Everyone can benefit from some micro training at Digitus

Introductory Courses

Introduction to micros IC/1

Business systems IC/2

Office systems IC/3

Management aids IC/4

A family of courses designed for users with no previous computer experience. The first introduces hardware and software (including programming), and establishes the criteria for selecting micros. The remaining three courses look at the problems of implementing systems, and where practicable review the package solutions available.

FEES

Introductory and Skills Training Courses £95 a day + VAT. Computer Pro Courses £125 a day + VAT. There is a discount of £10 a day for booking more than one day or five days can be booked for the price of four.

Digitus is a member of COSIT; its courses may qualify for training grants from the Manpower Services Commission or the Engineering Industry Training Board.

DATES OF NEXT COURSES

IC/1 Oct 10, Dec 12; IC/2 Oct 11, Dec 13;
IC/3 Oct 12, Dec 14; IC/4 Oct 13, Dec 15

Skills Training

Fundamentals of BASIC programming (2 days) ST/5

Improve your BASIC (2 days) ST/6

A complementary pair of courses designed to teach BASIC programming with plenty of hands-on practical work. The advanced course introduces sophisticated methods of file design, data organisation, access methods and control.

Wordprocessing with WordStar* ST/7

DataStar*/SuperSort*/MailMerge* ST/8

Spreadsheets with Supercalc* ST/18 **NEW**

Practical workshop courses with the emphasis on developing the basic skills and solving everyday problems, with plenty of hands-on sessions

dBASE II* (3 days) ST/19 **NEW**

A detailed study of dBASE II data management system, covering file design and indexing as well as applications system design using the dBASE procedure language.

Introduction to systems design (3 days) ST/17 **NEW**

An ideal follow up to the BASIC programming courses: helps formulate problems in computer terms

* registered trademarks of the following: MicroPro for WordStar, DataStar, MailMerge, SuperSort Sorcim for Supercalc; Ashton Tate for dBASE II; Bell Laboratories for UNIX

Computer Pro Courses

UNIX* (3 days) CPC/20

Programming in C (2 days) CPC/21 **NEW**

Tutorials on the main features of UNIX and the C programming language, with extensive practical sessions on a multi-user UNIX system.

Hardware for software people CPC/9

Operating systems and languages CPC/10

Communications CPC/11

Application design and products CPC/12

System and program generators CPC/13

A family of five one-day courses to introduce analysts and programmers to current micro practice, and to examine future trends. Popular software products are reviewed.

Micro technology and strategy CMS/14

Local area networks CMS/15

Micro database management systems CMS/16

A series of advanced tutorials to help computing management review the choices available and to select the best strategy.

IN-COMPANY TRAINING

Digitus provides courses tailored to the needs of individual companies, from seminars for management to detailed tuition for office and production staff. Courses can be held on company premises, or at the Digitus Training Centre. Contact the Training Administrator for full details.

Cover illustration by Robin Harris

FEATURES

- PCWSHOW PREVIEW** 125
The latest bulletin on who and what will be at the greatest micro event of the year.
- RANDOM NUMBERS** 132
How random are computer-generated random numbers? Professor Brian Ripley explains.
- CTUK! NEWS** 140
Chris Woodford reports on CTUK! Burton's software evaluation system.
- WARNIER ORR PART III** 180
Paul Overaa's penultimate article looks at normalisation in practice.
- EXPERT ADVICE** 184
Chris Pratt discusses expert systems in general with a focus on MYCIX which was specially written for the Sharp MZ-80K.
- DATA SHAKER** 192
Mark Huckvale presents cocktails to slake your thirst in the most oppressive dog days of summer.
- BIG BROTHER IS WATCHING YOU** 194
A Sandison considers the consequences of the Data Protection Bill presently going through Parliament.
- SHARPLAGIC** 212
Extend your Sharp Basic with a little clever coding.
- BEGINNER'S GUIDE TO BASIC PROGRAM CONVERSION** 216
Compiler of the master chart Surya gives some hints to beginners.
- SIRIUS GRAPHICS** 218
A D Osborne investigates an add-on board from Magus Computer Systems for the ACT Sirius 1.
- COMPUTERISING YOUR BUSINESS** 220
Michael Becket, the voice of experience, gives you the benefit of his learning curve.
- TISPRITES MYSTERY SOLVED** 222
Adrian Bicker with some clever tricks in TI Extended Basic.
- USER GROUP INDEX** 230
We present our periodic round-up of machine specific clubs—local, national and international.

BENCHTESTS & REVIEWS

PIED PIPER 144

Dick Pountain focuses an eagle eye on this Canadian-designed portable with CP/M and a single 784k formatted disk.

APC 152

A beautifully made machine from NEC, but is it a good buy? David Tebbutt investigates.

MICRO-PROFESSOR II 168

Shirley and Pete Fawcett check-out the claim that the MPF II is compatible with Apple software.

REGULARS

NEWSPRINT 116

Everything you ought to know about the micro world this month presented by the ineluctable Guy Kewney.

COMMUNICATIONS 126

This month's bumper mail bag. Keep on scrolling!

BANKS' STATEMENT 136

Find out how Cedric Arbuthnot from Wapping became Ivan Andov, the VIC-20 busking, genius son of a white Russian emigré . . .

EDUCATION 139

Welcome back to Derrick Daines with an occasional series.

CHESS 142

Tony Harrington talks to Richard Lang, PCW's 1981 chess tournament winner.

LEISURE LINES 147

JJ Clessa's monthly brain teaser.

YANKEE DOODLES 149

What to expect this side of the Atlantic as our man in the US Sol Libes reports.

COMPUTER ANSWERS 150

Len Warner and his team of experts get to work solving your problems.

SCREENPLAY 159

Games guru Steve Mann tries out some new offerings for the Spectrum, VIC-20 and TI 99/4A.

PROSE PACKAGING 176

Steve Mann turns his Spectrum into a full-blown word-processor.

WHICH SPREADSHEET? 196

SPECTRUM SPREAD

Mike Liardet tests out Psion's Vu-Calc and Microl's The Spreadsheet, both available for the Spectrum.

STAR QUALITY 202

This month Kathy Lang examines Infostar from MicroPro, which is already second to just Dbase II in the CP/M stakes.

T J's WORKSHOP 164

Pages of hints and tips for PCW readers from the same.

BEGINNERS START HERE 201

Special new user-friendly version of our familiar introduction to the jargon.

SUBSCRIPTIONS 208

Roll up and hand it over. Our naked request for your cash.

BRAINDUMP 209

Peter Rodwell wonders how portable is portable?

NUMBERS 223

Mike Mudge presents his latest medley.

BOOK REVIEWS 224

New regular fixture from Linnet Evans.

DIRECT ACCESS 246

Includes In Store, Transaction File, ACC News, Networks, CTUK! contacts and Diary Data.

PROGRAMS 258

Includes programs for Atom, Apple, BBC Computer, Spectrum, Atari, MZ-80K, and TRS-80/Genie.

CHIP CHAT 392

Our sideways look at what's daft if not downright damnable in the micro world this month.

BLUDNERS 392

Surely not!

THE NEW OSBORNE EXECUTIVE

Designed to appeal primarily to the corporate business user the Executive offers some exciting Osborne features.

- New 7" amber display screen
- Terminal Emulation - allows you to connect straight into the company computer system
- 6 Software programs inclusive in the purchase price
- *COMM-PAC™ option - giving you instant telephone connection
- Complete portability - vital to working flexibility
- Increased speed and capacity - 128K user memory. 200K bytes to each disk drive.

*Subject to British Telecom approval.

The New Executive includes six Software programs to the value of £1200! Make an appointment now for a demonstration of the Executive's unique and positive benefits.

All inclusive price £1995 + VAT

● I COMPUTERS

Britain's No.1.

Southampton House, 192-206 York Road, London SW11 3SA
TELEX: 8954575 CTCLDN

BRITAIN'S No.1. OSBORNE DEALER!

When you buy an Osborne at 01 Computers you also benefit from the kind of back up you would expect from Britain's No. 1 Osborne Dealer.

- * User training for you and your staff.
- * Easily arranged credit terms.
- * Sophisticated technical and service back up.

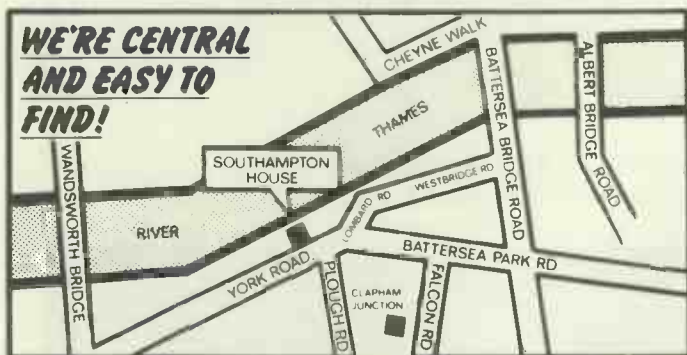

We would welcome a visit from you, to our showrooms where we can offer you coffee, an informal atmosphere and of course a personal demonstration of the incredible OSBORNE 1 and the superb New EXECUTIVE.

EXECUTIVE! Warranty extended to 3 years until 30th Sept. 1983!

Call us for an appointment, sales/ mail order, or simply drop in!

01-228 2207

* N.B. We are open until 6.30 pm weekdays and 10am - 1pm Sat.

Please send me a copy of your introductory brochure.

Dialog Software
19 Short's Gardens, London WC2H 9AT

If your computer gets stuck in a dead-end job you clearly haven't got dBase II.

There you are with all that microchip potential and no software that's man enough to exploit it.

Too specialised, too basic, too difficult, too risky.

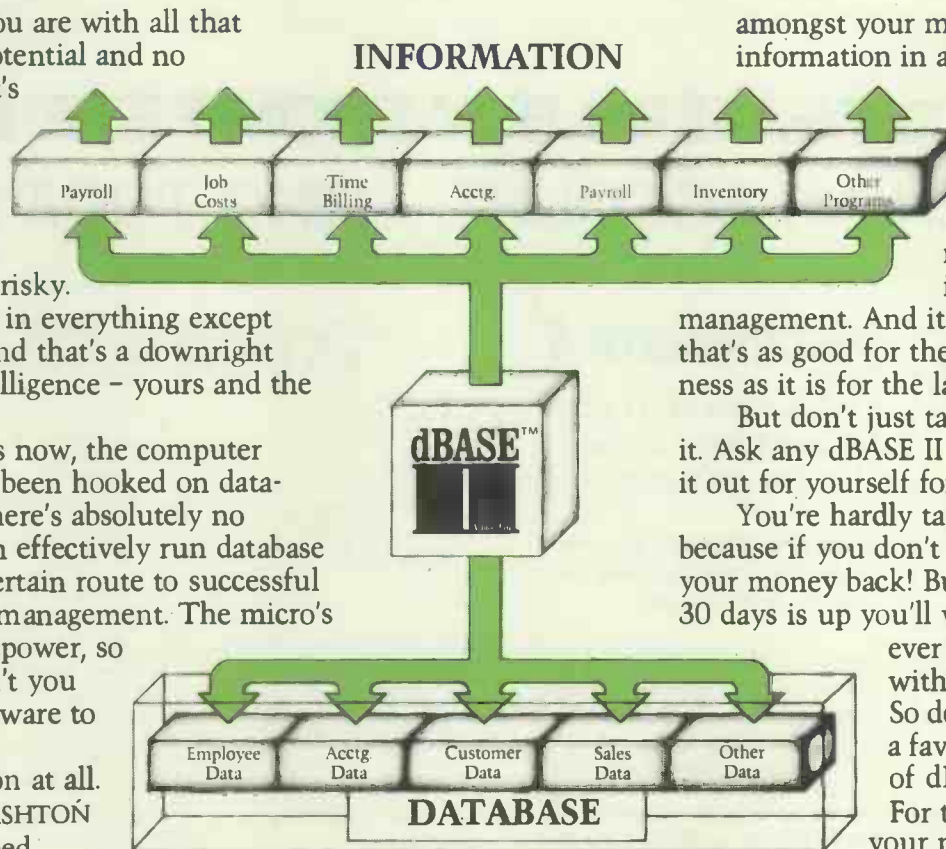

Over the top in everything except flexibility! And that's a downright insult to intelligence - yours and the computer's.

For years now, the computer industry has been hooked on databases. And there's absolutely no doubt that an effectively run database is the only certain route to successful information management. The micro's got the horsepower, so why shouldn't you have the software to go with it?

No reason at all. That's why ASHTON TATE developed dBASE II.

With dBASE II you can harness all your microcomputer's potential. It gives you a flexible structure on which to build business information and a straightforward means to develop complex and varied applications. In short, dBASE II gives you all you need to manage and use information.

When your business grows, you can change the way you handle information without changing the information itself. You can develop your own applications or buy them in ready-made. You can even build a set of menu-driven routines and let untrained people loose

amongst your most valuable information in absolute safety.

These features and more have made dBASE II a standard for microcomputer information

management. And it's a standard that's as good for the one-man business as it is for the larger company.

But don't just take our word for it. Ask any dBASE II dealer and try it out for yourself for 30 days.

You're hardly taking a risk, because if you don't like it, you'll get your money back! But before the 30 days is up you'll wonder how you ever managed without dBASE II. So do your computer a favour. Give it a copy of dBASE II.

For the name of your nearest dealer

SPECIAL PRICE £149

The friendliest, most powerful electronic worksheet you can buy. Saves time in management and planning.

Accelerator II

MAKE YOUR APPLE RUN
3.58 TIMES FASTER
FOR ONLY £299!!

Over 2000 UK Apple users now waste less time by using the Accelerator in an Apple.

See what Richard King, Hardware Editor of PCN has to say about the Accelerator. (PCN 15.6.83)

"Power down, open Apple, find empty slot, insert board, shut Apple, power up. That's it — well almost. There certainly can't be many add-ins to the Apple system that make such a difference in performance with so little fuss."

"The Accelerator II makes such a big difference to the operation of the Apple that I wish it did more."

"So what don't I like about the Accelerator II? Not a lot, to be honest. It's simple to install, it's reliable, it's easy to use and it runs like a bat out of hell."

"For the real business user who wants a real increase in throughput, I would strongly recommend the product."

All of the above operating systems support **Minerva**. Many others are capable of supporting it.

Minerva is not only the protectress of commerce and industry, but is also a new, integrated range of software products designed to protect the assets employed by commerce and industry.

Minerva may be single user or multi user, single-company or multi-company, supports foreign currency accounting, foreign language invoicing and does all of this real-time.

Minerva includes, at present, Nominal Ledger, Sales Ledger, Purchase Ledger, Address Book and Inventory Control. Early additions will include Sales Order Processing and Payroll.

Minerva costs a great deal less than it should.

Minerva is a product of **Technand Ltd** and is available from:

ACT SIRIUS I SEEING IS BELIEVING!

The Act I Sirius I is a *revolutionary* concept in personal computing for business, bringing a new meaning to the term Price/Performance.

It offers users the 16 Bit performance normally associated with minicomputers *but* at a microcomputer price.

And it's backed up by the kind of 01 expertise and service that has made 01 one of Britain's top microcomputer Dealers.

Call us *first* on 01-228 2207, for a personal demonstration of the Act Sirius I. Remember, seeing is believing!

* ACT Sirius 1 128K RAM with 1.2Mb S/S Disks including CP/M-86, MS-DOS, (Run-time versions) & Microsoft Basic 86 £2,395

* ACT Sirius 1 128K RAM with 2.4Mb D/S Disks including CP/M-86, MS-DOS, (Run-time versions) & Microsoft Basic 86 £2,895

* ACT Sirius 1 256K RAM with 2.4Mb D/S Disks including CP/M-86, MS-DOS, (Run-time versions) & Microsoft Basic 86 £3,195

* ACT Sirius 1 128K RAM with 10Mb Winchester and 1.2Mb D/S Disk including MS-DOS, (Run-time version incorporating CP/M-86 emulator) & Microsoft Basic 86 £3,995

“This is the bit where he gives it all ten fingers!”

Is your high-performance computer let down by your low-performance fingers? Touch 'n' Go will change all that. In just 24 hours you can master the computer's QWERTY keyboard and its numeric keypad. Forget boring drills and meaningless hieroglyphics, Touch 'n' Go introduces real words and phrases at the earliest possible moment. The computer gives you instant feedback on your performance and can even store the results for posterity. By the end of the course you should be capable of 40 words per minute.

Why use two fingers when you have ten?

Touch 'n' Go is available from computer dealers and direct from Caxton for only **£25** plus VAT.

It is available in popular CP/M and MSDOS formats. Please add £1 p&p when ordering direct.

Caxton Software Ltd 10-14 Bedford Street, Covent Garden, London WC2E 9HE

To match digital systems from the plethora of sophisticated equipment now available, to your particular problem is not an easy task

*what
is the
answer?*

digital solutions will first analyse your problem then select the most suitable system to solve that problem bearing in mind future developments in your business and the ongoing changes in computer technology

"It must be done by Friday!"TM

You are under pressure and you can't find the information to get the job done. Where is it? You could spend half the day looking for it. And still not find it. So you just give up and start all over again. This is crazy. There's a computer in the shop down the road or in the next office which ought to be able to help, but can't - simply because you don't know how to make it work.

At least, not until Friday! With Friday you can use that computer and forget all about programming. Friday will take care of everything. ■ FILES ■ REPORTS ■ DIARY ■ MAILINGS ■ and much more. Whatever it is you need to know - how well sales are going, what the stock levels look like, who owes you money, how much you have in the bank, whose salary is up for review - Friday can tell you in seconds. Produce reports instantly to a standard easily good enough to impress the board.

But Friday isn't only fast and versatile. It's designed for people who have never used a computer before. Its documentation, described as a model for the software industry, includes an introduction to micro computing. Friday is completely menu driven, with lots of prompts to guide you through the job you are doing. The

menus are there purely to help you - not to hold you up. You can switch from job to job - just as you always have. Only now you don't have to turn your desk upside down.

Invest half an hour with Friday and you will be amazed at the return. Just visit your Ashton-Tate dealer and he will demonstrate how to get it done by Friday.

Thank god it's Friday!TM

ASHTON-TATE ■

More than a personal computer.

apple is a word processor, an accountant and financial planner. Now for only **£1,199.**

Thousands of software programs are written for Apple IIe. So whether your business is Accountancy, Insurance, Dentistry, Medicine, Engineering or Pharmacy you can find the right software right away.

Apple IIe is designed to grow as your business grows. You can start with a Basic system and add more peripherals on the same system. Plus you can link many together with a network.

The Choice of Professionals
Low Prices to Professionals

A storehouse of knowledge.

If you work with so much data or so many programs that you find yourself shuffling diskettes constantly, you should take a look at Apple's ProFile,TM the personal mass storage system for the Apple III Personal Computer.

This Winchester-based 5-megabyte hard disk can handle as much data as 35 floppies. Even more important for some, it can access that data about 10-times faster than a standard floppy drive.

So now your Apple III can handle jobs once reserved for computers costing thousands more.

As for quality and reliability, you need only store one word of wisdom:

Apple.

Now for only **£3,395**

The personal computer

*Apple III will also run many Apple II programs and has CP/M compatibility.

Prices exclude delivery and VAT and are correct at time of going to press. Apple reserves the right to change specifications without notice. All offers subject to availability.

The Extraordinary Epson Computer Family

QX10

A fully integrated Desktop Microcomputer system that takes the hardwork out of using software. An incredible new member of the Epson family.

Features:

- ★ Z80A CPU, VDU, and Keyboard units in modern lightweight, functional design.
- ★ 192K memory upgradeable to 256K RAM.
- ★ RS232C and parallel interfaces with multi-font BASIC as standard.
- ★ 5 optional interface card slots for Cassette, Barcode, Joystick, Sound Generator, Omninet™ facilities. Also available is a universal interface card for developing your own interfaces.
- ★ 80 col x 25 lines screen with full bit image control.
- ★ 640 x 400 resolution graphics with 16:1 ZOOM and special effects including split screen facility.
- ★ Clock and calendar with battery back-up.

™ Omninet is a registered trade mark of Corvus Computers.

HX20

The full function, truly portable computer that slips into your briefcase, incorporating an LCD screen, full typewriter keyboard, printer and optional microcassette.

Features:

- ★ 20 character by 4 lines LCD screen.
- ★ A built in 24 column dot matrix microprinter.
- ★ 16K RAM which is optionally expandable to 32K, ROM expandable to 64K.
- ★ RS232C and serial interfaces.
- ★ Full size ASC II Keyboard.

STC Multicomponent can also offer a full range of accessories and several software packages in microcassette or pre-programmed ROM format.

RX80 & FX80 PRINTERS

Two exciting new printers that have the usual Epson qualities like reliability, modern styling and speed — and successfully surpass the performance of earlier machines.

- The RX80 Features:
- ★ 100 character per second
 - ★ Dot addressable graphics.
 - ★ Condensed and double width printing.
 - ★ Tractor feed for exact alignment.

- The FX80 Features:
- ★ 160 characters per second.
 - ★ Proportional spacing, quick form tear off, superscripts, and down loadable character set.

Both printers have standard Centronics parallel interface with IEEE 488, RS232C etc optional interfaces.

MX 100 III

Another stylish and versatile printer from the Epson family.

- Features
- ★ 100 characters per second
 - ★ Wide 15" carriage.
 - ★ Bit image printing.
 - ★ 32 print codes standard.
 - ★ Full 96 ASCII with decoders, 8 international character sets.
 - ★ Standard Centronics parallel interface with a variety of optional interfaces including RS232C, TRS 80 Model I, and Apple II intelligent parallel interface.

From cost accounting to consolidations...to cash forecasting, capital investment, production planning, and more...

If you're a businessman or accountant with a computer - an ex-timesharing user - or even if you've never used a computer before, The Financial Planner™ gives you all the scope you need to

■ PLAN ■ MODEL ■ FORECAST
■ ANALYSE ■ REPORT

and generate results that tell you what you need to know in a language you understand. You can model your existing or proposed business ventures using **your** words, **your** logic, **your** procedures, **your** report formats, **your** experience, and **your** expertise.

The Financial Planner comes to you with an easy-to-use manual, featuring an introduction for people using a computer for the first time. There's also a ten-lesson, self-teaching aid and a guide to using 'what-if?' techniques. You also get a quick reference guide, example models and case studies. The Financial Planner itself features built-in help screens which you can call on while you build and analyse your first models.

Nothing is too much trouble for The Financial Planner. Large models, multiple models, consolidations, currency conversions, 'what-if?' analyses, sensitivity analyses, plus tremendous reporting capability. It's all there in one low-cost system which will handle larger models than most micro systems on the market.

The Financial Planner also thinks like you do. You can start planning from any logical point. Set-up the year-end figures you want to achieve, and generate the model that will get you there.

The Planner has the flexibility to allow you to design your report for greatest legibility and to meet the standards and specifications used by your company. All reports are automatically printed with

row and column headings, titles and footnotes fully spelled out. Anyone reading your report knows immediately what he or she is looking at.

Versatility is another of The Financial Planner's attributes. Anyone concerned with financial evaluation and decisions can use it. Company Directors,

Economists, Production Planners or Financial Analysts. The Financial Planner's modelling scope is as advanced as its user. And a complex model need not be exclusive to the originator. Once built, it can be 'automated' with built-in prompts so that executives can experiment with the model, ultimately formulating the blueprint for financial success.

ASHTON · TATE

Cyborg

I'm the first all computer micro disk drive

5 inches/720 k*
3 inches/1 mega*
*formatted

connect me to ZX81, SPECTRUM, ORIC, ATARI, VIC 20, VIC 64, BBC, DRAGON, APPLE II, THOMSON TO7, TEXAS TI 99/4, and shortly IBM PC

Whatever the make of your computer, the CYBORG disk drive is for you!

The CYBORG disk drive is designed around its own on-board controller, allowing it to operate whatever might be the CPU of your micro. Before, disk drives had a compatibility restricted to host computers of the same brand. Change the computer and you had to change the disk drive unit. Now you can change the micro and keep your CYBORG, thanks to the ingenious PERSONALITY MODULE. This is a minuscule unit, contained in the connecting cable, allowing translation of control and data signals in the CYBORG STANDARD INTERFACE. To change your micro simply change this connecting lead. Insert the SYSTEM NUCLEUS floppy, and it runs.

Three good reasons for choosing the CYBORG disk drive.

1) the price: 199.99 pounds excl. VAT. This price includes: the disk drive, one personality module, and one system nucleus.

2) the capacity: drives currently available store around 150 K on a 5 inches floppy. The CYBORG gives you a capacity of 720 K on a single floppy (320 K per side).
3) Transportability: that incredible disk drive will hook up to any machine. Your text files can be read by any micro-computer. Just buy the personality

module plus the system nucleus of the new brand, and there it goes! (personality modules available now: ZX81, SPECTRUM, and ORIC; others to come shortly) (ZX81, SPECTRUM trade marks of SINCLAIR RESEARCH Ltd ORIC trade mark of ORIC INTERNATIONAL

Technical specifications: 5 inches disk drive unit 720 K per floppy
DOS COMMANDS: FORMAT, DIR, SAVE, LOAD, ERASE. Up to 4 disk drives, Price 199.99 excluded vat.
Optional extensions: FILE HANDLING: OPEN, READ, WRITE, CLOSE, POSIT, RENAME, SEARCH, TYPE, STAT, direct and sequential access (20 pounds);
SYSTEM EXTENSION: MLOAD, MSAVE, MRUN, CHAIN, LOCK, UNLOCK (35 pounds);
SECURITY HANDLING: prepares uncopyable disk (900 pounds); prices excluded vat.

WESSEXSOFT 16 EASTLAKE AVE PARKSTONE POOLE DORSET

STAR TREK (Vic 20)

A 16K adventure type of program with instructions. Take charge of the Enterprise and go out into space in Search of the Klingons.

With full use made of the sound and colour on the Vic and updated information displayed on the screen all the time it becomes a game of intrigue and strategy to outwit your enemy.

Using your warp engines to move around the galaxy and its 64 quadrants to find the Klingons and starbases. Repair and re-fuel your ship. Load up with torpedoes and continue your search.

The 10 levels of play will enable the game to be played in varying degrees of difficulty giving you fewer starbases and more Klingons to destroy. The more damage you receive from the Klingons in combat the more difficult it becomes to defend yourself.

A game of skill and cunning at £9.50 including p/p.

STAR RUN (Vic 20) 16K

You are the pilot of the freighter XR8 loaded with vital equipment for the satellite planet Amethos 10 which is trying to fend off an invasion of aliens from penetrating the inner galactic empire. The satellite planet has developed a malfunction in its gyroptic stabilizers which is causing the planet to spin erratically.

The aliens will try to stop you reaching Amethos 10 but should you run the gauntlet safely then you must land in a docking bay without crashing. The controls are switched over to the cursor controls or joystick.

The XR8 has two laser cannons to help defend itself and in combat the XR8 may be damaged. There are bases along the way to re-fuel and repair.

Not an easy game to play.

There are 9 levels of play and if you found Star Trek easy then this one is for you. £9.50 including p/p.

ALARIANS REVENGE

A fast moving game of wizards and goblins based on a fable. Find the amulet and its stones and save the kingdom from monsters and the evil sorcerer. A very complex game of skill and the facility to save the game to tape has been included to enable the player to re-load at any time and continue where they left off.

A 16K game using U.D.G. full colour and sound. £9.50 including p/p.

SPRITEMASTER (CBM 64)

This program for the 64 will allow the creation of graphics on the screen. This is done one at a time so that they can be changed if desired. The colours can be arranged at the same time. The sprites can be moved around the screen using cursor controls. This helps to give some idea of what the finished creation will look like in certain positions on the screen. It also gives an idea of what the created character will look like in motion.

The sprites can be saved as data to some designated high line numbers and merged with your own program. The program can then be re-numbered to save memory. £6.50 including p/p.

SYNTHESISER (CBM 64)

A program to turn your 64 into a full synthesiser. The range includes three octaves on the first voice. Sustain, attack and decay are used to make the sound very real.

The waveforms can be changed in mid tune by the use of the function key. It is not even necessary to be able to read music but it helps. £4.50 including p/p.

GET YOUR CARDS RIGHT (16-48K Spectrum)

A card game based on the television series where the cards appear face down. The player must decide if the following cards are higher or lower. There is an amount of money to gamble. Wins are paid on getting all the cards right but bonuses are paid for pairs etc.

User defined characters have been used to add realism and the game is ideal for younger players (average age is 10 years). £4.00 including p/p.

PEG IN THE MIDDLE (14-16K Spectrum)

A game of solitaire with the option of horizontal/vertical moves or incorporating diagonal moves for the less experienced player. After 3 attempts to move a blind the player is asked if they want to see a solution.

All legal moves have been covered and it is not possible to cheat. A game for all ages and not as easy to complete as you would think. £4.00 including p/p.

Peg in the Middle/Get Your Cards Right double package at £6.00 for the two.

THE BIG EVENT

Music & Games ?

STAND 266

WE ARE NOT THE FIRST PEOPLE TO ADD A LITTLE MUSIC TO A COMPUTER SHOW, BUT THE DIFFERENCE IS OUR BAND, 'THE TIME BANDITS', ARE ALSO OUR PROGRAMMERS! SO ANYONE WITH AN EAR FOR MUSIC IS ADVISED TO STAY AWAY SINCE OUR PROGRAMMERS ARE PUTTING MORE ENERGY INTO THEIR PROGRAMMING THAN THEIR MUSIC! FOR US THE BIG EVENT, THE 6th PCW SHOW, IS OUR LAUNCH. THE TIME WHEN WE UNVEIL WORLD BEATING GAMES FOR THE ZX-SPECTRUM. SO SHARE THE FUN AND VISIT US ON STAND 266. AND FOR £5 YOU CAN TAKE HOME SOME OF THE FUN TOO!!

"GARBAGE IN = GARBAGE OUT"

★ HOW MANY SYSTEM ERRORS HAVE YOU BLAMED ON SOFTWARE OR DISK PROBLEMS?

★ HOW MUCH DID THAT LAST SERVICE CALL COST YOU?

★ CAN YOU AFFORD TO LOSE YOUR DATA?

90% of all so called software problems are due to mains supply interference. Spikes and surges caused by electrical storms, industrial equipment or even the office coffee machine can cause your system to crash.

We can protect you from these problems for less than the cost of a service call.

When it's time to stop playing games and get down to business...

Unfortunately, many of today's desk top computers are designed with too much emphasis on home use. That's fine, if you want to balance your checkbook, play "space war" or draw pictures. But when you have serious business requirements for a computer, you want one designed specifically for business.

The RAIR Business Computer is just that. A computer designed specifically for business applications, incorporating a host of features—optimised for the business environment. 8- and 16-bit microprocessors allow users to run available 8-bit—plus newer 16-bit—applications software simultaneously. And an integral high-capacity Winchester disk drive—plus provision for additional hard disk support—provides sufficient on-line storage for virtually any business application.

Advanced communications software allows the RAIR Business Computer to connect to mainframe systems and networks. And expanded RAM memory supports simultaneous access from up to four user workstations, each including an ergonomically designed, detached keyboard, high-resolution colour display, and optional workstation printer.

So if you're serious about a computer for business, call RAIR for details about our Business Computer. We're not playing games.

RAIR Limited
6-9 Upper St. Martins Lane
London WC2H 9EQ
Phone (01) 836 6921, Telex 298452

SYSTEM SPECIFICATION

Microprocessors: Concurrent 16-bit 8088 plus 8-bit 8085
RAM Memory: 256 kbytes expandable to 1024 kbytes
Integral Disk Storage: 19-Mbyte Winchester drive plus 1-Mbyte floppy drive
Storage Options: Up to 4 add-on Winchester drives plus streaming tape backup
Communications: 4 workstation ports (RS-422-compatible), plus 2 synchronous/asynchronous programmable RS-232 ports

WORKSTATIONS (up to 4)

Keyboard: Ergonomic, low-profile, 83 keys, 10 programmable function keys, 10-key numeric keypad (with cursor/editing functions)
Color Display: High-resolution, 80 characters x 25 lines, upper and lower case, 8 programmable foreground/background colors.
Printer: Bidirectional, 160 characters-per-second, friction and tractor feed

SOFTWARE

Operating System: User-friendly, multi-tasking, CP/M, MP/M, PC-DOS compatible
Languages: BASIC, COBOL, Pascal
Applications: Spreadsheet, Database, Text Processing Communications

CP/M and MP/M are trademarks of Digital Research
PC-DOS is a trademark of IBM

the RAIR Business Computer.

Why the BBC Micro? It might be fairer to let someone else answer that question.

"The BBC Microcomputers are the limousines of home computers. The graphics are probably the best of any machine in this class. You are paying for a smart machine which would not disgrace the home of a professional." *Video World, Feb. '83.*

"Its design has given the BBC Micro an unrivalled potential for business, educational and serious home applications. It has been equipped to function as the heart of a system which can be expanded to suit its owner's need." *Which Micro & Software Review, Feb. '83.*

"The most attractive and exciting feature of the BBC Microcomputer is its enormous potential for expansion which will allow a highly expansive system to be built-up." *Deborah Carruthers, Which Micro, June '82.*

"They (the graphics) are tremendously exciting, and they are one of the features that make this machine stand out head and shoulders above everything else that is available in the market place at this time." *Dave Futcher, Educational Computing, May '82.*

"It is expandable and has a powerful BASIC. It has superb sound and graphics, the software is readily available and the price is right." *Mr. A. D. Alles, a BBC Micro owner from Hampshire.*

"The basics are easy to follow. My wife has developed a program for teaching our daughter French vocabulary. Our daughter uses it mainly for games and simple programming." *Dr. A. Yarwood, a BBC Micro owner from Co. Durham.*

"It is a very powerful computer. My husband has written his own data base. I have been writing programs and programming games. Even the children have written small programs." *Mrs. A. M. Thomas, a BBC Micro owner from Devon.*

"No other computer can offer such ease of use when dealing with complex sound effects."

Which Micro, June '82.

"It isn't often a journalist can sit down to write about a computer with the certain knowledge that he has never seen a nicer machine."

Guy Kewney, Personal Computer World, Dec. '82.

"It has got huge potential. Besides playing the games, the whole family are learning basic programming."

Mr. P. S. Green, a BBC Micro owner from Staffordshire.

"Everything possible seems to have been done to ensure that this is not a 'dead end' machine..."

Paul Beverley, Personal Computer World, July '82.

Perhaps we could just add that the BBC Micro is the machine which was chosen to be at the heart of the BBC's massive Computer Literacy Project.

It is also the machine which, having won the Department of Industry's blessing, will account for over 80% of the computers bought by British schools this year.

And now for some facts about the machine itself.

The BBC Micro is light, compact and, with a conventional electric typewriter keyboard, easy to get the feel of.

It can be loaded from virtually any cassette recorder. And there is a wealth of ready-made programs available covering games, education and business subjects.

The BBC Micro uses BBC BASIC, a sophisticated version of the most popular computer language.

However, as your confidence and fluency grow, it can be adapted to switch to other languages.

It can also become a word processor, with the facility to link with a second processor for high-powered business use.

A disc drive unit can also be added. And with an adaptor, the BBC Micro is the first micro to be able to pick up programs from the Micronet-Prestel system. Another adaptor converts your TV into a Teletext receiver, with further ability to download programs.

All this for only £399.

The most sophisticated version of the BBC Micro, the Model B, is only £399. The basic Model A is £299. (Both come with a "Welcome cassette" and comprehensive introductory manual.)

They are both available from John Lewis, selected branches of Boots or local stockists.

Alternatively, if you would like to order a BBC Micro B with your credit card, or if you want the address of your nearest stockist, just phone 01-200 0200.

Or, you can buy a Model B by sending off the order form below to: BBC Microcomputers, c/o Vector Marketing, Denington Estate, Wellingborough, Northants.

Your order will be despatched by fully insured courier.

Finally, you can also use the coupon simply to get full reprints of the articles from which the press cuttings featured have been taken.

 01-200 0200 credit card holders.

To BBC Microcomputers, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.

Please send me more information on the BBC Micro.

Please send me _____ BBC Model B Microcomputers at £399 each, inc. VAT and delivery.

I enclose PO/cheque payable to Acorn Computers Limited Readers A/C or charge my credit card.

ORIC MCP 40 COLOUR PRINTER

ORIC
MCP 40 COLOUR PRINTER

£169.95 incl.VAT.

It's here, the exciting new ORIC MCP 40, Colour-Printer. Packed with quality ORIC features to start building your ORIC system.

Superbly styled and quality engineered to provide 4 colour hard copy, for home and business use.

Just look at these leading features:

- **Quality hard copy on plain paper**
- **Superb graphics and text capability**
- **Prints 4 colours – Red, Green, Blue and Black**
- **Designed to match the futuristic style of ORIC 1**
- **Plugs straight into your ORIC – printer lead supplied**

RIVER RAID

A FIGHT TO THE FINISH ON THE RIVER OF NO RETURN.

YOUR MISSION:
Destroy enemy bridges and fuel dumps along a narrow, heavily-fortified river canyon. But beware of enemy attackers: ships, choppers and jet fighters in wave after deadly wave. Keep low, keep cool, keep firing... and maybe you'll survive. River Raid™ by Activision™. The most challenging battle adventure game ever for the Atari™ Video Computer System™.

Atari™ and Video Computer System™ are trademarks of Atari, Inc. Tele-Games™ and Video Arcade™ are trademarks of Sears, Roebuck & Co. Also for use with the Sears Tele-Games™ Video Arcade™. © 1982 Activision, Inc.

Sinclair Special

3

*Inside...
The New ZX Microdrive!
Latest software...
Latest prices...*

The ZX Microdrive- and more!

For some time now, the new ZX Microdrive has been the subject of much discussion. Which is only to be expected, when the object of everyone's anticipation is *completely* new to the world of computing.

Microdrive provides high-speed access to truly massive storage. With just one Microdrive, you'll have at least 85K bytes of storage, and the ability to LOAD and SAVE in mere seconds.

Yet the ZX Microdrive is about the size of a Spectrum mains adaptor, and costs less than £50!

First stocks are now in. Microdrives will be released on an order of priority basis. Spectrum owners who purchased by mail order, direct from us, will be sent full details including how to order, in a series of mailings that begins with the earliest names on our list.

And if you didn't buy by mail order?

Don't worry — for a colour brochure with full information on Microdrives, including how to order, just send us your name and address (use the coupon at the back of this issue of Sinclair Special). But remember, the sooner you send us your name, the sooner you'll get on the list.

Of course, there's much more to Sinclair than Microdrives, as you'll see on these pages. The latest releases of Spectrum and ZX81 software have been amongst the most successful ever. Prices of most established Sinclair products are at their lowest ever. To buy what you want, just use the Order Form.

Until the next issue of Sinclair Special, and more good news ...

Nigel Searle, Managing Director,
Sinclair Research Ltd.

PS: Come and see us — and all that's new at Sinclair — at the PCW Show, Barbican Centre, from Sept 28th to Oct. 2nd. We'll be pleased to see you!

ZX Microdrive System preview!

ZX MICRODRIVE

At least 85K bytes storage, loads a typical 48K program in as little as 9 seconds: £49.95.

ZX MICRODRIVE CARTRIDGE

Compact, erasable, revolutionary. Complete with its own storage sleeve. Contains up to 50 files, with a typical access time of 3.5 seconds: £4.95.

ZX INTERFACE 1

Necessary for sending and receiving data from ZX Microdrive. Includes RS232 interface, enables creation of local area network of 2 to 64 Spectrums. Attaches to the underside of your Spectrum. Purchased with ZX Microdrive, just £29.95. As separate item, £49.95.

Six new ways to make more of your Spectrum

Take a look at these brand-new titles. Each is an outstanding new program using the full potential of the Spectrum, for games with stunningly animated graphics, for strategies of fiendish cunning, for masterly applications of computing capability...

Cyrus-IS-Chess Based on the Cyrus Program, which won the 2nd European Microcomputer Chess Championship and trounced the previously unbeaten Cray Blitz machine. With 8 playing levels, cursor piece-movement, replay and 'take-back' facilities, plus two-player option. The 48K version has many additional features including an extensive library of chess openings. For 16K or 48K RAM Spectrum.

Horace and the Spiders Make your way with Horace to the House of Spiders, armed only with a limited supply of anti-spider-bite serum. In the house, destroy the webs before the spiders can repair them. Then destroy the spiders, before they destroy Horace! Undoubtedly the creepiest Horace program ever produced! For 16K or 48K RAM Spectrum.

Computer Scrabble The famous board game, on-screen - with the whole board on view! A huge vocabulary of over 11,000 words. Full-size letter tiles, four skill levels - the highest of which is virtually unbeatable. For 1 to 4 players. For 48K RAM Spectrum.

(SCRABBLE trademark and copyright licensed by Scrabble Schutzrechte und Handels GmbH - a J.W. Spear and Sons PLC subsidiary.)

Backgammon A fast, exciting program, with traditional board display, rolling dice and doubling cube. Four skill levels. For experts - or beginners. (Rules are included - it's the quickest way to learn the game.) For 16K or 48K RAM Spectrum.

FORTH Learn a new programming language, as simple as BASIC, but with the speed of machine code. Complete with Editor and User manual. For 48K RAM Spectrum.

Small Business Accounts Speeds and simplifies accounting work, produces Balance Sheets, Profit and Loss information and VAT returns. Complete with User manual. For 48K RAM Spectrum.

Overleaf - your Sinclair order form.

Latest ZX81 software

Prices round-up

These three new cassettes offer two totally different challenges to you and your ZX81. The games — like so many ZX81 games today — really do use the ZX81's capability. The FORTH program is a fascinating extension of your own computer understanding.

Sabotage. Defender or attacker? The choice is yours in this exciting game.

Be the guard and defend the ammunition in the compound — or be the Saboteur and attack it!

Written by Macronics for a ZX81 with 16K RAM. Cassette price: £4.95.

City Patrol. You are the Commander of a

laser-firing ship. Your task is to intercept and destroy alien suicide ships descending on your city.

Written by Macronics for a ZX81 with 16K RAM. Cassette price: £4.95.

FORTH. Discover a new programming language which combines the simplicity of BASIC with the speed of machine code. FORTH's compiled code occupies less than a quarter of the equivalent BASIC program and runs ten times as fast. Free User-Manual and Editor Manual with each cassette.

Written by Artic for a ZX81 with 16K RAM. Cassette price: £14.95.

- ZX Spectrum 48K now just **£129.95.**
- ZX Spectrum 16K now just **£99.95.**
- ZX81 now just **£39.95.**
- 16K RAM Pack for ZX81 **£29.95.**
- ZX Printer now just **£39.95.**
- 1.2A ZX Mains Adaptor **£7.95.**
- Printer Paper (5 rolls) **£11.95.**

How to order

Simply fill in the relevant section(s) on the order-form below. Note that there is no postage or packing payable on Section B. Please allow 28 days for delivery. Orders may be sent FREEPOST (no stamp required). Credit-card holders may order by phone, calling 01-200 0200, 24 hours a day. 14-day money-back option.

ZX Microdrive information request

Please send me a colour brochure with full specifications of ZX Microdrive/Interface 1, and add my name to the Microdrive Mailing List! (tick here) (Remember to include your name and address on the form above).

After bath. After shave.

After you with the Epson.

**Epson HX-20.
The most complete portable
computer you can lay your hands on.**

A complete portable computer with full size typewriter keyboard, LCD Virtual Screen, printer, microcassette facility and rechargeable power source all built-in.

Yet a precision machine so small, so lightweight, so portable - you can take it anywhere. To readily use it anywhere. The Epson HX-20.

The HX-20 is different. Because it is designed and built to be different.

And because it thinks bigger than the others.

Just take a look at the facts.

Uses full extended version of Microsoft BASIC with 16k RAM optionally expandable to 32k, and 32k ROM expandable to 64k, RS-232C and Serial interfaces.

The ASCII typewriter keyboard and five programmable keys offer no less than ten program functions.

A unique LCD screen that enables you to carry out word processing or data entry as if you were using a large screen.

24 column dot matrix impact micro-printer offering 42LPM for hard copies.

Runs on its own power for over 50 hours and can be easily recharged overnight or whilst in use - with the ability to retain information in memory even when switched off.

Simply add on a wide range of peripherals to include bar code readers and acoustic couplers for total capability.

Various software applications are available too.

You know the name. Epson quality is already world renowned for desktop computers and a superb range of quality printers. And now our new remarkable machine is raising more than just a few eyebrows wherever it's seen.

Clip the coupon opposite and we'll tell you the full story, or call us for the name of your local stockist, so you can experience the HX-20 first hand.

After everything else - it's got to be the most complete portable computer you are likely to lay your hands on.

Epson (UK) Limited, Freepost, Wembley, Middlesex HA9 6BR.
Sales Enquiries: Freefone 2730.
General Enquiries: 01-900 0466/01-900 0988 or 01-903 3722. Telex: 8814169.

EPSON Extraordinary product.
Exceptional quality.

I would like to see a demonstration of the HX-20 Portable Computer.

Please send me further details.

PCW/9/20

It's the same old Apple II.

For years, people have been trying to build a better Apple® II. It finally happened.

Meet the Apple IIe, an impressive new version of a most impressive machine.

The "e" means enhanced.

Which means a bundle of new features:

A standard memory of 64K (versus 48K) that's easily expandable. So you can create fatter files and crunch larger numbers of numbers.

A new, improved keyboard, with a complete set of ASCII standard characters. Plus full cursor controls, programmable function keys, and a rapid auto-repeat feature built into every key on the board.

Both upper and lower case characters. (And if you want to see more of them on the screen at one time, a low cost 80-column text card is available.)

Improved peripheral ports. Which make it a lot easier to

connect and disconnect game controllers, printers and all those other wonderful things that go with an Apple Personal Computer.

Self-diagnostics. That's a special feature that makes it easy to give your computer a thorough check-up.

Plus an even more reliable design. Achieved by reducing the number of components – which is to say, the number of things that could go wrong.

Except for the front, back and inside.

KEYBOARD

BACK PANEL & PERIPHERAL PORTS

MOTHER BOARD

And bear in mind, the IIe still has all those other virtues that made the Apple II so very popular. Including access to more accessories, peripheral devices and software than any other personal computer you can buy.

Like the original, it's rather extraordinary. But then some things never change.

So either visit one of our many authorised dealers, and see the newest Apple for yourself.

Or return the coupon for further details.

The personal computer.

Apple reserves the right to change specifications without notice.
Apple is a trademark of Apple Computer Inc. USA.

To: Apple Computer (UK) Limited, Eastman Way, Hemel Hempstead, Herts. HP2 4BR. FREEPOST.
Telephone 0442 60244 (24 hour Answerphone). Telex 825834 APPLUK G.

Please tell me more about the Apple IIe.

Intertec Offers
The Warranty
Your First Computer
Should've Offered.

One-Year Factory Warranty.

The rationale behind the conventional 90-day warranty is that anything likely to go wrong will go wrong in the first 3 months.

But it can take 3 months just to get comfortable with a new system. That's the honeymoon-period, when you treat your equipment with the delicacy of a safecracker.

CompuStar can network up to 255 intelligent terminals and give each of them access to common or restricted databases.

Ah, but now it's 5 months down the road, the honeymoon is over, your equipment has finally begun to justify its cost, and that's the afternoon your processor's fan succumbs to fatigue.

Or maybe the malfunction is more gradual, like a disk-head drifting increasingly out of alignment.

Or more elusive, like an intermittent failure due to borderline components.

When You Build Them Stronger, You Can Back Them Longer.

And that's why all Intertec terminals, computer networks and disk storage systems come with a full year of coverage. Not because you'll need it, but to assure you that you won't.

See—unlike other makers, we know what we're standing behind.

We don't slap Intertec nameplates on other people's parts. We build virtually all our equipment ourselves.

And we assemble it ourselves.

And we test and re-test it ourselves.

More Bytes For Your Buck.

That's also why we can offer you flatly superior dollar-values.

In single-user desk tops, for example, our SuperBrain offers twin Z80s, standard;

64 kbytes of dynamic ram, standard; up to 1.5 mbytes of disk storage, standard; CP/M 2.2* and MBasic† standard.

And compared to conventional multi-user systems, our CompuStar systems can give you many more hours of productive labor every day—because, instead of depending on a central processor for data manipulation, each workstation in a CompuStar network has its own processor and its own 64 kbytes of ram.

As a result, you can have anywhere from 2 to 255 workstations working simultaneously without suffering noticeable declines in execution-time.

Why Just Expand When You Can Up-Grade?

In fact, if you assess your expansion alternatives in terms of relative payback potential,

you're very likely to find that up-grading with Intertec equipment from scratch would be more cost-effective than burdening your existing installation with add-on's.

Dollar for dollar, the Intertec system is apt to be not only faster, more powerful and more versatile, but more reliable and better supported.

Since we build our equipment from scratch, we can afford to do it right and still hold down our prices.

For the name and address of your nearest Intertec dealer, or for more information about any of our products and services, please contact our Regional Manager at P.O. Box 367, London W13-9QQ, or telex 297066.

You're welcome as well to direct your enquiries to our corporate headquarters in the USA. Telex 8106662115, or write to Intertec Data Systems Corporation, 2300 Broad River Road, Columbia, South Carolina 29210.

GALAXY 2 COMPUTER SYSTEM

WHATEVER REQUIREMENTS YOU HAVE

GM813 - CPU/ 64K RAM Board

- ★ 4 MHz Z80A CPU
- ★ 64K Dynamic RAM
- ★ RS232 Serial Interface
- ★ Two 8-Bit I/O Ports
- ★ 1200 Baud Cassette Interface
- ★ Extended and Page Addressing Modes

GM812 - IVC Board

- ★ 80x25 Display Format
- ★ On-board Z80A Microprocessor
- ★ Buffered Keyboard Input
- ★ Programmable Character Generator
- ★ 160x75 Pixel Graphics
- ★ Light Pen Input

GM 829 - FDC/ SASI Board

- ★ Single/Double density operation
- ★ Single/Double sided drive operation
- ★ Up to 3 mixed 3.5", 5.25" and 8" drives
- ★ Industry Standard SASI hard-disk Interface

**TWO
SPARE
SLOTS**

The cost-effective solution to your computer needs for only **£1,495***

For just £1,495 the Galaxy 2 provides the basic requirements for a small business system:

- **Central Processor Unit with 64K of RAM**
- **Twin disk drives (400K storage per drive)**
- **Keyboard and 12" monitor**

But unlike many other small-business systems the Galaxy System is specially designed for expansion and flexibility to meet changing requirements. It uses the world's best selling micro processor, the Z80A, and is based on industry-standard 80-Bus boards. The business system uses only 3 boards in the 5 spaces available, so extra cards can be "plugged-in" to expand the system; for example to expand the memory, or to give a colour facility, or to develop the Galaxy for the particular requirements of education, research, software development etc.

It has a CP/M operating system which gives access to the largest range of software available for any machine. In particular, Gemini can offer QUIBS; a small-business package developed especially for the Galaxy.

The Galaxy has industry-standard interfaces (parallel and serial), and Gemini Microcomputers can supply a full range of compatible hardware including a Winchester sub-system and printer.

The Galaxy offers the most cost-effective way of obtaining a basic unit which is capable of developing to meet your particular requirements; now and tomorrow.

Features include:

- Twin Z80 Processors
- 64K Dynamic RAM
- 800K Disc Based Storage
- 80 x 25 Screen Format
- Dual Printer Interfaces
- Modular Design
- Extra Disc Drives Easily Added
- Winchester Expansion Available
- Net Working System Available
- Additional Slots for 2 Cards
- 12" Green or Amber Monitor

*Price is exclusive of VAT

PICK OUR BRAINS.

