What is Hypersonic 2?

Hypersonic 2 is a sound module plugin that can be used with any VST or DXi compatible host application, such as Cubase, FL Studio, Ableton Live, etc. It features four sound engines: analog, FM, wavetable and sample player, which can produce a variety of sounds from classic synthesizers to realistic acoustic instruments. Hypersonic 2 also has a polyphonic arpeggiator and an extensive effects section that can enhance the sounds further.

Hypersonic 2 comes with 1.7 GB of samples and 1,800 factory presets that cover almost every musical style from dance to classical. The presets are organized into categories and subcategories, making it easy to find the right sound for any project. The user interface is intuitive and user-friendly, allowing quick access to the most important parameters via hyperknobs. The plugin also supports MIDI learn, which means any parameter can be controlled by an external MIDI controller.

Why is it illegal?

Steinberg Hypersonic VSTi DXi 2.0 INTERNAL-AiRISO is an illegal version of the original Hypersonic 2 plugin, which was developed and distributed by Steinberg, a German company that specializes in music software and hardware. The original plugin requires a USB eLicenser dongle to activate and run, which is a form of copy protection that prevents unauthorized use and distribution of the software.

The group AiRISO managed to bypass the eLicenser protection and create a cracked version of the plugin that does not require the dongle. They also modified some files and added their own signature to the plugin name and logo. They then released the cracked version on the internet for free download, which is a violation of Steinberg's intellectual property rights and software license agreement.

What are the risks?

Downloading and using Steinberg Hypersonic VSTi DXi 2.0 INTERNAL-AiRISO is not only illegal, but also risky for several reasons. First of all, the cracked version may not work properly or cause compatibility issues with other plugins or host applications. It may also contain viruses or malware that can harm the computer or compromise the user's privacy and security. Furthermore, the user may face legal consequences if caught using or distributing the cracked software, such as fines or lawsuits.

What are the alternatives?

The best alternative to Steinberg Hypersonic VSTi DXi 2.0 INTERNAL-AiRISO is to buy the original Hypersonic 2 plugin from Steinberg's official website or authorized dealers. The original plugin is guaranteed to work flawlessly and safely, and comes with technical support and updates from Steinberg. The original plugin also costs less than \$300, which is a reasonable price for such a versatile and powerful sound module.

Another alternative is to use other legal sound module plugins that offer similar or better features and quality than Hypersonic 2. Some examples are HALion Sonic, Electra3, Phase Plant, MPowerSynth, Corona and many more. These plugins can be purchased from reputable online stores or downloaded as demos or free versions from their respective websites.
