Species abundance
Biodiversity

Governance

Infrastructure

Tourism/Eco-tourism

Processes of PA establishment

Increase participation

Alternative livelihoods

The Ghanaian Context

The Ghanaian Context

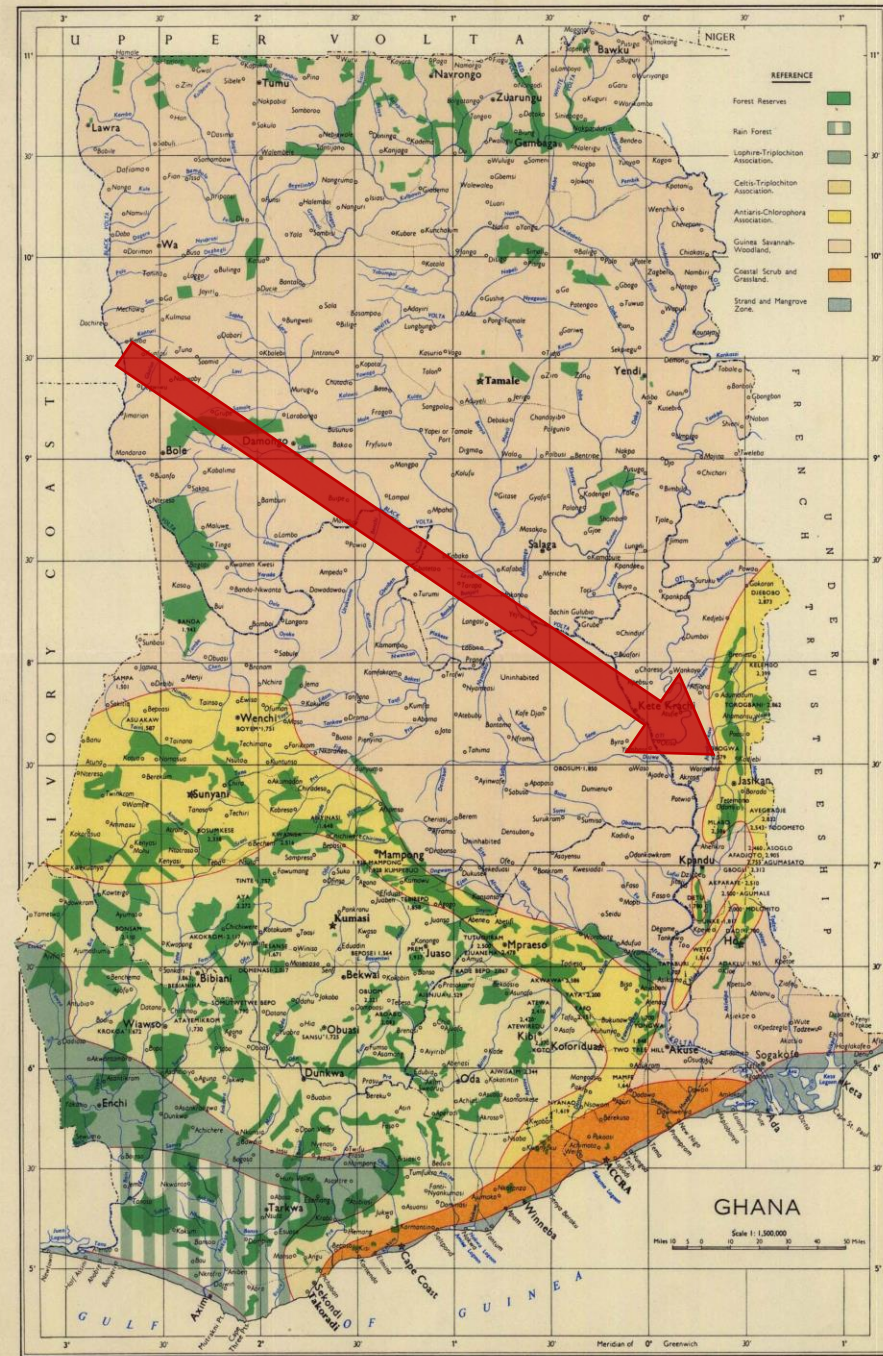

Community Resource Management Areas

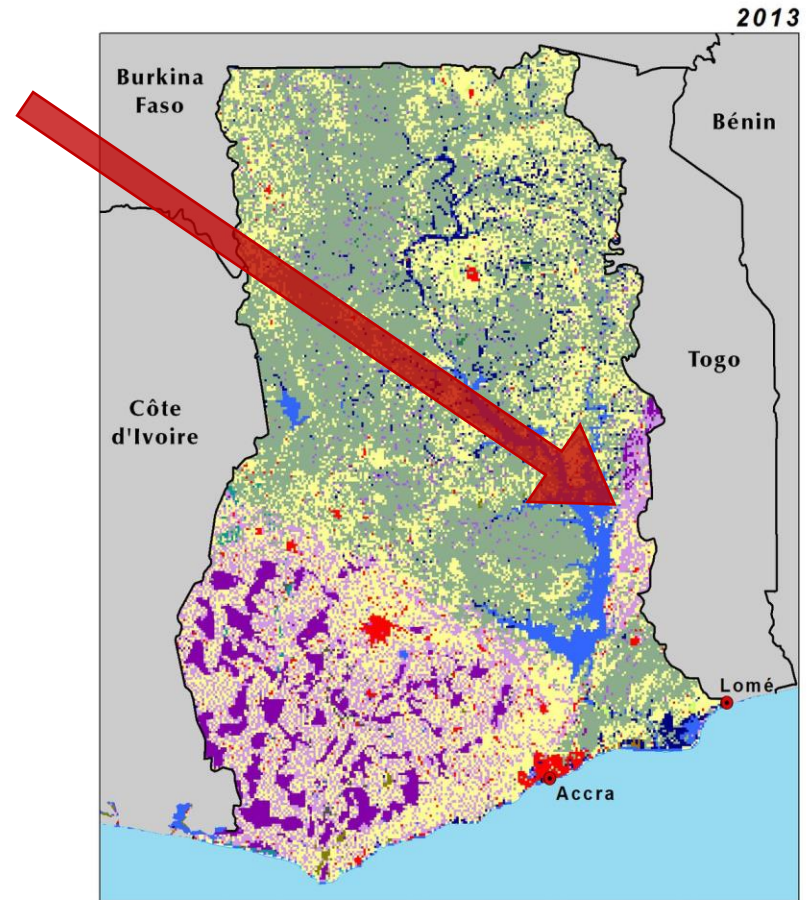

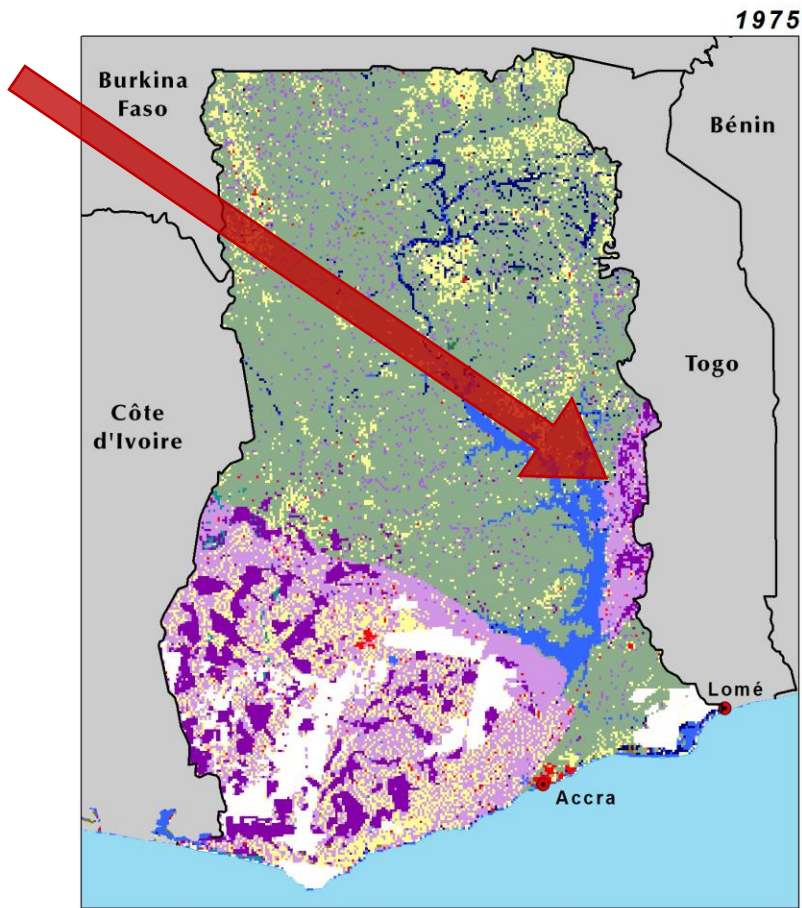

- CREMAS
- Devolved management
- Works to address issues of resource conservation on community lands
- Aims to bridge disconnect between **state** and **customary** management systems

Akwapim-Togo Mountain Range

- Guinean Forests of West Africa identified as a 'Biodiversity Hotspot' by international organizations
- Land management pluralistic and decentralized
- 80% of lands held under trusteeship of customary authorities = chiefs, families, and traditional leaders
- Akosombo Dam, 1965
- Closed canopy forest

Land cover and land use trends in Ghana from 1975 and 2013, USGS

Land Cover / Occupation des Terres

- Herbaceous savanna / Savane herbacée
- Savanna / Savane
- Woodland / Forêt claire
- Gallery forest & riparian forest / Forêt galerie & formation ripicole
- Forest / Forêt