Minstrel

The brain of a good computer system is the bit you never see. But that's precisely the bit that decides whether you've bought a Saville Row suit that fits your business like a glove — or a one size strait-jacket.

So if you're tempted to grab that nationally advertised neatly packaged "system" — just stop and think that while it's designed for everyone in general, it certainly wasn't designed for you in particular.

Instead, how about investing in some top, no-axe-to-grind, professional advice. And if you fill in the coupon, we'll send you a list of dealers and consultants covering your locality.

That way you'll get exactly the brain you need, and the precise add-ons and peripherals to match. Fitting your present needs and your future prospects.

And if you end up with a MINSTREL computer as the "brains" of your system — no surprise. Because we've designed it to mix, adapt and grow with the widest range of other equipment, freeing you to choose the set-up that suits you perfectly.

The fact that it's British-made*, ruggedly constructed and keenly priced are hardly drawbacks either.

And if it isn't right for you — you'll be told so. Because, as you

may have gathered we believe the system should suit the customer — not vice versa.

*The MINSTREL is made exclusively for HMS by High Technology Electronics in Southampton.

Please send me details of the Minstrel Computer and your list of recommended dealers and consultants in my area
I'm a buff. Please send me full specification of the Minstrel, and prove it's as good as you say

ETC.

SMORGASBOARD™

The only board your IBM Personal Computer may ever need.

SMORGASBOARD from Kensington Microware is a multi-function board for your IBM Personal Computer that greatly increases the capabilities of your PC while only using one expansion slot. SMORGASBOARD is completely hardware and software compatible with the PC. SMORGASBOARD combines the following 8 functions to enhance your IBM PC.

256K RAM MEMORY EXPANSION from 64K to 256K bytes in 64K byte increments. Additional memory enhances many software packages, including financial spreadsheets such as 1-2-3, VisiCalc and MultiPlan.

SERIAL PORT connects modems, letter quality printers and other serial devices. The serial port may be configured as COM1 or COM2. IBM PC communications software is fully supported.

PARALLEL PRINTER PORT Centronics compatible parallel printer interface, is identical to IBM's Parallel Printer Adapter and may operate as LPT1, LPT2 or LPT3. This interface is plug compatible with standard printer cable. It can also be configured as a bidirectional SASI interface.

CLOCK/CALENDAR so you no longer have to input the time and date each time you reboot your PC. SMORGASBOARD's chronograph always keeps your system's clock/calendar up to date.

GAME PADDLES/JOYSTICK INTERFACE for attaching up to four game paddles or two joysticks to the PC.

SPOOL software package uses part of the system's memory as a print buffer. You no longer have to wait for your printer.

SOFTDISK program allocates a portion of the system's memory as a super fast electronic disk drive. Store important information there for speedy access.

SMORGASBOARD PIGGYBACK offers even more expandability. With it another 256K bytes RAM and a 2nd Serial Port become available.

INCREDIBLE LOW PRICE: £299 with 64K installed; £399 with 128K; £499 with 192K and £599 with 256K. SMORGASBOARD comes with a one year warranty and is documented in English, French and German.

WHEN IT COMES TO MICROCOMPUTER SOFTWARE WE WROTE THE BOOK

How do you stay up-to-the-minute with the rapidly changing world of microcomputer software? Get the Lifeboat Catalogue.

The latest innovations The new Lifeboat Catalogue is packed with the latest state-of-the-art software. And if we publish a new program after the latest catalogue has gone to press, we enclose a flash bulletin in your copy.

The greatest selection Because Lifeboat is the world's largest publisher of microcomputer software, our catalogue offers you the greatest selection of programs for business, professional and personal use. Our more than 200 programs range from the integrated accounting and professional practice systems to office tools for book-keepers and secretaries to sophisticated tools for programmers. Included are business systems, word processors, programming languages, database management systems, application tools and advanced system utilities.

We specialise in software that runs on most small business computers. Our more than 60 media formats, including floppy disks, data cartridges, magnetic tape and disk cartridges, support well over 100 different types of computer.

Get full service We give the crucial dimension of after-sales service and full support to everything we sell.

That includes:

- An update service for software and documentation.
- Telephone, telex and mail-order services in the London office and at overseas offices in the United States, France, Switzerland, West Germany and Japan.
- Subscriptions to Lifelines,TM the monthly magazine that offers comparative reviews, tips, techniques, identified bugs and updates that keep you abreast of change.

Get it now Lifeboat now serves tens of thousands of satisfied customers with our breadth of up-to-date, fully tested, fully supported and competitively priced software.

You may not need all we offer, but we offer just what you need. After all, we wrote the book.

How quickly could you prepare a report from files like these?

Chances are it would take a good hour or more. With the MicroPro International InfoStar you can sort it out in just one minute, with a program that is four times faster than many other database management systems.

The InfoStar is a powerful file processor and business report generator that can be used for any business tasks from producing budgets and schedules, to sending special sales letters to preferred customers.

And it's as simple as it is efficient. There's no complicated computer language to learn. Instead, selections are made from an on-screen menu written in English. Even a novice can produce useful reports after just a few hours. And it's available to run on most microcomputers.

Leave the paperwork in the 19th century. Switch to advanced technology made simple . . . with InfoStar. Contact any of our distributors today for further information or a demonstration.

NOW!

PROTECT YOUR COMPUTER FROM MISTAKES IN THE MAINS

ONLY £49.95
(plus p&p and VAT)

Most unexplained computer errors aren't the fault of the computer or its user, but can be traced to a poor mains supply.

Electrical noise from sources like fluorescent lighting, electric kettles, CB radios and radar can play havoc with data. What's more, the voltage fluctuations from lightning and heavy electrical appliances may even result in permanent damage to memory units.

Now Mainstay stops all that. It literally filters and regulates the voltage going into your computer, as well as supplying microbreak power.

That means total protection for micro and mini-computers from the makers of some of the world's most sophisticated equipment for protecting mainframe computers and systems.

Play it safe. Send the coupon today.

XITAN
SYSTEMS

THE DEALERS

N:B. Although most products are available off the shelf, not all dealers carry the complete range, and some may specialize in turnkey systems rather than retailing individual products. Also, some dealers may carry other software not supplied by Xitan. While every effort has been made to ensure the accuracy of the information provided, Xitan are unable to accept any responsibility for errors.

WINNING TREBLE

It takes a precision throw to hit target and an accurate decision to choose the correct printer to suit your requirements. CAE makes your choice easier with the winning treble.

MICROPRISM

The new MicroPrism printer is produced for 'triple top' accuracy - that means quality text at low cost. Basic specification includes 80 cps correspondence quality and 110 cps data with high resolution 84 x 84 d.p.i graphics. The MicroPrism will also accept letter headed or pin feed paper.

PRISM 80 & 132

Small but efficient the Prism 80 & 132 Matrix printers are right on target. Ideal for personal and business use, producing a quality performance every time.

Both provide the speed you require, operating at up to 9600 baud and printing at 200 cps offering the flexibility to match immediate and future needs.

Optional features include high resolution graphics, 250 sheet hopper and FULL COLOUR.

PCW9

Now in chip form.

If your BBC Micro could talk, what sort of accent would it have?

A BBC English one, of course.

Which is exactly why Acorn Computers, who designed and built the machine, have produced its very own speech chip featuring the dulcet tones of Kenneth Kendall.

Called Speech Synthesis, it's a pair of chips that can be plugged into your BBC Micro by your local BBC/Acorn dealer. On them, you'll find 164 words/syllables spoken in familiar fashion by the famous retired newscaster, all of which can be

combined to form several hundred other words.

The chips also provide the 'serial' processing capability whereby future software cartridges can also be plugged into the front of your BBC Micro. (The machine's vocabulary will be widened via such cartridges.)

Priced £55, Speech Synthesis is available from your local BBC/Acorn dealer. (To find out where that is, simply call 01-200 0200.)

**ACORN
COMPUTER**

If you'd like more information, he'll complete the story. In plain English, of course.

NEW FROM ACT

**NOW WITH
256K!**

The 10 Megabyte Winchester Sirius — — £3995.00

Once again, ACT introduces a new price/performance breakthrough in personal computing: An ACT Sirius 1 16-bit personal computer with 256 Kbytes of RAM COMPLETE with integral 10 Mbyte Winchester for just £3995.

And, it's available now. Ready to take on the large business applications that previously called for much more expensive minicomputer systems.

Both access speed and data integrity are enhanced compared with floppy-based systems. The user can divide the disk into multiple volumes each of which appears as a discrete entity. And more than one operating system can access the Winchester.

Like all the Sirius range it's backed by

the strength and resources of ACT: The PULSAR range of true 16-bit application software for accounting, planning and word processing; ACT Training Centres in London and Birmingham open to all; nationwide field service; a full range of printers and consumables. And, the most complete and professional dealer network in personal computing.

The new Sirius Winchester is the latest addition to the 16-bit ACT Sirius 1 family. Prices start at just £2195 for a dual floppy drive system with 1.2 Mbytes and £2695 for the double-sided floppy drive version offering 2.4 Mbytes. All provide an Intel 8088 16-bit processor and 128 Kbytes of RAM.

NEW SIRIUS WINCHESTER: THE FACTS

Winchester Subsystem

- 10.6 Mbyte (formatted) 5¼" integral Winchester drive
- 218 msec average access time
- Intelligent disk controller
- DMA interface to system memory
- Multiple operating systems
- User configurable

General Specifications

- 256 Kbytes RAM
- Intel 8088 16-bit processor unit
- 1.2 Mbyte double-sided floppy disk drive for back-up
- 800 x 400 pixel high resolution graphics
- Multiple operating systems
- Parallel/IEE 488 port
- 2 x RS 232 asynchronous/synchronous ports
- User port

AUTHORISED ATARI SERVICE CENTRE

The brilliant new colour computer

SORD M5

A superb new home computer with one of the most powerful colour video processors available. An incredible 32 sprites simultaneously and 16K of RAM dedicated to graphics alone. Powerful Z80A (3.5MHz) main processor. Three tone generators and noise generator all with envelope control like a mini-synthesiser. Complete with BASIC and superb handbooks for beginners. All this for just £149.95 (AF64U)

INTEREST FREE CREDIT NOW!

If your order contains over £120 worth of computer hardware apply now for interest free credit by telephoning: Mail-order: (0702) 552911. London Shop: 01-248 0926. Birmingham Shop: 021-356 7292. Southend shop: 0702 554000 or write to P.O. Box 3, Rayleigh, Essex SS6 8LR.
 You pay 10% down, then 10% per month for a further nine months (to nearest penny).

Credit quotations on request. This offer subject to approval which can take up to 48 hours (APR = 0%).

Mapsoft full colour catalogue. Price £1 incl. post. Maplin catalogue contains full details of all hardware and lots of software. On sale now in all branches of W. H. Smith, price £1.25 or £1.50 incl. post from PO Box 3, Rayleigh, Essex.

Maplin Electronic Supplies Ltd., Mail Order: P.O. Box 3, Rayleigh, Essex SS6 8LR. Tel. Southend (0702) 552911 (Sales). Demonstrations at our shops NOW.
 159-161 King St., Hammersmith, W6. Tel. 01-748 0926. 284, London Road, Westcliff-on-Sea, Essex. Tel. (0702) 554000. Lynton Square, Perry Barr, Birmingham. Tel. (021) 356 7292.
 All goods delivered in UK mainland carriage paid, but add 50p if total order less than £5 except catalogues. Orders including items marked ★, delivery next day by Datapost.
 Subject to availability. All prices include VAT unless shown. Prices correct at time of going to press.

THE NEW SHARP MZ-700

by Graham Knight

SPECIFICATION

The MZ-700 has 64K user RAM, 4K VIDEO RAM, 4K CHARACTER GENERATOR ROM, and 4K MONITOR ROM — a total memory of 76K. The keyboard has 69 proper full stroke keys in a QWERTY layout. 5 special keys allow the user to define 10 functions. Four cursor arrow keys are on a separate pad allowing quick editing and skilful game control.

The Z-80A CPU runs at 3.6MHz giving very fast processing times (Benchmark 4 takes just 8.6 seconds). Optional extras are a 4 colour plotter-printer and a neat 1200 bps cassette. An interface for a larger Sharp printer is built in. A 50 way connector is incorporated for other peripherals. Sockets are also provided for connecting joysticks and using a separate cassette. The eight colour display can be viewed on any TV set. Composite video and R.G.B. connectors are provided for those wishing to use a monitor.

KNIGHTS DESIGN

We have been to Sharp at Osaka, Japan, three times in the last 18 months and have been closely involved in the European release of this model. Sharp originally intended to export the MZ-700 with 256 characters similar to those on the MZ-80K. We persuaded Sharp to incorporate our character generator which gives 512 characters.

Many computers have a very limited number of characters, often just 128 and sometimes with no small letters. Some micros get around this limitation by allowing the user to define shapes but this involves complex programming. Our easily programmed 512 characters include all the original Sharp shapes with the addition of "outline" letters and numbers, space invaders, rockets, planes, tanks, cars, snakes, bullets, guns, faces, gremlins, fruit, ghosts, flying saucers, chess pieces, a TV set and the MZ-700 itself. For more serious applications we added a mass of electrical symbols including transistors, diodes, capacitors, gates, etc, plus scientific, Greek and other language characters.

All of us at Knights were involved in designing this section of the MZ-700 and we would like to publicly thank the staff at Sharp for their help and enthusiasm. It is a great honour for our British design to be incorporated in Sharp's MZ-700 export production.

EIGHT COLOURS

Many colour computers give very poor colour indeed and many micros limit the number of colours displayed at any one time. On the Sharp each of the 1,000 characters on the screen can be individually programmed for foreground and background colour. With a choice of eight colours, 512 characters, and 1,000 positions you have a fantastic possibility of 28,000,000 different colour displays. The Sharp MZ-700 colour is excellent. We have even been able to program a colour TV test card — we have never seen any other computer come close to the Sharp for colour saturation and definition.

EXTENDED BASIC

Each MZ-700 is supplied with an extended BASIC which includes commands to control the plotter-printer and peripherals. Commands include: AUTO, AXIS, CIRCLE, CLOSE, COLOUR, CURSOR, DEF FN, DEF KEY, DELETE BLOCK, GET, GPRINT, HSET, IF — ERN, IF — ERN, INP PORT, KEY LIST, LEFT\$, LINE, MERGE, MID\$, MODE

GR, MOVE, MUSIC, ON ERROR — GOTO, ON — GOSUB, ON — GOTO, OUT PORT, PAGE, PAI, PCOLOUR, PEEK, PHONE, PLOT ON, PRINT USING, RAD, RENUMBER, RIGHT\$, RLINE, REMOVE, SET, SGN, SIZE, SKIP, STR\$, TEMPO, TEST, TIME\$, TRACE, and WOPEN.

REVOLVING VIDEO MEMORY

The MZ-700 features a most unusual 4K video memory which stores 50 lines of characters. The screen shows a 25 line section which can be moved to show any part of the VRAM. A 50 line program listing can be scrolled round and round giving a revolving cylinder effect and this can give truly amazing screen displays in programs.

PLOTTER-PRINTER

The 4 colour plotter-printer has a horizontal resolution of 480 points. It feeds the paper up and down so the vertical resolution is only limited by the length of paper. Characters can be printed in 64 different sizes from 1mm to 10cms high. Programs can be printed in 20, 40, or 80 character per line format. Characters can be orientated in four directions — the right way up, upside down and sideways. The BASIC has many new commands for use with the plotter-printer allowing very complex patterns, drawings or graphs to be created easily.

CLEAN COMPUTER

Some micros have small memories and are stuck in a single language. Sharp micros are designed as "clean computers" — that means there is a maximum of RAM memory and a minimum of ROM. Languages are loaded from tape and this means that if our MACHINE CODE LANGUAGE is used the whole 64K of memory is available. Many customers progress from BASIC to FORTH, MACHINE CODE, ASSEMBLER, or PASCAL. The ability to load different languages on tape is a most important feature.

FREE PROGRAMS

Each MZ-700 from KNIGHTS will be supplied with four languages and 40 programs. The prices in brackets are what you will pay if you buy your MZ-700 elsewhere!

TEN of JAPAN'S best games — SNAKE, SPACE BEE, SEND ONE, PAINFUL MAN, LAND ESCAPE, CIRCUS STAR, SEARCHER, BATTLE, ROUND STREET, and SUPER PUCKMAN.

TEN KNIGHTS PROGRAMS (£34) — CRIBBAGE, SUICIDE RUN, TEACH MULTIPLICATION, TEACH DIVISION, VICIOUS VIPER, MOTORING COSTS, STATISTICS, HOME ACCOUNTS, CRASHER, AMERICAN BOWLING.

PASCAL LANGUAGE + 12 Pascal programs (£25)

MACHINE CODE LANGUAGE (£12)

FORTH LANGUAGE + 5 programs (£25)

MZ-700 PRICES

The MZ-711 desktop micro is known as the Jack in Japan — it costs £215. The MZ-721 is known as the Queen and is the model with the built in cassette — it costs £248. The MZ-731 is known appropriately as the KNIGHT and has the cassette and plotter-printer built in — it costs £359. Customers outside the UK add £10 for air freight. UK customers get free Securicor delivery but remember to add Maggie's VAT.

PS We have sold thousands of Sharp products all over the World during the last nine years and have never had to charge for a single repair. I wish we could find someone to supply cars on the same basis! Ring or write for our latest newsletters and price lists.

BYTESHOP FOR THE PROFESSIONAL

There are so many micro computers on the market that choosing the right one is far from easy. And it isn't made any easier when you find them cheek by jowl with cameras, hi-fi and a host of other electrical equipment. What you need is someone that is single minded. And that means us. Byteshops are totally dedicated to microcomputers. So, not surprisingly, we can offer you a wider range because we sell nothing else. Our prices are keener too. So are our staff. Each one is an expert who can make sure you get the computer that's exactly right for you - whether it's a home micro or a £20,000 business system.
What's more we'll freely advise you on expanding or upgrading your system as your knowledge grows or your requirements change. While our Microserve Centres offer full service and maintenance on site and at our shops. And our product support specialists are your assurance of our total commitment to after sales service. After all, we are the UK's longest established microcomputer specialists. Come and see us soon.

SYSTEM SPOTLIGHT

IBM PERSONAL COMPUTER

The most significant microcomputer introduction for years and an established best seller. It's tremendous versatility means that it can be employed by for example, the small businessman as a stand alone desk top system, or the large corporate user as an intelligent terminal for a main frame. There's also the exciting new high performance high speed version the IBM PC XT. At the Byteshop, we can offer you the

widest portfolio of IBM software and programmes plus add on's and add in's. This month's system offer is the IBM personal Computer with dual 320K byte diskette drives, 128K byte memory, UK keyboard and screen, PLUS DOS operating system and asynchronous interface card.

BYTESHOP FOR THE BUSINESSMAN

You wouldn't go to a lawyer for medical advice, or take your tax problems to a doctor. It's just as illogical to talk computers to anyone but a computer expert.

Every Byteshop is a specialist computer store. In it you will find nothing but computers and computer people. There is nothing else to distract you. Every Byteshop can show you the very latest personal computer systems and provide solutions to both specific and specialist requirements. Word processing, production control, accounts financial planning and data bases are just a few of the most popular applications.

We can also offer everything allied to micro-computers, such as stationery, diskettes, boards, ribbons for your printer, books, tapes and print wheels.

Just as important, you will have the undivided attention of a computer expert. Our staff have been trained on all our machines and peripherals and can give you sound advice and assistance with complete impartiality.

Even if you have to travel a few extra miles it will certainly pay to come to the experts.

No 1 source for software

SOFT OPTION SOFTWARE CENTRE

When you're thinking software, think Soft Option first. Chances are we'll have the right product, in the right format, on the shelf in quantity.

We despatch fast from stock. We also offer a dealer pricing system to suit individual needs with cumulative discounts available.

Finally, we *know* about software—we can give you technical support when it's needed.

So make Soft Option your first call. We'll soon become your first choice.

CP/M 80 CP/M 86 MS-DOS

and IBM PC Software

SOURCES INCLUDE:

We hold stocks of most software manufacturers including:

MICROPRO
MICROSOFT
DIGITAL RESEARCH
SORCIM
IUS
ASHTON TATE

MACHINE FORMATS INCLUDE:

Software can be made available in 8 BIT or 16 BIT formats to suit most micro-computers currently on the market including:

Superbrain
North Star Horizon
North Star Advantage
Columbia PC-IBM PC
Televideo-Apple
CP/M 8" - Rair - Sirius

RING THE SOFTLINE Grantham (0476) 860171

All products are supplied complete with full originator's documentation. Please send large s.a.e. for full details. TRADE ENQUIRIES WELCOME.

PROGRAMS INCLUDE:

Our complete list of software is too long to publish and changes by the hour but here are a few examples to whet your appetite.

WORDSTAR MICROPRO's comprehensive word processing system.
PL/I-80 DIGITAL's PL/I Compiler.
BASIC-80 MICROSOFT's popular and powerful basic Interpreter. There is a Compiler too.
FORTRAN-80 Fortran Compiler to ANSI X3.9 1966 except COMPLETE data.
SUPERCALC SORCIM's spread sheet and modelling system.
EASYFILER Data Recording System for the IBM PC from IUS.
dBASE II Relational Database Management from Ashton Tate.

512 x 512 GRAPHICS

Digisolve offer you a way to increase your graphics speed and resolution. Using a high speed graphics processor, our cards draw lines and characters FAST. The graphics processor works in parallel to the host machine, and gives you the power of using a co processor specifically designed for graphics. With drawing rates of up to 1,500,000 pixels per second, lines appear instantly to speed up your plotting.

With the resolution, we offer new possibilities for software and systems. No longer is it necessary to consider one of the new 16 bit personal computers because of their better graphics. Digisolve offer a card designed for the Apple II to give 512 x 512 monochrome graphics. With the development of an 80 x 57 line Visicalc and Applewriter pre-boot, serious business users are no longer finding 80 column cards good enough. We also offer a colour unit designed to connect to any computer to give the same resolution but with 64 colours.

Digisolve are committed to the development of graphic systems and character display equipment and have a rapidly growing software base to help you use better graphics.

APPLE II CARD

APPLE II

Digisolve's Apple II High Resolution Vector Graphic Processor Card quadruples the screen resolution and saves using up your Apple's memory space. The enhanced Applesoft support disc supplied with our card provides the powerful graphics functions and simplifies the conversion of existing software.

- * Draws vectors at up to 1,500,000 pixels per second
- * 512 x 512 pixels resolution
- * Graphics and characters mixed, allows proportional spacing and up to 85 characters by 57 lines of text
- * 64K bytes of on board memory will store two pictures for animation or have one text and one graphics page
- * 4 different line types for clarity
- * Blocks of variable sizes may be drawn to speed up area filling
- * Read modify write mode for drawing cursors
- * Screen read mode for dumping drawings to a printer
- * £399 + VAT + P&P

SOFTWARE: Visicalc and Applewriter pre-boot. Architectural Design & Modelling. Kitchen Design. Draughting. Report Presentation.

Turtle Graphics, TASC & Apple Soft software support.

VGP 64

Digisolve offer you high resolution colour graphics too. Designed to plug into any computer with a bus host adapter. The VGP 64 gives you 512 x 512 pixels in 64 colours. With its own vector processor and 384 K bytes of memory your computer can become a sophisticated graphics system.

- * 64 colours that may be expanded with a palette or extension video RAM card
- * 512 x 512 pixels resolution with fast vector processor
- * 384 K bytes of video RAM on board
- * 2 pictures may be stored simultaneously in full colour for animation
- * In monochrome 12 pictures may be stored and selected for display under software control individually or for animation
- * Available as a boxed unit complete with power supply, or in board form to OEM customers
- * Will plug into Apple, Commodore, IBM, Sage, S100 systems, PDP11 or any computer with a bus
- * Available in several versions: 8 colour £799 64 colour £899

★ SEE YOU
AT
APPLE '83

The new Commodore 64 is the most powerful personal computer available to the businessman.

And amazingly, it's one of the least expensive.

A brilliant example of micro-computer technology, it will do a lot to make your business more efficient and more profitable.

The range of software—general and specific—is very extensive, and covers financial planning, word processing, information handling and countless other business and personal tasks.

The Commodore 64 is the ideal personal computer for the office. It is also ideal for the home, whether this is your 'second office' or main place of business.

It means that the scope of take-home work is no longer limited to what papers can be carried in a bulging briefcase.

A Commodore 64 at home could allow you access to all the information stored at your company office immediately, easily and with complete security, simply by linking up to any TV set or monitor.

For the office. Or the

ELECTRONIC MAIL IN MICROSECONDS

You could also link up with other Commodore 64s: in branch offices, for example, or in colleagues' homes, with instant exchange of information.

You could also plug in to half a million pages of Prestel information, making use of key figures in combination with your own calculations for such statistics as you might need, or for other business uses, like car hire and hotel bookings.

The Commodore 64 means maximum flexibility,

home office.

and provides the facts on which you can base sound business decisions.

INVALUABLE TO ANY BUSINESS

The Commodore 64 is the perfect computer for your own business, whatever its size. As well as the advantages we've already mentioned, it has a great capacity for expansion, and when combined with various peripherals** it is superbly flexible. Whether it's looking after personnel records or creating models, say, for sales forecasts, it will quickly prove to be of vital importance to any well run concern.

MORE POWER TO THE STUDENTS

A Commodore 64 in education puts more computer power at students' disposal. Subjects include maths, from basic arithmetic to higher functions; vocabulary building; elementary science; basic geography; and of course, learning computing.

FOR EVERYONE WHO HAS A HOBBY

Apart from being an absorbing and fascinating pastime in itself, the Commodore 64 can be a tremendous help in countless hobbies. It's equally happy collating recipes for a cook or choosing moves for a chess enthusiast.

In short, the Commodore 64 is one of the most outstanding microcomputers ever built. Outperforming all other computers in its class (some at twice the price), it's the ideal business partner. And just as at home, at home.

The **64** from Commodore.

64K memory for £299*. Of its kind, unbeatable. At its price, almost unbelievable.

commodore
Changing business for the better.

For more information on the powerful new Commodore 64, and the address of your nearest dealer, telephone or write to us at:
The Commodore Information Centre, 675 Ajax Avenue, Slough, Berkshire, SL1 4BG. Telephone: Slough (0753) 79292.

Let **PHILIPS** put a word in
for your business (or thousands of words)

The P2000 word processing system

... lets even one finger typists turn out secretary-perfect letters. Time after time after time.

And it costs from under
£2000 complete with
letter quality printer!

The P2000 system brings word processing power within the reach of practically any small business. Accountants, small contractors, solicitors, sole traders. In fact anyone who needs to put out letters, quotations, invoices, etc. quickly, neatly and accurately.

No more hasty alterations giving your letters that 'amateur' look. No more frantic retyping when you realise you need to make a change just before last mail collection. You can change text, correct errors, add or delete words or paragraphs, all at the touch of a few keys.

If you want more than one original it's no problem. You can even send the same letter to all your mail list, each individually titled. You'll soon find that the P2000 pays for itself in time saved, not to mention what it does for your business image.

Of course, the P2000 will do more if you want it to. For relatively small extra cost it will handle book-keeping, statistics, record filing and all those other office chores.

And all underwritten by the Philips' reputation for quality and reliability. It's simply for everyone.

Philips Micro-Computer

Simply for everyone.

LEISUREBASE. NEW NAME IN

Introducing Leisurebase — the friendly new name in microcomputers. You'll find us a friendly bunch and we aim to take a lot of the mystique out of buying microcomputers. You'll find our prices competitive and our product range wide. We also make sure we can support you with a comprehensive selection of peripherals and software.

Leisurebase No Deposit Instant Credit

No deposit instant credit is available at your local Leisurebase when you use the budget card. Please call in and ask for written details. We also take Barclaycard Visa and Access. (Leisurebase Credit Brokers APR. 30.6%.)

Part Exchange

If you're looking to upgrade your computer, come to us first as we are often willing to take good quality used equipment in part exchange.

Whichever way you look at it, you'll be better off coming to Leisurebase first.

A complete computer system in one box based on the legendary VIC 20.

Pack also includes a cassette unit, a simple explanation of computer programming, introduction to Basic Part 1 and an exclusive compilation tape of 4 computer programs — Blitz, Type-A-Tune, Race and Hoppit. Hurry to your Leisurebase dealer as this is a strictly limited offer.

THE COMPUTER CENTRE FOR ALL THE FAMILY

LEISUREBASE

EARLY LEARNING SPECTRUM SOFTWARE

4-8
year
olds

Announcing an exciting range of early learning software for the Sinclair ZX Spectrum - 16K and 48K. Specially produced for 4 to 8 year olds by the largest educational

publisher in the UK.

Colourful, action-packed games to teach those vital word and number skills.

Countabout - Teaches simple addition and subtraction. Help our micro chimp reach the bananas at the top of the tree by getting the sums right.

a,b,c... Lift-off! - an exciting introduction to the alphabet that teaches the letters in correct order. Page through the alphabet picture book and help load our spaceship to Venus by matching pictures and words. See lift-off with full sound effects!

All programs come with 6 pages of Parents' Notes providing complete instructions for use.

Hot Dot Spotter - a game of speed and skill that teaches number recognition. Count the dots (between 1 and 9) and watch the laser beam bounce the ball up the screen. Build up speed and score lots of points.

Longman Software can be used by children on their own or with initial help from mum or dad.

Available from W. H. Smith, Boots, Menzies, Martins and other leading chain stores, as well as from computer shops and through Websters, Software Directory.

Trade availability through Prism Microproducts. In case of difficulty, or for a full colour brochure, write to: Division GS6 (Software) Longman Group Ltd, Longman House, Burnt Mill, Harlow Essex CM20 2JE

If the number of computer systems on the market leaves you totally bewildered, we don't blame you.

And that's not your only problem. If you are not very careful, the system you buy today could well be obsolete tomorrow. That's how fast computer technology is progressing.

But take heart. There is one computer system that won't become obsolete. Because it is modular in concept it can be expanded both inside and outside to accommodate extra capacity and new advances—as well as being able to increase in size and capability to keep pace with your own growth or changing requirements.

You have a choice from a virtually unlimited range of CP/M compatible application software. Plus the support of total dealer back-up.

And, most important, you won't find that you've bought a system that suddenly doesn't meet your needs. The Communicator offers the facility to enhance and upgrade existing models to take account of new applications.

Comart have also met the stringent CCTA requirements. Which means we are A1.

In short, Comart Communicator systems can keep pace with both progress and innovation.

So don't get bogged down with obsolete equipment. Contact your Comart dealer for a demonstration now.

The Comart Communicator. One computer system that won't sink into obsolescence.

What's more, it's British.

At any one of the addresses listed below you can see the remarkable flexibility of a Comart Communicator system for yourself.

In under three years, it has become a complete family of compatible, fully expandable microcomputer systems, covering

20 models and including single user, multi-user and multi-processing systems.

To become technical for a moment, there's a choice of 8 or 16 bit processors, up to 1 megabyte of RAM and a wide range of floppy and hard disk storage capacities and add on modules.

COMART COMMUNICATOR SPECIFICATIONS		
	CP100 Series Systems	CP1000 Series Systems

BEEBUG FOR THE BBC MICRO

**DEVOTED EXCLUSIVELY
TO THE BBC MICRO**

**MEMBERSHIP NOW EXCEEDS
18,000
BRITAIN'S LARGEST COMPUTER
USER GROUP**

18,000 members can't be wrong — BEEBUG provides the best support for the BBC Micro. BEEBUG Magazine — NOW 64 PAGES devoted exclusively to the BBC Micro.

Programs — Hints & Tips — Major Articles — News — Reviews — Commentary.
PLUS members discount scheme with National Retailers. PLUS members Software Library.
10 Magazines a year. First issue April 1982. Reprints of all issues available to members.

ORBIT FOR THE ACORN ELECTRON

**IF YOU HAVE AN ACORN ELECTRON OR ARE THINKING OF BUYING
ONE THEN YOU SHOULD JOIN THE ELECTRON USER GROUP.**

Members receive 10 copies of the magazine ORBIT each year. ORBIT is devoted EXCLUSIVELY to the ELECTRON MICRO. It is packed with news, Reviews, Hints, Tips, Programming ideas, Major articles, plus Regular program features including games and useful utilities.

ORBIT, is produced by BEEBUG Publications Ltd., publishers of BEEBUG, the magazine of the National User Group for the BBC Micro. BEEBUG now has some 20,000 members, and has achieved a high reputation both in this country and abroad. Acorn and the BBC have both taken out multiple memberships, for example, and our articles are now syndicated in Australia. (For further details of BEEBUG, see separate advertisement elsewhere in this issue.)

The formula which makes BEEBUG an invaluable companion for users of the BBC micro will be applied to ORBIT.

By subscribing to ORBIT you gain all the advantages of a single-micro magazine, with no space wasted on programs and articles for other computers.

Further benefits of membership:

Members' discount scheme with national retailers of software, hardware and books, with savings of up to 25%.

Members' software library with a growing range of titles at special prices for members.

**SPECIAL OFFER
SUBSCRIBE NOW, AND GET A FREE INTRODUCTORY CASSETTE CONTAINING 8 TESTED
PROGRAMS FOR THE ELECTRON.**

1. **SPACE CITY** Defeat the invading Aliens with your laser, and save the city.
2. **3D NOUGHTS AND CROSSES** Pit your wits against the ELECTRON on a 4x4x4 board.
3. **RACER** Guide your racing car to victory, avoiding other cars and obstacles on the track.
4. **3D MAZE** In this challenging game, you must escape from the maze — The screen displays a 3D view from inside the maze.
5. **PATCHWORK** A multicoloured display of continuously changing patterns.
6. **KEY SET ROUTINE** A program to set up the user function keys.
7. **MEMORY DISPLAY** An efficiently written utility to display the contents of memory (ROM and RAM).
8. **CHARACTER DEFINER** Define individual graphics characters with this useful utility for use in your own programs.

HOW TO JOIN

To subscribe for one year, and get your free cassette, send £9.90 (payable to Orbit) plus a strong stamped addressed envelope (for the cassette) to:

ORBIT, PO BOX 50, ST ALBANS, HERTS.

SIX MONTH TRIAL SUBSCRIPTION (5 ISSUES) UK ONLY — FREE CASSETTE OFFER STILL STANDS.

Membership outside UK (one year only): Eire and Europe £16, Middle East £19, Americas & Africa £21, other countries £23.

The dawn of a New Computer Age...

ZAPPO COMPUTER CENTRES

COMPSOFT'S DMS – winner
of the 1982 **RITA** Awards,
'Software Product of the Year'.

Now Compsoft announce
Delta – the very powerful, very
friendly database* that the
world has been waiting for.

* For micro computers with CP/M, MP/M or MSDOS operating systems. Including IBM PC.

Compsoft Training Centre

If part of your microcomputer's job is to store information, you need Compsoft's software.

Compsoft DMS is already Britain's No. 1 record keeping program. And with 4000 users to our credit, we can honestly say we know more about information storage & retrieval than anyone else. We listen to your comments & requests and now we've produced a world first – the Delta – a true transactional database.

If you'd like to know more, we have general brochures, full technical specifications & free

guides to DMS handling a multitude of business situations from order processing, invoicing & stock recording, through to library, personnel & hospital record management.

Find out more about the database revolution. Either telephone the office or clip the coupon now.

Compsofts Delta – taking microcomputers into the third dimension.

£285 (£327.75 inc. VAT)

80x25 Video for nascom

£125
(£143.75 inc. VAT)

Nascom owners can now have a professional 80x25 Video display by using the Gemini G812 Intelligent Video Card with on-board Z80A. This card does not occupy system memory space and provides over 50 user controllable functions including prog character set, fully compatible with Gemini G805 and G815/809 Disk Systems. Software supplied on Gemini system disks. Built and tested.

The **Microvector 256A** is a high performance graphics display interface on an 80-BUS and NASBUS compatible card. Various graphic primitives such as vector and character generation are executed in hardware by a Thompson EF9356 Graphic Display Processor. Plotting rates are typically 1 million pixels per second giving full animation capability. Various vector and character types can be selected. Characters can be scaled to give 256 different sizes. MV 256A Suitable for TV use (PAL-UHF) **£199.00 + VAT**

MicroValue

REAL value — from the Professionals

I/O-Plus 2
£115

MegaPlus 64k
£249

Now you can buy a QUAD function IBM PC board without having to buy more memory.

MegaPlus™ and I/O-Plus-2™ are the ultimate add-on products you will need to expand your IBM PC and XT. Which board you decide on will depend on where you are heading. To take full advantage of your IBM PC and XT beyond 256k, you will want to expand with the MegaPlus™. It's features include two asynchronous ports, clock/calendar, printer port, and up to 512k of memory expansion. But what if you already have all the memory you need? The I/O Plus-2™ gives you all the features of MegaPlus™ to operate your printers, plotters and modems, set your time and date automatically with the clock/calendar, without adding memory. Also a special game adapter is available, but more about that later. Both boards include SuperDrive™ disk emulation and SuperSpool™ print buffer software.

MEGA WITH MEMORY

The MegaPlus™ has three functions standard: Parity checked and fully socketed memory up to 256k in 64k increments; clock/calendar with battery back-up for automatic loading of time and date when the computer is turned on; and an asynchronous communication port (RS232C serial) which can be used as COM1 or COM2, (DTE for a printer, or DCE for a modem). Optional is a 100% IBM compatible parallel printer port, and a second asynchronous port for another £30 each. The MegaPak™ option plugs onto your MegaPlus™ "piggyback" style to give you 512k of additional memory. Now you can create disk drives in memory up to 360k, set aside plenty of space for print spooling, and still have memory for your biggest programmes.

I/O-PLUS 2 WITHOUT MEMORY

The I/O-Plus 2™ comes standard with a clip-on battery powered clock/calendar, and asynchronous communication port (RS232C serial). Optional is a second asynchronous port (DTE for a printer, or DCE for a modem), a parallel printer adapter, and the best game paddle adapter on the market. What's so special about our game adapter? Not only is it an IBM standard game port, but it can also use low cost, widely available Apple compatible paddles and joysticks. If you already have sufficient memory the I/O-Plus 2™ gives you all the input and output ports you might need for less than the cost of most single function boards.

FREE SOFTWARE

SuperDrive™ disk emulation software creates "disk drives" in memory which access your programmes at the speed of RAM memory. SuperSpooler™ print buffer software allows the memory to accept data as fast as the computer can send it and frees your computer for more productive work. Some manufacturers sell hardware print buffers that do only this for hundreds of pounds. SuperSpooler™ eliminates the need for these slot robbing products. Both of these powerful pieces of software can be used with any expansion memory for your IBM PC or XT.

CHEAP SOFTWARE TOO

What's good is great hardware without some great software to use it with? We offer some terrific prices on some of the popular programmes you will want to use your board with. How about the cream of the spreadsheet programs, SUPERCALC, for just £129, or SUPERWRITER for £199. If you are looking for data base management you can get dBASE II by Ashton-Tate for £369.

WHY BUY IT FROM US?

Because we provide the service and support most companies just talk about. Each board is fully tested and burned in prior to shipment. We realize how integral this board is to the use of your computer. What good is a warranty if it takes weeks for repairs to be made? We offer 48 hour turnaround or a replacement board on all warranty repairs. Do you hear anyone else making this promise? If you still are not convinced, and want to compare prices, remember we don't charge extra for credit cards, shipping, or COD fees. We think the ultimate testimony to our good service and high quality is that one of our largest customers is none other than IBM! If you still want to buy elsewhere, ask any competitor if they will face the acid test.

THE ACID TEST

Qubie' (say que-bee-A) gives you a 30 day satisfaction guarantee on all board purchases. If you are not completely satisfied we will refund the entire cost of your purchase. If you can get one of our competitors to give you the same guarantee, buy any other board you think compares and

return the one you don't like. We're not worried because we know which one you will keep. We also offer a one year parts and labor warranty. An additional one year extended warranty is available for £35.

TO ORDER BY MAIL SEND:

- your name and delivery address
- board type, size, and options requested
- daytime phone number
- UK Residents add 15% for VAT
- Company check or credit card number with expiration date (personal checks take 10 days to clear)

PRICES:

ADMAN
ELECTRONICS

**Add on
the Adman way**

The Vic 20 really can speak...but only if
you use an ADMAN SPEECH SYNTHESISER
It's word power is endless as there is no set
vocabulary. Yet operation is simple. The 64
elements of English speech are pre-pro-
grammed to let you put your own words
together as soon as you switch on. Just
imagine...program adventure games with
characters that can actually talk!

Also for your Vic 20 there are 8K and
16K RAM PACKS and the ADMAN 3
PORT EXPANSION MOTHER BOARD.
With proven designs of the highest quality
they are the best value for money around.

Available from Spectrum, Dixons and other major computer accessory shops

Prices around:

8k Ram Pack £39.95
16k Ram Pack £49.95
Motherboard £19.95
Speech Synthesiser . . £49.95

To find out more about these products, why
not take a lead from our speech synthesiser...go to
your local dealer and ask for it! Or post the coupon.

SINCLAIR MEMORIES FOR EXPORT

We are the UK market leaders in internal memories for the Spectrum and ZX81.

Our well proven products include:

SP48 32K MEMORY EXTENSION
Converts a 16K Spectrum to a standard 48K, and is easily fitted inside the case by the customer.

SP80 64K MEMORY EXTENSION
Gives the 16K Spectrum two massive extra pages of 32K each. The paging instruction is written into the software, and although not an easy product for the beginner to use, it is of enormous benefit to the serious user. Programs for use with the SP80 will be on sale this autumn.

MAXIMEM 32K and 64K ZX81 MEMORIES

The only successful internal memories for the ZX81. For UK clients we insist on converting ZX81s in our own workshops, but enquiries are welcome from overseas distributors with workshop facilities.

OVERSEAS DISTRIBUTORS please contact us by telex, phone or letter for further information and quotations.

The printer you've all been waiting for.

Epson have done it again! Realising a genuine need in the market place for a printer that not only has the same advanced features as its sister, the well tested RX-80, but also has the ability to accept both single sheet and fanfold paper; we bring you the RX-80 F/T.

This latest addition to our range of fine printers gives you dot addressable graphics, standard Centronics compatible interface with a range of interfaces to suit most machines and a fast 100 characters per second print speed.

By incorporating both friction and tractor feed, (which allows for variable paper width) Epson have produced a completely versatile printer at a thoroughly realistic price. Just another example of how we at Epson are not only identifying customer needs, but acting

to serve them staying one step ahead of the field with our quality range of printers and computers.

Don't wait any longer...find out about the RX-80 F/T today.

PCW/9/83

The Personal Computer World Show

Barbican, London 29, 30

Inside: Int

The wonderful world of the PCW Show opens up again on 29th and 30th September and 1st and 2nd October.

And, like every previous Show, it's the one and only place for the newest, biggest, smallest, costliest, cheapest, finest, micro hardware, software, bolt-ons and books.

Where the big news breaks first.

At the Personal Computer World Show you'll see the launch of some astonishing new kit, fascinating software and vital peripherals.

And you can discover it all at first

hand, scooping all the magazines.

Know the world of personal computers.

Just about every micro manufacturer, software vendor, and goodie supplier will be at the PCW Show.

There'll be special deals on offer, too, as well as the chance to enter the Computer Scrabble® competition, and watch the 4th European Computer Chess championship.

Plus the MicroComputing Centre, Computer Town, Computer Clubs, and more.

The time and the place for everything.

Make sure you visit the PCW Show. It's on from Thursday September 29th until Sunday October 2nd, at the Barbican Exhibition Centre in London.

It'll be fully signposted, and is easy to reach by tube, bus or car.

Make sure you don't miss out.

The PCW Show: £3.00 - but to you £2.50.

Clip and keep this voucher to save 50p when you buy a PCW Show ticket on the day.

1983
Personal Computer
World Show
September 1, 2 October

Information.

PCW SHOW 50p DISCOUNT VOUCHER

This voucher entitles the bearer to 50p (fifty pence) discount on the full £3.00 entrance fee to the Personal Computer World Show.
 The organisers reserve the right to admission.
 Only one voucher per person/entrance. PCW9

Or to really save, organise ten or more friends and order our £1.25 Group Tickets in advance - nearly 60% discount!

“I never thought I would change the habits of a lifetime — and I didn't have to. Financial Director follows the same precise accounting principles that have become second nature to me over the years.”

Frank Bunn — 72,
— after more than
40 years of manual
accounting...

More and more people are finding FINANCIAL DIRECTOR is Right for their Business

Financial Director is a complete business book-keeping and accounting software package for small and medium-sized businesses and proven in two years' field testing.

Financial Director has been designed by professional Accountants and conforms exactly to British Accounting principles with essential items such as automatic double entry and a complete audit trail which are fundamental to successful computer accounting.

Financial Director has been described as the 'accountant in a briefcase' — partly due to its unique presentation, partly because it provides the financial control skills of the professional accountant and enables the businessman to keep totally up-to-date with the progress of his business.

Financial Director works on most business micro's and is available from good computer dealers all over the country.

We recommend that you consult your accountant and implement your computer accounting system with professional assistance.

For full information and details of our training schemes and dealer network — call today.

THINK CAREFULLY BEFORE YOU BUY YESTERDAY'S TECHNOLOGY

A NEW FAST & RELIABLE MEANS OF DATA STORAGE FOR YOUR COMPUTER SYSTEM.
You don't need to be an expert to appreciate the advantages of the new 'Sparrow 10' range of low cost cartridge disc drives for S-100 and CP/M users. If you have a data storage problem we can help! even if you have Winchester's now, we can still help! We offer a complete plug in and go cartridge disc subsystem that can be installed in your existing S-100 Computer in minutes. These new disc drives use a new type of low cost interchangeable cartridge giving unlimited off-line storage capacity. They are very robust and can even be dropped or walked on without fear of damage. H.B. Systems, as appointed dealer, can supply these drives singly or cased with power supply, controller (for up to four drives) and S-100 interface complete with self installing B10S software that enables a 40 MB subsystem to be up an running within minutes. Prices for S-100 plug-in-and-go systems start from £2,975 + VAT. For further information contact William Isaac on 02372 3304 or complete and clip the coupon.

Announcing more exciting programs for the BBC.

Acornsoft is the software division of Acorn Computers, the company that designed and built the BBC Microcomputer. Here are four more exciting programs, all designed to get the most from your BBC Micro.

Magic Garden (£9.95) is a cassette based on Shirley Conran's successful book. It's a problem-solving program which provides the complete beginner with instant answers to the questions of what to plant and where. Simply tell the computer whether you prefer a shrub or a flower, the type of soil, light and shade conditions and required flowering time and the computer will come up with a selection of possible plants.

Draughts & Reversi (£9.95) is a cassette containing two traditional board games for you to play against the computer. Both give a graphic display of the board on the screen and you can enter your moves with either keyboard or joystick. The games can be played at varying levels of difficulty and on the higher levels you will find the computer to be a very worthy adversary.

Hopper (£9.95) is a game on cassette which can be played with either keyboard or joysticks. Hop the frog across the busy motorway trying to avoid four lanes of fast-moving traffic. To get across the river to the frog's lair you must leap on to the logs and turtles' backs, but beware of the diving turtles, the crocodile and the snake.

BCPL (£99.65) is a flexible modern structured language that's very easy to learn. The package consists of a BCPL language ROM, a 40/80 disc and a 450 page User Guide. The disc contains the BCPL Compiler, a Screen Editor and a 6502 Assembler. BCPL is particularly good at handling Input and Output and is ideal for writing utility programs and to develop games and commercial packages.

How to get Acornsoft programs.

If you're a credit card holder and would like to buy the programs shown in this advertisement, or if you would like to know the address of your nearest stockist, just phone 01-200 0200.

Alternatively, you can buy the programs directly by sending off the order form below to: Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.

Also use this form if you would like to receive the current free Acornsoft catalogue.

Please allow 28 days for delivery.

☎ Credit Card Holders. Telephone 01-200 0200.

To: Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.

Please send me the following:-

ACORNSOFT

DISKING

FLOPPY
DISKS
FAST

FREE with EVERY TEN-PACK of diskettes from DISKING at these prices.

The complete DISKING DATA PROCESSING package

1 - SEE 10 LIBRARY BOX

Value £2.50

The NEW DISKING 'SEE 10' Plastic Library Box, with the facility for seeing ALL TEN DISKS, without the usual problem of bending the front disks forward. We've spent the last two years designing the BEST library box around, you will not find anything better. Unfortunately the 'SEE 10' is only available in the 5 1/4" size, whereas the 8" is the ordinary egly box.

★ ★ PLUS ★ ★

we supply the 'soft touch' DISKING Diskwriter. This pen is perfect for labelling diskettes, as it will not damage the delicate surface beneath the disk jacket. As an ordinary writing implement, it is superlative.

You may purchase these separately at a silly £9.90 for 50 (please specify blue or black ink).

★ ★ PLUS ★ ★

3 - DISK DIRECTORY

Value 99p

The 20 page PVC bound DISKING Disk Directory, offering two pages per diskette for keeping 'Track' of what's on each diskette. Also inside this directory, you will find a self adhesive index label for the spine of your Library Box.

You may purchase these separately at £9.90 for ten.

DISKING SUPER PROMOTION

With every TWO ten Packs of any 5 1/4" or 8" disks by Maxell, Datalife, Memorex or Dyan purchased at these prices we will pack a FREE Cheque Book Cover. Order FOUR Ten Packs and you will receive two Cheque Book covers and so on.

DISKETTE PRICES EXC VAT

MEMOREX

MEMOREX - Memory Excellence

When it comes to PRICE/PERFORMANCE, MEMOREX wrote the book. Their new Japanese media is very conservatively rated, and certification levels are easily surpassed in actual performance. Protected by a special anti-static lubricant, head performance and media life is also extended.

DISKETTE CARE AND MAILING

The NEW DISKING 'SUPERMAILER'

NEW LOW PRICES

DISK DRIVE HEAD CLEANING KITS

We're fed up with being asked whether our disk drive head cleaning kit actually works. So here's the proof:

Can you really risk that breakdown?

CK5 for 5 1/4" disk drives	14.90
CK8 for 8" disk drives	14.90

(5 1/4" only)

* COPYRIGHT DESIGN - Unlike the rest, this ingenious mailer has a flute crossing action when folded, resulting in a virtually unbendable mailer.

* CAVERNOUS CAPACITY - will take, one, two, three or even four diskettes WITH envelopes.

* FULL INSTRUCTIONS - Each DISKING 'SUPERMAILER' is printed with full instructions and comes complete with addressing/sealing label.

*PACKED IN 100'S - For convenience

NORMAL ORDERS - We now welcome any official Government orders. We are now happy to accept any official orders with a minimum value of £30.00 from Government Departments, Ministries and Local Authorities. We do this on the understanding that invoices will be settled within thirty days or preferably less please. Alternately, you may send your remittance with your order if you so wish. All other non Government bodies, cheques with order please payable to DISKING. If you are a large establishment, and cannot raise cheques without an invoice please post or telephone us your order, and we will send a pro-forma invoice by return, for your accounts department to pay against. Also bear in mind, that you do have to pay VAT, which will be added to these prices. If you are in any doubt, please see the order form on this brochure to help you with your calculations, or telephone us for assistance.

CREDIT CARD ORDERS
We welcome Access (Mastercharge), Barclaycard (VISA) & Diners Club International, & there is NO credit card surcharge. You may write your c/card No. on your order or telephone the order day or night, 365 days a year. You may speak for as long as you like, (but don't leave long gaps otherwise our machine thinks you've gone home) and don't forget to give the following details:
1. The Cardholder Name, Address and day time telephone number.
2. Delivery Address if different
3. Fast Class, ordinary or special post
4. Your Credit Card Number
5. What you wish to Order.
6. State whether purchasing from our General price list or Budget price list.
You may leave the rest to US!

