte, vi lascia il dolore e pētimēto;

⁵¶Raro cade chi ben camina;

1195.

A SIMILE FOR PATIENCE.

Patience serves us against insults precisely as clothes do against the cold. For if you multiply your garments as the cold increases, that cold cannot hurt you; in the same way increase your patience under great offences, and they cannot hurt your feelings.

1196.

To speak well of a base man is much the same as speaking ill of a good man.

1197.

Envy wounds with false accusations, that is with detraction, a thing which scares virtue.

1198.

We are deceived by promises and time disappoints us[2] . . .

1199.

Fear arises sooner than any thing else.

1200.

Just as courage imperils life, fear protects it.

Threats alone are the weapons of the threatened man.

Wherever good fortune enters, envy lays siege to the place and attacks it; and when it departs, sorrow and repentance remain behind.

He who walks straight rarely falls.

1195. 2. allengiurie: altremēti . . chessi. 3. fredo jnpero chesetti . . sechondo. 4. esso fredo. 5. grāde . . cressci . . essa ingiuria.

1196. 1. trissto.

1197. 1—3 R. 1. lanvidia . . cholla. 2. chol. 3. spavēte.

1198. 1. et mos. 2. nihil.

1199. 1—2 R. 1. nasscie. 2. cosa.

1200. 1. sichome . . pericholo . . chosi . . sichurita. 3. iminacciato. 4. lanvidia . . essedio ello chōbatte E . . lasscia il "dolore he" piētimēto. 5. chade . . chamina. 6. laldi e pegino . . chosa dicho . . tu nolla. 7. laldi e pegino is tu . . tu nollatēdi.

1198. 2. The rest of this passage may be rendered in various ways, but none of them give a satisfactory meaning.

⁶¶ Mal'è se laudi e peggio se riprēdi la cosa, dico se bene tu non la intēdi;

⁷¶ Mal fai se laudi e peggio se tu riprēdi || la cosa quādo bene tu non la intendi.

It is bad if you praise, and worse if you reprove a thing, I mean, if you do not understand the matter well.

It is ill to praise, and worse to reprimand in matters that you do not understand.

G. 49a]

Senpre le parole che nō soddisfañ all'orechio dello ¹auditore, li danno tedio over rincrescimēto, e'l segnio di ³cio vedrai, spesse uolte tali auditori essere ⁴copiosi di sbadigli; addūque tu, che parli dinati a omuni ⁵di chi tu cierchi benivolētia, quādo tu vedi tali pro⁶digi di rīcrescimēto, abreuiā il tuo parlare, o tu mu⁷ta ragionamēto, e se tu altramēti farai, allora in lo⁸co della desiderata gratia tu acquisterai odio ⁹e nimicitia;

¹⁰E se vuoi vedere di quel che vn si dilecta sanza u¹¹dirlo parlare, parla a lui mutādo diuersi ragio¹²namēti, e quel dove tu lo vedi stare intēto sanza ¹³sbadigliamēti o storcimēti di ciglia o altre varie ¹⁴azione, sia cierto che quella cosa, di che si parla, ¹⁵è quella di che lui si dilecta, ecc.

1201.

Words which do not satisfy the ear of the hearer weary him or vex him, and the symptoms of this you will often see in such hearers in their frequent yawns; you therefore, who speak before men whose good will you desire, when you see such an excess of fatigue, abridge your speech, or change your discourse; and if you do otherwise, then instead of the favour you desire, you will get dislike and hostility.

And if you would see in what a man takes pleasure, without hearing him speak, change the subject of your discourse in talking to him, and when you presently see him intent, without yawning or wrinkling his brow or other actions of various kinds, you may be certain that the matter of which you are speaking is such as is agreeable to him &c.

Tr. 11]

1202.

Mvouesi l'amante per la cosa amata come il senso e lo sensibile, e cō seco s'unisce ²e fassi vna cosa medesima; ³l'opera è la prima cosa che nasce dall'unione; ⁴se la cosa amata è vile, l'amāte si fa vile;

⁵Quando la cosa vuita è cōueniēte al suo ⁶vnitore, li seguita dilettatione e piacere e soddisfatione;

⁷Quādo l'amāte è givto all' amato, lì si riposa; ⁸quādo il peso è posato lì si riposa.

The lover is moved by the beloved object as the senses are by sensible objects; and they unite and become one and the same thing. The work is the first thing born of this union; if the thing loved is base the lover becomes base.

When the thing taken into union is perfectly adapted to that which receives it, the result is delight and pleasure and satisfaction.

When that which loves is united to the thing beloved it can rest there; when the burden is laid down it finds rest there.

C. A. 64b; 197b]

1203.

La prima fama si fa eterna insieme colli abitatori ²della città da lui edificata o accresciuta;

There will be eternal fame also for the inhabitants of that town, constructed and enlarged by him.

1201. 1. saddisfano. 2. alditore . . rincrescimēto. 3. uolte [alli] ttali vlditore. 4. chropiosi di sbavigli. 6. rīcrescimēto . . ottu. 7. esettu altremēti . . allora illo. 8. cho. 9. ennimicitia. 10. Esse voi . . sanza vl. 11. allui. 12. ecquel . . tullo.

13. sbadigliamēti osstorcimeti. 14. azione . . di chessi. 15. ecquelle . . lui si di che lui si dilecta.

POLEMICS.—SPECULATION.

G. 47 a]

1205.

O speculatore del^{le} cose, nō ti laudare
di conoscere le cose ⁴che ordinariamēste
per se medesima la ⁶natura ⁷conduce; ⁸Ma
rallegrati di co⁹noscere il fine ¹⁰di quelle
cose che ¹¹son disegniate dalla ¹²mēte tua.

Oh! speculators on things, boast not of knowing the things that nature ordinarily brings about; but rejoice if you know the end of those things which you yourself devise. Against Speculators (1205. 1206).

S. K. M. II. 2 67 a]

1206.

O speculatori · dello continvo moto,
quā²ti vani disegni in simile cerca avete
creati! ³accōpagniatevi colli cercatori del-
l'oro.

Oh! speculators on perpetual motion how many vain projects of the like character you have created! Go and be the companions of the searchers for gold.

C. A. 75 b; 219 b]

1207.

J bugiardi · interpreti di natura · affermano
l'argiēto viuo · essere comvne semēza a tutti
i metalli · nō si ricordādo che la ²natura
varia le semēze · secōdo la diuersità delle
cose che essa vole produrre al mōdo.

The false interpreters of nature declare that quicksilver is the common seed of every metal, not remembering that nature varies the seed according to the variety of the things she desires to produce in the world. Against alchemists (1207. 1208).

1205. 1. hosspechulatori. 2. chose . . laudare. 3. conossciere. 6. per sua [natu] “[ordine]”. 7. [ralmēte] chonducie. 8. dicho.
9. nossciere. 10. chose.

1206. 1. speculatori. 2. ciercha ave creati. 3. acōpagniatevi . . cierchator.

1209. Compare No. 837, ll. 54—57, No. 1296 (p. 363 and 364), and No. 1305 (p. 370).

1208.

And many have made a trade of de-
lusions and false miracles, deceiving the stupid
multitude.

1209.

Pharisees—that is to say, friars.

1210.

Abbreviators do harm to knowledge
and to love, seeing that the love of any
thing is the offspring of this knowledge,
the love being the more fervent in pro-
portion as the knowledge is more certain.
And this certainty is born of a complete
knowledge of all the parts, which, when com-
bined, compose the totality of the thing which
ought to be loved. Of what use then is he who
abridges the details of those matters of which he
professes to give thorough information, while
he leaves behind the chief part of the things
of which the whole is composed? It is true
that impatience, the mother of stupidity,
praises brevity, as if such persons had not
life long enough to serve them to acquire
a complete knowledge of one single subject,
such as the human body; and then they want
to comprehend the mind of God in which
the universe is included, weighing it minutely
and mincing it into infinite parts, as if they
had to dissect it!

Oh! human stupidity, do you not per-
ceive that, though you have been with yourself
all your life, you are not yet aware of
the thing you possess most of, that is of
your folly? and then, with the crowd of so-
phists, you deceive yourselves and others,
despising the mathematical sciences, in which
truth dwells and the knowledge of the things
included in them. And then you occupy
yourself with miracles, and write that you
possess information of those things of
which the human mind is incapable and
which cannot be proved by any instance from
nature. And you fancy you have wrought
miracles when you spoil a work of some

quando tu ài quastato vna ⁴²opera d'alcuno ingegnio speculativo, e nō ⁴³t'avedi che tu cadi nel medesimo errore, ⁴⁴che fa quello che denuda la piāta dell'orna⁴⁵mento de' sua rami, pieni di fronde, miste co⁴⁶gli odoriferi fiori o frutti, ⁴⁸come fece Giv⁴⁹stino, abbreviatore delle storie scritte da Trog⁵⁰ Pōpeo, il quale scrisse ornatamente tutti ⁵¹li eccellēti fatti dell'iua antichi, li quali e⁵²rā pieni di mirabilissimi ornamēti; e così ⁵³compose vna cosa ignuda, ma sol degna d'in⁵⁴gegni impatiēti, li quali pare lor perder ⁵⁵tanto di tempo, quanto quello è che è adoperato vtil⁵⁶mēte, cioè nelli studi delle opere di nature e delle ⁵⁷cose vmane; Ma stieno questi tali in compa⁵⁸gnia delle bestie; Nelli lor cortigiani sieno cani e ⁵⁹i altri animali piē di rapina e accompagnansi ⁶⁰con loro correndo sempre dietro , e seguita⁶¹no l' inocēti animali che cō la fame alli tem⁶²pi delle grā nevi ti uengono alle case, dimanda⁶³tori limosina come lor tutore.

speculative mind, and do not perceive that you are falling into the same error as that of a man who strips a tree of the ornament of its branches covered with leaves mingled with the scented blossoms or fruit [48] as Justinus did, in abridging the histories written by Trogus Pompeius, who had written in an ornate style all the worthy deeds of his forefathers, full of the most admirable and ornamental passages; and so composed a bald work worthy only of those impatient spirits, who fancy they are losing as much time as that which they employ usefully in studying the works of nature and the deeds of men. But these may remain in company of beasts; among their associates should be dogs and other animals full of rapine and they may hunt with them after , and then follow helpless beasts, which in time of great snows come near to your houses 'asking' alms as from their master

C. A. 187δ; 562δ]

1211.

O matematici fate lume a tale er²rore!
Lo spirito non à voce, perchè dov'è voce ⁴è corpo, e dove è corpo è occupatiō di lo⁵co, il quale impedisce all'ochio il ue⁶dere delle cose poste dopo tale loco; adunque tal corpo enpie di se tutta ⁸la circstante aria, cioè colle sua spetie.

O mathematicians shed light on this error.

The spirit has no voice, because where there is a voice there is a body, and where there is a body space is occupied, and this prevents the eye from seeing what is placed behind that space; hence the surrounding air is filled by the body, that is by its image.

On spirits
(1211—1213).

W. An. II. 242 b (N.)]

1213.

Delli discorsi vmani stoltissimo è da essere
riputato quello, il qual s'astende al la credulità
della negromatia, sorella della alchimia,
partoritricie delle cose semplici e naturali;
Ma è tanto più degnia di riprensione che
l'alchimia, quanto ella non partorisce alcuna
cosa se non simile a se, cioè bugia; il che
non interviene nella alchimia, la quale è
ministratrice de' semplici prodotti della na-
tura, il quale virtù fatto esser non può da
essa natura, perchè in lei non sono stru-
menti organici colli quali essa possa operare
quel ⁸che adopera l'uomo mediante le
mani, che in tale virtù ⁹è fatti i vetri
ecc.; ma essa negromatia, standardo ovvero
bandiera ¹⁰volante, mossa dal vento, è guidatri-
trice della stolta moltitudine, la quale ¹¹al
continuo testimonia collo abbaiameto d'in-
finiti effetti di tale ¹²arte; e uomo èpiuti i
libri, affermando che l'incanti e spiriti ado-
perino ¹³e sanza lingua parlino, e sanza
strumenti organici, sàza i quali ¹⁴parlar non
si può, parlino, e portino gravissimi pesi,
facino tempestare ¹⁵e piovere, e che li omni si
còvertino il gatte, lupi e altre bestie,
¹⁶benchè in bestia prima èträ quelli che tal
cosa affermano;

¹⁷E cierto, se tale negromatia fusse in
essere, come dalli bassi ingegni è creduto,
¹⁸nessuna cosa è sopra la terra che al
danno e seruitio dell'omo fusse di tanta
valitudine, perchè se fusse vero, che in tale
arte si avesse potètia di far turbare la trā-
quilla serenità dell'aria¹⁹a, convertendo quella
in notturn aspetto, e far le corruscationi o
venti con spaventevoli toni e folgori scorréti
infra le tenebre, e con ipetuosi venti ruinare

together, a spirit may take bodies of
various forms and by this means speak
and move with strength—to him I reply that
when there are neither nerves nor bones
there can be no force exercised in any kind
of movement made by such imaginary spirits.

Beware of the teaching of these specu-
lators, because their reasoning is not confir-
med by experience.

Of all human opinions that is to be
reputed the most foolish which deals with
the belief in Necromancy, the sister of Al-
chemy, which gives birth to simple and natural
things. But it is all the more worthy of
reprehension than alchemy, because it brings
forth nothing but what is like itself, that
is, lies; this does not happen in Alchemy
which deals with simple products of nature
and whose function cannot be exercised
by nature itself, because it has no organic
instruments with which it can work, as
men do by means of their hands, who have
produced, for instance, glass &c. but this
Necromancy the flag and flying banner, blown
by the winds, is the guide of the stupid
crowd which is constantly witness to the
dazzling and endless effects of this art; and
there are books full, declaring that enchant-
ments and spirits can work and speak without
tongues and without organic instruments —
without which it is impossible to speak —
and can carry heaviest weights and raise storms
and rain; and that men can be turned into cats
and wolves and other beasts, although indeed
it is those who affirm these things who first
became beasts.

And surely if this Necromancy did exist,
as is believed by small wits, there is
nothing on the earth that would be of so
much importance alike for the detriment and
service of men, if it were true that there
were in such an art a power to disturb the
calm serenity of the air, converting it into
darkness and making coruscations or winds,
with terrific thunder and lightnings rushing
through the darkness, and with violent

²²li alti edifiti, e diradicare le selue, e con quelle percuotere li eserciti, e quelli ²³ron-pēdo e atterrādo, e oltr'a questo le dannose tempeste, privando li cultori ²⁴del premio delle lor fatiche,—o qual modo di guerra può essere, che con tanto dan²⁵no possa offendere il suo nemico di aver potestà di privarlo delle sue raccolte? qual bat²⁶taglia marittima può essere che si assomigli a quella? dico lui che comāda alli vēti ²⁷e fa le fortune ruvinose e sommergitrici di qualche armata,—cierto quel che ²⁸co māda a tali inpetuosi potētie sarà signore dell'i popoli, e nessuno vma²⁹no ingegnio potrà resistere alle sue dannose forze; Li occulti tesori e ³⁰giemme, riposte nel corpo della terra, fieno a costui tutti manifesti; nessun ³¹serrame o fortezza inespugnabili sarā quelle che saluar possino al³²cuno sanza la voglia di tal negromāte; Questo si farà portare per l'aria dal³³l'oriente all'occidēte e per tutti li oppositi aspetti dell'universo; Ma per³⁴chè mi voglio più oltre estendere? quale è quella cosa che per ta³⁵le artefieci far nō si possa? quasi nessuna, eccetto il levarsi la morte; ad³⁶dunque è concluso in parte il danno e la vtilità che in tale arte si contiene, essē³⁷do vera; e s'ella è vera, perchè non è restata infra li omīni che tanto la deside³⁸rano, non avēdo riguardo a nessuna deitā? e so, che infiniti ce n'è, che per soddisfare ³⁹a vn suo appetito, ruine-rebbero Iddio cō tutto l'universo; e s'ella non è rimasto infra ⁴⁰li omīni, essendo a lui tanto neciessaria, essa nō fu mai, nè mai è per dovere essere, ⁴¹per la difinitiō dello spirito, il quale è invisibile in corpo; e dentro alli elemē⁴²ti non sono cose incorporee, perchè doue non è corpo, è vacuo, e il uacuo nō si da dē⁴³tro alli elemēti, perchè subito sarebbe dall'elemēto riēpiuto; volta carta.

storms overthrowing high buildings and rooting up forests; and thus to oppose armies, crushing and annihilating them; and, besides these frightful storms may deprive the peasants of the reward of their labours. — Now what kind of warfare is there to hurt the enemy so much as to deprive him of the harvest? What naval warfare could be compared with this? I say, the man who has power to command the winds and to make ruinous gales by which any fleet may be submerged,—surely a man who could command such violent forces would be lord of the nations, and no human ingenuity could resist his crushing force. The hidden treasures and gems reposing in the body of the earth would all be made manifest to him. No lock nor fortress, though impregnable, would be able to save any one against the will of the necromancer. He would have himself carried through the air from East to West and through all the opposite sides of the universe. But why should I enlarge further upon this? What is there that could not be done by such a craftsman? Almost nothing, except to escape death. Hereby I have explained in part the mischief and the usefulness, contained in this art, if it is real; and if it is real why has it not remained among men who desire it so much, having nothing to do with any deity? For I know that there are numberless people who would, to satisfy a whim, destroy God and all the universe; and if this necromancy, being, as it were, so necessary to men, has not been left among them, it can never have existed, nor will it ever exist according to the definition of the spirit, which is invisible in substance; for within the elements there are no incorporate things, because where there is no body, there is a vacuum; and no vacuum can exist in the elements because it would be immediately filled up. Turn over.

DELLI SPIRITI.

²Abiāo insin qui dirieto a questa faccia detto, ³come la difinitiō dello spirito ⁴è vna potentia congiunta al corpo, perchè per se

medesimo ⁵ reggiere nō si può, nè pigliare alcuna sorte di moto locale, ⁶e se tu dirai che per se si regga, questo essere non può ⁷dentro alli elemēti, perchè se lo spirito è quātità incor⁸porea, questa tal quantità è detta vacuo, e il ua⁹cuo non si da in natura; e dato che si desse, subito sa¹⁰rebbe riempito dalla ruina di quello elemento nel ¹¹qual il uacuo si gienerasse; adunque per la disinition del pe¹²so che dicie, la grauità è vna potētia accidentale creata ¹³d'alcuno elemento tirato o sospinto nell'altro, seguita, che ¹⁴nessuno elemēto, non pesando nel medesimo elemēto, e pe¹⁵ssa nell'elemēto superiore ch'è più lieve di lui; come si uede ¹⁶la parte dell'acqua non à gravità o leuità più che l'altra ¹⁷acqua, ma se tu la tirerai nell'aria, allora ella acqui¹⁸sterà gravezza, e se tu tirerai l'aria ¹⁹sotto l'acqua, allora l'acqua, che si trova sopra tale ²⁰aria, acquista gravezza, la qual gravezza per se sostener ²¹non si può, onde lì è neciessario la ruina, e così cade infra ²²l'acqua in quel loco ch'è vacuo d'essa acqua; tale ac²³caderebbe nello spirito, stando infra li elemēti, chè al ²⁴continuo gienererebbe vacuo in quel tale elemēto, dove ²⁵lui si trovasse, per la qual cosa lì sarebbe neciessario la con²⁶tinua fuga inverso il cielo, insinche vscito fusse di tali ²⁷elemēti.

SE LO SPIRITO TIENE CORPO INFRA LI ²⁹ELEMĒNTI.

³⁰ Abbiā provato, come lo spirito non può per se stare infra li ³¹elementi sanza corpo, nè per se si può mouere per moto vo³²lontario, se non è allo in sù; Ma al presente diremo co³³me, pigliando corpo d'aria tale spirito, è necies³⁴sario che s'in-fonda infra essa aria, perchè, s'elli stesse vnito, ³⁵e' sarebbe separato e caderebbe alla gieneratiō del uacuo, ³⁶come di sopra è detto; addunque è neciessario che, a volere ³⁷restare infra l'aria, che esso s'in-fonda in una quātità d'aria; e ³⁸se si mista coll'aria, elli seguita due inconvenienti, cioè ³⁹che elli leuifica quella quātità dell'aria dove esso si mista, e ⁴⁰per la qual cosa l'aria leuificata per se uola in alto,

move of its own accord, nor can it have any kind of motion in space; and if you were to say that it moves itself, this cannot be within the elements. For, if the spirit is an incorporeal quantity, this quantity is called a vacuum, and a vacuum does not exist in nature; and granting that one were formed, it would be immediately filled up by the rushing in of the element in which the vacuum had been generated. Therefore, from the definition of weight, which is this—Gravity is an accidental power, created by one element being drawn to or suspended in another—it follows that an element, not weighing anything compared with itself, has weight in the element above it and lighter than it; as we see that the parts of water have no gravity or levity compared with other water, but if you draw it up into the air, then it would acquire weight, and if you were to draw the air beneath the water then the water which remains above this air would acquire weight, which weight could not sustain itself by itself, whence collapse is inevitable. And this happens in water; wherever the vacuum may be in this water it will fall in; and this would happen with a spirit amid the elements, where it would continuously generate a vacuum in whatever element it might find itself, whence it would be inevitable that it should be constantly flying towards the sky until it had quitted these elements.

AS TO WHETHER A SPIRIT HAS A BODY AMID THE ELEMENTS.

We have proved that a spirit cannot exist of itself amid the elements without a body, nor can it move of itself by voluntary motion unless it be to rise upwards. But now we will say how such a spirit taking an aerial body would be inevitably melt into air; because if it remained united, it would be separated and fall to form a vacuum, as is said above; therefore it is inevitable, if it is to be able to remain suspended in the air, that it should absorb a certain quantity of air; and if it were mingled with the air, two difficulties arise; that is to say: It must rarefy that portion of the air with which it mingles; and for this cause the rarefied air must fly up of itself and will not

e non resta ⁴¹infra l'aria più grossa di lei; e oltre a questo tal uirtù ⁴²spirituale sparsa si disunisce e altera sua natura, per la qual ⁴³cosa esso māca della prima virtù; aggiugnesi vn ^{3°} incō⁴⁴veniente, e questo è, che tal corpo d'aria, preso dallo spirito, è ⁴⁵sottoposto alla penetratiō de' venti, li quali al continuo disu⁴⁶niscano e stracciano le parti vnite dell'aria, quelle rivolgiē⁴⁷do e raggrando infra l'altra aria; adunque lo spirito, in tale

remain among the air that is heavier than itself; and besides this the subtle spiritual essence disunites itself, and its nature is modified, by which that nature loses some of its first virtue. Added to these there is a third difficulty, and this is that such a body formed of air assumed by the spirits is exposed to the penetrating winds, which are incessantly sundering and dispersing the united portions of the air, revolving and whirling amidst the rest of the atmosphere; therefore the spirit which is infused in this

W. An. II. 201 b (M)]

1215.

aria infuso, sarebbe smēbrato overo sbranato e ²rotto insieme collo sbranamēto dell' aria, nella qual s'infuse.

**SE LO SPIRITO, AVĒDO PRESO CORPO ⁴D'ARIA,
SI PUÒ PER SE MOVERE O NO.**

⁵Inpossibile è che lo spirito, infuso a una quātità d'aria, ⁶possa movere essa aria; e questo si manifesta per la passa⁷ta dove dice ⁸lo spirito leuifica quella quātità dell'aria, ⁸nella quale esso s'infonde; adunque tale aria ⁹si leuerà in alto sopra l'altra aria, e sarà moto fatto dell'a¹⁰ria per la sua leuità e nō per moto volontario dello spirito, e ¹¹se tale aria si scontra nel uēto per la ³a di questo, essa ¹²aria sarà mossa dal uēto e nō dallo spirito in lei infuso.

SE LO SPIRITO PUÒ PARLARE O NO.

¹⁴Volendo mostrare, se lo spirito può parlare o no, è necies¹⁵sario in prima definire che cosa è uocie, e come si giene¹⁶ra; e diremo in questo modo: la vocie è movimē¹⁷to d'aria confricata in corpo denso, e 'l corpo denso ¹⁸confricato nell'aria che è il medesimo, la qual cō¹⁹fricatione di denso con raro condensa il raro e fassi resis²⁰tētiā, e ancora il uelocie raro nel tardo raro si condensa²¹no l'uno e l'altro ne' contatti, e fanno suono e grandissimo ²²strepito; è il suono ovvero mormorio fatto dal raro ²³che si move nel raro cō medi-

air would be dismembered or rent and broken up with the rending of the air into which it was incorporated.

**AS TO WHETHER THE SPIRIT, HAVING TAKEN
THIS BODY OF AIR, CAN MOVE OF ITSELF OR NOT.**

It is impossible that the spirit infused into a certain quantity of air, should move this air; and this is proved by the above passage where it is said: the spirit rarefies that portion of the air in which it incorporates itself; therefore this air will rise high above the other air and there will be a motion of the air caused by its lightness and not by a voluntary movement of the spirit, and if this air is encountered by the wind, according to the ³rd of this, the air will be moved by the wind and not by the spirit incorporated in it.

AS TO WHETHER THE SPIRIT CAN SPEAK OR NOT.

In order to prove whether the spirit can speak or not, it is necessary in the first place to define what a voice is and how it is generated; and we will say that the voice is, as it were, the movement of air in friction against a dense body, or a dense body in friction against the air,—which is the same thing. And this friction of the dense and the rare condenses the rare and causes resistance; again, the rare, when in swift motion, and the rare in slow motion condense each other when they come in contact and make a noise and very great uproar;

ocre movimēto, come ²⁴la grā fiamma generatrice di suoni infra l'aria; è l'grandissimo strepito fatto di raro cō raro, e quando il uelocie ra²⁶ro penetra in mobile raro, come la fiañna del foco vsci²⁷ta dalla bōbarda, e percossa infra l'aria, e ancora la fiamma ²⁸vscita dal nuvolo percuote l'aria nella gieneratiō delle saette; ²⁹Addunque diremo che lo spirito non possa gienerar vocie sanza ³⁰movimento d'aria, e aria in lui non è, nè la può cacciare da se ³¹se ellī nō l'à, e se uol movere quella, nella quale lui è infuso, ³²egli è neciessario che lo spirito multiplichi, e multiplicar nō ³³pvò se lui non à quātità; e per la 4^a che dice: nessuno raro ³⁴si move se non à loco stabile, donde lui pigli il movimēto, e ³⁵mas-simamēte auendosi a mouere lo elemento nello elemēto ³⁶il quale nō si move da se, se nō per vaporacione vniiforme al ciētro della ³⁷cosa vaporata, come accade nella spugnia ristretta ³⁸in nella mano che sta sotto l'acqua, dalla qual l'acqua fuggie per qua³⁹lunche verso con equal movimēto per le fessure interpose infra ⁴⁰le dita della man che dentro a se la strīgnie;

⁴¹ Se lo spirito à vocie articulata, ⁴²e se lo spirito può essere auditō, ⁴³e che cosa è audire e vedere; ⁴⁴l'ōda della vocie va ⁴⁵per l'aria come le spetie delli ⁴⁶obbietti vanno all'ochio.

and the sound or murmur made by the rare moving through the rare with only moderate swiftness, like a great flame generating noises in the air; and the tremendous uproar made by the rare mingling with the rare, and when that air which is both swift and rare rushes into that which is itself rare and in motion, it is like the flame of fire which issues from a big gun and striking against the air; and again when a flame issues from the cloud, there is a concussion in the air as the bolt is generated. Therefore we may say that the spirit cannot produce a voice without movement of the air, and air in it there is none, nor can it emit what it has not; and if desires to move that air in which it is incorporated, it is necessary that the spirit should multiply itself, and that cannot multiply which has no quantity. And in the 4th place it is said that no rare body can move, if it has not a stable spot, whence it may take its motion; much more is it so when an element has to move within its own element, which does not move of itself, excepting by uniform evaporation at the centre of the thing evaporated; as occurs in a sponge squeezed in the hand held under water; the water escapes in every direction with equal movement through the openings between the fingers of the hand in which it is squeezed.

As to whether the spirit has an articulate voice, and whether the spirit can be heard, and what hearing is, and seeing; the wave of the voice passes through the air as the images of objects pass to the eye.

 rebbe dato il uacuo.

its essence, as regards time, lies precisely between the past and the future, and has nothing in the present. This nothingness has the part equal to the whole, and the whole to the part, the divisible to the indivisible; and the product of the sum is the same whether we divide or multiply, and in addition as in subtraction; as is proved by arithmeticians by their tenth figure which represents zero; and its power has not extension among the things of Nature.]

[What is called Nothingness is to be found only in time and in speech. In time it stands between the past and future and has no existence in the present; and thus in speech it is one of the things of which we say: They are not, or they are impossible.]

With regard to time, nothingness lies between the past and the future, and has nothing to do with the present, and as to its nature it is to be classed among things impossible: hence, from what has been said, it has no existence; because where there is nothing there would necessarily be a vacuum.

ESEMPIO DELLA SAETTA FRA NUVOLI.

²[O potente e già animato strumento
 dell'artificiosa natura, ³a te nō valēdo le
 tue grā forze ti cōuiene abbādonare la
 trāquilla vita e obbedire alla legie, ⁴che Iddio
 e 'l tēpo diede alla gienitrice natura.]

 de' vicini popoli;

EXAMPLE OF THE LIGHTNING IN CLOUDS.

[O mighty and once living instrument of ^{Reflections}
 formative nature. Incapable of availing thy-
 self of thy vast strength thou hast to abandon
 a life of stillness and to obey the law which
 God and time gave to procreative nature.]

Ah! how many a time the shoals of terri-
 fied dolphins and the huge tunny-fish were
 seen to flee before thy cruel fury, to escape;
 whilst thy fulminations raised in the sea a
 sudden tempest with buffeting and submer-
 sion of ships in the great waves; and filling the
 uncovered shores with the terrified and desperate
 fishes which fled from thee, and left by the sea,
 remained in spots where they became the abun-
 dant prey of the people in the neighbourhood.

1217—1219. The character of the handwriting points to an early period of Leonardo's life. It has become very indistinct, and is at present exceedingly difficult to decipher. Some passages remain doubtful.

1217. 1218. Compare No. 1339, written on the same sheet.

O time, swift robber of all created things,
how many kings, how many nations hast thou
undone, and how many changes of states
and of various events have happened since
the wondrous forms of this fish perished
here in this cavernous and winding recess.
Now destroyed by time thou liest patiently in
this confined space with bones stripped and
bare; serving as a support and prop for the
superimposed mountain.

1218.

The watery element was left enclosed
between the raised banks of the rivers, and
the sea was seen between the uplifted earth
and the surrounding air which has to envelope
and enclose the complicated machine
of the earth, and whose mass, standing
between the water and the element of fire,
remained much restricted and deprived of
its indispensable moisture; the rivers will
be deprived of their waters, the fruitful
earth will put forth no more her light
verdure; the fields will no more be decked
with waving corn; all the animals, finding
no fresh grass for pasture, will die and food
will then be lacking to the lions and wolves
and other beasts of prey, and to men who
after many efforts will be compelled to
abandon their life, and the human race will
die out. In this way the fertile and fruitful
earth will remain deserted, arid and sterile
from the water being shut up in its interior,
and from the activity of nature it will continue
a little time to increase until the cold
and subtle air being gone, it will be forced
to end with the element of fire; and then its
surface will be left burnt up to cinder and
this will be the end of all terrestrial nature.

1219.

Why did nature not ordain that one
animal should not live by the death of
another? Nature, being inconstant and

del creare e fare cōtin^{ue} vite e forme, perchē cogni^soscie che sono accrescimēto della sua terrestre materia, ⁶è volonterosa e piv presta col suo creare che 'l tēpo col cōsumare; e però à ordinato che molti animali sieno cibo l'uno dell'⁸l'altro; e nō soddisfaciēdo questo a simile desiderio, e' spesso māda fuora certi avelenati e pestilēti vapori sopra le grā multipli¹⁰cazioni e cōgregazioni d'animali, e massime sopra gli omīni, che fanno ¹¹grāde accrescimēto, perchē altri animali ¹²nō si cibano di loro, e tolte via le cagioni mācherānno li effetti; ¹³adūque questa terra ciera di mācare di sua vita, desiderādo ¹⁴la continua multipli- cazione; per là tua assegnata e demon- strata ¹⁵ragione spesso li effetti somigliano le loro cagioni; gli animali so¹⁶no esēplo della vita mōdiale.

taking pleasure in creating and making constantly new lives and forms, because she knows that her terrestrial materials become thereby augmented, is more ready and more swift in her creating, than time in his destruction; and so she has ordained that many animals shall be food for others. Nay, this not satisfying her desire, to the same end she frequently sends forth certain poisonous and pestilential vapours upon the vast increase and congregation of animals; and most of all upon men, who increase vastly because other animals do not feed upon them; and, the causes being removed, the effects would not follow. This earth therefore seeks to lose its life, desiring only continual reproduction; and as, by the argument you bring forward and demonstrate, like effects always follow like causes, animals are the image of the world.

XX.

Humorous Writings.

Just as Michaelangelo's occasional poems reflect his private life as well as the general disposition of his mind, we may find in the writings collected in this section, the transcript of Leonardo's fanciful nature, and we should probably not be far wrong in assuming, that he himself had recited these fables in the company of his friends or at the court festivals of princes and patrons. Era tanto piacevole nella conversazione — so relates Vasari — che tirava a sè gli animi delle genti. And Paulus Jovius says in his short biography of the artist: Fuit ingenio valde comi, nitido, liberali, vultu autem longe venustissimo, et cum elegantiae omnis deliciarumque maxime theatralium mirificus inventor ac arbiter esset, ad lyramque scito caneret, cunctis per omnem aetatem principibus mire placuit. There can be no doubt that the fables are the original offspring of Leonardo's brain, and not borrowed from any foreign source; indeed the schemes and plans for the composition of fables collected in division V seem to afford an external proof of this, if the fables themselves did not render it self-evident. Several of them—for instance No. 1279—are so strikingly characteristic of Leonardo's views of natural science that we cannot do them justice till we are acquainted with his theories on such subjects; and this is equally true of the 'Prophecies'.

I have prefixed to these quaint writings the 'Studies on the life and habits of animals' which are singular from their peculiar aphoristic style, and I have transcribed them in exactly the order in which they are written in MS. H. This is one of the very rare instances in which one subject is treated in a consecutive series of notes, all in one MS., and Leonardo has also departed from his ordinary habits, by occasionally not completing the text on the page it is begun. These brief notes of a somewhat mysterious bearing have been placed here, simply because they may possibly have been intended to serve as hints for fables or allegories. They can scarcely be regarded as preparatory for a natural history; rather they would seem to be extracts. On the one hand the names

of some of the animals seem to prove that Leonardo could not here be recording observations of his own; on the other hand the notes on their habits and life appear to me to dwell precisely on what must have interested him most—so far as it is possible to form any complete estimate of his nature and tastes.

In No. 1293 lines 1—10, we have a sketch of a scheme for grouping the Prophecies. I have not however availed myself of it as a clue to their arrangement here because, in the first place, the texts are not so numerous as to render the suggested classification useful to the reader, and, also, because in reading the long series, as they occur in the original, we may follow the author's mind; and here and there it is not difficult to see how one theme suggested another. I have however regarded Leonardo's scheme for the classification of the Prophecies as available for that of the Fables and Fests, and have adhered to it as far as possible.

Among the humorous writings I might perhaps have included the 'Rebusse', of which there are several in the collection of Leonardo's drawings at Windsor; it seems to me not likely that many or all of them could be solved at the present day and the MSS. throw no light on them. Nor should I be justified if I intended to include in the literary works the well-known caricatures of human faces attributed to Leonardo—of which, however, it may be incidentally observed, the greater number are in my opinion undoubtedly spurious. Two only have necessarily been given owing to their presence in text, which it was desired to reproduce: Vol. I page 326, and Pl. CXXII. It can scarcely be doubted that some satirical intention is conveyed by the drawing on Pl. LXIV (text No. 688).

My reason for not presenting Leonardo to the reader as a poet is the fact that the maxims and morals in verse which have been ascribed to him, are not to be found in the manuscripts, and Prof. Uzielli has already proved that they cannot be by him. Hence it would seem that only a few short verses can be attributed to him with any certainty.

THE LOVE OF VIRTUE.

The gold-finck is a bird of which it is related that, when it is carried into the presence of a sick person, if the sick man is going to die, the bird turns away its head and never looks at him; but if the sick man is to be saved the bird never loses sight of him but is the cause of curing him of all his sickness.

Like unto this is the love of virtue. It never looks at any vile or base thing, but rather clings always to pure and virtuous things and takes up its abode in a noble heart; as the birds do in green woods on flowery branches. And this Love shows itself more in adversity than in prosperity; as light does, which shines most where the place is darkest.

H. I. 5b]

1221.

INVIDIA.

² Del nibbio · si legie · , che quādo esso
 uede ³i sua figlioli nel nido esser di troppa
 gra⁴ssezza, che per invidia egli becca loro
 le coste e tiēgli sanza māgiare.

ENVY.

We read of the kite that, when it sees its young ones growing too big in the nest, out of envy it pecks their sides, and keeps them without food.

1220. 2. callendrino e uno. 4. chessel. 5. quessto. 6. esse. 7. isschanpare quessto. 9. chausa .. hogni. 11. trissta. 12. honeste he. 13. ripatria [senpre] in .. assi. 15. essi .. prossperi. 17. comelume .. risplēde.

ALLEGREZZA.

⁷L'allegrezza · è appropriata · al gallo · che ⁸d'ogni piccola · cosa · si rallegra e cā-
cta · con vari e scherzati mouimenti.

TRISTEZZA.

¹¹La tristezza · s'assomiglia al corbo , il quale, ¹²quādo uede i sua nati figlioli esser biā¹³chi, che per lo grāde dolore si parte cō tristo ¹⁴rammarichio, gl'abādona e nō gli pascie · ¹⁵isino che non gli vede alquāte poche pēne ¹⁶nere.

H. 1 6a]

PACE.

²Del castoro si legge che, quādo è perse³guitato , cōnoscēdo · essere · per la virtù ⁴de' sua medicinali · testiculi, esso nō postēdo piv fuggire, si ferma, e per auere ⁶pace coi cacciatori coi sua tagliēti ⁷dēti si spicca i testiculi e li lascia a sua ⁸nimici.

IRA.

¹⁰Dell'orso si dice che · quādo va alle case ¹¹delle api per torre loro il mele, esse ¹²api cominciando a pūgierlo, che lui lasci¹³a il mele e corre alla vendetta, e volē-¹⁴dosi cō tutte quelle che lo mordono vē-¹⁵dicare, cō nessuna si uēdica, in modo che la ¹⁶sua ira si cōuerte in rabbia, e gittatosi ¹⁷in terra colle mani e coi piedi inasprādo, ¹⁸indarno da quelle si difende.

H. 1 6b]

GRATITUDINE.

²La virtù · della gratitudine si dice ³essere piv nelli uccielli detti upupa, ⁴i quali, cōnoscēdo il benificio della ⁵ricie-
vuta vita e nvtrimēto dal pa⁶dre e dalla lor madre, quādo li uedo⁷no vecchi fanno loro vno nido e li ⁸covano e li nutri-
scono, e cavā loro ⁹col becco le vecchie e triste penne, e ¹⁰cō cierte erbe li rēdano la uista, ¹¹in modo che ritornano in pro-
spertà.

CHEERFULNESS.

Cheerfulness is proper to the cock, which rejoices over every little thing, and crows with varied and lively movements.

SADNESS.

Sadness resembles the raven, which, when it sees its young ones born white, departs in great grief, and abandons them with doleful lamentations, and does not feed them until it sees in them some few black feathers.

I222.

PEACE.

We read of the beaver that when it is pursued, knowing that it is for the virtue [contained] in its medicinal testicles and not being able to escape, it stops; and to be at peace with its pursuers, it bites off its testicles with its sharp teeth, and leaves them to its enemies.

RAGE.

It is said of the bear that when it goes to the haunts of bees to take their honey, the bees having begun to sting him he leaves the honey and rushes to revenge himself. And as he seeks to be revenged on all those that sting him, he is revenged on none; in such wise that his rage is turned to madness, and he flings himself on the ground, vainly exasperating, by his hands and feet, the foes against which he is defending himself.

I223.

GRATITUDE.

The virtue of gratitude is said to be more [developed] in the birds called hoopoes which, knowing the benefits of life and food, they have received from their father and their mother, when they see them grow old, make a nest for them and brood over them and feed them, and with their beaks pull out their old and shabby feathers; and then, with a certain herb restore their sight so that they return to a prosperous state.

8. pichola chosa . . echā. 9. coūari esscerzati. 10. tristeza. 11. tristeza sasomiglia al corb. 14. rammarichio. 15. nogli . . poce.

1222. 2. he. 3. cōnoscēdo. 5. fugire. 7. sisspicha . . ellī lasscia assua. 11. ave. 12. ave lo cominciato a pūgiere o di lui lassci. 13. core. 14. chello mordano. 15. imodo chella. 17. tero cholle mani eco . . inaspādo. 18. dacquelle.

1223. 1. [misericordia] over graditudine. 3. detti upica. 4. cōnoscēdo . . nvtrimēdo. 6. ueda. 7. fano . . ellī. 8. ellī notrisscano. 9. becho . . trisse. 10. chō . . rēdano. 11. imodo. 13. rosspo si passcie . . essenpre.

AVARITIA.

¹³ Il rospo si pascie di terra e senpre
¹⁴ sta macro, perchè nō si satia; tant'è ¹⁵ il
timore che essa terra nō li manchi.

H. I 7a]

1224.

INGRATITUDINE.

²I colonbi sono assimigliati alla ³ingratitudine, inperochè quādo ⁴sono in età che non abbino piv bisogno d'essere cibati, cominciano a ⁶cōbattere col padre; e nō finisce ⁷essa pugnia insino a tāto che ⁸caccia il padre e togli la moglie ⁹facendose la sua.

CRUDELTA.

¹¹Il basilisco è di tanta crudeltà che, ¹²quādo colla sua venenosa vista nō può ¹³occidere li animali, si volta all'erbe ¹⁴e le piāte, e fermādo in quelle la sua ¹⁵vista le fa seccare.

H. I 7b]

1225.

LIBERALIT'.

²Dell'aquila si dice che non à mai si grā ³fame, che non lasci parte della sua ⁴preda a quelli vcciegli che gli son ⁵dintorno, i quali, nō potēdosi per se ⁶pasciere, è necissario che sieno cor⁷teggiatori d'essa aquila, perchè in tal ⁸modo si cibano.

CORETTIONE.

¹⁰Quādo il lupo va asentito intorno ¹¹a qualche stallo di bestiame, e che per caso ¹²esso pōga il piede in fallo in modo facci ¹³strepito, egli si morde il pié per correg¹⁴giere se da tale errore.

H. I 8a]

1226.

LUSINGHE OVER SIRENE.

²La sirena si dolcemēte cāta ³che adormenta i marinari, e essa ⁴mōta sopra i na-
vili e occide li a⁵dormētati marinari.

AVARICE.

The toad feeds on earth and always remains lean; because it never eats enough:— it is so afraid lest it should want for earth.

INGRATITUDE.

Pigeons are a symbol of ingratitude; for when they are old enough no longer to need to be fed, they begin to fight with their father, and this struggle does not end until the young one drives the father out and takes the hen and makes her his own.

CRUELTY.

The basilisk is so utterly cruel that when it cannot kill animals by its baleful gaze, it turns upon herbs and plants, and fixing its gaze on them withers them up.

GENEROSITY.

It is said of the eagle that it is never so hungry but that it will leave a part of its prey for the birds that are round it, which, being unable to provide their own food, are necessarily dependent on the eagle, since it is thus that they obtain food.

DISCIPLINE.

When the wolf goes cunningly round some stable of cattle, and by accident puts his foot in a trap, so that he makes a noise, he bites his foot off to punish himself for his folly.

FLATTERERS OR SYRENS.

The syren sings so sweetly that she lulls the mariners to sleep; then she climbs upon the ships and kills the sleeping mariners.

1224. 4. abino. 5. comiciano. 6. finisse. 7. attāto. 8. cacia . . toli. 9. rafaciendosela. 11. basalisscio. 12. vissta nōpo.

PRUDÉTIA.

⁷ La formica per naturale cōsiglio ⁸pro-
vede la state per lo uerno, uccidēdo le
racolte semēze, perchè nō ri¹⁰nascino, e di
quelle al tempo si pascono.

PAZZIA.

¹² Il bo saluatico avēdo in odio il co-
¹³lore rosso, i cacciatori vestono di rosso
¹⁴il pedal d'una piāta, e esso bo corre a
¹⁵quella e cō gran furia v'inchioda le corti-
¹⁶ne, òde i cacciatori l'uccidono.

PRUDENCE.

The ant, by her natural foresight pro-
vides in the summer for the winter, killing
the seeds she harvests that they may not ger-
minate, and on them, in due time she feeds.

FOLLY.

The wild bull having a horror of a red
colour, the hunters dress up the trunk of a
tree with red and the bull runs at this with
great frenzy, thus fixing his horns, and forth-
with the hunters kill him there.

H.¹ 88]

1227.

GIVSTITIA.

²E' si può assimigliare la uirtù della
giustitia allo rē delle api, il quale ordina
e dispone ogni cosa cō ragione, impero-
schè alcune api sono ordinate anda⁶re per
fiori, altre ordinate a lavora⁷re, altre a cō-
battere colle vespe, ⁸altre a leuare le spor-
citie, altre ⁹a accōpagniare e corteggiare il
loro rē; e quā¹⁰do è vecchio e sāza ali, esse
lo portano, ¹¹e se ui vna māca di suo ofi-
tio, sāza ¹²alcuna remissione è punita.

VERITÀ.

¹⁴Benchè le pernici rubino l'oua l'una
all'al¹⁵tra, nōdimeno i figlioli nati d'esse
ova ¹⁶senpre ritornano alla lor uera madre.

JUSTICE.

We may liken the virtue of Justice to
the king of the bees which orders and
arranges every thing with judgment. For
some bees are ordered to go to the flowers,
others are ordered to labour, others to fight
with the wasps, others to clear away all dirt,
others to accompany and escort the king;
and when he is old and has no wings they
carry him. And if one of them fails in his
duty, he is punished without reprieve.

TRUTH.

Although partridges steal each other's eggs,
nevertheless the young born of these eggs
always return to their true mother.

H.¹ 9a]

1228.

FEDELTA OVER LEALTÀ.

²Le grū son tanto fedeli e leali al loro
rē ³che la notte, quādo lui dorme, alcune
vā⁴no dintorno al prato per guardare da
lū⁵ga; altre ne stanno dapresso e tengono
⁶vno sasso ciascuna in piè, che se 'l son⁷no
le uincesse, essa pietra caderebbe e fa⁸rebbe
tal romore, ch'essi ridesterebbero; e ⁹altre
vi sono che insieme intorno al rē dor¹⁰mono,
e ciò fanno ogni notte scābiādosi, ¹¹acciò
chè loro rē nō uogliono mācare.

FIDELITY, OR LOYALTY.

The cranes are so faithful and loyal to
their king, that at night, when he is sleeping,
some of them go round the field to keep
watch at a distance; others remain near,
each holding a stone in his foot, so that if
sleep should overcome them, this stone
would fall and make so much noise that
they would wake up again. And there are
others which sleep together round the king;
and this they do every night, changing in
turn so that their king may never find them
wanting.

¹⁶. iacciatori loccidano.1227. 2. delagusti. 3. ave. 4. chosa . . ipero. 5. alchuna ave. 6. allauora. 7. chōbotttere cholle vesspe. 8. spurcitie. 9. acō-
pagnare e corteggiare loree. 10. essāza. 11. esse . . mācha. 14. benchelle.1228. 1. lialta. 2. allorere. 3. chella. 5. ettengano. 6. sasso [per] ciascuna . . chesselso. 7. vinciessi . . chaderebe effa. 8. rebe
. . . ridesterebono. 9. chensieme . . are. 10. mano . . fano. 11. acio chollorore nō uē gli a māchare. 13. torma dissiga.

FALSITÀ.

¹³ La uolpe quādo vede alcuna torma di sgar¹⁴ze o taccole o simili uccielli, subito si gitta in ter¹⁵ra in modo colla bocca aperta che par morta, ¹⁶e essi uccielli le uogliono beccare la lingua, e essa ¹⁷gli piglia la testa.

H. I 98]

BUGIA.

² La talpa à li ochi molto piccoli, e senpre ³sta sotto terra e tanto viue, quanto essa ⁴sta occulta, e come viene alla luce ⁵subito more perché si fa nota; così la bugia.

FORTEZZA.

⁷ Il lione mai teme, anzi cō forte animo ⁸pugna cō fiera battaglia contra la mol⁹titudine de' cacciatori, senpre ciercādo ¹⁰offendere il primo che l'offese.

TIMORE OVER UILTÀ.

¹² La lepre senpre teme, e le foglie che ca¹³dono dalle piāte per autunno senpre la tē¹⁴gono in timore, e 'l piv delle volte in fuga.

H. I 10a]

MAGNANIMITÀ.

² Il falcone nō preda mai, se non uccielli ³grossi, e prima si lascierebbe morire che ⁴si cibasse de' piccoli, o che mangiasse car⁵ne fetida.

VANA GLORIA.

⁷ In questo vitio si legge del pavone esser⁸li più che altro animale sottoposto, ⁹perchè senpre contempla in nella bellezza ¹⁰della sua coda, quella allargādo in for¹¹ma di rota e col suo grido trae a se ¹²la uista de' circustāti animali;

¹³ E questo è l'ultimo vitio che si possa ¹⁴vincere.

FALSITÀ.

FALSEHOOD.

The fox when it sees a flock of herons or magpies or birds of that kind, suddenly flings himself on the ground with his mouth open to look as he were dead; and these birds want to peck at his tongue, and he bites off their heads.

I229.

BUGIA.

LIES.

The mole has very small eyes and it always lives under ground; and it lives as long as it is in the dark but when it comes into the light it dies immediately, because it becomes known;—and so it is with lies.

FORTEZZA.

VALOUR.

The lion is never afraid, but rather fights with a bold spirit and savage onslaught against a multitude of hunters, always seeking to injure the first that injures him.

TIMORE OVER UILTÀ.

FEAR OR COWARDICE.

The hare is always frightened; and the leaves that fall from the trees in autumn always keep him in terror and generally put him to flight.

I230.

MAGNANIMITÀ.

MAGNANIMITY.

The falcon never preys but on large birds; and it will let itself die rather than feed on little ones, or eat stinking meat.

VANA GLORIA.

VAIN GLORY.

As regards this vice, we read that the peacock is more guilty of it than any other animal. For it is always contemplating the beauty of its tail, which it spreads in the form of a wheel, and by its cries attracts to itself the gaze of the creatures that surround it.

And this is the last vice to be conquered.

1231.

CONSTANCY.

Constancy may be symbolised by the phoenix which, knowing that by nature it must be resuscitated, has the constancy to endure the burning flames which consume it, and then it rises anew.

INCONSTANCY.

The swallow may serve for Inconstancy, for it is always in movement, since it cannot endure the smallest discomfort.

CONTINENCE.

The camel is the most lustful animal there is, and will follow the female for a thousand miles. But if you keep it constantly with its mother or sister it will leave them alone, so temperate is its nature.

1232.

INCONTINENCE.