- Degraded forest / Forêt dégradée
- Mangrove / Mangrove
- Agriculture / Zone de culture
- Irrigated agriculture / Cultures irriguées
- Plantation / Plantation
- Settlements / Habitation
- Water bodies / Plans d'eau
- Wetland - floodplain / Prairie marécageuse - vallée inondable
- Rocky land / Terrains rocheux
- Bare soil / Sols dénudés
- Open mine / Carrière
- Cloud / Nuage

The Akwapim-Togo Mountain Range

Research Approach & Methods

Goal & Driving Questions

Goal: To understand community perception and awareness towards natural resource management systems and conservation programming across the Akwapim-Togo Mountain Range

1. What factors promote (or inhibit) implementation and enforcement of conservation programming/policy?
2. How do stakeholders perceive current natural resource management systems and interventions?

Picture: Fire in the riparian corridor of the River Dayi that also serves as a source of drinking water for many downstream communities

Community workshops

- Implementation of 12 community workshops using SWOT framework with priority ranking system
- Total participants: 329

Key informant interviews

- Forestry Commission
- Wildlife Division
- NGOs/CSOs

Round-table discussions involving key stakeholders

- Local communities, government agency, and environment organizations

Transect walks with stakeholders and land managers

- River Dayi
- Kalakpa Resource Reserve
- Kyabobo National Park
- Mount Afajado
- Wli Falls
- Keta Lagoon complex

Key Results

- 2012 process started to implement CREMAs across the mountains
- Multimillion dollar project backed by international donors
- Programming focused on alternative livelihoods and new governance arrangements
- People are acutely aware of their changing landscape
- Fire widely perceived in ALL communities to be greatest threat to individual and collective livelihoods
- Deforestation, from illegal chainsaw operators, ID as a top threat in 11 out of the 12 participating communities
- Widespread resistance to conservation programming

Discussion

- Highlights attempts to promote new linkages between actors
- Land and resource tenure central issue
- Clear disconnect between state and customary management systems
- Conservation interventions did not directly focus on tenure or current management systems