URGENT ORDERS
If you're posting your order, omit the word FREEPOST from our address, and use our normal postcode GU30 7EL and do not forget to stamp it FIRST CLASS. If you are a Government body as defined under NORMAL ORDERS and are telephoning your official order OR are an individual or company using your credit card No., please make it clear that you wish to pay for your goods to be sent to you by FIRST CLASS POST.

Although the NewBrain is conceived as a total system, the unexpanded Processor itself has a great deal to offer. It is available in two forms: Model AD, shown below, with a built-in line display; and Model A, without the line display. Both models can operate with a monitor or a television set.

MEMORY

- 24K bytes of ROM;
- 32K bytes of RAM, at least 28K of which is available to the user.

THE SCREEN DISPLAY

- 40 or 80 characters to the line – without affecting the 28K bytes of RAM at your disposal;
- 24 or 30 lines to the screen;
- well-formed characters, with true descenders;
- a full European character set;
- normal or reverse video, high resolution graphics on screen of controllable size, 256, 320, 512 or 640 horizontal resolution by 250 vertical lines;
- a facility to set up a “page” of up to 255 lines, with the screen acting as a “window” to display it;
- ability to maintain several such pages simultaneously, and to switch rapidly between them;
- text may be used on graphics screen as well as on parts of the video screen not used by graphics.

CHARACTER SET

- 512 characters, including the full ASCII set, all European accented characters, Greek and graphics symbols.

GRAPHICS

- 20 powerful graphics commands;
- all text characters usable on the graphics screen;
- variable-sized graphics screen, with the rest of the screen available for text – for versatility and to save memory.

SOFTWARE

Enhanced ANSI BASIC; screen editor (32 commands); mathematics package (10 significant figures); graphics commands.

- a very friendly screen editor – a delight to use and readily adapted to text processing;
- arithmetic to 10 significant figures;
- very controllable output formatting of numbers – invaluable for accounting, statistics, and scientific applications;
- a powerful, much enhanced BASIC;
- a very flexible operating system, which allows any data stream to be opened to any device.

INTERFACES

- two tape cassette ports built into the processor unit;
- a built-in printer interface;
- a built-in communications interface (V24/RS232);
- a video monitor interface;
- a TV interface;
- an expansion interface for NewBrain system expansion modules.

KEYBOARD

- standard typewriter pitch, action, layout and size, with editing control and graphics keys.

*CP/M IS A REGISTERED TRADE MARK OF DIGITAL RESEARCH INC.

You can get everything in the box on the

If you understand the facts and figures on the left you'll soon realise that NewBrain has to be one of the most powerful micros around.

However, if you find the box on the left a little hard to follow, don't worry.

We've got over 120 dealers nationwide who've got all the answers at their fingertips.

Either way you'll discover that NewBrain is the kind of micro that will stop the competition getting a look in.

At £269 it starts off with twice as much memory as most of its competitors and can expand to over thirty times that amount. So there's no chance of being left behind in the micro race.

It comes with a very powerful language (enhanced ANSI BASIC) and it'll take CP/M,* so it'll work on the same system as similar big business micros, giving you the capacity to use an almost limitless variety of tried and tested software.

But most of all NewBrain is a machine that can expand.

It's designed to take disks, printers and memory expansion modules (up to 2M bytes) plus anything else you'd expect a professional business micro to handle.

So, whether you understand the box on the left or not, pay a visit to someone in the know on the right.

They'll answer all your questions and give you a full demonstration.

NewBrain

Grundy Business Systems Ltd., Grundy House,

Mini Micro or Super Micro?

Only Cromemco offer this depth of choice

Two solutions representing the extremes of microcomputer evolution—both from the Cromemco stable—both breaking new ground in microcomputer technology—both unbelievably cost competitive in their specific areas of application.

**ON THE ONE HAND
THE RIGHT CHOICE
AT THE RIGHT PRICE**

C10 Mini Micro- The Manager's Micro for just £1195 complete. Designed for the Manager's Desk, or his staff. A stand-alone Desk Top 64K, Z80A, single board Personal Computer—with 12" easy to read, green phosphor screen, detachable keyboard with optional function keys and numeric pad, plus 390K floppy diskette drive; supplied complete with CP/M compatible operating system, easy to use word processing and financial planning/spread sheet application software and 32K structured BASIC.

The Cromemco C10 is the first stand-alone micro to make computer power cost effective at an individual by individual desk top level throughout an organisation or company, with the opportunity of adding full networking capabilities at a later date.

**ON THE OTHER
THE RIGHT CHOICE
AT ANY PRICE**

68000 Super Micro- The DP Professional's Dual Processor Micro. The Dual Processor Micro-computer with a Motorola 68000 16 Bit Processor plus an on-board software selectable 8 Bit Z80A. You have a choice of S100 bus systems with comprehensive I/O options for business, scientific and research applications, and memory expansion of up to 4M Bytes. You have the option of 5" or 8" floppy diskette drives, or Winchester Hard Disk subsystems up to 70+M Bytes, with a choice of CP/M compatible system software or Cromemco's Cromix; a 12 station Unix-like multi-user, multi-tasking operating system. Cromemco's comprehensive 16 Bit and 8 Bit development language library includes FORTRAN, BASIC, PASCAL, COBOL, C, RPG11, Assembler, LISP and RATFOR.

If hardware and software compatibility, and future networking potential are prime considerations for your organisation, then Cromemco must be the first and only choice.

Comart are Cromemco's longest standing, most experienced European Distributor. So with Cromemco choice, and Comart support you won't have to write off the past to step on forward into the future.

PIECE**

Get micro's talking to each other ... and
to mainframes ... with Byrom Software's
communications packages.

BSTAM

Micro to micro transmission of all CP/M*
files, regardless of size.

- full wildcard expansions to send *. COM etc.
- full speed data transfer without hex conversion
- direct 9600 baud linking with UARTS, or via
phone lines using modems
- reliable error detection and automatic retry

BSTMS

TTY emulation facility for communicating
with remote time-sharing systems via
phone lines. Osborne version available.

Terminal mode runs your computer like a TTY,
and File mode lets you send and receive files to
and from the Host Computer.

- interactive mode
- expand and compress programs translating
binary to character files and vice versa.
- files received to and transmitted from disk

**Your IBM PC: A GUIDE TO THE
IBM PERSONAL COMPUTER
BY LYLE J GRAHAM**

Packed with information and resources, this book is written for both beginning and experienced computer users and will serve as a day-to-day guide and as a reference. For beginners it provides an overview of personal computer hardware and software, clear step-by-step operating instructions, and where appropriate, detailed explanations of the computer's internal operations. For the more experienced user, the author covers advanced IBM BASIC programming, DOS, graphics and sound, the printer interface and the I/O interface, machine language and the monitor. This is an indispensable book for all IBM PC users.
093198885 3 £12.95 □

**Data Base Management
Systems: A GUIDE TO
MICROCOMPUTER SOFTWARE
BY DAVID KRUGLINSKI**

You'll be able to evaluate and select a data base management system to meet your particular business requirements after reading *this* book. It defines the capabilities of the 3 categories of data base management systems: File, Relational and Network/Heirarchical and examines many of the more popular packages, some of which run under the CP/M

operating system, including: Condor Series 20, dBase II, FMS-80, DataStar and others. With the facts in this book, any microcomputer owner can make intelligent decisions about data base management systems for their business.
093198884 5 £12.95 □

**Learning with Logo
BY DANIEL WATT**

Logo is a fascinating new computer language. This comprehensive guide is written to be useful to children as young as 9 years old, as well as adults. Many pictures and examples, clear descriptions of commonly experienced bugs and pitfalls, and sample projects such as simple and complex turtle drawings in black and white and colour, animated computer games, word games, quizzes, conversations, and text editing are featured. This book offers fascinating insight into this language for anyone interested in learning or teaching logo.
07 068570 3 £16.50 □

WITH THESE GREAT BOOKS FROM MCGRAW HILL

**Vic 20 User Guide
BY JOHN HEILBORN**

Whether you're using your VIC 20 for entertainment or practical applications, this book will help you enjoy your computer more as you build your computer skills. For beginning programmers there are tutorials in VIC 20 BASIC, complete with instructions for colour graphics and sound. For experienced programmers, the book includes detailed coverage of VIC 20 BASIC statements and functions, including a chapter on advanced colour graphics. Filled with comprehensive reference material and tutorials, the VIC 20 User Guide is the definitive source for complete information on the VIC 20.
093198886 1 £10.95 □

**ZX81 / TS1000
Programming for Young
Programmers (UK)
BY LINDA HURLEY**

The ZX81 computer is becoming evermore popular both in schools and homes, but in order to teach youngsters the techniques required to become proficient in programming the ZX81, they need instruction that will hold their interest and provide entertainment. This book, to be published in July, teaches young programmers from 9 years upwards the fundamentals of BASIC programming, in a way they'll find both educational and exciting. A software cassette to accompany the book is also available. This contains listings in the book, plus ideas for routines that will help the adventurous programmer design and write their own simple games programs. Also included are 3 games not contained in the book. The cassette will be available in July.
07 084595 6 (Book) £4.95 □
07 084700 2 (Cassette) £5.95 □

**Word Processing Buyer's Guide
BY ARTHUR
NAIMAN**

Filling the need for a word processing buyer's guide that is neither too complex nor too superficial for the experienced computer user, this thorough guide shows how word processors enable all kinds of writers to edit, rearrange, reformat and print their documents electronically with dazzling speed and efficiency. It examines such areas as letter-quality printers, storage systems, terminals, keyboards and video monitors. Helpful appendices feature conversion tables, a bibliography and an extensive word processing glossary, and so make this an invaluable guide to the prospective word processor owner.
07 045869 3 £13.50 □

—AFTER THE SALE!

WHY IT PAYS TO BUY FROM THE MICRO EXPERTS

- Most dealers offer you only 90 days warranty. Computerpro thinks this unacceptable. All our equipment has a full years guarantee covering parts and labour.
- No quibble replacement in case of failure within the first 30 days. Return delivery charges are also waived during this period.

- Our in-house repair facilities means fast turnaround on all repairs.
- No delivery charges anywhere in the U.K.
- All units tested prior to dispatch.
- No hidden extras.
- Second day Data Post delivery wherever appropriate.
- No hidden extras.

Britain's specialist mail order microcomputer dealers/distributors. Dealer enquiries invited on all products.

KEYBOARD DAISYWHEELS

SILVER REEO EX 44 portable typewriter with serial interface, 9-12 CPS, 2000 character buffer, selectable baud rates from 50 to 9600 baud. RS232 INTERFACE FOR ABOVE **£50.00**

SHINWA CTI-CP80 80 CPS Bi-directional logic seeking, 10" carriage 80 columns, friction and adjustable tractor feed. Patented square needles up to 9 x 13 matrix. Hi-res graphics and block graphics. Parallel interface code compatible with Epson MX80. Normal price £289.00.

Special price **£269.00**
Serial RS232 interface **£38.00**
32K centronics parallel or RS232 serial buffer **£125.00**

EPSON RS80:80 column, 100 CPS, normal, italic and elite characters, 11 international character sets, hi-res bit image printing, bi-directional logic seeking, 4" to 10" adjustable pin feed, Centronic parallel interface. Normal price £289.00. Our special price **£259.00**

EPSON FX80: 80 column, 160 CPS, normal, italic and elite characters, 256 user definable characters, superscript, subscript, 11 x 9 matrix, bi-directional logic seeking, hi-res bit image printing (960 x 8 dots/line), friction and pin-feed, 9 international character sets, Centronic parallel interface. Normal price £438.00. Our special price **£379.00**

EPSON MX-100 136 column, 100 CPS, friction and tractor feed, up to 15" adjustable carriage, hi-res bit image printing, true descenders, Centronic parallel interface. Normal price £499.00. Our special price **£419.00**

RS232K Interface £99.00, **4K Xon Off Interface** **£134.00**

IEEE 488 Parallel interface £41.00, **PET / F Cable** **£20.00**

APPLE II I/F (Non-graphical) cable £56.00, **(Graphics)** cable **£59.00**

NEW APPLE II I/F **£48.00**, **Cable** **£17.00**

TRS 80 INTERFACE £25.00, **Expansion cable** £20.00, **Bus cable** **£15.00**

HERMES 612C Dotsy quality matrix printer. 18 needle ruby printhead. Data speed - 400 CPS. Draft speed - 200 CPS. Word processing - 100/120 CPS. Multi-mode Hi-res graphics. For character sets and eight national versions as standard. Friction and tractor feed. Proportional spacing. Optional sheet feeder. Probably one of the best quality printers available. Normal price £1950.00. Our special price **£1799.00**

PRINTER CABLES

OSBORNE/IBM PC/ATARI **£25.00**
BBC/ATOM/DRAGON 32/ORIC 1 **£13.50**
OTHER COMPUTERS Parallel or Serial (Please state your computer type when ordering) **£15.00**

MONOCHROME MONITORS

All units supplied with free connecting cables.

KAGA 12" High Res. Green **£109.00**

KAGA 12" High Res. Amber **£129.00**

BMC 12" High Res. B & W or Green **£109.00**

Zenith 12" High Res. Green includes an external 40/80 character switch **£89.00**

MICROVITEC COB COLOUR MONITORS

Connecting cables included in price

ACORN APPROVED MONITORS Beige Brown metal case for the BBC
14" 1431 Std Res. Link selectable TTL or Iner O 4V into 1500 OHMS **£245.00**
14" 1451 Med Res. **£369.00** **14" 1441 High Res.** **£469.00**
20" 2031 Std Res. Otherwise as above **£319.00**

For Apple II, IIE & III in matching metal colour case
14" 1436 Std Res. 5 lines TTL into ROM programmed to apple colour set (D/A conversion) **£275.00**
14" 1456 Med Res. Otherwise as above **£395.00**
14" 1446 High Res. Otherwise as above **£510.00**
20" 2036 Std Res. Otherwise as above **£339.00**
Apple II card **£30.00** Apple III Lead **£9.00**

FOR IBM PC
14" 1456/L1 Med Res. as for Apple but in high density structural form case **£420.00**
14" 1446/L1 High Res. Otherwise as above **£550.00**

FOR THE SPECTRUM
14" 1431M2 Std Res. Beige Brown metal case **£269.00**

There is a microvitec monitor suitable for every computer. If you have a monitor problem then drop us a line and we will gladly quote you for a monitor interface for your system.

DISC DRIVES 100% BBC COMPATIBLE

The following 5.25 inch disk drives based on Teak, Canon and Masubishi units, will work with the BBC, TRS 80 model III, Nascom, Superbrain, Heathkit, Forth, Gene, Atom and other Shugart S-400 compatible computers. Colours match BBC micro.

CUMANA 40 track single sided drive with cabinet and power supply. Single (100K) **£189.00**. Dual (200K) **£359.00**

CANON 40 track single sided drive with cabinet and power supply. Single (100K) **£186.00**. Dual (200K) **£399.00**

AS ABOVE but 40 track double sided. Single (200K) **£235.00**. Dual (400K) **£459.00**

AS ABOVE but 80 track double sided. Single (400K) **£290.00**. Dual (800K) **£549.00**

CUMANA 80 track single sided drive with cabinet and power supply. Single (200K) **£255.00**. Dual (400K) **£475.00**

CUMANA 80 track double sided drive with cabinet and power supply. Single (400K) **£329.00**. Dual (800K) **£599.00**

BBC DISK CONNECTING CABLE Single **£10.00**. Dual **£15.00**

Other computers please state your computer when ordering **£15.00**

BBC disk manual and formatting diskette **£17.00**

TORCH Z80 DISC PACK FOR BBC

This includes DUAL (800K) disc drives, 64K RAM, Z80, 2nd processor CP/M compatible operating system (CPM). This enables you to use a range of standard business Software and other programming languages. The unit is supplied with operating Software and comprehensive manuals. Requires BBC disk interface.

This month's special price **£749.00**

Price including free connecting cables

100% APPLE COMPATIBLE DRIVES

(Based on Teak, Canon and world storage units).

CUMANA 35 track single drive full cased complete with interface cable **£215.00**

Controller card 135 tracks **£47.00**
CUMANA 80 track disk drives in a dual cabinet with internal power supply unit. Either drive is switchable between 35 & 80 track mode. In 35 track mode all Apple Software including V, track Software, Pascal, and CP/M can be read. Programs easily transferred between 35 and 80 track formats. Capacity over 655K.

Price including interface cable **£589.00**. Controller card (80 tracks) **£47.00**

Also available, half height 40T design. Single **£199.00**. Dual **£389.00**

DENSEI 5.25 INCH WINCHESTERS

Cased with internal power supply, including controller for Apple II with host adaptor and Software. Complete and ready to run for instant operation.

APPLE II 6.7 MBYTE **£1195.00** **APPLE II 13.5 MBYTE** **£1350.00**

TRS 80 version of above **£1195.00** **TR 80 version of above** **£1350.00**

IBM PC To fit existing system with host adaptor and software patches **£1350.00**

6.7 MBYTE **£1195.00**, **13.5 MBYTE** **£1350.00**

EPSON HX-20 MICROCOMPUTER

The totally portable computer that slips into your briefcase, incorporating an LCD screen, full typewriter keyboard, printer, microcassette and a transistor case **£410.00**

ACCESSORIES

DATEx BBC COMPATIBLE cassette recorder with counter, remote control and record led indicator **£25.95**
Leads for BBC/Apple/Atom/Oric 1/Dragon 32/Sinclair **£4.50**
Dual Teas T1-99/4A leads **£10.00**. **C12 cassettes** **£6.00 for 10**

VERBATIM DATALIFE DISKS These are not only the world's favourite media, but now carry an unconditional five year warranty. Minidisks are all double density with hub ring reinforcement. All diskettes are sold in boxes of ten.

MD 525 S/Sided 48 tpi **£23.30** **£5.99**

MD 550 D/SIDED 48 tpi **£30.90** **£7.99**

Suitable for 35 or 40 track operation **£29.90** **£7.50**

MD 577 S/SIDED 96 tpi **£37.90** **£9.50**

Suitable for 77 or 80 track operation

10 & 16 hard sector available at same price. Free library box with every ten disks or lockable case per 50 or 90 disks

PLASTIC LIBRARY BOXES for 5.25 inch disks **£2.90**

SUPERLUXE DISK LIBRARY The SDL keeps your valuable media dust free while at the same time allows instant selection of any disk. The SDL holds 20 disks and the SDLX holds 28 disks. They come boxed with full instructions and labelling. **SDL** **£12.90**. **SDLX** **£12.90**. **Uplating Kit** **£3.00**

DISK DRIVE HEAD CLEANING KITS prevent head crashes and ensure efficient error free operation. Enough for 28 bi-monthly cleanings and a lot cheaper than a service call. For 5.25 inch disks **£15.85**

LOCKABLE DISK STORAGE Anti-static, ABS plastic with white base and transparent smoked lockable lid. 40 minidisk capacity **£21.90**

IN LINE PRINTER BUFFERS

These buffers allow you more time than your computer by storing the incoming data and then passing with your printer leaving your computer free for further more important needs. Comes in attractive casing, 5 1/4" long x 5" wide x 1 1/2" deep. Easily installed.

16K PARALLEL PARALLEL **£125.00** **48K** **£175.00**

Let us be your mail order suppliers. If you know what you want and don't want to pay an inflated price with a meaningless warranty, then drop us a line and leave the rest to us. Apple II, IIE, Atari, Commodore, Pet, 64, Vic 20, IBM, Taa AS, TRS-80, CP/M 8 Hardware Software specialists. Technical and computer books also supplied.

ORDERING INFORMATION

Orders from colleges and government depts. etc. are welcome. Please add VAT to all orders. Postage paid in UK. Allow up to 30 days for delivery on some items.

When ordering Micro Peripherals please indicate your computer to enable us to supply you with the correct cables.

Please make your order by completing the coupon, or on a separate paper and return to us.

Multi-Index from Bonsai.

The first Integrated Accounting Software for micros designed for real world business.

Multi-Index is a new generation of sophisticated Accounting Software. A completely integrated system written entirely in RM/COBOL, a professional business oriented language. It makes systems written in BASIC look pretty basic.

Multi-Index consists of seven fully integrated modules: Sales, Purchase, VAT and Nominal Ledgers, Stock Control, Order Entry/Invoicing and Sales Analysis, with several additional modules to be released soon. Multi-Index provides the ultimate combination of sophistication and ease-of-use. Entirely menu driven, easy to follow screen displays lead inexperienced operators step by step through all procedures so Multi-Index is quick and painless to learn.

Multi-Index presents features up to now only available on mainframes. Features like:

- Up to 13 open accounting periods with full detail accessible throughout the year.
- A financial statement report generator producing all statements including Sources & Applications of Funds, Balance Sheet, P & L and supporting schedules to your own format.

- Multiple-location stock control among unlimited branches with full stock transfer support.
- Access to customers, suppliers and stock items by name if the account or stock number is not known.
- Flexible price discount schedules, plus automatic calculation of salesmen's commissions, settlement discounts and finance charges.

→ No time-consuming sorts anywhere in the system.

Feature for feature Multi-Index beats all other micro accounting packages hands down. It is available now for many 8, 16 and 32-bit microcomputers running CPM-80, CPM-86, MS-DOS and Unix including the latest hardware like the IBM Personal Computer.

See Multi-Index running on the new IBM PC XT

SYMBNET

LOCAL AREA NETWORK

SYMBNET is a "tree and branch" network system using fibre optic cable to allow several microcomputers to share a common SYMBFILE (see opposite). SYMBNET is the fastest long range local area network for microcomputers, and can cover a range of 7-9 Kilometres. fibre optics means that SYMBNET is more cost effective; it uses a high intensity semi-conductor laser to transmit data and cables can be laid at the shortest route, whereas other networking systems use flat ribbon or coaxial cable which is sensitive to electrical noise from fluorescent lights, photocopies, etc. SYMBNET is compatible with DOS, Pascal, SOS, and CP/M running on any microcomputer supported by the SYMBFILE in concurrent operation. the support software allows the network controller to designate pass-codes for each user and to decide which user may access which applications.

Duroma House, 32, Elmwood Road, Croydon,
Surrey CR9 2TX ☎ 01 683 1137/8/9 Telex 893815

SYMBFILE

5 1/4" WINCHESTER SUB SYSTEM

The SYMBFILE hard disk subsystem is a complete add-on mass storage system for the Apple II, II+, IIe, or III microcomputers and is at present being developed for the SIRIUS, IBM PC and the BBC micro. It is compatible with the majority of hardware products currently available for the Apple, including the 16K Language card and all 80-column cards.

Full DOS, Pascal, and CP/M support allows any standard application software, including database, word processing, and accounting packages to be used. SYMBFILES are available in sizes from 5-21 megabytes, the average speed of access is 90ms, 32 sectors per track; rotational speed 3600 (rpm). SYMBFILE is used at the centre of SYMBNET (see opposite)

Guy Kewney delivers his monthly package of micronews.

A matter of time

'Real time' is a term most people thought we had outgrown when we left the old-fashioned mainframe industry — but it was a term which appeared in the publicity surrounding Britain's latest bandwagon, the Apricot.

For newcomers to computing, it needs to be explained that the Apricot is the first 16-bit system to be Sirius-compatible, rather than IBM-compatible.

It is the first sign that Victor, the maker of the Sirius, is not going to be obliterated by IBM's Personal Computer, but makes a computer which has become a standard of its own.

And the equally important news is that Victor will be making the Apricot, and will be selling it in the US, having set up a joint company with ACT to do this.

Apricot is a semi-portable, low-cost computer launched last month by ACT. It turns out to be faster, neater, smaller, and nicer than the best-selling 16-bit machine, the Sirius, and quite a bit cheaper, too.

And as ACT is the UK distributor of the Sirius, it took a rare bit of courage and vision

to produce the new machine. Most distributors of an established machine would have trembled with horror at the thought of putting their staple product in the shade. ACT must be as aware as everybody else that the informed user will prefer to have the Apricot, and it didn't stop the company from going ahead and rushing the new micro into the public eye.

Details of the machine look very interesting. For a start, it weighs very little, because of its small 3.5 inch disk drives, and is very compact (for the same reason). So the main box, with a lot of memory and a powerful central processor chip or two, is easily portable.

It needs a fairly unusual screen because it has an identical display to the Sirius (very high resolution for those special graphics) and this isn't built into the main case. So its portability is greatly reduced, if you aren't carrying the thing to a place where you have a spare display. So ACT believes (naturally) that most of its customers will buy two displays, one for home, one for work. Possibly.

ACT's Apricot—see 'A matter of time'

The other special thing is the keyboard. The new keyboard will be available for Sirius users, too. It has a clock in it, and this is marvellous—a lot more impressive than the LCD display panel which tells you what the 'soft' function keys will do.

As users of the MS-DOS operating system will know, you have to tell the computer the time and date each time you start using it. This system won't ask you, and if you type the day before the month, it won't store the 11 May files under the fifth of November by mistake. Instead, it will ask the clock in the keyboard.

The chip in the system is the Intel 8086, which is the big brother of the 8088 used by IBM and Sirius and Digital Equipment. It runs faster, and it is backed up in the Apricot by the 8089, which does a lot of the work of talking to printers, disks, phones, and so on.

Cost of a system with two disks and a screen will be just under £2000.

The courage of ACT is seen more clearly in its choice of 3½in disks than in launching Apricot, however.

Most people would have been desperately anxious to keep total compatibility with the old machine, and ACT is

probably taking a real chance in deciding that design comes first and disk compatibility second. It isn't that much of a chance, since ACT itself supplies most of the Sirius software, and will make sure it is available for Apricot users—but swapping data may be a problem.

That apart, the Apricot looks a sure winner.

The question then arises: why would anybody who can buy an Apricot want to buy a Sirius?

ACT's answer to this is 'The Sirius will be bought in the hard-disk form as a big central data store, with people using the Apricot as an entry-level system'—which frankly doesn't wash. The system is so very much like a Sirius that attaching a hard disk will be a (relative) doddle, and it will happen very soon.

And the idea that people will buy the Sirius to read Sirius disks is true, but it won't be for long.

The real answer, which neither ACT nor Sirius/Victor will be pleased to hear discussed publicly just yet, is that people will continue to buy the Sirius because it is going to be upgraded.

Back in November last year, Chuck Peddle warned that he would have a version of the

The normal price of a Zilog chip for an Apple II is much more than the £45 charged by Cirtech. So is the normal price of a parallel printer card, for which Cirtech wants £32. I haven't used them, don't know what software they run with: and suggest you contact Cirtech direct in Dunfermline on (0383) 729770 for details.

Sirius based on the Intel 80186 or 80286 (very much more powerful than the 8086) in the early months of 1983. That machine may not be ready yet, but the pressure on Peddle to get it ready—soon—will now be strong.

Now for the 'real time' angle. Most of ACT's publicity concentrated on the hardware—and the value, naturally. But the term 'real time' arose when Digital Research, the company which gave you CP/M, announced proudly that 'Reinforcing a trend being set by major OEMs' (no, an OEM isn't a Dutch uncle, it's a big customer) 'ACT has placed a contract worth £250,000 for the licensing of CP/M-86 and Concurrent CP/M-86, as well as the graphics GSX-86 package and Personal Basic.'

The announcement doesn't add that the figure (ACT says it was more, at \$500,000) is really quite low considering the number of machines that ACT is likely to sell, but it is. The low price is because Digital Research will do a lot of hard work in supporting it.

All this software comes free in the £1,500 price of a one-disk Apricot, together with quite a bit more (MS-DOS is the other operating software option, and there is a big integrated database called 3D).

Concurrent CP/M-86 is, as I have been saying for more than two years, the most important operating system, apart from Lisa, to appear on micros. It is this software which Digital Research proudly described as 'real time'.

Here again, newcomers to computing will need to be informed that, once upon a time, computers worked in 'offline' mode, under 'batch' operating systems.

This was a bit like the way trains run. The ticket office attempts to keep a constant feed-through of paid-up customers pouring onto the platforms, and hopes that when the train runs it is full. Similarly, the old computers used to expect to find work waiting for them when they finished a previous job, and it was the manager's task to make sure the expensive beast was never kept waiting on a platform for some fool with yesterday's ticket.

Today's micros work 'online'—like a taxi, they don't have a time-table. They will get you to

a destination—if they have nothing else to do—and they will get you there in their own way.

Real time programs are things like Space Invaders, telecommunications software, word processors, computer-aided drawing, and scientific control. They all require that the computer attend to them *immediately*.

A little reflection will show you that a machine which does only one job at a time need not work in real time. It has nothing else to do, so the fact that it ignores you in between attending to your first whim and attending to your following whim will never become apparent.

Even on some games machines, the difference is apparent. Watch an Apple running a Basic tutorial program like Little Brick Out (supplied free), or play the awful Spectral Invaders on a Spectrum, or try out the sample target-shooting program on a Lynx, and you will notice that as soon as one type of action starts, others slow down (or stop altogether). Like Gerry Ford, they can't walk and chew gum simultaneously.

But a real-time computer must constantly watch to see if the operator is pressing a key, whether the phone is ringing, what information is coming off the disk, whether the printer has finished its line of text, what characters ought to be displayed on the screen, and what time is it, anyway?

CP/M-86 and MS-DOS are *not* real-time systems. Concurrent CP/M-86 is. Bill Gates, head of Microsoft (inventors of MS-DOS) says we don't want real-time systems. His old friend, Chuck Peddle at Victor (maker of Sirius) has said that he will only support MS-DOS, not CP/M-86.

Bill and Chuck are going to have to think again.

Multi-purpose

The news that ICL is 'making a thousand personal computers a week and selling every one it can make' can be taken with a lot of salt and remain impressive.

On the face of it, the Rair Black Box is a silly idea. It is a way of sharing a £5 chip among three people. And the ICL

Stop Press

The Microprofessor (benchtested page 168) may no longer be available in this country following legal action taken by Apple.

At time of going to press Apple had just obtained a high court order preventing the Microprofessor's importer Sirtel from selling or otherwise dealing in the machine. The Microprofessor, made in Taiwan, allegedly uses Apple copyright software in its ROMs. Apple does not take kindly to plug compatibles.

Peter Cobb, managing director of Apple UK, told PCW: 'We have never lost a

case like this in the courts although in Britain it has never got that far before and we've always been able to settle out of court as in the case of the Apollo II. Probably the best known case we've won in the US was against the Pineapple.' In the US Apple has the support of the customs authorities which impound illegal Apple lookalikes from the Far East as they enter the country.

The injunction will be binding on Sirtel until the full trial of the case.

Meanwhile Sirtel's former boss John Ford has left the company and the new director Richard Drewnicki was not available for comment.

personal computer is the Rair Black Box: so why the sales?

The answer is that those people who have seen the ICL personal computer as a personal computer (people like me, I admit it) have been misled by their own enthusiasm for personal computers.

The ICL micro is really a minicomputer. The difference between a micro and a mini is best explained as follows:

Tom van der Loo, head of a Dutch software company called Holland Automation, sells software for accounting purposes, which runs on almost everything. It has now been put on the ICL personal computer, changing its name from Hai Line to Hi-Line. Full marketing marks to somebody or other.

Tom's theory, simply stated, goes: the ICL micro sells into the business market, not the micro market. It is a 'high value, high margin, market, and you can justify high profit in it because support is important, software is important'.

The ICL micro, he says, is a 'professional business system' and has been designed as a multi-user system. Just what a 'multi-user system' is, Tom explained: 'It is a system where several users in a business can all work on the same data. It doesn't matter if it's a network, or a single chip: it's access to the same data that matters.'

His prediction is that: 'IBM will survive. Olivetti will survive. Nixdorf might. ICL might, even with its current product, because quality of product is important only if you start to compare. Which

business user compares? If you put the right price tag on it, and fill it up with support, it will sell.'

A minicomputer is a computer which does the same job as a company mainframe, but is cheap enough for the smaller company to buy.

The interesting sidelight to van der Loo's theory is that he thinks that the days of the true personal computer are over. He actually went on record last month as saying that even the IBM micro 'is not selling now'.

'All the pipelines have been filled, and there is a dip in the market. Offering a catalogue of software is crazy—like offering a catalogue of spare parts as a way of getting your own car.'

Holland Automation's software is special in that it runs under neither CP/M nor MS-DOS, nor any other outside operating software. It writes its own, which means that it can format disks to suit itself, and can swap disks between such widely differing machines as the ICL micro and the Olivetti.

You don't have to agree with everything he says. But when you notice big companies buying Tycom MicroFrames with MP/SL's Multi-user Business Operating System (MBOS), and you wonder why, perhaps his words are worth considering.

Pay off

Everybody who makes toy micros has been cutting prices: the official price of a

Commodore 64 is now £230 including VAT. So the news that Oric has cut its prices should not be surprised.

The cut is by £30 on the 48 kbyte version, bringing the price to £140, while the 16 kbyte version 'returns to its launch price of £99'.

This may not seem much to you: to Oric, it is nail-biting time. Sales of its micros dropped off heavily in June and July, and one possible reason was that everybody knew about imminent price cuts from Commodore and others. Now that prices have stabilised Oric will be hoping (and praying) that people start buying Orics again.

The promising sign, for Oric, is that at the recent Computer Fair, I did see some software. Not having had a chance to try it out, I assume it is fairly average (average = normal rubbish) but at least you can buy it.

Lay it on the line

Most computer printers will, when you type "RETURN", move the print head to the left hand side of the paper, and move the paper up one line.

What you may not have realised is that there are two ways of doing this: and if you hadn't realised this, you are in the company of Tandy and Microsoft.

The first way, which the text editor WordStar prefers, is to transmit two characters. The

first is called a carriage return, which moves the print head to the left. The second is called a line feed, which feeds the paper up one line. Simple, isn't it?

The other way, which all Tandy TRS-80 computers seem to prefer, is to send a carriage return only. The printer is designed so that it automatically does a line feed all by itself.

Tandy has launched a portable computer — a 'lap-held' computer, which you can even use on a jolting train journey on the London Underground.

When you get to your destination, you will probably find a computer somewhere, with its own printer. Chances are it will be an Epson. Chances are that it will be driven by WordStar. That's what a lot of people use.

You can print your text out on this printer, but be warned: Epsoms driven by WordStar expect to get a line feed command. If you open the box up (lots of screws, turn the thing upside down, disentangle the wires, find the manual, move the right switch) you can change your Epson, so that it does the line feed all by itself. Of course, it won't work with WordStar, then.

You don't have to do this. The alternative, however, is to watch the Tandy 100 print your entire document on the top line of the first page.

It works like this. Each time your Epson gets a carriage return, it will return the carriage. The Tandy 100 will believe that it has also done a

line feed, and will print the next line. It will save an awful lot of paper, naturally.

Of course Tandy is very sorry about this. The company agrees that the computer should be able to change itself to suit the printer. However, Tandy didn't think of this when designing the spec which Microsoft used when writing the software. Microsoft, too, is very sorry: but it wasn't in the spec, so they didn't provide it. And neither of the two plans to change it.

Devilish cunning, these Japanese.

The whole truth

If there was a hole in your IBM micro (a space on the circuit board inside) when you bought it, you can now fill it.

It was a hole meant for a secondary 'co-processor' or a computer chip that worked with the main Intel 8088 processor. It is a specialised mathematics chip, which takes over the arithmetic functions which the main processor gives it, and feeds the results back into the main system. Intel calls it the 8087.

The announcement of this as an option arrived together with a whole set of useful, if un-astonishing 'upgrades' by IBM for its little micro. They include four games, but mainly the items covered are the colour display, a binary synchronous adaptor (if you don't know, you don't need to), a 3270 emulation program so that your overpriced micro can pretend to be an even more overpriced mainframe terminal; plus various software options including a language or two.

All these options should be available from stores in September.

NCC News

The biggest computer show in the world is Hanover: the Americans, however, all believe that the biggest is the one they call the National Computer Conference, or NCC.

It dates from the days when computers were rare beasts, and the people who worked with them needed a convincing

excuse, once a year, to get together and swap ideas. Somebody had the idea of bringing a few publicity materials for their own company, and it turned into an exhibition.

This year it happened in Los Angeles, right on top of Disneyland. Cynics might say that Disneyland was the only reason I went — and looking back, I find myself wondering, seriously, what else I got out of it.

First of all, it is not permitted to actually *sell* anything there. Sell? Tut, tut, how ungentlemanly: this is a conference, not a vulgar market. No, show the product, by all means: but no sales. Not even any contracts please.

Second, the people who go there are the people who don't actually rate a travel budget except to go to the NCC. It is the NCC, therefore their boss can't say 'What rinky-dink carnival is it you want to go to this time, Irving?' and fork out the air and motel fare. They are called 'system specifiers' in the trade.

To talk to these clerks, the companies provide appropriate level personnel. On each stand, there is a failed car/insurance/holiday/central heating salesman. He will smile, shake your hand, smile, invite you to the hospitality tent, smile, press brochures on you, and smile. Ask a serious question, however, and you will get a blank stare if you're lucky.

There were important people there, to be sure. I could have phoned them up and had equally fruitful discussions with most. There were products announced, like the Gavilan, which had been announced in London the month before.

Next year, I shall go to Comdex Spring.

Sharp chose the NCC to show bubble memory, still the dream of those who want to replace spinning magnetic disks with spinning magnetic 'domains' on a solid state chip.

The machine which had the bubble looked incredibly like the lap-held Gavilan, but had bubble instead of disk. I would automatically prefer the disk were it not for the fact that the Sharp, at \$2000, would be half the price of the Gavilan at \$4000. Apparently the full spec will include IBM-like MS-DOS operating software.

A man called Paul Terrell

The Tandy TRS-80 portable computer

A PERFORMANCE AND PRICE BREAKTHROUGH IN APPLE II[®] & IIe HARD DISC STORAGE

High Performance AID hard disc systems of 5-20 megabyte capacities, specifically designed for use with the Apple, are now available running under DOS, CP/M & Pascal. The units cold boot and throughput speeds are really impressive. If you want to leave others standing, try our fast DOS option!

The range features the 5+5 and 10+10 drives which enable you to configure half the drive as primary and half as secondary storage for ease of archiving.

The systems have been designed around the concepts of data reliability and convenience of operation.

They are simply the most competitive hard discs on the market. So why pay more for less.

Spectrum Business Software

If you are thinking of computerising your accounts, or of buying an Apple or a PET for your business, then first look at our business software. Now you can run accounting systems, similar to those on £500 micros and sometimes costing hundreds of pounds, on your Spectrum. Our products have the same facilities (menu-driven, ledger printout, audit trail), the speed (maximum record search time of 2 seconds), and the capacity (up to 1250 entries per month) to enable you to computerise your accounts at a fraction of the normal cost. All our products are of the highest quality, and have been designed and tested over a considerable period of time. A major wholesaler wrote the following of one of our products:

"On a large computer system, a file of this nature would cost between £150-£700".

- 48K Sales Ledger (amounts receivable)
- 48K Purchase Ledger (amounts payable)
- 48K Stock Ledger
- 48K Stock Control (no ledger printout, over 500 items per file, unlimited entries). £14.95 each.

Available from all good computer shops

Cambridge Computer Store

1 Emmanuel Street
Cambridge CB1 1NE
Telephone (0223) 65334/5
(closed 12.30 — 1.15 except Saturday)

An Apple in a motor-car is 'portable' in some sense, I suppose, so the claim that the APS battery adaptor which lets you run your computer from the car power 'makes it portable' can be taken seriously.

APS also suggests that you use this anyway, with a lead-acid battery, to prevent being caught by power-cuts. At £300 or so, the system had better be on a very critical application to justify this.

Details on (0273) 420196.

wandered onto several stands, looking vague, and asking for news of portable 16-bit micros. 'I want something like the Compaq, which is IBM-compatible, but smaller and movable,' he said, 'but I want it now. Compaq can't provide enough.'

He wanted it for a revolutionary new idea (see Prism story) to sell cartridges for computers and video games by loading the software into a blank cartridge — and offering the shopkeeper a computer to do this loading job.

What is really interesting is that of the dozens of people offering IBM-compatible micros, and portable ones at that, the only one found at the NCC who could actually sell more than one or two was Compaq. And Compaq was already selling all the machines it could make.

In this country, Terrell's operation will end up using a Sanyo computer, not yet officially announced. It makes for a thoughtful few moments, doesn't it?

Teacher's opposition

'We can't use the computer given to the school by the

Parent-Teachers Association, because...'

- 1) The Inspector won't let us plug it in until the plug has been approved;
- 2) It will be used for computer games, and will disrupt the class;
- 3) There is only one, and it will disrupt all the other children in the class who need one of their own;
- 4) We want to buy a more expensive machine, and will need the PTA to put up the money for a disk;
- 5) Nobody has shown me anything that this thing can do which I can't do better with a few coloured magic markers and a few big sheets of paper;
- 6) I am the mathematics teacher, and it isn't fair to start using a piece of equipment that only I want;
- 7) Computing is a middle-class thing, and this is a working-class area. (And while we're at it, isn't it full time we stopped this pretentious rubbish of having music lessons?)
- 8) The software is all crap;
- 9) We are not going to be any part of this conspiracy between Sinclair and the BBC to sell unnecessary gimmicks;
- 10) It's all too primitive still. We should wait until something better comes along. I have heard that these machines will soon come with free megaflops,

and will be able to work without you having to learn to type. That will be the time to get one — didn't you know that the qwerty keyboard was actually designed to slow you down? Wait till they come with that Microwriter thing as standard; 11) I've been on a course about computers, and, frankly, having looked into it very carefully I can assure you that there will be problems. For example, the Apple that the BBC is so anxious to promote is so dangerous that the Post Office won't even let you connect it to a television. And what about hard copy? You'll need a colour monitor to run that.

And so on, and on.

It isn't often you will read in one magazine a recommendation that you buy another: so here is an unusual event. Get hold of the July/August issue of *Educational Computing* and read Derrick Daines writing about obstructionist teachers. (Also, don't miss Derrick's column in this issue of *PCW*.)

Not only does Daines have them all off pat — right down to the older teacher (backbone of the staff) who sits at the back pretending to be asleep, and snorting (too quietly to be heard by the head teacher) his apparently sceptical wisdom at every odd statement — but he has suggestions as to why they obstruct.

And also, he has suggestions as to how to try to meet their prejudices, and to turn them into thoughtful objections —

which may or may not be changeable.

Derrick Daines's wisdom will serve me nothing, because there is one lesson I can add to the useful information he has collected.

That lesson is: any idea put forward by a parent is not merely suspect. It is beneath suspicion. Especially if a parent should happen to be as middle-class as every teacher in the school — with the obvious exception of the sole working class one who, naturally, has jumped into computing with both feet and is already thinking of putting a few programs on the market...

There is a lesson which teachers need to learn, however. Even if a parent says it, it remains true that computers will not replace teachers.

The reason is none too palatable: teachers are the nannies of our society. And the computer that can keep classroom discipline has not yet been dreamed of. No, I know it's not flattering to the image of teaching, but reality is reality.

And in the same way that journalists exist to provide space between the advertisements, teachers exist to keep children off the streets.

A good journalist can do more, but a lousy writer need not expect to be fired for doing less. As so it is with teachers. But whether they can find ways of making classroom life interesting (for themselves as well as the pupils) or rewarding, or even educational, their

An American company based in Now Orleans will be making Welsh Dragon computers under licence, for the US and South American markets.

These three happy faces belong to James Reiss Inr (centre), who is boss of the Tano Corporation which will do the deed. He is flanked by Dragon's Tony Clarke (left), and chairman Dr Derek Allam. The Tandy-compatible business begins here.

necessary function is to keep class order, to stop the kids knocking each other's teeth out while their parents are out earning a living.

Accumulative effect

It's possible to pay an awful lot of money for a utility program which will turn human mnemonics for the Zilog Z80 instructions into the real thing. Or it is possible to pay £30 for ZEN, and get a very popular program with most essential ingredients.

The list of computers which use the Z80 has now been increased by Kuma, a company which has produced a version that will load and run on the Newbrain.

Details from Kuma at 11 York Road, Maidenhead, Berks SL6 1SQ.

Closed shop

It is obviously sensible for Acorn to insist that BBC Micros are sold only by authorised dealers, who can fix the blessed things when they go wrong.

It would seem to be equally sensible for Acorn to tell its dealers not to 'wholesale' the micros, too. Obviously if a Dealer supplies machines to four or five Fly-By-Night Traders, he can get a bigger discount, and can duck out on fixing the things.

However, for Acorn to take this position requires that it has done its own job. It must have reasonable grounds for believing that the unauthorised shops which are getting the machines indirectly are, indeed, fly-by-night.

When the stores are in fact dealers who have been appointed by Acorn, and just can't get computers, then obviously Acorn is short of legs to stand on.

Now read this letter from a micro dealer to me. 'We applied to Acorn in the second week of November 1982, to be dealers. Meanwhile one of us spoke to Chris Curry at Compec. He suggested that we contacted the dealer man, Sandy Dow, which we did. In the first week of December, we

sent out company details, including our bank's name and address and two trade references.

Within days, our efforts seemed to be rewarded, as we received a dealership application form. This we filled in, and sent it back to them. A week later we contacted Acorn to find out how our application was proceeding, and were told, very apologetically, that our trade reference details had been lost. We repeated these details over the telephone to them, and were assured that this would be dealt with as soon as possible.

About a week later we received our dealer newsletters. Also at this time, another company in our town applied for dealership with Acorn — and were told that there were no dealers in our whole county, and that Acorn had no plans to appoint one.

By early January we had still heard nothing from them. We telephoned them, and were told that they had lost our trade reference details again, and could we repeat them please.

Things finally began to happen, when on 9 February we sent our first order to them, with a cheque. On 16 February, Acorn telephoned us... thanking us for the order, and could they have another cheque please, as they had lost the first.

We sent them a cheque, which they duly cashed. Then they found the first cheque again, and telephoned us when they could not cash it. We explained that as they had lost that one, we had stopped it, and issued another.

On 1st April (!) we received three BBC Model B Computers, and telephoned to find out when we could expect some more. We were told that we would receive fifteen more in two weeks — and could we give them the names and addresses of two trade references and of our bank...

These were written to them, as well as phoned to them.

In fact, two weeks later we did receive twelve computers. These were actually intended for another dealer with a similar name — who was invoiced for them.

On 26 April we were told that we had no account with them as yet, as they had not received from us the details of two trade referees and our bankers. By

this time we were somewhat annoyed and insisted that they telephoned our bank immediately, which they did.

Last week we were told that we now had a credit account with them, with a limit of £10,000. This we were told by their credit controller, Mary Tucker.

Today, however, it seems that although we have an account with Acorn, no credit limit has been attached to the account, because our referees have not yet replied. We then telephoned the referees who told us that they had not heard from Acorn computers at all. We still cannot order computers from Acorn.'

A dealer has now taken action to get Office of Fair Trading interested in Acorn's habit of striking off 'wholesaling' dealers.

As the man from the Computer Retailers Association said to me, 'We are supporting Acorn in its battle over the rights to restrict supplies. It is an important principle. But frankly, and I hope you won't quote me, we

do wish it had been somebody other than Acorn that we had to fight this battle over. It does stick in the throat.'

That is the story, and a sad one. But it isn't the whole story, naturally.

From Acorn's point of view, there are two important factors which all this leaves out: first, that it is working on the problem, and second, that it feels victimised by 'sniping' from people who aim to inflict jealous wounds, rather than make helpful comments.

By 'working on the problem', Chris Curry means that he is compiling a list of approved dealers, and has had this job interrupted by the need to expand the list, to cope with the launch of the Electron this month.

'I have a whole pile of "authorised dealers" plaques ready to go out,' he said. 'But we have to train the dealers to use our test equipment, and we're still doing that. It should be ready when we launch the Electron this month.'

Unlike many people, I don't doubt Curry's goodwill. But I

You may think that it's potty to keep a lot of information in a computer, but always look for it on a piece of paper. So it is: but people do it. They use the computer printer to produce lists, and then they stick the lists into index binders.

Datex Systems has produced special computer paper to make this possible. When you add a new name to the list, you just print out the new name, and slide the special paper into the index binder. If you have one, you'll need this paper.

Datex is in Brandsby, York, on (034-75) 224.

Proper use of chip-board can transform a boring old desk into a high-tech personal computer Micro Tidy, according to Abacus Marketing of Worcester. They charge £60 for it, and say it's suitable for Commodore, BBC, Dragon or Sinclair 'and many other home micros'. It even has space for cassette tapes. Details on (0905) 611161.

The alternative is the drinks cabinet, which Marcol of Southampton sells for £95 as a 'home computer and video cabinet.' Why not? Try calling the publicity agent on (01) 959 2452.

do doubt his grasp of the scale of the problem, and I think it is considerably worse than he thinks.

And even if he were in control of his own, internal-Acorn work, the chance of a highly organised Acorn preventing wholesaling is so low as to be worth a hollow laugh at best. Have a chat with Apple on the subject, and see what happens when it gets fierce with one of its retailers.

Well, actually, don't have a chat with Apple. It'll deny it. And you needn't bother asking the retailers, either: they'll deny it, too.

But the fact is that when one retailer has his money-back coupons cut off, he simply redeems them through another, until he's back in good odour. When a shop is told that it is no longer an official Apple dealer, it doesn't ring up all the customers and say 'Sorry, guys, but you'll have to find somewhere else to get them,' — it just goes to another dealer and buys them.

It's just a farce from the outside, but to the people inside the game, it's more serious than snooker. If you're hoping to be a customer, you just have to learn the rules, and never mind if they make sense or not.

Dutch treat

The news from the Dutch makers of the Tulip micro originally indicated a much

higher price than its UK distributor has eventually settled on.

The Tulip micro is yet another system which aims to sell on the theory that anything which will run MS-DOS will look as though it has the IBM blessing. It outperforms the IBM in having an 8086 rather than 8088 'and is the first computer in the world to offer the eight MHz version of the 8087 arithmetic processor as an option' according to its importer.

That importer is Newport Technical Services of Bristol, which will be attaching a £2680 price tag, including MS-DOS and Basic.

The manufacturer, CompuData, also makes that maverick old machine, the Exidy Sorcerer, under licence, says Newport — 'and the multinet local area network currently in use is to be upgraded to work with Tulip'.

Those who want to know what multinet is can ring Chris Newport on (0272) 290651.

Better late...

Sinclair has at last announced his Microdrive with the assurances that you really will be able to get the things in the shops. It will let you load a 48 kbyte program in nine seconds, and that, plus the £50, is all we need to know.

At the same time, the company is about to change its

mind yet again and offer a plug-in games cartridge.

Both announcements are hardly before time, given the complexity of programs available for the machine. The complexity is wonderful once the program is in the machine, but who has the patience to wait while it loads?

At a recent launch in London, software house Imagine greatly impressed the invited guests by having its newest games available on several machines in a plush hotel suite.

The guests assumed this was a nice example of the professional marketing approach. In fact it was a simple reflection of the sad reality that, given the tapes to take away and run, most journalists would have postponed the 15-minute ordeal (often repeated three times while you get the tape recorder volume control right) indefinitely.

The games, incidentally, were excellent.

Winnies for Unix

Bleasdale Computer Systems is boosting its Unix machine with mini Winnies and software to speed up disk accessing times.

The company believes that this will make it cost competitive with other Unix systems.

Bleasdale began shipping its Unix computers in January 1982 but it is still the only UK company building Unix machines. Founder Eddie Bleasdale believes that there is about to be an explosion in the use of Unix in business.

Bleasdale has improved the performance of its BDC680 with an increased clock speed on the Motorola 68000 processor from 8MHz to 10MHz. But the major improvement has come with the Atazimini Winnies with their access time of 30 milliseconds. This compares with an industry average of 97 milliseconds.