The unicorn, through its intemperance and not knowing how to control itself, for the love it bears to fair maidens forgets its ferocity and wildness ; and laying aside all fear it will go up to a seated damsel and go to sleep in her lap, and thus the hunters take it.

HUMILITY.

We see the most striking example of humility in the lamb which will submit to any animal ; and when they are given for food to imprisoned lions they are as gentle to them as to their own mother, so that very often it has been seen that the lions forbear to kill them.

1233.

PRIDE.

The falcon, by reason of its haughtiness and pride, is fain to lord it and rule over all the other birds of prey, and longs to be sole and supreme ; and very often the falcon has been seen to assault the eagle, the Queen of birds.

ASTINENTIA.

⁹ Il saluatico · asino · quādo · va alla ¹⁰ fonte · per bere · e trova · l'acqua intor¹¹bidata, non avrà mai si grā sete, che nō ¹²s'astēga di bere, e aspetti ch'essa acqua ¹³si richiari.

GOLA.

¹⁵ Il vulture · è tanto sottoposto alla gola ¹⁶che andrebbe mille miglia per māgiare ¹⁷d'una carognia, e per questo seguita li eserciti.

H. I 12 a]

1234.

CASTITÀ.

² La tortora nō fa mai fallo al suo cō-pagnio, ³e se l'uno more, l'altro osserua perpetua ca⁴stità e non si posa mai su ramo verde e nō ⁵beue mai acqua chiara.

LUSSURIA.

⁷ Il pipistrello per la sua sfrenata lussuria non osserua alcuno vniversale mo⁹do di lussuria, anzi maschio cō maschio, ¹⁰femina cō femina, siccome a caso si tro¹¹vano insieme, vsano il lor coito.

MODERANZA.

¹³ L'ermellino per la sua moderātia nō māgia ¹⁴se non vna sola volta il dì, e prima si lascia pi¹⁵gliare dai cacciatori che volere fugire ¹⁶nella infangata tana, ¹⁷per nō maculare la sua giētilezza.

H. I 12 b]

1235.

AQUILA.

² L'aquila, quādo è vechia, vola tāto ³in alto, che abbrucia le sue penne, e na⁴tura cōsentte che si rinoui in giovētù, ⁵cadendo nella poca acqua;

⁶ E se i sua nati nō possono tenere la uista ⁷nel sole — ; nō li pascie di nessuno uc-cello, ⁸che nō uole morire; non s'accostano

trouva. ¹¹ non ara . . sede. ¹² aspetti . . acqua. ¹³ sirisciari. ¹⁵ la voltore ettanto sotto possto. ¹⁶ andrebe mile miglia [all] per. ¹⁷ per que seguita.

VOL. II.

ABSTINENCE.

The wild ass, when it goes to the well to drink, and finds the water troubled, is never so thirsty but that it will abstain from drinking, and wait till the water is clear again.

GLUTTONY.

The vulture is so addicted to gluttony that it will go a thousand miles to eat a carrion [carcase]; therefore is it that it follows armies.

1234.

CHASTITY.

The turtle-dove is never false to its mate; and if one dies the other preserves perpetual chastity, and never again sits on a green bough, nor ever again drinks of clear water.

UNCHASTITY.

The bat, owing to unbridled lust, obser-
ves no universal rule in pairing, but males
with males and females with females pair
promiscuously, as it may happen.

MODERATION.

The ermine out of moderation never eats but once in the day; it will rather let itself be taken by the hunters than take refuge in a dirty lair, in order not to stain its purity.

THE EAGLE.

The eagle when it is old flies so high that it scorches its feathers, and Nature allowing that it should renew its youth, it falls into shallow water [5]. And if its young ones cannot bear to gaze on the sun [6]—; it does not feed them with any bird, that does not wish to die. Animals which much fear

al suo ⁹nido gli animali che forte la tema¹⁰no, ma essa a lor nō noce, senpre ¹¹lascia ri-manēte della sua preda.

LUMERPA,—FAMA.

¹³Questa nascie nell'Asia Maggiore, e splē¹⁴de si forte che toglie le sue ôbre, e morendo ¹⁵nō perde esso lume, e mai li cadono giù le ¹⁶penne, e la penna che si spicca piv nō ¹⁷luce.

it do not approach its nest, although it does not hurt them. It always leaves part of its prey uneaten.

LUMERPA,—FAME.

This is found in Asia Major, and shines so brightly that it absorbs its own shadow, and when it dies it does not lose this light, and its feathers never fall out, but a feather pulled out shines no longer.

H.1 13a]

1236.

PELICANO.

²Questo porta grāde amore a sua nati, ³e trouādo quelli nel nido morti dal ⁴ser-pēte, si pūgie a riscōtre al core e, col ⁵suo piovente sangue bagniādoli, li tor⁶na in vita.

SALAMĀDRA.

⁸Questo non à mēbra passive, e nō si ⁹cura d'altro cibo che di foco, e spesso in ¹⁰quello rinova la sua scorza.

¹¹La salamādra nel foco ¹²rinova la sua scorza; — ¹³per la ¹⁴vir¹⁵tū.

CAMELEO.

¹⁶Questo viue d'aria, e ī quella sta su-¹⁷bietto a tutti li uccelli, e per stare piv ¹⁸saluo vola sopra le nvbole; e truova ¹⁹aria tāto sottile, che nō può sostenere ²⁰vccielo che lo seguiti.

²¹A questa altezza nō va, se nō a chi da cieli ²²è dato, cioè dove vola il came-leone.

THE PELICAN.

This bird has a great love for its young; and when it finds them in its nest dead from a serpent's bite, it pierces itself to the heart, and with its blood it bathes them till they return to life.

THE SALAMANDER.

This has no digestive organs, and gets no food but from the fire, in which it con-stantly renews its scaly skin.

The salamander, which renews its scaly skin in the fire,—for virtue.

THE CAMELEON.

This lives on air, and there it is the prey of all the birds; so in order to be safer it flies above the clouds and finds an air so rarefied that it cannot support the bird that follows it.

At that height nothing can go unless it has a gift from Heaven, and that is where the chameleon flies.

H.1 13b]

1237.

ALEPO PESCIE.

²Alepo nō uive fori dell'acqua.

STRUZZO.

⁴Questo cōuerte il ferro in suo ⁵nutri-mēto; cova l'uova colla vista; ⁶¶per l'arme ⁷de' capitani.¶

THE ALEPO, A FISH.

The fish alepo does not live out of water.

THE OSTRICH.

This bird converts iron into nourishment, and hatches its eggs by its gaze;—Armies under commanders.

THE SWAN.

The swan is white without any spot, and it sings sweetly as it dies, its life ending with that song.

THE STORK.

This bird, by drinking saltwater purges itself of distempers. If the male finds his mate unfaithful, he abandons her; and when it grows old its young ones brood over it, and feed it till it dies.

1238.

THE GRASSHOPPER.

This silences the cuckoo with its song. It dies in oil and revives in vinegar. It sings in the greatest heats.

THE BAT.

The more light there is the blinder this creature becomes; as those who gaze most at the sun become most dazzled.—For Vice, that cannot remain where Virtue appears.

THE PARTRIDGE.

This bird changes from the female into the male and forgets its former sex; and out of envy it steals the eggs from others and hatches them, but the young ones follow the true mother.

THE SWALLOW.

This bird gives sight to its blind young ones by means of celandine.

BASILISCO.—CRUDELTÀ.

⁹Questo è fugito da tutti i serpēti; la don¹⁰nola per lo mezzo della ruta cōbatte con essi ¹¹e si l'uccide.

L' ASPIDO.

¹⁴Questo porta ne'dēti la subita morte ¹⁵e per nō sentire l'incāti, colla coda si ¹⁶stoppa li orechi.

H.1 15a]

DRAGO.

²Questo lega le gābe al liosante ³e quel li cade adosso, e l'uno e l'al'tro more, e morēdo fa sua vēdetta.

VIPERA.

⁶Questa nel suo accoppiare apre la bocca, e nel fine ⁷strīgnie dēti e amazza il marito, poi ⁸i figlioli in corpo cresciuti straccia⁹no il uêtre e occidono la madre.

SCORPIONE.

¹¹La saliua sputa a digivno sopra dello scor¹²pione e l'occide; à similitudine dell'a¹³stinētia della gola, che togle via e cura ¹⁴le malatie che da essa gola dipēdon, e a¹⁵pre la strada alle virtù.

H.1 17a]

COCCODRILLO. IPOCRESIA.

²Questo animale piglia l'o³mo e subito l'uccide poichè l'à morso ⁴con lamētevole voce e molte lacrime ⁵lo piāge, e finito il lamēto crudel⁶mēte lo diuora; così fa l'ipocrito ⁷che per ogni lieue cosa s'enpie il uiso ⁸di lagrime; mostrādo un cor di tigro e' ral⁹legrasi nel core dell'altrui male cō ¹⁰piātoso volto.

BOTTA.

¹²La botta fugie la luce del sole, e se pure ¹³per forza v'è tenuta, si gōfia tāta, che s'asconde la testa in basso, e privasi d'essi razzi; ¹⁵così fa chi è nimico della chiara e luciē¹⁶te virtù, che nō può se nō con gōfiato ¹⁷animo forzatamēte starle davāti.

^{16.} stopa.

^{1240.} delluno ellal. ^{6.} suo coperbocha. ^{7.} stīgnie dēti e amaza. ^{8.} cresscivti. ^{11.} la sciliua . . . dellōsschor. ^{12.} pone locide assimilitudine. ^{13.} chettole viaconde. ^{14.} I ||| mal ||||| che ||| a. Lines 14 and 15 are very indistinct and nearly effaced.

^{1241.} 1. cocodrillo. 2. animale [essendo]. 3. poichella morto. 4. collamētevole. 8. mostrādo icor di tigro e ra. 12. esse. 13. scopia chessasco. 14. baso. 15. cosi facie nemico . . ciara. 16. po . . con ||||| cōfiati. 17. ||||| animo . . stale.

THE BASILISK.—CRUELTY.

All snakes flee from this creature; but the weasel attacks it by means of rue and kills it.

THE ASP.

This carries instantaneous death in its fangs; and, that it may not hear the charmer it stops its ears with its tail.

I240.

THE DRAGON.

This creature entangles itself in the legs of the elephant which falls upon it, and so both die, and in its death it is avenged.

THE VIPER.

She, in pairing opens her mouth and at last clenches her teeth and kills her husband. Then the young ones, growing within her body rend her open and kill their mother.

THE SCORPION.

Saliva, spit out when fasting will kill a scorpion. This may be likened to abstinence from greediness, which removes and heals the ills which result from that gluttony, and opens the path of virtue.

I241.

THE CROCODILE. HYPOCRISY.

This animal catches a man and straight-way kills him; after he is dead, it weeps for him with a lamentable voice and many tears. Then, having done lamenting, it cruelly devours him. It is thus with the hypocrite, who, for the smallest matter, has his face bathed with tears, but shows the heart of a tiger and rejoices in his heart at the woes of others, while wearing a pitiful face.

THE TOAD.

The toad flies from the light of the sun, and if it is held there by force it puffs itself out to much as to hide its head below and shield itself from the rays. Thus does the foe of clear and radiant virtue, who can only be constrainedly brought to face it with puffed up courage.

H. I 178]

BRUCO.—DELLA VIRTÙ IN GIENERALE.

³ Il bruco, che mediante l'esercitato studio ⁴ di tessere con mirabile artifizio e sottile lauoro ⁵ intorno a se fa la nova abitatione, escie ⁶ poi fori di quella colle dipinte e belle ⁷ ali, cō quelle leuādosi inverso il cielo.

RAGNIO.

⁹ Il ragnio partorisce fori di se l'ar¹⁰ti-
fitiosa e maestrevole tela, la quale ¹¹ gli
rēde per benifitio la presa preda.

H. I 18a]

LIONE.

² Questo animale col suo tonāte grido
³ destà i sua figlioli dopo il terzo giorno
⁴ nati, aprēdo a quelli tutti li adormēta⁵ti
sēsi, e tutte le fiere, che ⁶nella selua sono,
fuggono.

⁷ Puossi assimigliare a figlioli della ⁸virtù,
che mediāte il grido delle lode ⁹ si sue-
giano e crescono per li studi onorevoli
¹⁰ che senpre piv gli inalza, e tutti i tristi
¹¹ a esso grido fuggano ciessādosi dai ¹²ver-
tuosi.

¹³ Ancora il leone copre le sue pedate,
¹⁴ perchè nō s'intenda il suo viaggio ¹⁵ per
i nimici; questo sta bene al capitano ¹⁶a
cielare i segreti del suo animo, acciochè
¹⁷ il nimico nō cogniosca i sua tratti.

H. I 18b]

TARĀTA.

² Il morso della tarāta mātiene l'omo
³ nel suo proponimēto, cioè quello che ⁴pen-
sano quādo fu morso.

DUGO E CIVETTA.

⁶ Questi gastigano i loro schernitori ⁷ pri-
vādoli di uista, chè così à ordina⁸to la na-
tura, perchè si cibino.

1242. Two notes are underneath this text. The first: *'nessuna cosa e da temere più che lla sozza fama'* is a repetition of the first line of the text given in Vol. I No. 695.

1242.

THE CATERPILLAR.—FOR VIRTUE IN GENERAL.

The caterpillar, which by means of assiduous care is able to weave round itself a new dwelling place with marvellous artifice and fine workmanship, comes out of it afterwards with painted and lovely wings, with which it rises towards Heaven.

THE SPIDER.

The spider brings forth out of herself the delicate and ingenious web, which makes her a return by the prey it takes.

1243.

THE LION.

This animal, with his thundering roar, rouses his young the third day after they are born, teaching them the use of all their dormant senses and all the wild things which are in the wood flee away.

This may be compared to the children of Virtue who are roused by the sound of praise and grow up in honourable studies, by which they are more and more elevated; while all that is base flies at the sound, shunning those who are virtuous.

Again, the lion covers over its foot tracks, so that the way it has gone may not be known to its enemies. Thus it beseems a captain to conceal the secrets of his mind so that the enemy may not know his purpose.

1244.

THE TARANTULA.

The bite of the tarantula fixes a man's mind on one idea; that is on the thing he was thinking of when he was bitten.

THE SCREECH-OWL AND THE OWL.

These punish those who are scoffing at them by pecking out their eyes; for nature has so ordered it, that they may thus be fed.

The second: *fatica fugga cholla fama in braccio quasi ochultata e* is written in red chalk and is evidently an incomplete sentence.

 nō sono provocati; quādo son ca⁴duti nella
 fossa, gli altri cō rami, ⁵terra e sassi riē-
 piono la fossa, ⁶in modo che alzano il fondo,

The huge elephant has by nature what
 is rarely found in man; that is Honesty,
 Prudence, Justice, and the Observance of
 Religion; inasmuch as when the moon is
 new, these beasts go down to the rivers, and
 there, solemnly cleansing themselves, they
 bathe, and so, having saluted the planet, return
 to the woods. And when they are ill, being
 laid down, they fling up plants towards
 Heaven as though they would offer sacrifice.—They bury their tusks when they fall
 out from old age.—Of these two tusks they
 use one to dig up roots for food; but they
 save the point of the other for fighting with;
 when they are taken by hunters and when
 worn out by fatigue, they dig up these buried
 tusks and ransom themselves.

They are merciful, and know the dangers,
 and if one finds a man alone and lost, he
 kindly puts him back in the road he has
 missed, if he finds the footprints of the man
 before the man himself. It dreads betrayal,
 so it stops and blows, pointing it out to
 the other elephants who form in a troop and
 go warily.

These beasts always go in troops, and the
 oldest goes in front and the second in age
 remains the last, and thus they enclose the
 troop. Out of shame they pair only at night
 and secretly, nor do they then rejoin the herd
 but first bathe in the river. The females do
 not fight as with other animals; and it is
 so merciful that it is most unwilling by nature
 ever to hurt those weaker than itself. And
 if it meets in the middle of its way a flock
 of sheep

it puts them aside with its trunk, so as
 not to trample them under foot; and it never
 hurts any thing unless when provoked. When
 one has fallen into a pit the others fill up
 the pit with branches, earth and stones, thus

che esso facilmente rimoti; temono forte lo stridore de' porci e fugono indirieto; e non fa male danno poi coi piedi a sua che a nimici; diletasi de' fiumi, e sempre vagabudi intorno quelli, e per lo gradi peso non possono notare; diuorano le pietre, e troppo chi dell'alberi sono loro gratissimo cibo; anno in odio i ratti; le mosche si diletano del suo odore e posadosi li adosso, quello arrasca la pelle, e fa le pieghe strette, e l'uccide.

raising the bottom that he may easily get out. They greatly dread the noise of swine and fly in confusion, doing no less harm than, with their feet, to their own kind than to the enemy. They delight in rivers and are always wandering about near them, though on account of their great weight they cannot swim. They devour stones, and the trunks of trees are their favourite food. They have a horror of rats. Flies delight in their smell and settle on their back, and the beast scrapes its skin making its folds even and kills them.

Quando passano i fiumi, madano i figlioli diuerso il calar dell'acqua, e stando loro inverso l'erta ronpono il rapido corso dell'acqua, aciochè il corsso non le menasse via; il drago se li gitta sotto il corpo, colla coda l'annoda le gäbe, coll'alie e colle braccia anche li tignie le coste e coi denti lo scanna, el liofante li cade adosso o il drago scoppia, e così colla sua morte del nemico si uédica.

IL DRAGONE.

Questi s'accopagnano insieme e si tessano a uso di radici, e colla testa le uata passano i paduli, e notano dove trouano migliore pastura, e se così non si vnissero,

When they cross rivers they send their young ones up against the stream of the water; thus, being set towards the fall, they break the united current of the water so that the current does not carry them away. The dragon flings itself under the elephant's body, and with its tail it ties its legs; with its wings and with its arms it also clings round its ribs and cuts its throat with its teeth, and the elephant falls upon it and the dragon is burst. Thus, in its death it is revenged on its foe.

THE DRAGON.

These go in companies together, and they twine themselves after the manner of roots, and with their heads raised they cross lakes, and swim to where they find better pasture; and if they did not thus combine

annegherebbero; così fa la unitione.

they would be drowned, therefore they combine.

SERPÈTE.

Il serpente, gradissimo animale, quando vede alcuno ucciello per l'aria, tira a se si forte il fiato, che si tira gli uccielli in bocca; Marco, Regulo, consule dello esercito Roma, fu col suo esercito da un simile animale assalito e quasi rotto, il quale animale, essendo morto per una machina mivrale, fu misurato 123 piedi, cioè 64 braccia e 1/2; avazava colla testa tutte le piante d'una selua.

THE SERPENT.

The serpent is a very large animal. When it sees a bird in the air it draws in its breath so strongly that it draws the birds into its mouth too. Marcus Regulus, the consul of the Roman army was attacked, with his army, by such an animal and almost defeated. And this animal, being killed by a catapult, measured 123 feet, that is 64 1/2 braccia and its head was high above all the trees in a wood.

1250.

vna che avea vno putto intero in corpo ²il quale avea trāghiottito

one which had inside it a boy, entire, that it had swallowed.

MACLI. ¶PEL SONNO È GIŪTO.

⁴Questa bestia nascie in Scādinavia isola; sà forma di grā cavallo, se nō che la ⁶grā lūghezza dello collo e dell'orechi lo varianzo; pascie l'erba allo indietro, perchè à si ⁸lugo il labro di sopra che pasciēdo inā⁹zi coprirebbe l'erba; à le gābe d'ū pezzo; ¹⁰per questo, quādo vuol dormire s'appoggia ¹¹a vno albero, e i cacciatori, ātivedēdo ¹²il loco vsato a dormire, segā quasi tutta ¹³la piāta, e quādo questo poi vi s'appoggia ¹⁴nel dormire, per lo sonno cade, e i cacciato¹⁵ri così lo piglano, e ogni altro modi di pi¹⁶glarlo è vano, perchè è d'incredibile velocità ¹⁷nel correre.

THE MACLI.—CAUGHT WHEN ASLEEP.

This beast is born in Scandinavia. It has the shape of a great horse, excepting that the great length of its neck and of its ears make a difference. It feeds on grass, going backwards, for it has so long an upper lip that if it went forwards it would cover up the grass. Its legs are all in one piece; for this reason when it wants to sleep it leans against a tree, and the hunters, spying out the place where it is wont to sleep, saw the tree almost through, and then, when it leans against it to sleep, in its sleep it falls, and thus the hunters take it. And every other mode of taking it is in vain, because it is incredibly swift in running.

H. I 22 a]

1251.

BONASO NOCE COLLA FUGA.

²Questo nascie in Peonia; à collo ³cō crini simile al cauallo, in tutte ⁴l'altre parti è simile al toro, saluo ⁵che le sue corna sono in modo piegate ⁶indētro, che nō può cozzare, e per questo ⁷non à altro scanpo che la fuga, nella ⁸quale getta sterco per spatio di 400 ⁹braccia del suo corso, il quale, dove to¹⁰cca, abbrucia come foco.

THE BISON WHICH DOES INJURY IN ITS FLIGHT.

This beast is a native of Paeonia and has a neck with a mane like a horse. In all its other parts it is like a bull, excepting that its horns are in a way bent inwards so that it cannot butt; hence it has no safety but in flight, in which it flings out its excrement to a distance of 400 braccia in its course, and this burns like fire wherever it touches.

LEONI, PARDI, PĀTERE, TIGRI.

¹²Questi tēgono l'ūgie nella guaina, e mai ¹³le sfoderanno, se non è adosso alla preda o ne¹⁴mico.

TIGRO.

² Questa nascie in Ircania, la qua³le è simile alquāto alla pātera per le ⁴diuerse machie della sua pelle, ed è ani⁵male di

THE LIONESS.

When the lioness defends her young from the hand of the hunter, in order not to be frightened by the spears she keeps her eyes on the ground, to the end that she may not by her flight leave her young ones prisoners.

1252.

THE LION.

This animal, which is so terrible, fears nothing more than the noise of empty carts, and likewise the crowing of cocks. And it is much terrified at the sight of one, and looks at its comb with a frightened aspect, and is strangely alarmed when its face is covered.

THE PANTHER IN AFRICA.

This has the form of the lioness but it is taller on its legs and slimmer and long bo-died; and it is all white and marked with black spots after the manner of rosettes; and all animals delight to look upon these rosettes, and they would always be standing round it if it were not for the terror of its face;

1253.

therefore knowing this, it hides its face, and the surrounding animals grow bold and come close, the better to enjoy the sight of so much beauty; when suddenly it seizes the nearest and at once devours it.

CAMELS.

The Bactrian have two humps; the Arabian one only. They are swift in battle and most useful to carry burdens. This animal is extremely observant of rule and measure, for it will not move if it has a greater weight than it is used to, and if it is taken too far it does the same, and suddenly stops and so the merchants are obliged to lodge there.

1254.

THE TIGER.

This beast is a native of Hyrcania, and it is something like the panther from the various spots on its skin. It is an animal

of terrible swiftness; the hunter when he finds its young ones carries them off hastily, placing mirrors in the place whence he takes them, and at once escapes on a swift horse. The panther returning finds the mirrors fixed on the ground and looking into them believes it sees its young; then scratching with its paws it discovers the cheat. Forthwith, by means of the scent of its young, it follows the hunter, and when this hunter sees the tigress he drops one of the young ones and she takes it, and having carried it to the den she immediately returns to the hunter and does

1255.

the same till he gets into his boat.

CATOBLEPAS.

It is found in Ethiopia near to the source Nigricapo. It is not a very large animal, is sluggish in all its parts, and its head is so large that it carries it with difficulty, in such wise that it always droops towards the ground; otherwise it would be a great pest to man, for any one on whom it fixes its eyes dies immediately.

THE BASILISK.

This is found in the province of Cyrenaica and is not more than 12 fingers long. It has on its head a white spot after the fashion of a diadem. It scares all serpents with its whistling. It resembles a snake, but does not move by wriggling but from the centre forwards to the right. It is said that one

1256.

of these, being killed with a spear by one who was on horse-back, and its venom flowing on the spear, not only the man but the horse also died. It spoils the wheat and not only that which it touches, but where it breathes the grass dries and the stones are split.

1255. Leonardo undoubtedly derived these remarks as to the Catoblepas from Pliny, Hist. Nat. VIII. 21 (al. 32): *Apud Hesperios Aethiopas fons est Nigris* (different readings), *ut plerique existimavere, Nili caput — — — Juxta hunc fera appellatur catoblepas, modica aliquin, ceterisque membris iners, caput tantum praegrave aegre ferens; alias internecio humani generis, omnibus*

qui oculos ejus videre, confestim morientibus. Aelian, *Hist. An.* gives a far more minute description of the creature (*τὸ κατώβλεπτον*), but he says that it poisons beasts not by its gaze, but by its venomous breath. Athenaeus 221 B, mentions both. If Leonardo had known of these two passages, he would scarcely have omitted the poisonous breath. (H. MÜLLER-STRÜBING.)

DONNOLA OVER BELLULA.

⁸Questa · trovādo · la tana · del basilisco, coll'odore della sua sparsa orina l'uccide; l'odore della quale orina ancora spesse volte ¹¹ essa donola occide.

ICNEUMONE.

²Questo · animale · è mortale nemico all'aspido; ³nascie · in Egitto ·, e quādo · vede presso al ⁴suo · sito alcuno · aspido ·, subito corre ⁵alla litta over fango · del Nilo, e cō quello ⁶tutto · s'infanga, e poi, risecco dal

THE WEASEL.

This beast finding the lair of the basilisk kills it with the smell of its urine, and this smell, indeed, often kills the weasel itself.

THE CERASTES.

This has four movable little horns; so, when it wants to feed, it hides under leaves all of its body except these little horns which, as they move, seem to the birds to be some small worms at play. Then they immediately swoop down to pick them and the Cerastes suddenly twines round them and encircles and devours them.

THE AMPHISBOENA.

This has two heads, one in its proper place the other at the tail; as if one place were not enough from which to fling its venom.

THE IACULUS.

This lies on trees, and flings itself down like a dart, and pierces through the wild beast and kills them.

THE ASP.

The bite of this animal cannot be cured unless by immediately cutting out the bitten part. This pestilential animal has such a love for its mate that they always go in company. And if, by mishap, one of them is killed the other, with incredible swiftness, follows him who has killed it; and it is so determined and eager for vengeance that it overcomes every difficulty, and passing by every troop it seeks to hurt none but its enemy. And it will travel any distance, and it is impossible to avoid it unless by crossing water and by very swift flight. It has its eyes turned inwards, and large ears and it hears better than it sees.

THE ICNEUMON.

This animal is the mortal enemy of the asp. It is a native of Egypt and when it sees an asp near its place, it runs at once to the bed or mud of the Nile and with this makes itself muddy all over, then it dries

itself in the sun, smears itself again with mud, and thus, drying one after the other, it makes itself three or four coatings like a coat of mail. Then it attacks the asp, and fights well with him, so that, taking its time it catches him in the throat and destroys him.

THE CROCODILE.

This is found in the Nile, it has four feet and lives on land and in water. No other terrestrial creature but this is found to have no tongue, and it only bites by moving its upper jaw. It grows to a length of forty feet and has claws and is armed with a hide that will take any blow. By day it is on land and at night in the water. It feeds on fishes, and going to sleep on the bank of the Nile with its mouth open, a bird called

1259.

trochilus, a very small bird, runs at once to its mouth and hops among its teeth and goes pecking out the remains of the food, and so inciting it with voluptuous delight tempts it to open the whole of its mouth, and so it sleeps. This being observed by the ichneumon it flings itself into its mouth and perforates its stomach and bowels, and finally kills it.

THE DOLPHIN.

Nature has given such knowledge to animals, that besides the consciousness of their own advantages they know the disadvantages of their foes. Thus the dolphin understands what strength lies in a cut from the fins placed on his chine, and how tender is the belly of the crocodile; hence in fighting with him it thrusts at him from beneath and rips up his belly and so kills him.

The crocodile is a terror to those that flee, and a base coward to those that pursue him.

1260.

THE HIPPOPOTAMUS.

This beast when it feels itself over-full goes about seeking thorns, or where there may be the remains of canes that have been

veña che la taglia, e cauato il sangue, che li ⁶bisognia, colla litta s'infanga, e risalta alla ⁷piaggia; à forma quasi come cavallo; l'ughia, ⁸fessa, coda torta, e dëti di cinghiale; collo cõ ⁹crini la pelle; nò si può passare, se nò si ba¹⁰gnia; passiesi di piâte ne'capi, entravi ¹¹allo dirieto, acciochè pare ne sia uscito.

IBIS.

¹³Questo à similitudine colla cicognia, e quan¹⁴do si sente ammalato, épie il gozzo d'acqua, ¹⁵e col becco si fa vn clistero.

CIEGUI.

¹⁷Questo quando si sente morso dal ragno ¹⁸detto falangio mágia de' grâchi, e si libera ¹⁹di tale veneno.

H. I. 27 a]

LUCERTE.

²Questa quâdo cõbatte colle serpi ³mangia la cicierbita; e sõ libere.

RONDINE.

⁵Questa rende il uedere alli orbiti ⁶figlioli col sugo della celidonia.

⁸Questa quando caccia ai ratti, mágia ⁹prima della ruta.

CINGHIALE.

¹¹Questo medica i sua mali mangiâdo ¹²della edera.

SERPE.

¹⁴Questa quâdo si uol renovare, gitta il ¹⁵vechio scoglio, comîciâdo dalla testa; ¹⁶mvta in vn dì e vna notte.

PARTERA.

¹⁸Questa, poichè le sono uscite l'interiora, ¹⁹ancora combatte coi cani e cacciatori.

split, and it rubs against them till a vein is opened; then when the blood has flowed as much as he needs, he plasters himself with mud and heals the wound. In form he is something like a horse with long haunches, a twisted tail and the teeth of a wild boar, his neck has a mane; the skin cannot be pierced, unless when he is bathing; he feeds on plants in the fields and goes into them backwards so that it may seem, as though he had come out.

THE IBIS.

This bird resembles a crane, and when it feels itself ill it fills its craw with water, and with its beak makes an injection of it.

THE STAG.

These creatures when they feel themselves bitten by the spider called father-long-legs, eat crabs and free themselves of the venom.

1261.

THE LIZARD.

This, when fighting with serpents eats the sow-thistle and is free.

THE SWALLOW.

This [bird] gives sight to its blind young ones, with the juice of the celandine.

THE WEASEL.

This, when chasing rats first eats of rue.

THE WILD BOAR.

This beast cures its sickness by eating of ivy.

THE SNAKE.

This creature when it wants to renew itself casts its old skin, beginning with the head, and changing in one day and one night.

THE PANTHER.

This beast after its bowels have fallen out will still fight with the dogs and hunters.

9. si po passare. 10. passiesi . . biâde. 11. vscito. 13. assimilitudine . . ciguognia ecq"â". 14. amalato . . il cozo dacque. 15. e chol becho . . cristero. 18. falange . . grâci essi.

1262.

CAMELEONTE.

²Questo piglia senpre il colore della cosa ³dove si posa; onde insieme colle frödi ⁴dove si posano, spesso dali elefanti sō diuorati.

CORBO.

⁶Questo quando à ucciso el cameleonte ⁷si purga coll'alloro.

H.1 48δ]

1263.

¶Moderanza raffrena tutti i vitj.

²L'ermelino prima morire che imbrat-³tarsi.

DELL' ANTIUEDERE.

⁵Il gallo nō cāta, se prima ³volte nō batte ⁶l'alie; il papagalo nel mutarsi pe'rami ⁷nō mette i piè, doue non à prima ⁸messo il becco; ⁹¶il'uoto nascie quādo la sperāza more.

¹⁰Il moto seguita il ciētro del peso.

This creature always takes the colour of the thing on which it is resting, whence it is often devoured together with the leaves on which the elephant feeds.

THE RAVEN.

When it has killed the Chameleon it takes laurel as a purge.

Moderation checks all the vices.

The ermine will die rather than besmirch itself.

OF FORESIGHT.

The cock does not crow till it has thrice flapped its wings; the parrot in moving among boughs never puts its feet excepting where it has first put its beak. Vows are not made till Hope is dead.

Motion tends towards the centre of gravity.

H.3 53a]

FAVOLA.

²Sendo l'ostrica insieme colli altri ³pe-
sci in casa del pescatore scarica⁴ta vicino
al mare, priega il ratto, ⁵che al mare la
cōduca; il ratto fatto ⁶disegnio di māgiarla
la fa aprire, ⁷e mordēdola questa li serra
la testa ⁸e si lo ferma; viene la gatta e
l'uccide.

A FABLE.

An oyster being turned out together with other fish in the house of a fisherman near the sea, he entreated a rat to take him to the sea. The rat purposing to eat him bid him open; but as he bit him the oyster squeezed his head and closed; and the cat came and killed him.

C. A. 115a; 357a]

1266.

FAVOLA.

²I tordi si rallegrarono forte, vedēdo
che l'omo prese la ciuetta ³e le tolse la
libertà, quella legando con forti legami ai
sua piedi; la ⁴qual ciuetta fu poi mediante
il uischio causa nō di far perdere ⁵la libertà
ai tordi, ma la loro propia vita.; detta
per quelle ⁶terre che si rallegrā di uedere
perdere la libertà ai loro maggio⁷ri, me-
diante i quali poi perdonò il soccorso, e
rimāgono lega⁸ti in potētia del loro nemico,
lasciādo la libertà e spesse volte la uita.

A FABLE.

The thrushes rejoiced greatly at seeing a man take the owl and deprive her of liberty, tying her feet with strong bonds. But this owl was afterwards by means of bird-lime the cause of the thrushes losing not only their liberty, but their life. This is said for those countries which rejoice in seeing their governors lose their liberty, when by that means they themselves lose all succour, and remain in bondage in the power of their enemies, losing their liberty and often their life.

1267.

A FABLE.

A dog, lying asleep on the fur of a sheep, one of his fleas, perceiving the odour of the greasy wool, judged that this must be a land of better living, and also more secure from the teeth and nails of the dog than where he fed on the dog; and without farther reflection he left the dog and went into the thick wool. There he began with great labour to try to pass among the roots of the hairs; but after much sweating had to give up the task as vain, because these hairs were so close that they almost touched each other, and there was no space where fleas could taste the skin. Hence, after much labour and fatigue, he began to wish to return to his dog, who however had already departed; so he was constrained after long repentance and bitter tears, to die of hunger.

1268.

A FABLE.

The vain and wandering butterfly, not content with being able to fly at its ease through the air, overcome by the tempting flame of the candle, decided to fly into it; but its sportive impulse was the cause of a sudden fall, for its delicate wings were burnt in the flame. And the hapless butterfly having dropped, all scorched, at the foot of the candlestick, after much lamentation and repentance, dried the tears from its swimming eyes, and raising its face exclaimed: O false light! how many must thou have miserably deceived in the past, like me; or if I must indeed see light so near, ought I not to have known the sun from the false glare of dirty tallow?

A FABLE.

The monkey, finding a nest of small birds, went up to it greatly delighted. But they, being already fledged, he could only succeed in taking the smallest; greatly delighted he took it in his hand and went to his abode; and having begun to look at the

questo vcelletto, ²²lo cominciò a baciare; e per lo sviscerato amore tanto ²³lo baciò, e rivolse, e strinse ch'ella gli tolse la uita; ²⁴è detta per quelli che per nō gastigare i figlioli capita²⁵no male.

C. A. 66δ; 200δ]

FAVOLA.

² Stando il topo assediato in vna piccola sua abitazione ³dalla donnola, la quale cō cōtinva vigilantia attēdea ⁴alla sua disfatione, e' per uno piccolo spiraculo riguarda⁵va il suo grā pericolo; infrattanto venne la gatta, ⁶e subito prese essa donnola, e imēdiate l'ebbe diuorata; ⁷allora il ratto, fatto sacrificio a Giove d'alquāte sua noc⁸cione, ringratìo sommamēte la sua deità, e uscito fori dalla ⁹sua buca a possedere la già persa libertà, della quale subito in¹⁰sieme colla vita fu dalle feroci unghie de' denti della ¹¹gatta privato.

C. A. 66δ; 201δ]

FAUOLA.

² La formica trovato vno grano di ³miglio, jl grano sētendosi preso da quel ⁴la gridò: se mi fai tāto piacere di ⁵lasciarmi fruire il mio desiderio del ⁶nasciere, io ti rēderò ciēto me medesimi; ⁷e così fu fatto.

⁸ Trovato il ragnio vno grappolo d'uue, ⁹il quale per la sua dolcezza era molto visitato da avi e diuerse ¹⁰qualità di mosche, li parue avere trouato ¹¹loco molto comodo al suo inganno; e cala¹²tosì giù per lo suo sottile filo, e ētrato nella no¹³va abitazione lì ogni giorno ¹⁴faciēdosi alli spiraculi, fatti dalli ¹⁵interualli de' grani dell'uue, assaltaua come ¹⁶ladrone i miseri animali che da lui non si ¹⁷guardauano; e passati alquanti giorni il ¹⁸uentemiatore colse essa uva e messa coll' ¹⁹tre insieme, con quelle fu pigiata; e così ²⁰l'una fu laccio e inganno dello ingañatore ²¹ragnio, come delle ingannate mosche.

²² Addormētatosi l'asino sopra il ghiaccio ²³d'ū profondo lago, il suo calore dissolue ²⁴esso ghiaccio, e l'asino sot't acqua a mal suo ²⁵danno si destò e subito annegò.

little bird he took to kissing it, and from excess of love he kissed it so much and turned it about and squeezed it till he killed it. This is said for those who by not punishing their children let them come to mischief.

1269.

A FABLE.

A rat was besieged in his little dwelling by a weasel, which with unwearied vigilance awaited his surrender, while watching his imminent peril through a little hole. Meanwhile the cat came by and suddenly seized the weasel and forthwith devoured it. Then the rat offered up a sacrifice to Jove of some of his store of nuts, humbly thanking His providence, and came out of his hole to enjoy his lately lost liberty. But he was instantly deprived of it, together with his life, by the cruel claws and teeth of the lurking cat.

1270.

A FABLE.

The ant found a grain of millet. The seed feeling itself taken prisoner cried out to her: "If you will do me the kindness to allow me accomplish my function of reproduction, I will give you a hundred such as I am." And so it was.

A Spider found a bunch of grapes which for its sweetness was much resorted to by bees and divers kinds of flies. It seemed to her that she had found a most convenient spot to spread her snare, and having settled herself on it with her delicate web, and entered into her new habitation, there, every day placing herself in the openings made by the spaces between the grapes, she fell like a thief on the wretched creatures which were not aware of her. But, after a few days had passed, the vintager came, and cut away the bunch of grapes and put it with others, with which it was trodden; and thus the grapes were a snare and pitfall both for the treacherous spider and the betrayed flies.

An ass having gone to sleep on the ice over a deep lake, his heat dissolved the ice and the ass awoke under water to his great grief, and was forthwith drowned.

S. K. M. III. 938]

Trovandosi l'acqua nel superbo mare, suo elemēto, le veñe voglia di mōtare sopra ³l'aria, e cōfortata dal foco elemēto, reueuarsi i sottile vapore, ⁴quasi parea della sittigliezza dell'ariē; mōtata in alto givnse ifra l'aeria piv sottile e fredda, dove fu abādonata dal foco, e i piccoli granicoli, ⁸sendo ristretti, già s'uniscono e fānosì pesanti, ove cadēdo la superbia ¹⁰ si cōuerte in fuga, e cade dal cielo, ¹¹ōde poi fu bevuta dalla secca terra, ¹²dove lūgo tēpo incarcierata ¹³ fece penitētia del suo peccato.

C. A. 1728; 5168]

FAUOLA.

²Vsciendo vn giorno il rasojo · di quel manico, col quale si fa gvaina a se mede-simo, ³e postosi al sole ·, vide il sole spe-chiarsi nel suo corpo; della qual cosa prese somma gloria, ⁴e rivolto col pensiero · in-dirieto · cominciò cō seco medesimo · a dire: Or tornerò io ⁵piv a quella bottega della quale novamēte uscito · sono ·? cierto · no ·; nō piaccia alli Dei che ⁶si splendida bel-lezza caggia in tāta viltà d'animo! che pazzia sarebbe quella, la qual mi cōdu-cessese a radere le insaponate barbe de' ru-stici villani · e fare mecaniche operacioni! ⁸è questo corpo da simili eserciti? cierto

A falcon, unable to endure with patience the disappearance of a duck, which, flying before him had plunged under water, wished to follow it under water, and having soaked his feathers had to remain in the water while the duck rising to the air mocked at the falcon as he drowned.

The spider wishing to take flies in her treacherous net, was cruelly killed in it by the hornet.

An eagle wanting to mock at the owl was caught by the wings in bird-lime and was taken and killed by a man.

1271.

The water finding that its element was the lordly ocean, was seized with a desire to rise above the air, and being encouraged by the element of fire and rising as a very subtle vapour, it seemed as though it were really as thin as air. But having risen very high, it reached the air that was still more rare and cold, where the fire forsook it, and the minute particles, being brought together, united and became heavy; whence its haughtiness deserting it, it betook itself to flight and it fell from the sky, and was drunk up by the dry earth, where, being imprisoned for a long time, it did penance for its sin.

1272.

A FABLE.

The razor having one day come forth from the handle which serves as its sheath and having placed himself in the sun, saw the sun reflected in his body, which filled him with great pride. And turning it over in his thoughts he began to say to himself: "And shall I return again to that shop from which I have just come? Certainly not; such splendid beauty shall not, please God, be turned to such base uses. What folly it would be that could lead me to shave the lathered beards of rustic peasants and perform such menial service! Is this body destined for such work? Certainly not. I will hide myself in some retired spot and

there pass my life in tranquil repose." And
having thus remained hidden for some months,
one day he came out into the air, and issuing
from his sheath, saw himself turned to the
similitude of a rusty saw while his surface
no longer reflected the resplendent sun.
With useless repentance he vainly deplored
the irreparable mischief saying to himself:
"Oh! how far better was it to employ at the
barbers my lost edge of such exquisite keen-
ness! Where is that lustrous surface? It has
been consumed by this vexatious and unsightly
rust."

The same thing happens to those minds
which instead of exercise give themselves up
to sloth. They are like the razor here spoken
of, and lose the keenness of their edge, while
the rust of ignorance spoils their form.

A FABLE.

A stone of some size recently uncovered
by the water lay on a certain spot some-
what raised, and just where a delightful grove
ended by a stony road; here it was sur-
rounded by plants decorated by various
flowers of divers colours. And as it saw the
great quantity of stones collected together in
the roadway below, it began to wish it could
let itself fall down there, saying to itself: "What
have I to do here with these plants? I want to
live in the company of those, my sisters." And
letting itself fall, its rapid course ended
among these longed for companions. When
it had been there sometime it began to find
itself constantly toiling under the wheels of
the carts the iron-shoed feet of horses and
of travellers. This one rolled it over, that
one trod upon it; sometimes it lifted itself a
little and then it was covered with mud or
the dung of some animal, and it was in vain
that it looked at the spot whence it had come
as a place of solitude and tranquil place.

Thus it happens to those who choose to
leave a life of solitary contemplation, and
come to live in cities among people full of
infinite evil.

²Le fiamme · già · aveano durato nella fornace ³de' bichieri, e veduto a se avincinarsi vna ⁴candela in vn bello e lustrante cādeliere, con gran deside⁵rio si forzauano · accostarsi a quella; infra le qua⁶li vna, lasciato el suo naturale ⁷corso e tiratasì dentro · a vno · voto stizzo, dove ⁸si pascieva · e vssita fori d'una piccola fessura ⁹alla cādela, che vicina l'era, si ¹⁰gittò · e cō somma · gelosità · e ingordigia quella ¹¹diuorando · quasi · a fine la condusse ·; e volendo ripa¹²rare · al prolungamēto · della sua vita, indar¹³no tētò tornare alla fornace ·, donde partita s'era, ¹⁴perchè fu costretta · morire, le mazze insieme ¹⁵colla cādela, òde al fine cō piāto e pētimēto ¹⁶. in fastidioso fumo si converti, lasciādo ¹⁷tutte le sorelle in splendente e lūga vita e bellezza.

1273.

Some flames had already lasted in the furnace of a glass-blower, when they saw a candle approaching in a beautiful and glittering candlestick. With ardent longing they strove to reach it; and one of them, quitting its natural course, writhed up to an unburnt brand on which it fed and passed at the opposite end out by a narrow chink to the candle which was near. It flung itself upon it, and with fierce jealousy and greediness it devoured it, having reduced it almost to death, and, wishing to procure the prolongation of its life, it tried to return to the furnace whence it had come. But in vain, for it was compelled to die, the wood perishing together with the candle, being at last converted, with lamentation and repentance, into foul smoke, while leaving all its sisters in brilliant and enduring life and beauty.

A small patch of snow finding itself clinging to the top of a rock which was lying on the topmost height of a very high mountain and being left to its own imaginings, it began to reflect in this way, saying to itself: "Now, shall not I be thought vain and proud for having placed myself—such a small patch of snow—in so lofty a spot, and for allowing that so large a quantity of snow as I have seen here around me, should take a place lower than mine? Certainly my small dimensions by no means merit this elevation. How easily may I, in proof of my insignificance, experience the same fate as that which the sun brought about yesterday to my companions, who were all, in a few hours, destroyed by the sun. And this happened from their having placed themselves higher than became them. I will flee from the wrath of the sun, and humble myself and find a place befitting my small importance." Thus, flinging itself down, it began to descend, hurrying from its high home on to the other snow; but the more it sought a low place

1275.

Avēdo jl ciedro desiderio di fare uno bello e grāde frutto ²in nella sommità di se lo mise in esecuzione cō tutte le ³forze del suo omore; jl quale frutto cresciuto fu cagione ⁴di fare declinare la eleuata e diritta cima.

Il persico avēdo jvividia alla grā quātità de' fru⁶tti visti fare al noce suo vicino, deliberato fare ⁷il simile, si caricò de' sua in modo tale che 'l peso ⁸di detti frutti lo tirò diradicato e rotto alla piana ⁹terra.

The cedar, being desirous of producing a fine and noble fruit at its summit, set to work to form it with all the strength of its sap. But this fruit, when grown, was the cause of the tall and upright tree-top being bent over.

The peach, being envious of the vast quantity of fruit which she saw borne on the nut-tree, her neighbour, determined to do the same, and loaded herself with her own in such a way that the weight of the fruit pulled her up by the roots and broke her down to the ground.

FAVOLA.

²Trovādosi la noce essere della cornacchia ³portata sopra vn alto campanile, e' per ⁴vna fessura, doue caddè, fu liberata dal mortale ⁵suo becco; pregò esso muro ⁶per quella gratia che Dio li aveva dato. del essere tanto ⁷eminēte e magnio e ricco di si belle cāpane e di tā⁸to onorevole suono ch'ella douesse soccorrere, ⁹poi ch'ella non avea potuta cadere sotto ¹⁰i verdi rami del suo vecchio padre; e essere nella grasa ¹¹sa terra, ricoperta dalle sue cadēti foglie, che non la ¹²volesse lui abandonare, inperoch'ella, trovādosi ¹³nel becco della fiera corua, ¹⁴votò, che scappādo da essa voleua finire la ui¹⁵ta sua in un piccolo buco; alle quali parole ¹⁶il mvro, mosso a cōpassione, fu cōtento ricettar¹⁷la nel loco ov'era caduta; e infra poco tēpo ¹⁸la noce cominciò aprirsi e mettere le radici infra ¹⁹le fessure delle pietre, e quelle allargare, e gitta²⁰re i rami fori della sua caverna; e quegli ²¹in brieve leuati sopra lo edifitio, e ingrossate le ²²ritorte radici, cominciò aprire i mvri e ca²³uare le antiche pietre de' loro uechi lochi; allo²⁴ra il muro tardi e indarno pianse la cagione del suo danno; ²⁵e in breve aprì e rovinò grā parte delle sua mēbra.

figs were all torn off her, and her boughs cut away and broken. Then, when she was thus maimed in all her limbs, the elm asked her, saying: "O fig-tree! which was best, to be without offspring, or to be brought by them into so miserable a plight!"

1276.

The plant complains of the old and dry stick which stands by its side and of the dry stakes that surround it.

One keeps it upright, the other keeps it from low company.

1277.

A FABLE.

A nut, having been carried by a crow to the top of a tall campanile and released by falling into a chink from the mortal grip of its beak, it prayed the wall by the grace bestowed on it by God in allowing it to be so high and thick, and to own such fine bells and of so noble a tone, that it would succour it, and that, as it had not been able to fall under the verdurous boughs of its venerable father and lie in the fat earth covered up by his fallen leaves it would not abandon it; because, finding itself in the beak of the cruel crow, it had there made a vow that if it escaped from her it would end its life in a little hole. At these words the wall, moved to compassion, was content to shelter it in the spot where it had fallen; and after a short time the nut began to split open and put forth roots between the rifts of the stones and push them apart, and to throw out shoots from its hollow shell; and, to be brief, these rose above the building and the twisted roots, growing thicker, began to thrust the walls apart, and tear out the ancient stones from their old places. Then the wall too late and in vain bewailed the cause of its destruction and in a short time, it wrought the ruin of a great part of it.

A FABLE.

The privet feeling its tender boughs loaded with young fruit, pricked by the sharp claws and beak of the insolent blackbird, complained to the blackbird with pitious remonstrance entreating her that since she stole its delicious fruits she should not deprive it of the leaves with which it preserved them from the burning rays of the sun, and that she should not divest it of its tender bark by scratching it with her sharp claws. To which the blackbird replied with angry upbraiding: "O, be silent, uncultured shrub! Do you not know that Nature made you produce these fruits for my nourishment; do you not see that you are in the world [only] to serve me as food; do you not know, base creature, that next winter you will be food and prey for the Fire?" To which words the tree listened patiently, and not without tears. After a short time the blackbird was taken in a net and boughs were cut to make a cage, in which to imprison her. Branches were cut, among others from the pliant privet, to serve for the small rods of the cage; and seeing herself to be the cause of the Blackbird's loss of liberty it rejoiced and spoke as follows: "O Blackbird, I am here, and not yet burnt by fire as you said. I shall see you in prison before you see me burnt."

A FABLE.

The laurel and the myrtle seeing the pear tree cut down cried out with a loud voice: "O pear-tree! whither are you going? Where is the pride you had when you were covered with ripe fruits? Now you will no longer shade us with your mass of leaves." Then the pear-tree replied: "I am going with the husbandman who has cut me down and who will take me to the workshop of a good sculptor who by his art will make me take the form of Jove the god; and I shall be dedicated in a temple and adored by men in the place of Jove, while you are bound always to remain maimed and stripped of your boughs, which will be placed round me to do me honour.

FAVOLA.

³¹ Vedēdo jl castagnio · l'vomo · sopra · il fico, il quale piegava ³²inverso se i sua rami e di quelli spiccava · i maturi frutti · i quali mette³³va nell' aperta bocca difaciēdoli e diserrādoli coi duri dēti, crollā³⁴do · i lunghi rami, e' cō spregevole mormorio disse: ³⁵O fico · quāto sei tu mē di me obbligato alla natura · ! vedi come ³⁶in me ordinò · serrat· i mia dolci figlioli ·, prima vestiti di sottile ca³⁷micia, sopra la quale è posta la dura e federata pelle ·, e nō cō³⁸tētandosi di tanto benificarmi · ch'ell'ā fatto loro la forte abi³⁹tatione, e sopra quella fondò acute · e folte · spine ·, aciochè le ⁴⁰mani dell'omo · nō mi possino nvocere ·; Allora il fico comi⁴¹cio insieme coi sua figlioli a ridere, e ferme le risa disse: ⁴²conosci l'omo essere di tale ingegnio che lui ti sappi col⁴³le pertiche e pietre e sterpi, tratti infra i tua rami, farti povero ⁴⁴de' tua frutti, e quelli caduti posta coi piedi o coi sassi, a modo ⁴⁵che i frutti tua escino straciati e storpiati fora dall'armata ⁴⁶casa; e io sono cō diligēza tocco dalle mani, e nō come te da bastoni e da sasso.

