

Declarable list

Epiroc is committed to provide clean, safe and healthy environment for all employees. Use of listed substances must be declared.

Scope

Certain substances may have an adverse effect on human health or the environment. The use of some of those substances are limited through legislation in many countries. Some substances are prohibited in products and processes, other needs to be phased-out and declared. **The Declarable** list provides information about substances that should be limited in use. In addition, all Epiroc units as well as business partners, including suppliers, contractors, subcontractors, joint venture partners, and agents must declare any use of listed substances in items delivered by or to Epiroc. Compliance with Epiroc Group **Declarable list** is part of the 10-criteria letter for suppliers.

Information on prohibited substances can be found in the Epiroc Group Prohibited list.

If national rules are more restrictive and prohibits a substance in the **Declarable list** such national rules must be followed.

Requirements

A substance can be both prohibited and declarable depending on the application of use. Each entry can cover one single substance or a group of substances; in that case this is indicated by "Several". The duty to declare content of a substance in the list refers to concentrations exceeding 0,1 percent by mass of any individual article assembled in any product delivered to Epiroc.

Conflict minerals

Conflict minerals are minerals whose trade, taxation or protection can directly or indirectly finance armed groups and further the conflict in regions as defined by UN. These minerals include columbite-tantalite (coltan), cassiterite, gold, wolframite or their derivatives. Common derivatives of these minerals are tantalum, tin, tungsten and gold and are included in this definition.

Upon request, suppliers must disclose the presence of conflict minerals and due-diligence progress, according to industry standard and report the results with reasonable certainty.

³ CAS is the abbreviation for Chemical Abstract Service registry number. This is an international numeric identifier which designates only one chemical substance

Annex D – Clarification of legal references and scope

Use of substances in **Epiroc Declarable list** shall be limited. Regardless if the scope of the legal reference is limited to a product type or a region Epiroc has decided that presence of any listed substance must be declared for all products delivered to Epiroc unless else is clearly exempted in **Epiroc Declarable list**. The duty to declare applies to any individual article assembled in any product.

Note that a substance can be included in many different legislations. The strictest requirement is then applied.

+ Phase-out list

Contains substances that we want to highlight since they will soon be added to the Prohibited list. Information about when the substances will be added to Prohibited list, in what regulation the substances are included, and in what products/materials the substance is known to be found in is given in this section. This list is short and meant as a priority list for substitution.

+ REACH⁴ (Abbreviation for Restriction, Evaluation, Authorization and Restriction of Chemicals)

Is the name of EU:s chemicals legislation. As chemicals are components in products and processes used in our industry, some parts of REACH applies to Epiroc. By **REACH compliance** Epiroc means that content above 0,1 % of any substance included in the Candidate list is declared and no substance is used in contradiction to the restrictions in Annex XVII.

+ REACH Candidate list

Is a list of substances identified to have long term negative effects on health and environment (e.g. carcinogenic, mutagenic or reprotoxic (CMR), endocrine disruptors or persistent, bioaccumulative and toxic for the environment (PBT and vPvB)). These substances are also known as Substances of Very High Concern and the list as SVHC-list.

Information about content of any substance included in the Reach Candidate list of Substances of Very High Concern in concentrations above 0,1 % must be provided to Epiroc. The information must be provided for all individual articles assembled in any product delivered to Epiroc.

If any individual article contains substances included in the Candidate list Epiroc must actively provide such information to our customers. This requirement is stated in Article 33 of REACH. New substances are added to the Candidate list twice annually with instant duty to inform customers.

All substances in the Candidate list are included in the **Declarable list** unless they are also regulated by a more strict legislation. If regulated by a more strict regulation the substance is included in the **Prohibited list**.

+ REACH Authorization list (REACH Annex XIV)

Some of the substances in the Candidate list are also included in REACH Authorization list, meaning that after a sunset date they cannot be used without a permit within EU. Those substances are included in Epiroc Phase-Out List until the sunset date is passed. When the sunset date the substances are moved to Epiroc Prohibited list for use in processes (chemicals).

+ REACH Annex XVII

Contains a list of substances (on it own, in mixtures or in an article) for which the manufacturing, placing on the market or use is limited or banned in European Union. The list contain substances that pose an unacceptable risk to human health or to the environment. To ensure compliance for Epiroc products, all relevant substances/entries in Reach Annex XVII are included in the Epiroc **Prohibited list** or **Declarable list**.

+ Kyoto Protocol (Greenhouse gases)

Is an international agreement to fight global warming by reducing greenhouse gas concentrations in the atmosphere. Epiroc follows EU:s interpretation and prohibit any products to contain substances with a global warming potential (GWP) above 2500. Content of greenhouse gases identified to have a GWP below 2500 in concentrations above 0,1% should be declared.

⁴REACH – Registration, Evaluation, Authorization and restriction of Chemicals (EC 1907/2006)

+ **RoHS⁵** (Abbreviation of Restriction of Hazardous substances)

Is a legislation banning use of hazardous substances in electric and electronic equipment to facilitate recycling. RoHS bans the use of lead, mercury, hexavalent chromium, cadmium, the brominated flame retardants PBDE and PBB and the plasticizers DEHP, DIBP, BBP and DBP in electric and electronic equipment (EEE), including cables and spare parts. Many components and spare parts incorporated in or used with Epiroc equipment are covered by this legislation when sold as individual parts.

To ensure compliance with this regulation Epiroc ban the use of these substances in concentrations above 0.1 % (0.01% for cadmium) in processes and any item delivered to the Group. For electric and electronic equipment (EEE), including cables and spare parts, the prohibition is valid for any homogeneous material. For non-EEE the prohibition is valid for any individual article assembled in a product delivered to Epiroc.

· ⁵RoHS –Restriction of Hazardous Substances in electric and electronic equipment (2011/65/EU).