A software rewrite has been done to optimise head movement from track to track. Here Bleasdale has improved from an average time of 15 milliseconds to three milliseconds.

Another advantage of the

5¼in disks is that they are cheaper to manufacture than 8in ones. This will bring down the cost of a 320kbyte RAM and 13 Mbyte hard disk system to £8,844 excluding monitor.

But 20 Mbytes disk store is the minimum that Bleasdale reckons you need for Unix. The operating system arrives with 15 Mbytes of code and data.

According to Bleasdale Unix is the unrivalled first for multi-user systems, incorporating as it does features such as electronic mail, shared filestore and record level lockout. Details on 01-828 6661.

Jane Bird

Best — or boring?

My original instinct, on hearing that this paper was Benchtesting the NEC 16-bit micro (the APC) was to ring up and ask 'why was it launched in March 1982 in America, and in July 1983 in Britain?' — but on hearing of its wonderful features (like 8in disk drives, no bundled software) I changed my mind.

The machine, when launched in Australia in November, was given a 'top industry award' (not specified) as 'the best new personal computer on the market'.

Looking at it next to new British-designed things like the Advance 86, and the Apricot, I decided the question to ask should really be 'why launch this boring machine at all?' — but I found I really didn't care about the answer, so I have left it to our machine reviewer.

Suffice it to remark that NEC has joined the club of people who rabbit on about the 'value' of their system, but won't mention the price in public. There's usually a reason for this, in my opinion.

Details on 01-388 6100.

Chess Tournament

The PCW Fourth European Microcomputer Chess Tournament will be held at the Barbican as part of the PCW Show from 28 September to 2 October. Entries are invited

from amateur chess programmers, commercial dedicated chess machine manufacturers and home computer chess program suppliers for a nine round Swiss tournament.

There will be three categories of prizes, though all categories will go into the same draw for the Swiss. The three categories are: 1) amateur programmer (and the ruling here is that the programmer must have the right to sell his own program—the organisers reserve the right to make the final decision on who is an amateur); 2) commercial supplier (and here we include experimental entries by commercial companies); 3) and home computer programs (these can be cartridge, cassette or disk-based).

Those interested should get in touch with Tony Harrington at PCW.

Miracle working

The nicest thing about the heavy Miracle portable computer launched last month by Portico is the vast amount of free software it brings—including a typing tutor.

The new machine is both bigger (28lb) and pricier (£1800) than a great many 8-bit CP/M portables—but it does offer quite a bit more software.

Among the 'full set' of text editing, financial and programming software, the company is offering

Heavyweight portable—see 'Miracle working'

MicroModeller, normally a very expensive bit of financial modelling software.

Plans to offer a 16-bit upgrade are now well advanced, says the company. It is now appointing dealers as quickly as it can sign them up.

Damned lies and statistics?

A forecast that 'the traditional computer suppliers will start to displace the new personal computer companies this year'—made by Intelligent Electronic Europe in a study of the West European market—was only slightly spoiled by its theory that Commodore would substantially increase its sales to the user spending \$1000 and over.

The report suggests that Victor/Sirius will be the only 'newcomer' to increase its percentage share of the market.

The quoted figures show Victor getting 3 percent of a one

billion dollar market last year, and 6 percent of a nearly \$4 billion market in 1988—with IBM rising to 13 percent, the biggest share of the 1988 pie.

Apple, shown as the current leader with 18 percent, is forecast to be the number 2 in 1988, with 11 percent—a big increase in actual sales, of course. Commodore sales will rise similarly, though the market share will drop from 17 percent last year to 9 percent in 1988. Olivetti apparently had a bigger share of the market last year than either Sirius or Osborne (which will, they say, have no significant share at all of the 1988 market).

You may like this sort of forecast, despite my own reservations. You have to like it enough to send \$1,475 to IPI, Nordre Ringvej 201, 2600 Glostrup-Copenhagen, Denmark. That's what it costs.

Research aids progress

Research Machines, the British company known for its RML 380Z and 480Z micros used widely in schools, has produced a version of the children's programming language LOGO.

LOGO, designed by Seymour Papert and born out of research at MIT into the nature of intelligence, was originally implemented on a mainframe in the 1960s. Since then, it has achieved an almost unrivalled position as the ideal introductory programming language for children, with versions being written for a wide range of micros.

RML LOGO was developed from Edinburgh LOGO, written by the Artificial Intelligence Department of

Edinburgh University, one of the world's leading centres for research into LOGO.

Peter Smith, RML's Education Projects Manager, stated that most versions of LOGO currently available in Britain don't go far enough, offering only simplified turtle graphics. 'Our version will take pupils well beyond simple graphics, and includes many powerful features like list processing and recursion.'

A version for the 480Z and CHAIN network will be announced later in the year. Details on (0865) 249866. *Surya*

Cheaper TABS

TABS is a very successful set of accounting software packages, all 'integrated', for both eight and 16-bit micros.

So it was very generous of TABS boss Terry Poole to announce the new 'EasyTABS' package as one which showed that he had learned 'from the mistakes we made with TABS'.

This is not quite the same as saying that 'TABS was a mistake', as one reporter seemed to think he meant, and the new package is really not competition for the money of the 3000-odd people who bought the old one.

EasyTABS is only five modules, not 18, and it is cheaper, easy for the very small business to use (they say) and can be seen as bait for the real TABS range (they didn't say that).

There is a word processor called TABwriter, a mail list program called TABmailer, a cash book, purchase ledger, and sales ledger, each costing £99.

The company is looking to change its dealer list, so those in doubt should contact the company direct on (0264) 58933. Otherwise, look in the stores.

The gibberish test

'Single button offline text reprint' is the tantalising bait which Brother is using to fascinate us with the idea of buying a new £500 daisy wheel printer.

The exact meaning of this (or

It is a clock, that small circuit which Brian Tannat Nash of Market Logic is holding. It runs at 4MHz, which is the speed a Zilog Z80 normally runs at—unless it is plugged into a Sharp PC3201 micro. That is a particularly slow system.

Market Logic's little thing 'will speed up the PC3201 by up to 50 per cent' says Tannat Nash. It costs £30. Details from publicity agent Byron PR on Uxbridge (0895) 52131.

why you need it) is not what really delighted me about this 'two-colour' (red and black ribbon) printer; it was the put-down of speed claims.

Apparently, there is a standard printer test, involving the repetitive printing of a nonsense sentence (for the prurient, the sentence reads 'The head and in frontal attack on an english writer that the character of this point is therefore another method for the letters that the time of who ever told the problem for an unexpected') which is (apparently) a 'very strenuous test of wheel selection, as well as carriage motion and line spacing'.

So far, so good. This is the wonderful bit:

'Brother would like to see all daisywheel manufacturers quoting their speed on this text to avoid the spurious claims being made at present.'

Spurious claims?

'One American oem recently advertised a Brother printer under his own label as achieving 200 characters per second in "white space mode" — which in English, means "paper movement only".'

Brother printers are sold through Jones Brothers in Manchester on (061) 330 6531.

Police Five

Somebody stole over £300,000 worth of Spectrum computers from distributor Prism.

Apparently somebody (30 of them) has now been arrested.

The robbery made a horrible story, with an armed gang getting into Prism's warehouse by staging a fake traffic accident and getting security staff to come to their assistance. They then offered to kill them, either before or after the raid.

Police seem very satisfied that their enquiries into the case are now over, as they have recovered around 90 percent of the stock in the course of their investigations.

The sad thing is that, even though this batch turned out to be unsellable (which is how the crooks got caught) on the street markets, it now seems that crooks do regard computers as nickable. As little as a year ago, most computers that were stolen were invariably the victims of mistaken identity, being confused with television

sets.

Sanyo has reported the loss of some 200 new 16-bit systems in transit from the Warrington depot to dealers. The company put a brave face on the announcement, ('we are flattered by the computer's obvious desirability') but the sad truth is that computers are becoming just another commodity.

It is time to re-plan your household insurance accordingly.

Joining the Gold standard

Epson's HX-20 has been substantially over-trumped by the Tandy Model 100 — but it still has one advantage: software.

An example of the lead the Epson machine has is the Telex program offered by British Monomarks, which will sell you a lap-held computer with software for £800.

The software connects you via phone to the Monomarks computer, which puts the Telex message onto the Telex network. It saves you the £2500 cost of a Telex machine (plus £300 a year rental).

An example of how the Tandy machine can catch up is provided by the fact that with a Tandy 100 plus a modem, a subscription to British Telecom Gold will let you send messages to other BTG subscribers in both capital and small letters, plus Telexes to Telex subscribers.

Another company to join the Gold network is ACT, which has announced a package of hardware and software plus free BTG subscription for around £250 to users of its Sirius and Apricot computers.

Look for Acorn to announce a similar deal for the BBC micro, and several other computer companies too, before the year end.

Details of the Epson link from Wilder & Co Computer Services, on Camberley 21552.

Brighter Rainbow

Dealers of the Rainbow micro

built by Digital Equipment tell me that the announcement of a 'utility diskette' for that machine is, indeed, a sign that the company has found its way again.

Originally, DEC spoiled a very impressive-looking micro by announcing that it was going to 'restructure' the micro market from the outside. It was going to supply everything, and customers wouldn't even be allowed to buy blank diskettes, because there would be no format routine to make them usable.

The format routine was then produced, and it was suggested that the program be priced at £1000 — presumably to stop people using it.

Now, the programs on this utility diskette 'will be in the public domain' — normally an Americanism for 'free' but here meaning priced £170 and available from all Rainbow dealers.

Nothing can bring back the lost year (from when DEC announce the Rainbow) till now. It is quite possible that if this machine with a combined CP/M and CP/M-86 package had been available last year, MS-DOS would not have made any serious impact on the UK micro market.

That milk is spilled: the new batch is available, and it involves MS-DOS version 2.0, which is running on Rainbows today. Another good sign for DEC watchers.

Micro price cuts

The price war in the home computer market continues unabated. Following reductions by Sinclair,

Commodore, Atari and Texas Instruments, Lowe Computers has announced that the Colour Genie has been knocked down from £194 to £168. This reduction is even greater than it at first seems — the previous price was for a 16k Genie, and standard memory size is now 32k.

Oric has also announced a drop in the price of its 48k model. This now retails at £139.95 and, as an added bonus, all purchasers will now receive a £40 voucher which can be put towards the cost of the Oric MCP40 four-colour printer, which was launched in June. The 16k Oric will sell for £99.95. Other Oric peripherals include the long-awaited modem and a disk drive — both are due this autumn.

Steve Mann

New printers

Micomax is a new low-budget impact printer which, it is claimed, is suitable for use with a wide variety of home computers. The small but perfectly formed Micromax measures 4¾ × 8¼ × 2½ inches and features a totally enclosed paper roll.

The printer uses normal paper and gives 24 standard or enhanced characters per line. It provides interfaces for TTL serial or RS232 serial or parallel with selectable speeds of 300, 1200 or 2400 Baud. There is a range of connection cables for VIC-20, BBC, Dragon, Acorn Atom, ZX81, Spectrum and Research Machines 380Z. Price is a very reasonable £69, with interface cables at around £15. Further details from Computopia, 30 Lake Street, Leighton Buzzard, Beds; tel (0525) 376600.

Camputers Ltd, 357 Bridge Street, Cambridge CB2 1UW.

Sensory Chess Challenger 9

At last—a modular chess computer of really advanced specification which plays superb chess.

- ★ Programme rated by US Chess Federation at 1771 points
- ★ Accepts library of modules which further enhance basic programme
- ★ Sensory surface
- ★ Promotes pawns to any legal piece
- ★ 'Easy mode' downrates the computer's ability — ideal for learning/teaching
- ★ Very easy-to-use problem mode
- ★ Most advanced mate and draw announcements available
- ★ Comprehensive library of book openings
- ★ Can take back-up to eleven full moves
- ★ Book practice mode helps you develop your opening technique
- ★ Can advise your best move
- ★ Can play against itself
- ★ Can monitor the play of two humans
- ★ Operates on mains (transformer included) or batteries (not included)
- ★ Thinks during its opponent's playing time
- ★ The Sensory Chess Challenger 9 has been selected as a 'best buy' by numerous consumer magazines and one of the top national dailies.

Sensory Chess Challenger 9 and the full CGL range are available throughout the U.K. For details of your nearest stockist and a full Sensory 9 specification contact: Computer Games Limited, CGL House, Goldings Hill, Loughton, Essex IG10 2RR. Tel: 01-508 5600.

CGL Bringing
leisure
to life.

BIGGEST AND BEST

Those of you who are itching to know who's attending the PCW Show will be pleased to see the complete list below. Between now and the date of the Show, there may well be one or two changes, but that just adds an element of surprise.

Here is the exhibitors' list at the time of going to press:

- * Acorn Computers Ltd
- * Addison-Wesley Publishers Ltd
- * Anirog Computers Ltd
- * ACT (Holdings) PLC
- * Atari UK
- * Audiogenic Ltd
- * BiBi Magnetics Ltd
- * BICC-Vero Electronics Ltd
- * Biodata Ltd
- * Bug-Byte
- * Bubble Bus (The Computer Room)
- * Compssoft Ltd
- * Camputers Ltd
- * CDS Microsystems Ltd
- * Centre Soft
- * Commodore Business Machines
- * Computer Bookshop Ltd
- * Computer Town UK!
- * Comshare Ltd
- * Creative Computing
- * Digital Equipment Co
- * Dragon Data Ltd
- * Druvic International
- * Elan Computers Ltd
- * Electrical-Electronic Press
- * EMAP Business & Computer Publications
- * Environmental Equipments (Northern) Ltd
- * Gemini Marketing Ltd
- * Group 18 Ltd
- * Hofacker Elcomp
- * IBM UK Product Sales Ltd
- * Ikon Computer Products
- * Inter Data Computer Systems
- * IO Research Ltd
- * International Computers Ltd
- * Jarman Systems Ltd
- * KGB Micros Ltd
- * Kansas City Systems Ltd
- * Kuma Computers Ltd
- * Landau Electronics Ltd
- * The Language Laboratory
- * Little Genius
- * Llamasoft
- * Longs Ltd
- * Mannesmann-Tally
- * Maplin Electronic Supplies
- * Mapsoft Ltd
- * Mattel Electronics Ltd
- * McGraw-Hill Co (UK) Ltd
- * Melbourne House (Publishers) Ltd
- * Memotech Ltd
- * Microage Ltd
- * Microdeal Ltd
- * Micronet 800
- * Micro Products Software Ltd
- * Microwriter Ltd
- * Miniature Tool Co
- * Moranbrook Ltd
- * MPI Ltd
- * NEC Business Systems
- * Opus Supplies
- * Oric Products
- * Paperlogic Ltd
- * Peachtree Software International
- * Pete and Pam Computers
- * Phoenix Technology
- * Pilot Software Ltd
- * Postern Ltd
- * Power Testing (Sales) Ltd
- * Premier Publications
- * Prentice-Hall International
- * Psion Ltd
- * Quicksilva Ltd
- * Rabbit Software
- * Radio & Electronics World
- * Rapid Terminals
- * Roadrunner Electronic Products
- * Romik Ltd
- * SBD Software
- * Salamander Software
- * Shards Software
- * Sharp Business Systems
- * Silicon Chip Ltd
- * Sinclair Research Ltd
- * Smallway Marketing Ltd
- * Softsel Computer Products
- * Stonechip Ltd
- * Systematics International Microsystems Ltd
- * TDI Ltd
- * Tabs Ltd
- * Texas Instruments Ltd
- * Time Computer Products
- * Timedata Ltd
- * Transam Computers Ltd
- * Virgin Games Ltd
- * Visionstore Ltd
- * WBM Business Supplies Ltd
- * John Wiley & Sons Ltd

As you can see the variety is enormous. Nearly 100 exhibitors are listed above. The October issue, which will arrive in the shops about two weeks before the Show, will preview exhibitors in more detail. All the big selling computers will be in evidence: the Oric, Spectrum, BBC, VIC-20 and Commodore 64, Dragon, DEC's Rainbow, the IBM PC, Atari 400 and 800 and Sirius.

Commodore has a very big show planned which will feature its whole range from the VIC-20 through '64 and SuperPET (8000 series) right up to the new 700 machines, which will be shown running a range of business software. Commodore informs us that 20 completely new programs will be launched for both business and home from its stand.

ACT will, of course, show off the new Apricot, which is a machine worth a quick look. It's small (weighs only 17lbs), software compatible with the Sirius and it comes with 3½in microdrives and a small LCD on the keyboard to show what the function keys are currently doing. The Sirius itself will also appear.

The printed media will be much in evidence. Creative Computing will provide feedback from the other side of the Atlantic, EMAP and Electrical-Electronic Press

(and, of course, your favourite, PCW) will provide news (and no doubt subscription offers) of the UK.

Games companies Quicksilva, Bug-Byte and Audiogenic will no doubt be making plenty of noise, while on the business side, companies like Compssoft and Tabs will have various business packages to offer. Many smaller companies—Llamasoft, Rabbit Software, Artic and others—will provide the familiar interesting programs and useful add-ons. Many exhibitors, as in previous shows, will offer special show prices. We've also heard of one or two competitions and some new products—but that's a secret until next month!

PCW, of course, will provide, with the invaluable assistance and organisation of Little Genius, the Scrabble Contest. Anyone attending the Show can enter and there will be four prizes for the highest scores.

We would also like to offer companies the chance to sponsor the Chess Tournament. This event has become recognised throughout the world of chess programs as a chance for new programmers and products to make their mark. Any sponsorship would naturally offer the chance of valuable publicity through the Show. If your company would like to add its sponsorship, possibilities can be discussed by contacting Sue Clements at VNU Business Publications, Evelyn House, 62 Oxford Street, London W1A 2HG, tel 01-636 6890.

Meanwhile, we look forward to seeing you all at the 1983 PCW Show and to the fun we know will be had by all!

END

COMMUNICATIONS

PCW welcomes correspondence from its readers but we must warn that it tends to be one way! Please be as brief as possible and add 'not for publication' if your letter is to be kept private. Please note that we are unable to give advice about the purchase of computers or other hardware/software — these questions must be addressed to Len Warner (see 'Computer Answers' page). Address letters to 'Communications,' Personal Computer World, 62 Oxford Street, London W1A 2HG.

No offence

Dear Bird
For Heaven's sake, don't apologise to that creep Dr Brooke (PCW July) for apparently making some fuss or other about the indelicate use of his surname. He should be honoured. Any right-thinking person knows that to be addressed by one's surname alone implies a pleasing measure of equality.

Real doctors — not those joke jobs — come in two categories: GPs who know nothing about everything, and Specialists who know everything about nothing. In other words, far be it from the learned quack (to give him the benefit of the doubt) to throw his weight around.

Editors are a different kettle of fish altogether. The use of 'we' (the first person plural) has long been limited to monarchs, editors and ladies-in-the-family way. In this respect, I suppose, you yourself could theoretically score twice — and the best of British luck to you.

But why worry about the sensitivity of your readers? My advice is forget it. Just tell us more about our machinery and systems.

I mean, here am I, tapping away at a kind of typewriter thing you avoid like the plague. It's probably quite bright in its own simple way, but hasn't a clue about high resolution graphics or any other quality that might entitle it to a mention in your columns. Indeed the advertising blurb suggest that the most indolent of secretaries can master every twiddle in the book while rolling a joint, sniffing glue, or whatever it is you do these days to keep up with the pack.

Only wish I were half as fast off the mark, with or without the help of 64k RAM, a Z80A

and an absolutely baffling 4MHz. To be frank, I had thought of excusing you duty, as it were, and throwing this little lot straight at your secretary — we all know what it's like at the top. But, horror of horrors, I can't.

Assuming your credits are as accurate as the rest of your text and you haven't yet sacked the girl, this letter would have to begin 'Dear Dear' . . . See what I mean? How terminal can you get! Better forget the whole thing.

Save Tracy Dear (BUPA willing). Call the good doctor. And perhaps at the same time spare a thought for those tied into their systems.

A line on word processors perhaps?
Michael M Cahill, London

Practical joke?

Can PCW help me solve a mystery?

See below a letter I received a while ago, and as you can see, it makes perplexing reading. I replied to the letter, saying that I did have several programs that I might be interested in having marketed, and asked for more details — in particular the identity of the authors. Not having received a reply, I now suspect that the intention of the authors may not be entirely honest.

I should imagine that they got hold of my name through the fact that I have three UK101/Superboard programs currently marketed by Merlin Micro Systems, and I believe my name is sent out with these games should the purchasers have any queries.

It seems possible now that the intention of those who wrote the letter was perhaps to get free software, or

alternatively to 'steal' programmers from other firms (which would not apply in my case). Perhaps I am being over suspicious, but my suspicion has been fuelled by theirs; I am perfectly willing to trust a reputable company to be honest with software royalties, etc, but an 'accommodation address' is a different matter.

I hope you, or a reader, may be able to explain this mystery to me, and I hope it also serves as a possible warning to others who receive similar letters to be cautious.

P.S. It has been suggested that the letter was a practical joke — if so, then my congratulations to the joker. I have fallen hook line, and sinker! — and my congratulations also to his attention to detail — the postmark was from London.

48, Fitzroy Street
London W1P 5HS
14 April 1983.

Our ref. JC/57

Dear Mr Harrison,
It has been brought to our attention that you are a particularly capable programmer of micro computers, especially with regard to games.

We are a newly established computer software company currently marketing a selection of programs for micro computers to all major outlets in the UK. As a result of our success to date we are at present seeking to extend the range of games we have to offer.

With this in mind, we are able to pay significant royalties and we therefore invite you to submit details or, preferably, examples of your work.

If you wish to benefit from our well respected marketing expertise, seek high financial rewards and want to establish yourself in this highly competitive market, we should

like to hear from you.

Note: For security reasons we request you to write to the above accommodation address quoting our reference number JC/57."

David Harrison, Bury, Lancs.

OK, we're baffled — any ideas?
— Ed.

Back to Basics

Both in the computer press and in personal contacts I am flooded with statements that Basic is a poor language and that Pascal is superb.

The MBasic program below is the most used routine in several programs that I use for serious purposes.

It would normally be rewritten in machine code for long runs but a high level language simplifies initial testing of the correctness of the logic.

Perhaps some Pascal buff could say how he would write it effectively in Pascal with every bit, in each work, valid and independent.

A long winded solution is, of course, possible but processing every bit separately is incredibly slow.

```
5 DEFINT R,S,X,Y
1000 S1=0:S2=-1:S4=0:S8=-1
1010 X=S(S) AND R:R=NOT R
1020 Y=S(S+1) AND R
1030 X=X OR Y
1040 IF X THEN Y=S1 and X:S1=S1 XOR X:X=Y
1050 IF X THEN Y=S2 and X:S2=S2 XOR X:X=Y
1060 IF X THEN Y=S4 and X:S4=S4 XOR X:X=Y
1070 IF X THEN S8=S8 XOR X
1180:
1190 WHILE S8: SX=S8
1200 SX1=NOT
```

S1: SX2=NOT S2: SX4=NOT S4: SX8=NOT S8
 1210 S1=S1 AND SX8: S2=S2 AND SX8: S4=S4 AND SX8
 1225 SX1= SX1 AND S8: SX2= SX2 AND S8: SX4= SX4 AND SX8: SX8= SX8 AND S8
 1230 Y= SX1 AND SX: SX1= SX1 XOR SX: SX= Y
 1240 IF SX THEN Y= SX2 AND SX: SX2= SX2 XOR SX: SX= Y
 1245 IF SX THEN Y= SX4 AND SX: SX4= SX4 XOR SX: SX= Y
 1250 IF SX THEN SX8= SX8 XOR SX
 1260 SX1= SX1 AND S8: SX2= SX2 AND S8: SX4= SX4 AND SX8: SX8= SX8 AND S8
 1270 S1= SX1 OR S1: S2= S2 OR SX2: S4= S4 OR SX4
 1275 S8= 0
 1280 WEND
 1285 S8= SX
 This routine is the essential of the main routine of several programs. How may it be programmed efficiently in Pascal?
R G Silson, Tring, Herts.

Scientific bent

I would like to draw attention to a marked deterioration in recent months in the quality of PCW's reviews of, and less formal passing references to, new machines, at least as far as scientific and technical users are concerned. Up to about six months ago, your reviewers, especially the admirable Dick Pountain, used to give some of the essential information about the quality of the arithmetic and presence or absence of important programming and library features such as matrix operations or true subroutines with formal parametal and local variables. All this has now vanished and we hear of nothing but keyboards and word processing and spreadsheets.

A particularly gross example occurred in Newsprint in the July issue concerning the Dutch Tulip machine. I know nothing whatsoever about the machine, but it is pretty certain that any computer with 8086 and 8087 processors has far better arithmetic capabilities than most and is almost certainly oriented towards mathematical

work and scientific users. Guy Kewney's flippant comments about it being nothing special for WordStar and Mailmerge are unhelpful and probably irrelevant. I would like to see a section in your reviews given over to the mathematical capabilities of the machine, at least of those which have any, and a return of Dick Pountain.
George Weeden, Edinburgh

Dick reviewed the Tandy Model 100 in August and the Pied Piper in this issue.

Steve Mann's review of the Sord M5 in the August issue and Shirley and Pete Fawcett's review of the Micro-Professor this month also contain information about the maths functions. However, some machines we review are aimed specifically at the business user of word-processing, database, spreadsheet and accountancy packages. In these cases we concentrate on those facilities.

We are very proud of our Benchtests which are generally the most comprehensive and informed reviews in the industry.

See our regular feature SubSet for how to get more out of your machine. — Ed.

Frustration

I read, with great interest, the article on Micronet 800 (PCW July) and while being in agreement with the general conclusions reached I cannot but voice reservations about the first few months of the service.

The initial difficulties of downloading and saving the Aladdin's Cave of free programs meant many hours of sheer frustration for BBC micro users. Only weeks later, with the arrival of an addendum sheet (dated 25 March) containing an improved version of the terminal software along with a rather mild apology for those of us who were attempting the impossible with our 1.2 system, did our micro, indeed, 'come to life'. The procedure for producing one's back-up terminal software at 1200 baud from the one issued at 300 seemed simple but how much better it would have been if a replacement cassette had been sent (if necessary limiting

it to customers who requested it). The same is true of the latest version (4.0a).

Another difficulty is the generally unpredictable performance of the present acoustic modem: the whole business is rather reminiscent of the cat's whisker days of radio. I find that occasionally a telephone receiver will not fit into the modem at all and merely resting on the top produces a nil response from Prestel and a screenful of garbage: clearly there is considerable variation in size of the standard receiver.

On the positive side, however, I must extol Micronet as potentially a rich educational resource. In my work as an educational consultant I have found that pupils of 11 years of age can readily log on to the system and access the data they require for projects and download programs for use in lessons. At this stage of development many of the programs have little to offer educationally but recent additions, in particular those of CET, are of sufficient quality greatly to encourage teachers who were beginning to fear that there was no software relevant to their needs.

The system has much to offer and the friendly approach is very attractive, especially when, as in my case, it is followed-up (from my problem explained in a response frame) by two phone calls and a gratis tape of software.

I have joined Homelink via Micronet and also enjoy the benefits of telebanking through this service. My pupils have already accepted that this is how their bank transactions will be conducted when they are adults: full marks to Micronet.
OP Alexander, Bournemouth

Female role

I am studying the portrayal of women and girls in computer ads. Most ads are dreadfully sexist, but I do enjoy the occasional ad which involves women as participants, rather than spectators in computing. This is especially gratifying when it is in the lay or popular press.

Last autumn, a series of Dragon ads were particularly offensive. Some of the

headlines were:
 Like Father Like Son
 Read this Ad to your Wife
 (implying that only men bought computers)

I wrote to the company and complained, twice. But I received no reply. But in the latest copy of PCW, I saw a beautiful ad by Dragon. In large type, it said:

'If you want to know which computer to buy, ask your expert.'

And the expert was portrayed as a girl in cap and gown.

Maybe it was just a coincidence. But maybe my letter (and others) did influence their ads. But I did write to the company and told them that I was pleased.

If readers see ads which portray women in a particularly bad or good light, I would really appreciate a copy. Please state where and when it was published (if possible), if it is not obvious from the copy. Thank you.

Danielle R Bernstein, 1 Ethelred Court, Headington, Oxford OX3 9DA

Don't throw stones

With reference to the Bible story about splinters in the eye, don't you feel that the attention paid to minor bugs in the reviews in Screenplay is out of place on a page where the pictures are obviously with the wrong games.

Stuart Sampson, Otley, West Yorks
Our printer is sent to try us — Ed.

Top Secret

Further to my article on cryptography (PCW July 83), various reports have appeared in the press saying that the RSA public-key cryptosystem had been broken. This was since my article was written. As a result I wrote to Adi Shamir, a co-inventor of the RSA system, in Israel. From his reply, it is clear that these reports were the result of a gross misunderstanding. They arose from a paper which Shamir himself had published, of which

he sent me an abstract. *In this, he demonstrates the insecurity of the so-called 'knapsack' system, a rival to his own RSA system. The press took this to mean that he had in effect publicly shown that his own system was no good!

In fact, the security of the RSA system still rests on the difficulty of finding the two prime factors of a large number. This is a problem that has occupied some of our best minds since the ancient Greeks, and no easy solution has been found to date. Better computers make it a bit easier, but they also make it much easier to use codes with still larger numbers. Users of RSA systems can remain confident of their security unless some truly magical factoring algorithm is devised.

George Sassoon, Warminster, Wilts

*Shamir Adi A polynomial time algorithm for breaking Merkle-Hellman cryptosystems (Weizmann Inst, Israel, April 1982)

Retrospection

Nostalgia for the early days of microcomputing seems to be in at the moment; what we really need is a revival of the spirit we had in those days. Have our soldering irons lost their bits? Come on Guy the Private Eye, don't complain that an American machine has a modem to Ma Bell's spec, find out what's driving it then write an article on how to change it to CCITT spec. If it uses a MC14412 or that dreamy (have you seen the price?) AM7910 modem chip then change the Logicstate on one pin and maybe a few component values in the filters.

My current hobby horse is that too many people are changing their hardware because they think computing is about running software that someone else has written on next month's hardware; the old hardware may need an update from time to time but scrapping, *no!* My company is still using the Nascom 1 we purchased in 1979; granted it has been added to and attacked with a soldering iron from time to time, but the only redundant parts are a few EPROMs and a small disk drive board. Yes, it

has got 80 column display; 64k RAM at 4MHz, without waits; twin disks, etc and it's a lot more flexible than most of the 'modern' machines, thanks to the (original) Nascom and Gemini companies 'get in there with an iron' attitude as opposed to 'sorry Sir, looking at a screw holding the case together invalidated the warranty'.

Clive P A Waller, Chiatronix, Luton, Beds

Macho move

I am often amazed at the novel arguments people think up to justify their attacks on computer games. A case in point is Martin Banks' 'Banks Statement' in the June issue.

The first half is largely devoted to a comparison between computer game playing (of the arcade variety) and such pursuits as drinking competitions and hazardous driving. Martin suggests that the former has replaced the latter activities as a means of allowing young people to prove themselves.

Even if you accept (and I don't) that this accounts for more than a small proportion of computer game playing, I don't see that it is an indictment of the games themselves. The fact that these games are around doesn't prevent you from doing the other things (and in my experience they are alive and well). What it does mean is that you have more choice. Many people, I'm sure, would argue that playing games in which you cannot come to any real harm is preferable to playing ones in which you can.

Martin says that computer game playing removes one from reality. This is true in so far as there are no real Pac-Men or Space Invaders but that is not the point. The skill required to score a million at 'Defender' or whatever certainly isn't unreal and if the games didn't provide some kind of genuine challenge I don't think people would enjoy playing them. The games' scenarios are fantasy, yes, but to object to them on that basis is stupid.

Martin seems unable to accept that computer games need no more justification than the fact that they are fun to play. Game playing, it seems to me, is just as legitimate an application

of computers as their use in science, education or other 'real' fields.

Towards the end of his 'Statement' Martin objects that computer games 'help to push individuals down to some level of "lowest common denominator" of intellectual activity or aspiration' and that 'even the games approach can be used to better advantage'. The assumption behind these statements seems to be that all computer games have pretensions to being of some intellectual or educational value whereas, as far as I can tell, most of them strive only to be fun to play — and rightly so. You might as well object to swimming or parachuting (or drinking) on the grounds that they are not educational.

There are, of course, some very intellectual computer games but they are another matter and have a very different appeal to those of the arcade variety.

To be fair, I do not think the issue is completely clear cut and I'm sure that there are cases where computer games have been positively harmful. But there is strong evidence (their success, for instance) that these games give a lot of pleasure to a lot of people. That is surely something to be grateful for?

Finally, I think I should point out that I am not saying these things out of self-interest (I don't work for Atari or anything) and write purely as an enthusiast and occasional player. Whatever anyone says, I think the games are here to stay.

Martin Perry, Pinner, Middlesex

Martin Banks replies

It was with a certain amount of pleasure that I read Martin's riposte to my piece on games in Banks' Statement. It is good to know that there are some out there thinking more general thoughts about home computers and their implications than the size of a memory or address bus.

I do have a suspicion (and I admit that it is predominantly no more than that) that many computer games — particularly those of the arcade variety — are not entirely a good thing,

and to answer Martin's points on what I wrote, I will try to explain why. I would add that I accept that many people will consider some of my views extreme, and I do not claim to be in any way right. I have just highlighted some dangers and some possibilities.

I do feel that, for many people, computer games have the power to replace such activities as outlined — and many others — and that they are used (as the activities have been used) as a means of 'proving' oneself. I have nothing as such against the games (OK, I don't go for them personally, but that's different) and no, they do not prevent one from doing other things if one wants to. My main complaint, doubt, fear, call it what you will, is that they remove people from reality. Even worse, they can give a totally distorted view of life.

Martin says, quite rightly, that there is often considerable skill involved in playing an arcade game. This means that the game typically tests manual dexterity in intercepting one video image with a moving line emanating from another video image, under operator control. The trouble is, it doesn't sound terribly exciting stated like that, does it?

Say instead that the player is 'defending your galaxy from alien invaders, armed with photon torpedoes and nuclear bombs,' and it sounds more interesting.

This is why I refer to the unreality of the games. Swimming, parachuting and drinking are, in fact, more educational than the games, if only because they are 'real'. Do them wrong and you drown, dig a very deep hole very quickly, or get sick for a week.

With the games you are throwing nuclear bombs around with gay abandon, killing God knows who, just because they happen to 'appear'. You can even get five 'lives', where the player can get wasted and miraculously brought back to life without a blemish — you don't even get a mild shock through the joystick to let you know you blew it.

Am I overstating the case? Very probably I am, but I cannot help wondering where such games could lead, and maybe it is better to state an opinion now rather than later. I

view the implied violence of such games with horror, I'm afraid. It is an old saying, but 'violence begets violence' is as true now as it ever was, and attitudes to violence—its implicit acceptance as OK in the form of these games, for example—is an essential part of this. One only has to observe the relationship between violence on TV and film, and its occurrence in real life. The two quite naturally feed off each other. Many of these games are just grist to the mill.

I accept the following as a paranoid scenario but: we live now in enough danger of some political lunatic (and it is my considered opinion that the vast majority of politicians fit the bill) pressing one or two of the right buttons in a fit of high-principled pique, thus reconstituting all of us. Just imagine how much easier it will be in a few years' time when the lunatics (sorry, politicians) who lead us are drawn from the ranks of those that currently think nothing of 'nuking' whole galaxies by the hundred, and for a cost/effective outlay of only 20 pence.

Yes, I know, I'm just being silly.

Advice

I am considering buying an Acorn Atom, possibly as a kit, so I decided to contact Acorn for literature.

The first time I sent one of the coupons from an advert, but received no reply. That was at the end of February, and since then I have sent two personal letters including stamped addressed envelopes. No replies have been forthcoming, and I wonder whether my letters have gone straight into the bin or whether some enterprising secretary opens them and steams the stamp off the SAE for further use!

Please can you advise me where such literature is available?

John Cooper, Camberley, Surrey

Overt to you Acorn—Ed

Forth right

I would like to counter the assertion in this column (July) by Brian Darmanin, that

'references to the Olivetti M20 are conspicuous by their absence', and also set the record straight concerning Forth.

Your reviewer of PolyForth on the IBM PC concluded with the words 'if it's speed you're after, then this is the package for you'. It isn't. OliForth, an enhanced version of the Forth 79 standard, running on the Olivetti M20 under PCOS, returns an average of 7.6 seconds across the 15 original Benchmarks, and inclusion of the 'mixed maths' Benchmark increases the discrepancy between OliForth and any other version still further.

As a director of the software house that wrote and markets OliForth, I realise that talk of Benchmark timings are often a little spurious and 'macho'—however, given that Forth is often used in time and precision-critical applications, I think mention of the above is probably justified in this instance.

Robert Ward, Tower Associates, Derby

Serious complaint

I am the proud owner of a brand new Sirius 1 computer together with an ACT 40 printer. Not unusual you may think, but I did say *owner* not *user*.

Having unpacked my new machine I eagerly reached out for the handbooks so that I could update my present Basic programs to run under Basic-86. Alas I could not find any reference in any of the three manuals to enable me to perform simple tasks, ie, clear screen, etc. I initially had to spend hours finding values for all the functions—some still remain mysteriously buried in the depths of the machine.

I have 320,000 controllable pixels at my fingertips, definition fine enough to pick out the warts on my Aunt Maude's nose, but how do I get at 'em? . . . a quick phone call to my dealer. 'Oh you need the systems hardware manual Sir.' A mere £40+ extra.

Ah well, not to despair, let's get to grips with the printer. The manual is written in JapEng . . . more hours spent clearing up reams of paper the

printer insists on spewing out as I search for yet more codes.

This time a phone call to ACT in Birmingham. 'Hello I wonder if you could help me regarding the ACT 40 printer.'

'Not off the top of me 'ed Sir.' 'Well I've been having a little trouble deciphering the manual . . .'

'Oh that's alright, we don't understand it either. It's translated from Japanese you know.'

'I know.' 'What you need is the Supplementary Technical Reference Manual, it's about two inches thick and shouldn't cost you more than about twenty-five quid.'

When, oh when . . .
R M Richards, Menai Bridge, Gwynedd

Sharp eye

As a user of the PC1500 I am always interested to see this often overlooked machine mentioned in print. I was pleased to see Amanda Parfitt's contribution in the July issue in which a whole page was devoted to a program that sidestepped the problem of not being able to CSAVE or CLOAD the function key.

I tried the program, it works!! but I think that PC1500 (and PC2) users will be more interested to know that the entire RESERVE area of RAM can be CSAVED and CLOADed in the normal way; all you have to do is select the RESERVE mode first. Since there are only 188 bytes to be saved the process only takes a few seconds. Note also that if you try to CLOAD a RESERVE file when you are in the wrong mode (RUN or PRO) the computer will ignore it completely.

Oh yes! and when is somebody going to write some decent, well-priced software? (actually this is a plug because I have!!)

Charlie Simpson, Twerton, Bath

Satisfied customer

I feel Guy Kewney is unfair in your July issue in his comments

on the Tandy Model 100 (Newsprint Page 109). I find the design excellent, particularly the large screen and the resident programs.

The Telecom program is certainly more than 'useless silicon' because the 'find and dial' system for telephone numbers works straight away and the modem chip (mc 14412) is pin-changeable to CCITT standards by a connection change. I suspect any problem will be in the software and the difficulty of getting the whole unit approved by the telephone authorities. Tandy may omit it initially in Europe I believe.

In any case, an external modem on the RS232 has many advantages, for instance, one can choose the baud rate and connect to a radio transmitter or a direct line.

It is fashionable to comment on the Telecom approval process. I approached Telecom with the design of a modem which is line powered, ie, using the 50v of the telephone line so that no external power supply and hence no danger of electric shock arises, particularly in the case of the M100. I have found Telecom receptive and helpful and the fees moderate, so any obstructionism seems to be other than at the engineering level.

R J Redding, Design Automation Ltd, Maidenhead, Berks

See PCW August for a full Benchtest—Ed.

Clarification

I would like to point out an error in your news item headed 'Parting Company' (June 1983), which I believe was written by Guy Kewney. Datapoint is not and never has been a subsidiary of TRW Inc and so the question of 'slight embarrassment' does not apply. Until two years ago TRW distributed Datapoint products outside the US, but that was the extent of the association. Secondly, I wonder if the users of the 5,000 ARCNETS from Datapoint would agree that 'all these networks are hopelessly premature anyway'.

Glyn Jones, Datapoint

END

BANKS' STATEMENT

TOP OF THE POPS

The public relations man looked simultaneously horrified and perplexed. There may also have been a touch of cynicism thrown in for good measure.

'Cedric?' he asked, incredulously.

'Yes,' said a small, acned individual of perhaps thirteen tender and sheltered years.

'No-one is called Cedric these days, are they?' The PR man felt there was nothing left to do. Young Cedric may be brilliant—everyone said his new games program was one of the best ever—but there was no way the PR man could make either the lad or his product a worldwide success without some drastic surgery.

Acne was one thing, it could even be made vaguely romantic with a great deal of effort. But there was nothing else for it, that name would have to go.

Six hours and a bottle of gin later, the PR man returned to his bosses wearing a slightly incoherent smile and slurred 'got it, got the whole package worked out. There's only one way Shedric's program is going to be a success. Gotta go back to the old days, like when we was in records. We're gonna hype the little devil till it hurts.'

And so it was that small, acned Cedric Arbutnot from Wapping became Ivan Andov, the genius son of a white Russian emigré, who was discovered busking VIC-20 programs on a street corner off the Rue Pigalle in Paris. The acne was now an obscure, incurable skin disease picked up when his late, aristocratic mother was a cabaret programmer in a Bangkok system house supper club.

His games program, originally called Tax Avoidance Routines No 1, was re-christened Jason in the Caves of the Cay Man and went on to make its publishers—formerly a major record company—immensely rich. It would lend Ivan money

'Good games writers are liable to become "stars" in their own right. They are also liable to become as rich as many pop music stars of today...'

when he needed it or send him out on promotional trips in a borrowed Rolls Royce.

There ends, for the moment at least, this month's Story Time, and let me stress that, at this point in time, it is a story with no basis in truth. But that is only as far as I

know, for I have a feeling that if it isn't happening now, it soon will be.

You see, several things have come to light recently that point to a new development in the business. Individually they are not worth repeating, but together they show that another analogy between computers and the record industry is showing up, and that it is an analogy that is not altogether wholesome in its connotations.

That analogy is, in one word, *hype*. Now that there is a goodish installed base of home computers out there, the software industry is scrambling to jump on the bandwagon. Quite right, too, I hear someone say, and I agree with you—but only up to a point. With such a vast market growing ever more crowded with new games and hobby programs every day, something has to be done to get them noticed.

There was a time when all that was needed was a ten-penny advert in a magazine not totally dissimilar to *PCW*. The world was small enough then for it to be seen and noticed. Today that is not liable to be enough.

Already the advertisements are getting bigger and grander (quite right, too, I hear the publishers say). The authors of the programs are beginning to be publicised as personalities, which indeed some of them are. There are 'pop' charts showing which programs are selling best. It gets to look more like the record industry every day.

And, of course, the way things are going, that is exactly what it is going to be. The record companies, observing the diametrically opposing trends in sales potential of the record business and the home computer software business, are about to de-camp from the former to the latter *en masse*. (OK, so they're not necessarily actually going to give up the record making business, but they do know a good gravy train when they see one.)

As such companies move in, several things are likely to happen. One is that the home software business—games and stuff like that—will go from being shoe-string to the other thing. When it comes to promotional gambits, the megabucks are about to start flying around. What we have seen so far in software promotion has been kids stuff carried out on small change. These efforts have been worthwhile for many of the participants it is true, but now the big boys are coming out to play.

Another thing that is likely to happen is that, despite their acknowledged financial clout, there is no natural follow-on that what record companies spend their money on promoting will be any good. As was witnessed in the sixties, when the record

companies took Liverpool apart trying to find their own version of the Beatles, they are expert at following the trends poorly, and not half so good at picking the right new, and unknown, developments. If they are so weedy in their own back garden, it could be fun watching them treading in the doggie-do of a strange and new business.

This is where it could get interesting, for each of the companies will no doubt have its different approach. Some, I feel sure, will want to hedge their bets and cut corners by buying in the expertise. This will probably be in the form of one of the small but successful software publishing com-

'Other companies might take a different approach and try to hype their way to success.'

panies that lacks, above all else, finance.

This, in my own extremely humble opinion, would not necessarily be a bad thing. Indeed, it could be beneficial to all concerned.

Other companies might take a different approach and try to hype their way to success. It has been found before in the record business that enough money can sometimes push a product to the top despite its quality (or lack of it). The methods of achieving this are not all that wholesome either. The record industry itself has had to come to terms with the sometimes gross manipulation of the pop charts. Get something in the charts and it will become 'sellable'... so do what you have to in order to get it in the charts: that has been the motto.

Even now this cannot be guarded against completely in the record business, and in the software business the 'charts' are wide open to every con going. I have no specific evidence for what follows but, when someone in the business says to me that chart manipulation is going on, and that his suppliers are saying that a little financial inducement in the right direction will ensure that a program gets to the top in the next issue of a magazine, then there is an outside chance that it might not all be a pack of lies... know what I mean, nudge, nudge, wink-wink?

And already the power of chart positioning—manipulated or not—is being felt. The retailers are finding that they must watch the magazines closely and stock up on the ones that gain both the high spots in the charts, and the good reviews. Getting a five-star rating in a magazine means a

BANKS' STATEMENT

program gets sales. It follows that there is a potential for some unscrupulous companies to try to acquire such ratings.

The ratings are important because the users have so little else to go on in choosing new programs. This is why the authors are likely to become personalities in their own right, for in the same way that the music business sells on the name of the artist (if you like Rod Stewart or Simon Rattle you are much more inclined to buy their new records just because you know you like them), so the software business will follow suit.

Good games writers are liable to become 'stars' in their own right. They are also liable to become as rich as many pop music

stars of today, and this is attracting another problem for the industry (and another good reason for having the museum/archive I wrote about in *PCW* July). Having read of the money some of the early 'stars' are making already, kids are starting to clamour to become stars themselves. Worse still, parents are dragging reluctant children along to publishers, just because they have bought a VIC or Sinclair and can make it print 'Get lost' . . . smart kid, eh?

One instance of this that I have heard of had parents demanding an advance royalty of £50,000 from a games publisher for a new game written by their 'brilliant' spotty erk. Two things prevented the transaction in the end. One was that the publisher had

been around a bit. The game the kid had 'written' was in fact an old 8k PET program copied and modified. The kid had found it at school. The publisher remembered playing it himself all those years ago (three?). Without an archive, museum and indeed sound copyright laws, there is going to be much more of this, so publishers ought to mug up on the old stuff.

The other reason he didn't do a deal? Oh yes, he didn't have £50,000 in spare cash at the time. The record companies, of course, will have. The time is coming to buy lots and lots of Kleenex, for there are going to be some wonderful colds caught in the near future.

NEW from NEC!

the ADVANCED Personal Computer (APC) for only £1,985 + VAT

which is little short of sensational for the following . . .

Standard features:

- * Full 5 MHz 8086 16 bit processor (true 16 bit data bus).
- * Dual 8" Disks, 2 x 1 MegaByte. IBM 3740 standard also.
- * Standard CP/M-86 operating system, (MSDOS & UCSD soon).
- * 128k user RAM + screen RAM + system ROM + battery-backed CMOS non-volatile RAM & clock/calendar.
- * 8 x 19 dot high resolution character screen definition, (25 lines of 80 characters + 26th system status line).
- * 256 standard character set includes maths/Greek symbols. Additional 256 user-programmable shape character set.
- * Award winning NEC 7220 graphic chip in character mode.
- * 61 key keyboard + 25 key numeric/cursor pad + 22 dual mode function keys with labelling facility (16 of which will each hold two 15 character user strings).
- * Serial RS-232 synch/asynch to 19,000 baud. Parallel O/P.
- * Programmable power-off, 2 year lithium battery. Music.
- * Superb manuals, operating level to full technical spec.

Optional Extra features:

- * User memory expandable in 128k units to 640k RAM.
- * One/two Hard Disk drives shortly (9 or 18 MB formatted).
- * 8 colour screen (Benchmark & Masterplanner use colour).
- * Very High Resolution graphics: 640x475 screen from 1024x1024 bit-map 8 colour array (384k RAM!). Hardware draw, pan & zoom using 2nd NEC 7220 controller. Fast! Macro shape generation etc with CPM-86 GSX/GSS software.
- * 32 bit Hardware Arithmetic Processor: 25 times CPU speed.

Software:

NEC Benchmark Word Processor. DBASE II Data Base. Masterplanner spreadsheet. Our own bespoke Accounts Software or Systematics through NEC. IBM etc terminal emulation. RM/Cobol & other standard CP/M-86 software.

THE AUTOMATED CLASSROOM

With the increasing use of micros in education, there has been a mixed reaction from both teacher and pupil. Derrick Daines provides a valuable insight into what's going on.

Despite our relentless pioneering at the frontiers of technology, PCW has neglected a vital lead into the future—education. Now former PCW educational correspondent Derrick Daines is back with an occasional series on micros in education. Why not rally to his call, be you teacher, pupil or mortal, and send in a few opinions of your own?

As I was saying . . .

A deputy head of my acquaintance told me a little while ago that he had given up prejudging educational computer programs until he had seen the children using them. He added, half in jest, that he lets them tell him how good the program is! Another teacher remarked firmly that he wouldn't let children choose their own video nasties and so he wouldn't let them choose their own computer programs either.

To some extent, those two views encapsulate for me one of the fundamental problems facing education following the arrival of the computer in the classroom. The first man shows what I believe to be a becoming modesty and an open mind. The second shows a caring attitude and a sense of responsibility, but a closed mind. I hope that more experience with a computer in his classroom will broaden his views.

It isn't only the children who learn when a computer is put into the classroom. The teacher learns, as do the head, the governors, parents and the inspectors. I first wrote that remark a couple of years ago and an inspector friend of mine demanded: 'Are you saying that the Inspectorate are ignorant?' I ducked the question, but I noticed that a few weeks later there was an in-service day laid on for the inspectors!

So, everybody learns, albeit different things. The teacher learns first of the enormously motivating effect that the computer has on the pupils, and may even feel a twinge of jealousy that an inanimate machine can have an effect that he or she has unsuccessfully striven for over a number of years. The first reaction of many teachers is swiftly to transfer to the computer a lot of the chores of education

—all of those things that pupils do not like very much and which come under the general heading of drill and practice. Why not? Why not cash in on the motivation that the computer provides? Hooray for the computer!

Drills and frills

After a while, however, it begins to dawn that even computer-generated motivation will not sustain an interest in computer-generated drill and practice, so such activities are frequently wrapped up in a game and we have drills and frills. That's the sort of thing where, as a reward for getting a sum right, the user gets to zap a Klingon or something, and—bless 'em—children are pretty loyal and don't mind if the proportion of drill to frill is kept reasonable. After all, it's what has been happening in schools for generations; only the frill has been changed.

I suspect that is where the second teacher above is right now. I suspect that he suspects that given a choice, the kids would be happier blasting away at Space Invaders or Pacman rather than working at Space Sums or whatever we call our drills and frills program. He's right, of course. After all, what could be more soul-destroying than an inanimate object coldly shoving thousands of little problems at you? I mean, you can't even put a whoopee cushion under it! It is not surprising that one hears of children who groan with dismay when it is their turn to go on the computer.

At this stage many teachers will dismiss the computer as a worthless gimmick—a novelty quickly outgrown.