A FABLE.

The chesnut, seeing a man upon the fig-tree, bending its boughs down and pulling off the ripe fruits, which he put into his open mouth destroying and crushing them with his hard teeth, it tossed its long boughs and with a noisy rustle exclaimed: "O figl how much less are you protected by nature than I. See how in me my sweet offspring are set in close array; first clothed in soft wrappers over which is the hard but softly lined husk; and not content with taking this care of me, and having given them so strong a shelter, on this she has placed sharp and close-set spines so that the hand of man cannot hurt me." Then the fig-tree and her offspring began to laugh and having laughed she said: "I know man to be of such ingenuity that with rods and stones and stakes flung up among your branches he will bereave you of your fruits; and when they are fallen, he will trample them with his feet or with stones, so that your offspring will come out of their armour, crushed and maimed; while I am touched carefully by their hands, and not like you with sticks and stones."

1279.

The hapless willow, finding that she could not enjoy the pleasure of seeing her slender branches grow or attain to the height she wished, or point to the sky, by reason of the vine and whatever other trees that grew near, but was always maimed and lopped and spoiled, brought all her spirits together and gave and devoted itself entirely to imagination, standing plunged in long meditation and seeking, in all the world of plants, with which of them she might ally herself and which could not need the help of her withes. Having stood for some time in this prolific imagination, with a sudden flash the gourd presented itself to her thoughts and tossing all her branches with extreme delight, it seemed to her that she had found the companion suited to her purpose, because the gourd is more apt to bind others than to need binding; having come to this conclusion

diliberatione rizza sua rami in uerso il cielo aspettando ¹⁷ qualche amichevole vccielo, che li fusse al disiderio mezzano; ¹⁸ jfra quali veduta a se vicina la sgarza disse inverso ¹⁹ di quella: o giētile vccielo, per quello soccorso ²⁰ che a questi giorni da mattina ne' mia rami trovasti, ²¹ quādo l'affamato, crudele e rapace falcone ti voleva diuorare, ²² e per quelli riposo che sopra me spesso ài ²³ vsato. quādo ²⁴ l'ali tue a te riposo chiedeano; e per quelli piacie²⁵ri che infra detti mia rami scherzādo colle tue cōpagnie ²⁶ ne' tua amoreggiamenti ài vsato, jo ti priego che tu truovi, ²⁷ la zucca, e inpetri da quella alquāte delle sue semēze; ²⁸ e dì a quelle che, nate ch'elle fieno, ch'io le tratterò no²⁹n altramente che se del mio corpo gienerate l'aussi; ³⁰ e similmente vsa tutte quelle parole, che di simile intē³¹tione persuasive sieno, benchè a te, maestra de' linguag³²gi, insegnare non bisogna; e se questo ³³ farai, io sono cōtēta di ricieuere il tuo nido sopra ³⁴ il nascimēto de' mia rami insieme colla tua fa³⁵miglia sanza pagamēto d'alcū fitto; allora la sgarza fatto e fermato alquāti capitoli di novo col salice, e mass³⁷sima che biscie o faine sopra se mai non accettasse, ³⁸ alzato la coda e bassato la testa e gittatasi dal ramo ³⁹ rēde il suo peso all'ali, e quelle battēdo sopra ⁴⁰ la fugitiva aria, ora qua, ora in là curiosamēte col timō della coda ⁴¹ dirizzādosi, perueñe a vna zucca, e cō bel saluto ⁴² e alquāte bone parole inpetrò le dimandate semēze; ⁴³ e condotte al salice fu con lieta ciera ricevuta; ⁴⁴ e raspatto alquāto coi piē il terreno vicino al salicie, ⁴⁵ col becco in cierchio a esso essi grani piatò, li quali ⁴⁶ in brieva tēpo cresciēdo comiciorono collo accrescimēto e aprimēto de' sua ⁴⁷ rami a occupare tutti i rami del salice, e colle sue ⁴⁸ grā foglie a toglierle la bellezza del sole e del cielo; e nō ⁴⁹ bastādo tāto male, seguēdo le zucche comiciorono, per discō⁵⁰cio preso, a tirare le cime de' teneri rami inverso la test⁵¹rra con strane torture e disagio di quelli.

she awaited eagerly some friendly bird who should be the mediator of her wishes. Presently seeing near her the magpie she said to him: "O gentle bird! by the memory of the refuge which you found this morning among my branches, when the hungry cruel, and rapacious falcon wanted to devour you, and by that repose which you have always found in me when your wings craved rest, and by the pleasure you have enjoyed among my boughs, when playing with your companions or making love—I entreat you find the gourd and obtain from her some of her seeds, and tell her that those that are born of them I will treat exactly as though they were my own flesh and blood; and in this way use all the words you can think of, which are of the same persuasive purport; though, indeed, since you are a master of language, I need not teach you. And if you will do me this service I shall be happy to have your nest in the fork of my boughs, and all your family without payment of any rent." Then the magpie, having made and confirmed certain new stipulations with the willow,—and principally that she should never admit upon her any snake or polecat, cocked his tail, and put down his head, and flung himself from the bough, throwing his weight upon his wings; and these, beating the fleeting air, now here, now there, bearing about inquisitively, while his tail served as a rudder to steer him, he came to a gourd; then with a handsome bow and a few polite words, he obtained the required seeds, and carried them to the willow, who received him with a cheerful face. And when he had scraped away with his foot a small quantity of the earth near the willow, describing a circle, with his beak he planted the grains, which in a short time began to grow, and by their growth and the branches to take up all the boughs of the willow, while their broad leaves deprived it of the beauty of the sun and sky. And not content with so much evil, the gourds next began, by their rude hold, to drag the ends of the tender shoots down towards the earth, with strange twisting and distortion.

⁵²Allora scontēdosi, e indarno crollandosi per fare da se esse zuche cadere, e indarno ⁵³vaneggiando alquāti giorni in simile inganno, perchè la bona e forte collegatione tal ⁵⁴pēsiero negava, vedēdo passare il uēto, a quello racomādādosi, e quello soffisi forte; allora s'assperse il uechio e voto gābo del salice in 2 parti insino ⁵⁶alle sue radici; e caduto in 2 parti indarno pianse se me⁵⁷desimo, e conobbe che era nato per non aver mai bene.

Then, being much annoyed, it shook itself in vain to throw off the gourd. After raving for some days in such plans vainly, because the firm union forbade it, seeing the wind come by it commended itself to him. The wind flew hard and opened the old and hollow stem of the willow in two down to the roots, so that it fell into two parts. In vain did it bewail itself recognising that it was born to no good end.

FACIETIA.

² Andādo vn prete per la sua parrochia il sabato santo, dādo ³come vsanza l'acqua benedetta per le case, capitò nella stāza ⁴d'ū pittore, doue spargiēdo essa acqua sopra alcuna sua pittura esso pittore voltosi indirieto, alquāto crucciato; dis⁶se perchè faciesse tale spargimēto sopra le sue pitture? allora ⁷il prete disse, essere cosi vsanza, e ch'era suo debito il fare ⁸cosi, e che facieva bene, e chi fa bene debbe aspettare be⁹ne e meglio, chè così promettea Dio, e che d'ogni bene, che si ¹⁰facieva in terra, se n'avrebbe ¹¹di sopra per ogni vn 100; allora ¹¹il pittore, aspettato ch'egli uscisse fori, se li fecie di sopra ¹²alla finestra, e gittò vn grā sechione d'acqua adosso a esso. ¹³prete, diciēdo: ecco che di sopra ti uiene per ogni v 100, come ¹⁴tu diciesti., che accaderebbe del bene che mi facievi colla ¹⁵tua acqua santa, colla quale m'ai guasto mezze le mie ¹⁶pitture.

A JEST.

A priest, making the rounds of his parish on Easter Eve, and sprinkling holy water in the houses as is customary, came to a painter's room, where he sprinkled the water on some of his pictures. The painter turned round, somewhat angered, and asked him why this sprinkling had been bestowed on his pictures; then said the priest, that it was the custom and his duty to do so, and that he was doing good; and that he who did good might look for good in return, and, indeed, for better, since God had promised that every good deed that was done on earth should be rewarded a hundred-fold from above. Then the painter, waiting till he went out, went to an upper window and flung a large pail of water on the priest's back, saying: "Here is the reward a hundred-fold from above, which you said would come from the good you had done me with your holy water, by which you have damaged my pictures."

1282.

Wine, the divine juice of the grape, finding itself in a golden and richly wrought cup, on the table of Mahomet, was puffed up with pride at so much honour; when suddenly it was struck by a contrary reflection, saying to itself: "What am I about, that I should rejoice, and not perceive that I am now near to my death and shall leave my golden abode in this cup to enter into the foul and fetid caverns of the human body, and to be transmuted from a fragrant and delicious liquor into a foul and base one. Nay, and as though so much evil as this were not enough, I must for a long time lie in hideous receptacles, together with other fetid and corrupt matter, cast out from human intestines." And it cried to Heaven, imploring vengeance for so much insult, and that an end might henceforth be put to such contempt; and that, since that country produced the finest and best grapes in the whole world, at least they should not be turned into wine. Then Jove made that wine drunk by Mahomet to rise in spirit to his brain; and that in so deleterious a manner that it made him mad, and gave birth to so many follies that when he had recovered himself, he made a law that no Asiatic should drink wine, and henceforth the vine and its fruit were left free.

As soon as wine has entered the stomach it begins to ferment and swell; then the spirit of that man begins to abandon his body, rising as it were skywards, and the brain finds itself parting from the body. Then it begins to degrade him, and make him rave like a madman, and then he does irreparable evil, killing his friends.

since to him it was a satisfaction to see men greater than himself, as is the way with the populace; while the gentleman could only see men of less consequence than himself; and so lords and great men were deprived of that pleasure.

1284.

Franciscan begging Friars are wont, at certain times, to keep fasts, when they do not eat meat in their convents. But on journeys, as they live on charity, they have license to eat whatever is set before them. Now a couple of these friars on their travels, stopped at an inn, in company with a certain merchant, and sat down with him at the same table, where, from the poverty of the inn, nothing was served to them but a small roast chicken. The merchant, seeing this to be but little even for himself, turned to the friars and said: "If my memory serves me, you do not eat any kind of flesh in your convents at this season." At these words the friars were compelled by their rule to admit, without cavil, that this was the truth; so the merchant had his wish, and eat the chicken and the friars did the best they could. After dinner the messmates departed, all three together, and after travelling some distance they came to a river of some width and depth. All three being on foot—the friars by reason of their poverty, and the other from avarice—it was necessary by the custom of company that one of the friars, being barefoot, should carry the merchant on his shoulders: so having given his wooden shoes into his keeping, he took up his man. But it so happened that when the friar had got to the middle of the river, he again remembered a rule of his order, and stopping short, he looked up, like Saint Christopher, to the burden on his back and said: "Tell me, have you any money about you?"—"You know I have", answered the other, "How do you suppose that a Merchant like me should go about otherwise?" "Alack!" cried the friar, "our rules forbid as to carry any money on our persons," and forthwith he dropped him into the water, which the merchant perceived was a facetious way of being revenged on the indignity he had done them; so, with a smiling face, and blushing somewhat with shame, he peacefully endured the revenge.

C. A. 758; 2198]

Vno disputādo e vantādosi · di sapere fare molti vari · e belli · giochi · vn altro de' circonstanti · disse: jo so fare ²vno giocco · il quale · farà · trarre le brache · a chi a me parirà; il primo vantatore, trovandosi sanza brache, ³disse · che a me non le sarai trarre e vo'dare vn pajo di calze; il propontore d'esso gioco accettato ⁴lo invitò · in pro mvtò piv paja di brache, e trassele nel volto · al mettitore delle calze, e vinse il peggio.

⁵Vno disse a vn suo conosciēte: tu ài · tutti · li ochi · trasmutati · in strano · colore; Quello · li ripose interuenirli ⁶spesso, ma tu nō ci ài posto cura;—e quādo t'adiuiē questo?—rispose l'altro: ogni volta, che mia · ochi vedono jl tuo viso ⁷strano · per la violenza ricievuta da si grā dispiaciere · subito s'impallidiscono · e mvtano in istrā colore;

⁸Vno disse a un altro: tu ài tutti li occhi mutati in istrā colore; Quello li rispose egli è perchè i mia ochi vedono ⁹il tuo viso strano.

¹⁰Vno disse che in suo paese · nascievan le piv strane cose del mōdo ·; l'altro rispose : tu che sei vi na¹¹to, confermi ciò esser uero · per la stranezza della tua brutta presenza.

Tr. 78]

Dispregiādo uno vecchio publicamēte vn giovane mostrādo auda²cemēte nō temer quello, onde il giovane li rispuose che la ³sua lūga, età li faceva migliore scudo che la lingua ⁴o la forza.

timate with you because I love you, and I do not choose that you, by speaking ill of me, your friend, to others, should produce in others, as in me, a bad impression of yourself, by speaking evil to them of me, your friend. Therefore, being no longer intimate together, it will seem as though we had become enemies; and in speaking evil of me, as is your wont, you will not be blamed so much as if we continued intimate.

1288.

A man was arguing and boasting that he knew many and various tricks. Another among the bystanders said: "I know how to play a trick which will make whomsoever I like pull off his breeches." The first man—the boaster—said: "You won't make me pull off mine, and I bet you a pair of hose on it." He who proposed the game, having accepted the offer, produced breeches and drew them across the face of him who bet the pair of hose and won the bet [4].

A man said to an acquaintance: "Your eyes are changed to a strange colour." The other replied: "it often happens, but you have not noticed it." "When does it happen?" said the former. "Every time that my eyes see your ugly face, from the shock of so unpleasing a sight they suddenly turn pale and change to a strange colour."

A man said to another: "Your eyes are changed to a strange colour." The other replied: "It is because my eyes behold your strange ugly face."

A man said that in his country were the strangest things in the world. Another answered: "You, who were born there, confirm this as true, by the strangeness of your ugly face."

1289.

An old man was publicly casting contempt on a young one, and boldly showing that he did not fear him; on which the young man replied that his advanced age served him better as a shield than either his tongue or his strength.

1290.

FACIETIA.

²Sendo uno infermo in articulo ³di morte, esso sentì battere la porta, ⁴e domādato vno de' sua serui chi era ⁵che batteva l'uscio, esso seruò rispose ⁶esser vna che si chiamava madona ⁷Bona; allora l'infermo alzato le ⁸braccia al cielo ringraziò Dio con alta voce; poi disse ai serui che lasci¹⁰assino venire presto questa, accio-¹¹chè potesse vedere vna donna ¹²bona iñazi che esso morisse, ¹³imperochè in sua vita mai ne vide nessuna.

S. K. M. II.² 43^b]

1291.

FACIETIA.

²Fu detto a vno che si levasse ³dal letto, perchè già era leva⁴to il sole; E lui rispose: se ⁵io avessi a fare tanto viaggio ⁶e facende quanto lui, ancora io sarei ⁷già levato, e però avendo a fa⁸re si poco cammino, ancora non ⁹mi voglio levare.

Fo^q

Vno vedendo vna femina parata a tener ta²vola in giostra guardò il tavolaccio e gridò ³vedendo la sua lancia: oimè quest'è troppo pic⁴col lavorante a si grā bottega.

A sick man finding himself in *articulo mortis* heard a knock at the door, and asking one of his servants who was knocking, the servant went out, and answered that it was a woman calling herself Madonna Bona. Then the sick man lifting his arms to Heaven thanked God with a loud voice, and told the servants that they were to let her come in at once, so that he might see one good woman before he died, since in all his life he had never yet seen one.

A JEST.

1291.

A JEST.

A man was desired to rise from bed, because the sun was already risen. To which he replied: "If I had as far to go, and as much to do as he has, I should be risen by now; but having but a little way to go, I shall not rise yet."

1292.

A man, seeing a woman ready to hold up the target for a jousting match, exclaimed, looking at the shield, and considering his spear: "Alack! this is too small a workman for so great a business."

1293. Lines 1—51 are in the original written in one column, beginning with the text of line 11. At the end of the column is the programme for the arrangement of the prophecies, placed here at the head: Lines 56—79 form a second column,

VOL. II.

lines 80—97 a third one (see the reproduction of the text on the facsimile Pl. CXVIII).

Another suggestion for the arrangement of the prophecies is to be found among the notes 55—57 on page 357.

YY

〔Dell'api.〕

¹⁷E a molti altri sarā tolte le mvnitioni e lor cibi, ¹⁸e crudelmēte da giēte sanza ragione saranno ¹⁹sommersi e annegate; o giustitia di Dio ²⁰perchè nō ti desti a vedere così malmenare e tua ²¹creati?

〔Delle pecore vacche ²³e capre e simili.〕

²⁴A innumerabili saran tolti i loro piccoli figlio²⁵li e quelli scarnati ²⁶e crudelissimamēti squartati.

〔Delle noci e vlieue e ghiā²⁸de e castagnie e simili.〕

²⁹Molti figlioli da spietate bastona³⁰te fieno tolti dalle propie braccia delle lor ³¹madri e gittati in terra e poi lacerati.

〔De'fanciulli che stanno ³³legati nelle fascie.〕

³⁴O città marine, io vedo in uoi i uostri citta³⁵dini così femine come maschi stret³⁶tamente dai forti legami colle braccia e ganbe esser le³⁷gati da gente che non itenderanno i uostri li³⁸guaggi, e sol ui potrete sfogare li vostri dolori e per³⁹duta libertà mediante i lagrimosi piā⁴⁰ti e li sospiri e lamentatione infra uoi mede⁴¹simi, chè chi vi lega, non v'intenderà, nè voi loro int⁴²tenderete.

〔Delle gatte che māgiano i topi.〕

⁴⁴A voi città dell'Africa si uedrà i uostri nati essere ⁴⁵squarciati nelle propie case de' crudelissimi e ra⁴⁶paci animali del paese vostro.

〔Delli asini bastonati.〕

⁴⁸O natura, perchè ti sei fatto ⁴⁹partiale, facciedoti ai tua figli d'alcuna pietosa ⁵⁰e benignia madre, ad'altri crudelissima e spietata matrignia? io vedo i tua figlioli esser dati in al⁵²tru seruitù sanza mai benifitio alcuno, e in lo⁵³co di remuneratione de' fatti benifitj esser pagati ⁵⁴di grādissimi martiri, e spēdere senpre la loss⁵⁵r vita in benifitio del suo mal fattore.

〔Of Bees.〕

And many others will be deprived of their store and their food, and will be cruelly submerged and drowned by folks devoid of reason. Oh Justice of God! Why dost thou not wake and behold thy creatures thus ill used?

〔Of Sheep, Cows, Goats and the like.〕

Endless multitudes of these will have their little children taken from them ripped open and flayed and most barbarously quartered.

〔Of Nuts, and Olives, and Acorns, and Chesnuts, and such like.〕

Many offspring shall be snatched by cruel thrashing from the very arms of their mothers, and flung on the ground, and crushed.

〔Of Children bound in Bundles.〕

O cities of the Sea! In you I see your citizens—both females and males—tightly bound, arms and legs, with strong withes by folks who will not understand your language. And you will only be able to assuage your sorrows and lost liberty by means of tearful complaints and sighing and lamentation among yourselves; for those who will bind you will not understand you, nor will you understand them.

〔Of Cats that eat Rats.〕

In you, O cities of Africa your children will be seen quartered in their own houses by most cruel and rapacious beasts of your own country.

〔Of Asses that are beaten.〕

[48] O Nature! Wherefore art thou so partial; being to some of thy children a tender and benign mother, and to others a most cruel and pitiless stepmother? I see children of thine given up to slavery to others, without any sort of advantage, and instead of remuneration for the good they do, they are paid with the severest suffering, and spend their whole life in benefitting those who ill treat them.

¶ Delli omini che dormono nell'asse d'alberi. ¶

⁵⁷ Li omini dormiranno e māgieranno e abiterāno ⁵⁸ infra li alberi nelli selue e cāpagnie.

¶ Del sogniare. ¶

⁶⁰ Alli omini parrà vedere nel cielo nove rui⁶¹ne; parrā in quello leuarsi a uolo, e di quello fuggi⁶²re cō penvria le fiamme che di lui discē⁶³dono; sentirā parlare li animali di qua⁶⁴lūche sorte in linguaggio vmano; scorre⁶⁵ranno inmediate colla lor persona ⁶⁶in diverse parti del mōdo sanza mo⁶⁷to; vedrāno nelle tenebre grādissimi ⁶⁸splēdori; o maraviglia della vmana ⁶⁹spetie qual frenesia t'ā si condotto! ⁷⁰ parlerai cogli animali di qualūche spetie, ⁷¹e quelli cō tecō in linguaggio vmano, ⁷²vedrāti cadere di grande alture san⁷³za tuo danno; i torrēti t'accompa⁷⁴gnerranno e mischieranno col lor rapido corso . . .

¶ De' cristiani. ¶

⁸¹ Molti che tengono la fede del figlio-⁸²lo e sol fan tempi nel nome ⁸³della madre.

¶ Del cibo stato animato. ¶

⁸⁴ Gran parte de' corpi animati ⁸⁵passerà pe' corpi degli altri animali, ⁸⁶cioè le case disabitate passerā ⁸⁷in pezzi per le case abitate, dan⁸⁸do a quella vtile, e portā⁸⁹do cō seco i sua danni; ⁹⁰cioè la uita dell'omo si fa dalle cose ⁹¹māgiate, le quali portā con se⁹²co la parte dell'omo ch'è morta . . .

C. A. 143δ; 426δ]

1294.

¶ Delli uftj funerali ²e processioni e lumi
³e cāpane e cōpagnia. ¶

⁴ Agli omini saran fatti grandissimi ⁵onorì e ponpe sanza lor saputa.

¶ Of Men who sleep on boards of Trees. ¶

Men shall sleep, and eat, and dwell among trees, in the forests and open country.

¶ Of Dreaming. ¶

Men will seem to see new destructions in the sky. The flames that fall from it will seem to rise in it and to fly from it with terror. They will hear every kind of animals speak in human language. They will instantaneously run in person in various parts of the world, without motion. They will see the greatest splendour in the midst of darkness. O! marvel of the human race! What madness has led you thus! You will speak with animals of every species and they with you in human speech. You will see yourself fall from great heights without any harm and torrents will accompany you, and will mingle with their rapid course.

¶ Of Christians. ¶

Many who hold the faith of the Son only build temples in the name of the Mother.

¶ Of Food which has been alive. ¶

[84] A great portion of bodies that have been alive will pass into the bodies of other animals; which is as much as to say, that the deserted tenements will pass piecemeal into the inhabited ones, furnishing them with good things, and carrying with them their evils. That is to say the life of man is formed from things eaten, and these carry with them that part of man which dies . . .

¶ Of Funeral Rites, and Processions, and Lights, and Bells, and Followers. ¶

The greatest honours will be paid to men, and much pomp, without their knowledge.

the other notes on the same sheet and of a somewhat different style. The ink is also of a different hue, as may be seen on the original sheet at Milan.

C. A. 362a; 1143a]

¶Dell auaro.¶

²Molti fieno quelli che con ogni studio e sollecitudine seguiranno ³con furia quella cosa che sempre li à spauētati, nō conoscendo la sua ⁴malignità.

¶Delli omini che, quāto piv inuechiano, piv ⁶si fanno avari, chè auēdosi a star poco dovrebbero farsi liberali.¶

⁷Vedansi a quelli, che son giudicati di piv speriētia e giuditio, quanto ⁸egli' ànno mē bisogno delle cose, cō piv auidità cercarle e riseruarle.

¶Della fossa.¶

¹¹Starā molti occupati in esercitio a leuare di quella cosa che tanto crescerà, quan¹²to se ne leuò.

¶Del peso posto sul piumacco.¶

¹⁴E a molti corpi nel vedere da lor leuar la testa, si uedrà manifestamente cresciere, e rendendo loro la leuata testa immediatamente ¹⁶diminviscono la grādezza.

¶Del pigliare de' pidocchi.¶

¹⁸E saran molti cacciatori d'animali che, quanto piv ne piglierāno ¹⁹māco n'avranno, e così de conuerso piv n'avrà, quāto men ne piglie²⁰ranno.

¶Dello tignere l'acqua colle 2 sechie a vna sola corda.¶

²²E rimaranno occupati molti che quāto piv ²³tireraño in giù la cosa, essa piv se ne fugirà in contrario ²⁴modo.

¶Le lingue de' porci e vitelli nelle budelle.¶

²⁸O cosa spurca, che si vedrà l'uno animale aver la lingua ²⁹in culo all'altro.

¶De' crivelli fatti di pelle d'animali.¶

³¹Vedrassi il cibo degli animali passar dentro alle ³²lor pelli per ogni parte salvo che per la bocca, e penetra³³re dall'opposita parte insino alla piana terra.

1295.

¶ Of the Avaricious.¶

There will be many who will eagerly and with great care and solicitude follow up a thing, which, if they only knew its malignity, would always terrify them.

¶ Of those men, who, the older they grow, the more avaricious they become, whereas, having but little time to stay, they should become more liberal. ¶

We see those who are regarded as being most experienced and judicious, when they least need a thing, seek and cherish it with most avidity.

¶ Of the Ditch.¶

Many will be busied in taking away from a thing, which will grow in proportion as it is diminished.

¶ Of a Weight placed on a Feather-pillow.¶

And it will be seen in many bodies that by raising the head they swell visibly; and by laying the raised head down again, their size will immediately be diminished.

¶ Of catching Lice.¶

And many will be hunters of animals, which, the fewer there are the more will be taken; and conversely, the more there are, the fewer will be taken.

¶ Of Drawing Water in two Buckets with a single Rope.¶

And many will be busily occupied, though the more of the thing they draw up, the more will escape at the other end.

¶ Of the Tongues of Pigs and Calves in Sausage-skins.¶

Oh! how foul a thing, that we should see the tongue of one animal in the guts of another.

¶ Of Sieves made of the Hair of Animals.¶

We shall see the food of animals pass through their skin everyway excepting through their mouths, and penetrate from the outside downwards to the ground.

¶ Of Lanterns. ¶

[35] The cruel horns of powerful bulls will screen the lights of night against the wild fury of the winds.

¶ Of Feather-beds. ¶

Flying creatures will give their very feathers to support men.

¶ Of Animals which walk on Trees—wearing wooden Shoes. ¶

The mire will be so great that men will walk on the trees of their country.

¶ Of the Soles of Shoes, which are made from the Ox. ¶

And in many parts of the country men will be seen walking on the skins of large beasts.

¶ Of Sailing in Ships. ¶

There will be great winds by reason of which things of the East will become things of the West; and those of the South, being involved in the course of the winds, will follow them to distant lands.

¶ Of Worshipping the Pictures of Saints. ¶

Men will speak to men who hear not; having their eyes open, they will not see; they will speak to these, and they will not be answered. They will implore favours of those who have ears and hear not; they will make light for the blind.

¶ Of Sawyers. ¶

There will be many men who will move one against another, holding in their hands a cutting tool. But these will not do each other any injury beyond tiring each other; for, when one pushes forward the other will draw back. But woe to him who comes between them! For he will end by being cut in pieces.

¶ Silk-spinning. ¶

Dismal cries will be heard loud, shrieking with anguish, and the hoarse and smothered tones of those who will be despoiled, and at last left naked and motionless; and this by reason of the mover, which makes every thing turn round.

¶Del mettere e trarre il pan dalla bocca
del forno.¶

⁷⁰ Per tutte le città e terre e castelli e case si uedrà, per desiderio di mangiare, trarre il ⁷¹ proprio cibo di bocca l'uno all'altro senza poter fare difesa alcuna.

¶Le terre lauorate.¶

⁷³ Vedrassi voltare la terra sotto sopra e risguardare l'oppositi ⁷⁴ emisferii e scoprire le spelonche a ferociissimi animali.

¶Del seminare.¶

⁷⁶ Allora in grā parte dell'i omini, che resterà uiui, gitterà ⁷⁷ fori delle lor case le serbate vettovaglie in libera preda dell'i ⁷⁸ vcelli e animali terrestri sanza curarsi d'essi in parte alcuna.

¶Delle pioggie che fanno che fiumi intorbidati ⁸⁰ portan via le terre.¶

⁸¹ Verrà diuerso il cielo chi trasmuterà gran parte dell'Africa ⁸² che si mostra a esso cielo inverso l'Europa, e quella di Euro⁸³pa inverso l'Africa, e quelle delle provincie Scitiche si mischieranno in ⁸⁴sieme con grā revolutione.

¶De legniami che bruciano.¶

⁸⁷ Li alberi e arbusti delle grā selue si convertiranno in cenere.

¶Delle fornaci di mattoni e calcina.¶

⁸⁹ Al fine la terra si farà rossa per lo infocamēto di molti giorni, ⁹⁰e le pietre si convertiranno in cenere.

¶I pesci lessi.¶

⁹² Li animali d'acqua moriranno nelle bellonti acque.

¶L'ulive che cadono dagli ulivi dannoci l'olio che fa lume.¶

⁹⁴ Discenderà con furia diuerso la terra, chi ci darà notrimēto e luce.

¶Of putting Bread into the Mouth of the Oven and taking it out again.¶

In every city, land, castle and house, men shall be seen, who for want of food will take it out of the mouths of others, who will not be able to resist in any way.

¶ Of tilled Land.¶

The Earth will be seen turned up side down and facing the opposite hemispheres, uncovering the lurking holes of the fiercest animals.

¶ Of Sowing Seed.¶

Then many of the men who will remain alive, will throw the victuals they have preserved out of their houses, a free prey to the birds and beasts of the earth, without taking any care of them at all.

¶ Of the Rains, which, by making the Rivers muddy, wash away the Land.¶

[81] Something will fall from the sky which will transport a large part of Africa which lies under that sky towards Europe, and that of Europe towards Africa, and that of the Scythian countries will meet with tremendous revolutions [84].

¶ Of Wood that burns.¶

The trees and shrubs in the great forests will be converted into cinder.

¶ Of Kilns for Bricks and Lime.¶

Finally the earth will turn red from a conflagration of many days and the stones will be turned to cinders.

¶ Of boiled Fish.¶

The natives of the waters will die in the boiling flood.

¶ Of the Olives which fall from the Olive trees, shedding oil which makes light.¶

And things will fall with great force from above, which will give us nourishment and light.

¹¹² Nelle corna dell' animali si vedranno taglieti ¹¹³ ferri colli quali si torna la uita a molti della loro ¹¹⁴ spetie.

¶ Della notte che nō si conosce ¹¹⁶ alcun colore. ¶

¹¹⁷ Verrà a tanto che non si conoscerà differenza infra ¹¹⁸ colori, anzi si faran tutti di nera qualità.

¶ Delle spade e lance che per se ¹²⁰ mai nuocono a nessuno. ¶

¹²¹ Chi per se è māsueto e sanza alcuna offensione, si farà ¹²² spaumentevole e feroce mediante le triste cōpa ¹²³ gnie, e torrà la vita crudelissimamente ¹²⁴ a molte genti; e pīv n'ucciderebbe, se corpi sā ¹²⁵ z'anima e usciti dalle spelonche non li difendessino, ¹²⁶ cioè le corazze di ferro.

¶ De' laccioli e trappole. ¶

¹²⁸ Molti morti si moverā con furia e piglieranno e legheranno ¹²⁹ i vivi, e serviranno gli a lor nemici circa ¹³⁰ la lor morte e distruzione.

¶ Of Owls and screech owls and what will happen to certain birds. ¶

Many will perish of dashing their heads in pieces, and the eyes of many will jump out of their heads by reason of fearful creatures come out of the darkness.

¶ Of flax which works the cure of men. ¶

That which was at first bound, cast out and rent by many and various beaters will be respected and honoured, and its precepts will be listened to with reverence and love.

¶ Of Books which teach Precepts. ¶

Bodies without souls will, by their contents give us precepts by which to die well.

¶ Of Flagellants. ¶

Men will hide themselves under the bark of trees, and, screaming, they will make themselves martyrs, by striking their own limbs.

¶ Of the Handles of Knives made of the Horns of Sheep. ¶

We shall see the horns of certain beasts fitted to iron tools, which will take the lives of many of their kind.

¶ Of Night when no Colour can be discerned. ¶

There will come a time when no difference can be discerned between colours, on the contrary, everything will be black alike.

¶ Of Swords and Spears which by themselves never hurt any one. ¶

One who by himself is mild enough and void of all offence will become terrible and fierce by being in bad company, and will most cruelly take the life of many men, and would kill many more if they were not hindered by bodies having no soul, that have come out of caverns—that is, breastplates of iron.

¶ Of Snares and Traps. ¶

Many dead things will move furiously, and will take and bind the living, and will ensnare them for the enemies who seek their death and destruction.

〔De' metalli.〕

¹³² Uscirà dalle oscure e tenebrose spelche che metterà tutta l'umana spezie in grandi affanni, pericoli e morte; a molti seguirà lor, dopo molti affanni, darà ¹³⁷ diletto; ma chi nō fia suo partigiano morrà ¹³⁸ con stento e calamità; questo commette¹³⁹ rā infiniti tradimenti, questo avmēte¹⁴⁰ rā e persuaderà li omini tristi alli assassinamenti ¹⁴¹ e latrocini e le perfidie; questa darà ¹⁴² sospetto a i sua partigiani; questo torrà ¹⁴³ lo stato alle città libere; questo torrà ¹⁴⁴ la uita a molti; questo travaglierà ¹⁴⁵ li omini infra loro con molte arti, ¹⁴⁶ inganni e tradimenti; o animal mostro! quanto sarebbe meglio agli omini ¹⁴⁸ che tutti tornassero nell'inferno! per costui ¹⁴⁹ rimarrā diserte le grā selue delle lor ¹⁵⁰ piante; per costui infiniti animali perderanno la ui¹⁵¹ta.

〔Del fuoco.〕

¹⁵³ Nascierà di piccolo principio, ¹⁵⁴ chi si farà cō prestezza grande; que¹⁵⁵sto non stimerà alcuna creata ¹⁵⁶ cosa, anzi colla sua potēzia ¹⁵⁷ quasi il tutto avrà in potentia ¹⁵⁸ di transformare di suo essere ¹⁵⁹ in vn altro.

〔De' navili che annegano.〕

¹⁶¹ Vedrannosi grandissimi ¹⁶² corpi sanza vita por¹⁶³tare con furia moltitu¹⁶⁴dine d'omini alla distrutti¹⁶⁵one di lor uita.

〔De' boi che si māgiano.〕

¹⁶⁷ Māgieranno i padrō delle posses-¹⁶⁸sioni i lor propri lauoratori.

〔De' battere il letto per risfarlo.〕

¹⁷⁰ Veranno li omini in tanta ingratitudine, ¹⁷¹ che, chi darà loro albergo sanza alcū prezzo, ¹⁷² sarà carico di bastonate, in modo che ¹⁷³ gran parte delle interiora si spignerā¹⁷⁴no dal loco loro e s'andranno rivoltando pel ¹⁷⁵ suo corpo.

〔Delle cose che si māgiano ¹⁷⁷ che prima s'uccidono.〕

¹⁷⁸ Sarà morto da loro il loro nutritore e flag¹⁷⁹giellato cō spietata morte.

〔Of Metals.〕

That shall be brought forth out of dark and obscure caves, which will put the whole human race in great anxiety, peril and death. To many that seek them, after many sorrows they will give delight, and to those who are not in their company, death with want and misfortune. This will lead to the commission of endless crimes; this will increase and persuade bad men to assassinations, robberies and treachery, and by reason of it each will be suspicious of his partner. This will deprive free cities of their happy condition; this will take away the lives of many; this will make men torment each other with many artifices deceptions and treasons. O monstrous creature! How much better would it be for men that every thing should return to Hell! For this the vast forests will be devastated of their trees; for this endless animals will lose their lives.

〔Of Fire.〕

One shall be born from small beginnings which will rapidly become vast. This will respect no created thing, rather will it, by its power, transform almost every thing from its own nature into another.

〔Of Ships which sink.〕

Huge bodies will be seen, devoid of life, carrying, in fierce haste, a multitude of men to the destruction of their lives.

〔Of Oxen, which are eaten.〕

The masters of estates will eat their own labourers.

〔Of beating Beds to renew them.〕

Men will be seen so deeply ungrateful that they will turn upon that which has harboured them, for nothing at all; they will so load it with blows that a great part of its inside will come out of its place, and will be turned over and over in its body.

〔Of Things which are eaten and which first are killed.〕

Those who nourish them will be killed by them and afflicted by merciless deaths.

¶ Dello specchiare le mura ¹⁸¹delle città nel l'acqua de' lor fossi. ¶

¹⁸²Vedrannosi l'alte mvra delle grā città sotto sopra ne' lo¹⁸³ro fossi.

¶ Dell'acqua che corre torbida ¹⁸⁵e mista cō terra, e della polue¹⁸⁶re, e nebbia mista coll'aria, e del ¹⁸⁷foco misto col suo e altri cō ciascūo. ¶

¹⁸⁸Vedrassi tutti li elementi insieme misti con grā re¹⁸⁹volutione trascorrere ora inverso il centro del mō¹⁹⁰do, ora inverso il celo, e quādo dalle parti meri¹⁹¹dionali scorrere cō furia inverso il fred¹⁹²do settentrione, qualche volta dall'oriēte inverso ¹⁹³l'occidente, e così di questo in quell'altro emisperio.

¶ In ogni punto si può fare diuisio¹⁹⁵ne de' 2 emisperi. ¶

¹⁹⁶Li omni tutti scābieranno emispērio immediate.

¶ In ogni pūto è diuisione da o¹⁹⁸riente a occidente. ¶

¹⁹⁹Moverannosi tutti li animali da oriēte a occidente, e così ²⁰⁰da aquilone a meriggio scanbievolmēte, e così de' cōuerso.

¶ Del moto dell'acque che portano ²⁰²i legniami che son morti. ¶

²⁰³Corpi sanz'anima per se medesimi si moveranno e porterā ²⁰⁴cō seco innumereabile generatione di morti, toglien²⁰⁵do le richezze a circūstanti viuēti.

¶ Dell'oua che sendo māgiate nō possono ²⁰⁷fare e pulcini. ¶

²⁰⁸O quanti fiē quegli, ai quali sarà proibito il nascere!

¶ De' pesci che si māgiano non nati. ¶

²¹⁰Infinita gieneratione si perderà per la morte delle grauide.

¶ Del piāto fatto il venerdì santo. ¶

²²⁰In tutte le parti d'Europa sarà piāto da grā popoli per la morte d'ū ²²¹solo omo morto in oriēte.

¶ Of the Reflection of Walls of Cities in the Water of their Ditches. ¶

The high walls of great cities will be seen up side down in their ditches.

¶ Of Water, which flows turbid and mixed with Soil and Dust; and of Mist, which is mixed with the Air; and of Fire which is mixed with its own, and each with each. ¶

All the elements will be seen mixed together in a great whirling mass, now borne towards the centre of the world, now towards the sky; and now furiously rushing from the South towards the frozen North, and sometimes from the East towards the West, and then again from this hemisphere to the other.

¶ The World may be divided into two Hemispheres at any Point. ¶

All men will suddenly be transferred into opposite hemispheres.

¶ The division of the East from the West may be made at any point. ¶

All living creatures will be moved from the East to the West; and in the same way from North to South, and vice versa.

¶ Of the Motion of Water which carries wood, which is dead. ¶

Bodies devoid of life will move by themselves and carry with them endless generations of the dead, taking the wealth from the bystanders.

¶ Of Eggs which being eaten cannot form Chickens. ¶

Oh! how many will they be that never come to the birth!

¶ Of Fishes which are eaten unborn. ¶

Endless generations will be lost by the death of the pregnant.

¶ Of the Lamentation on Good Friday. ¶

Throughout Europe there will be a lamentation of great nations over the death of one man who died in the East.

¶Del sogniare.¶

²²³ Andranno li omini e nō si moveranno,
²²⁴ parleranno cō chi nō si trova, senti²²⁵rāo
chi nō parla.

¶Dell'onbra che si move coll'uomo.¶

²²⁷ Vedrannosi forme e figure d'uomini
²²⁸ e d'animali, che seguiranno essi ani²²⁹mali
e omini dovunque fugiranno; ²³⁰e tal fia il
moto di lui qual è del²³¹l'altro, ma parrà
cosa mirabile delle ²³²varie grandezze in
che essi si tras²³³mutano.

¶¶Dell'ombra del sole e dello specchiarsi
²³⁵ nell'acqua in un medesimo tēpo.¶¶

²³⁶ Vedrassi molte volte l'uno uomo
²³⁷ diuentare 3, e tutti lo seguo²³⁸nō, e spesso
l'uno, il piv certo, l'abbandona.

¶Delle casse che riseruano ²⁴⁰molti
tesori.¶

²⁴¹ Troverrassi dentro a de' noci e deli
alberi ²⁴²e altre piante tesori grādissimi, i
quali ²⁴³lì stanno occulti e ben guardati.

¶Dello spegnere el lume a chi ²⁴⁵va al
letto.¶

²⁴⁶ Molti per mandare fori il fiato ²⁴⁷con
troppa prestezza perderanno il ue²⁴⁸dere e
in brieue tutti i sentimēti.

¶Delle canpanelle de' muli ²⁵⁰che stanno
presso ai loro orechi.¶

²⁵¹ Sentirassi in molte parti dell'Europa
stru²⁵²mēti di uarie magnitudini far diuerse
²⁵³armonie con grandissime fatiche di chi
²⁵⁴piv presso l'ode.

¶Delli asini.¶

²⁵⁶ Le molte fatiche saran remvnerate di
²⁵⁷fame, di sete, di disagio, e di mazzate, e
di pū²⁵⁸tute, e bestemie, e grā uillanie.

¶De' soldati a cauallo.¶

²⁶⁰ Molti sarā veduti portati da grādi
ani²⁶¹mali con veloce corso alla ruina della
sua ²⁶²vita e prestissima morte.

²⁶³ Per l'aria e per la terra saranno ve-
duti ani²⁶⁴mali di diuersi colori portarne cō
fu²⁶⁵rōre li omini alla destructione di lor vita.

¶Delle stelle delli sproni.¶

²⁶⁷ Per causa delle stelle si uedranno li
omini ²⁶⁸esser velocissimi al pari di qua-
luche ²⁶⁹animal ueloce.

¶Of Dreaming.¶

Men will walk and not stir, they will
talk to those who are not present, and hear
those who do not speak.

¶Of a Man's Shadow which moves with him.¶

Shapes and figures of men and animals
will be seen following these animals and men
wherever they flee. And exactly as the one
moves the other moves; but what seems so
wonderful is the variety of height they
assume.

¶Of our Shadow cast by the Sun, and our Reflec-
tion in the Water at one and the same time.¶

Many a time will one man be seen as
three and all three move together, and
often the most real one quits him.

¶Of wooden Chests which contain great
Treasures.¶

Within walnuts and trees and other plants
vast treasures will be found, which lie hidden
there and well guarded.

¶Of putting out the Light when going
to Bed.¶

Many persons puffing out a breath with
too much haste, will thereby lose their sight,
and soon after all consciousness.

¶Of the Bells of Mules, which are close to
their Ears.¶

In many parts of Europe instruments of
various sizes will be heard making divers har-
monies, with great labour to those who hear
them most closely.

¶Of Asses.¶

The severest labour will be repaid with
hunger and thirst, and discomfort, and blows,
and goadings, and curses, and great abuse.

¶Of Soldiers on horseback.¶

Many men will be seen carried by large
animals, swift of pace, to the loss of their
lives and immediate death.

In the air and on earth animals will be
seen of divers colours furiously carrying men
to the destruction of their lives.

¶Of the Stars of Spurs.¶

By the aid of the stars men will be seen
who will be as swift as any swift animal.

¶ Il bastone ch'è morto. ¶

²⁷¹ Il movimēto de' morti farà fugire
²⁷² cō dolore e piāto e cō grida molti
viui.

¶ Dell' esca. ¶

²⁷⁴ Cō pietra e con ferro si rende²⁷⁵ranno
visibili le cose che prima nō²⁷⁶ si vedeano.

C. A. 362 b; 1134 b]

¶ Del navicare. ¶

²Vedrassi li alberi delle grā selue
di Tavrus, ³e di Sinai, Apenino, e Atlante
scorrere per l'aria ⁴da oriēte a occidēte, da
a quilonne a meridiē, e porteranno per l'aria
grā moltitudine ⁶d' omini; o quāti voti! o
quāti mor̄ti! o quanta seperatiō d'amici e di
parēti! o quā⁸ti fiē quelli che nō rivedranno
più le lor pro⁹vincie nè le lor patrie, e che
moriranno sanza se¹⁰poltura colle lor ossa
sparse in diuersi ¹¹siti del mōdo!

¶ Dello sgomberare l'ogni santi. ¶

¹³Molti abandoneranno le propie abita-
zioni, e por¹⁴terā cō seco tutti e sua valsenti,
e andran¹⁵no abitare in altri paesi.

¶ Del di de' morti. ¶

¹⁷E quāti fiē quelli che piāgeranno i
lor ¹⁸antichi morti portādo lumi a quelli.

¶ De' frati che spēdendo parole; ²⁰riceuono
di grā ricchezze e danno²¹ il paradiso. ¶

²⁴¶ Le invisibili monete farà triōfare
molti spē²⁵ditori di quelle. ¶

¶ Degli archi fatti ²⁷colli corni de' boi. ¶

²⁸Molti fiē quelli che per causa delle
bouine cor²⁹na moriranno di dolente morte.

¶ Dello scriver lettere da vn ³¹paese a vn
altro. ¶

³²Parleransi li uomini di remotissimi paesi
l'uno all'altro e rispōderāsi.

¶ Degli emisperi che sono infiniti ³⁴e da
infinite linie son diuisi, in mo³⁵do che senpre
ciascuno uomo n'à ³⁶vna d'esse linie infra
l'ū de' piedi e l'altro. ¶

³⁷Parleransi e coccheransi e abbraccierani
si li omni stanti da l'uno al³⁸altro emisperio,
e tenderansi i loro linguaggi.

¶ Of a Stick, which is dead. ¶

The motions of a dead thing will make
many living ones flee with pain and lamentation
and cries.

¶ Of Tinder. ¶

With a stone and with iron things will
be made visible which before were not seen.

1296.

¶ Of going in Ships. ¶

Whe shall see the trees of the great forests
of Taurus and of Sinai and of the Appenines
and others, rush by means of the air, from
East to West and from North to South; and
carry, by means of the air, great multitudes
of men. Oh! how many vows!
Oh! how many deaths! Oh! how many
partings of friends and relations! Oh! how
many will those be who will never again
see their own country nor their native land,
and who will die unburied, with their bones
strewn in various parts of the world!

¶ Of moving on All Saints' Day. ¶

Many will forsake their own dwellings
and carry with them all their belongings and
will go to live in other parts.

¶ Of All Souls' Day. ¶

How many will they be who will bewail
their deceased forefathers, carrying lights
to them.

¶ Of Friars, who spending nothing but words,
receive great gifts and bestow Paradise. ¶

Invisible money will procure the triumph
of many who will spend it.

¶ Of Bows made of the Horns of Oxen. ¶

Many will there be who will die a painful
death by means of the horns of cattle.

¶ Of writing Letters from one Country to
another. ¶

Men will speak with each other from
the most remote countries, and reply.

¶ Of Hemispheres, which are infinite; and
which are divided by an infinite number of
Lines, so that every Man always has one of
these Lines between his Feet. ¶

Men standing in opposite hemispheres will
converse and deride each other and embrace each
other, and understand each other's language.

¶ De' preti che dicono messe. ¶

40 Molti fien quelli che per esercitare la lor arte si uestirā richissimamente e questo parrà esser fatto secōdo l'uso de grēbiali.

¶ De' frati confessori. ¶

43 Le suēturate donne di propria volontà andranno a palesare agli omini 45 tutti le loro lussurie e opere 46 vergognose e se-gretissime.

¶ Delle chiese e abitatiō de' frati. ¶

53 Assai saranno che lascieranno 54 li eserciti e le fatiche 55 e povertà di uita e di roba, e andranno abitare nelle 56 richezze e triofanti edifiti mostrando questo esser 57 il mezzo di farsi amico a Dio.

¶ Del uendere il paradiso. ¶

61 Infinita moltitudine venderanno pubblicamente e pacificamēte 62 cose di grandissimo prezzo senza licenza del padrone di quelle, 63 e che mai nō furō loro nè in lor potestà, e a questo nō prove⁶⁴drà la giustitia vmana.

¶ De' morti che si uanno a sotterrare. ¶

66 I senplici popoli porterā gran quantità di lumi per far lumi 67 ne' viaggi a tutti quelli che integralmente ànno perso la virtù 68 visiua.

¶ Delle doti delle fanciulle. ¶

71 E doue prima la gioventù feminina nō si potea difendere dal⁷²la lussuria e rapina de' maschi, nè per guardie di parenti nè fortezze di mvra, 73 verrà tempo che bisognierà che padri e parēti d'esse fanciulle 74 le paghino di grā prezzi chi voglia dormire con loro, ancorachè es⁷⁵se sien ricche, nobili, e bellissime; cierto è, par qui che la 76 natura voglia spegniere la umana spetie come cosa invtile al mondo, 77 e guastatrice di tutte le cose create.

¶ Della crudeltà dell'omo. ¶

79 Vedrannosi animali sopra della terra, i quali senpre combatteranno infra 80 loro e

¶ Of Priests who say Mass. ¶

There will be many men who, when they go to their labour will put on the richest clothes, and these will be made after the fashion of aprons [petticoats].

¶ Of Friars who are Confessors. ¶

And unhappy women will, of their own free will, reveal to men all their sins and shameful and most secret deeds.

¶ Of Churches and the Habitations of Friars. ¶

Many will there be who will give up work and labour and poverty of life and goods, and will go to live among wealth in splendid buildings, declaring that this is the way to make themselves acceptable to God.

¶ Of Selling Paradise. ¶

An infinite number of men will sell publicly and unhindered things of the very highest price, without leave from the Master of it; while it never was theirs nor in their power; and human justice will not prevent it.

¶ Of the Dead which are carried to be buried. ¶

The simple folks will carry vast quantities of lights to light up the road for those who have entirely lost the power of sight.

¶ Of Dowries for Maidens. ¶

And whereas, at first, maidens could not be protected against the violence of Men, neither by the watchfulness of parents nor by strong walls, the time will come when the fathers and parents of those girls will pay a large price to a man who wants to marry them, even if they are rich, noble and most handsome. Certainly this seems as though nature wished to eradicate the human race as being useless to the world, and as spoiling all created things.

