

Unlimited logistics solutions

Logistics
services,
freight
transport
and storage

ACAGO Logistics is a Romanian private company, licensed as a expedition company, which offers a wide range of logistics services, internal and international freight transports, as well as storage services.

The seven hubs in the country that will be operational in a short time and whose locations are strategically placed near the border areas, help us to offer the optimal conditions for maximizing the efficiency of the supply chain with complete logistics and warehousing solutions.

Our transport and professional support services guarantee the maximization of the efficiency of the supply chains through low costs, speed of transports in double insurance regime and real-time tracking of the route of the goods by the clients, from the lifting point to the final destination.

Freight storage services

Due to the distribution network that we will soon make available to customers, consisting of seven hubs located in Pascani, Iasi, Constanta, Bucharest, Giurgiu, Arad and Oradea, we offer to our customers services characterized by important storage capacity in ambient and controlled temperature regime, taking into account the specifications of your requirements, the facilities including the access to utilities, storage shelves and adequate lifting and handling equipment.

Together with our partners, we guarantee fair prices - which will allow you to achieve savings by constantly updating prices in favor of customers, taking into account factors such as economic situation and the relationship between supply and demand. The guarantee of the security for your goods is given by a double insurance, a civil liability insurance and a second insurance on the goods coming from the carriers with which we work (through this goods being insured during transport).

Freight transport services

Road freight

The range of road freight services by trucks includes both internal and international transports, performed in full truck load (FTL) and also in less than truckload (LTL) modes, for all types of products. For both internal and external transports we provide a special road transport service, which includes, but is not limited to: oversized, containerized, dangerous goods (ADR) or temperature controlled transports.

Rail freight

Because our hub network will have immediate connections to the national railway network, we offer to our customers complete rail logistics services. Rail freight is a more environmentally friendly mode of transport, offering a much higher transport capacity. This service has a number of major advantages, such as greater speed, avoiding traffic jams or limited transit times - imposed by legal regulations for drivers.

Maritime and river freight

FCL containerized transport (full container load) and maritime groupings LCL (less than container load) are the main service groups within the maritime solutions offered by ACAGO Logistics. On important transport routes, especially maritime ones (* Asia - Europe), ACAGO Logistics monitors the transport through modern IT systems and rents storage spaces, so that the entire process of managing and running your transport will be fully coordinated by shipping experts.

Air freight

Whether we refer to standardized delivery services, groupings or priority shipments with fixed delivery dates, our experts in air services will identify the best solutions for your needs. Through door-to-door, airport-to-airport transportation services or a combination of the options above, we are at your disposal for demands that require an urgent solution.

Intermodal freight

Through the intermodal freight services we are at your disposal with the optimal solutions intended mainly for requests that include deliveries from very long distances. We guarantee to obtain excellent ratios between the duration and the cost of the transports, combining the maritime / railway transports (for long distances) with the road transport (for taking over the goods and delivering them to the final destination).