It's strange, isn't it? For years the computer was resisted in the classroom because *inter alia* teachers feared that it would replace them, yet many teachers will come to dismiss the computer because it doesn't! To put that another way, just as a workcard is not a substitute for a teacher, making the computer into an animated or reactive workcard will not replace the teacher either. It cannot be stated often enough that the computer presents us with

wholly new opportunities and that to confine it to present old stuff on a new medium is to stifle the opportunities.

Acclimatisation

When given new technology, it is hard for us to think widely enough and to explore freely enough. People of my generation will remember newsreels of Polish cavalry charging against invading German tanks; they were still using the methods of a generation before. Similarly, when the cine camera was invented, one of its first uses was to record stage events; the camera was stationary and simply recorded what went on in front of it. Techniques such as flash-backs, dissolves and so on came later, as did the use of these techniques to create special story-telling effects possible in no other way. It has taken eighty years of experience and experimentation with the movie camera to produce the current level of film production, and to discover the best use of the computer will probably take longer.

This is where the first teacher of my opening paragraph scores. In adopting an open-minded policy he shows himself ready to learn and experiment and re-evaluate what he is doing; willing to try to get the best out of his classroom computer and perhaps to discover new ways of teaching.

Assessment

It's good to be back in PCW. In the two years that I've been away so much has happened that it is almost impossible to offer a precis. Without much doubt, however, the most exciting thing that has happened has been the combined DOI and DES initiatives of putting computers into schools. In my own LEA of Nottinghamshire, not less than 95 per cent of schools have taken advantage of the offers and courses of instruction are packed. If this level of response is matched across the country, the outlook for computing is fantastic; the potential for educational, social and economic change quite im-

measurable. Love 'em or hate 'em, computers are here to stay and education will never be the same again.

All at PCW are aware of this, and in asking me to return to writing for them, it is hoped that we will be able to provide a forum for debate and comment, as well as providing news or other items of interest to teachers. So — if you have anything that you wish to pass on to others; if you have a viewpoint that you want to air or a problem to be solved; if you have discovered an interesting way of using computers in the classroom; then this is the page.

This is *not* the page for technical queries, nor is it a free assessment service for software suppliers. The reason for this is that as a software supplier myself, I would lay myself open to charges of bias. On the other hand, if you are a non-profit-making service, then we will be glad to cooperate.

Forum for debate

From time to time — when the mailbag gets light — I intend to be rather provocative and for starters I want to suggest that perhaps teachers will be — or are — among the worst offenders when it comes to illegal copying of programs. Are you reaching for

paper yet? No? How about this then — I think that as a profession we tend towards what I call the widows and orphans syndrome. That is, the widow hauled up before court for shoplifting pleads that she did it for her starving children. I suggest that the more teachers care about their pupils and the more anxious they are that a good supply of programs be available in their schools, the more they will succumb to the temptation of stealing. Of course, copying of programs is not *seen* as stealing! Stealing is lifting something and pocketing it, isn't it? How can it be stealing when you have not removed something but merely cloned it? Besides — it's for the good of the children — surely no-one minds that! Before you reject the thesis, remember that just over a year ago a school was successfully prosecuted for making photocopies of sheet music, while many others were warned off the practice. (That should start the letters rolling in!)

As I write, representatives of various governments are holding a week-long conference also attended by various international firms to discuss the problems of software copying. To be sure, they are mainly concerned about theft of large and expensive programs, mainly for commer-

cial application and costing hundreds of pounds a time, but it does highlight a desperate problem. In schools computing, the problem has some new dimensions. Generally speaking, the programs are quite simple in concept and anyone with a reasonable expertise can reproduce it for himself. In the trade this is known as 'backward engineering' — seeing a program running and — without looking at the listing — going away to write your own program that does exactly the same thing or perhaps contains your own little modifications. Whose is the copyright? Have you stolen anything? According to existing law, an idea is not copyright; only the manifestation of that idea in copyable form such as print.

Schools are training their teachers as fast as they can. In a year or two there will be more people capable of writing programs than ever before — and remember that, generally, educational programs are fairly simple. What are the professional criteria? If you reject my thesis that many teachers will simply execute a rip-off, what standards should educationists apply to themselves when it comes to backward engineering? I would welcome any views on this thorny topic.

CTUK! NEWS

CTUK! Burton has taken the unprecedented step of imposing strict standards on the programs kept in its software library. Chris Woodford describes the evaluation procedure.

BASIC SOFTWARE STANDARDS

The recent proliferation of computer software poses certain problems for the beginner, not least of which is the question of how the quality of software can be fairly and accurately estimated.

Although it's fair to say that the amount of high quality, well conceived, ergonomically designed, well documented and well supported software has substantially increased, so regrettably has the amount of badly designed material written by people with an all too superficial knowledge of a particular machine, who make little use of a machine's more valuable and esoteric features.

Software producers — particularly amateurs — can rarely afford the opportunity to examine material prior to purchase. It's often impossible to tell exactly what your money is buying. This problem, coupled with the ever increasing cost of software for home micros, prompted Computer Town Burton to establish a software library

which would contain programs that had been stringently tested and assessed according to a set of software standards.

The standards arose from discussion about what constituted a good program (and a bad one), the examination of educational standards, the dissection of very poor quality software, the consideration of common mistakes in beginners' programs, and comments from program reviewers. Although the software library has taken rather a long time to catch on, as Maggie Burton predicted, the standards have been widely used in CTUK! Centres and schools.

In designing the standards, emphasis was placed on what the programming was like, rather than on aesthetic considerations, since it is quite often the 'internal' aspects of a program — the way in which it has been written — that determine the 'external' aspects — how it appears to the end user.

To assess a program using the standards, start with a figure of 100% and subtract the given figures according to whether or not each condition is met. You should only subtract once for each error, ie, if the possibility of a 'Division by zero error' occurs four times, subtract as

though it only occurs once. It is assumed that the program to be tested has been completely debugged.

As a matter of interest, programs need to achieve a 75% rating to be considered for the CTUK! Burton Software Library.

The Standards

Internal aspects — 50%

- 1 Has every byte been used thoughtfully?
 - a) Have direct wastages of memory been avoided? For example, `IF A-1=3 THEN` and `10 X=4:X=X+1` (40%)
 - b) Has repetitive code been avoided by replacing consecutive statements or routines with subroutines, loops, procedures or defined functions? (3%)
 - c) Have `READ` and `DATA` statements been used instead of repeating lines where the data is implicit in the instruction, eg, `LET`, `PLOT`, `DRAW`. (3%)
 - d) Has the order of statements been altered to save memory? For example:
`10 FOR I=1 TO 10:A(I)=RND(1):NEXT`
`FOR I=1 TO 10:PRINT A(I):NEXT`
becomes:
`10 FOR I=1 TO`
`10:A(I)=RND(1):PRINT` (3%)

A(I):NEXT

- e) Are variables used instead of constants wherever possible (except when a constant is used only once or twice)? (2%)
- 2 Is the program error-trapped? Can it cope with an inexperienced user or deliberately corrupted data?
 - a) Has the program been error-trapped for the user's input, pressing the wrong keys, RETURN without any data, and so on? For example, 10 INPUT "AN INTEGER BETWEEN 5 & 10";A: IF A<5 OR A>10 OR INT(A)<>A THEN 10 (4%)
 - b) Has the program been trapped internally for occurrence of division by zero, square root of a negative number, and so on? For example, 10 IF B=0 THEN 1000 ELSE C=A/B (4%)
 - c) Does the program check to prevent animated figures or printouts from moving outside predefined boundaries, eg, games, data tabulation on spreadsheet programs? (4%)
 - d) Are default values used when no data is input? (3%)
- 3 Was the program planned?
 - a) Has the program been prepared using algorithms, flowcharts, blueprints, Warnier-Orr diagrams, PDL or similar techniques? (5%)
 - b) Is the program modular in nature to permit easy maintenance and debugging? (5%)
- 4 Optimisation?
 - a) Has the program been optimised to run in as little memory as possible or as quickly as possible? (3%)
 - b) Have special routines been devised to save time and memory wherever possible? (2%)
 - c) Has the emphasis been placed on the design of highly efficient routines? (2%)
 - d) Have subroutines and data been placed at the beginning and not the end of programs? NB This may not always be desirable since it can detract from the readability of the program. (1%)
- 5 Miscellaneous
 - a) Have single character inputs been achieved using GET\$, INKEY\$, CHR\$ (INCH) to obviate the need for the RETURN key to be pressed? (1%)
 - b) Have the main program segments been indicated by REMs, except where virtually all of the available memory has been used up by an efficient program? (½%)
 - c) Has the program been renumbered so that automatic line numbering can be used to type it in? (½%)

External aspects — 35%

- 1 Good input and output?
 - a) Have the screen, keyboard, printer and other peripherals been used thoughtfully, logically, appealingly or ergonomically? (5%)
 - b) Is the program visually novel? Is there a good, uncluttered display? (5%)
 - c) Have the computer's more esoteric features been used to the greatest possible extent, eg, sound prompts, colour graphics for pie charts and so on? (5%)
- 2 Good quality instructions and documentation?
 - a) Are the instructions easily understandable and comprehensive with nothing omitted? (If there is sufficient free memory, they

should be built into the program, otherwise they should be written out and distributed with each program copy.)

- 3 Ergonomic design?
 - a) Was the program designed according to the user environment, eg, mouse for businessmen, joystick for arcade games, restricted keyboard for disabled users? (5%)
 - b) Is it easy to use and understand? (4%)
- 4 Miscellaneous
 - a) Is the screen cleared at the beginning of the program and between major segments wherever possible? The entire screen should not be cleared if this is not desirable. (1%)

Discretionary marks — 15%

To be subtracted at the marker's discretion in the following instances, for example:

Games:

Marks might be subtracted in the absence of: a timing function; scoring and comments on it; best score or time facility; adaptation with the player and a variable difficulty degree; the correct balance between skill and luck; a hard game, though a maximum score can be obtained; constant parameter resetting is not required; an attract mode to show game operation.

Utilities:

Marks might be subtracted for poor design, if the user has to perform unnecessary work — for example, input data that could be calculated by the program.

Business Software:

Marks could be lost if the program was not designed for computer naïve people, appropriate business terms are not used, special training is required, or if the program is not compatible with other business software, eg, word processing programs.

Educational Software:

Marks might be lost if the program failed to adapt to the child's ability, record his or her performance for later inspection by the teacher (where appropriate); if the program is not entirely foolproof; if it requires constant supervision; or if the child's progress cannot be monitored from a distance, eg, with appropriate sounds, border colours and so on — again, where appropriate.

Computer Town UK! is a rapidly expanding network of computer literacy centres where members of the public are given free access to all sorts of computer equipment. This is courtesy of those willing to offer time/resources. You can find a Computer Town anywhere — they're often in libraries or schools. The aim is to make micros enjoyable and non-threatening, so axe-grinding of any sort is banned. Guidelines are available for those interested in starting up their own 'Towns. We are intending to revamp our coverage of CTUK! shortly. In the meantime, write to David Tebbutt, 18 Countlands Close, Ruislip, Middx. Remember to enclose an A4 SAE for your reply.

WINNER TAKES ALL

Richard Lang's chess program has gone from strength to strength since the 1981 PCW Chess Tournament. Tony Harrington reports.

Richard Lang's name has already been mentioned from time to time in these columns. As the designer of the program which won the 1981 PCW Tournament with a crushing score of five out of five, he could hardly have failed to get some attention.

He is one of the new breed of young enthusiasts, who has drifted into the intricacies of computer chess more or less by chance, and who has found in it something seductive and obsessive. Lang had nothing to do with computers in his school days. His school, in the village of Winnersh, near Reading, encouraged studies of the more traditional kind. And the chess that was played there was between schoolboys rather than machines.

'We played a few lightning games and the odd chess tournament,' Lang said. 'My father taught me the moves of chess when I was around eight years old, and I played a bit from time to time. But my interest in computers came when I bought a Video Genie home computer three years ago. I taught myself Basic, but that was irritatingly slow, so after a month I bought a book on machine code programming.'

'The first project I tried was to write a video game. That wasn't a great success. I wanted to do something other than simply produce another version of space invaders, so I decided to have a go at writing a computer chess program.'

Writing the video game in assembler code occupied about the first three months of Lang's time after the arrival of the Genie. Thereafter, he put childish things behind him, and settled down to solve a few of the problems that perplex the AI staff of Britain's university computer departments. (AI, for those new to these pastures, stands for Artificial Intelligence.)

No one just launches into the writing of computer chess programs on instinct and native wit alone. There are certain fundamental things to be learned, as every aspirant computer chess programmer will discover. Lang quickly found that he needed some assistance in getting his program off the ground. Accordingly he went out and scoured the bookshops for likely material.

This was provided in the shape of a book by Dan and Kathy Spracklen (who, as readers of this column might remember, achieved fame as the designers of the Sargon program, and who are still writing

chess programs for Fidelity). The book was *Sargon, the Chess Program*, and it provided, among other things, a full listing of one of the Sargon programs.

'That helped me considerably. I read it and absorbed a lot of what they were doing. It gave me an idea of how chess programs were written,' Lang commented. In case you think that this is all there is to writing tournament winning chess programs, I should point out that within a very short time of reading about that version of the Spracklens' program, Lang fancied that he saw several ways of improving on what they had done.

'I could see far better ways of doing a lot of the things. Much depended on finding ways of improving the speed of their program. I found better algorithms and better ways of obtaining a score for chess positions,' he said modestly.

I asked how it was that he, on his (at that stage) scant acquaintance with chess programs, was able to see further into the intricacies of composing chess algorithms than the Spracklens had produced in that program. (Not that the Spracklens haven't devised other, better algorithms since, because they undoubtedly have.) Lang was puzzled about how to answer my question.

'I simply did,' he said, and seemed to think it perfectly natural. Pressed a little further on the subject, he added: 'Understanding chess algorithms is something you either can do or you can't. It's a bit like a musical gift. I suppose practice helps, but certain people seem to be better at it than others. I found that I was one of the people who was good at it.'

Despite the high graphics content in the video game that was Lang's first venture into programming, his first chess program eschewed graphics altogether. ('To have written graphics for it then would simply have diverted me from the chess program itself.') All it did was to provide an algebraic notation of the moves. And unless the human opponent was an expert at blindfold chess, an ordinary chess board was an essential 'peripheral'.

He started writing the program in January 1981. This was a leisure hours hobby, since his ostensible occupation at that time was as an employee in the research department of British Gas, doing risk analysis. 'I used computer programs in the course of my work, but I didn't have a thing to do with writing them,' he

explained. 'That all happened after the office closed for the day.'

The PCW Tournament for that year was, as always, scheduled for September. Lang knew of the Tournament, and he says that it was a prime incentive in sharpening up the way his program played. 'To start with, I would have written the program anyway, regardless of whether there was a tournament on or not. But once I got started and realised that it was playing reasonably well, I kept the Tournament firmly in mind.'

'It was something of a race to get it into shape in time and I could have done with a few extra months. By the time the Tournament arrived, it was running on a Nascom micro with a 4 MHz clock. It did rather well and won in every round. David Levy and Kevin O'Connell took an interest in it at the Tournament and at the end of the Tournament they offered me two contracts. One for the program, and one to go and work as a programmer for them. This was very pleasing for me,' he said.

Since then, in addition to working on chess programs, Lang has written what might be the world's strongest program for the Oriental game Gomoko Renju — a game which I do not understand, but which I believe is played on a board similar to a Go-board. It involves trying to place stones in a straight or a diagonal line while preventing your opponent from achieving this end.

Lang didn't know how to play Gomoko Renju at the time and still doesn't play it. That wasn't necessary. 'It is sufficient to tell a programmer what the rules of any game are, though it probably helps a bit if you play the game,' he reflected. For the Gomoko Renju game, Lang was able to draw on the advice of a master, and that was sufficient.

Having sold the Cyrus 1 program, Lang set about writing Cyrus 2. He entered this in last year's PCW Show, but it didn't quite come up to his expectations. 'It was written in quite a hurry and the Tournament came in the middle of its development period rather than at the end,' Lang said. There were quite a few new ideas in the program and he didn't have much time to test them before the Tournament.

The new ideas were a combination of getting sections of the program to run faster, and building more chess 'wisdom' into it, by getting it to recognise isolated pawns, doubled pawns and the like.

Richard Lang: one of the new breed

Although it didn't do too well in the Tournament, Lang reckons that the current version of his program is demonstrably better than Fidelity's Sensory Nine.

A version of Cyrus has been bought by Dragon and now runs as a cartridge on the Dragon home computer. That, however, is another tale. Suffice it to say that on several occasions I have played against the Dragon version and have found it a worthy opponent.

Lang intends entering a new version of Cyrus in the 1983 PCW Chess Tournament, and that should answer any remaining questions.

Games section

White: Cyrus; Black: Cray Blitz; Pirc Defence: Notes by David Levy.

This is undoubtedly the most impressive victory scored by Cyrus to date. It was played in the speed tournament at the 1981 North American Computer Championships, and Cyrus' opponent was running on the Cray 1 computer, the world's fastest mainframe. In the previous year's competition, Cray Blitz had won the speed tournament with a score of 15 out of 15.

BENCHTEST

PIED PIPER

The Canadian-designed Pied Piper is yet another addition to the ever growing list of 64k, Z80, CP/M based computers. However, this did not deter Dick Pountain . . .

The recurrent nightmare among Bench-testers is that they will be asked to review a 64k, Z80, CP/M computer; the reason is that there is almost nothing left to say about such machines that hasn't already been said one hundred times before. This is a consequence of achieving Industry Standard status. Such machines are now so standard that virtually the only points of differentiation between them are a few terminal control codes which the user never even sees unless a new program needs to be installed; with the growing tendency to 'bundle' a set of major programs such as a word processor, a file manager and a spreadsheet, even this is an unlikely event.

Having said all this I should explain that I actually volunteered to test the Pied Piper Communicator, which is precisely a 64k, Z80, CP/M computer. My reason was that it looks as if it offers a very high degree of portability at a low price. The marketplace in portable CP/M based computers has become very complicated in recent months

The rear panel contains easily accessible sockets.

Photography by Ian McKinnell

and it is by no means easy to decide which is the best buy, when all the discounted prices and bundled software are taken into account. PCW Benchtests are intended, in the last analysis, to aid potential purchasers to make a decision, rather than to always reflect the 'state-of-the-art' in hardware design. There is still an awful lot of utility left in the 8-bit microcomputer, particularly one which runs CP/M-80. This review is being typed, under WordStar, on an 8-bit machine, and I see little possibility of this changing in the near future; at the last count I had ten different language compilers or interpreters in regular use, many of which will not be available on 16-bit machines for some time and most of which will only be able to make use of 64k when they are.

There is still a lot of room for CP/M-80 machines to become smaller, cheaper and to offer more disk storage space for the money, hence my interest in the Pied Piper.

It was designed in Canada by Semi-Tech Microelectronics Corporation of Toronto, manufactured on its behalf in Hong Kong and is due to be launched in the UK this month by Semi-Tech (Europe) Ltd.

Hardware

The basic Pied Piper consists of a console containing the computer, keyboard and a single disk-drive. There is no built-in display device; the machine must be connected to a separate b/w monitor, or to a domestic TV set via an optional UHF modulator. I was not supplied with this unit and so the review was carried out entirely on a green-screen monitor.

The original Canadian and US models included the option of an Epson two line by 80 character LCD display (similar to that

on the Sord M23P). The European distributors, however, will not be offering this device as they feel it's too expensive and of limited appeal.

The case is a two piece moulding in ABS and is unusual in that the disk drive is housed in a bulge at the right hand end, in line with the keyboard. The keyboard thus sits in a wedge shaped depression which is covered by a removable rigid plastic lid for transportation. A retractable carrying handle is located at the back of the case. At 4 x 20.2 x 10.8in it is very compact indeed and it weighs a mere 15lbs. When in its fitted nylon carrying case it feels more or less like a small portable typewriter rather than an electric sewing machine (like its major competitors). This carrying case is a smart 'sports bag' type with a zip closure and a separate pocket on the front to hold leads; it's padded with foam.

Opening up the case, by removing six screws, reveals a mainboard which barely fills two thirds of the case area. This is formed on massively thick fibreglass and looks as if it would shrug off any abuse less than an airliner crash. The board contains the whole computer apart from the power supply and keyboard. This includes a 4MHz, Z80A processor, 64k main RAM, 4k ROM (bootstrap loader and diagnostics), 2k video RAM and 2k ROM character generator. One feature which is most unusual nowadays is that every chip on the board is socketed which makes for easy replacement. The power supply sits in the empty third of the case and is of the transformerless switching type, rated at 60 watts which is sufficient to run a second disk-drive.

A panel at the rear of the case displays a phono type plug for the monitor lead, a Centronics parallel printer socket, a DIN socket for TV-modulator output and the

Smart 'sports bag' type case with a separate pocket on the front to hold leads.

Reset button which performs a cold boot restart. At the left hand corner is the mains power socket and the ON/OFF switch; unfortunately the power lead I was supplied with had an 'L' shaped plug which effectively covered this up and made it difficult to locate. At the right hand corner is a covered slot which opens to reveal an edge connector for the system bus (STD bus compatible) which is used to connect additional disk drives, or for instrument control applications.

The disk drive is the closest that the Pied Piper comes to being state-of-the-art. It is a half-height 5 1/4in unit from Mitsubishi which contains a massive 1 Mbyte unformatted and a gratifying 784 kbytes formatted, which makes even the Sirius look inadequate. This capacity is achieved by ordinary double-sided 96 track (40 sectors/track) recording, with no variable speed or other trickery involved and so should prove easy for software producers to emulate on their copying machines. It's fairly quiet in operation and, despite its large capacity, is not noticeably slower than ordinary drives in its access times. Having this sort of space to play with opens up possibilities such as giving two applications their own USER areas on a disk and effectively making it into two disks.

The keyboard is an ASCII standard, full sized typewriter style unit which has all the keys in sensible places. The shift and return keys are double sized and the space-bar stands on its own. The keys have an excellent light touch with progressive 'feel'; one of the nicest I have used and a pleasure to type on. The only ground for criticism is that there are only two cursor keys, with up and down being shifted. There are both backspace and Del keys but in all the programs I tried they did the same thing, a destructive backspace. A key called FUNCT at the lower left side performs special operations when used with a number key. All keys auto repeat after 1/2 sec. It is good to see an English pound sign on the keyboard, probably something to do with the machine's Canadian origins.

Above the keyboard are three LEDs which show when power is on and when either of disk drives A or B is in operation (B is an external option). Unfortunately the drive A light remained on at all times when the computer was in use, as did the red light on the disk drive, so that little information was conveyed.

When connected to a standard b/w

The computer, keyboard and single disk-drive are contained in the streamlined console.

PIED PIPER

monitor the Pied Piper produces an 80 character by 24 line display which was both sharp and steady on the Kaga used in this test. Screen updating seemed to be unusually fast though rather messy as a fleeting 'ghost' cursor is to be seen flickering about. The 7x5 character set is not particularly pretty with minimal (1 pixel) descenders and a nasty squashed 'i'. Highlighting is supported in the form of high and low intensity characters. Since a TV set will not handle 80 character displays, Pied Piper has provided a utility program called TV.COM in their CP/M which switches the display to 40 characters; this condition is retained until you perform the next cold start. When in 40 character mode it's possible to scroll the screen sideways by running the cursor off the edge, or (much quicker) to tab sideways in jumps of 8 or 40 characters using the FUNCT key with 0 7 8 or 9.

Software

The Communicator comes with a customised CP/M 2.2 and the Perfect Software suite of programs, Perfect Writer, Perfect Speller, Perfect Filer and Perfect Calc. These are contained on three disks and a blank 'Scratch' disk is included to get you started.

The CP/M has been lightly modified in the interests of easy use. All the intrinsic commands remain the same (DIR, REN, TYPE, etc.) but some of the transient utilities are somewhat different from the standard Digital Research versions. FORMAT is replaced by a program called PREPARE which formats, verifies and

writes a system onto a disk in one operation. In addition to PIP there is a program called TRANSFER which prompts you to alternately insert the source and destination disks in order to transfer a file using a single drive. COPY works in the same way to back up a whole disk. It is here that the penalty for using a single 800k drive is paid; copying a diskette requires no less than 20 changes of disk, and for that reason backing up is likely to be done less often than safety dictates. Even transferring a single file can take several disk changes since only as much as can be held in RAM is transferred at each step. This is exacerbated by the fact that this CP/M is only a 56k system, the top 8k being used for disk interface, LCD driver and 40 character display routines.

VERIFY is a command, not usually found in CP/M systems, which performs a non-destructive analysis of a disk and reports the number of bad locations found;

however, since it provides no way of locking out such sectors, or of recovering data from them, the information is more of morbid interest than utility. One little feature that I liked was the way that Semi-Tech has altered the handling of CTRL P so that it tells you if the printer is not ready instead of just hanging up as it does in most CP/M versions.

There is not room here, nor is it appropriate, to review the Perfect suite. Suffice it to say that this is a high-class set of programs which has established a good reputation already in the USA. Perfect Writer is one of several word processors based on the mainframe/mini editor EMACS (others include Final Word, Mince and StarEdit). It features separate editing and formatting functions, which while not as immediately attractive as WordStar's 'what-you-see-is-what-you-get' approach, allows for far more complex and sophisticated formatting of docu-

The half-height, 5 1/4 in disk-drive from Mitsubishi is state-of-the-art.

The main board barely fills two thirds of the case area; the power supply sits in the empty third.

ments. It's especially suitable for technical reports, manuals, theses and book work, as well as complicated form letters. Its chief drawback is a multiplicity of control and escape codes which make even WordStar look simple; the Pied Piper lacks programmable function keys which might have helped here. Definitely one for the more experienced user. Perfect Writer comes equipped with a useful spelling checker called Perfect Speller which, unlike some, will actually type in the corrections for you, and allows roots of unknown words instead of the words themselves to be stored in the dictionary. For example, if 'new' is in the dictionary then 'renew' and 'renewed' would be recognised.

Perfect Filer is a reasonably powerful and simple to use database program and Perfect Calc a spreadsheet, both of which use — as far as possible — the same command codes as Perfect Writer so that learning one helps with all. Perfect Calc is supplied with 40 pre-written tutorial and utility sheets, such as one to do Chi-Square analysis in statistics.

Surprisingly the Pied Piper comes without any high level languages so I was not able to run any Benchmark timings; in any case most PCW readers will have an idea of what they look like for a 4MHz Z80 by now.

Expansion and potential use

It is my suspicion, yet to be backed by any survey results, that the vast majority of purchasers of Osbornes, Kaypros and the like do not actually do any computing outside of their home or office, and that it was price and free software as much as portability that conditioned their purchase. If this is the case, then the Pied Piper's lack of a built-in monitor is not of much importance. It is possible to keep a monitor at home or the office or both, and to use a TV set if you really do need to

Technical specifications

CPU	Z80A (4MHz)
Memory	64k main RAM, 2k video RAM, 6k ROM
Keyboard	ASCII standard, two cursor keys, no numeric pad
Display	One 5in drive (784k formatted)
Disks	Monochrome monitor or TV set
Ports	Centronics parallel, bust extension.
Operating System	CP/M 2.2
Warranty	90 days, parts and labour

compute in a hotel room. The saving in size and weight is really quite significant; it's quite comfortable to take the Pied Piper on the bus or tube, or even to strap it on a bicycle carrier.

On the other hand the lack of a second disk drive would quickly drive me potty and I suspect that a second drive will be the first expansion most owners will want to make, after a printer of course. With two drives you are talking about a hefty data-processing system but if this is still not enough, Semi-Tech will be able to sell you a 10 Mbyte Seagate winchester by January 1984.

Communications can be catered for be either a dual RS232C board or an RS232C/auto-dial modem board which fits onto a socket on the main board; Semi-Tech (Europe) is seeking Post Office approval for the latter item and so it will not be available on launch this month.

Documentation

The Pied Piper User's Manual is a slim 78 page affair which contains instructions on setting up the system and a brief guide to using CP/M with an explanation of the basic commands. You will look in vain for any technical information such as the terminal display control codes, which would be of use to a programmer. The Perfect programs each have their own thick, well written manual and the whole lot, including the Pied Piper manual, fits into a cardboard library case. The docu-

mentation is quite adequate for the user who wishes to get going straight away with the applications software but anyone who wishes to write programs will need something more (a language for starters, unless they plan to use ASM).

Conclusions

The Pied Piper Communicator is a solid, workmanlike CP/M computer which has the advantage of being very easily transportable. It also has at least twice as much disk space as most of its competitors, on a single drive. The supplied software is of high quality and covers most of the functions the average user would require. At £1066 it's good value for money, though remember to cost in a monitor as well. If it were mine, I would want to have the optional second disk drive kept at the place where it will be most used, since without it making frequent backups is unacceptably inconvenient and would probably not get done.

Prices

Pied Piper Communicator	£1066
TV Modulator	£24.95
Second 800k disk drive	£290
10Mbyte winchester drive	NA (Jan 84)
RS232 Port×2 Card	£100
RS232 Port+ modem Card	£125

END

LEISURE LINES

Quickie

Arrange the numbers 1-9 in a 3×3 grid so that all columns, rows, and diagonals add up to the same value.

Prize Puzzle

Arrange the digits 1-9 in the 3×3 grid shown. Calculate the sum of differences between squares which are adjacent horizontally or vertically, but not diagonally. Thus, in the example shown, the sum would be 24 made up of:

$$(9-8) + (9-6) + (8-7) + (8-5) + (7-4) + (6-5) + (6-3) + (5-4) + (5-2) + (4-1) + (3-2) + (2-1)$$

9	8	7
6	5	4
3	2	1

Note: each difference is only counted once.

What arrangement gives the maximum sum and what arrangement gives the minimum sum?

Answers please — postcards or backs of envelopes only — showing maximum and minimum sums plus the arrangements, to reach PCW by 30 Sept, 1983. Send entries to: PCW, Leisure Lines, September Prize Puzzle, 62 Oxford Street, London W1.

June Prize Puzzle

A rather easy puzzle in logic — at least to anyone familiar with Venn diagrams. Over 200 entries were received — mostly with the correct solution of 10 cats.

Amazingly enough the winner, drawn by random selection, was A E McCafferty

from, of all places, RATby, Leicester. And those of you who are familiar with the musical 'CATS', will know that McCafferty is the name of one of the star cats in the show. Perhaps my leg is being pulled.

Anyway, whether it is or not Mr McCafferty, congratulations, your prize is on its way.

Note: By the way, for those of you who are always asking for answers to the Quickies — here's your chance.

I am writing a book on Micro Puzzles (and other teasers) which will be published within the next couple of months. More about this next time.

by JJ Clessa

DISKPOST

* BETTER VALUE MAIL ORDER SUPPLIES FOR YOUR MICRO *

VEREX DISKS

Manufactured by Verbatim, to accepted industry standards. Full one year warranty. Quality products at popular prices for both home and office use.

5.25" DISKETTES

MD200-01	S/S, S/D, 48TPI	£1.71
soft sector only		
MD200-AS	S/S, S/D, 48 TPI	£1.66
Apple systems only		

8" DISKETTES

FD34-1500	S/S, S/D	£1.85
DD34-1501	D/S, D/D	£2.82

32 hard sector available at same price.

DATALIFE DISKS

From Verbatim, the world's leading diskette manufacturer. Full 5 year warranty. All minidisks are certified for double density recording, and are fitted with hub ring reinforcement as standard.

5.25" DISKETTES

MD525	S/S, D/D, 48 TPI	£1.92
MD550	D/S, D/D, 48 TPI	£2.86
MD577	S/S, D/D, 96 TPI	£2.69
MD557	D/S, D/D, 96 TPI	£3.60

48 TPI suitable for 35 or 40 track operation. 96 TPI suitable for 77 or 80 track operation. 10 and 16 hard sector versions available at same prices.

8" DISKETTES

FD34-9000	S/S, S/D	£2.75
FD34-8000	S/S, D/D	£2.80
DD34-4001	D/S, D/D	£3.26

32 hard sector versions available at same prices.

XIDEX DISKS

The new premier quality standard, against which all other manufacturers will have to be judged. All products certified for double density recording. Now with a lifetime warranty. Unreservedly recommended.

5.25" DISKETTES

5012-1000	S/S, D/D, 48 TPI	£2.44
5022-1000	D/S, D/D, 48 TPI	£3.28
5012-2000	S/S, D/D, 96 TPI	£3.49
5022-2000	D/S, D/D, 96 TPI	£4.48

48 TPI suitable for 35 or 40 track operation. 96 TPI suitable for 77 or 80 track operation. 10 and 16 hard sector versions available at same prices.

8" DISKETTES

8012-1000	S/S, D/D	£3.18
8022-1000	D/S, D/D	£3.83

32 hard sector versions available at same prices.

THE LAST ONE

Got a computing problem? Produce your own solution by using The Last One, a program generator which has helped to solve hundreds of problems in installations throughout the world.

TLO runs on the Apple II and IIE, Commodore 4032 and 8032/96, TRS-80 Model II (TRSDOS or CP/M), most CP/M, CP/M86 and MS-DOS machines including the IBM PC (PC-DOS) and Sirius.

Try out TLO for £50.

A limited demonstration version of TLO is now available for only £50, including full documentation. This cost is fully refundable against your subsequent purchase of a full version.

Full version costs:—

for Apple II	£185
all other versions	£330

Please specify version requirements when ordering.

DISK DRIVE HEAD CLEANING KITS

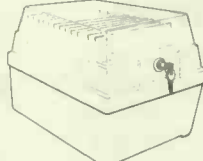

Helps to protect your valuable data, and minimise expensive downtime and repair costs. Consists of a flexible jacket, which receives a pre-saturated cleaning disk. Each disk is sealed within a foil sachet to ensure that it contains the right quantity of cleaning fluid when used. After use the disk is disposed of, and the jacket is kept for future use.

Suitable for single or dual head drives. Please specify 8" or 5.25" disks.

STARTER KIT £8.12
(contains jacket and two cleaning disks)

REPLACEMENT CLEANING DISKS £15.54
(pack of 10)

DISKETTE STORAGE BOXES

Protect your diskettes and valuable data from external contamination. Lockable, portable and secure. Two part box made from anti-static ABS plastic. Price includes dividers and index labels. Capacity 80 disks.

A5 Storage box (for 8" disks) £33.60

A6 Storage box (for 5.25" disks) £23.10

CTI - CP80 PRINTER

Features:—

- Friction and tractor feed as standard
- 80 c.p.s.
- Bi-directional logic seeking.
- 13 x 9 dot matrix giving true descenders. Sub and superscripts.
- Italic printing and auto underlining.
- Condensed, emphasised, expanded and double strike printing (can be mixed in a line).
- Parallel interface fitted as standard.
- 12 month warranty.

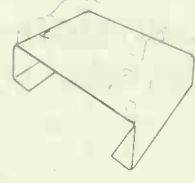

Print sample available on request.

CP 80 PRINTER £289.00

Optional RS-232 interface £40.00

Special VIC20/VIC 64 interface £46.00

PRINTER STAND

Suitable for use with dot matrix printers. Lifts printer sufficiently to enable continuous stationery to self-stack. Painted steel unit. Dimensions: 39cm deep x 28cm wide x 10cm high

Comes as package which also contains:—

- 200 sheets continuous stationery.
- 1 x 9 1/2" binder.
- 1 x highlighter pen.
- choice of rubber feet/sticky pads.

PRINTER STAND £21.95

COMPUTER FURNITURE

Suitable for use with all leading personal computers. Features a top shelf for monitor/printer, lower shelf for books, paper and general storage; large desk top surface at keyboard height; attractive teak finish, and castors for mobility.

U.K. Manufacture. Comes in flat pack for self assembly - full instructions provided.

A further range of more sophisticated units is available - please ask for details.

Sol Libes presents his monthly round-up of news and gossip from the Big Apple.

Does advertising pay?

There must be something to the old adage that 'advertising pays' because the sums being spent by personal computer companies are staggering. For example, last year IBM spent \$19.7 million to advertise the PC, Commodore spent close to \$14 million, Texas Instruments \$8.8 million and Tandy \$5 million. Apple got away with spending only \$2.7, which may account for why it is lagging behind IBM in the image department.

Apple doings

Apple Computer is continuing to wage its battle against Apple II clones. The latest are three lawsuits filed against Jade Computer Products, Hawthorn CA, Cosmic Computers Unltd, Diamond Bar CA, and Ironsides Computer Corp, Reseda CA. Apple is charging them with copyright and patent infringement and unfair competition. Apple claims that all three companies are marketing units and software which are virtually identical to the Apple II.

In the meantime, the shortage of IIE's which existed in the first four months of the year is no more and in fact Apples are now in abundant supply which has triggered a price war. The Apple IIE system, which includes a monitor and display, lists for \$1995 and is now being offered by some discounters for as low as \$1599.

The Apple III has certainly not been a success story for Apple. However, the company appears committed to the III. Apple has already established

135 of its 1500 dealers to carry the Lisa and all of them have already received demo units with customer shipments expected later this summer. Apple expects to increase its Lisa dealer base to about 300 by this time next year. The company is relying on its own national accounts sales force for most Lisa sales. Apple is also expected to do a large OEM business with the Lisa (Apple already has over 100 OEM accounts).

Apple's next big effort is expected to be in local area networking for all of its products.

Random rumours

There is industry speculation that Compaq, the company that to date has produced the most IBM PC compatible machine, may follow that up soon with a notebook-size version of the computer using a 24 line by 80 character wide gas plasma display. Also, the company is expected to 'go public' later this year. . . An Apple IIIe is expected before year end. . .

And Tandy is expected shortly to release an IBM PC compatible at significantly less cost. . . There are also rumours that IBM will soon release an in-house developed DOS for the PC which will be more upward compatible to IBM disk operating systems used on their mainframes instead of the current Microsoft direction of providing upward compatibility to Xenix. . . Commodore is expected to drop the list price of the model 64 to under \$200 and introduce a stripped down 64 with a list of under \$150 for the Christmas season. Also look for a 16k version of the VIC-20. And rumours abound that Commodore will soon do away with the P-series of computers and introduce a \$100 low-capacity disk drive. . .

International Telephone and Telegraph is rumoured readying a personal computer entry at its Qume division. . . Spectravideo is rumoured readying a lap-size portable computer which is a souped up version of the Tandy 100 at,

naturally, a lower cost. . . Microsoft is expected to introduce shortly versions of Xenix for the IBM PC XT and DEC Professional 350 personal computers. . . There are hot rumours that both IBM and Apple will launch their home computer this fall. Both are expected to be stripped down versions of their PC and IIE standard models, to include disk drive, 64k of RAM and to be transportable (in other words have handles, be slim and weigh under 30lbs). The selling prices are expected to be in the \$500-600 range.

New war in software

Manufacturers and retailers had hoped to make their money on selling software at list price while discounting the computers to near cost.

However, now the price war appears to have spread to software as well and manufacturers are bundling more and more software in with the basic machine. Further, manufacturers are beginning to drop prices on software in the same way that they dropped prices on hardware. Commodore, for example, has recently begun selling game software at \$10, which previously sold in the \$20-35 range and business-oriented software such as spreadsheets and database programs in the \$50-100 range where previously they sold for several hundred dollars.

Software is now merchandised in much the same manner as audio records and tapes. There are specialised software stores and software has even begun springing up on the racks of drug stores. Distribution is now done through distributors (*à la* records and magazines) and no longer from manufacturer to dealer.

Japanese seek computer standard

Fourteen Japanese and one

American company are reported to have agreed to adopt a computer standard developed by Microsoft. The standard relates more to the home computer market where the Japanese have as yet had no success in penetrating the US market-place. The standard would allow for software and peripheral compatibility and is referred to as MSX. It requires a Z80 based CPU, the TI-9918 graphics controller, the General Instruments sound chip, 64k of RAM, 32k of ROM (containing Microsoft Basic and a minimal operating system), a quadrature joystick and an NEC cassette interface.

The companies agreeing to the MSX standard include Canon, Fujitsu, General Corp, Hitachi, Mitsubishi, Pioneer, Sony, Toshiba, Sanyo and Matsushita. The one US company is Spectravideo. Digital Research, developer of CP/M, has also stated that it is developing a standard.

Bad times hits PC business

Texas Instruments has disclosed that as yet it has never made a profit in the personal computer business. This follows a similar statement made by Atari earlier this year. Actually TI has never been successful in consumer electronics. Its efforts in digital watches and calculators were also serious disappointments.

Atari, whose market share of the game business has slipped from 80 per cent to about 40 per cent and who at one time was number 1 in the personal computer business and is now in third or fourth place, is going through a 'consolidation' and 'reorganisation'. During the past year it has eliminated some 2000 jobs in the US and shifted manufacturing to the Far East, Puerto Rico and Ireland.

TI ordered a two-week 'vacation' for all its consumer group employees, has closed all of its retail stores and is expected to have a new round of price cuts (which intensify the current price war even further). It is estimated that TI currently

Bit stik

In my small company, I am responsible for designing new products and bringing them into production. This calls for lots of drawings and frequent amendments, and some 3D projections to give a better idea of the end product. Most of the drawings are not complicated and would fit A4 paper.

Our work would be speeded up if it were handled by a computer, VDU and plotter, but all the equipment I have seen is priced at £25,000 upwards. Has the micro brought this facility within the reach of the very small engineering company?

L Weatherill, Wincanton

The Robo Bit Stik, reviewed in PCW Nov 82, page 144, seems to fit your needs with a starting price below £5,000. (Robocom, 01-263 8585). It comprises an Apple II computer with disk drives, RGB colour card and colour monitor, A4 plotter, and the Bit Stik joystick and its plotter software. Larger plotters put the cost up, from A3 at £6,600 to AO at £18,250. I tried it at a trade show earlier this year and was impressed by the ease of use of the joystick, the plotting functions available, and by the range of example drawings, including circuit schematics, engineering drawings, architectural plans and 3D drawings.

Len Warner

PC 1500 assembler

I have a Sharp PC 1500 pocket computer, but I have been unable to obtain any information on its machine code (so that I may program in machine code) and detailed

description of its system and hardware configuration (for expansion purposes). Could you recommend any sources of suitable information? Do you know if there is a PC 1500 user group?

W Hedley, Benwell, Newcastle

You have probably noticed that the Tandy PC-2 and the Sharp are the same machine. Tandy has just introduced its magazine TRS-80 Microcomputer News to the UK, and the March issue contains the first in a series of articles by Bruce Elliott on PC-2 Assembly Language. The mag should be available from the several Tandy stores in your area, though you may have to order it. In case you miss it, I have sent you a copy of the first article, which gives a detailed architecture and memory map. I have not been able to find a user group, so if there is one, will it please get in touch.

Len Warner

Dual mode modem

I need a modem for the BBC micro with the following features:

- facility to order components by phone;
- access Micronet 800 or Prestel;
- talk to other computers; and
- have auto dialling.

R Morgan-Owen, Godalming

Prestel and Micronet need a V23 modem running at 1200/75 baud, and other dial up services need a V21 modem at 300 baud, as will most micros other than the Beebon, since few can manage asymmetric data rates. Modem pricing is rather strange, since just as the market has started to escape the GPO

monopoly, it has received an added push from new, do-everything single chip modems. The cheapest dual standard modem I know is the DSL 2123 from DaComm Systems in Milton Keynes (0908 676797), at about £320 + VAT, but auto-dial will cost a lot extra, and you still have to join Micronet. Your lowest cost option is probably to join Micronet, and get the Prism acoustic coupler for £60, then find a cheap originate/answer 300 baud modem. There are some available surplus, eg, from Display Electronics. The Prism hard wired modem may be another answer, when it becomes available. Perhaps a reader knows a better solution?

Len Warner

ZX81 reset

I have put a RESET button on my ZX81 which connects to the internal Z80 chip and performs its function by grounding the RESET line. Unfortunately when it is used it resets the computer alright but I cannot get my program back afterwards.

I am also writing my own language in machine code. I have become stuck because of the difficulty of locating specific routines in the Sinclair ROM. Paul Hills, Launceston, Cornwall

Grounding the RESET line forces the program counter back to zero, hence the routine at this address, the ZX81 initialisation routine in ROM, is executed. Part of its function is to find out the amount of RAM available by writing a specific value into each location and trying to read it back, which wipes out any program present. Also, if you are using dynamic RAM, as in most expansion

RAM packs, the loss of the Z80 REFRESH signal during reset will wipe the memory anyway.

The ZX81 monitor is decoded and commented in Dr Ian Logan's books published by Melbourne House which are widely available.

James Walsh

Micro upgrade choice

I am selling my ZX81 to buy a more expensive machine. There are quite a few computers on the market now and they all appear to have the same features. I want to know which in your mind is the best that has high-res graphics, colour, sound and costs £180 or less.

MA Lamb, Sheffield

This is one of those unanswerable questions, like 'Mummy, why is May?', because it all depends on how you want to use it. Some machines, like the Atari 400 and the TI99/4, have high power hardware at knock-down prices—but you may find cartridge software and extra peripherals rather expensive. The Spectrum has the minimum of hardware supporting its functions, so moving graphics will be slow and sound weak—but Spectrum software is very cheap and wide ranging, and add-on hardware is cheap, though limited. The Commodore 64 is a bit above your price range, but has good features and expansion potential which might make it good term investment. Other micros may give good graphics but strange dialects of Basic. Fairbairn's article in the Sunday Times Magazine, 10 July, and your ZX81 experience could help you choose. Ease of use, software

COMPUTER ANSWERS

availability and local support (like a good dealer or computer club), can be much more important than the detailed differences between machines.
Len Warner

Corvus mirror

I have seen in an advert a computer using VCR as well as a hard disk. Can I do this on my BBCB? I have a VCR, would there be any extra expense?
Danny King, Wellingborough

You have seen the Corvus Mirror from Keen Computers. This allows you to dump a large volume of data onto a video cassette. It is not a random access device like a disk. It is used to make a 'back up' copy of a hard disk so that if some hardware, software or operator error ruins your megabytes of vital files, you can recover by copying the back up to the hard disk. The VCR is used because it is cheaper than other high capacity storage, but since computer data is very different from TV signals and the error rate on video tapes is rather high, special circuits are needed to process the data. So it is neither suitable nor cheap as a primary file store on a micro, and you will have to save for a floppy disk drive.
Len Warner

Spectrum prestel display

Uncle Sir Clive Sinclair's puffware for the ZX Spectrum states that user software can generate a teletext compatible screen format, ie, 40 characters (and attribute cells) per line. Can you explain how this trick is done?

Are there any books on the Spectrum that describe the operating system in sufficient detail to enable ROM routines to be used from machine code?
J Hind, South Wigston, Leics

The screen is refreshed by the Sinclair ULA chip from a dedicated memory area which is divided into two parts. In the Display File each dot in the picture is set to paper or ink by one bit. In the Attributes each 8 x 8 dot character cell is given

flashing, brightness, paper and ink colour attributes by one byte. The characters displayed are formed by software and their dot pattern stored in the Display File, so a different character generator routine could create the six dot wide Prestel characters and fit 40 per line. However, the attributes are linked to the Spectrum 8 x 8 character cell so the colouring of a Prestel frame could only be approximate.

Dr Logan's *Complete Spectral ROM Disassembly* gives a very detailed dissection of the Sinclair firmware. Its only slight problem is that the assembly language routines do not include assembled machine code values, so it is somewhat difficult to find the address of a routine in ROM.

Alternatively, *Spectral ROM Decoded* is an annotated disassembly listing at £4.90 inc postage from MOI, 1 Francis Avenue, St Albans, Herts (tel 52801).

Graphics micro

I would like to buy a computer in the £200-£600 price range with high resolution graphics and, very important, a high standard of chess program.

Tim Howard, Wimborne, Dorset

Probably the best computer in this price range is the BBC Model B micro. This has very high resolution graphics (640 x 256 max), as well as colour modes. This will cost £399, which leaves you with some spare cash preferably to spend on a colour monitor, as a colour TV cannot satisfactorily display

the highest resolution on the Beeb. It will also improve the quality of the colour.

As far as chess programs are concerned, Micropower and Bug Byte both do programs which are worth looking at.
James Walsh

Digital electronics

I have been reading technical specifications of integrated circuits from several manufacturers and I have come across two terms I do not understand. They are 'daisy-chain priority mechanism' and 'multiplexed decoding'. Can you explain?
Paul Hills, Launceston

Can you suggest any books on digital electronics? I would like to know more about the working of static and dynamic RAM, address decoding, latches, etc, with a view to extending my Acorn Atom.
R J Middleton, Havant

Priority has its usual meaning. It is the predefined sequence in which several simultaneous requests will be granted a resource. Daisy-chaining is often used to fix I/O interrupt priority, determining which device gets first attention from the CPU. An interrupt enable control wire threads each device in turn. If a device does not need attention, it passes the enable signal down the chain. If it does, and it has the enable signal in, it causes a CPU interrupt and does not pass the enable signal on. So the request

nearest the top gets service.

Multiplexing is a way of sharing one set of wires between several sets of signals. Control signals say which kind of information is present at each instant. Typically, the same bus lines are used for memory addresses and for data transfer. An address value is sent first, to select a memory location, then the data value is transferred.

Adam Osborne's *An Introduction to Microcomputers Volume 1 Basic Concepts*, McGraw £9.95, is a clear, well illustrated and well indexed source for the digital techniques used in micros.
Len Warner

Warner's corner

Disk Directory (June) If you are struggling to understand CP/M disk space allocation, you will find Jack Dennon's *CP/M Revealed* (Heyden, £13.95) enlightening, especially if you have tried the Digital Research non-explanation in the operating system manual. It includes several assembler programs to examine the disk, including one to recover erased files. If you can't get it locally, Watford Technical Books (0923 23324) can supply it, and most of the others mentioned for £1 p&p (50p each extra book). Phone them for a selective book list for your micro.

Trackballs (July) Thanks to readers Gabriel, Repton, Withers and others for confirming my first idea—in short, trackball friction drives two shafts at right angles, each shaft carries a slotted disk. Each motion sensed by two light beams, giving quadrature signals to show direction and magnitude.

Oops Apologies to Commodore owners for 'Edge wear' (May), because their edge connector is the American .156in pitch. They could make up an extender with a .156in edge connector and a piece of Vector prototype board. Make sure there is no short to the metal case! Time data has discontinued the 0.1in edge plug, but it is still available from RS Components.

BENCHTEST

NEC APC

David Tebbutt gets the opportunity to scrutinise another Oriental offering in the micro stakes and puts NEC's recently launched APC under the spotlight.

Whenever a business microcomputer is delivered for Benchtesting, my first thoughts are: 'What on earth am I going to say about yet another twin disk, separate keyboard, standard software machine?' But each system tends to have its own personality, its own peculiar blend of good

and bad points, and it's this of course that makes Benchtests a worthwhile exercise.

When I first laid my hands on the NEC APC, I thought I'd never get to like it. It was odd really, because the machine looks quite nice and it is certainly very well made. Getting it out of the box and onto my desk

The keyboard is divided into three clearly defined areas.

The machine looks nice and is very well made.

was pretty strenuous since it weighs 75 pounds (80 if you include the keyboard). Perhaps that coloured my initial feelings or perhaps it was the fact that it contains two 8in disk drives, just when I was getting used to 5¼in and 3½in drives. There's nothing wrong with large disks; in fact they hold up to 1Mbyte of data each, which makes for a very healthy amount of information and programs at your fingertips. Perhaps it was the fact that I could see so much potential in the machine but knew I'd have to plough

'As you might expect from a large Japanese company, the product is beautifully made and contains a number of thoughtful touches...'

through seven or eight manuals to master its innermost secrets. Anyway, whatever it was, it is very hard for me to pinpoint now because I'm at the other end of the project looking back and my feelings are a lot more positive.