¶ Of the Cruelty of Man. ¶

Animals will be seen on the earth who will always be fighting against each other

con danni grandissimi e spesso morte di ciascuna delle ⁸¹ parti; questi non avrà termine nelle lor malignità; per le fiere mē-⁸²bra di questi uerranno a terra grā parte dell'i alberi delle gran selue dell'u⁸³niverso, e poi ch'essi avranno pasciuto, il nutrimento de' loro desideri sa⁸⁴rà, di dar morte e affanno e fatiche e guerre e furie a qualch'cosa animata; e per la loro smisurata superbia questi si vor⁸⁵ranno leuare inverso il cielo, ma la superchia gravezza delle lor membra gli porrà ⁸⁶in basso; nulla cosa resterà sopra la terra o sotto la terra e l'acqua che nō ⁸⁷sia perseguitata, remossa o guasta, e quella dell'ū paese remossa nell'altro; ⁸⁸e 'l corpo di questi si farà sepultura e transito di tutti i già da lor morti cor⁸⁹pi animati; o mōdo, come è che nō t'apri a precipitarlo nell'alte fessure de' tua ⁹⁰grā baratri e spelonche, e non mostrare più al cielo si crudele e spie⁹¹tato mōstro!

with the greatest loss and frequent deaths on each side. And there will be no end to their malignity; by their strong limbs we shall see a great portion of the trees of the vast forests laid low throughout the universe; and, when they are filled with food the satisfaction of their desires will be to deal death and grief and labour and wars and fury to every living thing; and from their immoderate pride they will desire to rise towards heaven, but the too great weight of their limbs will keep them down. Nothing will remain on earth, or under the earth or in the waters which will not be persecuted, disturbed and spoiled, and those of one country removed into another. And their bodies will become the sepulture and means of transit of all they have killed.

O Earth! why dost thou not open and engulf them in the fissures of thy vast abyss and caverns, and no longer display in the sight of heaven such a cruel and horrible monster.

Br. M. 42 δ]

1297.

PROFETIE.

²Molte fien quelle che cresce³rā nelle lor ruine.

〔La palla della neue ⁵rotolādo sopra la ⁶neue.〕

⁷Molta turba fie quella ⁸che, dimēticato loro esse⁹re e nome, staran come ¹⁰morti sopra le spoglie ¹¹deli altri morti.

〔Il dormire sopra ¹³le piume dell'uccielli.〕

¹⁴Vedrannosi le parti oriēta¹⁵li discorrere ¹⁶nell'occidentali e le me¹⁷ridionali in settentri¹⁸one, avviluppando¹⁹si per l'universo con grande ²⁰strepito e tremore o furore.

〔Il uento d'oriēte che ²²scorreua in ponente.〕

²³I razzi solari accende²⁴rāno il foco in te²⁵rra coll' quale s'in²⁶focherà ciò ch'è sotto ²⁷il cielo, e ripercossi ²⁸nel suo impedimē-²⁹to ritorneranno ³⁰in basso.

〔Lo specchio cavo ³²acciēde il foco, col ³³quale si scalda il ³⁴forno che à il fō³⁵do che sta sotto il suo ³⁶cielo.〕

PROPHECIES.

There will be many which will increase in their destruction.

〔The Ball of Snow rolling over Snow.〕

There will be many who, forgetting their existence and their name, will lie as dead on the spoils of other dead creatures.

〔Sleeping on the Feathers of Birds.〕

The East will be seen to rush to the West and the South to the North in confusion round and about the universe, with great noise and trembling or fury.

〔In the East wind which rushes to the West.〕

The solar rays will kindle fire on the earth, by which a thing that is under the sky will be set on fire, and, being reflected by some obstacle, it will bend downwards.

〔The Concave Mirror kindles a Fire, with which we heat the oven, and this has its foundation beneath its roof.〕

³⁷ Gran parte del mare ³⁸ si fuggirà in verso il ³⁹ cielo e per molto tēpo nō fa-⁴⁰rà ritorno; **¶** Cioè pe' nuvoli. **D**

⁴¹ Restaci il moto che separa ⁴² il mo-
tore dal mobile.

⁴³ Sarà annegato chi fa il lume ⁴⁴ al culto
diuino. **¶** Le ape che ⁴⁵ faño la cera delle
candele. **D**

⁴⁶ I morti uscirāno di sotto terra ⁴⁷ e
coi loro fieri mouimenti cac⁴⁸cieranno dal
mondo innumera⁴⁹bili creature umane.

¶ Il ferro uscito di sot⁵¹to terra è morto,
⁵²e se ne fa l'arme che ⁵³ ammorti tanti
uomini. **D**

⁵⁴ Le grandissime montagnie ⁵⁶ acorachè
sieno remo⁵⁷te da marini liti, scaccierāno
⁵⁸ il mare dal suo sito.

¶ Questo sono li fumi ⁶⁰ che portanno le
terre, ⁶¹ da loro leuate dalle mō⁶²tagnie, e le
scarica⁶³no ai marini liti, ⁶⁴ e doue entra
⁶⁵ la terra si fugge il ⁶⁶ mare. **D**

⁶⁷ L'acqua caduta dai nuvoli ancora in
moto sopra le spiagge de' mōti si ferme-⁶⁸rà per lūgo spatio di tempo sanza ⁶⁹ fare
alcū moto, e questo accade⁷⁰rà in molte e
diuerse provincie.

¶ La neve che fiocca ⁷² che è acqua. **D**

⁷³ I gran sassi de' monti gitterā ⁷⁴ fuoco
tale che brucieranno il le⁷⁵gname di molte
e grādissime selue ⁷⁶ e molte fere saluatiche
e dimestiche.

¶ La pietra del fucile, ⁷⁸ che fa foco che
consu⁷⁹ma tutte le some del⁸⁰le legnie con
che si ⁸¹disfā le selve; ⁸² E cuocierassi con
esse ⁸³ la carne delle bestie. **D**

⁸⁴ O quanti grandi edifitj fieno ruinati
⁸⁵ per causa del fuoco!

¶ Del fuoco delle bonbarde. **D**

⁸⁷ I buoi fieno in gran parte cavsa delle
ruine ⁸⁸ delle città, e similmente cavalli e
bufoli

¶ Tirā le bonbarde. **D**

A great part of the sea will fly towards heaven and for a long time will not return.
¶ That is, in Clouds. **D**

There remains the motion which divides the mover from the thing moved.

Those who give light for divine service will be destroyed. **¶** The Bees which make the Wax for Candles. **D**

Dead things will come from underground and by their fierce movements will send numberless human beings out of the world.

¶ Iron, which comes from under ground is dead but the Weapons are made of it which kill so many Men. **D**

The greatest mountains, even those which are remote from the sea shore, will drive the sea from its place.

¶ This is by Rivers which carry the Earth they wash away from the Mountains and bear it to the Sea-shore; and where the Earth comes the sea must retire. **D**

The water dropped from the clouds still in motion on the flanks of mountains will lie still for a long period of time without any motion whatever; and this will happen in many and divers lands.

¶ Snow, which falls in flakes and is Water. **D**

The great rocks of the mountains will throw out fire; so that they will burn the timber of many vast forests, and many beasts both wild and tame.

¶ The Flint in the Tinder-box which makes a Fire that consumes all the loads of Wood of which the Forests are despoiled and with this the flesh of Beasts is cooked. **D**

Oh! how many great buildings will be ruined by reason of Fire.

¶ The Fire of great Guns. **D**

Oxen will be to a great extent the cause of the destruction of cities, and in the same way horses and buffaloes

¶ by drawing Guns. **D**

I.2 15a]

¶ Vedrassi la spetie leonina · colle unghiate ²branche aprire la terra · e nelle fatte spelonche · seppellire · se insieme co⁴li altri animali a se sottoposti. ¶

¶ Usciranno dalla terra · animali · vestiti di tenebre, ⁶i quali con maravigliosi assalti assaliranno l'umana generatione, e quella da feroci morsi · fia con confusion di sanguine da essi · diuorata. ¶

¹⁰ Acora scorrerà per l'aria · la nefāda spetie volatile, ¹¹la quale · assalirà li omuni e li a¹²nimali, e di quelli si ciberanno cō grā ¹³gridore; empierāo i loro vētri di vermiglio sangue.

I.2 15b]

Vedrassi il sangue uscire dalle · stracciate carni, ²rigare le superfitali parti dell'i omuni;

¶ Verrà alli omuni · tal crudele mala⁴tia, che colle propie vnghie · si strac⁵cieranno le loro carni || ¶ Sarà la rognia; D¶

¶ Vedrannosi le piāte rimanere sanza foglie, ⁷e i fumi fermare i loro corsi; ¶

¶ L'acqua del mare si leuerà sopra l'alte cime de' mōti ⁹verso il cielo, e ricarderà sopra alle a¹⁰bitationi dell'i omuni || ¶ cioè per nuvoli; D¶

¶ Vedrannosi i maggiori alberi delle selue essere ¹²portati dal furor de' venti dall' oriēte ¹³all'occidente || ¶ cioè per mare; D¶

¶ Li omuni gitterāo via le propie vettovaglie ¶ cioè seminādo. D¶

1298.

The Lion tribe will be seen tearing open the earth with their clawed paws and in the caves thus made, burying themselves together with the other animals that are beneath them.

Animals will come forth from the earth in gloomy vesture, which will attack the human species with astonishing assaults, and which by their ferocious bites will make confusion of blood among those they devour.

Again the air will be filled with a mischievous winged race which will assail men and beasts and feed upon them with much noise—filling themselves with scarlet blood.

1299.

Blood will be seen issuing from the torn flesh of men, and trickling down the surface.

Men will have such cruel maladies that they will tear their flesh with their own nails. ¶ The Itch. D

Plants will be seen left without leaves, and the rivers standing still in their channels.

The waters of the sea will rise above the high peaks of the mountains towards heaven and fall again on to the dwellings of men. ¶ That is, in Clouds. D

The largest trees of the forest will be seen carried by the fury of the winds from East to West. ¶ That is across the Sea. D

Men will cast away their own victuals. ¶ That is, in Sowing. D

I.2 26a]

¶ Verrà a tale la gieneratione vmana ²che nō si intēderà il parlare · l'uno dell'altro; ³cioè un tedesco con un turco. ¶

¶ Vedrassi ai padri donare le lor figiolate ⁵a lussuria · dell'i omuni e premiare e abbādonare ogni ⁶passata guardia || ¶ quando si maritano le putte. D¶

¶ Usciranno li omuni dalle sepulture cōuertiti ⁸in vccelli, e assaliranno li altri omuni togliendo ⁹loro il cibo dalle propie mani e mēse || ¶ le mosche. D¶

1300.

Human beings will be seen who will not understand each other's speech; that is, a German with a Turk.

Fathers will be seen giving their daughters into the power of man and giving up all their former care in guarding them. ¶ When Girls are married. D

Men will come out of their graves turned into flying creatures; and they will attack other men, taking their food from their very hand or table. ¶ As Flies. D

¶¹⁰Molti fien quegli che scorticādo la madre li arrove¹¹scieranno la sua pelle adosso; ¶ [i lavoratori della terra.]

¶¹²Felici fiē quelli che presterāno orechi alle parole de' morti; ¶ [leggere¹³ le bone opere e osseruarle.]

Many will there be who, flaying their mother, will tear the skin from her back. ¶ [Husbandmen tilling the Earth.]

Happy will they be who lend ear to the words of the Dead. ¶ [Who read good works and obey them.]

1.2 168]

1301.

¶ Le penne leuerāno li omini siccome gli uccielli inverso il cielo; ¶ [cioè per le lettere fatte da esse pēne.]

¶ L'umane opere fieno cagione di lor morte; ¶ [le spade e lācie.]

¶ Li omini perseguaño quella cosa della qual piv temono, ¶ [cioè] ¶ Sarā miseri per nō venire i miseria.

¶ Le cose disunite s'uniraño e ricieverāno in se tal uirtù, che rēderanno la persa memoria alli omini, cioè i papiri che sō fatti di peli disuniti e tēgono memoria delle cose e fatti dell'i omini.

¶ Vedrannosi l'ossa de' morti cō veloce moto tratta¹⁴re la fortuna del suo motore; ¶ [i dadi.]

¶ I buoi colle lor corna difenderā¹⁵no il foco dalla sua morte; ¶ [la lāterna.]

¶ Le selue partoriraño figlioli che fiano causa della¹⁶lor morte; ¶ [il manico della scura.]

Feathers will raise men, as they do birds, towards heaven ¶ [that is, by the letters which are written with quills.]

The works of men's hands will occasion their death. ¶ [Swords and Spears.]

Men out of fear will cling to the thing they most fear. ¶ [That is they will be miserable lest they should fall into misery.]

Things that are separate shall be united and acquire such virtue that they will restore to man his lost memory; that is papyrus [sheets] which are made of separate strips and have preserved the memory of the things and acts of men.

The bones of the Dead will be seen to govern the fortunes of him who moves them. ¶ [By Dice.]

Cattle with their horns protect the Flamme from its death. ¶ [In a Lantern [13].]

The Forests will bring forth young which will be the cause of their death. ¶ [The handle of the hatchet.]

1.2 17a]

1302.

¶ Li omini batteranno aspramēte chi fia causa² di lor uita; ¶ [batteraño il grano.]

¶ Le pelli dell'i animali removerāno li omini con gran gridori e bestemie dal lor silentio; ¶ [le balle da giuocare.]

¶ Molte volte la cosa disunita fia causa di grāde unitione; ¶ [cioè il pettine fatto dalla disunita canna unisce le fila nella seta.]

¶ Il uēto passato per le pelli dell'i animali farà saltare⁹li omini; ¶ [cioè la piva che fa lo saltare.]

Men will deal bitter to blows to that which is the cause of their life. ¶ [In thrashing Grain.]

The skins of animals will rouse men from their silence with great outcries and curses. ¶ [Balls for playing Games.]

Very often a thing that is itself broken is the occasion of much union. ¶ [That is the Comb made of split Cane which unites the threads of Silk.]

The wind passing through the skins of animals will make men dance. ¶ [That is the Bag-pipe, which makes people dance.]

PERCHÈ LI CANI ODORÀ VOLENTIERI IL CULO
L'UNO AL²L'ALTRO.

Questo animale à in odio i po³veri, perchè e' māgiano tristi cibi, e ama li richi, perchè essi àn' bone vivāde e massime di car⁵ne; E lo sterco dell'i animali senpre ri⁶tiene della virtù della sua origine, come mo⁷strano le feccie

¹⁰Ora i cani ànno si sottilissimo odo¹¹rato che col naso sentono la uirtù rima¹²sta in tali feccie; e che sie uero, se le trovā¹³ per le strade odorano, e se vi sentono dentro ¹⁴vi¹⁵rtù di carne o d'altro, essi le piglian, e ¹⁵se nò, le lascian; e per tornare al quesito di¹⁶co, che se conoscono il cane mediante tali ¹⁷odori essere ben passiuto, essi lo riguar¹⁸dano, perchè stimano quello avere potēte e ricco pa¹⁹drone, e se nò sentono tale odore cò uirtù, essi sti²⁰mano tal cane essere da poco, e avere povero ²¹e tristo padrone, e però mordono tali cani come fare²²bbero il suo padrone.

WHY DOGS TAKE PLEASURE IN SMELLING AT EACH OTHER.

This animal has a horror of the poor, because they eat poor food, and it loves the rich, because they have good living and especially meat. And the excrement of animals always retains some virtue of its origin as is shown by the faeces. . . .

Now dogs have so keen a smell, that they can discern by their nose the virtue remaining in these faeces, and if they find them in the streets, smell them and if they smell in them the virtue of meat or of other things, they take them, and if not, they leave them: And to return to the question, I say that if by means of this smell they know that dog to be well fed, they respect him, because they judge that he has a powerful and rich master; and if they discover no such smell with the virtue of meet, they judge that dog to be of small account and to have a poor and humble master, and therefore they bite that dog as they would his master.

C. A. 688; 2038]

1331.

Sono li moti della terra ²circulari assai utili, ³cōciosiachè mai li o⁴mini si fermanno; e fassì in piv modi, de' qua⁵li nell'uno li omini por⁷tano la terra in spal⁸la, l'altro, colli bau⁹li, e altri col carret¹⁰to; Quel che la porta ¹¹in spalla si fa prima ¹²enpiere il uassoio in ter¹³ra, e perde tēpo a metterselo ¹⁴in spalla; Quel dello bau¹⁵le non perde tempo.

The circular plans of carrying earth are very useful, inasmuch as men never stop in their work; and it is done in many ways. By one of these ways men carry the earth on their shoulders, by another in chests and others on wheelbarrows. The man who carries it on his shoulders first fills the tub on the ground, and he loses time in hoisting it on to his shoulders. He with the chests loses no time.

Letters. Personal Records. Dated Notes.

When we consider how superficial and imperfect are the accounts of Leonardo's life written some time after his death by Vasari and others, any notes or letters which can throw more light on his personal circumstances cannot fail to be in the highest degree interesting. The texts here given as Nos. 1351—1353, set his residence in Rome in quite a new aspect; nay, the picture which irresistibly dwells in our minds after reading these details of his life in the Vatican, forms a striking contrast to the contemporary life of Raphael at Rome.

I have placed foremost of these documents the very remarkable letters to the Defterdar of Syria. In these Leonardo speaks of himself as having staid among the mountains of Armenia, and as the biographies of the master tell nothing of any such distant journeys, it would seem most obvious to treat this passage as fiction, and so spare ourselves the onus of proof and discussion. But on close examination no one can doubt that these documents, with the accompanying sketches, are the work of Leonardo's own hand. Not merely is the character of the handwriting his, but the spelling and the language are his also. In one respect only does the writing betray any marked deviation from the rest of the notes, especially those treating on scientific questions; namely, in these observations he seems to have taken particular pains to give the most distinct and best form of expression to all he had to say; we find erasures and emendations in almost every line. He proceeded, as we shall see, in the same way in the sketches for letters to Giuliano de' Medici, and what can be more natural, I may ask, than to find the draft of a letter thus altered and improved when it is to contain an account of a definite subject, and when personal interests are in the scale? The finished copies as sent off are not known to exist; if we had these instead of the rough drafts, we might unhesi-

tatingly have declared that some unknown Italian engineer must have been, at that time, engaged in Armenia in the service of the Egyptian Sultan, and that Leonardo had copied his documents. Under this hypothesis however we should have to state that this unknown writer must have been so far one in mind with Leonardo as to use the same style of language and even the same lines of thought. This explanation might—as I say—have been possible, if only we had the finished letters. But why should these rough drafts of letters be regarded as anything else than what they actually and obviously are? If Leonardo had been a man of our own time, we might perhaps have attempted to account for the facts by saying that Leonardo, without having been in the East himself, might have undertaken to write a Romance of which the scene was laid in Armenia, and at the desire of his publisher had made sketches of landscape to illustrate the text.

I feel bound to mention this singular hypothesis as it has actually been put forward (see No. 1336 note 5); and it would certainly seem as though there were no other possible way of evading the conclusion to which these letters point, and their bearing on the life of the master,—absurd as the alternative is. But, if, on a question of such importance, we are justified in suggesting theories that have no foundation in probability, I could suggest another which, as compared with that of a Fiction by Leonardo, would be neither more nor less plausible; it is, moreover the only other hypothesis, perhaps, which can be devised to account for these passages, if it were possible to prove that the interpretation that the documents themselves suggest, must be rejected *a priori*; viz may not Leonardo have written them with the intention of mystifying those who, after his death, should try to decipher these manuscripts with a view to publishing them? But if, in fact, no objection that will stand the test of criticism can be brought against the simple and direct interpretation of the words as they stand, we are bound to regard Leonardo's travels in the East as an established fact. There is, I believe nothing in what we know of his biography to negative such a fact, especially as the details of his life for some few years are wholly unknown; nor need we be at a loss for evidence which may serve to explain—at any rate to some extent—the strangeness of his undertaking such a journey. We have no information as to Leonardo's history between 1482 and 1486; it cannot be proved that he was either in Milan or in Florence. On the other hand the tenor of this letter does not require us to assume a longer absence than a year or two. For, even if his appointment (*offitio*) as Engineer in Syria had been a permanent one, it might have become untenable—by the death perhaps of the *Destardar*, his patron, or by his removal from office—, and Leonardo on his return home may have kept silence on the subject of an episode which probably had ended in failure and disappointment.

From the text of No. 1379 we can hardly doubt that Leonardo intended to make an excursion secretly from Rome to Naples, although so far as has hitherto been known, his biographers never allude to it. In another place (No. 1077) he says that he had worked as an Engineer in Friuli. Are we to doubt this statement too, merely because no biographer has hitherto given us any information on the matter? In the geographical notes Leonardo frequently speaks of the East, and though such passages

afford no direct proof of his having been there, they show beyond a doubt that, next to the Nile, the Euphrates, the Tigris and the Taurus mountains had a special interest in his eyes. As a still further proof of the futility of the argument that there is nothing in his drawings to show that he had travelled in the East, we find on Pl. CXX a study of oriental heads of Armenian type,—though of course this may have been made in Italy.

If the style of these letters were less sober, and the expressions less strictly to the point throughout, it might be possible to regard them as a romantic fiction instead of a narrative of fact. Nay, we have only to compare them with such obviously fanciful passages as No. 1354, Nos. 670—673, and the Fables and Prophecies. It is unnecessary to discuss the subject any further here; such explanations as the letter needs are given in the foot notes.

The drafts of letters to Lodovico il Moro are very remarkable. Leonardo and this prince were certainly far less closely connected, than has hitherto been supposed. It is impossible that Leonardo can have remained so long in the service of this prince, because the salary was good, as is commonly stated. On the contrary, it would seem, that what kept him there, in spite of his sore need of the money owed him by the prince, was the hope of some day being able to carry out the project of casting the 'gran cavallo'.

AL DIODARIO DI SIRIA LOCOTENĒTE DEL
SACRO SOLTANO ²DI BABILONIA.

³Il nvouo accidēte accaduto in queste
nostre parti settentrionali, il quale sō certo
che nō solamēte a te ma a tutto l'universo

TO THE DEVATDAR OF SYRIA, LIEUTENANT OF
THE SACRED SULTAN OF BABYLON.

[3]The recent disaster in our Northern parts which I am certain will terrify not you alone but the whole world, which referring to Armenia (1336. 1337).

1336. 1. sorio. 3. [eaca n] "duto" [vono] "il nvouo" accidēte | "achaduto" in queste . . parte settantrionali [le quali so] "il

1336. Lines 1—52 are reproduced in facsimile on Pl. CXVI.

1. *Diodario*. This word is not to be found in any Italian dictionary, and for a long time I vainly sought an explanation of it. The youthful reminiscences of my wife afforded the desired clue. The chief town of each Turkish Villayet, or province—such as Broussa, for instance, in Asia Minor, is the residence of a Defterdar, who presides over the financial affairs of the province. *Defterdar hane* was, in former times, the name given to the Ministry of Finance at Constantinople; the Minister of Finance to the Porte is now known as the *Mallîè-Nazri* and the *Defterdars* are his subordinates. A *Defterdar*, at the present day is merely the head of the finance department in each Provincial district. With regard to my suggestion that Leonardo's *Diodario* might be identical with the Defterdar of former times, the late M. C. DEFREMERIE, Arabic Professor, and Membre de l'Institut de France wrote to me as follows: *Votre conjecture est parfaitement fondée; diodario est l'équivalent de dévadar ou plus exactement dévâtdâr, titre d'une importante dignité en Egypte, sous les Mamelouks.*

The word however is not of Turkish, but of Perso-Arabic derivation. دفتر دار, دواة دار literally *Defter* (Arabic) meaning *folio*; for *dar* (Persian) Book-keeper or holder is the English equivalent; and the idea is that of a deputy in command. During

the Mamelook supremacy over Syria, which corresponded in date with Leonardo's time, the office of Defterdar was the third in importance in the State.

Soltano di Babilonia. The name of Babylon was commonly applied to Cairo in the middle ages. For instance BREIDENBACH, *Itinerarium Hierosolyma* p. 218 says: "At last we reached Babylon. But this is not that Babylon which stood on the further shore of the river Chober, but that which is called the Egyptian Babylon. It is close by Cairo and the twain are but one and not two towns; one half is called Cairo and the other Babylon, whence they are called together Cairo-Babylon; originally the town is said to have been named Memphis and then Babylon, but now it is called Cairo." Compare No. 1085, 6.

Egypt was governed from 1382 till 1517 by the Borgite or Tcheressian dynasty of the Mamelook Sultans. One of the most famous of these, Sultan Kaït Bey, ruled from 1468—1496 during whose reign the Gama (or Mosque) of Kaït Bey and tomb of Kaït Bey near the Okella Kaït Bey were erected in Cairo, which preserve his name to this day. Under the rule of this great and wise prince many foreigners, particularly Italians, found occupation in Egypt, as may be seen in the 'Viaggio di Josaphat Barbaro', among other travellers. "Next to Leonardo (so I learn from Prof. Jac. Burckhardt of Bâle) Kaït Bey's most helpful engineer was a German

farà 'terrore; il quale successivamente ti sarà detto per ordine mostrando primo l'effetto e poi la causa . .

5 Ritrovandomi io in queste parti d'Erminia . a dare con amore e sollecitudine opera a quello vftio, pel quale tu mi mādasti, e nel 6 dare principio in quelle parti che a me pareano esser · piv al proposito

quale [ere] sō ciero" che . . atte mattutto . . dara. 4. terrore [e ca] il . . causa [e du]. 5. dare | "con amore e sollecitudine" opera acquello [pe] vftio . . mādassti. 6. parte [chontingue ne a noi] che . . pareano | "eser" piv . . nostro. 7. cita

who in about 1487 superintended the construction of the Mole at Alexandria. Felix Fabii knew him and mentions him in his *Historia Sueorum*, written in 1488."

3. *Il nuovo accidente accaduto*, or as Leonardo first wrote and then erased, è *accaduto un nuovo accidente*. From the sequel this must refer to an earthquake, and indeed these were frequent at that period, particularly in Asia Minor, where they caused immense mischief. See No. 1101 note.

4. The text here breaks off. The following lines are a fresh beginning of a letter, evidently addressed to the same person, but, as it would seem, written at a later date than the previous text. The numerous corrections and amendments amply prove that it is not a copy from any account of a journey by some unknown person; but, on the contrary, that Leonardo was particularly anxious to choose such words and phrases as might best express his own ideas.

5. *Parti d'Erminia*. See No. 945, note. The extent of Armenia in Leonardo's time is only approximately known. In the XVth century the Persians governed the Eastern, and the Arabs the Southern portions. Arabic authors—as, for instance Abulfeda—include Cilicia and a part of Cappadocia in Armenia, and Greater Armenia was the tract of that country known later as Turcomania, while Armenia Minor was the territory between Cappadocia and the Euphrates. It was not till 1522, or even 1574 that the whole country came under the dominion of the Ottoman Turks, in the reign of Selim I.

The Mamelook Sultans of Egypt seem to have taken a particular interest in this, the most Northern province of their empire, which was even then in danger of being conquered by the Turks. In the autumn of 1477 Sultan Kaït Bey made a journey of inspection, visiting Antioch and the valleys of the Tigris and Euphrates with a numerous and brilliant escort. This tour is briefly alluded to by Moodshireddin p. 561; and by WEIL, *Geschichte der Abbasiden* V, p. 358. An anonymous member of the suite wrote a diary of the expedition in Arabic, which has been published by R. V. LONZONE (*Viaggio in Palestina e Soria di Kaid Ba XVIII sultano della II dinastia*

shall be related to you in due order, showing first the effect and then the cause[4] . .

Finding myself in this part of Armenia[5] to carry into effect with due love and care the task for which you sent me[6]; and to make a beginning in a place which seemed to me to be most to our purpose, I entered into

mamelucca, fatto nel 1477. Testo arabo. Torino 1878, without notes or commentary). Compare the critique on this edition, by J. GILDEMEISTER in *Zeitschrift des Deutschen Palaestina Vereins* (Vol. III p. 246—249). Lanzone's edition seems to be no more than an abridged copy of the original. I owe to Professor Schéfer, Membre de l'Institut, the information that he is in possession of a manuscript in which the text is fuller, and more correctly given. The Mamelook dynasty was, as is well known, of Circassian origin, and a large proportion of the Egyptian Army was recruited in Circassia even so late as in the XVth century. That was a period of political storms in Syria and Asia Minor and it is easy to suppose that the Sultan's minister, to whom Leonardo addresses his report as his superior, had a special interest in the welfare of those frontier provinces. Only to mention a few historical events of Sultan Kaït Bey's reign, we find that in 1488 he assisted the Circassians to resist the encroachments of Aladdoulet, an Asiatic prince who had allied himself with the Osmanli to threaten the province; the consequence was a war in Cilicia by sea and land, which broke out in the following year between the contending powers. Only a few years earlier the same province had been the scene of the so-called Caramenian war in which the united Venetian, Neapolitan and Slavonic fleets had been engaged. (See CORIALANO CIPPICO, *Della guerra dei Veneziani nell'Asia dal 1469—1474. Venezia 1796*, p. 54) and we learn incidentally that a certain Leonardo Boldo, Governor of Scutari under Sultan Mahmoud,—as his name would indicate, one of the numerous renegades of Italian birth—played an important part in the negotiations for peace.

Tu mi mandasti. The address *tu* to a personage so high in office is singular and suggests personal intimacy; Leonardo seems to have been a favourite with the Diodario. Compare lines 54 and 55.

I have endeavoured to show, and I believe that I am also in a position to prove with regard to these texts, that they are draughts of letters actually written by Leonardo; at the same time I must not omit to mention that shortly after I had discovered

nostro, entrai nella città di Calindra, vicina ai nostri confini; questa città è posta nelle spiagge di quella parte del monte Tavro, che è divisa dall'Eufrates e riguarda i corni del grā Mōte Tavro per ponete; Questi corni son di tanta altezza che par che tocchino il cielo, chè nell'universo non è parte terrestre più alta della sua cima; e sempre 4 ore inanzi di è per-

the city of Calindra[7], near to our frontiers. This city is situated at the base of that part of the Taurus mountains which is divided from the Euphrates and looks towards the peaks of the great Mount Taurus[8] to the West[9]. These peaks are of such a height that they seem to touch the sky, and in all the world there is no part of the earth, higher than its summit[10], and the rays of

di chalindra . . confini [e] questa . . ispiegge [del m] di quel. 8. divisa [dal lago] dallefrates [essa per le] e riguarda i [grā] corni del "grā". 9. altezza [che lo per me non credo] "che par chetochino il celo" che nell'universo [sia] "none" parte. 10. ste più al della . . essenziale . . di [allu] e perchossa . . sole [che allei si mostra]. 11. lesere . . petra biachissima

these texts in the Codex Atlanticus and published a paper on the subject in the *Zeitschrift für bildende Kunst* (Vol. XVI), Prof. Govi put forward this hypothesis to account for their origin:

"Quanto alle notizie sul monte Tauro, sull'Armenia e sull'Asia minore che si contengono negli altri frammenti, esse vennero prese da qualche geografo o viaggiatore contemporaneo. Dall'indice imperfetto che accompagna quei frammenti, si potrebbe dedurre che Leonardo volesse farne un libro, che poi non venne compiuto. A ogni modo, non è possibile di trovare in questi brani nessun indizio di un viaggio di Leonardo in oriente, né della sua conversione alla religione di Maometto, come qualcuno pretenderebbe. Leonardo amava con passione gli studi geografici, e nel suoi scritti s'incontran spesso itinerari, indicazioni, o descrizioni di luoghi, schizzi di carte e abbozzi topografici di varie regioni, non è quindi strano che egli, abile narratore com'era, si fosse proposto di scrivere una specie di Romanzo in forma epistolare svolgendone l'intreccio nell'Asia Minore, intorno alla quale i libri d'allora, e forse qualche viaggiatore amico suo, gli avevano somministrato alcuni elementi più o meno fantastici. (See Transunti della Reale Accademia dei Lincei Vol. V Ser. 3).

It is hardly necessary to point out that Prof. Govi omits to name the sources from which Leonardo could be supposed to have drawn his information, and I may leave it to the reader to pronounce judgment on the anomaly which is involved in the hypothesis that we have here a fragment of a Romance, cast in the form of a correspondence. At the same time, I cannot but admit that the solution of the difficulties proposed by Prof. Govi is, under the circumstances, certainly the easiest way of dealing with the question. But we should then be equally justified in supposing some more of Leonardo's letters to be fragments of such romances; particularly those of which the addresses can no longer be named. Still, as regards these drafts of letters to the *Diodario*, if we accept the Romance theory, as proposed by Prof. Govi, we are also compelled to assume that Leonardo purposed from the first to illustrate his tale; for it needs only a glance at the

sketches on Pl. CXVI to CXIX to perceive that they are connected with the texts; and of course the rest of Leonardo's numerous notes on matters pertaining to the East, the greater part of which are here published for the first time, may also be somehow connected with this strange romance.

7. *Città de Calindra (Chalindra).* The position of this city is so exactly determined, between the valley of the Euphrates and the Taurus range that it ought to be possible to identify it. But it can hardly be the same as the sea port of Cilicia with a somewhat similar name Celenderis, Kelandria, Celendria, Kilindria, now the Turkish Gulnar. In two Catalanian Portulans in the Bibliothèque Nationale in Paris—one dating from the XVth century, by Wilhelm von Soler, the other by Olivez de Majorca, in 1584—I find this place called Calandra. But Leonardo's Calindra must certainly have lain more to the North West, probably somewhere in Kurdistan. The fact that the geographical position is so carefully determined by Leonardo seems to prove that it was a place of no great importance and little known. It is singular that the words first written in l. 8 were *divisa dal lago* (Lake Van?), altered afterwards to *dall'Euphrates*.

Nostri confini, and in l. 6 *proposito nostro*. These refer to the frontier and to the affairs of the Mamelook Sultan. Lines 65 and 66 throw some light on the purpose of Leonardo's mission.

8. *I corni del grā mōte Tauro.* Compare the sketches Pl. CXVI—CXVIII. So long as it is impossible to identify the situation of Calindra it is most difficult to decide with any certainty which peak of the Taurus is here meant; and I greatly regret that I had no foreknowledge of this puzzling topographical question when, in 1876, I was pursuing archaeological enquiries in the Provinces of Aleppo and Cilicia, and had to travel for some time in view of the imposing snow-peaks of Bulghar Dagh and Ala Tepessi.

9—10. The opinion here expressed as to the height of the mountain would be unmeaning, unless it had been written before Leonardo moved to Milan, where Monte Rosa is so conspicuous an

cossa dai razzi del sole ¹¹ in oriète ; e per essere lei di pietra biachissima, essa forte risplende, e fa l'ufitio a questi Ermini come farebbe vn bel lume ¹² di luna . nel mezzo delle tenebre; e per la sua grande altura essa passa la somma altezza de' nuvoli per spatio di 4 miglia; e per linia retta ¹³ questa cima è ueduta di grā parte dell'occidente alluminata dal sole dopo il suo tramontare ¹⁴ insino alla 3^a parte della notte; ed è quella che appresso di voi ne' tempi sereni abbi-amo già giudicato essere vna cometa, e pare a noi nelle ¹⁵ tenebre della notte mv-tarsi in varie figure, e quādo diuidersi in due o in 3 parti, e quādo lūga e quādo corta; e questo nascie per li ¹⁶ nuvoli che nel orizzonte del cielo s'interpongono infra parte d'esso monte e il sole, e per tagliare l'uno essi raz¹⁷zi solari, il lume del monte è interrotto con vari spati di nvvoli, e però è di figvra uaria¹⁸bile nel suo splen-dore.

the sun always fall upon it on its East side, four hours before day-time, and being of the whitest stone[11] it shines resplendently and fulfils the function to these Armenians which a bright moon-light would in the midst of the darkness; and by its great height it out-reaches the utmost level of the clouds by a space of four miles in a straight line. This peak is seen in many places towards the West, illuminated by the sun after its setting the third part of the night. This it is, which with you[14] we formerly in calm weather had supposed to be a comet, and appears to us in the darkness of night, to change its form, being sometimes divided in two or three parts, and sometimes long and sometimes short. And this is caused by the clouds on the horizon of the sky which interpose between part of this mountain and the sun, and by cutting off some of the solar rays the light on the mountain is intercepted by various intervals of clouds, and therefore varies in the form of its brightness.

THE DIVISIONS OF THE BOOK[19].

- The praise and confession of the faith[20].
- The sudden inundation, to its end.
- [23] The destruction of the city.
- [24] The death of the people and their despair.
- The preacher's search, his release and benevolence[28].
- Description of the cause of this fall of the mountain[30].
- The mischief it did.

12. luna "nel mezzo delle tenebre" e per . . le [magnie] somme" 12. luna "nel mezzo delle tenebre" e per . . le [magnie] somme" [pi] allumi. 13. ueduta [prima per] di . . dell' ochcidente [pi] allumi. 14. e "insino alla 3 parte della notte" de quella che appresso div[n]oi . . tempi . . abiā ga giudicato . . cu-meta . . anni. 15. mvrtarsi varie . . ecquādo . . parti "e ecquādo lūga ecquādo corta" ecquesto nassie. 16. nvoli . . ori-zonte . . celo sinterpongano . . elsole . . essira. 17. ellume . . monte he . . varri [e] spati . . nvvoli. 24. popolo [el suo piāto]. 26. la [cōfērmatiō] la cerca. 27. ella . . venivo.

35. alagamēto . . parte. 40. profeta [mostra]; che is wanting.

which he had at hand; more probably, indeed, of one he purposed writing.

20. *Persuasione di fede*, of the Christian or the Mohammedan faith? We must suppose the latter, at the beginning of a document addressed to so high a Mohammedan official. *Predica* probably stands as an abbreviation for *predicazione* (lat. *praedicatio*) in the sense of praise or glorification; very probably it may mean some such initial doxology as we find in Mohammedan works. (Comp. l. 40.)

26. 28. The phraseology of this is too general for any conjecture as to its meaning to be worth hazarding.

30. *Ruina del monte*. Of course by an earthquake. In a catalogue of earthquakes, entitled *kēchf aussal-salēb an auasf esel-zelēh*, and written by Djelal eddin

object in the landscape. 4 ore inanzi seems to mean, four hours before the sun's rays penetrate to the bottom of the valleys.

11. *Pietra bianchissima*. The Taurus Mountains consist in great part of limestone.

14. *Appresso di voi*. Leonardo had at first written *noi* as though his meaning had been: This peak appeared to us to be a comet when you and I observed it in North Syria (at Aleppo? at Aintas?). The description of the curious reflection in the evening, resembling the "Alpine-glow" is certainly not an invented fiction, for in the next lines an explanation of the phenomenon is offered, or at least attempted.

19. The next 33 lines are evidently the contents of a connected Report or Book, but not of one

³² ¶ Ruina di neve;
³³ ¶ Trovata del profeta;
³⁴ ¶ La profetia sua;
³⁵ ¶ Allagamēto delle parti basse ³⁶di Erminia occidentale, ³⁷li scolamēti delle quali era³⁸no per la tagliata di mōte Tav³⁹ro; ¶

⁴⁰Come il novo profeta mostra che ⁴¹questa ruina è fatta ⁴²al suo proposito;

⁴³Descritione del mōte Tavro ⁴⁴e del fiume Evfrates;

⁴⁵Perchè il monte risplende nella sua cima ⁴⁶la metà o' l ^{3°}della notte, e pare vna ⁴⁷cometa a quelli di ponente dopo la ⁴⁸sera, e ināti di a quelli di leuāte.

⁴⁹Perchè essa cometa par di uariabile ⁵⁰figura in modo che ora è tonda or ⁵¹lunga e or diuisa in 2 or in 3 parti, e ⁵²ora vnita, e quādo si riuede.

FIGURA DEL MÔTE TAVRO.

⁵⁴Non sono, o Diodario, da essere date inputato di pigrizia come le tue rāpogne · par che accennino ·, ma lo isfrenato amore, ⁵⁵il quale ha creato il benifitio ch'io posseggo da te, è quello, che mi à costretto cō somma ⁵⁶solicitudine a cercare e cō diligētia a investigare la cavsa di si grāde e stupēdo effetto ·; la qual cosa ⁵⁷nō sanza tēpo à potuto avere effetto; ora, per farti ben satisfatto della causa di si grande effetto, è necessario ch'io ti mostri ⁵⁸la forma del sito, e poi verrò allo effetto col quale credo rimarrai satisfatto;

[32] Fall of snow.

The finding of the prophet [33].

His prophesy.

[35] The inundation of the lower portion of Eastern Armenia, the draining of which was effected by the cutting through the Taurus Mountains.

How the new prophet showed [40] that this destruction would happen as he had foretold.

Description of the Taurus Mountains [43] and the river Euphrates.

Why the mountain shines at the top, from half to a third of the night, and looks like a comet to the inhabitants of the West after the sunset, and before day to those of the East.

Why this comet appears of variable forms, so that it is now round and now long, and now again divided into two or three parts, and now in one piece, and when it is to be seen again.

OF THE SHAPE OF THE TAURUS MOUNTAINS [53].

I am not to be accused, Oh Devatdar, of idleness, as your chidings seem to hint; but your excessive love for me, which gave rise to the benefits you have conferred on me[55] is that which has also compelled me to the utmost painstaking in seeking out and diligently investigating the cause of so great and stupendous an effect. And this could not be done without time; now, in order to satisfy you fully as to the cause of so great an effect, it is requisite that I should explain to you the form of the place, and then I will proceed to the effect, by which I believe you will be amply satisfied.

41. [disc] questa . . effatta. 45. rissplende. 47. cometa [in] acquelli di. 48. acquelli. 50. ettondo. 51. lungho . . diuiso. 54. ho diodaro . . datte . . piegritia chome . . lo [tuoi] isfrenato. 55. datte ecquelle che [apv "a"] chavoluto che ma cō stretto chō somma [diligētia]. 56. 40. *Novo profeta*, l. 33, *profeta*. Mohammed. Leonardo here refers to the Koran:

In the name of the most merciful God.—When the earth shall be shaken by an earthquake; and the earth shall cast forth her burdens; and a man shall say, what aileth her? On that day the earth shall declare her tidings, for that thy Lord will inspire her. On that day men shall go forward in distinct classes, that they may behold their works. And whoever shall have wrought good of the weight of an ant, shall behold the same. And whoever shall have wrought evil of the weight of an ant, shall behold the same. (The Koran, translated by G. Sale, Chapter XCIX, p. 452).

53—94. The facsimile of this passage is given on Pl. CXVII.

54. The foregoing sketch of a letter, lines 5. 18, appears to have remained a fragment when Leonardo received pressing orders which caused

Syouthy, the following statement occurs: "In the year 889 (1484 A.D.) there were six shocks of earthquake at Aleppo. They were excessively violent and threw the inhabitants into consternation." I owe this communication to the kindness of Prof. Ch. Schéfer, Membre de l'Institut, to whom this unpublished Arabic MS. belongs. The foregoing entries refer to two earthquakes in Cairo, in 1476 and 1481: the following ones indicate a time at which Leonardo was, certainly, living in Milan.

36. *Tagliata di Monte Tauro*. The Euphrates flows through the Taurus range near the influx of the Kura Shai; it rushes through a rift in the wildest cliffs from 2000 to 3000 feet high and runs on for 90 miles in 300 falls or rapids till it reaches Telek, near which at a spot called Gleikash, or the Hart's leap, it measures only 35 paces across. Compare the map on Pl. CXIX and the explanation fo it on p. 391.

⁵⁹ Nō ti dolere, o Diodario, del mio tardare · a dar risposta alla tua desiderosa richiesta, perchè queste cose, di che tu mi richie⁶⁰desti, son di natura che nō sanza processo di tempo si possono bene espri-
mere, e massime perchè, a voler mostrare la causa di ⁶¹si grande effetto, bisogna descrivere cō bona forma la natura del sito, e mediante quella tu potrai poi cō ⁶²facilità satisfarti della predetta richiesta;

⁶³ Jo lascierò indietro la descritione della forma dell'Asia Minore, e che mari o terre sien quelle che terminono ⁶⁴la figura della sua quātità, perchè so che la diligētia e sollecitudine de'tua studi non t'anno di tal notitia ⁶⁵privato; e verrò a denotare la vera figura di Tavrus Mōte, il quale è quello ch'è cavsatore di si stupenda e danosa maraviglia, la quale · serue alla spedizione del nostro pro⁶⁶posito; Questo monte Tavro è quello che appresso di molti è detto e'ssere il giogo del Monte Cavcaso, ma, avēdo ⁶⁷voluto ben chiarirmi, o voluto parlare con alquanti di quelli che abitano sopra del Mar Caspio, i quali mostrano che ⁶⁸quel sia il uero Mōte Caucaso, che, benchè i mōti loro abbino il medesimo nome, questi son di maggiore altura, e però cōfermano, perchè Caucaso in lingua Scītica vuol dire somma altezza; e in vero non ci è noti⁶⁹tia che l'oriēte nè l'occidente abbia monte di si grande altura; e la pruova, che così sia, è che li abitatori de' pae⁷⁰si, che gli stanno per ponēte, vedono i razzi del sole che allumina insino alla 4^a parte delle maggior notti grā ⁷¹parte della sua cima; e'l simile fa a quelli paesi che gli stanno per oriēte.

QUALITÀ E QUĀTITÀ DEL MÔTE TAVRO.

him to write immediately and fully on the subject mentioned in line 43.

59—62. This passage was evidently intended as an improvement on that immediately preceding it. The purport of both is essentially the same, but the first is pitched in a key of ill-disguised annoyance

[59] Do not be aggrieved, O Devatdar, by my delay in responding to your pressing request, for those things which you require of me are of such a nature that they cannot be well expressed without some lapse of time; particularly because, in order to explain the cause of so great an effect, it is necessary to describe with accuracy the nature of the place; and by this means I can afterwards easily satisfy your above-mentioned request[62].

I will pass over any description of the form of Asia Minor, or as to what seas or lands form the limits of its outline and extent, because I know that by your own diligence and carefulness in your studies you have not remained in ignorance of these matters[65]; and I will go on to describe the true form of the Taurus Mountain which is the cause of this stupendous and harmful marvel, and which will serve to advance us in our purpose[66]. This Taurus is that mountain which, with many others is said to be the ridge of Mount Caucasus; but wishing to be very clear about it, I desired to speak to some of the inhabitants of the shores of the Caspian sea, who give evidence that this must be the true Caucasus, and that though their mountains bear the same name, yet these are higher; and to confirm this in the Scythian tongue Caucasus means a very high[68] peak, and in fact we have no information of there being, in the East or in the West, any mountain so high. And the proof of this is that the inhabitants of the countries to the West see the rays of the sun illuminating a great part of its summit for as much as a quarter of the longest night. And in the same way, in those countries which lie to the East.

OF THE STRUCTURE AND SIZE OF MOUNT TAURUS.

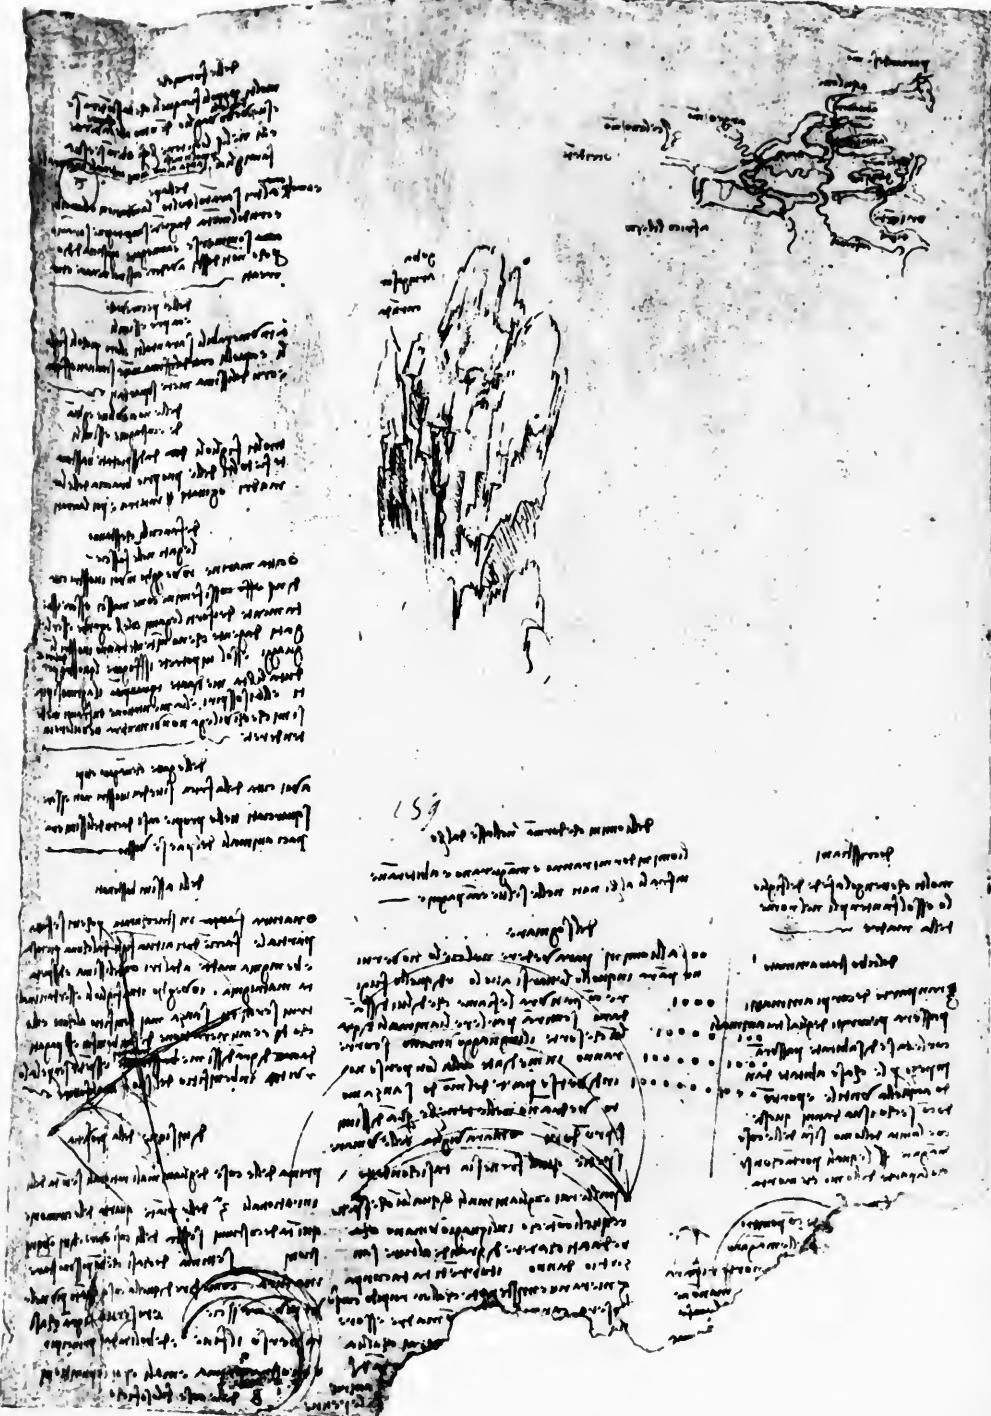

⁷³ The shadow of this ridge of the Taurus is of such a height that when, in the middle of June, the Sun is at its meridian, its

which is absent from the second. I do not see how these two versions can be reconciled with the romance-theory held by Prof. Govi.

68. Caucasus; Herodot Καύκασις; Armen. Kaukaz.

73—75. The statements are of course founded on those of the 'inhabitants' spoken of in l. 67.

