SURFACE DRAINAGE

TIRED OF LOSING PRECIOUS TOPSOIL TO EROSION?

Heritage Tractor can help.

Managing surface water is not easy, but Heritage Tractor has the tools and expertise to help you retain your topsoil, increase yield, increase field efficiency, and simplify field operations.

Step 1: Our experts can perform an accurate RTK topographical survey of your problem areas. This shows the natural lay of the land and can help you make sense of the way the water flows during a hard rainfall. This survey is the foundation of a computer-generated design that will reduce erosion without breaking the bank.

Step 2: The data generated from the survey is used to create a preliminary custom design plan for terraces with grassed waterways, underground outlets, custom terrace spacing, USDA specifications, and other requests.

Step 3: After you review the preliminary design, submit any changes you would like to make. If you would like to move an underground outlet to fit your farming practices we can do that. If you would like to move a terrace to better fit your equipment we can do that. Our team will keep providing designs until you are completely satisfied.

Step 4: After completing the preliminary design, we will provide you with a detailed list of materials for the job that includes length, size, and type of tile, elbows, risers, adapters, etc. Everything you will need to complete the job.

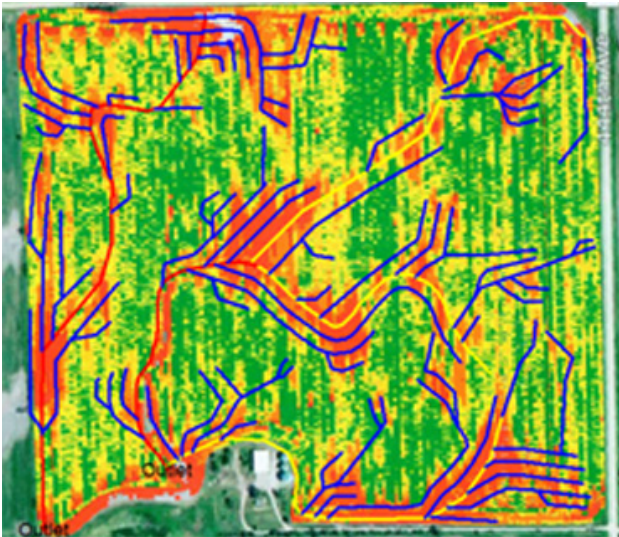

Step 5: The final plan is yours. You can do the installation yourself or hire a contractor. We can provide the plans in paper form or electronic form for automated machine control systems.

Need a contractor? We have contractors available with the experience and equipment to do the job right. We can even transfer the plans to your field using GPS located flags. We also have machine control systems available for rent, ask for details.

Surface Drainage Pricing

	Description	Price per Acre
RTK Survey	Conducts the RTK Survey to Capture grower topography information	\$5
Plan Design	Creation of drainage plans by AGREM according to USDA specifications (lengths of terraces, amount and sizing of mains, heights of inlets).	\$15
Final Plan Installation	<ul style="list-style-type: none">• Installation of the final plan performed by a professional contractor. Heritage Tractor will format designs for the contractor if requested.• Flagging of Terraces is optional upon request• Additional flagging is \$2.50 per acre	Flagging - \$10

*Prices are subject to change