As you might expect from a large Japanese company, the product is beautifully made and contains a number of thoughtful touches: the top, sides and back are in a one piece moulding which can be removed simply by slackening two screws; the printed circuit boards are held in a five-slot card cage and each board has removal levers attached to its top edge; and the keyboard contains back tab and keys for switching into various graphics and

character modes. My most serious complaint about the quality of the hardware is the fact that the disk drives can get quite noisy when they're very active.

Hardware

The casing of the APC is mainly cream with the exception of the keys on the keyboard and the screen surround, which is black. The machine has only three controls beyond the keys themselves and they are conveniently located at the front of the machine. Like the NCR I reviewed last month, the APC screen and disks overhang slightly at the front. This recess contains the brightness and volume controls as well as the on/off switch. It also provides a useful niche for the keyboard when it's not in use. The unit is extremely robust and is obviously built to last.

The keyboard, which lives on the end of a 5ft coiled lead, is divided into three areas. The keys of the qwerty part are all light grey apart from the controls (shift, caps lock, etc.) which are black. The numeric pad blends light grey and black in a similar way but it also has four cursor control keys in dark grey. These are positioned in a North, South, East and West arrangement. At the top of the keyboard are 22 function keys together with their own shift called FNC giving 44 functions altogether. All but six of these are user-definable and can contain multi-line instructions (eg, 01,ERA *.BAK^DIR^ would tell the key definition utility to encode function key one with the commands to erase backup files then list the new directory). For some reason that I've not yet fathomed out, the six protected keys issue the string [0 followed by one of the letters O to Z, depending on which key is pressed. The function keys have no positional relevance, they are simply stretched across the top of the keyboard, but they are accompanied by a channel which will hold a template of the available functions.

The machine lent to us for the Benchtest incorporated a colour monitor, two 8in vertically mounted, slim-line disk drives, 256k of memory, a colour graphics board

and a peripheral controller which I didn't use. People with no use for colour may buy a monochrome version of the machine tested. It is also possible to buy a single disk drive, monochrome system but that sort of configuration is more likely when the APC is being used simply as a terminal to a host machine. Hard disks of 10 or 20Mbytes are to be marketed although I think it is probably too early to expect them in the UK. The peripheral controller was, I presume, to drive a parallel printer. Since NEC is a printer manufacturer, you won't be surprised to learn that the company recommends the use of its printers with this system. The manuals pretty well state that it's no use looking to NEC for help if other

NEC APC

printers don't work with the APC.

The 12in screen comprises 25 lines of 80 characters or 640×475 pixels. The graphics boards each contain their own RAM which means that both graphics and text may be superimposed on each other. The APC can display around 500 different characters and if that's not enough, it also allows you to define an additional 256 characters of your own. Rummaging through the APC standard character set, I came across a clock face, a little man, a superscripted '2', a floppy disk and a few fractions. Each character position on the screen comprises 8×19 pixels and within this you can define your own characters up to 8×16 . This means that you will find it impossible to define characters which can join up vertically but NEC has anticipated that need by offering a fairly wide range of joined-up line drawing characters of its own. Normal characters occupy an area 7

pixels by 11. The utility which helps you design and store your own character sets is mildly irritating because you need to hold the shift key down all the time you're using it. The programmer decided that pixels should be set by an asterisk and unset by the space bar. Asterisk on the APC is above the number 8. Ho hum. This whole area became a source of frustration to me because, despite what it says in the brochures, I could not get the ALT key to access the user-defined graphics. Either I had a duff keyboard (tut, tut) or the brochure's got it wrong (tut, tut again). I could print 'my' characters one at a time by prefixing each with ESC, (and 1 but that didn't seem too friendly to me). Not only that, but this arcane information came from a different manual to the one which explained how to define the characters in the first place. A few black marks there I think, NEC. The dot matrix printers supplied by NEC will print your own design graphics but to a resolution of 8×8 .

Colour can be changed using another escape sequence, so, for example, if you prefer magenta listings simply enter ESC, [, value and m where value relates to the

colour required. You may choose from red, green, blue, yellow, magenta, cyan, white and black. If you need to use the machine for plotting then you will be pleased to learn that pixels may be coloured individually which makes for extremely high quality graphics. Although the review machine had the graphics board, I didn't have the software tools to develop any pixel graphics programs. I did, however, manage to get hold of a demon-

Keyboard connector, comms and centronics printer ports.

The moulding can be simply removed to reveal the printed circuit boards.

CBasic graphics extensions

BEAM	Pen on/off
BOUNDS	Set aspect ratio
CHARACTER HEIGHT	As % of Y length
CLEAR	Clear screen + pen off
CLIP	Prevent drawing exceeding boundary
COLOR	Set foreground colour
COLORCOUNT	Assign number of colours to variable
DEVICE	Assign physical device limits to variables
GRAPHICCLOSE	Close current device
GRAPHICINPUT	Accept X, Y coordinates from cursor position
GRAPHICOPEN	Initialise graphics and set output device
GRAPHICPRINT	Alphanumeric string at given point
JUSTIFY	Position text
LINESTYLE	Solid, dashed, dotted, dashed-dotted
MARKER HEIGHT	Size of special markers
MARKER TYPE	Symbols
MATFILL	Draw filled polygon from array of coordinates
MATMARKER	Draw markers according to array of coordinates
MATPLOT	Connect points defined by array of coordinates
PLOT	Connect series of coordinate pairs together
POSITION	Set beam position or assign it to a variable
STYLECOUNT	Assign number of styles to a variable
TEXTANGLE	Approximate angle for text printing
VIEWPORT	Define window boundaries
WINDOW	Define scale of X & Y axes

stration suite and check that the facilities are as good as they sound. Later in the Benchtest I will introduce you to the software NEC will be providing for this type of work. Monochrome graphics needs its own 128k of RAM while colour needs 384k. This memory is mounted on the same board as the graphics circuitry and doesn't eat into the user's 'normal' memory.

Now here's a thing which baffles me. Programmers just seem to love getting tunes out of machines which simply weren't designed to play music. It's happened again. If you want a ghastly rendering of some Bach piece (I couldn't hazard a guess at which) then you *must* listen to it on the APC. It's truly awful. It does illustrate the fact that the machine can cope with a couple of octaves, three different tones, different volumes and a range of notes from a 32nd to a whole note. In addition it has four tempos. I can only conclude from this obsession with music on business computers that the manufacturers think that speech synthesis is on the cards in the reasonably near future.

The APC contains three types of memory: RAM, ROM and CMOS RAM which is battery backed. This means that for at least two years after switching off the APC, it will still remember the information you put into the 4k of CMOS RAM. The only evidence I had of this in action was that the APC did keep remarkably accurate time and it always knew the date. I did set the date to February 28th 1984 and it rather foolishly took me to March 1st at midnight. One of the brochures told me that it could be used to remember things like function key assignments. I scoured the manuals but couldn't find out how. It certainly didn't do it automatically. The 8k ROM contains the bootstrap and self testing programs. The machine comes with 128k (16x64kx1bit) RAM which can be extended to 256k. You don't need any extra RAM for graphics but you can save

yourself an expansion slot by having 128k of 'normal' RAM tucked away on your graphics board. The APC has a theoretical memory addressing capability of 1 Mbyte so it will be interesting to see if anything is developed to soak up this potential.

The things which irritated me in this section of the Benchtest were really firmware problems. The hardware itself is quite excellent. The four-layer PCBs look just, er would you believe, beautiful? You can buy extra PCBs to handle communications and a 32-bit floating point mathematics processor which offers speed increases of 25 to 100 times over mathematics performed on the 8086. This is clearly only useful in processor bound applications with a high mathematical content.

Software

I've already mentioned a few bits and pieces of firmware and system software. Here are a few more interesting facilities. The speed at which the screen displays can be varied by hitting CTL plus a number key. If you really want to screw up somebody's demonstration, try setting this value to '0' when they're not looking. You can set a key click on or off and, unlike some machines I know, the APC has the

'If you're looking for a top quality business computer, then this machine should be on your shortlist for consideration.'

sense not to keep hooting when characters are being repeated. Each character can possess any combination of the following attributes: overline, underline, inverse, strike through, highlight and blinking in addition to one of the colours mentioned earlier. General display functions comply with ANSI standards while direct cursor addressing can be handled by ANSI or

ADM-3a escape sequences.

CP/M-80 allows you to stop and start a display by using CTRL-S, you can still do it with the APC but it also has a BREAK/STOP key which does the same thing. Similarly printing can be toggled on and off using the PRINT key. CTRL-P still does that job as well. Again, unlike many systems, if the printer is not on or not attached, the APC invites you to do something about it. The system used to have a reset button at the back of the keyboard. I suspect that this was quite often pressed in error because the system can only be reset now by pressing FNC, CTRL and BREAK all at the same time. At least you can't possibly do that accidentally. You can even power off through software. APC supply a program called 'POW' which does the job for you. This is quite useful if you leave the machine running a batch stream and want it to close down when the work is complete.

This certainly beats the way one of my friends handled a similar problem in the late sixties. He was running a system which was notoriously slow because it used paper tape as the main means of input and output. As the workload increased, he spent more and more time waiting for jobs to finish in the evening so that he could switch the machine off and go down the pub. This particular machine used a workstation with a moving carriage, rather like a typewriter, except it was about three times as long and ten times as heavy. He realised that this thing could build up quite a velocity if CR was hit when the carriage was positioned at the extreme right hand end. He drilled a hole in the on/off switch at the wall and programmed a CR as the last instruction of all his long-running programs. He fixed a hook in the ceiling and tied a piece of string to the switch, looped it over the hook and tied the other end to the platen knob on the right hand end of the carriage. At the end of the job, the carriage would whizz across, snatch the string just before the end of its travel and off would go the main switch. I seem to remember he still claimed the overtime for his late shift. Ah well, back to the APC.

The screen display is held in a 4k buffer so you can use CTRL and up arrow to scroll back up to look at things that have disappeared off the top of the screen. You get about one screen's worth of invisible information even if there's only one character per line. With a graphics chip, the screen acts as a window on an area

1024x1024 pixels and you can (according to the documentation) pan over this area which sounds like a lot of fun. Other things mentioned in the documentation which were impossible to test were zooming and partitioning. Apparently you can define windows in which all activity takes place without disturbing its surroundings.

I did get to read the CBasic manual with

You're just one step away from one-step accounting

Anagram Systems' Integrated Accounts is, simply, the most comprehensive, easiest to understand integrated accounting package available to Commodore users. It is the best reason yet for choosing Commodore.

And now there is Anagram Integrated Accounts with integrated Stock Control - on top of superb Anagram standalone Stock

Control and ledger packages. Just look at these features and options.

Full integration: Anagram Integrated Accounts consists of Sales, Purchase and Nominal Ledgers, Cash Book, and functions which permit journal entries, file maintenance and report printing in remarkable detail. All these are automatically updated when you make an entry. In the version with Stock Control, creating an invoice updates the stock as well as the other modules.

Single- or multi-user: Anagram Integrated Accounts, with or without the integrated Stock Control, can be supplied either single-user, or multi-user for up to five machines for only £300 extra per machine. The same goes for Anagram Stock Control.

Hard disk or floppies: Integrated Accounts is on just one floppy disk - compare that to competitive packages - and runs successfully with the Commodore twin disk units. Integrated Accounts with Stock Control and Sales Order Processing ideally requires a hard disk.

Open Item or Balance Forward: Choose which system you want for each account - you can even mix the two.

Extensive analysis: Each sales invoice can be analysed across ten nominal headings; each purchase invoice across eight. You can set up budgets within each nominal heading to get comparisons of 'budget to actual' at any time.

Easy to understand, learn and use: Anagram Accounting and Stock Control packages are designed for busy people who don't want to mess about with computers. They use ordinary book-keeping terms without jargon.

Your Commodore dealer should have these packages ready for demonstration. If not, phone Anagram and we will fix a demonstration for you. Or send the coupon.

PHOENIX Data Display Monitor

THE TRUE LOW COST, EUROPEAN ALTERNATIVE!

The Phoenix Technology new breed of precision display monitor, offers an exceptionally high standard of performance and reliability at a true low cost.

P12 Data Display Monitor

Specifications:

Input:

Composite video with loop through facility.

Iv into 75ohms

CRT-Colour:

Green P31,

Orange P33

Band width:

24MHz measured at 3 db down

Display area:

210mm - horizontal

150mm - vertical

Scan frequency:

15.750 - horizontal

50Hz - vertical

Power consumption:

25 watts

*PLUG COMPATIBLE WITH:
NASCOM - APPLE - BBC MICRO
- OSBORNE (WITH ADAPTOR)
AND MANY OTHERS!*

If you think you are paying over the odds for just another monitor, call and see the Phoenix range.

NEC APC

the graphics extensions which are designed to work with Digital Research's GSX. I got the right manual but the wrong version of CBasic because it flagged all my graphics instructions as errors. The extra commands are boxed elsewhere in this Benchtest but basically (ugh! Geddit?) they allow you to define graphics windows, set the scale, plot, fill, set colours, define the angle at which character strings are to be printed and define the line drawing style to be used. There are others but that gives you the general idea. GSX is an extension to CP/M-86 and it sets up a thing called a GIOS to handle all graphics calls from application programs. It looks a darned useful extension to CP/M-86 and not at all difficult to use.

Talking of CBasic (well, I was just now), I was astonished to see how slow it is. CBasic is compiled which means that it should run faster than interpreted Basics. Well, this one didn't. Apart from Benchmark 7, it was slower than interpreted MBasic on the IBM, for example. CBasic, incidentally, doesn't like the word END to occur before the end of a program listing. I substituted the word STOP and the Benchmarks ran just fine. I won't tell you how many days it took me to figure out what was wrong but future Benchtesters please note. Don't get too upset by different Benchmark timings, they are only massively relevant if your application is largely processor-bound. Most systems spend more time waiting for operators to do something than they lose by slow program execution.

Users of CP/M will feel right at home with CP/M-86. It has got some interesting extras but it is still the same old CP/M that we know and love. Of course, people who have never heard of CP/M will probably find it a bit of a pain. I mean, how on earth is PIP supposed to mean anything to an accountant? On the other hand, the addition of a command called HELP is a jolly good idea. This lets you display the contents of helpful information files on disk. It's just as well it's there because our accountant friend can then look up the word PIP which happens to be explained reasonably well. I can't help feeling that it

would have been better to have made CP/M-86 more friendly. The KEY command allows you to define the role of each function key using up to 15 letters. Escape sequences can be encoded so I set a number of keys up to provide me with the various colours. I could then Benchtest away merrily in a colour to suit my mood. Right now it's yellow — what do you make of that? I forgot to mention earlier that there's even a colour called secret. I suppose it's quite useful for people having to type in passwords. The function keys are a real bonus when you have to perform repetitive tasks frequently. I set up one to compile programs, one to link them and another to execute them. It meant that I could perform each function with just three keystrokes. Not bad, huh?

Application software

I was supplied with three packages — a word processor, a mailing list manager and a spreadsheet system. I gave the word processor a try since it was in the APC livery and it was fine. Nothing about it made me want to shout its praises from the rooftops. On the other hand I have no desire to rubbish it either. It was adequate, usable and seemingly reliable. It had the odd idiosyncrasy such as having to enter numbers for menu options. Someone please tell me what's wrong with mnemonics? The colour scheme was a little garish but it was easy to use and reasonably intuitive. The manual was very good.

I gave the other two packages a cursory look and they seemed okay too, although I must say that Comshare's documentation of MasterPlanner was a dog compared with NEC's efforts. And NEC being Japanese too.

I'm pleased to see that my favourite word processor, Spellbinder, is available on the APC. UK publisher, Systematics, has done well to provide the approved accounting packages and 'good old boy', George Tate, has sneaked in again with his DBase II. MPI, Tamsys and Xitan are the people to ask about packages available for the APC. Their lists are probably growing daily. (See the separate box for prices of the NEC approved packages.) Because the APC is a CP/M-86 system, I'm sure that most software packages will migrate onto it before very long. It's not as if NEC has

gone for some weirdo processor chip/operating system combination.

ASync and BISync packages means that your communications requirements are pretty well taken care of. You can let the APC pretend to be an IBM work station by using the 3270, 3780 or HASP versions of BISync. Alternatively you could use ASync to let the APC think it's an ordinary terminal attached to another computer, an APC perhaps. Data can be handled in binary or ASCII format and incoming data can be stored on to the APC's disk.

Documentation

I was given seven official manuals, two unofficial ones and the MasterPlanner manual. The NEC manuals were all bound in plastic ring binders which were textured to make them feel like suede. I didn't like the feel, I quite liked the manuals though. It's amazing what a clear layout and typesetting does for one's attitudes to documentation. Apart from the Word Processor and Mailing List Manager, both called Benchmark by the way, I had two CP/M manuals — one for programmers and the other for users, an operator's guide, a maintenance guide and a system reference guide.

The operator's guide simply tells how to unpack, assemble and operate the equipment from a physical point of view. The system reference guide isn't a lot of use unless you happen to be an engineer because it's jam-packed with circuit diagrams and timing charts. The maintenance guide is in the same category as the last one which leaves us with the CP/M guides and the application guides. I can't help feeling that there should be something deeper than the operator's guide but less complex than the CP/M guides. If there isn't then I think there will be an awful lot of frustrated users out there who know they're sitting on something good but can't put their fingers on the information they need to make the thing give of its best.

Don't get me wrong, all the manuals are good but there really is something missing. I had to hunt around for the information I needed and most users just wouldn't know where to start looking, or even what they were looking for.

Prices

The machine I tested cost over £4000 which sounds like a lot of money to me. You would have to buy programs, a cable and printer on top of that so you are starting to talk about £5-6k for a complete system. I think it would be fair to compare the product with a quality motor car — if you want something that is undeniably well made and will therefore probably be reliable, then this could be a system to put on your short list. If you can afford to lose a bit of computer time here and there then you may be able to find similar facilities at a lower price. If you can live without colour for a while, this does knock £600 off the price. Whatever you do, don't buy a single drive system if you are planning to use it as

GOTO page 227

TASWORD TWO THE WORD PROCESSOR

48K
SPECTRUM

64 CHARACTERS PER LINE ON THE SCREEN AND TO PRINTERS!

TASWORD TWO The Word Processor

Your Spectrum becomes a professional word processor with TASWORD TWO. TASWORD TWO gives you an amazing 64 characters per line on your screen. This is ideal for standard A4 paper and TASWORD TWO prints your text just as it appears on your screen.

Tasword Two drives the following interfaces:

Cobra RS232 I/O Port	Kempston Interface
Euroelectronics Interface	Morex Interface
Hilderbay Interface	Tasman Interface

The same program drives these interfaces. A short easy to follow set of instructions takes you through setting up your Tasword Two to drive the interface you have or choose to buy.

Tasword Two also drives the ZX printer.

£13-90 fully inclusive mail order price.

TASWORD TWO TUTOR

TASWORD TWO comes complete with a manual and a cassette. The cassette contains your TASWORD TWO and TASWORD TWO TUTOR. This teaches you word processing using TASWORD TWO. Whether you have serious applications or simply want to learn about word processing, TASWORD TWO and TASWORD TWO TUTOR make it easy and enjoyable.

TASWORD TWO £2 Demonstration Cassette

See for yourself the powerful features of TASWORD TWO. Send just £2 for the Tasword Two demonstration cassette. A voucher is included which gives you £1 off the price of TASWORD TWO.

TASWIDE – 64 characters per line!

A machine code utility program, TASWIDE doubles the information that your own programs can display. Make a simple change to your print statements and your output appears on the screen at 64 characters per line instead of the normal 32. Both print sizes can be mixed on the screen. 16K and 48K versions supplied on the same cassette.

£5-50 fully inclusive mail order price

TASMAN PRINTER INTERFACE

Plug into your Spectrum and drive any printer fitted with the Centronics standard parallel interface. Supplied complete with ribbon cable, connectors, and driving software.

£45 fully inclusive mail order price

All prices include VAT and post and packaging.

Master 64 INTRODUCTORY OFFER PRICE £125 + VAT!

MASTER is a totally new concept... a complete program development package! Available NOW for the CBM 64, Master has 85 new commands... AND Basic IV too! PLUS Toolkit functions, Business Basic, keyed disk access, screen management, user-definable input zones, report generator, 22-place decimals, date control, disk data compression, string search, screen plotting, screen dump, optional software protection key, and more... Master 64 supports the CBM 1541 disk (also CBM disks 4040 to 9090 with its optional IEEE interface) and is supplied with an indexed User Reference Manual, Quick Reference Guide and demo programs. MASTER IS ALSO AVAILABLE FOR CBM MODELS 4032/8032/8096, AND CBM 700!

PM 96 ONLY £99.50 PLUS VAT!

Unleash the full power of your CBM 8096, with PM96... the only product to provide sophisticated yet simple dynamic memory management... AND Toolkit commands... AND Extended Basic! PM96 offers a multi-program user memory of no less than 82K, with 56K for programs and 26K for variables. PM96 is supplied with a full User Reference Manual, Quick Reference Guide, program disk with demo, and WD11 Support Rom.

Master and PM96 are just two products from our range of fine CBM software... please phone or write for a free catalogue! SCREENPLAY

Steve Mann tries out some games for the Spectrum, VIC-20 and TI-99/4A.

Buyers of the new Pete Shelley album (or cassette) 'XL1' may be puzzled by the hideous screeching at the end of side two. 48k Spectrum owners, however, can connect their computer to the record player and load a set of programs which simply display the lyrics of each track in time with the music while a sort of mini-light-show pulses in sync. Another performer, Chris Sievey, has a single, 'Camouflage', with three games for the ZX81 on the B-side. And a band called Mainframe claims to have started the whole thing with a single, 'Radio', released in October 1982, the flipside of which featured a 'sound-to-light' program for the Apple II.

The music business appears to be cashing in on the computer software boom with a vengeance: walk into the Virgin

Mega store in London's Oxford Street and you'll be confronted by a whole rack of games software — not just Virgin's own brand but material from Quicksilver, Imagine, etc.

Software seems to be cropping up in the most unlikely places — there was a report in the press recently of a fish and chip shop owner in Richmond who dishes up programs for the Spectrum, ZX81 and VIC-20 with the rock salmon, thereby giving rise to dreadful puns like 'fish and micro chips'. This new, wide availability can only be good for the micro fraternity which, until fairly recently, was forced to rely on mail order with all its attendant late deliveries and disappointment when the game on arrival bears little resemblance to the glowing ad copy. Then there's the financial

aspect — three games on the backside of a £1.50 single seems like a good deal to me; even if the games aren't up to much, at least you've got a record to play.

It seems that the relationship between the computer industry and the music business can only get closer — Virgin Games, for instance, already features tracks by Steve Hillage on all its cassettes — and, let's face it, it will be extremely handy to be able to pop into your local record store for your new software. Indeed, games packaging is becoming more showbiz-oriented with writers getting credits — and in some cases their photos — on cassette inserts and, of course, the Top Ten charts that are published in various magazines, listing the best-selling programs for all the more popular micros. Next thing will probably be fan clubs for software writers . . .

Anyway, on to this month's games — all of which are basic no-frills models with nary a guitar in sight . . . One interesting-looking cassette which I hoped to include was Zzoom from Imagine. This is a beautifully designed arcade-style game with excellent graphics and overtones of Defender (which can't be bad). Unfortunately my pre-production copy had a tendency to crash without provocation so I'll have to return to Zzoom in a future issue. So this month we've got cassettes for the Spectrum and VIC-20 and, by way of a change, a couple of plug-in cartridges for the TI-99/4A. The prices given for the two TI games are Texas's recommended figures. In fact, several shops retail them at about a fiver cheaper, which is still outrageously expensive.

TEST MATCH

Computer: 48k Spectrum
Supplier: Computer Rentals
Price: £4.95

In Test Match you are given the opportunity to play a full five-day cricket match — or a one-day limited overs contest — between two teams of your choice.

On loading, you are asked if you would like to choose your own teams or use the two already in memory.

After the teams have been

selected, the computer decides which team has won the toss, and they are given the opportunity to bat or field. Each team may have a maximum of six bowlers, who must be chosen at the beginning and who are ranked in order — your first-choice bowler is more likely to take wickets than number six, although any bowler can be successful. To guard against over-bowling your first choices, bowlers one

to four lose some of their efficiency with every five overs they bowl.

Play then continues with the opening pair of batsmen facing the attack. The result of each ball bowled is determined by a mathematical formula involving a random number between 1 and 246, a constant (5), the batsman's number, the bowler's number, the number of runs scored by the batsman and the number of overs bowled by the bowler. The instructions say that you can work out your best chance of success with any particular bowler by a bit of calculation: this raises visions of Bob Willis jotting figures in a notebook to decide whether Botham or Dilley should bowl — hardly cricket! I just trusted to luck.

The graphics consist of a green playing surface with stick figures representing the fielding team and batsmen. Each ball bowled can have the following results: it can go straight to the wicket-keeper; it can be hit for a boundary; it can take a wicket — bowled, caught, lbw or stumped — it can go for 'extras' or it can be hit into an open space. If the latter,

you have to decide whether the batsmen should run or not. Fielders change colour and shape if the ball has gone directly to them. If the ball splits the field, one fielder changes colour to denote that this is the one who will retrieve the ball. Judging whether a run is possible is perhaps the hardest part of this game — one of my early innings included seven run-outs. One particularly realistic feature is the number of extras — 40 or 50 in an innings, which is pretty much the same as in a modern match. At the end of each over you have the choice of declaring the innings closed or carrying on with a new bowler.

Each side has two innings and the game continues until one emerges triumphant or 400 overs have been bowled, in which case the game is considered a draw. The limited-over game is exactly the same, except that each side has one innings only and this is limited to 40, 50 or 55 overs. In limited-over cricket the batsmen also score considerably faster.

This is hardly a serious tactical game — strategy is less

SCREENPLAY

important than luck. I must admit that I found Test Match a lot of fun—but then I'm a cricket fanatic. I suspect that non-cricket freaks may well be somewhat baffled but anyone

who understands the game will find much to enjoy here.

PARSEC

Computer: TI-99/4A
Supplier: Texas Instruments
Price: £31.95

Until this month I had no experience of using the TI-99/4A, and I must admit that I was very pleasantly surprised. Parsec is a shoot-em-up space game and shows off the TI's graphics and sound facilities admirably.

Loading the game is simplicity itself—you simply slide the program module into its slot at the right of the console, press a button and you're instantly faced with a menu, enabling you to choose TI Basic or the chosen game.

In this game you are at the controls of a spaceship, the eponymous Parsec. You are faced with waves of attack from seven different types of alien craft; there is an asteroid belt through which you must blast a path; and there is a facility for refuelling by guiding your craft through a narrow tunnel. In addition, you may select one of three levels to vary the speed at which your ship moves up and down. The game may be controlled with joysticks or via the keyboard. I suspect that a joystick is necessary to achieve a really high score—I was restricted to keyboard use and found it very difficult to get past the first level.

To start the game it is necessary to press the full-stop key ('Fire' if joysticks are utilised). You are then warned

that alien craft are approaching and the first of the numerous hazards start to swarm in from the right hand side of the screen. First to appear are the Swoopers, which attack from the upper right and drop down to various altitudes above the planet surface. They do not fire at you, but simply fly straight at the Parsec. They are followed by the first wave of armed opponents—the Urbites. These are larger than Swoopers and attack with twin photon cannon. They appear at the right of the screen and are extremely accurate.

Next on the scene is another group of small fighters, the Light Triangular Fighters or LTFs. Similar to Swoopers, their streamlined shape makes them a difficult target. They too simply fly straight at you. If you get past the LTFs you are met by a much more serious hazard—the Dramite cruisers. These are armed with single rapid-fire photon cannons and are exceptionally manoeuvrable. Once you have disposed of the Dramites you face the most vicious and unpredictable of your opponents—the Saucers. These have a disconcerting habit of sneaking up behind you, attempting to crash into you from the rear. If you dodge them successfully they simply reverse direction and hurtle in from in front of you. Dispose of these successfully and you are confronted by the Bynites.

Similar to Urbites and Dramites, these are armed with a photon cannon that fires clusters of photon missiles. As an added hazard, it should be mentioned that if any of your ships are lost at any stage (you have five lives) you go back to the beginning of that stage. So if, for example, you destroy all of the Urbites save one and then fall victim to the last Urbite you then go back to the beginning of that stage and have to start all over again.

Once you have disposed of all the aliens you might think your troubles are over. Not so! You then have to face the hazards of the asteroid belt. You cope with this problem by simply blasting the lumps of rock out of the way. Succeed in this and the game moves up a level and the aliens start attacking again—this time they're even harder to dispose of. At any stage in the game you may be invited to refuel. This is achieved by navigating your craft through a narrow tunnel on the planet surface and is not easy—in fact I've managed it only once.

Points are scored as follows: on Level 1 Swoopers and Urbites are worth 100 points per ship, LTFs and Dramites rate 200 points each and

Saucers and Bynites rack up 300 points each hit. Getting through the asteroid belt adds a further 1000. On Level 2 the aliens increase in value by 100 points each and the asteroid belt scores 2000. Level 3 adds a further 100 points per alien, with the asteroid belt worth 3000. From this point on, all values except the asteroid belt maintain these points. The asteroid belt increases in value by 500 points per level up to a maximum of 10,000. Oh, and one other point—at Level 2 you must hit each alien twice to destroy it. Level 3 and above requires three hits per alien.

All in all, this is an excellent and addictive game. I feel that joysticks are a necessity for really high scores—using the keyboard I failed to get further than the start of the second level, but then my reflexes aren't what they once were. If you have the speech module for your TI, the game will talk to you—even without speech the sound effects are just fine. If you own a TI and can afford the high price, Parsec should give you hours of fun.

ALPINER

Computer: TI-99/4A
Supplier: Texas Instruments
Price: £31.95

After the hustle and bustle of Parsec, Alpiner comes as a welcome relief. In this game the object is to guide a mountaineer up six of the world's tallest mountains, battling against avalanches and a somewhat weird collection of animals.

Slide the program module into its slot and you are met with

a menu, detailing TI Basic and the various different versions of Alpiner (the difference is purely in the language used—you may choose any one of seven different languages). On starting the game a naggingly familiar tune begins and a representation of a mountain-climber is depicted as he stands at the foot of Mt Hood, the first on the list of six peaks to be climbed. The

mountaineer is guided by using the cursor keys, and you simply start him moving upwards. At any time you may be met with a hazard—this could be a rattlesnake, a mountain lion, a rock fall or maybe a skunk.

A total of 11 objects impede your progress on each peak and these are heralded by a warning tone (if the speech module is fitted you will get a spoken warning). Your climber has some superhuman attributes—each step he takes will move him 40 metres upwards. Bumping into any obstacle, with the exception of trees, results in your Alpinist falling back two steps or more. Each step back is 46 metres. If your climber touches another obstacle while falling back, he is knocked to the base of the mountain and you lose one of your four lives. As you climb higher, the obstacles become more difficult—bears will set you back six steps, mountain lions have a penalty value of seven, bats fly out of caves and knock you down five steps, vultures drop rotten eggs on you, causing you to lose eight steps, and rams will set you back a full nine steps. The final peak, Mt Everest, features the most fearsome of all creatures—the Yeti, or Abominable Snowman. This is mounted on

skis (!) and will make straight for you; one touch sends you crashing to the bottom of the mountain.

There are certain bonuses to be gained. A time recorder is constantly on screen and you are awarded a bonus on each peak if there is still time remaining. In addition, at certain times the bears, mountain lions and rams will appear with a small green target held between their paws. Touch the target without making contact with the animal that holds it and you will rack up a bonus of between 500 and 1000 points. Touch the animal, however, and you hurtle to the bottom of the mountain, losing a life.

If you climb all the mountains successfully, the whole thing starts again—but much faster and with additional hazards. This is certainly a novel game and one that makes very good use of the TI graphics. I had a lot of fun playing five or six games, but I suspect that the novelty would wear off fairly quickly. I think that this could be an ideal game for younger children who may not be clever enough to deal with all the complexities of something like Parsec.

CATCHA SNATCHA

Computer: VIC-20 (unexpanded)
Supplier: Imagine
Price: £5.50

Catcha Snatcha is a great idea that's let down by its execution. As Barney Bootlace, your job as store detective is to prowl the shopping emporium, keeping an eye open for shoplifters, lost

children and lost property. Your only aim in life is to please the store manager—his approval is shown as a percentage.

Loading the game is achieved by pressing a shift key together with Run/Stop. A floor-plan of the store is then displayed, showing counters and shelves, a

lost-property office, a couple of escalators, the manager's office, a 'lost-children' department and the main exit. Barney wanders the shop while the shoppers pile into the store. Each task that Barney carries out successfully increases his percentage rating—picking up a lost bag scores four per cent, while stopping a shoplifter gains him 20 per cent. It's interesting that saving goods scores more than saving lives—removing a parcel bomb gets him a meagre 10 per cent. A joystick is a big help in this game but, even so, it is hard to control Barney satisfactorily—he seems to move just that bit too slowly in comparison with the shoppers.

If Barney's score reaches 99 per cent he is rewarded by a move to a higher level;

conversely, dropping to zero demotes him by one level. At the top of the screen is a clock—after 6pm when the store stays open for late-night shopping customers flood in and move at a speed that makes apprehending a shoplifter purely a matter of luck.

I must confess to being somewhat disappointed with this game. In general, I'm a big fan of Imagine software and the idea behind this example is excellent. But in practice it just doesn't make it: it's simply too difficult to move Barney around and I found that it palled fairly quickly. A pity—it could have been superb. Catcha Snatcha was written by Eugene Evans.

JUMPING JACK

Computer: 16/48k Spectrum
Supplier: Imagine
Price: £5.50

After the disappointment of Catcha Snatcha, Imagine returns to form with this little beauty for any Sinclair Spectrum. Like many a good game the concept of Jumping Jack is extremely simple—you control a matchstick man with a big nose and the object of the exercise is simply to make him jump up eight platforms to the top of the screen. The screen is divided by horizontal lines and gaps appear in these lines at intervals. When a gap appears directly above Jack, he is able to leap in the air and ascend a level.

Each set of levels negotiated brings a hazard that roams the platforms—a witch, an octopus, an axe, a train, etc,

etc. In addition, each completed screen adds a line to a limerick that begins 'Jumping Jack is quick and bold/With skill his story will unfold', and carries on in similar vein.

Jack is controlled from the keyboard, with the Symbol Shift and Space keys moving him left and right and the Caps Shift key making him spring into the air. Great care must be taken to judge his leaps exactly—the gaps move from right to left and from left to right and it is all too easy to negotiate a jump successfully and then fall straight back through a gap that is moving the other way. Falling through a gap or being hit by one of the obstacles results in Jack being temporarily stunned. While he is in this condition he is unable to negotiate any of the obstacles

SCREENPLAY

—so it is all too likely that if he is stunned on the sixth level, say, he will end up falling all the way to the bottom and losing a life.

That's all there is to it—but it is impossible to describe the appeal of this game: play it once, however, and you're hooked. It's a prime example of the 'just one more go' syndrome that separates the great games from the merely

enjoyable. Written by Albert Ball with graphics designed by his son Stuart, this little beauty is highly recommended to anyone who enjoys playing something that's not just a run-of-the-mill space chase computer game. Superb.

MISSION MERCURY

Computer: VIC-20
(unexpanded)

Supplier: Virgin Games
Price: £7.95

Virgin Games' first offering for the VIC-20 is, like the other Virgin offerings reviewed last month, very much an old standard. Mission Mercury is simply a jazzed-up Lunar Lander. The cassette insert tells you that a team of scientists has been stranded on Mercury where a freak solar flare has produced a violent burst of radiation. The scientists are feared dead when a faint message comes over the ether. You (who else?) are picked as

leader of the rescue mission . . .

As an added hazard, Mercury's skies are full of asteroids and you have to pick your way through these to reach the landing pads—of which there are three. To make things just that bit harder, you can rescue only one scientist at a time, and landing on a pad renders it useless for future attempts. So you must guide your rescue shuttle down from the mother ship, pick up a scientist and return. You have to repeat the operation until the entire team is saved.

Getting your shuttle through

the asteroids and onto a pad is hardly taxing—and, in fact, the pad is not destroyed if the shuttle merely lands; it is okay until the shuttle has redocked with the mother ship. This is the only difficult part of the game—it seems much harder getting back up through the asteroids than it was getting down and of course this time you have to hit a moving target. Graphics are good and the game is well designed—but the concept

behind it is so old hat it makes you wonder why Virgin bothered. One unforgivable thing about this game is that nowhere on the packaging does it state that a joystick is essential. Virgin should rectify this immediately.

GIANT ADVENTURES

£9.90

for
ATARI 400/800 ^{32K} **BBC** ^{32K} **CBM 64** **LYNX** ^{48K}
NASCOM ^{32K} **ORIC** ^{48K} **SPECTRUM** ^{48K} **& 380Z** ^{48K}

1) **COLOSSAL ADVENTURE:** The classic mainframe game "Adventure" with all the original treasures and puzzles + 70 extra rooms.

"A minor miracle of programming" - *Popular Computing W.* 12 May

"A few days ago I received Colossal Adventure and I am writing to say that I am delighted with it. I first met Adventure on an Open University summer school and several of us regularly stayed up to 3 and 4 o'clock in the morning playing it. That was 6 years ago, and I've not been able to play it since, so I was immensely pleased to see how like the original yours is."

- *Chris Green (customer)* April 83

2) **ADVENTURE QUEST:** Through forest, desert, mountains, caves, lake, fire, moorland and swamp on an epic puzzle journey.

"This is the best adventure yet. I did the H****t in 1 day and p*****a in about 3 1/2 hours." - *S Burrows (customer)* May 83

3) **DUNGEON ADVENTURE:** "massive adventure with more than 100 puzzles to solve. Rich vein of humour throughout." - *The Micro User* June 83.

Each adventure needs 32K and costs £9.90 (inclusive). They are very much bigger than normal adventure games that you can buy.

NASCOM PROGS

Asteroids	m/c,g	£7.90
Galaxy Invaders	m/c,g	£5.90

5-games cassette	misc	£5.90
High speed + source compression		

(FULL RANGE IN NASCOM CATALOGUE)

ALL PRICES INCLUDE P&P AND VAT. ALL programs are in stock and orders will be sent within 2 days of receipt. Please send order or SAE for catalogue, describing your micro, to:

LEVEL 9 COMPUTING

Dept W, 229 Hughenden Road, High Wycombe, Bucks HP13 5PG

BBC FORTH

£15

"For your money you get not only a very good implementation of the popular FORTH language but also a 72 page manual... Once you have got an idea of the fundamentals you should get better value out of this pack than virtually any other program you could buy. In fact, the only reason I can think of for not buying this cassette is that you already have a version of FORTH!" - *LASERBUG* April 83

"rqFORTH is fast and has a first-class screen editor... Overall, a good buy" - *Computing Today* July 83

rqFORTH costs just £15 (inclusive) and runs on 16K or 32K BBC micros. It:

- ★ needs no added hardware and works with any MOS version;
- ★ works with cassette and disc;
- ★ is FORTH-79 STANDARD and has fig-FORTH facilities;
- ★ provides 260 FORTH words and is infinitely extensible;
- ★ allows full use of the MOS via *MOS, CALL and EMIT;
- ★ permits use of all graphic modes, even 0-2 (just!);
- ★ has an excellent full-screen editor;
- ★ runs faster than BBC BASIC;
- ★ includes a 72 page manual, a 20 page disc supplement and a summary card for quick reference;
- ★ is used by hundreds of people, worldwide.

BBC FORTH TOOLKIT

£10

"Level 9 promise to support rqFORTH and this pack proves it. It provides the source code for all sorts of useful routines and examples of how to program in FORTH. With so much on one cassette it would be good value at twice the price." - *LASERBUG* April 83

The rqFORTH toolkit costs just £10 (inclusive) and adds the following facilities to FORTH:

- ★ a full assembler, providing machine-code within FORTH;
- ★ turtle graphics, giving you easy-to-use colour graphics;
- ★ decompiler routines, allowing the versatile examination of your compiled FORTH programs;
- ★ the full double-number set (with many extensions);
- ★ an example FORTH program and demonstrations of graphics;
- ★ other useful routines.

ATTENTION ALL ZX81 AND SPECTRUM OWNERS

Introducing the new Ricoll compatibles

Guaranteed quality and reliability at sensationally low prices

Keyboard RIKB1

Just imagine how good it would be to turn your ZX81 or Spectrum into this attractive model with its professional typewriter keyboard (full 41 keys plus spacebar) and rugged all metal body.

It's not only good looking, there's a list of features beneath the gleaming black finish and the price shows how easy we've made it turn the dream into reality.

- Adjustable fixing of PC.B. virtually eliminates the famous 'wobble' and provides a complete choice of add-on parts.
- Simple connection, no soldering, no special skills. All you need is a screwdriver and pliers.
- Complete with full instructions.
- Double shift key.
- Switches have gold-plated contacts and a guaranteed life of 10⁶ operations.
- Ergonomically shaped front ensures easy operation.

Be sure to state whether ZX81 or Spectrum type required.

All metal rugged construction

£37.95 inc. VAT
p & p £2.00

16K RAM Pack RI161

Increase the power and potential of your ZX81 with our 'state of the art' 16k RAM pack. We've used the latest technology to reduce the number of I.C.s and give you better efficiency and improved operation.

- Very low power feature when used with our keyboard RIKB1, the dreaded 'wobble', overheating and memory loss become things of the past.

- Easily expandable to 32k by simply plugging in extra RAM chips - no soldering! See our special offer!

- Sturdy plastic case.
- Fits neatly into rear of computer

£22.95 inc. VAT
p & p £1.25

'state of the art' technology

Special Introductory Offer

If you upgrade to 32k within six months of purchase, we will supply the necessary chips for your RI161 at a special price of only £13.75 inclusive of VAT (p&p £1.00).

★ Coming Attractions ★

Of special interest to educational establishments and serious hobbyists

EIGHT SLOT BUFFERED MOTHERBOARD

Eight slot expansion buffered motherboard for the Spectrum enables up to eight add-on boards to be fitted and operated with complete security.

We will be introducing special uncased boards with the following features:-

- Parallel ports (4-8 bit port in or out)
- 8 or 16 channel D to A convertor
- 16 channel A to D convertor
- 4 channel 12 bit A to D convertor
- Counter/timer, real time clock
- Fast A to D real time recording and analysis of sound etc (with software)
- Sound generator and filter
- Centronics printer inter-face
- E.PROM programmer 2716/2731/2764/27128/27256

Further details in October issue

Sound Generator (filtered)

Soon you'll be able to add those exciting sounds you've always wanted. Our new sound generator, specially developed for the Spectrum is, programmable to produce virtually any sound; animals, birds, explosives, bomb blasts, trains etc.

- Filtered to give clean, realistic sound reproduction
- Completely programmable
- COMPLETE WITH DEMONSTRATION CASSETTE
- Sturdy plastic case
- Own speaker and amplifier
- Fits neatly into the back of your computer - no soldering
- Full range of software available

completely programmable

Further details in October issue

DRAGON MERGER

The Dragon 32 provides a RENUMBER facility but no MERGE. Dragon owners might like to know that memory

locations 25 and 26 contain the start of Basic address. Locations 27 and 28 contain a pointer to the start of variable storage.

The following Basic lines will move pointers above the first program:

```
10 IF PEEK(28) ≥ 2 then POKE 26, PEEK(28) - 2 ELSE POKE 26, 256 - PEEK(28)
20 IF PEEK(28) ≥ 2 then POKE 25, PEEK(27) ELSE POKE 25, PEEK(27) - 1
```

Load the second program and type POKE 25,30: POKE

26,1: CLR to complete the merge. Even if the second program has line numbers lower than those in the first it can still be renumbered correctly.

A Fallon

ACE GRAPHICS

The Jupiter Ace, like the ZX81, has pixel graphics, and an instruction PLOT which allows a program to set or clear any pixel on the screen. It would be useful, especially for games, to have some command which would test to see if a pixel is black or white. This is what this command ?PLOT does.

The command uses assembler code and, if the defining word CODE has been defined as described in the manual, can be used in the same way as a normal Forth word would be used.

The input parameters are: x-coordinate, y-coordinate, and the command returns TRUE (1) if the pixel at that position is white, and FALSE (0) if the pixel is black.

Note: any assembler code entered via CALL on the Ace enters with HL pointing at the first instruction. (CALL uses JP (HL).) This is used to construct an address in the middle of the code. This address is put into IY, so that a piece of ROM code, which exits with JP (IY), can be entered. The ROM code is part of the code for the PLOT command. It is entered with BC containing the plot type word, 0 for unplot. The coordinates are still on the stack, but PLOT will take them off the stack and use them.

On return, the following registers are useful:

A New screen character code.

E Old screen character code.
HL Screen address.

If the pixel was already black, it cannot be unplotted, and so both codes will be the same. If you want the command to leave the screen unchanged, you can put the old character back onto the screen; if you want the command to leave the pixel black, this instruction can be omitted.

Finally, the command exits via part of the ROM code for 0=. It enters with the A register zero or non-zero, and a flag value is put on the stack.

The first version of the command is the smallest possible, but it is dangerous! If you call it with incorrect coordinates, you get the system into such a state that the only thing you can do is switch off! You should only use this version when you are trying to squeeze a program into the available space, and you can guarantee correct parameters every time.

The second version is only eight bytes longer, but less dangerous. It will still do funny things after incorrect parameters, but it will then recover. You will find that the first thing you type in after 'ERROR 9' will do something funny, but after that, type ABORT to make sure, then you can continue as normal, and can try and correct your incorrect values.

Both versions are listed with a lot of comments, which should be omitted when typing

```
CODE ?PLOT ( assembly code routine to test
the state of a pixel
input: x-coord y-coord
returns: flag
0: pixel was black
1: pixel was white
uses ROM PLOT code)
1 C, 11, ( LD BC,0011 ) ( NB entered with HL )
9 C, ( ADD HL,BC ) ( = entry address )
E5 C, ( PUSH HL )
FD C, E3 C, ( EX [SP],IY ) ( IY points into code )
D1 C, ( POP DE )
23 C, ( INC HL )
23 C, ( INC HL )
73 C, ( LD [HL],E )
23 C, ( INC HL ) ( save IY for later )
72 C, ( LD [HL],D )
48 C, ( LD C,B ) ( BC = 0 meaning unplot )
C3 C, B4F, ( JP B4F ) ( enter ROM - will return
by JP [IY] )
FD C, 21 C, 0, ( LD IY,0 ) ( restore original IY )
73 C, ( LD [HL],E ) ( put original value back )
( THIS INSTRUCTION OPTIONAL )
AB C, ( XOR E ) ( A = 0 if no change )
C3 C, C1F, ( JP C1F ) ( sets flag and returns )
```

Version 2 (Larger but less dangerous)

```
CODE ?PLOT ( assembly code routine to test
the state of a pixel
input: x-coord y-coord
returns: flag
0: pixel was black
1: pixel was white
uses ROM PLOT code)
1 C, B, ( LD BC,000B ) ( NB entered with HL )
9 C, ( ADD HL,BC ) ( = entry address )
E5 C, ( PUSH HL )
FD C, E3 C, ( EX [SP],IY ) ( IY points into code )
48 C, ( LD C,B ) ( BC = 0 meaning unplot )
C3 C, B4F, ( JP B4F ) ( enter ROM - will return
by JP [IY] )
FD C, E1 C, ( POP IY ) ( restore original IY )
73 C, ( LD [HL],E ) ( put original value back )
( THIS INSTRUCTION OPTIONAL )
AB C, ( XOR E ) ( A = 0 if no change )
C3 C, C1F, ( JP C1F ) ( sets flag and returns )
```

Version 1 (Small but dangerous)

in. All numbers are hexadecimal, which means that you should have typed in the line:
16 BASE C!

before starting to enter the command.

(Name supplied)

BBC BASIC CONVERSION

There are times when converting programs into BBC Basic when a simple, neat method of GOTOing out of FOR...NEXT loops would be useful. The procedure PROCFFPOP allows this by effectively removing the last entry from the FOR...NEXT stack.

```
DEF PROCFFPOP
?38=?38-15
ENDPROC
```

Location 38 holds a value that is fifteen times the number of FORs left on the stack so reducing this value by fifteen decrements the stack pointer. If you try this short program:

```
10 i=0
20 FOR j=1 TO 10
30 i=i+1:PRINT i
40 PROCFFPOP:GOTO 20
50 NEXT j
```

you will find that the value of i will keep increasing. When the call to PROCFFPOP is removed a 'Too many FORs' error is generated when i is ten, the maximum level of FOR loop nesting.

Some Basics, such as Atari's version, provide a 'POP' command to remove the last GOSUB from the stack in case you decide not to RETURN from a subroutine. This can be simulated in BBC Basic by the procedure:

```
DEF PROCFFPOP
?37=?37-1
ENDPROC
```

This decrements the location holding the number of GOSUBs remaining on the stack and hence the stack pointer.

Unfortunately, because byte indirection is used, these procedures will not work in conjunction with a second processor. Tube compatible versions could be produced using OSWORD calls with A=5 to read from the appropriate memory locations, and A=6 to write the modified values back to memory. This program was written and tested using OS 0.1.

COP TIPS

Here are some tips for using the second processor in the Newbrain.

In addition to the Z80A which is its main processor, the Newbrain contains a National Semiconductor COP420 4-bit processor which is used as an intelligent I/O controller and manages the keyboard, line display, and tape I/O.

Communication between the two processors is handled via two page zero locations; COPCTL and COPST. COPCTL is a command byte which is written to the COP at interrupt time, and COPST is a series of flags which tell the Z80 what the COP has done, or is doing. There is also a third location, COPBUFF, which is used as a data buffer either to or from the COP. COPCTL, COPST, and COPBUFF (the names are those used by the technical manual) are at 59, 60 and 61 respectively.

Unless tape I/O is going on, COPBUFF will normally contain the keyboard matrix value of the last key pressed. This value will remain until another key is pressed (it won't change when you release the key).

The technical manual mentions the functions of several of the commands, but is inexplicably coy about telling you what their values are... a deficiency which a little trial and error soon remedies.

It appears that only the top four bits of COPCTL are read by the COP, and those values for which I have been able to discover the function are as follows:

D0—do nothing (the default value, and the only one given in the technical manual).
 80—perform tape I/O (I am uncertain of the details of the operation).
 F0—rescan keyboard; this will rewrite COPBUFF with the value of any key currently pressed (it will not clear it if no key is being pressed).
 A0—update line display from buffer area. The line display buffer runs from 62-77

inclusive, and is in reverse order (62 is the rightmost character).

So what use is all this? Well, the 'rescan keyboard' command allows us to tell when a key is being pressed, and also when it is released, which is otherwise impossible on the Newbrain. The following Basic subroutine will return the matrix value of any key currently being held down (except STOP, REPEAT—STOP can be detected by other means, of course). If more than one key is held down at once, only one will register, exactly which depends on the key.