Imp. Ludee

⁷⁴ stende insino al principio della Sarmatia, che sō giornate 12, e a mezzo dicembre s'astē⁷⁵de insino ai mōti Iperborei, che è viaggio d'un mese inverso tramontana; E senpre la sua parte opposta al uē⁷⁶to che soffia è priva di nuvoli e nebbie, perchè il uento, che s'apre nella percussione del sasso, dopo esso sasso si uiene a richi-⁷⁷vdere, e in tal moto porta con seco i nuvoli da ogni parte, e lasciali nella lor percussione; e senpre è piena di percussione di saette per la grā moltitudine di nuvoli che lì sō ricettati, onde il sasso è tutto fracassato e pien di grā ruine; Questo nelle ⁷⁸sua radici è abitato da richissimi popoli, ed è pieno di bellissimi fonti e fiumi; è fer⁷⁹tile e abondante d'ogni bene e massime nelle parti che riguardano a mezzo giorno; — ⁸⁰ma quando se n'è montato circa 3 miglia, si comicia a trovare le selue de' grā⁸¹di abeti, pini e faggi e altri simili alberi; dopo questi per spatio di 3 al⁸²tre miglia si trovano praterie e grādissime pasture, e tutto il resto, insino ⁸³al nascimēto del Monte Tavro, sono nevi

shadow extends as far as the borders of Sarmatia, twelve days off; and in the middle of December it extends as far as the Hyperborean mountains, which are at a month's journey to the North[75]. And the side which faces the wind is always free from clouds and mists, because the wind which is parted in beating on the rock, closes again on the further side of that rock, and in its motion carries with it the clouds from all quarters and leaves them where it strikes. And it is always full of thunderbolts from the great quantity of clouds which accumulate there, whence the rock is all riven and full of huge débris[77]. This mountain, at its base, is inhabited by a very rich population and is full of most beautiful springs and rivers, and is fertile and abounding in all good produce, particularly in those parts which face to the South. But after mounting about three miles we begin to find forests of great fir trees, and beech and other similar trees; after this, for a space of three more miles, there are meadows and vast pastures; and all the rest, as far as the beginning of the Taurus, is eternal snows

77. Sudden storms are equally common on the heights of Ararat. It is hardly necessary to observe that Ararat cannot be meant here. Its summit is formed like the crater of Vesuvius. The peaks sketched on Pl. CXVI—CXVIII are probably views of the same mountain, taken from different sides. Near the solitary peak, Pl. CXVIII these three names are written *goba*, *arnigasar*, *carūda*, names most likely of different peaks. Pl. CXVI and CXVII are in the original on a single sheet folded down the middle, 30 centimetres high and 43½ wide. On the reverse of one half of the sheet are notes on *peso* and *bilancia* (weight and balance), on the other are the 'prophecies' printed under Nos. 1293 and 1294. It is evident from the arrangement that these were written subsequently, on the space which had been left blank. These pages are facsimiled on Pl. CXVIII. In Pl. CXVI—CXVIII the size is smaller than in the original; the map of Armenia, Pl. CXVIII, is on Pl. CXIX slightly enlarged. On this map we find the following names, beginning from the right hand at the top: *pariades mō* (for Paryadres Mons, Arm. Parchar, now Barchal or Kolai Dagh; Trebizond is on its slope).

Aquilone—North, *Antitaurus*, *Antitaurus* *psis* *mō* (probably meant for Thospitis = Lake Van, Arm., Dgov Vanai, Tospoi, and the Mountain range to the South); *Gordis mō* (Mountains of Gordyaea), the birth place of the Tigris; *Oriente*—East; *Tigris*, and then, to the left, *Eufrates*. Then, above to the left *Argeo mō* (now Erdshigas, an extinct volcano, 12000 feet high); *Celeno mō* (no doubt Sultan Dagh in Pisidia). Celeno is the Greek town of *Kelaiatal*—see Arian I, 29, I—now the ruins of Dineir); *orientē*—East; *africo libezō* (for libeccio—South West). In the middle of the Euphrates river on this small map we see a shaded portion surrounded by mountains, perhaps to indicate the inundation mentioned in l. 35. The affluent to the Euphrates shown as coming with many windings from the high land of 'Argeo' on the West, is the Töchma Su, which joins the main river at Malatie. I have not been able to discover any map of Armenia of the XVth or XVIth. century in which the course of the Euphrates is laid down with any thing like the correctness displayed in this sketch. The best I have seen is the Catalonian Portulan of Olivez de Majorca, executed in 1584, and it is far behind Leonardo's.

eterne che mai per alcū tempo si par⁸⁴tono, che s'astendono all'altezza di circa 14 miglia in tutto; da questo na⁸⁵scimēto del Tavro insino all'altezza d'un miglio non passano mai i nuvoli; ⁸⁶che qui abbiamo 15 miglia, che sono circa a 5 · miglia d'altezza per linea retta, ⁸⁷e altrettanto o circa troviamo essere la cima dell'iorni del Tauro, ⁸⁸ne' quali dal mezzo in su si comincia a trovare aria che riscalda e nō ⁸⁹vi si sente soffiamēti de' uēti, ma nessuna cosa ci può troppo vivere; ⁹⁰quiui nō nascie cosa alcuna, saluo alcuni vccelli rapaci che ⁹¹covano nell'alte fessure del Tavro, e disciēdon poi sotto i nuvoli ⁹²a fare le lor prede sopra i monti erbosi; Questo è tutto sasso senplice, ⁹³cioè da' nuvoli insù, ed è sasso candidissimo · e in sulla alta cima nō ⁹⁴si può andare per l'aspra e pericolosa sua salita.

which never disappear at any time, and extend to a height of about fourteen miles in all. From this beginning of the Taurus up to the height of a mile the clouds never pass away; thus we have fifteen miles, that is, a height of about five miles in a straight line; and the summit of the peaks of the Taurus are as much, or about that. There, half way up, we begin to find a scorching air and never feel a breath of wind; but nothing can live long there; there nothing is brought forth save a few birds of prey which breed in the high fissures of Taurus and descend below the clouds to seek their prey. Above the wooded hills all is bare rock, that is, from the clouds upwards; and the rock is the purest white. And it is impossible to walk to the high summit on account of the rough and perilous ascent.

Having often made you, by my letters, acquainted with the things which have happened, I think I ought not to be silent as to the events of the last few days, which—[2]...

Having several times—

Having many times rejoiced with you by letters over your prosperous fortunes, I know now that, as a friend you will be sad with me over the miserable state in which I find myself; and this is, that during the last few days I have been in so much trouble, fear, peril and loss, besides the miseries of the people here, that we have been envious of the dead; and certainly I do not believe that since the elements by their separation reduced the vast chaos to order, they have ever combined their force and fury to do so much mischief to man. As far as regards

1337. On comparing this commencement of a letter l. 1—2 with that in l. 3 and 4 of No. 1336 it is quite evident that both refer to the same event. (Compare also No. 1337 l. 10—12 and 17 with No. 1336 l. 23, 24 and 32.) But the text No. 1336, including the fragment l. 3—4, was obviously

written later than the draft here reproduced. The *Diodario* is not directly addressed—the person addressed indeed is not known—and it seems to me highly probable that it was written to some other patron and friend whose name and position are not mentioned.

a fare tanto nocimēto alli omini ⁸quāto al presente da noi · s'è veduto · e provato, in modo ch'io nō posso imaginare · che cosa si possin ⁹piv accresciere a tanto male, il quale noi provammo in spatio di dieci ore; In prima fummo assaliti e combattuti dall'impeto · e furore de' vēti e a questo s'aggiunsero le ruine dellī grā mōti di neve, i quali ànno ripieno tutte questi valli ¹¹e cōquassato grā parte della nostra città; E nō si cōtentādo di questo, la fortuna ¹²cō subiti diluvi d'acque ebbe a sommergere tutta la parte bassa di questa città; oltre di questo s'aggiunse vna subita piog¹³gia · anzi ruinosa tēpesta piena d'acqua, sabbia, fango e pietre, insieme avviluppati cō radici sterpi e ciocchi di uarie piāte; ¹⁴e ogni cosa scorrendo per l'aria discēdea sopra di noi · e in vltimo vno inciēdio di fuoco parea cōdotto nō che da vēti ma da 10 milia diavoli, che'l portassino, il quale à abbruciato e disfatto tutto questo ¹⁵paese, e ancora non vi è cessato; E que' pochi, che siamo restati, siamo rimasti cō tanto sbigottimēto ¹⁶e tāta pavra · che appena come balordi abbiamo ardire di parlare · l'uno coll'altro ·; avēdo · abbandonato ogni · nostra cura, ci stiamo insieme vnti ¹⁷jn cierte ruine di chiese insieme misti maschi e femine, piccoli e grādi, a modo di ¹⁸torme di capre; ¶ i vicini per pietà ci ànno soccorso di uettovaglie, i quali erā prima nostri

us hēre, what we have seen and gone through is such that I could not imagine that things could ever rise to such an amount of mischief, as we experienced in the space of ten hours. In the first place we were assailed and attacked by the violence and fury of the winds[10]; to this was added the falling of great mountains of snow which filled up all this valley, thus destroying a great part of our city[11]. And not content with this the tempest sent a sudden flood of water to submerge all the low part of this city[12]; added to which there came a sudden rain, or rather a ruinous torrent and flood of water, sand, mud, and stones, entangled with roots, and stems and fragments of various trees; and every kind of thing flying through the air fell upon us; finally a great fire broke out, not brought by the wind, but carried as it would seem, by ten thousand devils, which completely burnt up all this neighbourhood and it has not yet ceased. And those few who remain unhurt are in such dejection and such terror that they hardly have courage to speak to each other, as if they were stunned. Having abandoned all our business, we stay here together in the ruins of some churches, men and women mingled together, small and great[17], just like herds of goats. The neighbours out of pity succoured us with victuals, and they had previously been our enemies. And if

11. *Della nostra città* (Leonardo first wrote *di questa città*). From this we may infer that he had at some time lived in the place in question wherever it might be.

17. *Certe ruine di chiese*. Either of Armenian churches or of Mosques, which it was not unusual to speak of as churches.

Maschi e femmini insieme unite, implies an infringement of the usually strict rule of the separation of the sexes.

18. *I vicini, nostri nimici*. The town must then have stood quite close to the frontier of the country. Compare 1336. L. 7. *vicini ai nostri confini*. Dr. M. JORDAN has already published lines 4—13 (see *Das Malerbuch, Leipzig, 1873*, p. 90:—his reading differs from mine)

VOL. II.

under the title of "Description of a landscape near Lake Como". We do in fact find, among other loose sheets in the Codex Atlanticus, certain texts referring to valleys of the Alps (see Nos. 1030, 1031 and note p. 237) and in the arrangement of the loose sheets, of which the Codex Atlanticus has been formed, these happen to be placed close to this text. The compiler stuck both on the same folio sheet; and if this is not the reason for Dr. JORDAN's choosing such a title (Description &c.) I cannot imagine what it can have been. It is, at any rate, a merely hypothetical statement. The designation of the population of the country round a city as "the enemy" (*nemici*) is hardly appropriate to Italy in the time of Leonardo.

DDD

nimici; ¹⁹ e se nō fussero certi popoli che ci àrno soccorso di uettovaglia, tutti saremmo morti di fame; Ora vedi come ci troviamo; E tutti questi mali son niête a cōparatione di quelli che in breve tépo ne son promessi;

LIBRO 43 DEL MOTO DELL'ARIA INCLUSA SOTTO
L'ACQUA.

.... Ho veduto movimenti d'aria tanto furiosi, che ànno ac¹compagnati e misti col corso suo li ⁵grandissimi alberi delle selue e li tetti in⁶teri de grā palazzi, e questa medesima ⁷furia fare vna buca con moto reuer⁸tiginoso e cavare vn ghiareto e portare ghi⁹ara, rena, acqua più d'ū mezzo miglio in¹⁰aria.

Notes about events observed abroad (1338. 1339).

Br. M. 155a]

A similitudine d'uno ritrosito vento che scorra in un a²renosa e cavata valle che pel suo veloci corsi scacchia al cētro tutte quelle cose che s'oppōgono al suo furi⁴oso corso....

⁵Non altramenti il settētrionale aquilone ripercuote ⁶colla sua tēpesta....

"per pieta" cī a sochorso . . . esse nō füssi soccorso di uttovaglia . . . saremo. ¹⁹ Ettiti . . . chē brieve . . . ne promesso. ²⁰ chome . . . cōtristerai . . . chome . . . colletere timostra . . . ralegrarmi.

^{1338.} 1. lacq^aa". 3. annò a. 5. elli. 6. palazi ecuesta. 7. bucha. 8. ghiareto e portare gia. 9. mezo miglo. 10. naria.

^{1339.} 1. chesschoranuna. 2. chavata . . . chorso scha. 3. qle chose chessoppōghono. 4. chorso. 5. altremēti . . . settētrionale . . . riperchuote. 6. cholla. 7. mviglia il [sellantrionale] tēpestoso. 8. [mosso chō grā furia da] quādo . . . settētrionale.

1338. The first sixteen lines of this passage which treat of the subject as indicated on the title-line have no place in this connexion and have been omitted.

2. *Ho veduto movimenti &c.* Nothing of the kind happened in Italy during Leonardo's lifetime, and it is therefore extremely probable that this refers to the natural phenomena which are so fully described in the foregoing passage. (Compare too, No. 1021.) There can be no doubt that the descriptions of the Deluge in the Libro di Pittura (Vol. I, No. 607—611), and that of the fall of a mountain No. 610, l. 17—30 were written from the vivid impressions derived from personal experience. Compare also Pl. XXXIV—XL.

it had not been for certain people who succoured us with victuals, all would have died of hunger. Now you see the state we are in. And all these evils are as nothing compared with those which are promised to us shortly.

I know that as a friend you will grieve for my misfortunes, as I, in former letters have shown my joy at your prosperity . . .

1338.

BOOK 43. OF THE MOVEMENT OF AIR ENCLOSED
IN WATER.

I have seen motions of the air so furious that they have carried, mixed up in their course, the largest trees of the forest and whole roofs of great palaces, and I have seen the same fury bore a hole with a whirling movement digging out a gravel pit, and carrying gravel, sand and water more than half a mile through the air.

1339.

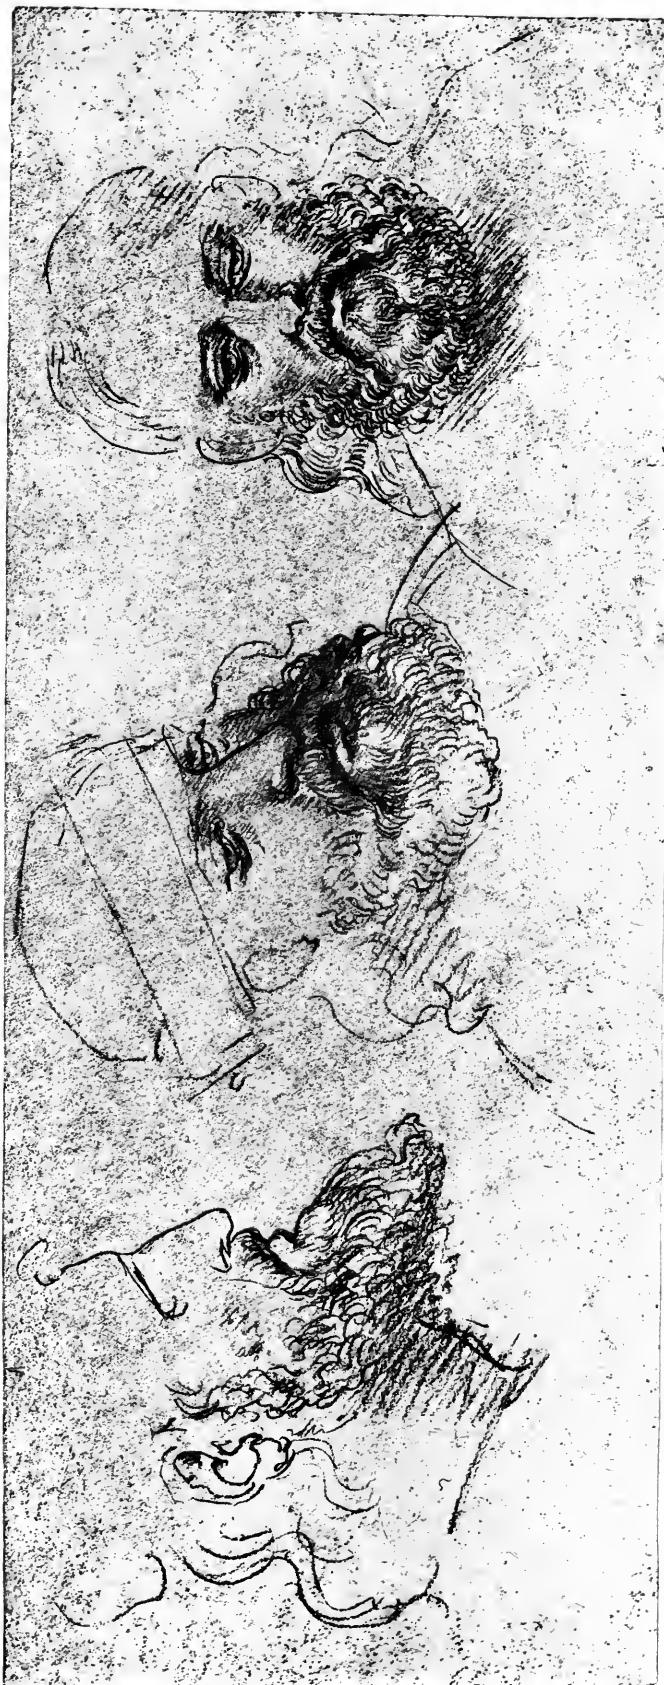

Like a whirling wind which rushes down a sandy and hollow valley, and which, in its hasty course, drives to its centre every thing that opposes its furious course . . .

No otherwise does the Northern blast whirl round in its tempestuous progress . . .

1339. It may be inferred from the character of the writing, which is in the style of the note in facsimile Vol. I, p. 297, that this passage was written between 1470 and 1480. As the figure 6 at the end of the text indicates, it was continued on another page, but I have searched in vain for it. The reverse of this leaf is coloured red for drawing in silver point, but has not been used for that purpose but for writing on, and at about the same date. The passages are given as Nos. 1217, 1218, 1219, 1162 and No. 994 (see note page 218). The text given above is obviously not a fragment of a letter, but a record of some personal experience. No. 1379 also seems to refer to Leonardo's journeys in Southern Italy.

Pl. CXX

Heliogr. Dujardin.

Imp. Eudes

⁷Nō fa si grā muggchio il tēpestoso mare, ⁸quādo il settētrionale aquilone ⁹lo ripercuote colle scivmose onde fra Scilla e Cariddi, nè Stronboli o Mō¹⁰gibello, quando le solfuree fiamme, essendo rīchiuse, ¹¹per forza ronpēdo e aprēdo il grā mōte, fulminādo ¹²per l'aria pietre terra iſieme col l'uscita e vomitata fiamma . . .

¹³Nè quādo le infocate caverne di Mōgibello rivomitādo il male tenuto elemēto, spigniendolo ¹⁴alla sua regione, cō furia cacciādo īnāzi qualūche ostacolo ¹⁵s'interpone alla sua ipetuosa furia . . .

¹⁶E tirato dalla mia bramosa voglia, vago di uedere la gran cō . . . ¹⁷delle varie e strane forme fatte dalla artifiziosa natura, ragiratomi ¹⁸alquāto jſra gli ōbroſi ſcoglī pervenni all'etrata d'una ¹⁹grā caverna dinanzi alla quale restato alquāto ²⁰stupeſatto,—e jgniorante di tal cosa piegato le mie rene ²¹in arco e ferma la stāca mano ſopra il ginocchio e colla destra mi feci tenebra ²²alle abbassate e chivſe ciglia; e ſpesso piegādomi in qua e in là per ve²³dere dētro vi discernessi alcuna cosa, e queſto vietatomi per ²⁴la grāde oscurità, che là entro era, e ſtato alquāto, ſubito ſi deſtarono ²⁵in me 2 cose, pavra e deſiderio; paura per la minaccio²⁶sa oſcura ſpilonca, deſidero per vedere ſe là ētro fuſſe alcuna ²⁷miracolosa cosa . . .

Nor does the tempestuous ſea bellow so loud, when the Northern blast dashes it, with its foaming waves between Scylla and Charybdis; nor Stromboli, nor Mount Etna, when their ſulphurous flames, having been forcibly conſained, rend, and burst open the mountain, fulminating ſtones and earth through the air together with the flames they vomit.

Nor when the inflamed caverns of Mount Etna, rejecting the ill-reſtained element vomit it forth, back to its own region, driving furiously before it every obstacle that comes in the way of its impetuous rage . . .

Unable to resist my eager desire and wanting to see the great . . . of the various and strange shapes made by formative nature, and having wandered ſome distance among gloomy rocks, I came to the entrance of a great cavern, in front of which I stood ſome time, astonished and unaware of ſuch a thing. Bending my back into an arch I rested my left hand on my knee and held my right hand over my down-cast and contracted eye brows: often bending first one way and then the other, to see whether I could discover anything inside, and this being forbidden by the deep darkness within, and after having remained there ſome time, two contrary emotions arose in me, fear and desire—fear of the threatening dark cavern, desire to see whether there were any marvellous thing within it

13. Mongibello is a name commonly given in Sicily to Mount Etna (from Djebel, Arab.=mountain). Fr. FERRARA, *Descrizione dell'Etna con la storia delle eruzioni* (Palermo, 1818, p. 88) tells us, on the authority of the *Cronaca del Monastero Benedettino di Licordia*, of an eruption of the Volcano with a great flow of lava on Sept. 21, 1447. The next records of the mountain are from the years 1533 and 1536. A. Percy neither does mention any eruptions of Etna during the years to which this note must probably refer (*Mémoire des tremblements de terre de la péninsule italique*, Vol. XXII des Mémoires

couronnées et Mémoires des savants étrangers. Académie Royale de Belgique).

A literal interpretation of the paſſage would not, however, indicate an allusion to any great eruption; particularly in the connection with Stromboli, where the periodical outbreaks in very ſhort intervals are very ſtriking to any observer, especially at night time, when passing the island on the way from Naples to Messina.

1340. The numerous corrections, the alterations in the figures (l. 18) and the absence of any ſignature prove that this is merely the rough draft of a

letter to Lodovico il Moro. It is one of the very few manuscripts which are written from left to right—see the facsimile of the beginning as here reproduced. This is probably the final sketch of a document the clean of which copy was written in the usual manner. Leonardo no doubt very rarely wrote so, and this is probably the reason of the conspicuous dissimilarity in the handwriting, when he did. (Compare Pl. XXXVIII.) It is noteworthy too that here the orthography and abbreviations are also exceptional. But such superficial peculiarities are not enough to stamp the document as altogether spurious. It is neither a forgery nor the production of any artist but Leonardo himself. As to this point the contents leave us no doubt as to its authenticity, particularly l. 32 (see No. 719,

where this passage is repeated). But whether the fragment, as we here see it, was written from Leonardo's dictation—a theory favoured by the orthography, the erasures and corrections—or whether it may be a copy made for or by Melzi or Mazenta is comparatively unimportant. There are in the Codex Atlanticus a few other documents not written by Leonardo himself, but the notes in his own hand found on the reverse pages of these leaves amply prove that they were certainly in Leonardo's possession. This mark of ownership is wanting to the text in question, but the compilers of the Codex Atlanticus, at any rate, accepted it as a genuine document.

With regard to the probable date of this projected letter see Vol. II, p. 3.

1. ⁷ Ho modi di ponti leggierissimi e forti, e atti ad portare facilissimamente, et co' quelli seguire ⁸e alcuna uolta fuggire li inimici, e altri securi e offendibile da foco ⁹e battaglia; facili e comodi da leuare e ponere; Et modi di ardere e disfare quelli dell'inimico.

¹⁰ 2. So i la ossidione di una terra togliere uia l'acqua de' fossi; e fare infiniti poti: gatti e scale ¹¹e altri istrumenti pertinenti a detta spedizione.

¹² 3. Itē se per altezza di argine o per fortezza di loco e di sito nō si potesse i la ossidione di ¹³vna terra usare l'officio delle bombarde: ho modi di ruinare omni rocca o altra fortezza, ¹⁴se già nō fusse fondata i su el sasso ecc.

¹⁵ 4. Ho ancora modi di bombarde cōmodissime e facili a portare: Et con quelle buttare minuti sassi ¹⁶a similitudine quasi di tempesta; E con il sumo di quella dando grāde spauēto al'inimico ¹⁷con graue suo danno e confusione ecc.

¹⁸ 5. Et quādo accadesse essere i mare, ho modi di molti istrumenti attissimi da offendere e difendere: ¹⁹et nauili che faranno resistentia al trarre di omni grossissima bōbarda: e poluere e fumi.

²⁰ 5. Itē ho modi: per caue e uie secrete distorte fatte senza alcuno strepito per ueire disegnato ²¹... ancora che bisogniasse passare sotto fossi o alcuno fiume.

²² 6. Item farò carri coperti e securi offendibili, i quali ētrādo itra li inimici con sue artiglierie; nō è si grāde multi²³tudine di gente d'arme che nō rompessino: E dietro a questi potranno seguire faterie assai illesi e sēza ²⁴alcuno impedimento.

²⁵ 7. Item occorrendo di bisogno, farò bōarde, mortari et passauolanti di bellissime e utili forme fuori del comune uso;

²⁶ 8. Doue mācasce la operatione delle bōarde comporrò briccole, māgani | trabuchi e altri istrumenti di mirabile ²⁷efficacia e fuori del' usato: Et i soñā secondo la uarietà de' casi cōporrò uarie e infinite cose da offendere e di

1) I have a sort of extremely light and strong bridges, adapted to be most easily carried, and with them you may pursue, and at any time flee from the enemy; and others, secure and indestructible by fire and battle, easy and convenient to lift and place. Also methods of burning and destroying those of the enemy.

2) I know how, when a place is besieged, to take the water out of the trenches, and make endless variety of bridges, and covered ways and ladders, and other machines pertaining to such expeditions.

3) Item. If, by reason of the height of the banks, or the strength of the place and its position, it is impossible, when besieging a place, to avail oneself of the plan of bombardment, I have methods for destroying every rock or other fortress, even if it were founded on a rock, &c.

4) Again I have kinds of mortars; most convenient and easy to carry; and with these can fling small stones almost resembling a storm; and with the smoke of these causing great terror to the enemy, to his great detriment and confusion.

9) [8] And when the fight should be at sea I have kinds of many machines most efficient for offence and defence; and vessels which will resist the attack of the largest guns and powder and fumes.

5) Item I have means by secret and tortuous mines and ways, made without noise to reach a designated [spot], even if it were needed to pass under a trench or a river.

6) Item. I will make covered chariots, safe and unattackable which, entering among the enemy with their artillery, there is no body of men so great but they would break them. And behind these, infantry could follow quite unhurt and without any hindrance.

7) Item. In case of need I will make big guns, mortars and light ordnance of fine and useful forms, out of the common type.

8) Where the operation of bombardment should fail, I would contrive catapults, mangonels, *trabocchi* and other machines of marvellous efficacy and not in common use. And in short, according to the variety of cases, I can contrive various and endless means of offence and defence.

[secondo le occurrētie] fuggire. 9. de adē .. qlli. 10. obsidione de .. toglie"r" uia laqua, et .. ghatti. 11. ad dicta expeditio. 12. de agine.. de loco.. potesse.. obsidione de. 13. dele.. omni [forte] o | "rocca" (?) altra. 14. saxo, 15. anchora .. de bombāde.. facile ad .. ²⁸10. In tempo di pace credo di soddisfare benissimo al paragone di ogni altro in architettura, i compositione di edifitii e pubblici ²⁹e privati: e i cōdurre acqua da uno loco ad uno altro.

³⁰Jtē cōdurrò i scultura, di marmore, di bronzo e di terra: simile i pictura ciò che si possa fare ³¹a paragone di ogni altro e sia chi vuole.

³²Ancora si potrà dare opera al cauallo di bronzo, che sarà gloria immortale e eterno onore della ³³felice memoria del signore vostro padre e dela iclyta casa Sforzesca;

³⁴E se alcuna delle sopradette cose a alcuno paressino impossibili e infattibili, nni offro ³⁵paratissimo a farne esperimento i parco uostro, o i qual loco piacerà a vostra Eccellenza, al³⁶la quale umilmente quanto più posso, mi raccomando ecc.

10) In time of peace I believe I can give perfect satisfaction and to the equal of any other in architecture and the composition of buildings public and private; and in guiding water from one place to another.

Item: I can carry out sculpture in marble, bronze or clay, and also in painting whatever may be done, and as well as any other, be he whom he may.

[32] Again, the bronze horse may be taken in hand, which is to be to the immortal glory and eternal honour of the prince your father of happy memory, and of the illustrious house of Sforza.

And if any one of the above-named things seem to any one to be impossible or not feasible, I am most ready to make the experiment in your park, or in whatever place may please your Excellency—to whom I commend myself with the utmost humility &c.

1341. Evidently a note of the superscription of a letter to the Duke, and written, like the foregoing from left to right. The manuscript containing it is of the year 1493. Lodovico was not proclaimed and styled Duke of Milan till September 1494. The Dukedom of Bari belonged to the Sforza family till 1499.

1342. 1343. These two notes occur in the same

not very voluminous MS. as the former one and it is possible that they are fragments of the same letter. By the *Modello*, the equestrian statue is probably meant, particularly as the model of this statue was publicly exhibited in this very year, 1493, on the occasion of the marriage of the Emperor Maximilian with Bianca Maria Sforza.

There are here, my Lord, many gentlemen who will undertake this expense among them, if they are allowed to enjoy the use of admission to the waters, the mills, and the passage of vessels and when it is sold to them the price will be repaid to them by the canal of Martesana.

1344.

I am greatly vexed to be in necessity, but I still more regret that this should be the cause of the hindrance of my wish which is always disposed to obey your Excellency.

Perhaps your Excellency did not give further orders to Messer Gaultieri, believing that I had money enough.

I am greatly annoyed that you should have found me in necessity, and that my having to earn my living should have hindered me . . .

[12] It vexes me greatly that having to earn my living has forced me to interrupt the work and to attend to small matters, instead of following up the work which your Lordship entrusted to me. But I hope in a short time to have earned so much that I may carry it out quietly to the satisfaction of your Excellency, to whom I commend myself; and if your Lordship thought that I had money, your Lordship was deceived. I had to feed 6 men for 56 months, and have had 50 ducats.

1345.

And if any other comission is given me by any . . . of the reward of my service. My Lord, I knowing your Excellency's
 mind to be occupied
 to remind your Lordship of my small matters
 and the arts put to silence
 that my silence might be the cause of making
 your Lordship scorn . . .
 my life in your service. I hold myself ever
 in readiness to obey . . .
 [11] Of the horse I will say nothing because
 I know the times [are bad]
 to your Lordship how I had still to receive
 two years' salary of the
 with the two skilled workmen who are con-
 stantly in my pay and at my cost
 that at last I found myself advanced the
 said sum about 15 lire
 works of fame by which I could show to
 those who shall see it that I have been
 everywhere, but I do not know where I
 could bestow my work [more] . . .

[17] I, having been working to gain my
 living

I not having been informed what it is, I find
 myself
 [19] remeniber the commission to paint the
 rooms
 I conveyed to your Lordship only requesting
 you

Magnificent Commissioners of Buildings
 I, understanding that your Magnificencies
 have made up your minds to make
 certain great works in bronze, will remind you
 of certain things: first that you should not be
 so hasty or so quick to give the commission,
 lest by this haste it should become impossible
 to select a good model and a good master;
 and some man of small merit may be chosen,
 who by his insufficiency may cause you to

11. See No. 723, where this passage is repeated.

17. See No. 1344 l. 12.

19. In April, 1498, Leonardo was engaged in painting the Saletta Nigra of the Castello at Milan. (See G. MONGERI, *L'Arte in Milano*, 1872, p. 417.)

1346. 1347. Piacenza belonged to Milan. The Lord spoken of in this letter, is no doubt Lodovico

il Moro. One may infer from the concluding sentence (No. 1346, l. 33. 34 and No. 1347), that Leonardo, who no doubt compiled this letter, did not forward it to Piacenza himself, but gave it to some influential patron, under whose name and signature a copy of it was sent to the Commission.

stra · età givdicādo che questa · età fusse mal fornita d'omini ⁶di bon givditio · e di boni · maestri, vedendo le altre città, e massime la città de' Fiorentini, · quasi ne' medesimi tēpi, essere ⁷dotata di si belle e magnie opere di bronzo, intra le quali le porte del loro Battisterio ·; la qual Fiorētia ·, si come Piaciētia, ⁸è terra di passo · doue · cōcorrono assai forestieri ·, i quali vedendo le opere belle o bone, belle fanno · a se ⁹medesimi impressioni: quella città · essere fornita di degni abitatori, vedendo l'opere testimonie d'essa opinione; e per lo contrario di¹⁰co, vedendo · tanta spesa di metallo operata si tristamēte, che mē uergognia alla città ¹¹sarebbe che esse porte fussino di senplice legniame ·, perchè la poca spesa della materia ¹²nō parebbe meriteuole di grāde · spesa di magisterio ·, òde che ..

¹³La principale parte che per le città · si ricerchi · si sono · i domi, ai quali appresatisi, le prime · cose, ¹⁴che all'occhio appriscono · sono · le porte donde in esse chiese passare si possa.

¹⁵Guardate ·, signori · fabbricieri ·, che la troppa celerità del uolere voi con tāta ¹⁶prestezza · dare · speditione alla locatione · di tanta magnia opera, quanto io sento che per uoi ¹⁷s'è ordinata, non sia cagione che quello ·, che per onore · di dio · e delli omni si fa ·, non torni in grā ¹⁸disonore de' uostri giuditi e della vostra città, doue, per essere terra degnia e di passo, è concorso · d'innumerabili forestieri ·; e questo disonore accaderebbe ·, quādo per le · uostre · indiligiētie ²⁰voi · prestasti · fede · a qualche vantatore che per le · sue frasche o per fauore ·, che di qua · dato li fusse, ²¹da uoi auessse a impetrare · simile opera ·, per la quale · a se e a uoi auesse a partorire lunga ²²e grādissima infamia ·; Chè non posso · fare · che io non mi crucci · a ripensare quali omni ²³sieno quelli che abbino · conferito · volere · in simile impresa ētra²⁴re sanza pensare alla loro sofitiēzia, sanza dirne altro ·; chi è maestro · di boccali ·, chi di corazze

be abused by your descendants, judging that this age was but ill supplied with men of good counsel and with good masters; seeing that other cities, and chiefly the city of the Florentines, has been as it were in these very days, endowed with beautiful and grand works in bronze; among which are the doors of their Baptistry. And this town of Florence, like Piacenza, is a place of intercourse, through which many foreigners pass; who, seeing that the works are fine and of good quality, carry away a good impression, and will say that that city is well filled with worthy inhabitants, seeing the works which bear witness to their opinion; and on the other hand, I say seeing so much metal expended and so badly wrought, it were less shame to the city if the doors had been of plain wood; because, the material, costing so little, would not seem to merit any great outlay of skill . . .

Now the principal parts which are sought for in cities are their cathedrals, and of these the first things which strike the eye are the doors, by which one passes into these churches.

Beware, gentlemen of the Commission, lest too great speed in your determination, and so much haste to expedite the entrusting of so great a work as that which I hear you have ordered, be the cause that that which was intended for the honour of God and of men should be turned to great dishonour of your judgments, and of your city, which, being a place of mark, is the resort and gathering-place of innumerable foreigners. And this dishonour would result if by your lack of diligence you were to put your trust in some vaunter, who by his tricks or by favour shown to him here should obtain such work from you, by which lasting and very great shame would result to him and to you. Thus I cannot help being angry when I consider what men those are who have conferred with you as wishing to undertake this great work without thinking of their sufficiency for it, not to say more. This one is a potter, that one a maker of cuirasses, this one is a

Ecco vno il quale il signiore ·, per fare questa sua opera à tratto di Firenze ²che è degnio maestro, ma à tāta faciēda che non la finirà mai; ³e credete voi che differētia · sia a vedere vna cosa bella da una brutta; ⁴allega Plinio.

bell-founder, another a bell ringer, and one is even a bombardier; and among them one in his Lordship's service, who boasted that he was the gossip of Messer Ambrosio Ferrere [26], who has some power and who has made him some promises; and if this were not enough he would mount on horseback, and go to his Lord and obtain such letters that you could never refuse [to give] him the work. But consider where masters of real talent and fit for such work are brought when they have to compete with such men as these. Open your eyes and look carefully lest your money should be spent in buying your own disgrace. I can declare to you that from that place you will procure none but average works of inferior and coarse masters. There is no capable man,—[33]and you may believe me,—except Leonardo the Florentine, who is making the equestrian statue in bronze of the Duke Francesco and who has no need to bring himself into notice, because he has work for all his life time; and I doubt, whether being so great a work, he will ever finish it[34].

The miserable painstakers . . . with what hope may they expect a reward of their merit?

1347.

There is one whom his Lordship invited from Florence to do this work and who is a worthy master, but with so very much business he will never finish it; and you may imagine that a difference there is to be seen between a beautiful object and an ugly one. Quote Pliny.

carry into effect a will, made three years ago when my father died—as also, and no less, because I would not fail in a matter I esteem most important—I cannot forbear to crave of your most Reverend Highness a letter of recommendation and favour to Ser Raphaello Hieronymo, at present one of the illustrious members of the Signoria before whom my cause is being argued; and more particularly it has been laid by his Excellency the Gonfaloniere into the hands of the said Ser Raphaello, that his Worship may have to decide and end it before the festival of All Saints. And therefore, my Lord, I entreat you, as urgently as I know how and am able, that your Highness will write a letter to the said Ser Raphaello in that admirable and pressing manner which your Highness can use, recommending to him Leonardo Vincio, your most humble servant as I am, and shall always be; requesting him and pressing him not only to do me justice but to do so with despatch; and I have not the least doubt, from many things that I hear, that Ser Raphaello, being most affectionately devoted to your Highness, the matter will issue *ad votum*. And this I shall attribute to your most Reverend Highness' letter, to whom I once more humbly command myself. *Et bene valeat.*

menesi, Vol. III. It is the only text throughout this work which I have not myself examined and copied from the original. The learned discoverer of this letter—the only letter from Leonardo hitherto known as having been sent—adds these interesting remarks: *Cardinale nato ad Ercole I. nel 1470, arcivescovo di Strigonia a sette anni, poi d'Agra, aveva conseguito nel 1497 la pingue ed ambita cattedra di Milano, là dove avrà conosciuto il Vinci, sebbene il poco amore ch'ei professava alle arti lasci credere che le proteste di servitù di Leonardo più che a gratitudine per favori ricevuti e per opere a lui allegate, accennino a speranza per un favore che si aspetta. Notabile è ancora in questo prezioso documento la ripetuta signature del grande artista che si scrive Vincio e Vincius, non da Vinci come si tiene comunemente, sebbene l'una e l'altra possano valere*

a significare così il casato come il paese; restando a sapere se il nome del paese di Vinci fosse assunto a cognome della famiglia di Leonardo nel qual supposto più propriamente avrebbe a chiamarsi Leonardo Vinci, o Vincio (latinamente Vincius) com'egli stesso andò segnarsi in questa lettera, e come scrissero parecchi contemporanei di lui, il Casio, il Cesariano, Geoffroy Tory, il Gaurico, il Bandello, Raffaele Maffei, il Paciolo. Per ultimo non lascerò d'avvertire come la lettera del Vinci è assai ben conservata, di nitida e larga scrittura in forma pienamente corrispondente a quella dei suoi manoscritti, vergata all'uso comune da sinistra a destra, anzichè contrariamente come fu suo costume; ma indubbiamente autentica e fornita della menzione e del suggello che fresca ancora conserva l'impronta di una testa di profilo da un picciolo antico cammeo. (Compare No. 1368, note.)

quāto fatto sdegnare con meco, e questo è che da tante lettere che io ho scritte a uostra ³Signoria io non ò mai avuto risposta; hora io mando costi Salai per fare intendere a uostra Signoria ⁴come io sono quasi al fine del mio letigio che io ho co' mia fratelli, come io credo trouarmi costi in questa ⁵pasqua e portare con meco due quadri di due nostre donne di uarie grandezze, Le quali son fatte ⁶pel cristianissimo nostro rè, e perchè a uostra Signoria piacerà, jo avrei ben caro di sapere alla mia ⁷tornata di costa, doue io auessi a stare per stanza, perchè non uorrei dare più noia a uostra Signoria, e ⁸ancora, auendo io lauorato pel cristianissimo rè, se la mia prouisione è per correre o no; jo scriuo ⁹al presidente di quella acqua che mi donò il. r. ¹⁰, della quale non fui messo in posses-sione, perchè in quel tēpo u'era ¹⁰carestia nel nauilio per causa de'gran secchi, e perchè i sua bocchelli non erano moderati; ma bē mi promise che, ¹¹fatta tal moderatione, io ne sarei messo in possessione; sicchè io prego uostra Signoria che non le incresca, ¹²che ora che tali bochelli son moderati, di fare ricordare al presidente la mia speditione cioè di darmi la ¹³possessione d'essa acqua, perchè alla uenuta mia spero farui su strumēti e cose che sarā di grā piacere al ¹⁴nostro cristianissimo rè; Altro non mi accade; sono senpre a uostri comandi.

1349. Charles d'Amboise, Maréchal de Chaumont, was Governor of Milan under Louis XII. Leonardo was in personal communication with him so early as in 1503. He was absent from Milan in the autumn of 1506 and from October 1510—when he besieged Pope Julius II. in Bologna—till his death, which took place at Correggio, February 11. 1511. Francesco Vinci, Leonardo's uncle, died—as Amoretti tells us—in the winter of 1510—11 (or according to Uzielli in 1506?), and Leonardo remained in Florence for business connected with his estate. The letter written with reference to this affair, No. 1348, is undoubtedly earlier than the letters Nos. 1349 and 1350. Amoretti tells us, *Memorie*

somewhat angry with me, and that this is why to so many letters which I have written to your Lordship I have never had an answer. I now send Salai to explain to your Lordship that I am almost at an end of the litigation I had with my brother; that I hope to find myself with you this Easter, and to carry with me two pictures of two Madonnas of different sizes. These were done for our most Christian King, or for whomsoever your Lordship may please. I should be very glad to know on my return thence where I may have to reside, for I would not give any more trouble to your Lordship. Also, as I have worked for the most Christian King, whether my salary is to continue or not. I wrote to the President as to that water which the king granted me, and which I was not put in possession of because at that time there was a dearth in the canal by reason of the great droughts and because [10]its outlets were not regulated; but he certainly promised me that when this was done I should be put in possession. Thus I pray your Lordship that you will take so much trouble, now that these outlets are regulated, as to remind the President of my matter; that is, to give me possession of this water, because on my return I hope to make there instruments and other things which will greatly please our most Christian King. Nothing else occurs to me. I am always yours to command.

1350.

Magnificent President, I am sending thither Salai, my pupil, who is the bearer of this, and from him you will hear by word of mouth the cause of my ...

Storiche, ch. II, that the following note existed on the same leaf in MS. C. A. I have not however succeeded in finding it. The passage runs thus: *Io sono quasi al fine del mio letigio che io ò con mie fratelgli Ancora ricordo a V. Excia la facenda che ò cum Ser Juliano mio Fratello capo dell'altri fratelli ricordandoli come se offerse di conciar le cose nostre fra noi fratelli del comune della eredità de mio Zio, e quelli costringa alla expeditione, quale conteneva la lettera che lui me mandò.*

10. Compare Nos. 1009 and 1010.

Leonardo has noted the payment of the pension from the king in 1505.

³Magnifico presidēte io.

⁴Magnifico presidente, essendomi io piv volte ricordato delle proferte fattemi da uostra Eccellētia più volte, ò preso sicurtà ⁵di scriuere e di ricordare a questa la promessa fattami à l'ultima partita, cioè la possessione di quel^ele ¹² once d'acqua donatemi dal cristianissimo rē; vostra Signoria sa che io non ētrai in essa possessione, perchè in quel ⁷tempo, ch'ela mi fu donata, era carestia d'acqua nel navilio, si pel grā secco come pel non essere ancora moderati li sua bochelli; ma ⁸mi fu promesso da uostra Eccellēntia che fatta tal moderatione io avrei l'intento mio; di poi, intendendo essere aconcio il navilio, io scrissi più volte a vo⁹stra signoria e a Messer Girolamo da Cusano, che à apresso di se la carta di tal donazione, e così scrissi al Corigero, e ¹⁰mai ebbi risposta; Ora io mādo costi Salai, mio discepolo, aportatore di questa, al quale vostra Signoria potrà ¹¹dire a bocca tutto quel ch'è seguito, della qual cosa io prego vostra Eccellenza; ¹²Io credo esser costi in questa pasqua per esser presso al fine del mio piateggiare, e pōterò cō meco due quadri di nostra ¹³donna che io ò commīciate, e ò le ne'tempi, che mi sono avāzati, condotte in assai bō porto; Altro nō mi accade.

¹⁴Magnifico Signore mio, l'amore che uostra Eccellētia m'à senpre dimostro, e' benefici ch'io ò riceuuti da quella al continuo ¹⁵mi sō dināzi....

¹⁶Io ò sospetto che la poca remuneratiō de'grā benifiti ch'io ho riceuuto da uostra Eccellēntia non l'abbi¹⁷no fatto alquāto turbare con meco, e questo è che di piv lettere che io ò scritte a vostra Eccellēntia io non ò mai ¹⁸avuta risposta ., ora io mando costi Salai per fare intendere a vostra Signoria, come io son quasi al fine del mio ¹⁹letigio coi mia fratelli, e come io credo essere costi in questa pasqua e portare con meco due quadri dove sono ²⁰due Nostre donne di varie grādezzze, le quali io ò comīciato pel cristianissimo rē, o per chi a uoi piacerà; avrei ben caro di sa²¹pere

Magnificent President, I . . .

Magnificent President:—Having ofttimes remembered the proposals made many times to me by your Excellency, I take the liberty of writing to remind your Lordship of the promise made to me at my last departure, that is the possession of the twelve inches of water granted to me by the most Christian King. Your Lordship knows that I did not enter into possession, because at that time when it was given to me there was a dearth of water in the canal, as well by reason of the great drought as also because the outlets were not regulated; but your Excellency promised me that as soon as this was done, I should have my rights. Afterwards hearing that the canal was complete I wrote several times to your Lordship and to Messer Girolamo da Cusano, who has in his keeping the deed of this gift; and so also I wrote to Corigero and never had a reply. I now send thither Salai, my pupil, the bearer of this, to whom your Lordship may tell by word of mouth all that happened in the matter about which I petition your Excellency. I expect to go thither this Easter since I am nearly at the end of my lawsuit, and I will take with me two pictures of our Lady which I have begun, and at the present time have brought them on to a very good end; nothing else occurs to me.

My Lord the love which your Excellency has always shown me and the benefits that I have constantly received from you I have hitherto . . .

I am fearful lest the small return I have made for the great benefits I have received from your Excellency may not have made you somewhat annoyed with me. And this is why, to many letters which I have written to your Excellency I have never had an answer. I now send to you Salai to explain to your Excellency that I am almost at the end of my litigation with my brothers, and that I hope to be with you this Easter and carry with me two pictures on which are two Madonnas of different sizes which I began for the most Christian King, or for whomsoever you please. I should be very glad to

alla mia tornata di costà, dove io ò a stare per stanza, perchè nō uorrei dare più noia a uostra Signoria, e à²²cora, auendo io lauorato pel cristianissimo Rè, se la mia prouisione è per correre o no; io scriuo al presidē²³te di quell' acqua che mi donò il rè, della quale nō fui messo in possessione per esserne carestia nel navilio per ca²⁴usa de' grā secchi, e perchè i sua bocchelli non erā moderati; ma bē mi promise che, fatta tal moderatione, i'ne sarei ²⁵messo in possessione, sichè io vi prego che, scontrandovi in esso presidente, nō ui incresca che ora, che tali bochelli sō ²⁶moderati, di ricordare a detto presidente di farmi dare la possessione d'essa acqua, che mi parue intēdere che in grā par²⁷te stava a lui; altro non mi accade; sono senpre a uostri comādi.

²⁸Buō dì, messer Francesco, può lo fare Iddio che di tante lettere ch'io v'ò scritte che mai voi non m'abbiate risposto; Or aspettate ²⁹ch'io venga costà, per Dio, ch'io vi farò tanto scrivere che forse vi rin crescerà.

³⁰Caro mio, messer Francesco, io mādo costi Salai per intendere dalla magnificētia del presidente che fine à avuta quella ³¹moderatione dell'acque che alla mia partita fu ordinata per li bochelli del navilio, perchè el magnifico presidēte mi promi³²se che subito fatta tal moderatione, io sarei spedito; Ora egli è più tempo che io intesi che il nauilio s'accō³³cchiaua, e similmente i sua bochelli, e inmediatē scrissi al presidente e a uoi, e poi replicai, e mai ebbi ³⁴risposta; adūque voi degnerete di rispōdermi quel ch'è seguito, e non essendo per spedirsi nō u'icresca per mio a³⁵more di sollecitarne vn poco il presidente e così messer Girolamo da Cusano, al quale uoi mi racomādere³⁶te e offeriretemi a sua magnificētia.

know where, on my return from this place, I shall have to reside, because I do not wish to give more trouble to your Lordship; and then, having worked for the most Christian King, whether my salary is to be continued or not. I write to the President as to the water that the king granted me of which I had not been put in possession by reason of the dearth in the canal, caused by the great drought and because its outlets were not regulated; but he promised me certainly that as soon as the regulation was made, I should be put in possession of it; I therefore pray you that, if you should meet the said President, you would be good enough, now that the outlets are regulated, to remind the said President to cause me to be put in possession of that water, since I understand it is in great measure in his power. Nothing else occurs to me; always yours to command.

Good day to you Messer Francesco. Why, in God's name, of all the letters I have written to you, have you never answered one. Now wait till I come, by God, and I shall make you write so much that perhaps you will become sick of it.

Dear Messer Francesco. I am sending thither Salai to learn from His Magnificētia the President to what end the regulation of the water has come since, at my departure this regulation of the outlets of the canal had been ordered, because His Magnificētia the President promised me that as soon as this was done I should be satisfied. It is now some time since I heard that the canal was in order, as also its outlets, and I immediately wrote to the President and to you, and then I repeated it, and never had an answer. So you will have the goodness to answer me as to that which happened, and as I am not to hurry the matter, would you take the trouble, for the love of me, to urge the President a little, and also Messer Girolamo Cusano, to whom you will commend me and offer my duty to his Magnificētia.

[Illustrissimo mio Signore,² Assai mi rallegro, illustrissimo mio signiore¹, del uostro].

³Tanto mi son rallegrato, o illustrissimo mio signore, del desiderato acquisto di vostra sanità che io quasi ho [riavuto la sanità mia]—[sono all'ultimo del mio male]—e'l male mio da me s'è fuggito — della quasi reintegrata sanità di vostra Eccellenza; ⁴Ma assai mi rincrescie il nō auere io potuto integralmēte satisfare alli desideri di uostra Eccientia mediāste la malignità di cotesto ingannatore, al quale non o lasciato indirieto cosa alcuna colla quale ⁶io li abbia potuto giovare che per me non li sia stata fatta e prima la sua provisione inanzi al tēpo li era pagata, la quale io credo che volentieri ⁷negherebbe, se io non avessi la scitta e testificata da me e dallo interprete, e vedendo io che per me nō si lauorava, se nō quādo ⁸i lavori d'altri si mācavano, de' quali lui era sollecito investigatore, jo lo preghai che dovesse mangiare con meco, e lauorare indi ap-

[Most illustrious Lord. I greatly rejoice Drafts of a letter to Giuliano de' Medici (1351. 1352).]

1351.

I was so greatly rejoiced, most illustrious Lord, by the desired restoration of your health, that it almost had the effect that [my own health recovered]—[I have got through my illness]—my own illness left me — — of your Excellency's almost restored health. But I am extremely vexed that I have not been able completely to satisfy the wishes of your Excellency, by reason of the wickedness of that deceiver, for whom I left nothing undone which could be done for him by me and by which I might be of use to him; and in the first place his allowances were paid to him before the time, which I believe he would willingly deny, if I had not the writing signed by myself and the interpreter. And I, seeing that he did not work for me unless he had no work to do for others, which he was very careful in soliciting, invited him to dine with me, and to work afterwards near me, because, besides the saving of expense, he

1351. 1353. It is clear from the contents of this notes that they refer to Leonardo's residence in Rome in 1513—1515. Nor can there be any doubt that they were addressed to Leonardo's patron at the time: Giuliano de' Medici, third son of Lorenzo the Magnificent and brother of Pope Leo X (born 1478). In 1512 he became the head of the Florentine Republic. The Pope invited him to Rome, where he settled; in 1513 he was named patrician with much splendid ceremonial. The medal struck in honour of the event bears the words MAG. IVLIAN. MEDICES. Leonardo too uses the style "Magnifico", in his letter. Compare also No. 1377.

GINO CAPONI (*Storia della Repubblica di Firenze*, Vol. III, p. 139) thus describes the character of Giuliano de' Medici, who died in 1516: *Era il migliore della famiglia, di vita placida, grande spenditore, tenendo intorno a sè uomini ingegnosi, ed ogni nuova cosa voleva provare.*

See too GREGOROVIUS, *Geschichte der Stadt Rom*, VIII (book XIV. III, 2): *Die Luftschlösser fürstlicher Grösse, wozu ihn der Papst hatte erheben wollen zerfielen.*

Julian war der edelste aller damaligen Medici, ein Mensch von innerlicher Richtung, unbefriedigt durch das Leben, mitten im Sonnenglanz der Herrlichkeit Leo's X. eine dunkle Gestalt die wie ein Schatten vorüberzog. Giuliano lived in the Vatican, and it may be safely inferred from No. 1352 l. 2, and No. 1353 l. 4, that Leonardo did the same.

From the following unpublished notice in the Vatican archives, which M. Eug. Müntz, librarian of the Ecole des Beaux arts, Paris, has done me the favour to communicate to me, we get a more accurate view of Leonardo's relation to the often named GIORGIO TEDESCO:

Nota delle provisione (sic) a da pagare per me in nome del nostro ill. S. Bernardo Bini e chompa di Roma, e prima della illma sua chonsorte ogni mese d. 800.

A Ldo da Vinci per sua provisione d. XXXIII, e più d. VII al detto per la provisione di Giorgio tedesco, che sono in tutto d. 40.

From this we learn, that seven ducats formed the German's monthly wages, but according to No. 1353 l. 7 he pretended that eight ducats had been agreed upon.

presso di me, perchè oltre al conto elli acquisterebbe il linguaggio italiano; [lui sempre lo promise e mai lo volle fare]; E questo facievo ancora, perchè quel Giovā tedesco che fa li specchi ogni dì li era in bottega, e volleua vedere e intendere ciò che si faceva e publicava per la... forte biasimando; e perchè lui māgiava cō quelli ¹⁰ della guardia del papa, e poi se n'ādava in compagnia colli scoppietti, amazādo vccicelli per queste anticaglie e così seguitava da dopo desinare a sera; E se io mandavo Lorēzo ¹¹a sollecitarli il lavoro lui si cruciava e diceva che nō volea tanti maestri sopra capo, e che il lauor suo era ¹²per la guardaroba di vostra Eccielētia, e passò dua mesi e così seguitava e indi, trovādo Giannicolò della ¹³guardaroba, domādailo s'el Tedesco avea finito l'opere del magnifico, e lui mi disse non esser vero, ma che so¹⁴lamēte li avea dato a nettar dua scoppiette; di poi faciēdolo io sollecitare lui lasciò la bettega, e cominciò a lavorare i came¹⁵ra, e perde assai tēpo nel fare vn altra morsa e lime e altri strumēti a vite; e qui ui lavorava mulinelli da torcere seta, ¹⁶li quali nascōdeva, quādo un de' mia vētrava, e con mille bestemie e rimbotti, in modo che nessū de mia voleva piv entrare.

¹⁷Tanto mi sō rallegrato, jllustrissimo mio Signore, del desiderato acquisto di vostra sanità che quasi il male mio da me ¹⁸s'è fugito; Ma assai mi rincrescie il non avere io potuto integralmēte satisfare alli desideri di uostra Eccellenza ¹⁹mediante la malignità di cotesto ingānatore tedesco, per il quale non o lasciato indireto cosa alcuna, ²⁰colla quale io abbia creduto farli piaciere; e secondariamente invitarlo ad abitare e vivere con meco, per la qual cosa io ve²¹drei al continuo l'opera che lui faciesse, e cō facilità ricorreggierei li errori; e oltre di questo inparerebbe la lingua italiana, ²²mediante la quale lui cō facilità potrebbe parlare sanza interprete; e li sua danari li

would acquire the Italian language. He always promised, but would never do so. And this I did also, because that Giovanni, the German who makes the mirrors, was there always in the workshop, and wanted to see and to know all that was being done there and made it known outside... strongly criticising it; and because he dined with those of the Pope's guard, and then they went out with guns killing birds among the ruins; and this went on from after dinner till the evening; and when I sent Lorenzo to urge him to work he said that he would not have so many masters over him, and that his work was for your Excellency's Wardrobe; and thus two months passed and so it went on; and one day finding Gian Niccold of the Wardrobe and asking whether the German had finished the work for your Magnificence, he told me this was not true, but only that he had given him two guns to clean. Afterwards, when I had urged him farther, he left the workshop and began to work in his room, and lost much time in making another pair of pincers and files and other tools with screws; and there he worked at mills for twisting silk which he hid when any one of my people went in, and with a thousand oaths and mutterings, so that none of them would go there any more.

I was so greatly rejoiced, most Illustrious Lord, by the desired restoration of your health, that my own illness almost left me. But I am greatly vexed at not having been able to completely satisfy your Excellency's wishes by reason of the wickedness of that German deceiver, for whom I left nothing undone by which I could have hope to please him; and secondly I invited him to lodge and board with me, by which means I should constantly see the work he was doing and with greater ease correct his errors while, besides this, he would learn the Italian tongue, by means of which he could with more ease talk without an interpreter; his moneys were always given him in advance of the

linghagio italiano... lui sempre [lo promise e mai lo volle fare]. ¹⁷Ecque"sto" facievo". On the margin in twelve short lines: ecquesto facievo ancora perche que... tedesco... ongni... ibottegha... cio chessi e publicava per la for biasimando |||||||| aro quel ||||||| ndea

furō ²³sēpre dati ināzi al tēpo ; Dipoi la richiesta di costui fu di avere li modelli ²⁴finiti di legniame, com'ellino aveano a essere di ferro, e' quali volea portare nel suo paese; La qual cosa io li negai diciē-²⁵doli ch'io li darei in disegnio la larghezza, lunghezza e grossezza e figura di ciò ch'elli avesse a fare, e così restammo mal volētieri.

²⁶La secōda cosa fu, che si fecie vn altra bottega e morse e strumenti, dove dormiua, e quivi lavorava per altri, dipoi andava a desi²⁷nare coi Suizzeri della guardia, dove sta giēte sfacciēdata, della qual cosa lui tutti li uicieva; e'l piv ²⁸delle volte se n'andauano due o tre di loro, colli scoppietti; ammazzavā vccielli per le anticaglie, e questo durava insino a sera;

²⁹Al fine ò trovato come ³⁰questo maestro Giovā ³¹ni delli Spechi è quello ³²che à fatto il tutto per ³³due cagioni; e la prima ³⁴perchè lui à avuto a dire che ³⁵la venuta mia qui ³⁶li à tolto la cōuersa³⁷tione e'l favore di uostra ³⁸Signoria, che senpre ve... ³⁹L'altra è ⁴⁰che la stātia ⁴¹di questo fereui ⁴²disse cōuenirsi a lui per ⁴³lavorare li specchi, e ⁴⁴di questo n'à fatto dimostra⁴⁵tione chè, oltre al farmi ⁴⁶costui nimico, li à fatto vē⁴⁷dere ogni suo e lasciare ⁴⁸a lui la sua bot⁴⁹tega, nella qual lavora ⁵⁰cō molti lavorāti assai spe⁵¹chi per mādere alle fiere.

C. A. 278a; 850a]

Tanto mi son rallegrato, illustrissimo mio signiore, del desiderato acquisto di uostra sanità, che quasi il male mio da me ²è fuggito; dico iddio ne sia laudato, Ma assai mi rincresce il non avere io potuto integralmēte satisfare alli desideri di uostra Eccellenza ³mediante la malignità di contesto ingānatore tedesco, per il quale non ò lasciato indirieto cosa alcuna, ⁴colla quale io abbia creduto farli piacere, e secondariamente invitarlo ad abitare e vivere con meco, per la qual cosa ⁵io farei piantare

time when due. Afterwards he wanted to have the models finished in wood, just as they were to be in iron, and wished to carry them away to his own country. But this I refused him, telling him that I would give him, in drawing, the breadth, length, height and form of what he had to do; and so we remained in ill-will.

The next thing was that he made himself another workshop and pincers and tools in his room where he slept, and there he worked for others; afterwards he went to dine with the Swiss of the guard, where there are idle fellows, in which he beat them all; and most times they went two or three together with guns, to shoot birds among the ruins, and this went on till evening.

At last I found how this master Giovanni the mirror-maker was he who had done it all, for two reasons; the first because he had said that my coming here had deprived him of the countenance and favour of your Lordship which always... The other is that he said that his iron-workers' rooms suited him for working at his mirrors, and of this he gave proof; for besides making him my enemy, he made him sell all he had and leave his workshop to him, where he works with a number of workmen making numerous mirrors to send to the fairs.

1352.

I was so greatly rejoiced, most Illustrious Lord, by the wished for recovery of your health, that my own ills have almost left me; and I say God be praised for it. But it vexes me greatly that I have not been able completely to satisfy your Excellency's wishes by reason of the wickedness of that German deceiver, for whom I left nothing undone by which I could hope to please him; and secondly I invited him to lodge and board with me, by which means I should see constantly the work he was doing,

at Rome.

Questo altro m'à ipedito l'anatomia
col papa biasiamādola, e così all'ospedale,
e ēpie di botteghe da specchi tutto questo
Beluedere o di lavorāsti; e così à fatto nella
stātia di maestro Giorgio; disse che otto
du⁸cati li furon promes^{si} ogni mese, comi-
ciādo il primo dì ¹¹che si mise in via,
¹²o il più tardo quā¹³do e' ui parlò, e che
¹⁴voi l'acciettaste;

¹⁵Vedēdo io costui rare volte sta¹⁶re a
bottega e che cōsumava assai, jo ¹⁷li feci
dire che se li piacea che io farei ¹⁸con lui
mercato di ciascuna cosa che ¹⁹lui facesse,
e a stima tānto li darei ²⁰quāto noi fus-
simo d'accordo; ellī ²¹si cōsigliò col uicino
e lasciò lì la stā²²tia, vendendo ogni cosa,
e venne a trovare . . .

This other hindered me in anatomy, blaming it before the Pope; and likewise at the hospital; and he has filled [4]this whole Belvedere with workshops for mirrors; and he did the same thing in Maestro Giorgio's room. He said that he had been promised [7]eight ducats every month, beginning with the first day, when he set out, or at latest when he spoke with you; and that you agreed.

Seeing that he seldom stayed in the workshop, and that he ate a great deal, I sent him word that, if he liked I could deal with him separately for each thing that he might make, and would give him what we might agree to be a fair valuation. He took counsel with his neighbour and gave up his room, selling every thing, and went to find . . .

1354. A puzzling passage, meant, as it would seem, for a jest. Compare the description of Giants in Dante, *Inf.* XXI and XXII. Perhaps Leonardo had the Giant Antaeus in his mind. Of him the myth relates that he was a son of Gē, that he fed on lions; that he hunted in Libya and killed the inhabitants. He enjoyed the peculiarity of

renewing his strength whenever he fell and came in contact with his mother earth; but that Hercules lifted him up and so conquered and strangled him. Lucan gives a full account of the struggle. *Pharsalia* IV, 617. The reading of this passage, which is very indistinctly written, is in many places doubtful.

410'

410^2

risentito jl gigāte e sētēdosi ¹² quasi coperto dalla moltitudine, subito sentesi cuo¹³cere per le pūture; mise un muggchio che parve ¹⁴fusse vno spavētoso tono, e posto le sue mani in ¹⁵terra, e levatosi il pavroso volto, e postosi ¹⁶vna delle mani j capo trovò selo ¹⁷ pieno ¹⁸d'uomini appiccati e cannaglia a similitudine de' mi²⁰nti animali, che fra que ²¹gli sogliono nascere; ²²onde scutotendo jl capo gli o²³mini lācia non altramēti per l'aria che si facia ²⁴la grādine, quādo va cō furor di vēti, e trovossi molti ²⁵di questi uomini esser morti da quegli che gli stavano so²⁶pra ritti; coi piedi calpestādo . . .

²⁷E tenēdosi a capegli ēgiegniādosi nascōdere tra quegli, facevano ²⁸a similitudine de' marinai quādo è fortuna, che corrono super le corde ²⁹per abbassar la a poco vēto.

³⁰Nuove delle cose ³¹di levāte; ³²sappi come ³³nel mese ³⁴di givgnio ³⁵è apparito ³⁶vn gigāte che viē dalla ³⁷deserta Libia, ³⁸a similitudine delle ³⁹formiche furiā⁴⁰do ⁴¹abatuto dall ⁴²rígido villano.

⁴³Questo gigāte era nato nel Mōt' Atalate, ed era ⁴⁴un eroe, e ebbe cōtrastare cogli Egiti e Arabi ⁴⁵Medi e Persi; viveva j mare delle bale⁴⁶ne de' grā capidogli e de' navili.

⁴⁷Marte, temēdo della ⁴⁸vita, s'era fugito sotto le ⁴⁹. . . . di Giove.

⁵⁰¶E per la grā caduta parve la provīcia ⁵¹tutta tremasse. ¶

frequent wounds; by which, the giant being roused and feeling himself almost covered by the multitude, he suddenly perceives the smarting of the stabs, and sent forth a roar which sounded like a terrific clap of thunder; and placing his hands on the ground he raised his terrible face: and having lifted one hand to his head he found it full of men and rabble sticking to it like the minute creatures which not unfrequently are found there; wherefore with a shake of his head he sends the men flying through the air just as hail does when driven by the fury of the winds. Many of these men were found to be dead; stamping with his feet.

And clinging to his hair, and striving to hide in it, they behaved like sailors in a storm, who run up the ropes to lessen the force of the wind [by taking in sail].

News of things from the East.

Be it known to you that in the month of June there appeared a Giant, who came from the Lybian desert . . . mad with rage like ants . . . struck down by the rude.

This great Giant was born in Mount Atlas and was a hero and had to fight against the Egyptians and Arabs, Medes and Persians. He lived in the sea on whales, grampus and ships.

Mars fearing for his life took refuge under the . . . of Jove.

And at the great fall it seemed as though the whole province quaked.

Il quale spirito ritrova il cerebro, dōde partito s'era, con alta vocie cō tali parole mosse . . .

1355. This passage, very difficult to decipher, is on the reverse of a drawing at Windsor, Pl. CXXII, which possibly has some connection with

it. The drawing is slightly reduced in this reproduction; the original being 25 cm. high by 19 cm. wide.

⁴O felice; o aveturato spirito, dōde partisti! jo ho questo uomo a male mio grado bē conosciuto.; Questo è ricietto di villania, questo è proprio ammonitione di somma ingratitudine, ⁶in cōpagnia di tutti i viti; ma che mi vo io cō parole indarno affaticādomi? la somma de' peccati ⁷solo in lui trovati sono; E se alcuno infra loro si trova, che alcuna bontà possegga, non altri⁸mēti come che me dalli altri uomini trattati sono; e in effetto io ho questa cōclusione ch'è ⁹male s'eli sono nimici e peggio s'eli son amici.

O blessed and happy spirit whence comest thou? Well have I known this man, much against my will. This one is a receptacle of villainy; he is a perfect heap of the utmost ingratitude combined with every vice. But of what use is it to fatigue myself with vain words? Nothing is to be found in them but every form of sin . . And if there should be found among them any that possesses any good, they will not be treated differently to myself by other men; and in fine, I come to the conclusion that it is bad if they are hostile, and worse if they are friendly.

H.3 89a]

1356.

All the ills that are or ever were, if they could be set to work by him, would not satisfy the desires of his iniquitous soul; and I could not in any length of time describe his nature to you, but I conclude . .

quoted (No. 1210, l. 48). The two have however no real connection.

son quelli ³a chi i sua viti dispiacino; anzi solamente a quelli omini li dispiaci⁴no che son di natura cōtraria a tali uitj; e molti odiano li ⁵padri e guastan le amicitie, reprēsori de' sua viti e non ⁶vogliono esenpli contrari a essi, nè nessuno vīnā consiglio.

⁷E se alcuno si ne trova virtuoso e bono, non lo scacciate ⁸da voi; fatteli onore, acciò che non abbia a fugirsi da ⁹voi e ridursi neli eremi, o spelonche, o altri lochi soleta¹⁰ri, per fugirsi dalle vostre insidie, e se alcun di questi ¹¹tali si trova, fatteli onore, perchè questi sono li uostri Iddei ¹²terrestri, questi meritā da uoi le statue e li simulacri; ma ¹³bē ui ricordo che li lor simulacri nō siē da uoi mā¹⁴giati come ācora in alcuna regione del India; ¹⁵chè quādo li simulacri operano alcuno mi¹⁶raculo secondo loro, li sacerdoti li tagliano in pezzi, essen¹⁷do di legno, e ne danno a tutti quelli del paese nō ¹⁸sancta premio, e ciascū raspa sotilmēte la sua parte ¹⁹e mette sopra la prima vivanda che māgiano; e così tē²⁰gono per fede aversi māgiato il suo santo, e credono che lui li ²¹guardi poi da tutti li pericoli || che ti pare, uomo, qui della ²²tua spetie? sei tu così savio, come tu ti tieni? son ²³queste cose da esser fatte da omini?

few whom his vices have disgusted, and he only dislikes those men whose natures are contrary to those vices. And many hate their fathers, and break off friendship with those who reprove their vices; and he will not permit any examples against them, nor any advice.

If you meet with any one who is virtuous do not drive him from you; do him honour, so that he may not have to flee from you and be reduced to hiding in hermitages, or caves or other solitary places to escape from your treachery; if there is such an one among you do him honour, for these are our Saints upon earth; these are they who deserve statues from us, and images; but remember that their images are not to be eaten by you, as is still done in some parts of India [15], where, when the images have according to them, performed some miracle, the priests cut them in pieces, being of wood, and give them to all the people of the country, not without payment; and each one grates his portion very fine, and puts it upon the first food he eats; and thus believes that by faith he has eaten his saint who then preserves him from all perils. What do you think here, Man, of your own species? Are you so wise as you believe yourselves to be? Are these things to be done by men?

Come io vi dissi ne' dì passati, voi sapete ²che io sono sanza alcuno ...

L. 15. In explanation of this passage I have received the following communication from Dr. G. W. LEITNER of Lahore: "So far as Indian customs are known to us, this practice spoken of by Leonardo as 'still existing in some parts of India' is perfectly unknown; and it is equally opposed to the spirit of Hinduism, Mohammedanism and Sikhism. In central Thibet the ashes of the dead,

when burnt, are mixed with dough, and small figures—usually of Buddha—are stamped out of them and some are laid in the grave while others are distributed among the relations. The custom spoken of by Leonardo may have prevailed there but I never heard of it." Possibly Leonardo refers here to customs of nations of America.

1371. adi p“o” dagosto.

1368. So Leonardo writes his name on a sheet with sundry short notes, evidently to try a pen. Compare the signature with those in Nos. 1341, 1348 and 1374 (see also No. 1346, l. 33). The form "Leonardo" does not occur in the autographs. The Portrait of the Master in the Royal Library at Turin, which is reproduced—slightly diminished—on Pl. I, has in the original two lines of writing underneath; one in red chalk of two or three words is partly effaced: *Leonardo it...lm* (or *lai?*); the second written in pencil is as follows: *fatto da lui stesso assai vecchio*. In both of these the writing is very like the Master's, but is certainly only an imitation.

1369. This date is on a drawing of a rocky landscape. See *Chronique des Arts* 1881 no. 23: *Léonard de Vinci a-t-il été au Righi le 5 août 1473?* letter by H. de Geymüller. The next following date in the MSS. is 1478 (see No. 663).

1370. While the letters in the MS. notes of 1473 and 1478 are very ornate, this note and the texts on anatomy on the same sheet (for instance No. 805) are in the same simple hand as we see on Pl. CXVI and CXIX. No 1370 is the only dated note of the years between 1480 and 1489, and the characters are in all essential points identical with those that we see in the latest manuscripts written in France (compare the facsimiles on Pl. CXV and

p. 254), so that it is hardly possible to determine exactly the date of a manuscript from the style of the handwriting, if it does not betray the peculiarities of style as displayed in the few notes dated previous to 1480.—Compare the facsimile of the manuscripts 1479 on Pl. LXII, No. 2; No. 664, note, Vol. I p. 346. This shows already a marked simplicity as compared with the calligraphy of 1478.

The text No. 720 belongs to the year 1490; No. 1510 to the year 1492; No. 1459, No. 1384 and No. 1460 to the year 1493; No. 1463, No. 1517, No. 1024, 1025 and 1461 to the year 1494; Nos. 1523 and 1524 to the year 1497.

1371. *Scrissi qui.* Leonardo does not say where; still we may assume that it was not in Milan. Amoretti writes, *Memorie Storiche*, chap. XIX: *Sembra pertanto che non nel 1499 ma nel 1500, dopo il ritorno e la prigione del duca, sia da qui partito Leonardo per andare a Firenze; ed è quindi probabile, che i mesi di governo nuovo e incerto abbia passati coll'amico suo Francesco Melzi a Vaprio, ove meglio che altrove studiar poteva la natura, e soprattutto le acque, e l'Adda specialmente, che già era stato l'oggetto delle sue idrostatiche ricerche.* At that time Melzi was only six years of age. The next date is 1502; to this year belong No. 1034, 1040, 1042, 1048 and 1053. The note No. 1525 belongs to the year 1503.

Br. M. 272 a]

1372. This statement of Ser Piero's age contradicts that of the *Riassunto della portata di Antonio da Vinci* (Leonardo's grandfather), who speaks of Ser Piero as being thirty years old in 1457; and that of the *Riassunto della portata di Ser Piero e Francesco*, sons of Antonia da Vinci, where Ser Piero is mentioned as being forty in 1469. These documents were published by G. UZIELLI, *Ricerche intorno a L. da Vinci, Firenze*, 1872, pp. 144 and 146. Leonardo was, as is well known, a natural son. His mother 'La Catarina' was married in 1457 to Acchattabriga di Piero del Vaccha da Vinci. She died in 1519. Leonardo never mentions her in the Manuscripts. In the year of Leonardo's birth Ser Piero married Albiera di Giovanni Amadoci, and after her death at the age of thirty eight he again married, Francesca, daughter of Ser Giovanni Lanfredi, then only fifteen. Their children were Leonardo's half-brothers, Antonio (b. 1476), Ser Giuliano (b. 1479), Lorenzo (b. 1484), a girl, Violante (b. 1485), and another boy Domenico (b. 1486); Domenico's descendants still exist as a family. Ser Piero married for the third time Lucrezia di Guglielmo Cortigiani

by whom he had six children: Margherita (b. 1491), Benedetto (b. 1492), Pandolfo (b. 1494), Guglielmo (b. 1496), Bartolomeo (b. 1497), and Giovanni) date of birth unknown). Pierino da Vinci the sculptor (about 1520—1554) was the son of Bartolomeo, the fifth of these children. The dates of their deaths are not known, but we may infer from the above passage that they were all still living in 1505.

1373. This and the previous text it may be remarked are the only mention made by Leonardo of his father; Nos. 1526, 1527 and No. 1463 are of the year 1504.

1374. Thus he writes on the first page of the MS. The title is on the foregoing coversheet as follows: *Libro titolato disstrafformatione coe* (cioè *d'un corpo nvn* (in un) *altro sanza diminutione e acrescimento di materia*.

1375. No. 1528 and No. 1529 belong to the same year. The text Vol. I, No. 4 belongs to the following year 1509 (1508 old style); so also does No. 1009.—Nos. 1022, 1057 and 1464 belong to 1511.

1376. No. 1465 belongs to the same year. No. 1065 has the next date 1514.

The Magnifico Giuliano de' Medici left Rome on the 9th of January 1515, just at daybreak, to take a wife in Savoy; and on the same day fell the death of the king of France.

1378.

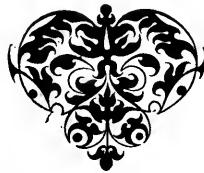

On the 24th of June, St-John's day, 1518 at Amboise, in the palace of . . .

1378. 1. a 24 digugnio. 2. palazzo dell clli.

1377. Giuliano de Medici, brother to Pope Leo X.; see note to Nos. 1351—1353. In February, 1515, he was married to Filiberta, daughter of Filippo, Duke of Savoy, and aunt to Francis I., Louis XII's successor on the throne of France. Louis XII died

on Jan. 1st, and not on Jan. 9th as is here stated.— This addition is written in paler ink and evidently at a later date.

1378. *Castello del clli.* The meaning of this word is obscure; it is perhaps not written at full length.

418

XXII.

Miscellaneous Notes.

The incidental memoranda scattered here and there throughout the MSS. can have been for the most part intelligible to the writer only; in many cases their meaning and connection are all the more obscure because we are in ignorance about the persons with whom Leonardo used to converse nor can we say what part he may have played in the various events of his time. Vasari and other early biographers give us a very superficial and far from accurate picture of Leonardo's private life. Though his own memoranda, referring for the most part to incidents of no permanent interest, do not go far towards supplying this deficiency, they are nevertheless of some importance and interest as helping us to solve the numerous mysteries in which the history of Leonardo's long life remains involved. We may at any rate assume, from Leonardo's having committed to paper notes on more or less trivial matters on his pupils, on his house-keeping, on various known and unknown personages, and a hundred other trifles—that at the time they must have been in some way important to him.

I have endeavoured to make these 'Miscellaneous Notes' as complete as possible, for in many cases an incidental memorandum will help to explain the meaning of some other note of a similar kind. The first portion of these notes (Nos. 1379—1457), as well as those referring to his pupils and to other artists and artificers who lived in his house (1458—1468) are arranged in chronological order. A considerable proportion of these notes belong to the period between 1490 and 1500, when Leonardo was living at Milan under the patronage of Lodovico il Moro, a time concerning which we have otherwise only very scanty information. If Leonardo did really—as has always been supposed,—spend also the greater part of the preceding decade in Milan, it seems hardly likely that we should not find a single note indicative of the fact, or referring to any event of that period, on the numerous loose leaves in his writing that exist. Leonardo's life in Milan between 1489 and 1500 must have been comparatively uneventful. The MSS. and memoranda of those years seem to prove that it was a tranquil period of intellectual and artistic labour rather than of bustling court life. Whatever may

have been the fate of the MSS. and note books of the foregoing years—whether they were destroyed by Leonardo himself or have been lost—it is certainly strange that nothing whatever exists to inform us as to his life and doings in Milan earlier than the consecutive series of manuscripts which begin in the year 1489.

There is nothing surprising in the fact that the notes regarding his pupils are few and meagre. Excepting for the record of money transactions only very exceptional circumstances would have prompted him to make any written observations on the persons with whom he was in daily intercourse, among whom, of course, were his pupils. Of them all none is so frequently mentioned as Salai, but the character of the notes does not—as it seems to me—justify us in supposing that he was any thing more than a sort of factotum of Leonardo's (see 1519, note).

Leonardo's quotations from books and his lists of titles supply nothing more than a hint as to his occasional literary studies or recreations. It was evidently no part of his ambition to be deeply read (see Nrs. 10, 11, 1159) and he more than once expressly states (in various passages which will be found in the foregoing sections) that he did not recognise the authority of the Ancients, on scientific questions, which in his day was held paramount. Archimedes is the sole exception, and Leonardo frankly owns his admiration for the illustrious Greek to whose genius his own was so much akin (see No. 1476). All his notes on various authors, excepting those which have already been inserted in the previous section, have been arranged alphabetically for the sake of convenience (1469—1508).

The passages next in order contain accounts and inventories principally of household property. The publication of these—often very trivial entries—is only justifiable as proving that the wealth, the splendid mode of life and lavish expenditure which have been attributed to Leonardo are altogether mythical; unless we put forward the very improbable hypothesis that these notes as to money in hand, outlay and receipts, refer throughout to an exceptional state of his affairs, viz. when he was short of money.

The memoranda collected at the end (No. 1505—1565) are, in the original, in the usual writing, from left to right. Besides, the style of the handwriting is at variance with what we should expect it to be, if really Leonardo himself had written these notes. Most of them are to be found in juxtaposition with undoubtedly authentic writing of his. But this may be easily explained, if we take into account the fact, that Leonardo frequently wrote on-loose sheets. He may therefore have occasionally used paper on which others had made short memoranda, for the most part as it would seem, for his use. At the end of all I have given Leonardo's will from the copy of it preserved in the Melzi Library. It has already been printed by Amoretti and by Uzielli. It is not known what has become of the original document.

1379. The mysterious looking words, quite distinctly written, in line 1: *ingol, amor a, ilopan a* and on line 2: *enoiganod al* are obviously in cipher and the solution is a simple one; by reading them backwards we find for *ingol*: *logni*—probably *longi*, evidently the name of a person; for *amor a*: *a Roma*, for *ilopan a*: *a Napoli*. Leonardo has done the same in two passages treating on some secrets of his art Nos. 641 and 729, the only other places in which we find this cipher employed; we may therefore conclude that it was for the sake of secrecy that he used it.

There can be no doubt, from the tenor of this passage, that Leonardo projected a secret excursion to Naples. Nothing has hitherto been known of this journey, but the significance of the passage will be easily understood by a reference to the following notes, from which we may infer that Leonardo really

had at the time plans for travelling further than Naples. From lines 3, 4 and 7 it is evident that he purposed, after selling every thing that was not easily portable, to leave a chest in the care of his relations at Vinci. His luggage was to be packed into two trunks especially adapted for transport by mules. The exact meaning of many sentences in the following notes must necessarily remain obscure. These brief remarks on small and irrelevant affairs and so forth are however of no historical value. The notes referring to the preparations for his journey are more intelligible.

2. *Libro di Vitolone* see No. 1506 note.

7 and fol. It would seem from the text that Leonardo intended to have instructions in painting on paper. It is hardly necessary to point out that the Art of illuminating was quite separate from that of painting.

11. *De Ponderibus.* A large number of Leonardo's notes bear this superscription. Compare No. 1436, 3.

1380. This note must have been made in Milan; as we know from the date of the MS.

1381. Callias, Architect of Aradus, mentioned by Vitruvius (X, 16, 5).—Epimachus, of Athens, invented a battering-engineer for Demetrius Poliorketes (Vitruvius X, 16, 4).—Callimachus, the inventor of the Corinthian capital (Vitr. IV, 1, 9), and of the

method of boring marble (Paus. I, 26, 7), was also famous for his casts in bronze (Plin. XXXIV, 8, 19). He invented a lamp for the temple of Athene Polias, on the Acropolis of Athens (Paus. I, 26, 7).—The other names, here mentioned, cannot be identified.

1382. *Condotti d'acqua.* Possibly a book, a MS. or a map.

1383. On the same sheet is the text No. 663.

S. K. M. III. 18]

1414. 1. pagolo di uannocco. 2. codi röcho . — domenico chia umo. 5. prigone. 6. bissconte stracinato . . el figiolo. 7. gan della rosa tolto li e danari. 8. borgonzo . . pro. 9. ella roba elliberta.

1410. *Caravaggio*, a village not far from the Adda between Milan and Brescia, where Polidoro and Michelangelo da Caravaggio were born. This note is given in facsimile on Pl. XIII, No. 1 (above, to the left). On Pl. XIII, No. 2 above to the right we read *cerouaro*.

1413. This note is written between lines 23 and 24 of the text No. 710. *Corduso*, *Cordusio* (*curia ducis*) = *Cordus* in the Milanese dialect, is the name of a Piazza between the *Via del Broletto* and the *Piazza de' Mercanti* at Milan. In the time of il Moro it was the centre of the town. The persons here named were members of the noble Milanese family de' Fossani; Ambrogio da Fossano, the contemporary painter, had no connection with them.

1414. l. 4—10. This passage evidently refers to

events in Milan at the time of the overthrow of Ludovico il Moro. Amoretti published it in the *'Memorie Storiche'* and added copious notes.

6. *Visconti*. *Chi fosse quel Visconte non sapremmo indovinare fra tanti di questo nome. Arluno narra che allora atterrate furono le case d' e Visconti, d' e Castiglioni, d' e Sanseverini, e d' e Botta e non è improbabile che ne fossero insultati e morti i padroni. Molti Visconti annovera lo stesso Cronista che per essersi rallegrati del ritorno del duca in Milano furono da' Francesi arrestati, e strascinati in Francia come prigionieri di stato; e fra questi Messer Francesco Visconti, e suo figliuolo Battista.* (AMORETTI, *Mem. Stor. XIX.*)

8. *Borgonzio o Brugonzio Botta fu regolatore delle ducale entrate sotto il Moro, alla cui fuga la casa sua fu pur messa a sacco da' partitanti francesi.* (AMORETTI, l. c.)

1427. 1. leuato i che. 2. c he d spingano.

1424. L. 1—3 are in the original written between
lines 3 and 4 of No. 292. But the sense is not clear
in this connection. It is scarcely possible to de-
vive the meaning of the following sentence.

2. 3. Gherardo Miniatore, a famous illuminator,
1445—1497, to whom Vasari dedicated a section of
his Lives (Vol. II pp. 237—243, ed. Sansoni 1879).

5. Bernardo, possibly the painter Bernardo Ze-
nale.

1427. The sketch on the same page as this text
represents two poles one across the other. At the
ends of the longest are the letter *c* and *d*. The
sense of the passage is not rendered any clearer.

1428. This seems to be a speculation about the
flying machine (compare p. 271).

1429. Leonardo perhaps alludes to the Gauls under
Brennus, who laid his sword in the scale when the
tribute was weighed.

1441. 6. *Marc Antonio*, see No. 1433.

1443. *Alessandro Farnese*, afterwards Pope Paul III was created in 1493 Cardinal di San Cosimo e San Damiano, by Alexander VI.

1444. i. *Pandolfino, Agnolo*, of Florence. It is to this day doubtful whether he or L. B. Alberti was the author of the famous work '*Del Governo della Famiglia*'. It is the more probable that Leonardo should have meant this work by the words *il libro*, because no other book is known to have been written by Pandolfino. This being the case this allusion of Leonardo's is an important evidence in

favour of Pandolfino's authorship (compare No. 1454, line 3).

7. The works of Lactantius were published very often in Italy during Leonardo's lifetime. The first edition published in 1465 "*in monastero subiacensi*" was also the first book printed in Italy.

15. *Sansovino, Andrea*—the sculptor; 1460—1529.

25. Leonardo here probably alludes to the map, not executed by him (See p. 224), which is with the collection of his MSS. at Windsor, and was published in the *Archaeologia Vol. XI* (see p. 224).

C. A. 145a; 432a]

¶ Di quel di Pavia si lauda · piv · il movimento · che nessun altra cosa;—

¶² L'imitatione · delle cose · antiche · è piv laudabile · che quella delle · moderne;—

¶³ Nō può essere bellezza · e vtilità · come appare nelle fortezze ⁴e nell'i omini; ¶

¶⁵ Il trotto · è quasi di qualità di cavallo libero;—

⁶Doue · manca · la uiuacità naturale, bisogna farne una accidētale. ¶

1445.

In that at Pavia the movement is more to be admired than any thing else.

The imitation of antique work is better than that of the modern things.

Beauty and utility cannot exist together, as seen in fortresses and in men.

The trot is almost the nature of the free horse.

Where natural vivacity is lacking it must be supplied by art.

1450. 1. *Guiliano Gondi*. Ser Piero da Vinci, Leonardo's father, lived till 1480, in a house belonging to Giuliano Gondi. In 1498 this was pulled down to make room for the fine Palazzo built on the Piazza San Firenze by Giuliano di San Gallo, which still exists. In the *Riassunto del Catasto di Ser Piero da Vinci*, 1480, Leonardo is not mentioned; it is evident therefore that he was living elsewhere. It may be noticed incidentally that in the *Catasto di Giuliano Gondi* of the same year the following mention is made of his four eldest sons:

*Lionardo mio figliuolo d'età d'anni 29, non fa nulla,
 Giovambatista d'età d'anni 28 in Ghostantinopoli,
 Billichozo d'età d'anni 24 a Napoli,
 Simone d'età d'anni 23 in Ungheria.*

He himself was a merchant of gold filigree (*facci-amo lavorare una bottega d'arte di seta . . . facciamo un pocho di trafico a Napoli*). As he was 59 years old in 1480, he certainly would not have been alive at the time of Leonardo's death. But Leonardo must have been on intimate terms with the family till the end of his life, for in a letter dated June 1. 1519, in which Fr. Melzi, writing from Amboise, announces

Leonardo's death to Giuliano da Vinci at Florence (see p. 284), he says at the end "*Datemene risposta per i Gondi*" (see UZIELLI, *Kicerche*, passim).

Most of the other names on the list are those of well-known Florentine families.

1452. See No. 844, note, p. 130.

1453. In July 1506 Pope Julius II gave Donna Lucrezia della Rovere, the daughter of his sister Lucchina, in marriage to the youthful Marcantonio Colonna, who, like his brothers Prospero and Fabrizio, became one of the most famous Captains of his family. He gave to him Frascati and made him a present of the palazzo he had built, when Cardinal, near the church of Santi Apostoli which is now known as the Palazzo Colonna (see GREGOROVIUS, *Gesch. der Stadt Rom.* Vol. VIII, book XIV 1, 3. And COPPI, *Mem. Collonesi* p. 251).

1454. Much of No. 1444 is repeated in this memorandum.

2. Vasari states that Leonardo invented mechanical birds which moved through the air. Compare No. 703.

1456. This fragmentary note is written on the margin of a drawing of two legs.

1457. This note occurs on a pen and ink drawing made by Leonardo as a sketch for the celebrated large cartoon in the possession of the Royal Academy of Arts, in London. This cartoon is commonly supposed to be identical with that described and lauded by Vasari, which was exhibited in Florence at the time and which now seems to be lost. Mr. Alfred Marks, of Long Ditton, in his valuable paper (read before the Royal Soc. of Literature, June 28, 1882) "On the St. Anne of Leonardo da Vinci", has adduced proof that the cartoon now in the Royal Academy was executed earlier at Milan. The note here given, which is written on the sheet containing the study for the said cartoon, has evidently no

reference to the drawing on which it is written but is obviously of the same date. Though I have not any opening here for discussing this question of the cartoon, it seemed to me important to point out that the character of the writing in this note does not confirm the opinion hitherto held that the Royal Academy cartoon was the one described by Vasari, but, on the contrary, supports the hypothesis put forward by Mr. Marks.

1458. *Il di della Maddalena.* July 22.

6. *Marco*, probably Leonardo's pupil Marco d'Ag-gionno; 1470 is supposed to be the date of his birth and 1540 of his death.

Che stava con meco. We may infer from this that he left the master shortly after this, his term of study having perhaps expired.

⁹ Item a dì 26 di gienaro seguēte, esendo io in casa di messer Galeazzo da San Severino a ordinare la festa ¹⁰ della sua giostra, e spogliandosi certi staffieri per prouarsi alcune vesti d'omini saluatici ch'a detta *lige 2 S 4*

¹¹ festa accadeano, Giacomo s'accostò alla scarsella d'uno di loro, la qual era i sul letto con altri panni, ¹²e tolse quelli dinari che dêtre vi trovò.

¹³ Itē essendomi da maestro Agostino da Pavia donato in detta casa una pelle turchesca da fare uno *lige 2.*

¹⁴ pajo di stualetti, esso Giacomo infra uno mese me la rubò, e vendè la a uno conciatore di ¹⁵ scarpe per 20 soldi, de' quali danari secondo che lui proprio mi cōfessò, ne cōprò anici cōfetti;

¹⁶ Itē ancora a dì 2 d'aprile, lasciādo Giā Atonio uno grafio d'argiēto sopra uno suo disegnio, ¹⁷esso Giacomo gli lo rubò, il qual era di ualuta di soldi **24 lira 1^a S 4.**

¹⁸ Il primo ¹⁹anno

²⁰ v mātello, lire 2

²¹ camicie 6, lire 4

²² 3 givboni, lire 6

1465. 2. *Giovā*; it is not likely that Leonardo should have called *Giovān' Antonio Beltraffio* at one time *Giovanni*, as in this note and another time *Antonio*, as in No. 1464 while in No. 1458 l. 16 we find *Giovān' Antonio*, and in No. 1436, l. 6 *Beltraffio*. Possibly the *Giovanni* here spoken of is Leonardo's less known pupil *Giovān Pietrino* (see No. 1467, 5).

2. 3. *Francesco de' Melzi* is often mentioned, see Nos. 1350.

3. *Salai*. See No. 1519 note.

4. *Lorenzo*. See No. 1351, l. 10 (p. 408). Amoretti gives the following note in *Mem. Stor. XXIII*: 1505. *Martedī—sera a dì 14 d'aprile. Venne Lorenzo a stare con mecho: disse essere d'età d'anni 17 . . a dì 15 del detto aprile ebbi scudi 25 d'oro dal chamerlingo di Santa Maria nuova.* This, he asserts is derived from a MS. marked S, in quarto. This MS. seems to have vanished and left no trace behind; Amoretti himself had not seen it, but copied from a selection of

extracts made by Oltrocchi before the Leonardo MSS. were conveyed to Paris on the responsibility of the first French Republic. Lorenzō, by this, must have been born in 1487. The sculptor Lorenzetto was born in 1490. Amoretti has been led by the above passage to make the following absurd observations:

Cotesto Lorenzo, che poi gli fu sempre compagno, almeno sin che stette in Italia, sarebb'egli Lorenzo Lotto bergamasco? Sappiamo essere stato questo valente dipintore uno d'bravi scolari del Vinci?

Il Fāfōia, perhaps a nickname. Cesare da Sesto, Leonardo's pupil, seems to have been in Rome in these years, as we learn from a drawing by him in the Louvre.

1466. This seems to be an account for two assistants. The name of the second is scarcely legible. The year is not given. The note is nevertheless of chronological value. The first line tells us the date when the note was registered, January 3^d, and the

observations that follow refer to events of the previous month 'of last year' (*dell'anno passato*). Leonardo cannot therefore have written thus in Florence where the year was, at that period, calculated as beginning in the month of March (see Vol. I, No. 4, note 2). He must then have been in Milan. What is more important is that we thus learn how to date the beginning of the year in all the notes written at Milan. This clears up Uzielli's doubts: *A Milano facevasi cominciar l'anno ab incarnatione, cioè il 25 Marzo e a nativitate, cioè il 25 Decembre. Ci sembra probabile che Leonardo dovesse prescelgire lo stile che era in uso a Firenze.* (Ricerche, p. 84, note.)

1467. 5. See No. 1465, 2.

1469. The late Marchese Girolamo d'Adda published a highly valuable and interesting disquisition on this passage under the title: *Leonardo da Vinci e la sua Libreria, note di un bibliofilo* (Milano 1873. Ed. di soli 75 esemplari; privately printed). In the autumn of 1880 the Marchese d'Adda showed me a considerable mass of additional notes prepared for a second edition. This, as he then intended, was to come out after the publication of this work of mine. After the much regretted death of the elder Marchese, his son, the Marchese Gioachino d'Adda was so liberal as to place these MS. materials at my disposal for the present work, through the kind intervention of Signor Gustavo Frizzoni. The following passages, with the initials G. d'A. are prints from the valuable notes in that publication, the MS. additions I have marked*. I did not however think myself justified in reproducing here the acute and interesting observations on the contents of most of the rare books here enumerated.

1. "La nobel opera de arithmetiche ne la qual se tracta tute cose americantia pertinente facta & compilata per Piero borgi da Veniesia", in-4°. In fine: "Nela indita citta di Venetia a giorni. 2 augusto. 1484. fu imposto fine ala presente opera." Segn. a—p. quaderni. V'ha perd

un'altra opera simile di Filippo Calandro, 1491. È da consultarsi su quest'ultimo, Federici: *Memorie Trevisiane, Fiore di virtù: pag. 73. "Libricciuolo composto di bello stile verso il 1320 e più volte impresso nel secolo XV (ristampato poi anche più tardi). Gli accademici della Crusca lo ammettono nella serie dei testi di lingua. Vedasi Gamba, Razzo'ini, Panzer, Brunet, Lechi, ecc. (G. d'A.)*

2. "Historia naturale di C. Plinio Secondo, tradotta di lingua latina in fiorentina per Christophoro Laudino & Opus Nicolai Jansonis gallici imp. anno salutis M. CCCC. LXXVI. Venetiis" in-fol.—Diogene Laertio. Incomincia: "El libro de la vita de philosophi etc.: Impressum Venetiis per Bernardinum Celerium de Luere, 1480", in-4° (G. d'A.).

3. "La Bibbia volgare historiata (per Nicoldi Malerimi) Venetia . . . M. CCCC. LXXI in kalende di Augusto (per Vindelino de Spira)" 2 vol. in-fol. a 2 col. di 50 lin.; od altra ediz. della stessa versione del Malerimi, Venetia 1471, e sempre: "Venetia per Gabriel de Piero 1477," in-fol.; 2 vol.; Ottavio Scotto da Modoetia 1481," "Venetia 1487 per Joan Rosso Vercellese," "1490 Giovanni Ragazzo di Monteferato a instantia di Luchanthonio di Giunta, ecc."—Lapidario Teofrasto? Mandebille: "Le grand lapidaire," versione italiana ms.? . . . Giorgio Agricola non può essere, perchè nato nel 1494, forse Alberto Magno: de mineralibus. * Potrebbe essere una traduzione del poema latino (*Liber lapidum seu de gemmis*) di Marbodio Veterio di Rennes (morto nel 1123) da lui stesso tradotto in francese dal greco di Evao rè d'Arabia celebre medico che l'aveva composto per l'imperatore Tiberio. Marbodio scrisse il suo prima per Filippo Augusto rè di Francia. Vi sono anche traduzioni in prosa. "Il lapidario o la forza e la virtù delle pietre preziose, delle Erbe e degli Animali." (G. d'A.)

4. Il Vegetio? . . . Il Frontino? . . . Il Cornazzano? . . . Noi crediamo piuttosto il Valturio. Questo libro doveva essere uno de' favoriti di Leonardo poichè libro di scienza e d'arte nel tempo stesso.

Le edizioni a stampa sono le seguenti: La prima: "Roberti Valturiū de re militari, libri XII ad Sigismundum Pandulfum Malatestam . . . Johannes ex Verona oriundus: Nicolai cyrugia medici filius: Artis impressorie magister: hunc de re militari librum elegantissimum; litteris, & figuratis signis sua in patria primus impressit. An. M. CCCCLXXII." in-fol. senza numerazione.

La seconda edizione è di Bologna, 1483, ristampata a Parigi nel 1532, e poi nuovamente nel 1533. Paolo Ramusio la volgeva in italiano e la pubblicava di nuovo in Verona coi tipi del Paganino, sempre in-fol., 1483 (le stampe di formato più piccolo), e Luigi Meigret la traduceva in lingua francese nel 1555 a Parigi.

"Mediolani per Leon. Pachel & Ulric. Scinzenzeler 1484" in-4°—.

5—7. Abbiamo varie versione delle Deche di Tito Livio, impresse nel secolo XV. Il "Tito Livio volgarizzato (da Ruggiero Ferario) Roma Uldarico Gallo nel 1476," un tom. in 3 vol. in-fol. "Bologna per maestro Antonio da Bologna 1478," piccolo in-fol. "Venetia Octaviano Scoto 1481," pic. in-fol. Venetia Bartholomeo de Alexandria & Andrea de Asula 1485. Bartholomeo de Zanis, 1490, ecc." Vedasi il Manuel del Brunet o meglio il Repertorium dell'Hain ed il Panzer. (G. D'A.)

5. "Arnaldi de Villanova & Johannis Mediolanensis Regimen sanitatis Salernitanum, 1480," in-4° ovvero "Tractato utilissimo circa la conservatione de la sanitade, ecc. composto per il clarissimo ed excellente philosopho & doctore di medicina messer Ugo Benzo di Siena, ecc.", in-4°, caratteri gotici senza numeri e senza nome di tipografo. In fine: "Exactum est hoc opus Mli (Mediolani) cura & diligentia Petri de Corneno Mediolanensis, 1481. pridie kalendas Junias. Johanne Galeatio Sforcia Vicecomite principe nostro invictissimo dominante." V. Sassi Argelati. Parte I, vol. I, p. DLXXV. (G. D'A.)

6. L'Acerba (da acervus, cumulo), il noto poema di Francesco Stabili, astrologo nemico dell'Alighieri. Numerose edizioni del secolo XV e XVI. È una vera encyclopédia in versi, ripiena di idee arditissime e che valsero all'infelice pensatore il rogo nel 1347. In questo poema trovansi delineate le origini di molti trovati moderni, ed in particolare della circolazione del sangue, due secoli prima del Michele Serveto. Della prima edizione di Brescia Ferrandus s. a. in-fol. non si conosce che un solo esemplare nella Spenceriana. V. Dibdin. (G. D'A.)

7. "Incomenza el libro chiamato della vita ecc., cōposto per Alberto magno filosofo excellentissimo ecc. Neapoli

Bernardini de gerardinis de Amelia, 1478," in-4°. Altra edizione di "Bologna per Bazalino di Bazaliero, 1493," in-4° got. (G. D'A.)

8. Forse "Guido dalle Colonne" detto anche "da Caulico," "Guidonis de Cauliaco Cyrurgia. Turra de Castello recepta atque balnei de Porecta ecc. Venetiis mandato & expensis Octavianoi Scotti cura & arte Boneti Locatelli, 1498" in-fol. got.: rarissimo trattato di chirurgia. Ebbe traduzioni francesi parecchie e nel secolo XV anche una versione italiana s. l. n. a. ed un'altra in lingua castigliana nel 1498. Vedi: Brunet, Panzer, Hain e Mendez. — L. Guil. de Saoua rhetorica nova, S. Albano, in-4° 1480 (Laurentius Guilelmus). È libro d'più rari (Brunet, Tomo V, col. 137). S. Albans, Albani Villa, Verulanum, Borgo inglese nella contea di Hertfordshire, la patria di Bacone Francesco. (G. D'A.)