The value is six bits wide, the top two bits give the status of SHIFT, CONTROL and GRAPHICS; SHIFT sets bit six, CONTROL bit seven, and GRAPHIC both bits, when pressed. The value returned for each key on the keyboard follows—

```
1000 a=PEEK(61):IF a=0
RETURN
1010 POKE 61,0:POKE
59,240:RETURN
(this returns the key in a. It clears COPBUFF and rescans the keyboard if a key is being pressed)
```

Key	Value	Key	Value	Key	Value
1	9	7	8	3	8
6	4	7	3	3	8
(22)	23	T	11
E	12	R	11	P	38
I	36	0	38	S	46
ESC	31	A	46	K	51
G	42	J	51	Z	30
+	29	NLN	30	N	56
V	57	B	56	VTX	47
	55	/	47	CRU	2
SPC	15	CRL	2		
Value	Key	Value	Key	Value	Key
7	4	6	5	5	5
19	9	20	0	21	13
24	Q	14	W	13	13
10	Y	37	U	35	28
26	=	27	—	28	43
45	D	44	F	43	40
62	L	39	:	40	58
60	X	59	C	58	54
52	M	53		54	61
25	HOM	63	INS	61	18
50	CRD	34	CRR	18	

ESC=Escape NLN=Newline
 VTX=Vidextext HOM=Home
 INS=Insert SPC=Space
 CRL=Cursor left
 CRU=Cursor up
 CRD=Cursor down
 CRR=Cursor right.
 SHIFT adds 64 to value,
 CONTROL adds 128,
 GRAPHICS adds 192.

The other COP command which I have found useful is the one to rewrite the line display. Using this the line

display can be poked with values, and then updated by setting COPCTL to A0 (POKE 59,160).

The following short program demonstrates that the line display can in fact display 256 different characters, not the 64 or so stated in the manual... the characters are displayed 16 at a time; pressing any key shows the next group.

```
10 CLOSE #1:OPEN #1,5
20 ba=62:FOR i=0 TO 255
STEP 16
30 FOR j=15 TO 0 STEP -1:
POKE ba+j,i+15-j:NEXT j
40 POKE 59,160:GET #1,a:
NEXT i
50 CLOSE #1:END
```

As you will notice, the top 128 characters are simply flashing versions of the bottom 128, and the 'new' characters are mostly pretty weird and wonderful...

I have written a game using the line display only using some of the new 'graphics' (a world first?), but a more practical use is to enable upper and lower case to be distinguished on the line display, by flashing lower case letters. The following subroutine does just that, displaying a\$ in upper/lower case.

```
1000 IF LEN(a$)>16 THEN
a$ = LEFT$(a$,16)
1010 FOR i=1 TO LEN(a$)
1020 a=ASC(MID$(a$,i))
1030 IF a>96 AND a<123
THEN a=a+96
1040 POKE 78-i,a
1050 NEXT i
1060 FOR i=i TO 16
1070 POKE 78-i,32
1080 NEXT i
1090 POKE 59,160
1100 RETURN
```

The loop from 1010 to 1050 puts the string into the buffer, converting any lower case letters to their flashing upper case equivalents. The loop from 1060 to 1080 clears the rest of the display, and 1090 makes the COP display the buffer.

Stephen Burt

BBC PERFECT LISTINGS

As many BBC micro owners who possess a printer will know, it can be difficult to obtain perfect hardcopy listings if the program contains directly embedded mode 7 teletext control characters (those which produce colour and graphics, etc). This is because the control

characters can make the printer backspace or skip characters, or perform other equally weird and wonderful effects that can lead to untidy, sometimes unreadable, listings. The neatest solution to this problem is to define a spare function key as shown below:

```
*KEY 1vect=!&20E AND
&FFFF: FOR B%=0 TO
3STEP:P%=&70:
[OPTB%:CMP#128:BPL
```

```
swap: JMPvect:.swap
LDA#ASC(" "):
JMPvect]:NEXT:?&20E=&70:
?&20F=0||M
(Please note that the '||' at the
end of this program is the
character which appears
under the break at the top right
of the keyboard. This with 'M',
as used here, produces a
carriage return and is used in
some specialised
applications.)
```

Pressing this key before

listing a program to a printer will cause all teletext control characters to be printed as a ' '. This can easily be changed by altering the 'LDA' instruction to give any character desired. Pressing the Break key will return all output to normal.

Lee Baxter

LYNX TAMER

Accessing the Lynx's video RAM is an awkward business. This is because the screen memory is in separate pages from the user RAM — the layout is shown in Fig 1. This is one of the reasons why screen handling on the Lynx is slower than on most other micros.

It can be seen that there are three screen memories, one for each of the primary colours. There is also a fourth area which can alternatively be used to produce green.

In order to access the VDU RAM, it is necessary to select the bank of memory to be accessed, read from and/or write to the screen, and then switch back to workspace RAM. It is therefore apparent that any program running in RAM cannot itself access the screen, because it will switch itself out from the memory map if it attempts to select one of the video pages.

There must be some way to read from and write to the screen, of course, and the answer is to use ROM routines to do the job. This works because, no matter what page of RAM has been selected, the ROM always gets priority on reading.

As several values have to be passed, via the processor

registers, to the routine which writes to the screen, it is not possible to POKE to the video RAM from Basic. This would in any case be of little use with the bit-mapped display used by the Lynx.

The routine which writes a byte to the screen is located at 08B6H in the ROM I have inside my Lynx. The parameters which it requires in the various Z80 registers are as follows:

A must contain 65H to select bank 1, or 63H to select bank 2.

A' should contain E4H to select bank 1, or E8H to select bank 2.

BC must point to the colour area to be accessed, ie, 8000H for blue, C000H for green and red.

HL should point to the location to be accessed in the specified area. HL=0 points to the top left hand corner of the screen, while HL=1FFFH points to the bottom right hand corner, which is invisible.

E is the bit mask for the byte currently in the specified location, which is logically ANDed with this register.

D is the actual byte to be stored; in fact the result of the above operation is ORed with D and the result stored back to the screen.

An example may serve to make the above a little clearer.

Suppose it was required to set four blue dots spaced one dot apart in the top left hand corner of the screen, the assembly code required would be as follows:

```
LD A,E8H
EX AF,AF'
LD A,63H
LD BC,8000H
LD HL,0000H
LD DE,5500H
CALL 08B6H
```

You can try this program if you wish, but an easier method for experimental purposes would be to use the monitor. The registers can be set up by using the 'U' command, and G8B6 should produce the desired result.

Reading the screen is somewhat simpler as only the HL register pair needs to be set up to point to the location to be accessed. This means that it should be in the range 8000H to 9FFFH to read the blue area, and it should lie between C000H and DFFFH to read the green and red areas. Location 0070H in the ROM then has to be called to read bank 1, while to read bank 2 the address is 0070H. The contents of the specified location are returned in register L, and H is set to zero. This makes it possible to read the screen from Basic by using the parameter-passing facilities provided. For

```
10 PROTECT 0
20 FOR C=1 TO 7
30 INK C
40 PRINT "COLOUR ";C
50 NEXT C
60 PRINT "PRESS ANY KEY"
70 FOR B=0 TO 12 STEP 4
80 OUT &0080,B
90 LET A$=GET$
100 NEXT B
```

example, to find the red component of the bottom right-hand corner of the screen, we execute CALL &69, &DFFF.

The address DFFFH is put into HL on entry, and on exit the read-only variable HL contains the desired information.

Examining the screen-reading routine reveals that one of the banks has to be disabled before the other can be read. This is to avoid data bus contention, as the two pages of memory are seen as one. An interesting implication of this is that the banks can be disabled for other purposes, where certain colours are required to disappear off the screen. This is indeed the case, as the Basic program shows. Some spectacular effects can be achieved by rapidly turning colours on and off.

Note that bits 13 and 15 of the screen address lines are missing. This means that each colour area is phantom in the 8k area immediately following it. Presumably the designers have done this in order to allow memory space for the graphics expansion to 512 x 248, when each colour area will occupy 16k of RAM.

NB. All addresses are in hexadecimal

CP/M HINTS

A great deal of time can be saved in certain circumstances if you know the odd wrinkle or two.

Have you evertyped a line such as:
 PIPB:=A:ACBD.BAS
 only to discover ACBD.BAS does not exist and you meant to type ABCD.BAS?

At that stage you are not really sure what the file ought to be called and so you type DIR to look at the directory and then retype:

PIPB:=A:ABCD.BAS
 You needn't have bothered. DIR is a built in command and so it does not load into memory and then run like user programs. Thus PIP which you loaded into memory was not overwritten and is still there. If only you could get the CPU program counter to point to the beginning of PIP's code and run it, you wouldn't have to re-load it.

Easy! First save a zero length file. In other words create a directory entry for a non-existent program. I call mine GO.COM. Thus, type the following line and then press RETURN.

SAVE 0GO.COM
 Now it doesn't matter what was in memory when your last program bombed out or finished. If you now type GO followed by <RETURN> provided it is not corrupted it will repeat whatever was in memory immediately before.

There are exceptions. Some programs use the whole of the transient program area including the bit at the top of the TPA used by the console command processors CCP. When a program ends, CP/M reloads CCP into memory so that it can process your next command and if your program is using this area, CCP will

overwrite it and corrupt it. Very often data errors appear in this area and so although a program might still be intact, its data may be corrupted and it still will not run. Nevertheless the arrangement works in most situations.

Typewriter Mode: If you use a word processing program, you probably know what a hassle it is to do little things. First you have to prepare a text file then save it and only then can you print it. However, in some circumstances you can use your keyboard exactly as you would a typewriter keyboard and as you press each key, the printer will print each letter. This does not work with all printers, but it certainly works with several that I have used and most can be configured to accept a single character and to print it without waiting for a carriage return. However, you must be able to send line feed characters to the printer. Some terminals have a line feed key, others do not and some you can configure under software control to do this (Victor 9000, Sirius, etc).

What you have to do is type: PIP LST:=CON: and then press <RETURN>

What you have done is to map your printer on to your screen so that as you type at the keyboard whatever appears on the screen also comes out on the printer. The problem is that when you get to the end of a line you have to do both a carriage return and a line feed to ensure that your next lot of printing is on the next line. Once you have finished your document, envelope or similar, all you have to do is type a control Z. To do this you hold down both the control key and the Z key and you will then come back to the Command Mode.

Alan Secker

JOYFUL VIC

This VIC machine code routine takes 84 bytes. It is used to read joystick input. The format is as follows:

If the fire button is pressed, the routine returns a value

+128, ie, JS=USR(0). If the joystick is pointed up and the fire button is pressed, JS would contain 128+1 = 129.

The routine is fully relocatable to anywhere in RAM, and is called by POKEing the high order address byte in location 2 and the low order byte in location 1, then using the USR command. It should be entered either via a monitor or by a hex loader.

OSBORNE AUTOST.COM

I am sure that, like me, most Osborne 1 users get fed up with the infernal "AUTOST?" message each time a disk is booted up. This is due to the absence of the file "AUTOST.COM" which is used

to chain on the program "HELP.COM". The MBasic program below will create a new file "AUTOST.COM" which contains only one instruction, a Z80 RTS [CHR\$(201)], which tells the Osborne to return to CP/M without doing anything. The new "AUTOST.COM" consists of only one byte and a directory

```

10 ON ERROR GOTO 90
20 PRINT CHR$(26);STRING$(52,128):PRINT:PRINT:PRINT
30 PRINT,"FIXING AUTOST.COM";
40 KILL "AUTOST.COM"
50 OPEN "0",1,"AUTOST.COM":PRINT#1,CHR$(201):CLOSE
60 PRINT:PRINT:PRINT:PRINT:PRINT:PRINT STRING$(52,128)
70 PRINT:PRINT:PRINT CHR$(7):PRINT
80 SYSTEM
90 RESUME 50

```

entry, so it does not take up much space. After this program has been run, whenever the

disk is booted up, all that will appear is the 'A>' prompt.
 Nick Wilson

BENCHTEST

MICRO-PROFESSOR

The Micro-Professor II claims to be compatible with Apple software. Bearing this in mind Shirley and Pete Fawcett set out to examine the strengths and weaknesses of this latest clone.

Sooner or later, for every micro that tops the popularity charts, there will spring up two or three or even more imitators, all offering a few more features for a little less money than their source of inspiration.

The Apple II has come of age now, and in so doing it has acquired a camp following of its own. One of the cheapest, and at first glance one of the most intriguing would-be Apples is the Micro-Professor II, from Taiwan.

At £269, the MPF-II is a great deal cheaper than the Apple II. It also appears to share many of the features that have made the Apple so popular — high resolution colour graphics, support for a disk drive, Applesoft Basic as near as makes no difference, support for a wide range of peripherals, and best of all, it claims to be able to run much of the enormous pool of Apple software.

As the name suggests, the MPF-II is the second in a series from its manufacturer, Multitech Industrial Corporation of Taiwan. Its predecessor is a tiny educational micro, and it's to be followed by a business machine. The MPF-II itself is not new, though it only arrived in this country in the spring of this year. It was launched in the USA a good 18 months ago, where it's been gently ticking over ever since. (UK distributor Sirtel says the micro has sold 28,000 in the States since last Christmas.)

According to Sirtel, this micro is aimed at 'The home computer user with an interest in Basic'. It's also angled at the educational market. The company does not stress the Apple-compatibility claims although this machine runs a modified version of Apple DOS to support its disk system.

We took a look at a standard 64k system with printer and disk drive, to see if the Micro-Prof II does live up to its reputation.

Hardware

The Micro-Professor is a severely smart little box, long and very low in a sturdy light grey moulded plastic casing, trimmed with dark grey. It stands only 30cms high, with the tiny calculator-style keyboard recessed into the top surface near the front edge. Further back is the micro's built-in speaker grille, and a red LED power indicator light.

Unlike most home micros, this one is narrower than it is deep, measuring 250cms from front to back compared with 175 from side to side. Why the manufacturer has chosen to design the machine this way round we can't imagine, since it provides less space for the keyboard and needs more space to fit it on a desk in front of the TV or monitor. Very strange.

The casing is pretty tough, though it would be impossible to stack a monitor on top, Apple-style. The front side sports the Multitech logo, then round the left and back sides are a respectable set of interfaces to allow this micro access to a good range of peripherals. Moving clockwise around the MPF, there's a port for either joystick or add-on keyboard, one for a printer, and a ROM cartridge slot which will also take the disk controller cartridge; then at the back, there are monitor, microphone, earphone, TV and power sockets.

The on-off switch is mounted on the separate power supply where, sadly, Multitech has skimped on the cable. It will

probably be a case of the power socket coming to the Micro-Professor, rather than vice versa, since you get well under a metre of cable to connect up to the MPF, and less than two with which to reach your socket. That's the sort of minor annoyance that would cost very little to rectify.

There's a rather gimmicky TV switching box that fits between computer and television to let you flick between the two without needing to keep plugging and unplugging your aerial. But it makes the setting-up instructions rather daunting, and the MPF will work perfectly well without it if you prefer to connect it directly to the TV.

Memory

64k of memory comes as standard on the MPF. Or so Multitech claims, and after a fashion the company is right. But the figure is somewhat misleading, since when you start up the system you'll discover that in fact you have just under 38k to play with.

At least, you will discover that if you happen to be familiar with the ground rules of twos' complement arithmetic, in which the MPF expresses the amount of memory free. (To decode the figure, you'll need to deduct it from the 65536 bytes that make up 64k — but don't expect the manual to explain this.) The manual is indeed coy at this point. 'If your MPF-II displays a number close to -26629, then the memory of your MPF-II is all right', it proclaims.

38k may be as all right as the manufacturer planned, but it is not 64k or anything approaching it. Of the missing 26k, 16k is in fact used as ROM, to hold the Basic and

various other utilities: disk boot routine, input/output routines, printer driver software, and the system monitor. That makes it a 48k micro in most people's terms. True, it is possible to switch the ROM space to be used as RAM by setting a soft switch — but only if you are using one of the cartridge-based languages promised for this micro, since you will lose the Basic that resides in ROM. Since the languages are not yet here, and no utilities are provided to help you make this difficult switch, it's not unreasonable to look upon the MPF as a 48k machine. As such, it is less in competition with the expensive top-enders such as the Apple than it is with much smaller micros like the Oric or Spectrum.

The rest of the missing memory goes to handle the low-resolution graphics or text screen. If you want to use the MPF's high-resolution graphics, you're going to have to sacrifice another 8k to do it — bringing you down to a mere 30k in which to cram your programs.

The MPF's memory map splits the user RAM into two chunks, one of 8k and one of 24k, but they are separated by the 8k of low-resolution graphics memory. Then comes the 8k of high-resolution graphics handling, I/O routines, and finally that 16k of ROM.

The discovery that of your hoped-for 64k, just 30-38 is actually yours to use might lead you to think of expanding the memory. Forget it. No memory expansion is currently available for the MPF, and according to Sirtel, none is planned. Indeed, inside that slimline case there simply isn't space for another thing. No extra memory, and no hope of running CP/M or getting an 80-column display, says Sirtel. What you see is what you get, so if you want a major upgrade you'll have to trade in your MPF-II for something quite different — perhaps the business-oriented Z-80 based MPF-III that will probably appear soon, most likely with CP/M.

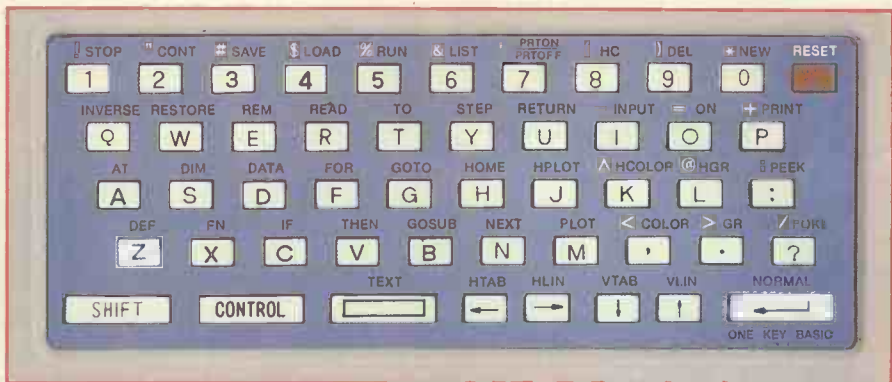

Inside

Getting under the MPF's skin is very easy, and indeed, the user manual actively encourages users to do so — presumably as part of its educational bias. Four small cross-headed screws on the underside of the micro come away to reveal a tightly-packed but neat and well-planned interior. Some 50 ICs perch on the main board, including the R6502, eight 16-pin RAM chips, and the two 28-pin chips used to store the Basic interpreter and the system monitor.

Towards the back of the board is the speaker and PAL TV system encoder. Then above the main board a second one is stacked, to handle colour, and at the front of the unit rests the keyboard. There isn't room to swing a flea inside, never mind expansion.

Keyboard

This is one Professor who's never going to teach a soul to write. The built-in calculator-look keyboard measures a miserly

A strange way to design a keyboard

The drive has the same long low profile as the MPF itself

The MultiTech printer is a grown-up version of the Sinclair ZX printer

A respectable set of interfaces for a good range of peripherals

At £35 the full-sized keyboard seems expensive

MICRO-PROFESSOR

60cms by 155cms, and into that tiny space, Multitech has crammed 49 midget-sized

moving keys. The space bar is particularly hard to use, being just twice the size of the alphanumeric keys, and it is hemmed in by shift, control, return and four cursor keys. The reset key — coloured orange for distinction — is in the upper right hand

corner, and there is no escape key at all. Touch-typing on this keyboard is out of the question.

Even so, as a calculator-style keyboard, this one is not at all bad. On the whole it's preferable to membrane-type keyboards

Some 50 ICs perch on the main board including the R6502 and eight 16-pin RAM chips

such as on the ZX81. On this keyboard, the keys are hard white plastic, and they make a respectable click in response to even quite gentle pressure. But none of them auto-repeat.

There are two drop-over templates for use when switching into either of the keyboard's other two modes—50 graphics characters, or single keystroke Basic commands. Here, the Basic keywords have been positioned so that the most frequently used are closest at hand. Mind you, on this keyboard, *everything* is only too close at hand. When using them, you'll have to punctuate your statements yourself and check their syntax, since unlike the Sinclair single-key commands, these do not insert spaces or check the end result for sense.

Full-sized users can buy an optional full-sized add-on keyboard for the MPF, though at £35 it seems expensive. Sure enough, the keys are full-sized, and spaced the right distance apart, but they are those wobbly rubber pads Spectrum users know so well. They, too, lack auto-repeat, and are also impressively unresponsive to the heavy key-thumping inflicted by one-finger typists such as ourselves. They don't appear to have been de-bounced, and on our sample, the N key was so unresponsive that we asked the MPF to PRIT strings at least a dozen times. And there's no click to let you know that your key-thump has been felt by the keyboard.

Using the add-on keyboard does not disable the built-in keyboard, so you will need to be careful it does not get knocked by mistake. And the two keyboards do not have the same layout, so you will need to relearn where the RETURN, CONTROL, shift and cursor keys are in order to use it.

The add-on has half a dozen extra keys, as well as a full-sized space bar. Two of the new keys are more cursor controllers, for no very obvious reason since there are four already on the built-in keyboard. There are a pair of fire keys for games players, placed directly beneath the shift keys where they tend to get hit by accident. There's also a key bearing the MPF logo which seems to be purely decorative.

The keyboard is smartly finished, standing at a slope on stout rubber feet, though it comes in a brown and beige plastic colour scheme which doesn't go very far towards matching the MPF's light and dark grey livery. It has a curly cable with which it is plugged into the side of the MPF, in the joystick socket.

But it doesn't seem to be a sufficiently great improvement to justify spending £35 to buy it. Better, perhaps, to wait for the business add-on keyboard which may appear soon, says Sirtel, though there are no pricing details yet.

Graphics

The MPF will drive either a television set or a composite video monitor. That puts it one up on most small micros which can't use a monitor, and also one up on the Apple, which doesn't stoop to use a TV. We found the resolution perfectly acceptable on our TV, though the edges tended to

waver a little.

Our biggest reservation was over the colours, which is no fault of TV or of micro, but rather of the designers' taste. Yes, the MPF produces a fairly accurate set of just six colours... black, white, and palest baby blue, lurid orange, springtime-in-Limerick green, and a rather dainty lilac. Note the most obvious choices, and not quite the thing for those mornings when you're feeling a little off-colour.

Text mode gives you a resolution of 40 columns by 24 lines, with a clear and easily readable set of 64 characters that's equipped with 28 symbols and punctuation marks, though no £ sign, and no lower-case letters at all. There's something reminiscent of those pioneer days of punch-cards and mainframes about a micro that only uses upper-case letters. True, it's a weakness that the Apple shares, but then the Apple is an older machine, so there's more of an excuse for it.

In low resolution graphics mode, you have 40 by 48 blocks at your disposal from to construct your screens. Each block may be any of the MPF's none-too-lavish choice of six colours. (In this mode, the Apple gives you 16.) In high-res mode, which gives you 280 by 192 pixels, you are much more constrained in your use of colours. Indeed, two pages of the user manual are given over to explaining the ground rules.

Although all the six colours are still available, you cannot put them anywhere you choose. In the odd-numbered columns, you can use black, white, orange and green, while you are restricted to white, black, blue or purple in even columns. Furthermore, those 280 columns are grouped in sets of seven columns, one set to a byte full of screen information. And any one byte can only contain black, white, and combinations of either purple and green or blue and orange.

Never can you mix the orange and the green, not mention any of the other possible combinations. This is severely limiting.

User-defined characters are built up on a grid seven wide by eight high, using machine code to set the values of each bit. The eighth, high-order bit is used to decide the colour of the whole character.

The Basic graphics commands are much the same as the Apple's, but many of the more complex functions require you to resort to machine code—one area where the Apple pulls ahead of the MPF.

Low resolution graphics instructions include COLOR, PLOT, HLINE and VLINE for plotting horizontal and vertical lines, and SCR to return colour to the screen at particular points. HCOLOR and HPOINT handle colour and plotting in high-resolution graphics mode. There are no screen paint or shape fill commands, nor brightness control. Applesoft commands such as DRAW, ROT, SCALE, and XDRAW (used to draw predefined shapes) are not even mentioned in the MPF manual, but work perfectly well just the same. The FLASH command, on the other hand, is not there at all on this machine. But the worst thing about this Basic is the manual. Finding any informa-

tion in it is well-nigh impossible, and it is riddled with both errors and omissions. both errors and omissions.

As the Benchmarks show, the Basic is not a fast implementation by any stretch of the imagination. True, the 6502 is no super-speedy processor, but there is room for improvement.

Sound

There's just a single sound generator on the MPF, and the resulting noise is both tinny and loud—and irritatingly, there's no way of controlling the volume or even switching the sound off.

This comes as quite a shock when you try running the demonstration cartridge and find your ears being assaulted by a semi-deafening version of the 'Ode to Joy', well off-key.

Programming the MPF's sound capability comes down to your skill as a machine code programmer, since there are no special Basic commands to control the sound. The only way is to reference the appropriate memory locations by using PEEK and POKE commands. The MPF's speaker cone can be made to move in or out by POKEing to the soft switch that controls it, which causes it to beep at 1 kHz for one tenth of a second. By joining a number of these beeps together, it's possible to produce different tones. But there's no guidance given in the manual as to how you should go about shaping the tones you want.

Software

The MPF's native tongue is Basic, of the Apple variety. According to Sirtel, cartridge-based versions of Forth, Pascal and Logo are also on their way, but there is neither a date nor a price for them.

The Basic, like Applesoft Basic, is an extended version of the language, and the two are almost identical. The range of commands available includes both simple variables and multi-dimensional arrays, for strings and for numerics. The complete set of algebraic, relational and logical operators is there, as well as a broad range of mathematical functions: sine, cosine, tangent and arctangent functions, integer, sign, absolute, square root, exponentiation, logarithm, and three random functions. Calculations are rounded to nine digits in total, if you are simply using the MPF in calculator mode for basic arithmetic.

For handling the flow of control in programs, you have FOR...NEXT loops, IF...THEN structures, ON...GOTO statements, but no REPEAT...UNTIL command at your disposal.

Among the utility commands, you have a choice of LOADA or LOADT for loading cassette-based software, depending on whether the program you want to load is Apple or MPF-compatible. (And yes, there are differences between the Basics, as we'll explain shortly.)

PEEK and POKE are available, but none of the more exotic commands such as DEEK and DOKE, to look at two memory

How fast is FAST?

Micro-computers don't hang about—and neither do we. We like to move as fast as the products we handle. When you deal in computers you need a distribution system to match the product. That's where we have the edge. Located at the centre of the country's communications network we can get anywhere in the UK—Fast! Phone in your order now, we'll get the system moving!

MICRO-PROFESSOR

locations instead of just one. Editing and format commands include LIST, REM, TAB, SPCE and POS, INVERSE, and a rather useful TRACE function for debugging.

Editing

The MPF's editing ability is very poor. A line of code can be changed by moving the cursor with the cursor control keys provided the line has not yet been entered; but once you have hit RETURN, the only way to change a line of code is to re-key it.

There is a way round this problem, in the shape of a cassette-based screen editor. This package does offer a slight improvement, though whether it will justify the effort of loading every time from cassette is a moot point. It takes three fingers at a time to operate (shift, control and one other) and allows you to insert, change and delete lines of code in a very clumsy manner, using an illogical set of keys.

It will give you auto-repeat of sorts, a facility sadly lacking on the MPF's keyboard, but only of a single key at a time. All these facilities are ones you would normally expect to find provided on the micro in any case, so to load them from cassette is annoying and unnecessary.

Applications software

The review machine came with a large boxful of cassette-based software, all from Multitech. Most was dismal, even at the price of £5 per cassette. We tried out a road race game, where the object seemed to be to keep a racing car on the road. But the slow response from the cursor control keys made it feel more like driving an overloaded juggernaut. Gobbler turned out to be a reasonable Pacman variant, but too easy to master and rather too slow. There were various financial packages which did little more than your calculator could do, and some fairly lacklustre educational software setting out to teach addition, division, subtraction. . .

One cassette is supplied free with the machine — Micro-Nurse, a diagnosis program. Sadly, although this comes complete with a user manual, there is next to no information about what the program actually does. You can, for example, enter 'TEST RAM' to the program, and after a pause it responds with 'TEST OK'. This may be reassuring, but it leaves you none the wiser.

Compatibility

Since probably the biggest selling point for the MPF is its reputed compatibility with the Apple, the first thing most prospective buyers will want to know is just how software compatible the two machines are.

The answer is, hardly at all. If you have hopes of picking up a pile of Apple

software and plugging it into a Micro-Professor, switching on and sailing away into the sunset, forget it. Only a very tiny fraction of that tempting mountain of Apple software is actually going to run on this machine.

The biggest problem is that, although the Basics are virtually the same on both micros, the respective machine codes are not. And relatively little Apple software is written purely in Applesoft Basic . . . and much of the stuff that *is* will be the stuff you wouldn't want to bother with anyway.

But that's not the only problem. Problem Number Two hinges on the fact that the Apple's and the MPF's memory maps are not the same. The MPF needs an additional four pages for its monitor program which the Apple does not use, and it locates those four pages in the same area that the Apple uses for its text-handling and low-resolution graphics. The MPF's own text and low-res graphics routines have been moved to the area used by the Apple for high-res graphics, and the secondary page for text and graphics is also at a different location on the MPF.

The outcome of all this musical chairs is that if you try to run Apple software on the MPF and your program tries to call code from any of those locations, then the program is not going to do at all what it is supposed to do.

We tried out various pieces of disk-based Apple software (the cassette-based variety is almost unheard of, since the Apple's virtually always sold as a disk system) under the MPF's modified version of Apple DOS.

Applesoft programs of less than 6k mostly ran, while the larger Applesoft programs were a hopeless case. (It's after the first 6k of user RAM space that the MPF's memory map starts to differ from the Apple's.) But even some of the smaller programs gave problems. Many of the keyboard instructions that the Apple uses give problems on the MPF—in particular, the K=PEEK (-16384) statement that is widely used in Apple programs to read the keyboard for keypresses.

Apple programs that swap between text and graphics modes also fail to run, since there are no bona fide text pages. And the TEXT command behaves differently on the two machines; on the Apple, it clears the screen and leaves the cursor on the bottom line, while on the MPF, it clears all but the left and bottom margins, and leaves the cursor at the top.

If you add to these problems the fact that there is no ESCAPE key on the MPF, and a great deal of Apple software uses this key, it becomes fairly obvious that most Apple programs aren't going to run unmodified on the Micro-Professor. Incidentally, you can create some interesting graphic effects as a result of the memory map differences, by running software that merrily overwrites the MPF's screen pages.

Incidentally, it is not at all clear how easy it will be to get hold of the MPF's DOS — essentially a modified version of Apple DOS. Either the dealers will supply the system, or users will need to take along their own copies of Apple DOS to be

tailored. Sirtel is not very forthcoming about how this is to be achieved.

Peripherals

One of the MPF's major plus points, and a feature that puts it into competition with the bigger micros rather than with the Oric or Spectrum, is its ability to support a disk drive. At the moment, it will only handle a single drive, but a twin disk controller may follow.

The drive is priced at £300, and is a small, sleek box styled to match the rest of the system, with the same long, low profile as the MPF itself. It measures just 24 by 15 by 4cms, and is attached by a flat connector to a floppy disk interface software cartridge, which in turn plugs into the MPF's ROM cartridge slot. Its door fastens with a spring-loaded catch which doesn't seem to work terribly well. It uses an Apple-compatible 5¼in 40-track disk format so that it can quite happily read Apple disks. 140 kbytes is its capacity.

There is a joystick to be had, priced at £15, but there wasn't one available for testing. It shares the same input slot as the add-on keyboard, which is rather restricting, and only one joystick can be attached, which is very restricting.

There's no manufacturer's own-brand cassette recorder to be used with the MPF, but unfortunately there is also little guidance given in the manual about the choice of a suitable — that is to say, mono—machine.

The MPF will work with any Centronics standard printer, but there is also a Multitech thermal printer available to go with the machine.

Printer

The Multitech own-brand printer is in effect a grown-up version of the £40 Sinclair ZX printer. It's a smallish grey moulded plastic box with transparent paper cover, measuring 7cms high by 25cms wide and 18cms deep, weighing 1.5kg, and it prints on white thermal paper just 11.2cms wide — about half as wide again as the Sinclair paper.

At £185, the printer seems over-priced, especially since it can print only 40 characters per line, and then only on the special white thermal paper — though granted, it's an improvement on the silver Sinclair variety.

Printing speed is respectable, at around 150 lines per minute. And, being a thermal printer, it can reproduce graphics characters without needing special driver software; but only in black and white, of course. Resolution is quite acceptable, at up to 280 dots to the line.

Thermal printing is done by selectively heating some of the dots on each printhead — 20 per head with this printer — which then turn the paper black when contact is made. But the printer manual warns you that poor quality paper will wreck your printheads in under two hours. It refers you to an appendix for a list of suitable paper suppliers. But alas for your print heads, no such appendix is there.

MICRO-PROFESSOR

On the left hand side of the casing, there's a 16-pin parallel interface, while on top there's a paper release lever and paper advance switch.

The MPF uses the PRTON command to drive the printer, and you can choose to print one line at a time, or by the screenful. You can program the printer to underline, backspace or even retype characters, and a special graphics mode lets you program each dot on the print heads individually.

But you don't have to use the Multitech printer. The MPF will also interface to any printer with a Centronics interface, which throws the field wide open. At £185, this own-brand printer may find it hard to compete.

Documentation

Cast your mind back to the late sixties and early seventies, when Japanese electronic goods started hitting the UK in bulk. Remember the early instruction booklets that went with those stereo systems and televisions? Remember them, and if the memory is a fond one, rush out and buy a Micro-Professor. On the other hand, if you prefer your documentation in English, this is not the machine for you.

The main problem lies with the Basic manual. The user's manual is plump and informative, though finding your way around it is no joke, and there is a brief, heavily illustrated installation booklet thrown in for good measure. Both are more or less in English.

The same cannot be said of the stout, spiral-bound Basic tutorial. It sets out with the approach of teaching computer programming through the use of Basic, rather than purely teaching you this one dialect of Basic. So its almost 250 pages start out from scratch by trotting you through such fundamentals as the workings of the human brain and the history of the computer.

It's packed solid with very likeable cartoons — little jelly-bean characters cracking jokes to soften the subject. But nine times out of ten, you'll find your own set of jokes just reading this manual. How can you take much notice of a manual that greets you with a cartoon of a tiny

jelly-bean professor shaking hands with a microcomputer to the strains of this typical Mingleish conversation: (Micro) — 'Hey! I am micro-computer, nice to meet you!'...(Professor) — 'Oh! So Lovely!'

There are careless and confusing errors in the manual, as well as a total lack of an index to help you find the piece of information you need. It may not even be in there — several of the graphics commands are not mentioned at all in the manual, but work perfectly well. You'll probably never know what is absent and what merely not signposted in this chaotic manual. And errors such as 'The MPF-II keyboard shows the numeral zero with a slash through it' (it doesn't, in fact) do not improve matters.

The user's manual, too, is annoyingly index-less. This manual covers everything from installation and hardware specifications through the single-keystroke Basic commands and other keyboard modes, use of high and low-res graphics, sound generation, use of the system monitor and machine code programming, memory organisation, and input-output handling. Then there's a set of useful appendices featuring the 6502 instruction set, hexadecimal operation codes, a glossary of terms, and keyboard circuit diagrams. But an index is essential for finding any needles in that particular haystack.

I must have hunted for information about sound programming for half an hour before I managed to track down a few grains of information under the heading 'Input-output Expansion'.

Sirtel says it is looking at the possibility of doing a rewrite of the manuals, but there's no date fixed for that as yet. In the meantime, such documentation as there is does the MPF-II no favours at all, and is largely useless for the intended educational audience.

Support and availability

At present, Sirtel — a general electronics importer based in Peterborough and dealing in everything from computers to CB radios — is sole UK distributor for the MPF-II. The company stressed that this is not the only micro it handles, and insists that support will come from the dealers, not from Sirtel. The Spectrum stores are to

sell the micro, as well as various other dealers whom Sirtel wouldn't name — and Spectrum shops should have supplies in stock now.

If the MPF-II is to sell as an Apple substitute, it will need strong support to help users overcome the various incompatibilities and train them to sort out the Apple software that will run from that which won't. Whether Sirtel's policy of leaving support up to the dealers will prove equal to this task remains to be seen. But the company promises that dealers will be ready and able to give guidance on all these matters.

Conclusions

As a serious low-cost rival to the Apple, the MPF-II is just too incompatible to compete and there doesn't appear to be the support to overcome the incompatibilities. As an educational aid, it's let down to the point of uselessness by poor documentation. As a rival to the smaller colour home micros, it is hampered by a lack of decent software and an equal lack of Basic commands to make programming of sound and colour straightforward.

Really, this is a machine which isn't sure what market it should be aimed at. Given a decent Basic manual and a bit more compatibility with the excellent educational software that's around for the Apple, there's no reason why it shouldn't make some headway in education. Put up against the Spectrums and Orics of this world its only selling point will be the ability to handle a disk system and run a little Apple software — for on colours, on sound and on Basic implementations, it doesn't compete, and user memory is virtually equal.

At the moment, the MPF is overpriced since it's not going to make its mark in the Apple marketplace — where, indeed, it would look cheap. It will most probably come down in price before long — and if a proper hard-keyed keyboard does appear soon, at a reasonable price, then this micro will have a small impact on the Spectrum shelves. As it stands, it will have a pretty tiny impact.

Personally, we wouldn't buy it. It has some sterling virtues, most notably the funniest Basic manual of the year, but a micro with a colour range this small and this hideous, and with a propensity for playing Beethoven off-key, is never going to win our hearts.

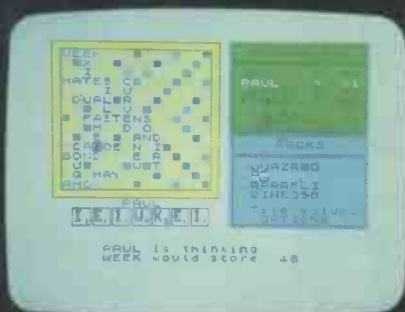

END

Technical specifications

CPU:	R6502, 1.023 MHz
RAM:	48k
ROM:	16k
Keyboard:	49 key calculator type, built-in
I/O ports:	TV, composite video, cassette, joystick/keyboard, parallel printer, disk controller/ROM cartridge.
Disk:	Single drive only, 140 kbytes.
Printer:	Thermal, 40 columns, 150 — 180 lines/minutes.
Peripherals:	Keyboard, joystick.
Operating System:	Apple DOS variant.
Languages:	Basic; Pascal, Forth and Logo to come, on ROM cartridge.
Software:	Multitech brand cassette based games, business and education packages.

Problem. Simulating an aircraft on a small microcomputer and depicting the 3-D world outside through the eyes of the pilot.

Problem. Turning the Spectrum's numerical abilities into powerful verbal skills combined with a huge vocabulary.

PSION HAVE BIG PROBLEMS.

Problem. Evaluating complex algorithms to provide sufficient depth of analysis in a short time.

Problem. Integrating cartoon-quality graphics with the realism of the ski-slope.

Problem. Creating cartoon-quality graphics in an entertaining and varied game.

Problem. Providing complex, sophisticated data handling through easy-to-use commands.

Problem. Modelling in 3-D on a small micro - performing some 7.5 million calculations for one hidden line drawing.

Problem. Balancing the number of strategic factors required with a complex series of rules for a classic game.

Psion have bigger, more ambitious software ideas for your Sinclair Spectrum. So naturally, our software is more of a problem to design.

Happily, we have all the right programming skills to match. In fact, Psion have one of the most advanced microcomputer software design facilities in the world. (Ask anyone who's seen a VAX 11/750 computer!)

That's why we can create the best software programs you'll ever see on a Sinclair Spectrum. (Remember - our 'Horizons' cassette was selected to introduce you to the Spectrum's capabilities.)

In all, there are 12 challenging titles, published exclusively under the Sinclair label. You can see the quality of eight of them alongside!

In addition, you can defend Earth from Space Raiders... destroy Planetoids... use VU-CALC in your business... even stroll in the park with Hungry Horace! And the Psion range is growing all the time - watch out for our latest program, 'Chequered Flag'!

Psion programs for the Spectrum:

- Flight Simulation (48K)
- Chess (48K)
- Space Raiders
- Planetoids
- VU-CALC
- VU-FILE
- VU-3D (48K)
- Hungry Horace
- Horace and The Spiders
- Horace Goes Skiing
- Backgammon
- Computer SCRABBLE® (48K)

'Horace' series produced in conjunction with Melbourne House. SCRABBLE® trademark and copyright licensed by Scrabble Schutzzrechte und Handels GmbH - A.J.W. Spear and Sons PLC subsidiary.

Whichever program you choose, you can be sure it's high-quality, and action-packed.

The popularity of our cassettes proves it. In a recent WH Smith chart of best-selling Spectrum software, no less than 7 of the top 12 were by Psion.

That means there's one good way to choose the best Spectrum software...

Just look for the Psion symbol on the cover of the cassette.

PROSE PACKAGING

Word processing on a Spectrum? Well, who'd have thought it . . . Steve Mann explains how to set up your own low-cost system

Now, promise you won't laugh — I've turned my Spectrum into a word processor. On the face of it, nothing could be more unsuitable for this task than Sir Clive's best-seller: after all it lacks a proper keyboard, displays only 32 characters to a line and does not have a proper printer interface. In its favour, of course, is the 39k of user RAM available to those with a 48k machine.

Over the past few weeks I have given a lot of thought to word processing. My normal practice when writing articles for *PCW* has been to work at home. This has meant that I have been writing my articles in longhand and then typing them out on the office Sirius — time-consuming and hardly labour-efficient. It was obvious that I needed some form of word processor at home. My first thought was to build up a system using the BBC Micro with disk drives. However, my lack of a personal BBC machine would have meant buying the whole system from scratch — and my finances just won't run to that at present. The obvious answer was to make the best of my trusty Spectrum . . .

The keyboard presented no problem as I already owned a 'proper' model which had been purchased as long ago as last summer from the Buffer Micro Shop in Streatham. I say 'proper' in quotes because, although a considerable improvement on the standard Spectrum keyboard, this particular model — from dk'tronics — lacks a space bar. At the time of purchase this was the only type available — if I was buying one today I'd make sure there was a standard space bar.

Next on the agenda was an interface to enable the Spectrum to be used with a printer other than the ZX Printer. Convenient though the ZX Printer is for short listings, it is obviously inadequate for word processing. So I obtained a Centronics interface from Kempston Microelectronics, which is suitable for hooking the Spectrum up to a wide range of printers, including the Epson models — I used the office MX-80.

The final component was the software. I've seen a whole range of so-called 'word processors' for the Spectrum, but very few of these have been designed for use with a full-size printer. The exception is Tasword Two from Tasman Software, which is designed for use with a range of interfaces, including Kempston's, and which redefines the Spectrum character set to give 64 characters per line — both on screen and on the printer.

Setting up

Putting the system together was a piece of cake. The Kempston interface simply plugs into the expansion port at the rear of the Spectrum and is connected to the printer via a ribbon cable. The only problem I found was that because of the design of the dk'tronics keyboard there was insufficient room to plug in the interface. This was remedied by cutting a chunk out of the rear of the keyboard

casing with a fretsaw — it doesn't look very elegant, but it has done the trick.

The Kempston interface came with a setting-up program on cassette for each of the two Spectrum sizes. This is used to create a customised program for your particular printer and you would normally specify the printer codes for carriage return, linefeed, etc. This customised program would then be loaded into your Spectrum each time you use the interface.

When the Kempston interface is used with Tasword Two, however, setting up becomes, if anything, even easier. You first create a customised printer program in the manner described in Kempston's documentation, but instead of keying in the correct codes for carriage return and linefeed you simply set these to zero. Next you must load Tasword Two from tape. Having done this, you break out of Tasword and return to Basic by pressing STOP followed by 'B'. Now you merge your printer program into Tasword by

executing LOAD "printcode" CODE 57856. Finally, you simply run Tasword and then use the define graphics/printer facility to specify the interface control codes and the codes for carriage return and linefeed (13 and 10 on the Epson range). If you then use the 'Save Tasword' option you will have a system tailored to your requirements, incorporating the codes for your particular printer, that can be reloaded at any time.

Tasword Two

Tasword Two itself is a fine demonstration of the programmer's art, providing just about every feature you would need in a word processing package. It is based on WordStar and uses the Spectrum block graphics keys for printer control codes—it comes with the graphics keys set up for an Epson FX-80. Perhaps the most surprising aspect of this package is the fact that the redefined character set is actually quite readable: a former editor of this magazine scoffed at the idea of 64 characters per line on the Spectrum but, once you have made sure your TV is tuned in properly, the text is perfectly clear.

Describing a word processing package is not the easiest of tasks. I think the simplest way to do it is to go through the Tasword features in the order in which they appear in the excellent manual — which was produced using Tasword Two and an Epson printer.

The 'Getting started' section gives the user a few pointers on how to make the most of the system, and explains the use of the Tasword Tutor, which is supplied on the tape as a text file ready to be loaded into Tasword. There then follows a section entitled 'How Tasword works', which details the features and limitations of the package. Tasword operates on a text file that contains whatever you type in from the keyboard. This file may be up to 320 lines in length (which according to my calculations gives you a healthy 20,480 characters). The television screen acts as a 'window', displaying 22 lines of the text file at a time and various control keys scroll this window through the text file in both directions. In normal use Tasword displays all 64 characters on each line of the text file. However, if your eyesight just can't handle this size of text, the window may be 'opened' to show only 32 characters at a time at normal Spectrum size.

Text is entered by using the Spectrum keys in their normal fashion. Because of the complexity of the Spectrum keyboard, it is sometimes necessary to go into 'Extended mode' to obtain some elements of the Spectrum character set. Tasword uses the Spectrum keywords — the ones printed in red on the keys — as control keys, together with the words marked in white above the number keys. Both character keys and control keys will auto-repeat if held down. A particularly useful control key is EDIT (CAPS SHIFT 1), which displays a 'Help' page on the screen; this gives a brief description of each control key and is shown here as Fig 1.

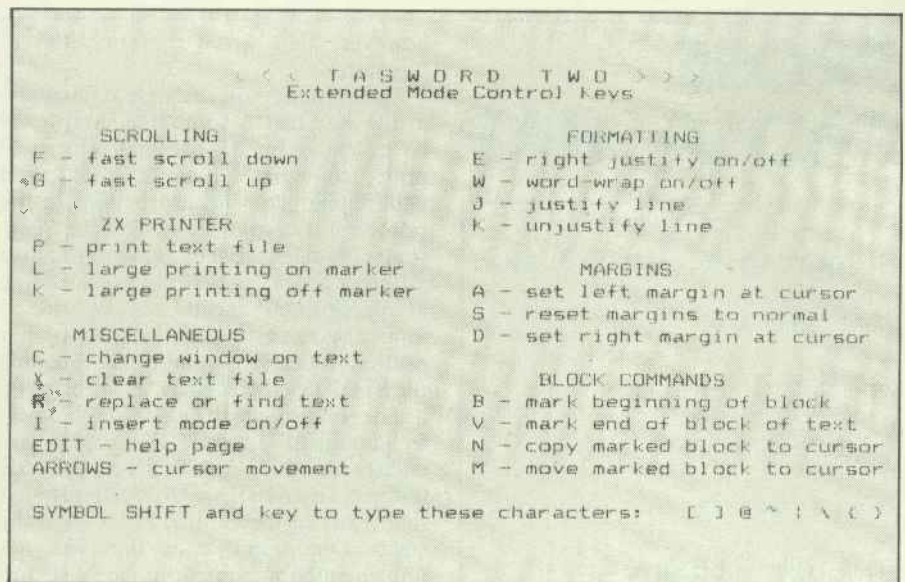

Fig 2 Extended mode 'Help' page

There are 19 control keys in normal mode (Tasword is in normal mode when the bottom line of the display — which shows the number of lines typed and indicates whether justification and word-wrap are on — is flashing). The actions of these keys are as follows:

EDIT (caps shift 1) — displays the normal mode help page. When this page is displayed pressing ENTER returns to text file; pressing CAPS SHIFT and SYMBOL SHIFT together displays the Extended Mode help page.

CAPS LOCK (caps shift 2) — toggles CAPS LOCK on and off.

TRUE VIDEO (caps shift 3) — moves cursor to the end of the next word to the left of the cursor. This enables the cursor to move rapidly left along a line.

INVERSE VIDEO (caps shift 4) — as TRUE VIDEO, but moves to the beginning of the next word to the right.

CURSORARROWS (caps shift 5,6,7,8) — move cursor to any position on the screen.

GRAPHICS (caps shift 9) — this key accesses the Spectrum's block graphics. These are printed as normal on the ZX Printer but are used as control codes for full-width printers.

DELETE (caps shift 0) — deletes character under the cursor and moves rest of the line left one position.

<= (symbol shift q) — moves text under and left of cursor one character position to the left.

<> (symbol shift w) — centres text on the line containing the cursor.

>= (symbol shift e) — moves text under and to right of the cursor one character position to the right.

AND (symbol shift y) — inserts new characters, words or lines into the text file.

OR (symbol shift u) — displays the end of the text file.

AT (symbol shift i) — jumps back to beginning of the text file.

STOP (symbol shift a) — used for saving, loading and printing text files.

NOT (symbol shift s) — deletes the line the cursor is on and moves all subsequent lines up to fill the gap.

STEP (symbol shift d) — reformats text after deletions or corrections have been made.

TO (symbol shift f) — scrolls display down one line.

THEN (symbol shift g) — scrolls display up one line.

ENTER — moves cursor to the beginning of the next line. If Insert Mode is on, a new line is inserted.

In addition to these control keys, Tasword uses the Spectrum's 'Extended Mode' keys as a further set of controls. These enable the user to handle such tasks as fast scrolling in either direction, formatting (right justify on/off, word-wrap on/off, justify single line and unjustify single line), outputting text to the ZX Printer, setting margins, moving blocks of text, changing the text window, clearing the text file, finding or replacing sections of text, and toggling in and out of insert mode. The 'Replace or find text' option is particularly useful. If you are typing a piece of text that contains a word or phrase that is used several times, it is a simple matter to use an abbreviation (for example, I used 'Ta' for Tasword while writing this piece) and then use the 'Replace and find' option to substitute the correct letters before printing. When using this option Tasword automatically reformats the text. When in extended mode it is also possible to set margins within the text — this is useful for highlighting certain paragraphs. When a margin is set part of the screen will change colour from white to yellow to indicate the settings. While margins are set, the <=, <> and >= keys do not affect text inside margins and will not work at all if the cursor is inside a margin. To indicate that Tasword is in extended mode, the bottom line of the display flashes. The extended mode help page is shown in Fig 2.

Unless otherwise instructed, Tasword Two automatically formats the text with right justification (text is printed with flush left and right margins) and with word-wrap. Word-wrap simply means that if a word is too long to fit in the space left in a line it is dropped down to the next line. Of course you can override this and use a

PROSE PACKAGING

print
condensed print
underlined print
bold print
double-strike print
normal print size

Fig 3 Some type styles

hyphen. The only time that you should use the ENTER key is at the end of a paragraph or if you want to leave a blank line. When you type the last character in a line Tasword moves the cursor to the beginning of the next line and it changes shape, becoming vertically elongated. If you type a character when the cursor is enlarged Tasword assumes that this is part of the last word on the line above and so will word-wrap — so you must type a space after each word, even if a word ends exactly at the last character position on a line. If the last character on a line is a punctuation mark Tasword will not word-wrap when you begin the next line, even if the cursor is tall. Tasword also ignores the first two spaces that you type so that you don't indent a line by mistake. To enable Tasword to format text correctly, the manual recommends that you always type at least one space after punctuation and that you always begin a new paragraph by indenting at least three spaces or by leaving a line space.

To save and load text files, the STOP key is utilised while Tasword is running in normal mode. A menu of options then appears. A series of on-screen prompts makes loading, saving and verifying very simple — if a mistake does occur and you find yourself back in Basic, it is merely a matter of pressing RUN and your text file is retrieved. If you choose the 'Load text file' option, any text currently in Tasword will be cleared. This can be avoided by using the 'Merge' option, in which case the new text will be loaded after any text that is already there. The merge will fail if there is not enough room for both files (ie, if their total length is more than 320 lines).