9. De agricultura. "Il libro della agricultura di Pietro Crescenzio," prima edizione di questa versione italiana scritta nel trecento e testo di lingua citato dall'Accademia della Crusca. "Florentie per me Nicholaum Laurentii alemanum diocesis uratissiensis anno M. CCCC. L. XXVIII," in-fol.—Cibdone: Le materie trattate in questo singolarissimo libretto sono: dei frutti, delle erbe, della flebotomia, della medicina, della luxuria, del bagno, ecc. Almansor-ebn-Isahak fu governatore del Chorassan ed al suo nome intitolava Raze i suoi dodici libri di medicina, che in compendio contengono tutto il sistema medico degli Arabi. Quest'ultima edizione in-4°. Brescia per d. Bapt. de Farfengo, si compone di sei carte s. n. 2. o seg. caratteri semigotici a 2 col. (G. D'A.)

*10. Quadrirègio (libro chiamato il) di Federigo Frezzi domenicano. È poema religioso-morale-scientifico in terzine. Fra gli imitatori della Divina Comedia è dei migliori "non indegno di gir dietro a Dante" dice il Quadrio. Questo poema è in oggi ingiustamente negletto e quasi sconosciuto, ancorchè in tempi da noi lontani fosse stato nobilmente stampato più volte. Ebbe almeno sette edizioni dal 1481 al 1515, e contiene bellezze di primo ordine. *L'edizione che con molta probabilità era fra i libri di Leonardo ritenevamo quella di Milano 1488 Zaroto. Un esemplare all'Ambrosiana fra i quattrocentisti donati da G. Porro; — forse più rara che molte altre.*

"Fabulæ de Esopo historiate," in-4° fig. senza nota di tempo e di luogo; o l'edizione di Venezia per Manfredo da Monserrato, in-4° fig. 1481 e 1490; od anche: "Brescia per Boninum de Boninis 1487," in-4° con 67 belle figure silografiche; "Roma, Silber 1483," Venetia Manfredo Bo-

neilo da Streno, 1497, in-4°, ecc., o più probabilmente: "Aesop" vita & fabulae latine cum versione italica & allegoriis I'r. Tuffi impresse, Napoli, 1483," in-fol., rara edizione ornata di belle vignette incise in legno. Questo Esopo è anche libro di novelle. Nel Catalogo Cicognara abbiamo una minuta descrizione di questo rarissimo volume. (G. d'A.)

11. "Donatus latine & italice: Impressum Venetiis impenis Johannis Baptistae de Sessa anno 1499, in-4°".—

"El Psalterio de David in lingua volgare (da Malermi Venetia nel M.CCCC.LXXVI)," in-fol. s. n. (G. d'A.)

12. Compare No. 1210, 48.—La versione di Girolamo Squarzafico: "Il libro di Justino posto diligentemente in materna lingua. Venetia ale spesse (sic) di Johane de Colonia & Johane Gheretze... 1477," in-fol.—"Marsili Ficini, Theologia platonica, sive de animarum immortalitate, Florentine, per Ant. Misconimum 1482," in-fol., ovvero qualche versione italiana di questo stesso libro, ms. (G. d'A.)

13. Forse "la Historia Trojana Guidonis," od il "manipulus" di "Guido da Monterocherii," ma più probabilmente "Guido d'Arezzo," il di cui libro: "Micrologus, seu disciplina artis musicæ" poteva da Leonardo aversi ms.; di questi ne esistono in molte biblioteche, e fu poi impresso nel 1784 dal Gerbert.

Molte sono le edizioni dei sonetti di Burchiello Fiorentino, impresse nel secolo XV. La prima e più rara e cercata: "Incominciano li sonetti, ecc. (per Christoforo Arnaldo)," in-4° senza numeri, richiami o signature, del 1475, e fors' anche del 1472, secondo Morelli e Dibdin, ecc. (G. d'A.)

14. Versione italiana del "Doctrinal de Sapience" di Guy de Roy, e fors' anche l'originale in lingua francese.—

Di Pulci Luigi, benchè nell'edizione: "Florentiae 1479" in-4° si dica: "Il Driadeo composto in rima octava per Lucio Pulcro." Altre ediz. del secolo XV, "Florentie Miscomini 1481, in-4°, Firenze, apud S. Jacob. de Ripoli, 1483," in-4° e "Antoni de Francesco, 1487," in-4° e Francesco di Jacopo 1489," in-4° ed altre ancora di Venezia e senza alcuna nota ecc. (G. d'A.)

15. Una delle edizioni del Morgante impresse nel secolo XV, ecc.—

Quale delle opere di Francesco Petrarca, sarebbe malagevole l'indovinare, ma probabilmente il Canzoniere. (G. d'A.)

16. Sono i viaggi del cavaliere "Mandeville," gentiluomo inglese. Scrisse il suo libro in lingua francese. Fu stampato replicatamente nel secolo XV in francese, in inglese ed in italiano,* ed in tedesco; del secolo XV ne annoverano forse più di 27 edizioni, di cui ne conosciamo 8 in francese, quattro in latino, sei in tedesco e molte altre in volgare. (G. d'A.)

17. Il Platina (Bartolomeo Sacchi) la versione italiana "de la honesta voluptate, & valetudine (& de li obsonii) Venetia (senza nome di tipografo) 1487," piccolo in-4° gotico. (G. d'A.)—Compare No. 844, 21.

18. Il Manganello: Satira eccessivamente vivace contro le donne ad imitazione della Sesta di Giovenale. Manganello non è soltanto il titolo del libricino, sua ben anche il nome dell'autore ch'era un "milanese". Di questo libricolo rarissimo, che sembra impresso a Venezia dallo Zoppino (Nicolò d'Aristotile detto il), senza data, ma dei primissimi anni del secolo XVI, e forse più antico, come vedremo in appresso, non se ne conoscono fra biblioteche pubbliche e private che due soli esemplari in Europa. (G. d'A.)

19. "Cronica desidero", sembra si deggia leggere piuttosto "cronico disidoro"; ed in questo caso s'intenderebbe la "cronica d'Isidoro" tanto in voga a quel tempo "Comenza la Cronica di Sancto Isidoro menore con alcune additione cavate del testo & istorie de la Bibbia & del libro di Paulo Orosio Impreso in Ascoli in casa del reverendo misser Pascale per mano di Guglielmo de Linis de Alamania M.CCCC.LXXVII" in-4° di 157 ff. È il primo libro impresso ad Ascoli e l'edizione principe di questa cronica in oggi assai rara. Non lo è meno l'edizione di Cividal del Friuli, 1480, e quella ben anche di Aquila, 1482, sempre in-4°. Vedasi Panzer, Hain, Brunet e P. Dechamps. (G. d'A.)

20. "Le pistole di Ovidio tradotte in prosa. Napol. Sixti. Riessinger", in-4°, oppure: "Epistole volgarizzate 1489," in-4° a due col. "impresse ne la citta (sic) di Bressa per pre: Baptista de Farfengo," (in ottave) o: "El libro delle Epistole di Ovidio in rima volgare per messere Dominico de Monticelli toscano. Brescia Farfengo," in-4° got. (in rima volgare), 1491, ed anche la versione di Luca Pulci. Firenze, Miscomini, 1481, in-4°. (G. d'A.)

21. See 1. 4.

22. "Jo: de Sacrobusto," o "Goro Dati," o "Tolosano da Colle" di cui molteplici edizioni del secolo XV. (G. d'A.)

23. Tre edizioni delle faczie del Poggio abbiamo in lingua italiana della fine del secolo XV, tutte senza data. "Facetie de Poggio fiorentino traducte de latino in vulgare ornatissimo," in-4^o, segn. a—e in caratteri romani; l'altra: "Facetie traducte de latino in vulgare," in-4^o, caratteri gotici, ecc. (G. D'A.)

24. *"Die Kunst Cyromantia etc. in tedesco. 26 ff. di testo e figure il tutte eseguito sù tavole di legno verso la fine del secolo XV da Giorgio Schapff". Dibdin, Heinecken, Sotheby e Chatto ne diedero una lunga descrizione; i primi tre accompagnati da fac-simili. La data 1448 che si legge alla fine del titolo si riferisce al periodo della composizione del testo, non à quello della stampa del volume benché tabellario. Altri molti libri di Chiromanzia si conoscono di quel tempo e sarebbe opera vana il citarli tutti. (G. D'A.)

25. Miniatore Bartolomeo. "Formulario de epistole vulgare missive e responsive, & altri fiori de ornati parlamenti al principe Hercule d'Esti ecc. composto ecc. Bologna per Ugo di Rugerii," in-4^o, del secolo XV. Altra edizione di "Venetia Bernardino di Novara, 1487" e "Milano per Joanne Angelo Scinzenzeler 1500," in-4^o. (G. D'A.)

Five books out of this list are noted by Leonardo in another MS. (Tr. 3): donato, — lapidario, — plinio, — abacho, — morgante.

1470. Nonius Marcellus and Sextus Pompeius Festus were Roman grammarians of about the fourth century A. D. Early publications of the works of Marcellus are: *De proprietate sermonis, Romae* (about 1470), and 1471 (place of publication unknown). *Compendiosa doctrina, ad filium, de proprietate sermonum*. Venice, 1476. BRUNET, *Manuel du libraire* (IV, p. 97) notes: *Le texte de cet ancien grammairien a été réimprimé plusieurs fois à la fin du XV^e siècle, avec ceux de Pompeius Festus et de Terentius Varro. La plus ancienne édition qui réunisse ces trois auteurs est celle de Parme, 1480 . . . Celles de Venise, 1483, 1490, 1498, et de Milan, 1500, toutes in-fol.; ont peu de valeur.*

1472. 1. Compare No. 1113, 25.

2. *Vitruvius de Arch., et Frontinus de Aqueductibus*. Florence, 1513.—This is the earliest edition of Frontinus.—The note referring to this author thus suggests a solution of the problem of the date of the Leicester Manuscript.

1476. Where Leonardo found the statement that Cato had found and restored the tomb of Archimedes, I do not know. It is a merit that Cicero claims as his own (*Tusc.* V, 23) and certainly with a full right to it. None of Archimedes' biographers—not even the diligent Mazzucchelli, mentions any version in which Cato is named. It is evidently a

1474.

The Archimedes belonging to the Bishop of Padua.

1475.

Archimedes gave the quadrature of a polygonal figure, but not of the circle. Hence Archimedes never squared any figure with curved sides. He squared the circle minus the smallest portion that the intellect can conceive, that is the smallest point visible.

1476.

If any man could have discovered the utmost powers of the cannon, in all its various forms and have given such a secret to the Romans, with what rapidity would they have conquered every country and have vanquished every army, and what reward could have been great enough for such a service! Archimedes indeed, although he had greatly damaged the Romans in the siege of Syracuse, nevertheless did not fail of being offered great rewards from these very Romans; and when Syracuse was taken, diligent search was made for Archimedes; and he being found dead greater lamentation was made for him by the Senate and people of Rome than if they had lost all their army; and they did not fail to honour him with burial and with a statue. At their head was Marcus Marcellus. And after the second destruction of Syracuse, the sepulchre of Archimedes was found again by Cato [25], in the ruins of a temple. So Cato had the temple restored and the sepulchre he so highly honoured . . . Whence it is written that Cato said that he was not so proud of any thing he had done as of having paid such honour to Archimedes.

slip of the memory on Leonardo's part. Besides, according to the passage in Cicero, the grave was not found '*nelle ruine d'un tempio*'—which is highly improbable as relating to a Greek—but in an open spot (H. MÜLLER-STRÜBING).—See too, as to Archimedes, No. 1417.

Leonardo says somewhere in MS. C.A.: *Architronito è una macchina di fino rame, invenzion d'Archimede* (see 'Saggio', p. 20).

CORNELIO CELSO.

² Il soño · bene · è la sapiëza ; il soño male · è il dolore · del corpo; jnperochè, essēdo ³noi composti · di 2 cose, cioè · d' anima · e di corpo, ⁴delle quali la prima · è migliore ·, la peggiore · è il corpo; la sapiëzia è ⁵della miglior parte ·; il sommo male è della peggior parte e pessima; Ottima cosa è nell'animo la sapiëza, così è pessima ⁶cosa nel corpo il dolore; ⁷adūque, sicome il sommo male è l' corporal dolore, così la sapiëzia è dell'animo ⁸il soño bene, cioè dell'uomo sagio, e nissvna altra cosa è da cōparare a questa.

CORNELIUS CELSUS.

The highest good is wisdom, the chief evil is suffering in the body. Because, as we are composed of two things, that is soul and body, of which the first is the better, the body is the inferior; wisdom belongs to the better part, and the chief evil belongs to the worse part and is the worst of all. As the best thing of all in the soul is wisdom, so the worst in the body is suffering. Therefore just as bodily pain is the chief evil, wisdom is the chief good of the soul, that is with the wise man; and nothing else can be compared with it.

Tr. 57]

1487.

Demetrio solea dire non essere differētia · dalle parole e voci dell'inperiti igniorati, ²che sia da suoni e strepiti · cavasati dal ventre ripieno di superfluo vēto; ³e questo nō senza cagiō dicea, iperochè lui nō reputava esser differētia da qual parte ⁴costoro mādassino · fuora la voce, o dalle parti iſeriori o dalla bocca, ⁵che l'una · e l'altra era di pari valimēto e sustātia.

Demetrius was wont to say that there was no difference between the speech and words of the foolish and ignorant, and the noises and rumblings of the wind in an inflated stomach. Nor did he say so without reason, for he saw no difference between the parts whence the noise issued; whether their lower parts or their mouth, since one and the other were of equal use and importance.

tica*’ of Horace [5].

per Mattheum Cerdonis de Vuindischgretz, 1484,” in-40;
“*Lipsia, 1493,*” in-40; “*Venezia, 1494,*” in-40 e rivo “1498,”
con fig. Queste figure per altro non sono, come si è pre-
teso, le prime che fossero introdotte in un trattato di No-
toma. Nel ‘*fasciculus Medicinae*’ di Giovanni Ketham,
che riproduce l‘*Anatomia* del Mundinus, impresso pure a
Venezia da J. e G. de Gregorius, 1491, in-fol., contengono
intagli in legno (si vogliono disegnati non già incisi da
Andrea Mantegna) di grande dimensione, e che furono
più volte riprodotti negli anni successivi. Quest’edizione
del ‘*fasciculus*’ del 1491, sta fra nostri libri e potrebbe
benissimo essere il volume d’*Anatomia* notato da Leonardo.
(G. d’A.)

1497.

The catapult, as we are told by Nonius
and Pliny, is a machine devised by those &c.

Ash. II. 12^δ]

Ò ritrovato nele Storie delli Spagnioli
come nelle guerre da loro ²avute colli
Inglesi fu Archimede Siracusano, il quale
i quel tēpo ³dimorava i cōpagnia di Ecli-
derides, rē de' Cirodastri; Il quale nella
⁴pugnia marittima ordinò, che i navili fus-
sino con lunghi arbori, ⁵e sopra le lor
gaggie ⁶collocò vna antennetta di lūgezza
di 40 piē, e ^{1/3} ⁷piē di grossezza; nel'
una stremità era vna ancora picciola, nel'
al⁸tra vn contrapeso; al' ancora era appic-
cato 12 piedi ⁹di catena e dopo essa
catena tāta corda ¹⁰che perveniu dalla
catena al nascimēto della gaggia ch'era
attaccata con una cordella; ¹¹da esso na-
scimēto mādaua i basso īsino al nascimēto
dell'arbore, ¹²dou'era collocato vn argano
fortissimo, e lì era fermo ¹³il nascimēto
d'essa corda; Ma per tornare all'uftio
d'essa machina ¹⁴dico che sotto a detta
ācora era vno foco, il quale con sommo
stre¹⁵pito gittava i basso i sua razzi e pi-
oggia di pegola ifocata, li qua¹⁶li piovēdo
sopra alla gaggia costrignevano li omni,
che lì erano, a ¹⁷abbādonare detta gaggia,
ōde calato l'ancora colle acut ¹⁸quella
cauava ai labri della gaggia; e subito era
tagliata la corda posta ¹⁹al nascimēto della
gaggia a sotener quella corda ch'ādava
²⁰dal'ācora al'argano, e tirādo il navilio . . .

I have found in a history of the Spaniards that in their wars with the English Archimedes of Syracuse who at that time was living at the court of Ecliderides, King of the Cirodastri. And in maritime warfare he ordered that the ships should have tall masts, and that on their tops there should be a spar fixed[6] of 40 feet long and one third of a foot thick. At one end of this was a small grappling iron and at the other a counterpoise; and there was also attached 12 feet of chain; and, at the end of this chain, as much rope as would reach from the chain to the base of the top, where it was fixed with a small rope; from this base it ran down to the bottom of the mast where a very strong spar was attached and to this was fastened the end of the rope. But to go on to the use of his machine; I say that below this grappling iron was a fire[14] which, with tremendous noise, threw down its rays and a shower of burning pitch; which, pouring down on the [enemy's] top, compelled the men who were in it to abandon the top to which the grappling-iron had clung. This was hooked on to the edges of the top and then suddenly the cord attached at the base of the top to support the cord which went from the grappling iron, was cut, giving way and drawing in the enemy's ship; and if the anchor—was cast . . .

Messer Vicentio Aliprādo, che sta presso all'osteria dell'Orso, à il Vetrūcio di Iacomo Andrea.

1501.

Messer Vincenzo Aliprando, who lives near the Inn of the Bear, has Giacomo Andrea's Vitruvius.

L. 538]

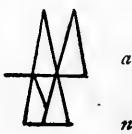

Dice Vetruvio che i modelli piccoli ²non sono in nessuna operazione confor³mi all'effetto de' grandi; la qual co⁴sa qui disotto intendo dimostra⁵re tale conclusione · essere falsa, ⁶c massimamente allegando quelli me⁷desimi termini, coi quali lui co⁸clude tale · sententia, cioè colla ⁹sperimentia · della triuella, per la qua le ¹⁰lui mostra essere fatto dalla po¹¹tentia dell'omo uno buco di cier-¹²ta quantità di diametro, e che poi ¹³vn buco di dupplicato diametro nō ¹⁴sarà fatto da dupplicata potentia ¹⁵di detto uomo, ma da molto più; all'¹⁶a qual cosa si può molto ben rispo¹⁷dere, allegando che il trivello

1502.

Vitruvius says that small models are of no avail for ascertaining the effects of large ones; and I here propose to prove that this conclusion is a false one. And chiefly by bringing forward the very same argument which led him to this conclusion; that is, by an experiment with an auger. For he proves that if a man, by a certain exertion of strength, makes a hole of a given diameter, and afterwards another hole of double the diameter, this cannot be made with only double the exertion of the man's strength, but needs much more. To this it may very well be answered that an auger

L. 53a]

di dupplicata figura non può ²essere mosso da dupplicata po³tentia, conciosiachè la superficie ⁴d'ogni corpo di figura simile è di dup⁵plicata quantità alla superficie, di ⁶quadruplicata qualità l'una ⁷all'altra, come mostrano le due ⁸figure · a · e · n.

1503.

of double the diameter cannot be moved by double the exertion, because the superficies of a body of the same form but twice as large has four times the extent of the superficies of the smaller, as is shown in the two figures *a* and *n*.

OF SQUARING THE CIRCLE, AND WHO IT WAS THAT FIRST DISCOVERED IT BY ACCIDENT.

Vitruvius, measuring miles by means of the repeated revolutions of the wheels which move vehicles, extended over many Stadia the lines of the circumferences of the circles of these wheels. He became aware of them by the animals that moved the vehicles. But he did not discern that this was a means of finding a square equal to a circle. This was first done by Archimedes of Syracuse, who by multiplying the second diameter of a circle by half its circumference produced a rectangular quadrilateral equal figure to the circle[10].

con aggiunte del principe Boncompagni, e le illustrazioni del cav. Enrico Narducci. Nel ‘Catalogo di manoscritti’ posseduti da D. Baldassare de’principi Boncompagni, compilato da esso Narducci, Roma, 1862, sotto al n. 358, troviamo citato: Vitellio, ‘Perspectiva’, manoscritto del secolo XIV. La ‘Prospettiva di Vitelleone’ (sic) Thuringo-poloni è citata due volte da Paolo Lomazzo nel Trattato dell’arte della pittura. Vitellio o Vitello o Witelio. Il suo libro fu impresso in foglio a Norimberga nel 1535; la secondo edizione è del 1551, sempre di Norimberga, ed una terza di Basilea, 1572. (See Indagini Storiche . . . sulla Libreria-Visconteo-Sforzesca del Castello di Pavia . . . per cura di G. D'A., Milano 1879. P. I. Appendice p. 113. 114).

1507. Altro codice di cestesa ‘Prospettiva’ del Vitolone troviamo notato nel ‘Canone bibliographico di Nicolò V’, conservato alla Magliabecchiana, in copia dell’originale verosimilmente inviato dal Parentucelli a Cosimo de’ Medici (Magliab. cod. segn. I VII, 30 carte da 193 a 198). Proviene dal Convento di San Marco e lo aveva trascritto frate Leonardo Scruberti fiorentino, dell’ordine dei predicatori che fu anche bibliotecario della Medicea pubblica in San Marco (See Indagini Storiche . . . per cura di G. D'A. Parte I, p. 97).

1504. Vitruvius, see also Nos. 1113 and 343.
10. Compare No. 1475.

1505. The end of the text cannot be deciphered.

1506. (Witelo, Vitellion, Vitellon) Vitellione. È da vedersi su questo ottico prospettico del secolo XIII Luca Pacioli, Paolo Lomazzo, Leonardo da Vinci, ecc. e fra i moderni il Graesse, il Libri, il Brunet, e le Memorie pubblicate dal principe Boncompagni, e ‘Sur l’orthographe du nom et sur la patrie de Witelo (Vitellion) note de Maximilien Curtze, professeur à Thorn’, ove sono descritti i molti codici esistenti nelle biblioteche d’Europa. Bernardino Baldi nelle sue ‘Vite d’matematici’, manoscritto presso il principe Boncompagni, ha una biografia del Vitellione. Questo scritto del Baldi reca la data 25 agosto 1588. Discorsero poi di lui Federigo Risnerio e Giovanni di Montetegro nella prefazione dell’Altagrano, Giovanni Boteone, Girolamo Cardano, ‘De subtilitate’, che nota gli errori di Vitellione. Visse, secondo il Baldi, intorno all’anno 1269, ma secondo il Reinoldo floriva nel 1299, avendo dedicata la sua opera ad un frate Guglielmo di Monteca, che visse di quei tempi.

Intorno ad un manoscritto dell’ottica di Vitellione, citato da Luca Pacioli v’ha un secondo esemplare del Kurtz,

1519. This note, of about the year 1494, is the earliest mention of Salai, and the last is of the year 1513 (see No. 1465, 3). From the various notes in the MSS. he seems to have been Leonardo's assistant and keeper only, and scarcely himself a painter. At any rate no signed or otherwise authenticated picture by him is known to exist. Vasari speaks somewhat doubtfully on this point.

1520. This note enables us to fix the date of the Manuscript, in which it is to be found. In 1495 the 4th of September fell on a Friday; the contents of the Manuscript do not permit us to assign it to a much earlier or later date (Compare No. 1522, and Note).

1522. See Nos. 1384 and 1517.

 12 e per berretta { fr. 1,
 13 al calzaiolo fr. 1°,
 14 a Salai fr. 1°;
 15 Venerdì mattina a dì 19 di luglio fiorino
 uno māco S 6, restò mi fr. 7 e 22 in cassa;
 16 martedì a dì 23 di luglio fiorino uno
 a Tomaso,
 17 lunedì mattina a Tomaso fiorino uno,
 18 [mercoledì mattina fiorino uno a Tomaso]
 19 giouedì mattina a dì p° d'agosto fiorino
 uno a Tomaso,
 20 domenica 4 d'agosto fiorino uno;
 21 venerdì a dì 9 d'agosto 1504 22 tolgo
 ducati 10 dalle casse.

On Monday morning 1 florin to Salai to spend on the house.

On Thursday I took 1 florin for my own spending.

Wednesday evening 1 florin to Tommaso, before supper.

Saturday morning 1 florin to Tommaso.

Monday morning 1 florin less 10 soldi: Thursday to Salai 1 florin less 10 soldi.

For a jerkin, 1 florin.

For a jerkin } 2 florins.

And a cap } 2 florins.

To the hosier, 1 florin.

To Salai, 1 florin.

Friday morning, the 19th of July, 1 florin, less 6 soldi. I have 7 fl. left, and 22 in the box.

Tuesday, the 23th day of July, 1 florin to Tommaso.

Monday morning, to Tommaso 1 florin.

[Wednesday morning 1 fl. to Tommaso.]

Thursday morning the 1st day of August 1 fl. to Tommaso.

Sunday, the 4th of August, 1 florin.

Friday, the 9th day of August 1504, I took 10 ducats out of the box.

Br. M. 271b]

1527.

1504.

2 Venerdì a dì 9 d'agosto 1504 tolse
 fiorini 10 d'oro 3 venerdì a dì 9
 d'agosto grossoni quindici cioè fr. 5 S 5
 4 dato a me fr. 1° d'oro a dì 12 d'a-
 gosto, 5 a dì 14 d'agosto grossoni 32 a
 Tomaso, 6 e a dì 18 del detto grossoni 5
 a Salai, 7 a dì 8 di settembre grossoni 6 al
 fattore 8 per spendere cioè il dì della donna;
 9 a dì 16 di settembre detti grossō 4 10 a
 Tomaso in domenica.

1504.

On the 9th day of August, 1504, I took
 10 florins in gold[2] . . . [3] on Friday the
 9th day of August fifteen grossoni that is
 fl. 5 S 5 given to me 1 florin in gold
 on the 12th day of August[4] on the
 14th of August, 32 grossoni to Tommaso. On
 the 18th of the same 5 grossoni to Salai.
 On the 8th of September 6 grossoni to the
 workman to spend; that is on the day of
 our Lady's birth. On the 16th day of Sep-
 tember I gave 4 grossoni to Tommaso: on
 a Sunday.

1527. In the original, the passage given as No. 1463 is written between lines 2 and 3 of this text, and it is possible that the entries in lines 3 and 4 refer to the payments of Jacopo Tedesco, who is there mentioned. The first words of these lines are very illegible.

7. *Al fattore.* Il Fattore, was, as is well known,

the nick-name of Giovanni Francesco Penni, born in Florence in 1486, and subsequently a pupil of Raphael's. According to Vasari he was known by it even as a boy. Whether he is spoken of in this passage, or whether the word Fattore should be translated literally, I will not undertake to decide. The latter seems to me more probably right.

1547.

Johannes Antonius di Johannes Ambrosius de Bolate. He who lets time pass and does not grow in virtue, the more I think of it the more I grieve. No man has it in him to be virtuous who will give up honour for gain. Good fortune is valueless to him who knows not toil. The man becomes happy who follows Christ. There is no perfect gift without great suffering. Our glories and our triumphs pass away. Foul lust, and dreams, and luxury, and sloth have banished every virtue from the world; so that our Nature, wandering and perplexed, has almost lost the old and better track. Henceforth it were well to rouse thyself from sleep. The master said that lying in down will not bring thee to Fame; nor staying beneath the quilts. He who, without Fame, burns his life to waste, leaves no more vestige of himself on earth than wind-blown smoke, or the foam upon the sea.

1546—1566. All these texts are written in the ordinary way from left to right.

1547. 1. Ambrossius. 3. pensse . . . satrista. 4. lassa honore . . . aquistare havere. 5. safaticha. 6. coluy . . . Xstum. 7. perfecto donnosa. 8. pasano. 9. elliotose . . . del. 10. chorso . . . issmarita . . . chostume. 11. chonvien chosi chettutti spoltri . . . maeststro chessiegendo. 12. si uen nessotto choltri. 12. chissua . . . chonsumma. 13. uestigia . . . lasscia . . . onnellacqua lasschiuma.

1546. The meaning of this document, which is very difficult to decipher, and is written in unintelligible Latin, is, that Leonardo di Mansuetis recommends the Rev. Mair of Nusdorf, chaplain at Vienna, to some third person; and says also that something, which had to be proved, has been proved. The rest of the passages on the same leaf are undoubtedly

in Leonardo's hand. (Nos. 483, 661, 519, 578, 392, 582, 887 and 894.)

1547. From the last sentence we may infer that this text is by the hand of a pupil of Leonardo's.—On the same sheet are the notes Nos. 1175 and 715 in Leonardo's own handwriting.

Notes by unknown persons among the MSS.
(1546—1565).

1557. The notes in Greek, Nos. 1557, 1558 and 1562 stand in close connection with each other, but the meaning of some words is very doubtful, and a translation is thus rendered impossible.

1559. AMORETTI, *Mem. Stor. XXIV*, quotes the first three lines of this letter as by Leonardo. The character of the writing however does not favour this hypothesis, and still less the contents. I should regard it rather a rough draft of a letter by young

Melzi. I have not succeeded in deciphering completely the 13 lines of this text. Amoretti reads at the beginning *Canonica di Vaprio*, but *Vaprio* seems to me a very doubtful reading.

1560. These three epigrams on the portrait of Lucrezia Crivelli, a picture by Leonardo which must have been lost at a very early date, seem to have been dedicated to Leonardo by the poet. Leonardo used the reverse of the sheet for notes on geometry.

Hujus quam cernis nomen Lucretia, Divi
 Omnia cui larga contribuere manu.
 Rara huic forma data est; pinxit Leonardus, amavit
 Maurus, pictorum primus hic, ille ducum.

Naturam, ac superas hac laesit imagine Divas
 Pictor: tantum hominis posse manum haec doluit,
 Illae longa dari tam magnae tempora formae,
 Quae spatio fuerat deperitura brevi.

1563. 1. a m "r o" Lionardo dihavere p'sto la nolo stato.

1564. 1. vra ELL"tia". 2. Manini [porte] conduse . . . som i. 3. cristallo inporse (?) altre.

1561. 1. *Liber magistri Egidii de pulsibus matrice compositus (cum commentario Gentilis de Fulgineo)* published in 1484 at Padova, in 1494 and in 1514 at Venice, and in 1505 at Lyons.

2. This text appears to be in a handwriting different from that in the note, I. 1. Here the reading is not so simple as AMORETTI gave it, *Mem. Stor. XXV: A Monsieur Lyonard Peintre du Roy pour Amboise*. He says too that this address is of the year 1509, and Mr. Ravaission remarks: "*De cette suscription il semble qu'on peut insinuer que Léonard était alors en France, à la cour de Louis XII . . . Pour conclure je crois qu'il n'est pas prouvé que Léonard de Vinci n'aït pas fait un voyage de quelques mois en France sous Louis XII, entre le printemps de 1509 et l'automne de 1510.*"—I must

confess that I myself have not succeeded in deciphering completely this French writing of which two words remain to me doubtful. But so much seems to be quite evident that this is not an address of a letter at all, but a certificate or note. *Amboise* [l. 6] I believe to be the signature of Charles d'Amboise the Governor of Milan. If this explanation is the right one, it can be easily explained by the contents of Nos. 1350 and 1529. The note, line 1, was perhaps added later by another hand; and Leonardo himself wrote afterwards on the same sheet some geometrical explanations. I must also point out that the statement that this sheet belongs to the year 1509 has absolutely no foundation in fact. There is no clue whatever for giving a precise date to this note.

XVI^o C. 6 de Ciuitate Dei, ²se Antipodes.

Bibl. Melzi]

Sia manifesto ad ciaschaduna persona
 Leonardo's
 Will. presente et aduenere, che nella corte del Re nostro signore in Amboysia avanti de noy personalmente constituito messer Leonardo de Vince pictore del Re, al presente comorante nello locho dicto du Cloux appresso de Amboysia, el qual considerando la certezza dela morte e l'incertezza del hora di quella, ha cognosciuto et confessato nela dicta corte nanzi de noy nela quale s'è somesso e somette circa ciò havere facto et ordinato per tenore dela presente il suo testamento et ordinanza de ultima volontà nel modo qual se seguita. Primeramente el racomanda l'anima sua ad nostro Signore Messer Domine Dio, alla gloriosa Virgine Maria, a Monsignore Sancto Michele, e a tutti li beati Angeli Santi e Sante del Paradiso.

Item el dicto Testatore vole essere sepelito drento la giesia de sancto Florentino de Amboysia et suo corpo essere portato li per li capellani di quella.

Item che il suo corpo sia accompagnato dal dicto locho fin nela dicta giesia de sancto Florentino per il collegio de dicta giesia cioè dal Rectore et Priore, o vero dali Vicarii soy et Capellani della giesia di sancto Dionisio d'Amboysia, etiam li Fratri Minori del dicto locho, et avante de essere portato il suo corpo nela dicta chiesia, esso Testatore, vole siano celebratè ne la dicta chiesia di sancto Florentino tre grandi messe con diacono et sottodiacono, et il dì che se diranno dicte tre grandi messe che se dicano anchora trenta messe basse de Sancto Gregorio.

Item nella dicta chiesia de Sancto Dionisio simil servitio sia celebrato come di sopra.

Item nella chiesia de dicti Fratri et religiosi minori simile servitio.

Item el prefato Testatore dona et concede ad Messer Francesco da Melzo, Gentilomo da Milano, per remunerazione de' servitii ad epso grati a lui facti per il pas-

1566.

Be it known to all persons, present and to come that at the court of our Lord the King at Amboise before ourselves in person, Messer Leonardo da Vinci painter to the King, at present staying at the place known as Cloux near Amboise, duly considering the certainty of death and the uncertainty of its time, has acknowledged and declared in the said court and before us that he has made, according to the tenor of these presents, his testament and the declaration of his last will, as follows. And first he commends his soul to our Lord, Almighty God, and to the Glorious Virgin Mary, and to our lord Saint Michael, to all the blessed Angels and Saints male and female in Paradise.

Item. The said Testator desires to be buried within the church of Saint Florentin at Amboise, and that his body shall be borne thither by the chaplains of the church.

Item. That his body may be followed from the said place to the said church of Saint Florentin by the *collegium* of the said church, that is to say by the rector and the prior, or by their vicars and chaplains of the church of Saint Denis of Amboise, also the lesser friars of the place, and before his body shall be carried to the said church this Testator desires, that in the said church of Saint Florentin three grand masses shall be celebrated by the deacon and sub-deacon and that on the day when these three high masses are celebrated, thirty low masses shall also be performed at Saint Gregoire.

Item. That in the said church of Saint Denis similar services shall be performed, as above.

Item. That the same shall be done in the church of the said friars and lesser brethren.

Item. The aforesaid Testator gives and bequeaths to Messer Francesco da Melzo, nobleman, of Milan, in remuneration for services and favours done to him in the past, each

1565. i. XVI^o "6^o" de Ciuitate Dei. 2. esse.

1565. A facsimile of this note, which refers to a well known book by St. Augustin, is given on page 254.
 1566. See page 420.

sato, tutti et ciaschaduno li libri, che il dicto Testatore ha de presente et altri Instrumenti et Portracti circa l'arte sua et industria de Pictori.

Item epso Testatore dona et concede a sempre mai perpetuamente a Battista de Vilanis suo servitore la metà zoè medietà de uno iardino, che ha fora a le mura de Milano et l'altra metà de epso iardino ad Salay suo servitore nel qual iardino il prefato Salay ha edificata et constructa una casa, la qual sarà e resterà similmente a sempremai perpetudine al dicto Salai, soi heredi et successori, et ciò in remuneratione di boni et grati servitii, che dicti de Vilanis et Salay dicti suoi servitori lui hano facto de qui inanzi.

Item epso Testatore dona a Maturina sua fantescha una veste de bon pan negro foderata de pelle, una socha de panno et doy ducati per una volta solamente pagati: et ciò in remuneratione similmente de boni servitii a lui facti epsa Maturina de qui inanzi.

Item vole che ale sue exequie siano sexanta torchie, le quali seranno portate per sexanta poveri, ali quali seranno dati danari per portarle a discretione del dicto Melzo le quali torzi seranno divise nelle quattro chiesie sopradicte.

Item el dicto Testatore dona ad ciascheduna de dicte chiesie sopradicte diece libre cera in candele grosse che saranno messe nelle dicte chiesie per servire al dì che se celebreranno dicti servitii.

Item che sia dato ali poveri del ospedale di Dio alli poveri de Sancto Lazaro de Amboysia, e per ciò fare sia dato et pagato alli Tesorieri d'epsa confraternità la summa et quantità de soysante dece soldi tornesi.

Item epso Testatore dona et concede al dicto Messer Francesco Melce presente et acceptante il resto della sua pensione et summa de' danari qual a lui sono debiti del passato fino al dì della sua morte per il recevoir, ovvero, Tesaurario general M. Johan Sapin, et tutte et ciaschaduna summe de' danari che ha receputo dal p.^o Sapin de la dicta sua pensione, e in caxo chel decede inanzi al prefato Melzo, e non altramente li quali danari sono al presente nella possessione del dicto Testatore nel dicto loco de Cloux como el dice. Et similmente el dona et concede al dicto de Melze tucti et ciaschaduni suoi vestimenti quali ha al presente ne lo dicto loco de Cloux tam per remuneratione de boni et

and all of the books the Testator is at present possessed of, and the instruments and portraits appertaining to his art and calling as a painter.

Item. The same Testator gives and bequeathes henceforth for ever to Battista de Vilanis his servant one half, that is the moiety, of his garden which is outside the walls of Milan, and the other half of the same garden to Salai his servant; in which garden aforesaid Salai has built and constructed a house which shall be and remain henceforth in all perpetuity the property of the said Salai, his heirs and successors; and this is in remuneration for the good and kind services which the said de Vilanis and Salai, his servants have done him in past times until now.

Item. The said Testator gives to Maturina his waiting woman a cloak of good black cloth lined with fur, a of cloth and two ducats paid once only; and this likewise is in remuneration for good service rendered to him in past times by the said Maturina.

Item. He desires that at his funeral sixty tapers shall be carried which shall be borne by sixty poor men, to whom shall be given money for carrying them; at the discretion of the said Melzo, and these tapers shall be distributed among the four above mentioned churches.

Item. The said Testator gives to each of the said churches ten lbs. of wax in thick tapers, which shall be placed in the said churches to be used on the day when those said services are celebrated.

Item. That alms shall be given to the poor of the Hotel-Dieu, to the poor of Saint Lazare d'Amboise and, to that end, there shall be given and paid to the treasurers of that same fraternity the sum and amount of seventy soldi of Tours.

Item. The said Testator gives and bequeathes to the said Messer Francesco Melzo, being present and agreeing, the remainder of his pension and the sums of money which are owing to him from the past time till the day of his death by the receiver or treasurer-general M. Johan Sapin, and each and every sum of money that he has already received from the aforesaid Sapin of his said pension, and in case he should die before the said Melzo and not otherwise; which moneys are at present in the possession of the said Testator in the said place called Cloux, as he says. And he likewise gives and bequeathes to the said Melzo all and each of his clothes which he at present possesses at the said place of Cloux, and all in

grati servitii, a lui facti da qui inanzi, che per li suoi salarii vacationi et fatiche chel potrà avere circa la executione del presente Testamento, il tutto però ale spese del dicto Testatore.

Ordina et vole, che la summa de quatrociento scudi del sole che ha in deposito in man del Camarlingo de Sancta Maria de Nova nela città de Fiorenza, siano dati ali soy fratelli carnali residenti in Fiorenza con el profitto et emolumento che ne po essere debito fino al presente da prefati Camarlinghi al prefato Testatore per casone de dicti scudi quattrocento da poi el dì che furono per el prefato Testatore dati et consignati alli dicti Camarlinghi.

Item vole et ordina dicto Testatore che dicto Messer Francisco de Melzo sia et remana solo et in sol per il tutto executor del Testamento del prefato Testatore, et che questo dicto Testamento sortisca suo pleno et integro effecto, et circa ciò che è narrato et dicto havere tenere guardare et observare epso Messer Leonardo de Vince Testatore constituto ha obbligato et obbliga per le presente epsi soy heredi et successori con ogni soy beni mobili et immobili presenti et advenire et ha renunciato et renuncia per la presente expressamente ad tucte et ciaschaduna le cose ad ciò contrarie. Datum nelo dicto loco de Cloux ne la presencia de magistro Spirito Fleri Vicario nela chiesia de Sancto Dionisio de Amboysia, M. Gulielmo Croysant prete et capellani, magistro Cipriane Fulchin, Fratre Francesco de Corton et Francesco da Milano religioso del convento de fratri minori de Amboysia, testimonii ad ciò ciamati et vocati ad tenire per il iudicio de la dicta Corte in presentia del prefato M. Francesco de Melze acceptante et consentiente il quale ha promesso per fede et sacramento del corpo suo per lui dati corporalmente ne le mane nostre di non mai fare venire, dire, ne andare in contrario. Et sigillato a sua requesta dal sigillo regale statuito a li contracti legali d'Amboysia, et in segno de verita.

Dat a di XXIII de Aprile MDXVIII
avanti la Pasqua.

Et a dì XXIII d'epso mese de Aprile MDXVIII ne la presentia di M. Gulielmo Borian notario regio ne la corte de Baliagio d'Amboysia il prefato M. Leonardo de Vince ha donato et concesso per il suo testamento et ordinanza de ultima voluntà supradicta al dicto M. Baptista de Vilanis presente et acceptante il dritto de laqua

reimuneration for the good and kind services done by him in past times till now, as well as in payment for the trouble and annoyance he may incur with regard to the execution of this present testament, which however, shall all be at the expense of the said Testator.

And he orders and desires that the sum of four hundred scudi del Sole, which he has deposited in the hands of the treasurer of Santa Maria Nuova in the city of Florence, may be given to his brothers now living in Florence with all the interest and usufruct that may have accrued up to the present time, and be due from the aforesaid treasurer to the aforesaid Testator on account of the said four hundred crowns, since they were given and consigned by the Testator to the said treasurers.

Item. He desires and orders that the said Messer Francesco de Melzo shall be and remain the sole and only executor of the said will of the said Testator; and that the said testament shall be executed in its full and complete meaning and according to that which is here narrated and said, to have, hold, keep and observe, the said Messer Leonardo da Vinci, constituted Testator, has obliged and obliges by these presents the said his heirs and successors with all his goods moveable and immoveable present and to come, and has renounced and expressly renounces by these presents all and each of the things which to that are contrary. Given at the said place of Cloux in the presence of Magister Spirito Fleri vicar, of the church of Saint Denis at Amboise, of M. Guglielmo Croysant priest and chaplain, of Magister Cipriane Fulchin, Brother Francesco de Corton, and of Francesco da Milano, a brother of the Convent of the Minorites at Amboise, witnesses summoned and required to that end by the indictment of the said court in the presence of the aforesaid M. Francesco de Melze who accepting and agreeing to the same has promised by his faith and his oath which he has administered to us personally and has sworn to us never to do nor say nor act in any way to the contrary. And it is sealed by his request with the royal seal apposed to legal contracts at Amboise, and in token of good faith.

Given on the XXIIIrd day of April MDXVIII, before Easter.

And on the XXIIIrd day of this month of April MDXVIII, in the presence of M. Gulielmo Borian, Royal notary in the court of the bailiwick of Amboise, the aforesaid M. Leonardo de Vinci gave and bequeathed, by his last will and testament, as aforesaid, to the said M. Baptista de Vilanis, being present and agreeing, the right of water which

che qdam bone memorie Re Ludovico XII ultimo defuncto ha alias dato a epso de Vince suxo il fiume del naviglio di Sancto Cristoforo ne lo Ducato de Milano per gauderlo per epso De Vilanis a sempre mai in tal modo et forma che dicto Signore ne ha facto dono in presentia di M. Francesco da Melzo Gentilhomo de Milano et io.

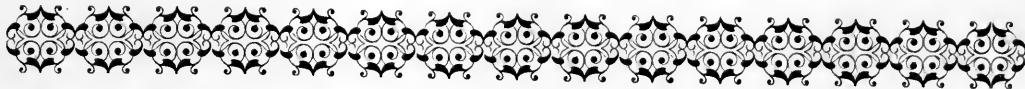

Et a dì prefato nel dicto mese de Aprile ne lo dicto anno MDXVIII epso M. Leonardo de Vinci per il suo testamento et ordinanza de ultima volunta sopradecta ha donato al prefato M. Baptista de Vilanis presente et acceptante tutti et ciaschaduni mobili et utensili de caxa soy de presente ne lo dicto loco du Cloux, in caxo però che el dicto de Vilanis surviva al prefato M. Leonardo de Vince, in presentia del prefato M. Francesco da Melzo et io Notario etc. Borean.

the King Louis XII, of pious memory lately deceased gave to this same de Vinci, the stream of the canal of Santo Cristoforo in the duchy of Milan, to belong to the said Vilanis for ever in such wise and manner that the said gentleman made him this gift in the presence of M. Francesco da Melzo, gentleman, of Milan and in mine.

And on the aforesaid day in the said month of April in the said year MDXVIII the same M. Leonardo de Vinci by his last will and testament gave to the aforesaid M. Baptista de Vilanis, being present and agreeing, each and all of the articles of furniture and utensils of his house at present at the said place of Cloux, in the event of the said de Vilanis surviving the aforesaid M. Leonardo de Vinci, in the presence of the said M. Francesco Melzo and of me Notary &c. Borean.

APPENDIX

I.

THE HISTORY OF THE MANUSCRIPTS.

1. Leonardo by his will expressly devised all his MSS. and drawings to his younger friend Francesco Melzi, who carried them back to Milan. Four years after Leonardo's death Alberto Bendedevo wrote from Milan to Alfonso d'Este, Duke of Ferrara: "Et perchè ho fatto mentione de la casa de Melzi, aviso a V. Ex. che un fratello di questo che ha giostrato fù creato de Lionardo da Vinci, et herede et ha molti de' suoi secreti, et tutte le sue opinioni . . . Credo ch'egli habbia quelli libriccini de Lionardo de la Notomia, et de molte altre belle cose." See G. Campori, *Nuovi Documenti*.

When Vasari visited Milan—probably in 1566—he saw Leonardo's MSS. in Francesco Melzi's possession, and wrote as follows: *Lionardo . . . di brutti caratteri scrisse lettere, che sono fatte con la mano mancina a rovescio; e chi non ha pratica a leggere, non l'intende, perchè non si leggono se non con lo specchio. Di queste carte della notomia degli uomini n'è gran parte nelle mani di messer Francesco da Melzo gentiluomo milanese, che nel tempo di Leonardo era bellissimo fanciullo e molto amato da lui, così come oggi è bello e gentile vecchio, che le ha care e tiene come per reliquie tal carte, insieme con il ritratto della felice memoria di Lionardo: e chi legge quegli scritti, par impossibile che quel divino spirito abbi così ben ragionato dell'arte e de' muscoli e nervi e vene, e con tanta diligenza d'ogni cosa. Come anche sono nelle mani di . . . , pittor milanese, alcuni scritti di Lionardo, pur di caratteri scritti con la mancina a rovescio, che trattano della pittura e de' modi del disegno e*

colorire. Costui non è molto che venne a Fiorenza a vedermi, desiderando stampar questa opera, e la condusse a Roma per dargli esito; nè so poi che di ciò sia seguito. (Ed. Sansoni, IV. 37).

In another place Vasari mentions that he himself possessed some drawings by Leonardo.

Lomazzo, the Milanese painter, writes, in 1590 (*Idea del Tempio della pittura*, 2nd Ed., p. 15):

Ma sopra a tutti questi scrittori è degno di memoria Leonardo Vinci, il qual insegnò l'Anatomia dei corpi umani, e dei cavalli, ch'io ho veduta appresso a Francesco Melzi, designata divinamente di sua mano. Dimostrò anco in figura tutte le proporzioni dei membri del corpo umano; scrisse della prospettiva dei lumi, del modo di tirare le figure maggior del naturale, e molti altri libri . . . Ma di tante cose niuna se ne ritrova in stampa; ma solamente di mano di lui, che in buona parte sono pervenute nelle mani di Pompeo Leoni, statovaro del Cattolico Rè di Spagna, che gli ebbe dal figliuolo di Francesco Melzi, e n'è venuto di questi libri ancora nelle mani del Sig. Guido Mazenta, Dottore virtuosissimo, il quale gli tiene molto cari.

2. In the short anonymous biography of Leonardo which, as it seems to me, must have been written somewhat earlier than Vasari's *Vite* (published by Milanesi, *Arch. Stor. Ital.* XVI) the MSS. are mentioned in these terms: (*Leonardo*) tornossene a Milano et dipoi in Francia al servizio del rè Francesco, dove portò assai de' sua disegni, de quali ancora ne lasciò in Firenze nello Spedale di S. Maria Nuova con altre mas-

serizie et la maggior parte del cartone della sala del Consiglio, del quale è il disegno del gruppo dè cavalli che oggi in opera si vede rimaso in Palazzo . . . et lasci) per testamento a messer Francesco da Melzio, gentile hom milanese, tutti i danari contanti, panni, libri, scritture, disegni et instrumenti et ritratti circa la pittura et arte et industria sua che qui vi si trovava, et fecelo executore del suo testamento.

These references to them, which are the oldest known, may be supplemented by some information which I owe to the kindness of Signor Enrico Stevenson, Scrittore in the Library of the Vatican. MS. 71 Boncompagni (previously Albani 511), XVIth century, contains the catalogue of MSS. belonging to 'Sangallo'. In this catalogue a MS. volume, Tome XXXIX, is thus described: *Ope-nione di Leonardo da Vinci nel diptigniere prospettive, ombre, lontanane, altezze, bassezze d'a-presso o da lontano, et altro.*

It seems therefore doubtful whether after the death of Francesco Melzi, about 1570, the Melzi family still possessed Leonardo's literary bequest intact, or at any rate, were the sole possessors of it. We have fuller information at the beginning of the XVIIth century, for Leonardo's MSS. had by that time become famous and were sought after as relics and curiosities. Guido Mazenta, who is mentioned by Lomazzo as possessing MSS. by Leonardo, was the brother of the author of an interesting memoir entitled: *Alcune memorie de' fatti da Leonardo da Vinci a Milano e de' suoi libri del P. D. Gio. Amb. Mazzenta, Milanese, Cherico Regre minore di S. Paolo altrimenti detti Barnabiti.*¹ An exact translation of this into French has been given by M. Eugène Piot in the Cabinet de l'Amateur (1863, p. 61—63). I quote from it the following passage relating to the history of the MSS.

À la mort de Melzi . . . les manuscrits restèrent dans sa villa de Vaprio, où ses héritiers, qui avaient des goûts et des occupations bien différents,

¹ The Italian MS. by Mazenta was until 1882 in the possession of the firm of booksellers A. Firmin-Didot, of Paris; but I was constantly forbidden to examine its contents. It has lately passed into the possession of an antiquary in Paris. The following interesting passage is again taken from M. Piot's translation, which adequately takes the place of the original: *Ses observations s'étendent même jusqu'aux choses historiques; il y met sous nos yeux les antiques cataractes dont les Ptolémées se servaient en Egypte pour répartir et distribuer les eaux bénissantes du Nil; les belles inventions relatives à la navigation de la mer de Nicomédie, au moyen des lacs et des fleuves, dont il est question dans les lettres de Trajan et de Pline; mais je crois que ce curieux génie prenait plaisir à déguiser sous ces noms ceux de Milan et de Nuovocomo (!?).*

négligèrent à ce point ces trésors qu'il fut facile à Lelio Gavardì, qui enseignait les humanités dans cette famille, d'en prendre tout ce qu'il voulut et de porter treize de ces volumes à Florence, dans le dessin de les offrir au grand-duc. Mais ce prince tomba malade et mourut à son arrivée, et il vint à Pise chez Manuce. Je lui fis honte de son bien mal acquis, et il en convint. Mes études étaient finies, je devais partir: il me pria de reporter les volumes à Milan, ce dont je m'acquittai de bonne foi en consignant le tout au chef de la famille, le Dr Oratio Melzi, qui fut très-étonné de l'embarras que j'avais voulu prendre, et qui m'en fit don en me disant qu'il avait du même peintre beaucoup d'autres dessins qui demuraient abandonnés dans des caisses sous les toits de sa villa. Ces livres restèrent donc entre mes mains, et, plus tard, entre celles de mes frères. Ceux-ci en firent un étalage un peu trop grand, racontèrent à ceux qui les voyaient avec quelle facilité je les avais obtenus, de sorte que beaucoup de personnes reviennent chez le docteur Oratio et en tirent des dessins, des modèles anatomiques, et beaucoup de précieuses reliques de l'atelier de Léonard. Pompeo Leoni fut un de ses chasseurs; son père avait été élève de Michel Ange Buonarroti, et lui-même était au service du roi d'Espagne, pour qui il a fait tous les bronzes de l'Escorial. Pompeo promit au Dr Melzi offices, magistratures, siège dans le sénat de Milan, s'il pouvait reprendre les treize volumes et les lui donner pour les envoyer au roi Philippe, grand amateur de ces sortes de curiosités. Excité par de telles espérances, Melzi vole chez mon frère, le prie à genoux de lui rendre les manuscrits qu'ils m'avait donnés; c'était son collègue au collège de Milan, bien digne de sa compassion et de son amitié; sept volumes lui furent rendus. Des six qui restaient à la maison, un fut offert au cardinal Frédéric Borromée; il est aujourd'hui conservé dans la bibliothèque Ambrosienne; c'est un in-folio, couvert de velours rouge, qui traite très philosophiquement de la lumière et des ombres, au point de vue de la peinture, de la perspective et de l'optique. Un autre fut donné à Ambroise Figini, noble peintre de cette époque, qui le laissa à Hercule Bianchi avec le reste de son cabinet. Pressé par le duc Charles-Emanuel de Savoie qui désirait en posséder, j'en obtins de l'amitié de mon frère un troisième que j'envoyai à cette Altresse. Après la mort de mon frère, les trois autres sont parvenus entre les mains de Pompeo Aretino, qui, avec ceux qu'il avait recueillis, en sépara les feuillets pour en former un gros volume qui passa à son héritier Polidore Calchi, et fut vendu ensuite à Galéaz Arconati pour trois cents ducats. Cet homme généreux le conserve dans sa galerie remplie de mille choses précieuses; il a dû plusieurs fois rési-

ster aux prières du duc de Savoie et d'autres princes qui le lui demandaient : il en a refusé plus de six cents ducats.

3. The MSS. in the possession of the brothers Mazenta, had, it would seem, been gradually reduced to three. Guido Mazenta whose name is to be seen in the MS. given by him to Cardinal Borromeo (see Bibl. No. 2), died in 1613.

In 1636, Count Galeazzo Arconati—who is named in Mazenta's report—presented twelve MS. volumes by Leonardo to the Ambrosian Library at Milan. The explicit deed of gift may be seen, translated into French in the *Cabinet de l'Amateur*, 1861, pp. 53—59. In the catalogue of these MSS. the binding is more particularly described than the contents. The following twelve MSS. were included in this gift. 1. the Codex Atlanticus (Bibl. 38), 2. a MS. now lost, but described as follows:

Le deuxième est un livre in-folio ordinaire, de la grandeur du papier coupé ordinaire. Il est relié en bois couvert de cuir rouge, orné de frises et de fleurs d'or. Le volume est entièrement composé de feuillets de vélin et commence par ces paroles, écrites en rouge: TAVOLA DELLA PRESENTE. Suivent huit feuillets sans pagination. Elle commence au suivant, qui a un ornement en tête qui dit: Ecculentis s. principe, etc., et la pagination suit jusqu'au cent vingtième feillet, quatre-vingt-sept pour le texte, trois blancs et le reste des dessins divers coloriés, le premier desquels est intitulé: Sfera solida, et le dernier: Piramis laterata exagona vacua; au fond du feillet est un texte grec qui exprime la même chose.

3. *Le troisième est un livre in-quarto, relié en vélin, sur le dos duquel on lit les paroles suivantes: DI LEONARDO DA VINCI; il est de cent feuillets juste, mais le premier manque; sur le second il y a quelques cerises noires, feuilles et fruits coloriés. Dans l'intérieur du volume, au feillet 49, on a inséré cinq feuillets de dessins variés, armes de hast pour la plupart, et à la fin un autre petit volume (volumetto) de diverses figures de mathématiques et d'oiseaux, de dix-huit feuillets, qui a été cousu dans la même reliure en vélin.*

Bibl. 3, 4. Ash. II and B: The appendix (*volumetto*) is now lost; the last mention of it occurs in Venturi's *Essai* (1796). Compare No. 1465, Note 4.

4. MS. of 114 leaves (see Bibl. 5, 6, Ash. I and A).

5. *Le cinquième est un autre livre semblable, in-quarto, couvert, comme le précédent, de cinquante-quatre feuillets. Sur le premier sont dessinées diverses têtes bouffonnes, et sur le dernier quatre colonnes de texte, écrites à rebours. Il est marqué sur le dos LEONARDO DA VINCI.*

This description corresponds with the MS., Bibl. 28 Tr. 6.

- 6. MS. see Bibl. 25, E.
- 7. MS. see Bibl. 22, F.
- 8. MS. see Bibl. 26, G.
- 9. Three MSS. bound in one vol.; see Bibl. 8—10, H¹, H², H³.

10. Two small MSS. bound in one, see Bibl. 13, 14.

- 11. MS. see Bibl. 18, L.
- 12. MS. see Bibl. 27, M.

In 1674 Count Orazio Archinti presented to the same Library a MS. by Leonardo, consisting of three small note-books in one Vol.; Bibl. 32—34.

In 1790, Stefano Bonsignori made a short catalogue of the MSS. in the Ambrosian Library at Milan. It includes 1. MS. C. A, see Bibl. 28; 2. MS. B and Ash. II, see Bibl. 3, 4; 3. MS. Ash. I and A, Bibl. 5, 6; 4. MS. D, Bibl. 31; 5. MS. E, Bibl. 25; 7. MS. G, Bibl. 26; 8. MSS. H¹, H², H³, Bibl. 8—10.

The descriptions of the others are too vague and slight to admit of our identifying by them any MSS. now existing: 6. *Miscellanea; idrostatica, etc.* È in-8 piccolo, in cartone rustico. 9. *Miscellanea. Moto, macchine, macchinette da forar cristalli, etc.* È in-16, legato in pergamena. 10. *Miscellanea in-16, in cartone rustico,* 11. *Miscellanea. Abbozzi informi, moto ecc.* È in-16, pergamena (see *Dosio, degli scritti . . . di Leonardo da Vinci. Milano 1871, pp. 21—24*). It will be observed that one MS. fewer is here named than in the deed of gift from Count Arconati; on the other hand a MS. *D*, not previously mentioned, is now included. The fifth MS. of Arconati's list is evidently wanting in this list. The volume given to the Ambrosian Library by Cardinal Borromeo in 1603 (Bibl. 2, C) seem also to have been omitted. It is evident then that we cannot exactly determine how many of these MSS. were to be found in the Ambrosian Library in the year 1796. At the suggestion of Bonaparte the Directory of the French Republic conveyed many works of art from Italy into France. So much as this is, at any rate certain: in August 1796 the Codex Atlanticus was in the Bibliothèque Nationale: and "*Douze petits MSS. de Leonardo de Vinci, sur les sciences*" were in the Institut National (Institut de France). The authors of the catalogue of the pictures and MSS. removed from the Ambrosian Library—Peignon, *commissaire de guerre* and *le Citoyen Tinet, agent des Arts* (dated Milan, May 24, 1796) either do not mention Leonardo's MSS. at all, or—which is more probable—include them under the following somewhat vague designation "*Le Carton des ouvrages de Leonardo d'avinci*". It is certain, on the other hand, that in 1815 the commissary of the

Austrian government demanded the restoration to the Ambrosian Library of thirteen (or fourteen?) MSS., being the number stated in Venturi's Essay written in 1796. (Venturi says in his essay: *Les Manuscrits sont au nombre de quatorze, parceque le Volume B contient un appendice de dix-huit feuillets qu'on peut séparer et considérer comme le quatorzième volume*).

However, only the Codex Atlanticus found its way back again; the other twelve MSS. remain in the possession of the Institut de France. These facts cover all that is known of the history and fate of the volumes now on the continent, that is to say in France and Italy.

I am unfortunately not in a position to give so full an account of the vicissitudes of such of Leonardo's MSS. as are now in England. Of the MS. volume at Windsor, W. L. (Bibl. 36) Chamberlain tells us (Original Designs, London, 1812): *It was one of the three volumes, which became the property of Pompeo Leoni that is now in his Majesty's possession. It is rather probable than certain that this great curiosity was acquired for King Charles I. by the Earl of Arundel, when he went an Ambassador to the Emperor Ferdinand II. in 1636, as may indeed be inferred from an instructive inscription over the place, where the volumes are kept, which sets forth that James King of England offered three thousand pistoles for one of the volumes of Leonardo's works. And some documents in the Ambrosian Library give colour to this conjecture. This volume was happily preserved, during the civil wars of the last century, among other specimens of the fine arts, which the munificence of Charles I. had amassed with a diligence equal to his taste. And it was discovered soon after his present Majesty's accession, in the same cabinet, where Queen Caroline found the fine portraits of the court of Henry VIII. by Hans Holbein, which the King's liberality permitted me lately to lay before publick.*

Chamberlain, apparently misled by the well-known inscription¹ in the Ambrosian Library seems to assume that Lord Arundel must

¹ The following inscription is on the staircase of the Ambrosian Library

|| LEONARDI VINCII || MANU. ET. INGENIO. CELEBERRIMI || LUCUBRATIONUM. VOLUMINA. XII || HABES. O. CIVIS || GALEAZ—ARCONATUS || INTER. OPTIMATES. TUOS || BONARUM. ARTIUM. CULTOR. have derived the Leonardo MSS. in his possession from Arconati, and not from Spain; but Mr. Alfred Marks of Long Ditton, has lately disproved this clearly in two contributions to the Athenaeum, Nos. 2626 and 2645. John Evelyn in his Memoirs (Vol. I, p. 213 ed. 1818) tells us that when travelling in Italy in 1646 he received from Lord Arundel, then sick at Padua, where he died in the course of this year, advice as to what he should try to see. Afterwards, visiting the Ambrosian Library, Evelyn writes:—

"In this room stands the glorious (boasting) inscription of Cavaliero Galeazzo Arconati, valueing his gift to the librarie of severall drawings by Da Vinci, but these we could not see, the keeper of them being out of towne and he always carrying the keys with him, but my Lord Martial, who had seene them, told me all but one booke are small, that an huge folio contain'd 400 leaves full of scratches of Indians [sketches of engines?] &c., but whereas the inscription pretends that our King Charles had offer'd 1,000 l. for them, my Lord himselfe told me that it was he who treated with Galeazzo for himselfe in the name and by permission of the King, and that the Duke of Feria, who was then Governor, should make the bargain: but my Lord having seen them since did not think them of so much worth."

The leaves of the Codex Atlanticus are numbered up to 393; hence it is probable that in giving this description Lord Arundel had this single MS. in his mind. The MS. W. L. at Windsor which, with the MS. C. A. formerly belonged to Pompeo Leoni now consists of only 234 folio leaves. Arconati (see above) mentions, it is true, one collection only of MSS. i. e. MS. C. A. as being in the hands of Pompeo Leoni; but it can hardly be doubted that the MSS. and drawings W. L. were also in his possession, since Leoni's name is given in the inscription on the old binding of the two volumes in the same way.

"Pompeo Leoni of Arezzo, Court sculptor to King Philip II. of Spain, died in Madrid A. D. 1610, as we learn from Carducho '*Dialogos de la Pintura*' (1633). Part of his property was publicly sold at Madrid; some works which had belonged to it being afterwards purchased by Charles the First when, as Prince of Wales, he visited Spain in 1623.

From the Spanish portion of Pompeo's collection thus sold came, in all probability, the two volumes of Leonardo's of which Carducho speaks as being then in the possession of Don Juan de Espina: "*Allí vi dos libros dibujados y manoscritos de mano del gran Leonardo de Vinchi, de particular curiosidad y doctrina*" ("two

books," may we say? "one of sketches, one manuscript"), which the Prince of Wales had in vain sought to purchase. The contents of these volumes Carducho unfortunately describes only in very general terms. In Mr. Sainsbury's 'Original Unpublished Papers illustrative of the Life of Rubens,' we find evidence that Lord Arundel was subsequently in treaty for these very books, or, perhaps, for one of them only. On p. 294 will be found a note of Endymion Porter's "of such things as my Lord Embassador Sr Francis Cottington is to send owt of Spaine for my Lord of Arondell; and not to forget the booke of drawings of Leonardo de Vinze w^{ch} is in Don Juan de Espinas hands." This is of the date 1629, when Sir Francis was for the third time setting out for Spain as ambassador. His negotiations for the book were unsuccessful, for on January 19th, 1636—37, we find (p. 299) Lord Arundel writing from Hampton Court to Lord Aston, then Ambassador to Spain,—"I beseech y^e be mindfull of D. Jhon. de Spinias booke, if his foolish humor change." There can, I think, be little doubt that, on the change of Don Juan's "foolish humor," a priceless treasure, the object of so many fruitless attempts, at last rewarded the persistence of the great English collector" (A. MARKS).

Here, beyond a doubt, only the MS. W. L. is meant, for this, as being a collection of Leonardo's most important drawings, must be regarded as exceptionally precious. But did Lord Arundel ultimately get this Manuscript. We cannot say more than that this seems probable; and for this reason: Hollar engraved drawings of Leonardo's which are now in Windsor and inscribed them "W. Hollar fecit 1646 ex collectione Arundeliana"—drawings which *most probably* were included in this W. L. collection before it was divided.

On the other hand it can be positively shown that Lord Arundel possessed the MS. Br. M., Bibl. 23, which was no doubt purchased by him for a relatively small sum in consideration of the smaller artistic interest of the drawings, and for the same reason it is quite intelligible that no mention should be made of it in the correspondence at the time. But whether the MS. W. L. was purchased by Charles II. when Lord Arundel's collections were sold in Holland, or whether Charles I. had previously acquired it after his journey to Spain as Prince of Wales in 1623—when he, in person, purchased some works of art from among Leoni's collection, is not known. So much as this alone is certain, that it has now for a very long period belonged to the Royal collections.

Though Chamberlain's statement as to the

acquisition of Leonardo's MSS. and drawings in the Windsor Library is, as we have seen, probably inaccurate, we may still give credit to his information as to the finding of them by Queen Caroline in Kensington Palace, for he—as Royal Librarian at the time—must certainly have been acquainted with the facts. His statement is moreover confirmed by Walpole (*Anecdotes of painting I*, 84: *Soon after the accession of the late King, Queen Caroline found in a bureau at Kensington, a noble collection of Holbein's original drawings for the portraits of some of the chief personages of the court of Henry VIII*).

This, however, is by no means the earliest information we possess regarding Leonardo's MSS. and drawings in the possession of Royalty. In the MS. Department of the British Museum I found an old inventory from which I give the following extracts: *List of the draw^{gs} in ye Cabinet in His Maj^{ts} Lower Apartment in this is marked what has been Deliver'd for her Maj^{ts} use* || Page 28. *A list of the Books of drawings and Prints in the buree in His Majesty's great Closet at Kensington.*

No. 3. *By Hans Holbein those fram'd & hang at Richmond.*

No. 5. *Prints by Hollar; delivered to her Maj^{ty} Aug. 1735 and by her lent to Lady Burlington, since put in Volumes and laid in y^e Library at Kensington.*

No. 6. *Drawings by Leonardo de Vinci.*

No. 13. *Drawings by Leonardo di Vinci;—these mark'd with a cross were delivered for her Maj^{ty}s use in y^e year 1728.*

The oldest inventory in Windsor Castle—is only of the beginning of the present century. On p. 23 we find: "*Leonardo da Vinci, Tom. I*" and a list follows of the drawings, comprised on 41 pages. For instance: *page 1 His own portrait, profile, red chalk* (a well known drawing in the present collection). Only a few can be identified, for the descriptions are very brief. On p. 26 we come to "*Leonardo da Vinci, Tom. II*" which is also a list of drawings comprised on 40 pages. It begins: *page 1, the last Supper, the Architecture is varied in the painting at Millan where an open door is represented behind our Saviour, black chalk. NB. This Drawing was not in the Vol. compiled by Pompeo Leoni, but in one of the Volumes in the Buonfiliuolo Collection bought at Venice.* (By the way I mention that the drawing in question, still at Windsor, is not an original drawing, but an old copy). This gives us an incidental clue to a second source whence the treasures of the Windsor collection have been derived. Nothing more, however, is known concerning the Buonfiliuolo collection.

On p. 29 of the Inventory we come to a catalogue of the contents of a third Vol. of 205 sheets, in which 549 drawings are named and shortly described, for instance:

No. 22 { 2 Heads, of Judas and one of the Apostles for the last supper at Milan.

41 { 1 Mechanical Powers
1 Anatomy.

NB. All the Leaves from 41 to 142, except those few marked otherwise, are full of very copious and accurate studys in Anatomy which were done with the assistance of Marc Antonio della Torre &c.

143 { 1 Manuscript—Here ends the Anatomical study.
1

As the reader will have observed, the number of leaves in the MS. W. L. does not correspond to that in either of these three Volumes. There can be no doubt that, at that time most of the drawings had been taken out of it. Recently most of the finest drawings in the Royal collection have been mounted on card-board and arranged in four portfolios, while some

of the MS. leaves remain in the folio W. L. (Bibl. 36), and others are mounted on old thin card board, more particularly the texts W. P., Bibl. 15, and W. An. I, Bibl. 1; others again are not mounted nor even—at the present date—arranged. Their large number rendered it necessary that they should be classified according to their contents and the probable date of their being written, with a view to this present publication. I therefore sorted them under the following heads: W. H., Bibl. 16; W. An. II., Bibl. 17; W. M., Bibl. 19; W. An. III., Bibl. 24; W. An. IV., Bibl. 35; W., Bibl. 37. The loose leaves in the Windsor collection are numbered consecutively (from 1—249) without any reference to their connection, while the Roman numbers refer to those sheets which are mounted. By this means reference to the originals is facilitated.

It will be noticed that Anatomical writings preponderate greatly, and they are the portion which Vasari most admired, when he had the opportunity of seeing Leonardo's MSS. in Melzi's house.

II.

B I B L I O G R A P H Y.

The Manuscripts are arranged here in the same chronological order as shown in Vol. I. pp. 5—7. The numbers of the sheets are generally not by the author, but in a more modern handwriting. The few instances when these numbers

A = Acqua (Water).

Ar = Architecture.

F = Forza (Force).

Fo = Fortezza (Fortress).

Ge = Geometry.

M = Moto, colpo (on movement &c.).

Ma = Mathematics.

are by Leonardo will be found mentioned in the lists. The bindings are in parchment, if not otherwise stated. The following abbreviations have been introduced in the description of the contents (the Italian words are headings used by Leonardo):

Mn = Machines.

O = Optics..

P = Peso (Weight).

Ph = Physics.

V = Volatili (Flight of Birds).

+ = blank pages.

I. W. An. I.

1^a 1370, notes on the skull | 1^b 805 | 2^a, notes on the skull | 2^b + 3^a on the skull and on the teeth | 3^b, 4^a on the skull | 4^b +

2. C.

Inscribed in golden letters on the front cover: . VIDI . MAZENTÆ || PATRITII . MEDOLANENSIS || LIBERALITATE || AN . M . D . C . III . Inside the cover: C and [O].—On the first sheet (by an unknown hand): Autographum Leonardi Vincii || cuius in ejusdem rebus gestis meminit || Raphael Trichet Fres-

neus || agit autem de lumine et umbra.—First sheet verso: O.—Second sheet marked [,G,] and O. The following sheets are numbered 1—30, by an unknown hand. These numbers disagree with Leonardo's own numbers, here given in brackets (). He seems to have counted the sheets backwards. They are on the back of the sheets, but some are

wanting: 1^a 254 | 1^b (15) 253 | 2^a 221 | 2^b
 (14) 220 | 3^a 219 | 3^b (13) 218 | 4^a 217 | 4^b

8. H.³

The three small Note books H³ H² H¹ are bound in one Volume. From the dirty state of the sheets at the beginning and at the end of each division it becomes apparent that Leonardo had used them separately. The cover is in parchment and is twice marked H on the outside and once inside, and Q on the back of the first sheet. Inside the back cover is the mark Q^a, and on the last sheet but one N N 48, meaning probably the number of sheets originally belonging to H³. MSS H² and H³ are numbered throughout. The sheets of H³ are also numbered 1—47, below the text and in a reversed position. The numbers here given are above the text | 47^a A | 47^b 1389 | 48^a Ma | 48^b dimmi semai, *sketch of a man's head in profile* | 49^a, 49^b Mn | 50^a 670 | 50^b, 51^a notes | 51^b 689 | 52^a 999 | 52^b 736 | 53^a 1264, 690 | 53^b—55^a Mn | 55^b

Sketch reproduced with No. 1112 | 56^a, 56^b P | 57^a P, 1462 | 57^b M. *sketch of a horse* | 58^a *sketch of horses and oxen drawing a car* | 58^b 1460 | 59^a—60^b Mn | 61^a 831 Mn | 61^b—69^b Mn | 70^a 691 | 70^b 1191 | 71^a 1192 | 71^b—73^a Mn | 73^b Pl. LXXXV, No. 16, 768 | 74^a *il ciétre dell' occhio fia for dell'abaco 1/8 di a.b.* | 74^b—76^a Mn | 76^b 1514 | 77^a 1513 | 77^b, 78^a + | 78^b *terminations of Latin verbs* | 79^a—80^a *slight sketches* | 80^b, 81^a Mn | 81^b 1515 | 82^a *Sketch of a car drawn by horses* | 82^b—84^a Mn | 84^b, 85^a—86^a *drawings of gear* | 85^a 27 | 85^b, 86^b, 87^b, 88^a, *conjugation of the Latin verb* | 88^b 644 | 89^a sum, eram &c. 1356 | 89^b 1543 | 90^a—92^b amo, amas, amat &c. | 93^a amor, amaris &c., 1139 | 93^b, 94^a amo, legione cōtiene 6063 persone | 94^b 1516.

9. H.²

See introductory note to No. 8. — The first sixteen sheets are numbered twice, 1—16 being also written below the texts, but in reversed order. 1^a 232 | 1^b 692 | 2^a, 2^b A Mn | 3^a *a sketch* | 3^b 1265 | 4^a—11^a A | 11^b *knots*, A | 12^a *knots*, Mn | 12^b 1197, *a sketch of ornaments* | 13^a 693 | 13^b, 14^a A | 14^b 1390, 1320, M | 15^a M | 15^b 694, 1316 | 16^a A | 16^b 1517 | 17^a A, 1010 Note | 17^b Pl. II. S. K. M. II.²

The two MSS. S. K. M. II.² and S. K. M. II.¹ are bound in one volume; the sheets are separately numbered on the top of each front sheet, but the two volumes are placed in the binding in reversed position, so that the two parts begin at the opposite ends of the volume. 1^a Vol. II, p. 62 sketch | 1^b 666, 697 | 2^a 665 | 3^a 1312, Ma | 3^b Ma | 4^a 1519 | 4^b + | 5^a M | 5^b, 6^a + | 6^b M | 7^a 1392, M | 7^b M, 1393 | 8^a Mn | 8^b + | 9^a Ge | 9^b Mn | 10^a sketch of a flower | 10^b O | 11^a P | 11^b Pl. LXXXV, No. 15, Vol. II, p. 74 below | 12^a 1394, 1317, sketch of a head | 12^b Ar | 13^a knots | 13^b Mn | 14^a 372 | 14^b, 15^a Mn | 15^b Fo | 16^a M | 16^b 103, P | 17^a Ph | 17^b, 18^a Mn | 19^b 998 | 20^a 1395, 376, Pl. XXIII, No. 2 | 20^b, 21^a P | 21^b sketches | 22^a 1396 | 22^b—23^b sketches | 24^a 1196 | 24^b—25^b sketches | 26^a + | 26^b Ma | 27^a 1397 | 27^b + | 28 is wanting | 29^a + | 29^b slight sketch of a woman

seated, holding a child in her lap | 30^a + | 30^b sketch | 31^a P | 31^b + | 32, 33, 34 are wanting | 35^a V | 35^b 1311 | 36^a M | 36^b Ma | 37^a acoustics | 37^b M | 38—42 are wanting | 43^a + | 43^b 1291 | 44^a 1290 | 44^b knots | 45, 46, 47 are wanting | 48^a—49^a knots | 49^b + | 50^a sketch of a head | 50^b, 51^a + | 51^b, 52^a Ge | 52^b 1398 | 53^a 1399 | 53^b, 54^a Ge | 54^b Mn | 55 is wanting | 56^a + | 56^b sketch | 57^a—59^a Ma | 59^b sketch of a head | 60^a + | 60^b, 61^a Ma | 62^a Ge | 62^a + | 62^b Ge | 63^a 97, 1400 | 63^b—64^b Ma | 65^a—66^b Mn | 67^a Ar | 68^a Mn | 68^b 1401 | 69^a 1313, 1402 | 69^b + | 70, 71, 72 are wanting | 73^a + | 73^b M | 74^a P | 74, 75^a + | 75^b 1403 Mn | 76^a Ge | 76^b 154 | 77^a—78^a Ge | 78^b 667, 1404 | 79^a Ma | 80^a Mn | 80^b knots. — On the same sheet are the marks K.K. 62 and 25 by an unknown hand.

12. S. K. M. II.¹

See preliminary Note of No. 11. — The numbers of the sheets are in Leonardo's handwriting and begin from the end, going backwards. The first sheet or cover sheet has no number | 1520, M, 612 | 1^a 36 | 1^b Ge | 2^a—26^a P | 26^b—28^a de chonfregatione | 28^b—42^b P | 43^a 1137 | 43^b 66^a P | 66^b 787 | 67^a P, 1206 | 67^b 784 | 68^a—69^a perpetuum mo-

bile | 71^b Ar | 72^a 793 | 72^b—75^b P | 76^a—86^a Mn | 86^b Sketch Vol. I, p. 201 and Vol. II, p. 99 below | 87^a—88^b Mn | 89^a 793 Note | 89^b Mn 90^a—93^b peso—94^a centro del mondo, A | 94^b 1521 | 95^a 733, 627, 1522 | 95^b mechanica potissimum in fine incipiendo, this note is not in Leonardo's handwriting, but by a later hand.

13. I.²

This and M S I.¹ are bound in one volume. The mark I is outside and Q and Q 3 inside the cover. 1^a magistr M^{to} jachomo (this note is not in Leonardo's handwriting). 1^b 1524, 704 | 2^a—7^b Latin and Italian vocabulary | 4^a has also the note simon de calima tintore | 8^a Vol. II, p. 68 Fig. 1 and 2 | 8^b—10^b Mn | 11^a 1405 | 11^b M | 12^a—14^a A | 14^b Ma | 15^a 1298 | 15^b 1299 | 16^a 1300 | 16^b 1301 | 17^a 1302 | 17^b 1303 | 18^a 1304 | 18^b 1305 | 19^a 1306 | 19^b—24^a A | 24^b 932 | 25^a Ge | 25^b—31^b A | 31^a M | 32^a second Latin declination | 32^b—36^a A | 36^b—38^a M | 38^b—43^a M | 44^a—47^a M | 47^b sketches of knots and shells | 48^a sketch of a dog's

head | 48^b contrapeso | 49^a ornamental design of two cornucopiae | 49^b sketch | 50^a—56^b M | 57^a, 58^a A, 58^b + | 59^a 679 | 59^b + | 60^a A | 60^b—61^b M | 62^a Pl. 15. W. P.

Most of these researches are written on loose sheets of unequal size. The dimensions of each sheet are here given in brackets: 1^a (20¹/₂ × 30 Cm) 324 | 1^b 322 2^a (21³/₄ × 26¹/₂) 310, 337, Pl. VII, Nos. 1 and 2* | 2^b sketch of a horse's legs, measurements and notes. 3 1^a (13¹/₂ × 14¹/₂ Cm) Pl. XI, 318 | 3 II^a (17 × 15 Cm) Pl. VII, No. 4, 327, 321 | 3 I^b, 3 II^b + | 4^a (21 × 12¹/₂ Cm) Pl. XIX, No. 1, 347 | 4^b 325 | 5^a (44 × 32 Cm) 341 ll. 1—4, 317 ll. 1—13, 625, 341 ll. 5—8, 317 ll. 14—17, Pl. XXXV, No. 1, 348 ll. 16—55, ll. 11—15, Pl. XVII, No. 2, 336, 348 ll. 1—10 | 707, 348, 56—68 | 5^b Vol. II, p. 44 Fig. 1 and p. 47 Fig. 3 | 6 I^a (21¹/₂ × 16

Cm) Pl. VIII, No. 2, 332 | 6 I^b 333 | 6 II^a (22 × 14³/₄ Cm) Pl. XIV, No. 2, 334 | 6 II^b Pl. XVI, No. 1, 335 | 7^a (40 × 28 Cm) 1410, 314, 338, 328, Pl. XIII, 326, 330, Pl. XIV, No. 1 | 7^b 349, Pl. XX, 339, Pl. XVI, No. 2, 342 | 8^a (28 × 20¹/₂ Cm) Pl. XV, 331, 345, 323 | 8^b + | 9^a (27 × 20¹/₂) V | 9^b + | 10^a, 10^b (22 × 16 Cm) Mn | 11^a (29¹/₂ × 20 Cm) Pl. LXIII, 684 | 11^b 685 | 12^a Pl. X, 316. — Sheets 9—12 which treat on different subjects are only added here, because in the Windsor Collection they form a set with Sheets 1—8. The thin cards, on which these sheets are mounted have a broad ornamental border in water colours.

16. W. H.

With regard to these studies see Vol. II, p. 4. The sheets are numbered 46—68, differing in size, and many not mounted are coloured in various tints: Compare also Lomazzo, Trattato dell'arte

della pittura I chap. 20, IV, 23 and Idea del tempio della pittura chap. 16. — Vasari also mentions these studies. 64. 716 | IV. 717.

17. W. An. II.

The sheets forming this treatise are all of the same size and originally formed a small book. At present the sheets are separated. The old numbers and marks which are to be found on most of the sheets are here given in brackets after the new numbers: 36 (21) 797 | 36^b muscles of the leg | 37^a 814, Pl. CVIII, No. 4 | 37^b the veins on the head &c. | 38^a (0) 38^b veins of the leg | 39^b veins on the leg and on the spine | 39^b 801 | 40^a nervi, matrice | 40^b + | 41^a (7) Delli musscholi che movā li labri della bocha | 41^b nervi, matrice | 42^a (10) nervi | 42^b veins of the leg | 43^a (8) Delli musscholi che movā la lingha | 43^b muscles of the foot, 843 | 44^a (3) veins of the arm | 44^b veins | 74^a (12) veins of the womb | 74^b muscles on the arm of the ape (scimmia) and of man (omo) | 75^a (2), 75^b muscles of the leg | 76^a dello vfitio de mesoplevri | 76^b Pl. CVIII, No. 1,

809 | 77^a (21) muscles of the leg | 77^b, 78^a (11) veins of the leg | 78^b veins of the hand | 84^a (10) 84^b the chest | 85^a the lungs | 85^b albero di tutti i nervi | 86^a (13) arteries | 86^b veins of the arm | 87^a (14) the lungs, 87^b the heart | 125^a—127^a (4) blood-vessels | 127^b the spine | 128^a (5) the mouth and the lips | 128^b matrice di uaccha | 156^a, 156^b genitals | 173^a (16. 17—two sheets, not separated) intestines 827 | 173^b 816 | 178^a, 178^b intestines | 183^a veins on the neck | 183^b veins | 201^a (M) bones | 201^b 1215 | 202^a (B.) 1412, 838 | 202^b 839 genitals, | 203 (24) 1178, 375, Pl. 19. W. M.

See Vol. II, p. 224 and No. 1051 Note. As to the Maps in MS. W. L. see No. 36. The following maps are on separate sheets 1. Pl. CXIII, The original is somewhat larger (19 × 13¹/₄ in); the whole is executed in water colours. The rivers are in blue 2. Pl. CXIV, (15³/₄ XII, in) | 3. Part of the Arno, in water-colours (39 × 22) Pl. CXII. 4. Map of a part of

Tuscany, in water colours (40 × 27 Cm), including Livorno, Pisa, Luccha, Volterra. 5. Central Italy (45 × 23 Cm) within the limits of Cornetto, Rimini, Pesaro, washed in Indian ink. 6. Study for the Map Pl. CXIII, washed in Indian ink; the names are written in Leonardo's ordinary writing (28 × 21 Cm).

20. S. K. M. I.²

This small MS. is bound in one Volume with MS. S. K. M. I.². On the first sheet is the note, written in German: Leonardo da Vinci der grōte Maler aus der italienischen Schule 1452 zu Vinci geboren, trat 1502 als Kriegsbaumeister in die Dienste Herzogg Valentini Borgia, und starb 1519. — This volume and the two others now in the Forster Library of the South Kensington Museum, London, were given to Mr Forster by Lord Lytton, who is said

to have bought them at Vienna for a low sum. The title of the treatise on sheet 1^a is given in 1374, Note; no other subject is discussed on the 38 sheets which form this MS. 1^b 1374 jo voglio abbassare la grosseza d'una tavola a data grosseza sanza mvtatione di sua largheza | domādo quāto cresce in sua lūgezza &c. | 4^a, 6^a, 8^b, 11^a, 12^a, 16^b are blank. — On the last sheet 39^a is the mark 46.

21. S. K. M. I.²

See introductory note to No. 20. — At the end of this Note book is the mark B B 14. This MS. has the pages numbered 1—28. — 1—4 Mn | 5 635, 649 | 6 Mn | 7 385 | 8 650,

24. W. An. III.

Among the numerous anatomical drawings in the Windsor Collection there is one set which appears to have formed originally a Volume by itself. Here the paper is of a thin greyish blue colour and of a rather rough surface. Leonardo seems to have made use of it exclusively for this particular treatise. All the sheets are of the same size. Each of them is marked by a Roman capital letter, as shown here in brackets. Sheet 217 bears the date 1513.—115^a (B) on veins | 115^b the heart | 116^a (K) blood-vessels | 116^b + | 117^a (E) spine and shoulders | 117^b + | 118^a (H) blood-vessels | 118^b + | 161^a (O) blood-vessels |

161^b + | 192^a (T) the arms, A | 192^b + | 193^a (V) vento | 193^b + | 196^a (P) muscles | 196^b + | 217^a (G) polmone 1376, 1423 | 217^b + | 225^a (N) battimento del cuore | 225^b + | 226^a (M) 850 | 226^b + | 227^a (H) cuore, polmone | 227^b + | 228^a (R) cuore, O | 228^b the heart and veins | 229^a (A), 229^b the heart | 230^a (S) discorso delli nerui muscoli, corde &c., 815 | 230^b + | 232^a (F) the heart | 232^b 121, 265, 292 ll. 1—3, 1424, 292 ll. 4—11, 59, 287, 209, 195, 204, 158, 1424: The sheet W. L. 136 (X) originally belonged to this series of sheets.

25. E.

The cover of thin grey card is the original binding. The outside bears the mark E. B is twice written inside the cover. The compiler of the treatise on painting in the Vatican library (Urbinas 1270) which was published by Manzi in 1817, and by Ludwig in 1882 gives a few passages from this MS, of which he correctly notes the corresponding number of pages, to which the mark B is added. o' 915, 479* | 1^a 1465, 1064, 1020 P | 1^b Ge, P | 2^a del cognoscere la parte settentrionale della calamita, M | 2^b 211 | 3^a de cōdensatione, 360, 238 | 3^b 117, 467 | 4^a 562, Ge | 4^b acoustics, 935 | 5^a A | 5^b, 6^a P | 6^b 366, 470, 403 | 7^a P | 7^b, 8^a Ge | 8^b 1155, Ma | 9^a—11^a Ge | 11^b Mn | 12^a 930 | 12^b—14^a strumenti aquatici | 14^b per fare l'arco | 15^a 230, 156, 380 | 15^b

28. Tr.

Marked S inside the cover and on the first sheet. At the beginning of the Volume is the following note: 1783 · 5 · Gennaro · Questo Codicetto di Leonardo da Vinci era del Signor Don Gaetano Caccia Cavaliere Nouarese, ma domiciliato in Milano, morto l'anno 1752 alli 9 di Gennaro sotto la Parocchia di S. Damiano La Scala. Jo Carlo Triulzio l'acquistai dal detto Caualiere intorno l'anno 1750 unitamente a un quinario d'oro di Giulio Maporiano e a qualche altra cosa che non più mi ricordo dandoli in cambio un orologio d'argento di ripetizione che io due anni avanti aveva comperato usato per sedici gigliati mache in verità era ottimissimo, che però questo codicetto mi viene a costare sei in sette gigliati. In the MS. the pages are numbered, not the sheets. 2 1493, caricatures, 1332, 1189 | 3 1469 Note, ships | 4 1486 | 5 Mn | 6 P Mn | 7 853 Ar Mn | 8, 9 list of words | 10 + | 11 1202 | 12 891 | 13 Fo | 14 840 | 15 Pl. 29. Leic.

Bound volume in leather cover. On the first five sheets before the beginning of the original MS are the following Notes. On 1^a marked in pencil 596: This treatise on the nature, weight and motion of water... has never been printed. On the reverse of the modern title may be found an extract from the life of Leonardo da Vinci, by Dufresne, in which this volume is particularly mentioned. It appears from the title page (although the name of the possessor has been obliterated) that it has belonged to Giuseppe Ghezzi, an eminent painter at Rome. — W. Roscoe.
 1^b + | 2^a + | 3^a Libro Originale || Della Natura, peso, e moto delle Acque, || Composto, scritto, e figurato di proprio || Carattere alla mancina || Dall' Insigne Pittore e Geometra || Leonardo da Vinci || In tempo di Ludouico il Moro, nel condur || che fece le Acque del Nauilio della || Martesana dall' Adda a Milano. || Si autentica con la precisa Mensione che ne fa Raffaelle du fresne nella Vita di detto Leonardo, descritta nel suo Libro stampato in Parigi da Giacomo Longlois l' Anno 1651 intitolato || Trattato || Della Pittura || Acquistato 'con la gran forza dell' Oro' (these words cover on erasure), per sublimare || le fatigose raccolte del suo studio || da || Giuseppe Ghezzi Pittore in Roma || 3^b (in another handwriting) Soleua il Vinci scrivere Alla mancina, secondo l' uso degli Ebrei, nella qual maniera erano scritti quei sedici Volumi de quali di già abiamo fatto menzione, et esendo il carattere buono, si legeua assai facilmente mediante un specchio grande, è probabile ch' egli facessi questo, accio tutti non legessero così facilmente i suoi scritti. L' impresa dell nauiglio di Martesana gli diede occasione di scriuere un libro della natura, peso e moto delle Aque pieno di gran numero di disegni di varie rote, Machine per molini, a regolar il corso dell' aque, e leuarle in Alto | 4 + | 4^a (in an earlier handwriting) Libro scritto da Leonardo Vincio che tratta del sole, della luna del corso dell' acqua dei ponti e dei moti | 4^b + | The arrangements of this MS. are somewhat unusual. On the head of many pages there are title lines here placed between giving the numbers of 'cases' (casi)

or subjects treated on the page. Most of these cases are introduced by 'Come' (How, or that).

36. W. L.

The history of this Volume is given on pp. 482, 483. Here as in the MS. C. A. the original sheets were fixed on the sheets of the volume, but most of them have been taken out again. The following references are exclusively to such sheets as are still to be found undetached in this celebrated volume. The size varies greatly. On the folio No. 124 (containing no drawing at present) is the Spanish note: ogni falsaua esta y nosecuēta. The back of some sheets is covered by the mounting. 132^a 886, Ma | 136^a Mn | 141^a 1436 | 141^b 1435 | 145^a A 597, Pl. V, 183, B 66, 270, 78, C 276, D 81, ll. 24—53, 120, 81 ll. 15—23, ll. 54—97 | 145^b A 288, B 77, C 80, 47, 87, D 79 ll. 1—5, 274, 81 ll. 1—14, 73, 79 ll. 6—12 |*

146^a 62, 130 | 146^b Ma | 198^a 682 | 198^b 683 | 199^a 199^b A | 200^a sketch of a head. 200^b sketchmaps of the Valle Brembana with the names and distances of the villages from Bergamo and Ponte a San Piero up to the Val Tellina, and of the Val Trompia between Brescia and the lago d'Idro. 203^a 1438, Ge Mn | 203^b sketch for the map on fol. 212^a | 212^a part of the Arno river 1437 | 212^b sketch-plan of Florence, 1004 Note, 1016 Note | 217^a five plans, showing the divisions of some fields | 217^b water colour drawing of a villa with gardens (not by Leonardo) | 224^a sketch-map of the Val di Serio between Bergamo and Ardese, with numbers showing the distances between the

villages | 224^b small map of the same valley, map of the Oglio between Palazzolo and Ponte secco: Pontaseg—confini d'Italia, sketch-map of rivers between Bergamo and Brescia | 226^a sketch of the valley of the Arno 1006 | 229^a plan of Imola 1051 and Pl. CXVI, No. 1 | 231^a map of the river Arno near Florence | 231^b whirlpools | 234^a sketch of river | 234^b map of the valley of the Arno including Florence, Prato, Pistoja, Lucca and Empoli.

37. W.

The detached sheets of MSS. in the Windsor Collection chiefly treat on Anatomy. They vary greatly in size, nor is there any consecutive order. The following account of the very rich materials must therefore be confined here to general statements 1^a. 387, Pl. XXIV, No. 1 | 1^b + | 2^a Fo | 2^b + | 3^a 379, 297, Pl. XXIII, No. 4 | 3^b drawing of a head | 4^a Mn, Anatomy | 4^b writing by an unknown hand with the date 1443 | 5^a A P 14II | 6^a 6^b measurements of a horse | 8^a drawing of legs | 8^b Joannes de pasqualibus debet dare etc. by an unknown hand; 9^a sketch of a head, not by Leonardo; 9^b P M., drawing of a horse Vol. II p. 24 above to the left | 10^a—35^b chiefly small drawings | 36^a 797 | 36^b legs and muscles | 45^a intestines | 45^b + | 69^a Mn, 69^b + | 70^a Pl. LII, No. 1 | 70^b + | 71^a—73^b mostly sketches | 79^a 79^b anatomy of the head | 81^a 83^a anatomy | 83^b + | 88^a the muscles | 88^b + | 92^a—99^a sketches | 100 standing male figure | 100^b + | 101^a Pl. XXXVIII, No. 3 | 101^b + | 102^a (19, 21) Pl. XXVIII, No. 7 | 102^b + | 103^a standing male figure | 103^b + | 104^a Pl. VII, No. 5 | 104^b + | 105, 111—114 various sketches | 119^a 313 Pl. VII, No. 3 | 120^a 121^a sketches of heads | 122^a Pl. CI, No. 3 | 123^a a similar drawing | 129^a blood-vessels | 129^b polmone | 136^a—144 anatomy, various notes and sketches | 158^a 608, Pl. XXXV No. 2 and 3 | 158^b 609 | 165^a cuore polmone | 165^b drawing of a female head, not by Leonardo | 174^a 1362 | 175—180 anatomy | 185^a—187^b anatomy | 188^a Ar | 188^b anatomy | 190 Ar, Ph | 190^b anatomy | 191^a Ge, 1475 | 191^b intestines | 194^a

195^b muscles, the heart | 197^a 351, Pl. XIX, No. 2 | 197^b sketches | 198^a legs | 207—209 Mn Ph | 210^a 799 | 210^b popilla de' animali notturni | 215^a 358, Pl. XXII, No. 2 | 215^b + | 219^a 219^b muscles of the arm | 224^a veins | 224^b + | 231^a 477, Pl. XXXVI, Pl. XXXVII | 233^a A, 233^b + | 235—238^a vento, A, P, anatomy | 238^b 807 | 239^a 8II | 239^b + | 240^a Io ò per strumento di questo 4^o libro a maneggiare 6 cose, cioè polo, subbio, leva, corda, peso e motore | 240^b 365, 269 | 241^a 1157, 1358, 844, 1210 | 241^b + | 243^a 681, Pl. LXII, No. 2 | 243^b + | 244^a sketches of trees | 244^b + | 245^a sketch of fire | 245^b + | 246^a Pl. XL, No. 2 | 246^b + | 247^a—249^a sketches of horses | 250 anatomy.—The following Roman numbers refer to selected drawings with MSS., most of which are mounted on cartoons: I Pl. XXXII, 137, 575, 577 | II 170 | III 356, Pl. XXI | IV 389 Pl. XXV | V Pl. XXVI* | VI 456 | VII 475 | VIII 642, IX 688, Pl. XLIV | X 710, 1413, 878 | XI 7II, Pl. LXXV | XII 713, 1175, XII^b 1547 | XIII 639, 714, 852, 1186 | XIV 715 | XV 717 | XVI Pl. LXXX, No. 4 (reversed in the reproduction) | XVII Pl. LXXXIII, 1103, XVII^b 1104 | XVIII CII, No. 1 | XIX Pl. CI, No. 1, 760 | XX Pl. CI, No. 3 | XXI 800, 833 | XXII 803 | XXIII 804, 1494 | XXIV 823 | XXV 856 | XXVI 868 | XXVII 909 | XXVIII 1022 | XXIX 1140 | XXX 1329 | XXXI 1355, Pl. CXXII | XXXII 1532, Vol. II p. 24 the sketch on the right.

The Arabic numbers of sheets not given among the foregoing references will be found inserted in the notices of the various treatises at Windsor Castle, given previously under separate headings.

38. C. A.

This best known and most voluminous Volume is composed of loose sheets of various size, each folio containing one or more sheets of original MS. The mounting is the same as in the Volume W. L. Such sheets as have notes on both sides are not fixed by their back to the folio sheets, but set into a paper frame. The numbering of sheets refers only to the folios. In the interest of identification and in order to facilitate a comparison of the writing on the opposite sides of one

and the same sheet, I have introduced here, in addition to the numbers of Leoni's folio sheets, second numbers which refer to the separate original sheets.—In the following description it seemed to me desirable to refrain from giving detailed accounts of the contents of such sheets, as do not bear upon the various subjects of the present publication, the more so, as the order of the sheets, being quite accidental, throws no light whatever on the connection of the various stu-

dies extending over about thirty years. Outside the cover is the inscription in golden letters: DISEGNI . DI MACCHINE . || DELLE . ARTI . SECRETE || ET . ALTRE . COSE || DI . LEO-NARDO DAVINCI || RACCOLTI DA || POMPEO LEO || NI || On the back of the cover is the No. 248. 1^a, 1^aand 1^b, 1^b 95 | 2^a 2^a—4^a 10a Mn | 4^a 11^a 1553 | 4^b 11^b 631, 1359. The following drawings and texts nearly all refer to machines | 7^a 19^a 1119 | 11^a 37^a P | 11^b 37^b 1439 | 12^a 42^a 1286, Sketch Vol. II p. 62 | 16^b Pl. XCVI, No. 1 | 17^a 67^a Mn | 17^b 67^b 1361, 1533 | 19^a 72^a Ph | 19^b 72^b 1440, Mn | 26^a 87^a 1545 | 26^b 87^b Mn | 27^a 89^a 1441 | 27^b 89^b canons | 30^b 96^b 200, Pl. 39—55.

39. *The drawings and MSS. by Leonardo in the Royal Library, Turin, are mounted on card.* Card 7 319, Pl. XII | 7^b Mn | 25 Mn | 17 1182 | 11 320 | 1 1369 Note, Pl. I | 5 Pl. XLII | 6 Pl. CXX.

40. Florence, *Uffizi Collection of drawings Frame 115 No. 446 663, 1383.* A drawing of a machine is on the back.—Drawing of Landscape (28 × 19½ Cm) in a portfolio, not exhibited, not mounted nor numbered. 1369.

41. Venice, *Academy of Fine Arts, Room VIII, Frame IV, 16, 315, Pl. IX, Frame V | 1^a Notes on P | 1^b Pl. XCIV, No. 4, Frame V | 4^a Pl. LV | 4^b Notes on P, Frame V | 9^a Pl. LIV | 9^b Motori de' corpi, notes | Frame VI 3 Pl. XVIII, 343 Frame X, 8, Pl. XLVI, 668.—The drawing Pl. LIII is in a portfolio in the library of the Academy (exhibited in 1883).*

42. *Among the drawings by Leonardo in the Gallery of the Ambrosian Library there is only one with a MS. note: 1456.*

43. *Collection of drawings, made by P. Resta, a large bound volume in the Ambrosian Library contains an anatomical drawing with notes by Leonardo.*

44. Munich, Pinacoteca, *a drawing with notes on warfare.*

45. *The collection of drawings made by Vallardi, a large volume in the Library of the Louvre contains a sheet with notes on arms and several drawings by Leonardo, but only two out of these bear on the subjects of this publication: Pl. LXXX and Pl. LXXX, No. 1.*

46. Louvre, *Collection of drawings, mounted on card (not exhibited) see Vol. I p. 297 and No. 594 Note.*

47. Paris, *Collection of drawings in the possession of M. Armand; a drawing with MS. note similar to that at Munich and to that in the Collection of A. Morrison, Esq. London.*

48. British Museum, Printroom. *Several drawings by Leonardo: 1457 and Pl. LII, No. 2 and a drawing with MS. notes on warfare.*

49. *A mounted sheet Pl. LXII, No. 1 664, in possession of A. W. Thibaudeau, Esq. London.*

50. *Collection of A. Morrison, Esq. (see No. 47).*

51. *Collection of the late Prince Henry of the Netherlands; one sheet containing notes and a diagram, referring to Perspective.*

52. *The five Manuscript sheets formerly in the possession of Libri (described in his catalogue of the reserved portion), were bought in 1862 by the Marquis of Breadalbane. After his death they came into the possession of the Hon. Mr. Baillie Hamilton, Langton, Berkshire. Here they seem to have mysteriously disappeared, and I have not been able to trace them any further.*

53. *In the Library of Christ Church Oxford; two mounted drawings preserved in portfolios. The first is marked 4 and has notes on machines, on weight and a sketch of a horseman fighting. The second is reproduced in parts in Vol. I Pl. LIX, Pl. LX, No. 1, Pl. LXI 676, 677.*

54. Modena, Archivio Palatino: No. 1348.

55. *Treatise of Francesco di Giorgio, MS. in possession of Lord Ashburton, with notes in Leonardo's handwriting written on the margin, on Fol. 13^b 767, on Fol. 25^a 952, on Fol. 27^b 44. Others on mechanics &c. on Fol. 15^b, 32^a, 41^a and 44^b.*