Printer control characters

As mentioned above, the Spectrum block graphics are printed as normal if the ZX Printer is used. For full-width printers,

however, they serve a very different function.

Most printers will allow great flexibility in the way text is formatted. Many will have facilities for large or small print, bold print (sometimes italic as well) and underlining. To send instructions to the printer, Tasword makes use of the Spectrum graphics. Each printer requires different codes, so Tasword has a 'Define graphics/printer' facility for the user to input the relevant codes for his or her printer. When in normal mode, pressing the STOP key followed by 'g' will bring up a series of prompts to enable graphic keys to be defined. Tasword Two comes with codes for the Epson FX-80 already defined. I used an Epson MX-80 and found that many of the control codes were the same. One useful code that was not implemented was for form-feed (used to move the print position to the start of the next page). For this I simply set one of the graphics keys with the code 12. Each time a form-feed was needed it was a simple matter to press the relevant key.

Conclusions

If your main reason for buying a micro is to use it for word processing, then the Spectrum would be one of your last choices. However, if you already own a Spectrum and would like to use it for processing text, this article should make it clear that such a use is perfectly feasible. I'm extremely impressed with the standard of Tasword Two — I found it easy to use and very well designed. It took a short while only to become familiar with the various control keys, and the number of on-screen prompts, together with the excellent manual, make it ideal — even for an absolute beginner. A Tasword text file holds a surprisingly large number of words — this article fitted quite comfortably into one file; there was room for considerably more verbiage. And, of course, the advent of the Microdrive — announced before this issue went to press — should allow the Spectrum to be used for a wide variety of applications that require the storage of

large amounts of data. I look forward to Tasman's Microdrive-based word processing package with great interest.

Tasword Two comes complete with instructions for using a variety of interfaces — the Cobra RS232, Euroelectronics ZX Lprint, the Hilderbay, the Morex and, of course, the Kempston interface. I used the Kempston version as this was one I had received for review, but Tasword Two is so well designed that I foresee no problems with any of the others.

The Kempston interface, too, did all that could be expected of it and proved reliable in use. I do have a minor gripe about the way the ribbon cable is arranged on this interface, though — it emerges from the same side of the interface as does the connection to the Spectrum port: unless the printer is sited directly behind the Spectrum this necessitates twisting the cable so that it does not obstruct the keys. It would have been more sensible to lead the cable from the rear of the interface so that it had a bit more clearance. Kempston's documentation is not all it could be, either — it contains all the information you'll need but the presentation could stand some improvement.

The dk'tronics keyboard has taken quite a bashing over the last year or so and has come through with flying colours. The only signs of wear and tear are on the keytops — some of the key labels have become obliterated (does anyone know where I can get a set of Spectrum key labels?). The dk'tronics keyboard is equipped with a numeric pad and will set you back £45 — but for word processing I would recommend a keyboard with a space bar; these can be obtained from a number of suppliers and cost about the same — or slightly less — than the dk'tronics one.

Tasword Two is produced by Tasman Software, 17 Hartley Crescent, Leeds LS6 2LL and costs £13.95.

The Kempston interface comes from Kempston Microelectronics, 180A Bedford Road, Kempston, Bedford MK42 8BL. Price: £45.

DOES YOUR PROGRAM OWE YOU ALIVING?

If you've written a home computer program it could be earning you money!

Let us evaluate your game, educational, or business program. Only THORN EMI can give you access to worldwide marketing and distribution expertise.

Just fill in your name and address below and post it to us at THORN EMI for you to receive a full package containing all information, or phone 01-437 3453, our 24 hour answering service, and we will send you details of how to program the world.

WARNIER ORR PROGRAMMING PART 3: NORMALISATION IN PRACTICE

In the penultimate part of this series Paul Overaa explains the procedure for normalising a set of data items.

We saw last month how it is possible to describe sets of data using Warnier diagrams. The general ideas involved in working backwards from the output of a program were illustrated leading to an initial Warnier diagram showing a program design for handling data input. I indicated that there are advantages to being able to impose different views on a data set without having physically to rearrange the data. This month I want to discuss a technique known as 'Normalisation' and show you some of the benefits that normalised data sets have in practice.

We were considering last month the production of a report for a company of consulting chemists. The primary data item set that we identified was described in terms of a logical input file using a Warnier diagram. This diagram is repeated in Fig 1 for convenience.

The word 'Entity' is used to describe a data item type that has 'real-life' existence. Such entities have various characteristics that we call 'Attributes'. To digress for a moment, if you were storing data about people then one entity you would deal with would be 'Person' and the attributes that you might wish to store about each person could be Name, Address, Telephone Number, Age and so on. If we return to Fig 1 then we see that the attributes of the entity Sample include Sample Identification Number, Commodity Name, Country of Origin, Type and also a collection of tests and test results that may occur more than once, eg, a particular sample may have half a dozen or more different analytical tests carried out on it. For this sample there will be that number of Test Names and Test Results present. Attributes like these that can occur more than once for a particular entity occurrence are called a 'Repeating Group'.

One obvious way to store our data set would be to regard Sample as the only entity and sequentially store the attribute values associated with particular Sample Identification Numbers as variable length records. This would represent our input file correctly but some of the data would be very awkward to get at. Imagine, for instance, that you want to find those samples that had a test for 'percentage of moisture' carried out. It would be necessary to search sequentially the whole of the data file in order to find each occurrence of the test name 'Moisture'. Such information would in fact be much

easier to obtain if the details for the tests were stored separately. The first stage of normalisation concerns itself with the problems that repeating groups cause and eliminates them by removing groups and rewriting them as new entities.

From a practical point of view it is useful initially to pick out from the Input file any attributes that are candidates for static file storage methods and rewrite these items as separate entities. By this I mean the attributes where you would be likely to store a code to represent the value rather than store the attribute value itself. Country of Origin is a typical candidate since we can encode up to 256 different countries of origin in one single byte. We would therefore like to maintain a static file containing the country names and the respective code numbers that are allotted. It should be fairly obvious that several candidates of this nature exist and it is immediately useful to rewrite them as new entities as follows:

Commodity	(Commodity#, Commodity-Name)
Origin	(Origin#, Origin-Name)
Type	(Type#, Type-Name)
Test	(Test#, Test-Name)

The # sign is frequently used to indicate a number and thus Commodity# is read as commodity number. We have written the four entities shown above in a common standard form and the notation is as follows: we write the name of the entity and then in brackets we list the attributes of the entity. The attribute or attributes that uniquely identify a particular occurrence of an entity type is called the 'key' or 'identifier' and is underlined. It is the identifier that is used to search for specific record occurrences in practice.

Having done this we can write our input file shown in Fig 1 as follows:

Sample (Sample#, Commodity#, Origin#, Type#, (Test#, Test-Result))

The identifier in this case is Sample# — ie, the Sample Identification Number.

At this point we are in a position to start what is usually regarded as the first stage of normalisation. The object is to remove any repeating groups from any currently identified entity descriptions and to rewrite them as new entities. In doing this it is necessary to include in the new entity all attributes that were identifiers in the original entity.

The result of doing this is shown

below. Note that the act of separating the repeating group has resulted in us identifying another entity that we have called Analysis-Result.

Sample (Sample#, Commodity#, Origin#, Type#)

Analysis-Result (Sample#, Test#, Test-Result)

It should be obvious that in order to identify uniquely a particular analysis result we would need to know to which test and to which sample we were referring. This being so we should not be surprised to see both identifiers present in the key.

The entities that we have selected to represent our logical input file are now free of repeating groups and are said to be in first normal form. It is convenient to list them together thus:

Commodity	(Commodity#, Commodity-Name)
Origin	(Origin#, Origin-Name)
Type	(Type#, Type-Name)
Test	(Test#, Test-Name)
Sample	(Sample#, Commodity#, Origin#, Type#)
Analysis-Result	(Sample#, Test#, Test-Result)

It is now necessary to examine each of the above entity descriptions to ensure that each non-identifying attribute (ie, attributes that are not part of the key) is functionally dependent on the whole of the key. This sounds frightening but it is very easy to do indeed. In effect all that we mean is that it must not be possible to identify uniquely an occurrence of a particular attribute without specifying the whole of the key. I think you will see what I mean as we work through the first normal forms.

Commodity (Commodity#, Commodity-Name)

This is an easy one since there is only one non-identifying attribute. Once we know a particular Commodity# then we have uniquely specified a Commodity-Name. Similarly, to specify a particular Commodity-Name we need only be in possession of Commodity#. It should be apparent that the attributes of the first four entities that we listed earlier, namely Commodity, Origin, Type and Test, are already such that the non-identifying attributes are functionally dependent on the whole key and other than recognising this fact we do not have to do anything to them.

Sample (Sample#, Commodity#, Origin#, Type#)

For the entity Sample we have three non-identifying attributes to be checked. We ask ourselves this question . . . 'Is it possible without specifying the Sample# of a sample to identify what commodity it is, its country of origin or its type?' Obviously to be able to say 'this sample comes from, eg, India' we would have to know to which sample we were referring, ie, we would have to know Sample#. I think you will agree that for all three cases we must know the Sample# before we can deduce the other attributes. In plain English we must know which particular sample we are talking about before we can say what it is, where it comes from or what type description it has. Again, therefore we do not have to do anything other than recognise that the attributes of this entity are already functionally dependent on the whole of the key chosen.

The last entity of our first normal set is Analysis-Result and in this case we have two attributes in our identifier or 'key'. Analysis-Result (Sample#, Test#, Test-Result)

We look at the non-identifying attribute Test-Result. Simply specifying the sample identification number Sample# would be insufficient to determine uniquely a test result because a particular sample may, as we have already indicated, have more than one analytical test carried out. Similarly it would be insufficient to specify a reference for the test carried out since there may be many samples that had such a test performed. It is necessary to specify both the sample number and the test in question before we can identify a particular test result value and thus as in the previous cases the non-identifying attributes are functionally dependent on the whole of the selected key.

In the example we are dealing with we see that the normal entity descriptions we produced initially are not only free from repeating groups but also exhibit the qualities of functional dependence we

have talked of. But things might not have been this easy, and to give you a chance to see how to proceed in less fortunate cases I want you to imagine that, in addition to storing data about the analytical test results, we also need to know which laboratory performed the analysis. If this had been part of the problem requirements then the entity Analysis-Result would look like this:

Analysis-Result (Sample#, Test#, Test-Result, Laboratory-Name)

We would convince ourselves as we did above that Test-Result was truly functionally dependent on both identifiers. We would then look at the attribute Laboratory-Name. In the case of our example each particular laboratory is set up to do certain types of work, that is to perform a certain range of tests. This being so I think you will agree that you only need to specify the Test# to know which laboratory performed the test. The attribute Laboratory-Name is therefore not functionally dependent on the whole of the key. The solution is to remove this attribute from the entity Analysis-Result and create a new entity Laboratory as follows:

Laboratory (Laboratory#, Laboratory-Name)

In this way we would ensure that non-identifying attributes were in fact functionally dependent on the whole key. Having done this our collection of entities would be described as being in Second Normal Form.

The last stage that we need to consider concerns itself with the relations between the non-identifying attributes themselves. We want to ensure that, for any particular entity, no 'non-identifying attribute' is functionally dependent on any other 'non-identifying attribute'. This part of the procedure therefore only applies to entities with two or more non-identifying attributes and in our example we consider one entity only, Sample.

Sample (Sample#, Commodity#, Origin#, Type#)

By inspection I think you will agree

that if we specify a particular commodity name by specifying or defining the value of Commodity# then this tells us nothing about the sample's origin or its type value. Similarly specifying a sample's origin or type value would not help us to identify what commodity it was. In this case we can safely say that non-identifying attributes of the entity Sample are mutually independent. If dependence is found, the procedure to follow is to remove the offending attribute by creating a new entity in just the same way as we would have created the entity Laboratory if we had been required to store details of which laboratory carried out which tests.

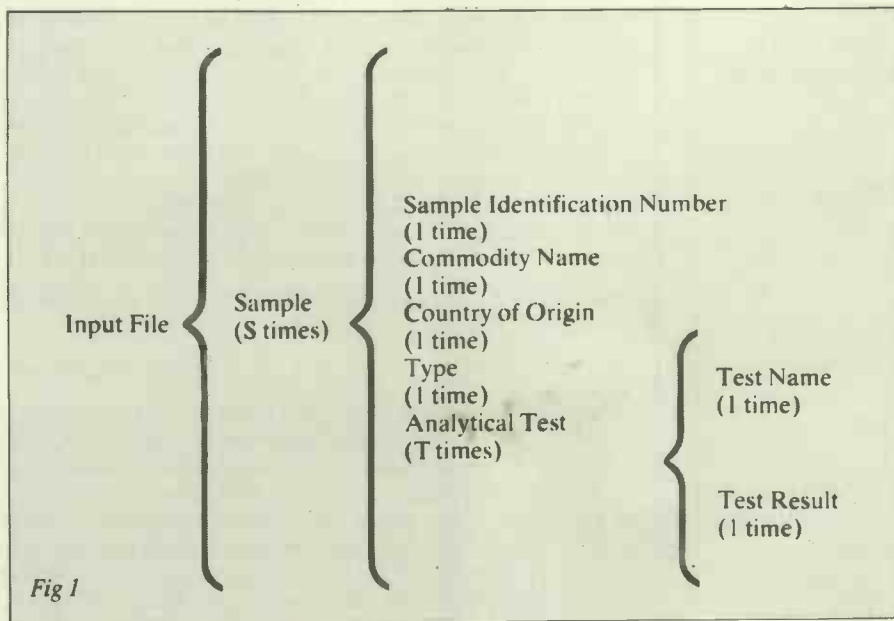

Once we had ensured that all non-identifying attributes are mutually independent we have created the famous 'Third Normal Forms' that you read about in the database books. Please remember that it takes far longer to explain these procedures than it does actually to do it.

Let's list the three steps that we have performed:

1. Write your initial entity descriptions in the bracket notation form and then remove any repeating groups that are present.
2. Check that the non-identifying attributes of each entity are functionally dependent on the whole of the identifier that you selected. If you find that some are not, then those particular attributes must be removed.
3. Lastly, you must ensure that all non-identifying attributes are mutually independent. Again if you find that this is not so then new entities must be created.

Look at Fig 2. This shows the entities and their relations. What we must now do is consider the ways in which such a representation could be implemented in practice. One quite simple method that could be used on many small disk-based computers would be to maintain separate files for each of the six entities. Random access files would be most suitable since we will wish to extract data by referring to specific keys rather than having to search through complete files.

It is necessary to decide what method will be used to indicate or define the relations that exist. Given a particular sample number, for instance, we could from the appropriate Sample record find what sort of sample it is, where it comes from and what type classification it had. We would also need to locate the analysis details and, since these will be placed in a separate file, we will need to know whereabouts in the Analysis-Results file the data has been placed. A simple solution is to use 'embedded pointers' within the Sample records, giving for instance the address or record number of the first result and also the number of tests that were carried out. In this way we could find out which records in the Analysis-Results file were associated with which records in the Sample file. Such embedded pointers could be used to specify all the relations needed.

THINKING ABOUT A COMPUTER FOR BUSINESS OR PERSONAL USE?

PPM have been supplying them for 5 years which makes us one of the most experienced companies in a young business.

To discuss your requirements 'phone David Chester on Brookwood (04867) 80111.

STOP PRESS ! In addition to the full range of Commodore equipment we have been appointed area distributor for the new 64k ZORBA professional portable computer with 776k in-built disks.
**Hermitage Road St Johns
Ltd. Woking Surrey GU21 1TZ**

Saunderson speaking ...

It's the laughing gnome again; judging by the reaction to the picture above that's what most people think I am! Major news this occasion is that the KGB has moved. No, not to Moscow but to a much more regal place, Windsor. The full address and 'phone number is below. We had been desperately overcrowded in Slough for months and with larger premises and more personnel our service is even further improving.

Concurrent with our move we became WANG dealers with the full range of their 16 bit 8086 based equipment. We are delighted about this because WANG's word processing software is superb. Come along between 5th and 7th September to our opening open day (is that English?) where we will be showing WANG as well as Superbrain and Sirius, or call on Stand 344 at the Personal Computer World Show in the Barbican Centre at the end of September.

It is software that this month reflects our special offer. We have excess stock of *Personal Pearl* and the first two people to send me £90 will get a CP/M version by return. That's half the normal price so it must be a good deal! Incidentally, we offer several Database systems, most of which I have hand-picked from the thousands available. The most flexible, which is a database only, is *DBase II*. It's been around for a long time now and with the new release is very popular. It does require some effort however to use it to the full. A superb Word Processor is *Silicon Office* which qualifies as a database system because of its features. For someone who wants an easy-to-learn system there is *DMS* or, for storing transactions, *Delta*. Last and by no means least there is the very simple but well-written *Cardbox*. There should surely be one for almost every application in that lot!

Don't forget our open days. There will be lots of special offers available.

Sandy Saunderson

Sandy Saunderson is Managing Director of KGB Micros Limited, the fast growing commercial microcomputer company based in Windsor. He has extensive knowledge of the microcomputer industry and if you would like to speak to him, either on general computer matters or particularly about his own products at KGB, give him a call on Windsor 50111 or drop him a line at KGB Micros Limited, 106 St. Leonards Road, Windsor, Berkshire SL4 3DD.

WARNIER ORR PROGRAMMING

PART 3: NORMALISATION IN PRACTICE

More sophisticated ways of specifying the relations exist and the ultimate ideas of flexibility move into the realm of relational database design. I am not for one minute suggesting that such techniques are either necessary or appropriate for most applications. What I am saying is that we can frequently make use of the flexibility that a normalised relational view provides. The message then is, define your input set, normalise it and then implement the simplest physical file structure that is consistent with the resulting entity descriptions and your particular processing requirements.

Output file

We have considered, in a fair amount of detail, the input set. It is necessary also to consider the requirements of the output set. The Warnier description of the report was given last month and it is possible to take the bracket description of the report and normalise it in the same way as we did for the input file. Since the process is identical to that of normalising the input file, I will simply state that if you do this, you will rediscover entities such as Commodity, Origin, Type, Test that are already known. You will, however, discover a new entity. It corresponds to a single line in the report and has therefore been called Report Line.

Report-Line (Commodity#, Origin#, Type#, Test#, N,L,H,A,S)

The characters N,L,H,A,S stand respectively for the attributes No tested, Low, High, Average and Standard deviation as described last month.

There are two ways of creating our output or report:

1. We can compute the derived data each time new sample data is added and update a file that we would create called Report, ie, the responsibility of updating the derived data can be assigned to the input program. This is simple to do because during the input of a set of sample data the four keys required to locate a particular line in the report, namely, Commodity#, Origin#, Type# and Test#, would be known. If this approach were to be adopted the production of the report would merely entail listing the contents of the file Report.

2. Alternatively the report could be produced in real time by examining the individual sample data that had been stored during the year. Such a procedure is attractive for many reasons including the fact that we would not necessarily have to reserve disk space for the report. Such an approach would allow the implementation of quite sophisticated query facilities in addition to the main report if indeed these were required.

If we decided on this latter approach then we would have to arrange to be able to retrieve our data using the four part key Commodity#, Origin#, Type#,

Test#. One way to implement this would be by using a further set of embedded pointers within the Analysis-Results file. Reading the file using these pointers would provide the required order for output processing.

To summarise, we can, by the use of pointers embedded in the record definitions of our entities, create logical pathways through a data set. In this way we can provide the view demanded by the output requirements even if that view is different from that of the input requirements. It is possible to do this because we paid special attention to the way we have chosen to represent our file structure. Normalisation enables us to identify a physical file structure that is well suited to having more than one logical view imposed upon it.

I have tried here to indicate the advantages of normalisation and have covered the basic steps involved in translating data sets into third normal form.

The logical description produced is quite easily mapped to a true physical description and we have seen how embedded pointers within records can be used to imply the relationships between various records of various entities. You may well have your own ideas on other ways of implementing the necessary relationships. I have attempted to show you some of the problems that we encountered while the software to handle the report used in the example was written. The steps involved in finding a suitable file structure are quite general and I think you will find these ideas useful in many of your own projects.

Next month is the last part of this series and I want to tie up the general principles that have been discussed during the last three months. I want also to show you one last use of the Warnier diagram... to design 'sets of programs'. I think that you may then agree with me that programming is beginning to change from an art to a fairly well defined technique that can be taught in much the same way as we teach other sciences.

END

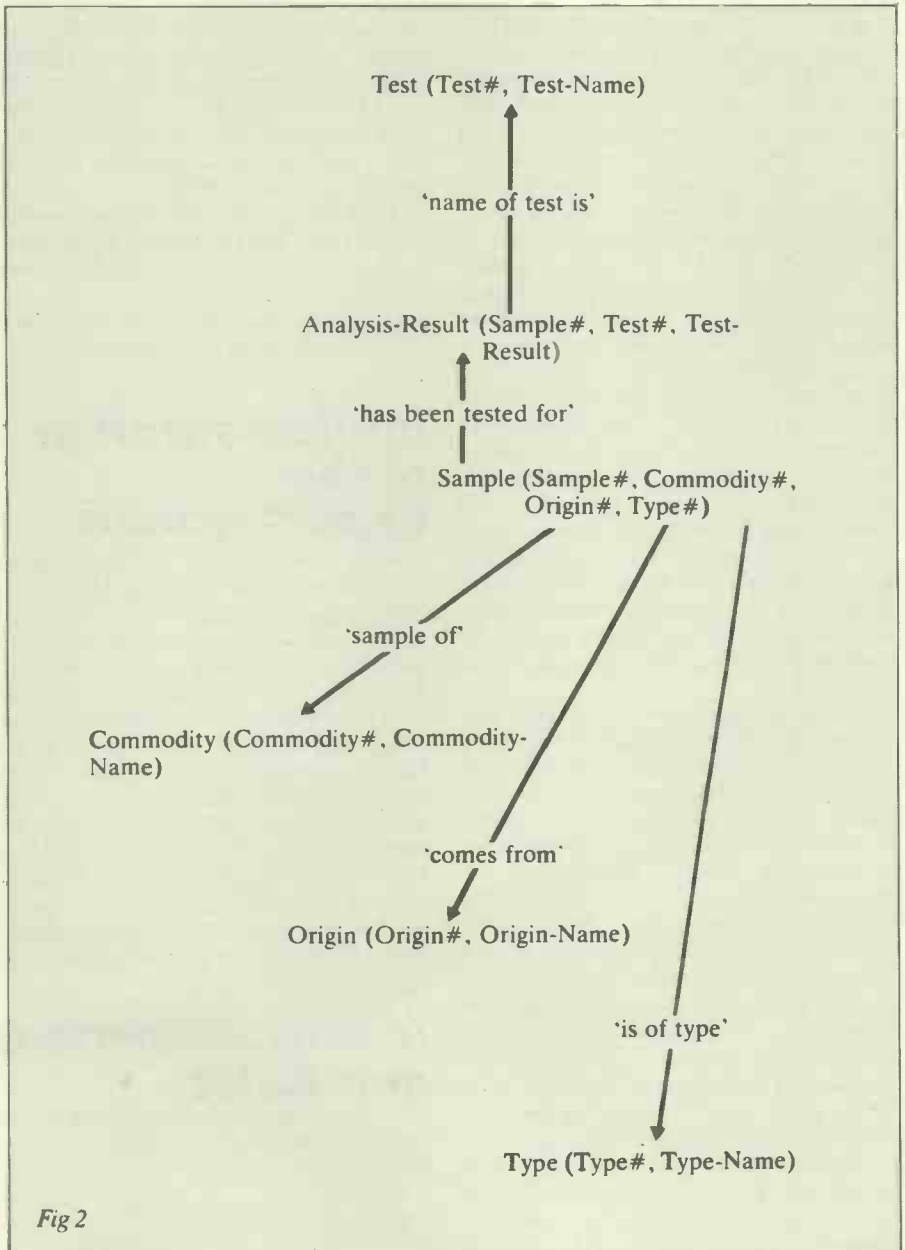

Fig 2

EXPERT ADVICE

AN EXPERT SYSTEM FOR THE MZ-80K

Chris Pratt takes a look at the flexibility of expert systems in general and focuses in on the MYCIX, specially written for the Sharp MZ-80K.

If you think expert systems will only run on powerful disk-based micros and minis, here is a pleasant surprise. You can run a perfectly respectable expert system on a 48k, tape-based machine, and what is more you can write it yourself.

Here's a description of an expert system called MYCIX which was written initially for the Sharp MZ-80K.

Before looking at MYCIX in detail, let's just look at some examples of what an expert system such as MYCIX can do.

Taxonomy

Let us say you find a toadstool and you want to know what species it is and whether it is edible, poisonous, harmful to trees and so on. Or you discover a caterpillar in the garden but you're not sure whether it is a pest or a species which will turn into a rare butterfly. Or perhaps your job involves the identification of species — for instance, micro organisms which cause disease.

You may decide to consult a human expert or you may decide to browse through a guidebook. Another alternative would be to consult an expert system.

Having loaded your expert system, you then need to load the appropriate knowledge base — fungi, insects, trees or whatever. The expert system then asks a series of questions and, assuming the search algorithm is fairly efficient, it will soon tell you the family, genus and species of your specimen. Of course, some questions may not be immediately answerable — for instance, in the case of micro organisms which may require tests to be performed to enable the questions to be answered.

So far so good, but no matter how efficient the search algorithm, there may be very distinctive characteristics which you want to tell the expert system about, to speed up the search, just as, when consulting a human expert, you would tell him or her straight away about the distinctive features.

You will probably be puzzled by the reasoning behind the questions asked by the expert system and you may want to acquire some of its expertise, so another feature you should include in the expert system is the ability to answer questions such as: 'Why did you ask me that?' and 'What have you established so far?' and 'What is the rule for such and such?'

Well, we've now got a fairly powerful expert system, but without disks, how on earth can we store all the knowledge (rules)? The answer is that we are

somewhat restricted but, surprisingly enough, about 400 species, that is roughly the size of a Collins Field Guide, can be held in memory together with the expert system program.

Let's now look briefly at another couple of examples of the use of this expert system.

Diagnosing faults in men and machines

Diseases in man, and for that matter, all animal and plant life, often manifest themselves in more than one symptom and need several tests to be identified. The same applies to faults in complex mechanical and electrical machines — for instance, the automobile.

The same expert system can be used but in this case an automobile fault knowledge-base or a human disease knowledge-base is loaded.

Using the same features, the expert system will attempt to diagnose the fault.

Implementation of the expert system

Having looked briefly at some typical applications of the expert system, let us now turn to the implementation. First of all we will examine three fundamental building blocks — Menus, Assertions and Rules. Then we will turn to the database structure as this is the starting point of the design and the major factor affecting the facilities and flexibility of the expert system. The next sections deal with the program which enables us to teach the expert system and to consult it. Finally we look at that essential component of expert systems — user-friendliness and the extent to which we can achieve 'natural language' communication with a personal computer expert system.

Menus, Assertions and Rules

The expert system presents questions to the user in the form of 'menus':

Menu Title:
1. Option 1
2. Option 2
N. Option N

For example, in the case of a fungi database

Location:

1. On wood
 2. On soil
 3. In grass
 4. Under conifer
 5. Under broad-leafed tree
- the user merely enters the appropriate option number.

The expert system presents conclusions or Assertions to the user. Continuing with the fungi database example an Assertion might be:

The genus is Agaricus
or: The species is Amanita Phalloides (deadly poisonous)

or simply: Field mushroom

Now let's look at the third and most important building block of the expert system — the Rules. The rules are stored and presented in the form:

If Menu Title A is Option B, Menu Title C is Option D, and Menu Title E is Option F, then Assertion G.

or:

If Assertion H, Menu Title I is Option J, Menu Title K is Option L, . . . and Menu Title M is Option N, then Assertion P.

For instance:

If colour of spores is white, surface of cap is scaly, joint of cap and stem is ball and socket, gill shape is free, and immature gill covering is ring, then the genus is Lepiota.

If the genus is Lepiota, colour of cap is dark brown, size of mature cap is 8-15cm, and flesh colour is orange when cut, then the species is Lepiota Rhacodes.

Notice how the Assertion of one rule may be a condition of another rule.

Before moving to the database structure let us look at a couple of other examples. First, a rule from a medical database, then one from an automobile database.

If the site of the culture is blood, the gram stain of the organism is gramneg, the morphology of the organism is rod, and the patient is a compromised host, then there is suggestive evidence that the identity of the organism is Pseudo-Aeruginosa.

If oil pressure is low, noise from top of engine is knocking, oil loss is below timing case, and overflow valve is not leaking, then there is evidence that there is a crack in the timing case and the camshaft is worn due to loss of oil pressure.

Database structure

If you're not used to working with arrays and pointers, you may have some difficulty

following the description of the database structure, but don't give up — it gets much easier after this.

The database structure, as illustrated in Fig 1, contains three large single dimensional arrays containing the Menus, the Assertions and the Rules.

To conserve memory, each new record,

Menu, Assertion or Rule is packed next to the previous record. Of course, holding fixed length records in a two dimensional array is much simpler but the fixed record size must then correspond to the size of the *largest* record and a large proportion of the memory would be wasted. These three arrays and a Menu Index array from the

knowledge base are stored on tape and loaded into memory.

Let us look at each array in the knowledge-base in turn. The Menu array contains a set of menus, each containing the data characters as displayed plus the carriage return characters. The Assertion array contains a set of assertions, each

EXPERT ADVICE

containing the characters as displayed plus a carriage return character. The Menu Index array contains two entries per menu — the first entry points to (ie, gives a displacement for) the menu while the second entry contains the number of options in the menu. The last two entries contain tail pointers for the Menu and Menu Index arrays. These point to the last entries in each array. The function of the Menu Index array will become clearer from the description of the consulting program. Menus, options and assertions in the Rule integer array are represented as follows:

Conditional assertion — Negative of the pointer to the assertion.

Menu/Option combination — Menu Index pointer $\times 100 +$ Option Number.

Concluding assertion — Negative of the pointer to the assertion — 10,000.

Using this arrangement, each condition or assertion occupies one array element, in this case, two bytes. This gives an upper limit of 320 Menus each with up to 99

options, and 10,000 assertions, which is more than adequate for a 48k machine. The last four elements of the Rule array contain tailpointers for the Rule and Assertion arrays, the number of assertions, and a tailpointer for the Rule Index array.

This last array is not stored on tape, but it is part of the knowledge-base. It is created from the Rule array each time a new knowledge-base is loaded. Each entry is a pointer to a Rule in sequential order. When consulting the expert system, rules found to be invalid are marked as such by adding 10,000 to the pointer. This prevents unnecessary searching.

In addition to the five arrays in the knowledge-base, there are two arrays for storing temporary data during a consultation. In effect, they store the characteristics of the subject of the consultation. Menus, options and assertions are stored in the same form as in the Rule array. It is a comparison of these arrays with the Rule array which enables deductions to be made

31 Menus	5921 Bytes
305 Assertions	6207 Bytes
322 Rules	5824 Bytes

Do you want to:

1. Add Menu
2. List Menu
3. Add Assertion
4. List Assertion

5. Add Rule
6. List Rule

K Save Knowledge-Base

Fig 2 MYCIX Learning Program

about the subject of the consultation. Again this will become clearer from the description of the consulting program.

Teaching the expert system

On a small personal computer, it is not advisable to try to combine the learning and consulting program, as the larger the program size is, the smaller the database size can be.

Let us start with the learning program, that is, the program which enables a human expert to teach the expert system by creating and modifying a knowledge-base. Fig 2 shows the most important screen format presented by the program.

To add a menu, the number 1 is keyed. The system prompts the user for the menu title and options. Listing menus is possible from a Master Menu which lists the Menu titles. Keying 3 and 4 enables assertions to be entered and listed. Rules are inserted by entering assertion, menu and option numbers when prompted by the system. Listing a rule displays the full textual form of the rule.

The program ensures that all rules are self-consistent. A rigorous check that each rule is consistent with every other rule is more complex and fairly slow. The best solution is probably a separate program which just performs this cross-checking function.

The screen format in Fig 2 continuously updates a display of the total number of Rules, Menus and Assertions and the amount of array space consumed. This is a help when building large knowledge-bases.

At intervals as a knowledge-base is built up, it is saved to tape, and reloaded when additions are required.

'Change' and 'Delete' commands are perfectly possible, but at the expense of knowledge-base space.

Consultation

Having organised the database and a means of setting up the database, we are now able to construct a program for consulting the expert system. Fig 3 shows

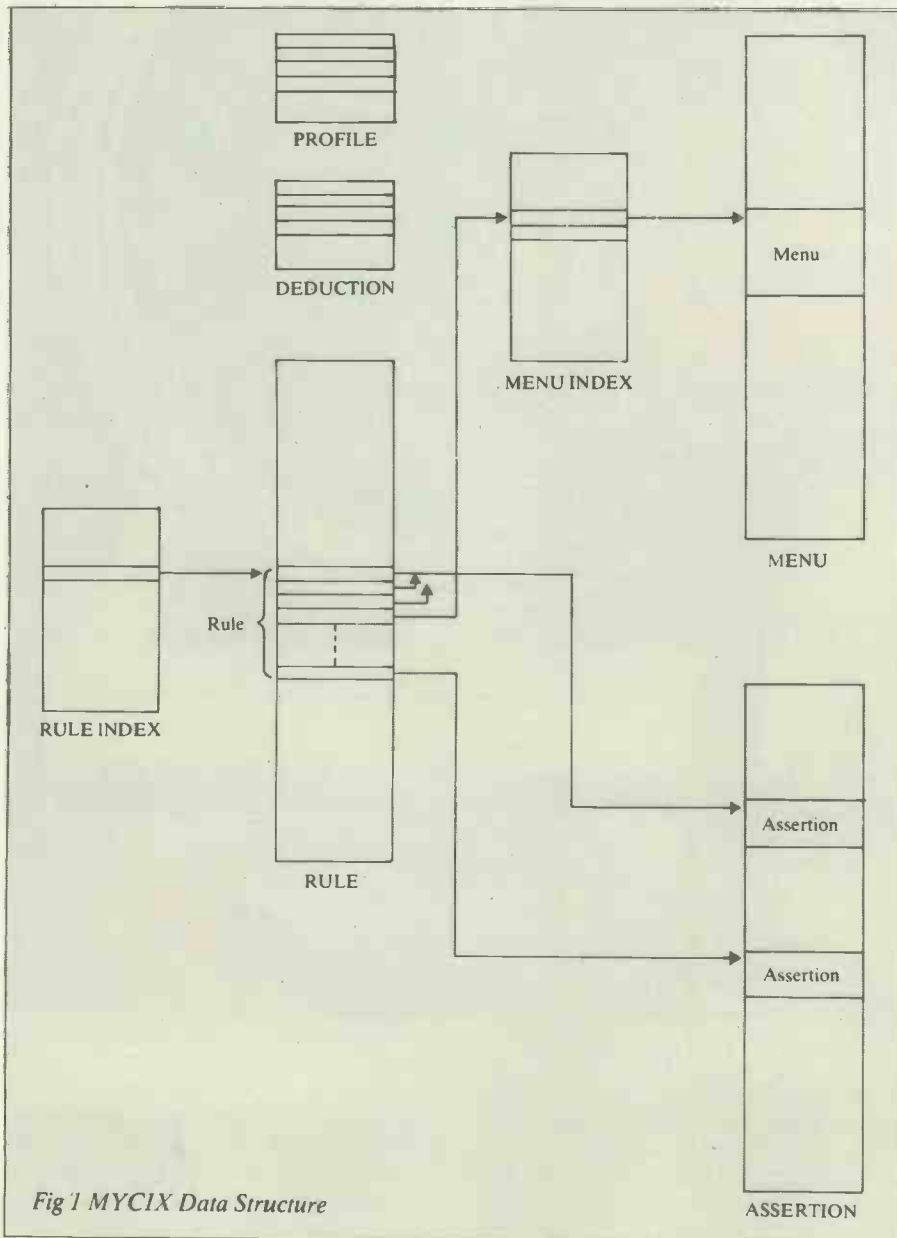

Fig 1 MYCIX Data Structure

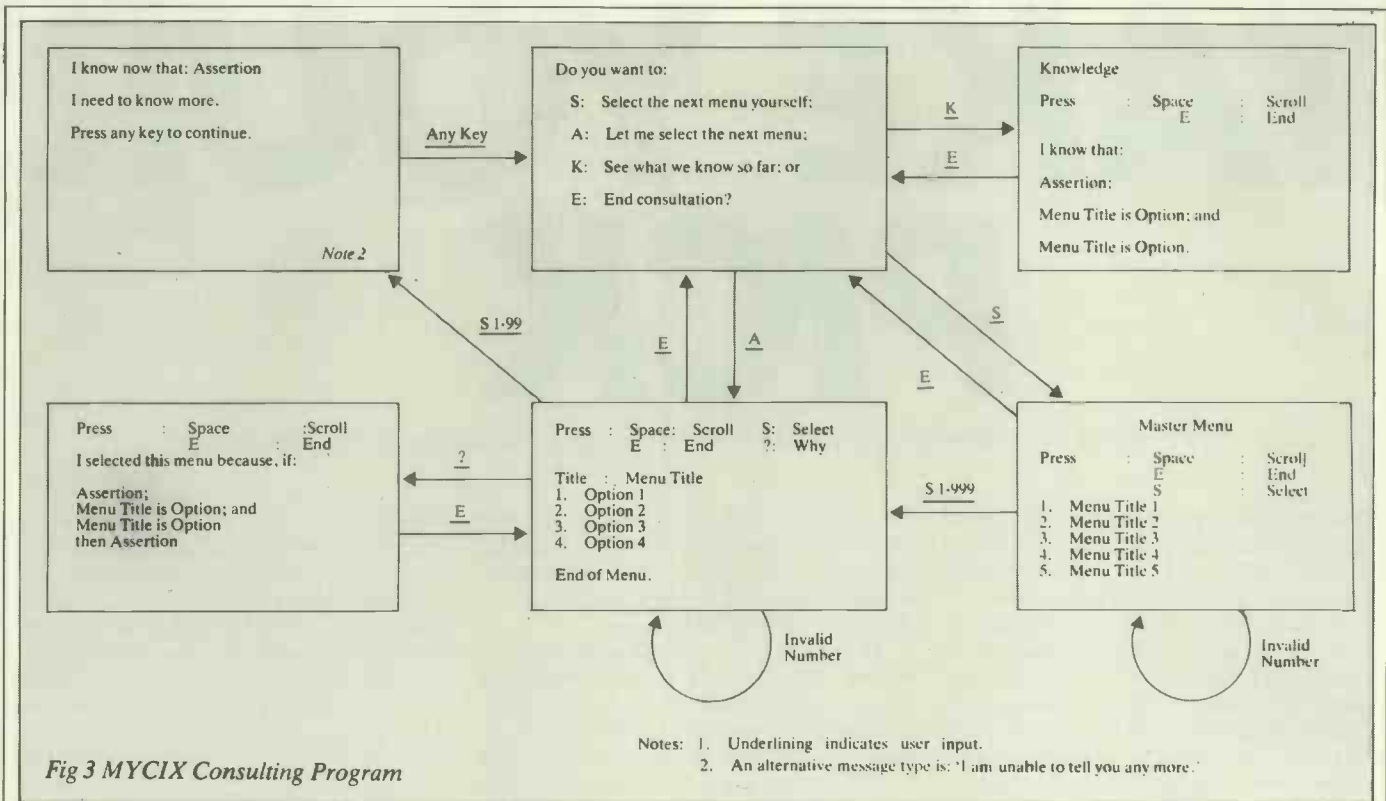

Fig 3 MYCIX Consulting Program

the main state transitions for the consulting program. When the program is run, it invites the user to load a knowledge-base. It then invites the user to:

- let the expert system ask the questions (ie, select the menus); or
- select the menus himself.

Let us examine a typical consultation. The user decides to let the expert system ask the questions and he is presented with a menu. He selects an option and the expert system tells him that it needs more information. Again he decides to let the expert system ask the questions. When the next menu is presented, the user asks the system why it presented that menu. It will then display the rule in textual form that it is currently working on. The user decides that the rule is not relevant and decides to select the next menu himself.

He goes to the Master Menu and selects an option. He continues this process for a while until the system tells him that it has established something, and displays the concluding assertion. However the expert system recognises that it may be able to deduce further assertions and invites the user to continue the consultation. The user asks the system what it has established so far, and it displays the relevant assertions and menu/option combinations in a textual form. Eventually the system recognises that it can deduce no more, informs the user, and asks if he requires another consultation.

Let's now look at why we need the four arrays — Profile, Deduction, Rule Index and Menu Index.

— Profile and Deduction are normally identical and contain the user selected menu/option combinations. When the expert system locates a rule whose conditions are a subset of Profile, the concluding assertion is entered in Deduction along with any unmatched menu/option combinations. Deduction is then copied to

Profile. The expert system then checks whether the new contents of Profile are capable of matching any of the rules before inviting the user to continue the consultation.

— Rule Index, as well as providing an index into the rule array, contains a flag to indicate which rules are still valid. Each time a search is made, only valid rules are searched. When all rules become invalid, the expert system tells the user that it is unable to help him any more.

— Menu Index contains the number of options in each menu. This is useful for range checking user input and for outputting rules in textual format. It also enables menu/option combinations in Rule to be held in one array element.

Having looked at the operation of the consulting program and the use of the various arrays, I should say a few words about the search algorithm. Although not very large, this part of the program needs considerable care in its design to ensure speedy response times. Fortunately, as the size of Profile gets bigger, the number of valid rules gets smaller, so the response time does not degrade.

Automatic selection of menus for display is done by selecting menus which have not been displayed, from Rules marked as valid. As this is sequential, it follows that, when creating a knowledge-base, the most frequently applicable rules should be entered first and the least frequently applicable rules entered last, for instance in the case of Taxonomy, the most common Genera and Species should be entered first.

Man-machine interface

An essential aspect of any program, but especially expert systems, is user-friendliness. The following are a few

aspects which I have found to be important:

- Each new output is preceded by a clear screen command to remove obsolete information.
- Each output includes instructions to the user and lists are completed with an end of list message.
- Long lists can be scrolled on the screen.
- All user input is checked for validity and all arrays are protected from overflow. Associated with each array declaration is a variable declaration which is used for checking for overflow. When array sizes are changed, the variable must also be changed.
- Displayed information is in plain English wherever possible. In particular rules are displayed as sentences. However, rules are created using a numeric method for simplicity and to ensure that the correct links are made to the menu and assertion arrays.

CONCLUSION — — —

There are no major problems in building a rule based expert system on a 48k tape-based microcomputer although a number of compromises have to be made. One simplification not mentioned so far is the omission of fuzzy logic. It is not always possible to state rules with 100 per cent certainty, so rules of the form 'If Condition then Assertion with 80 per cent certainty' can be useful. Similarly, if the user's knowledge is incomplete, it would be useful if the system could say: 'The most likely answer is x but it may be y or z' but it can't. Another simplification is the omission of 'ors' linking conditions as well as 'ands'. In practice 'ors' are far less common than 'ands' and it is always possible to implement an 'or' by creating two rules with the same concluding assertion.

TAKE YOUR PICK

Professor Brian Ripley explains how random numbers are selected by a computer:

Random numbers are an essential part of most computer games, and most Basics provide them via a function RND (although the syntax is far from standard). Random numbers also have their place in more serious applications—for example, in simulation models of operational research problems, teaching statistics, and other random processes (such as Patterns, PCW April & June, 1982). Random number routines are much less commonly provided in other languages on small or large computers. Random inputs to a program are often a good way of testing that all the plausible inputs have been accounted for.

Have you ever wondered how a computer can produce random numbers? The strict answer is that it cannot, and it is usual to talk about *pseudo-random numbers* in the vast literature on the subject. The prefix is appropriate, for the Concise Oxford Dictionary defines *pseudo-* to mean 'false, apparent, supposed but not real'. The sequence of numbers produced using calls to RND is deterministic; in fact usually all future values can be deduced from the current value. Nevertheless, the sequence appears similar to a random sequence, so much so that a statistician would be very hard pressed to show that it was not genuinely random. This explains the close link between pseudo-random number generation and cryptography (see PCW July 1983), since a good cipher will produce an apparently random sequence of characters, yet has a structure which is easily uncovered if the key is known. What we need are simple algorithms to create chaos from order.

Shift register generators

The manuals supplied with microcomputers are rarely forthcoming about how their random numbers are produced. One may have to do the equivalent of code-breaking to discover the algorithm used. For the BBC Computer 1 disassembled the interpreter. Fig 1 gives equivalent code in that machine's assembler (in which &20 denotes 20 in hex). It is based on a 33-bit shift register implemented in bytes 0D to 11. The inner loop is performed 32 times each time RND is called to produce a new random number. At each pass of the loop

the register is shifted left one place, and a new bit 0 formed by exclusive ORing bits 20 and 32. Thus bit j of the register holds the bit generated j places ago, say, b_{i-j} . Then $b_{i+1} = b_{i-19} \text{ EOR } b_{i-32}$.

The lowest four bytes are used to form a signed 32-bit integer Y , or viewed as a 32-bit binary fraction to form a real number U between 0 and 1. Note that since only 32 of the 33 bits are used to form Y and U , the future output is not determined by these (although the current and previous values suffice).

Congruential generators

For positive integers X and M , $X \text{ mod } M$ is defined as the remainder when X is divided by M . Thus $0 \leq X \text{ mod } M < M$. BBC Basic provides a MOD operation; in other dialects it can be implemented as:
DEF FNMOD (X,M) = X - M*INT(X/M)

Congruential generators are the commonest sources of random numbers. They generate the next

integer X_{i+1} by
 $X_{i+1} = (aX_i + c) \text{ mod } M$

for positive integers a , c , and M . The initial value of X is known as the *seed*. The effect is similar to a roulette wheel, in which small variations in the initial velocity are magnified into the number of turns, which is then reduced to the fractional part of the turn to give the position. These generators have been explored in PCW Sub Set (July, September, October and December 1981, February, June and September 1982). For example, the Sinclair ZX81 has $X_{i+1} = 75X_i \text{ mod } (2^{16} + 1)$. Obviously the mod M operation is easiest if $M = 2^e$ (just keep the lowest e bits) but it is not much more difficult if $M = 2^e \pm 1$. (Let $y = ax + c$. Then $y = q2^e + r$ is easy. So $y = q(2^e \pm 1) + (r \mp q)$, and $y \text{ mod } M = (r \mp q) \text{ mod } M$, which is $r \mp q$ or $r \mp q \pm M$.) Again one can produce numbers between 0 and 1 by $U_i = X_i/M$ or $X_i/2^e$.

Both shift-register and congruential generators are *periodic* in that eventually they repeat the same output sequence. The *period* is the length of the sequence which is repeated. It is 2^{16} for the Sinclair generator, in which X_i takes all the values 1,2,3,... 2^{16} before repeating. The BBC generator has period $2^{33}-1$; the integers Y take the value zero once and all other possible

values twice in each period. Obviously a long period is desirable. The BBC machine can produce a random number about every 1.5msecs and so would take about 150 days to complete a single period. Other generators have much shorter periods. The RML380Z uses real numbers U_i and forms U_{i+1} by forming $38965U_i + 26664$ and

- (i) $M = 2^e, c > 0$. Maximum is M , attained if $a-1$ is divisible by 4.
- (ii) $M = 2^e, c = 0$. Maximum is $M/4$, attained if the seed is odd and $a-5$ is divisible by 8.
- (iii) M prime and $c = 0$. Maximum is $M-1$, attained if the seed is non-zero and a is a primitive element (or root), that is, if a $(M-1)/p = 1 \text{ mod } M$ for all prime factors p of $M-1$.

Fig 1 The BBC random-number generator

renormalising to lie between 0 and 1. This has period 1995. (I am grateful to Research Machines Ltd for this information.)

Finding the period of a generator is not easy and well beyond the scope of this article. Fig 2 gives some conditions which ensure congruential generators have maximum possible periods. Note that $2^{16}+1$ is a prime (check it!) and 75 is a primitive element, giving 2^{16} as the period of the Sinclair generator. (To check it, set $a = 75$ and do $a = a * a \text{ mod } M$ 15 times, giving $65536 = 2^{16}$.) In cases (i) and (iii) X_i takes all values in $1, 2, 3, \dots, M-1$ during a period, and case (i) includes 0. No simple conditions are known for the periods of shift-register generators.

A long period of itself is not enough for a pseudo-random sequence to be acceptable. The values taken must be uniformly spread between 0 and 1. This is guaranteed for all the maximum period generators described here. Further, successive values must not appear predictable. For example, $X_{i+1} = X_i + 1 \text{ mod } 2^{32}$ has a long enough period, but no one would call its output random. We will at least demand that the pairs (X_i, X_{i+1}) be uniformly spread in the unit square. Fig 3 illustrates some of the patterns which can occur, and Fig 4 lists a program for the BBC Computer to examine these patterns. It has been shown that for congruential generators the choice of c only shifts the pattern slightly, whereas the whole pattern is very sensitive to the choice of the multiplier a . One need not stop at pairs, but can examine triples, quadruples and so on.

With large periods it will be impossible to examine the patterns of pairs visually — one would need years and ultra-high resolution graphics. Fortunately this is not necessary for the maximum-period congruential generators of Fig 2. Examination of Fig 3 shows that the pattern is a lattice made up of repeating a 'cell' M times. All one needs to do is to find the cell. Since there are M cells, each has area $1/M$. Thus, given M , the structure of the pattern is made as fine as possible by choosing a to make the cell as nearly square as possible. Exactly similar considerations apply to triples within the unit cube. In that case the cell has volume $1/M$, so at least one of the sides is longer than $1/\sqrt[3]{M}$, for $M = 2^{16}$ about $1/40$. Experience has shown that structure on even this small scale can badly affect certain uses of random numbers. Unfortunately very little is known about the multidimensional structure from shift-register generators.

Finding lattice cells

Fig 5 gives a program to find the lattice cell for pairs. It works on two vectors X and Y , repeatedly trying to subtract an integer multiple of the shorter vector from the longer vector. Why it works is research level mathematics (see Beyer, Roof & Williamson, *Mathematics of Computation* 25(1971) pp 345-363 if you really want to know). When no further progress can be made the vectors X and Y contain two sides

of the basic lattice cell. The program quotes their lengths. To reduce rounding errors X and Y have been multiplied by M , so they contain integers. However, integer arithmetic is not used since most microcomputers hold real numbers to higher precision than integers (32 rather than 31 bits for the BBC Computer, 23 or 24 bits rather than 15 for most others). None of the elements of X or Y ever exceeds M , so exact calculation is guaranteed in lines 130 and 150 provided $2M-1$ can be represented exactly as a real variable. Line 15 allows arbitrary expressions such as $2 \uparrow 16 + 1$ to be entered for M .

The observed cells in Fig 3 can be checked by this program. It is also possible to check the generators proposed in PCW Sub Set. For example, the ratio of the cell sides for the Sinclair generator is 11.65, for E Thomson's $a=254$, $M=2^{16}+1$ the ratio is 1.02, and for his $a=513$, $M=2^{31}-1$ it is

8160! (These are all primitive elements.) In fact the longest lattice cell sides are $13.3E-3$, $3.94E-3$ and $1.95E-3$. The second of these generators may appear adequate in two dimensions but has undesirable structure in three dimensions where the longest cell side is 22 times longer than the shortest.

The lattice cell structures in three and four dimensions can easily be checked on a microcomputer, although the response will not be as instant as it is for pairs. Fig 6 gives a program to do this on the BBC Computer. Typical timings are 0.1 seconds for Fig 5, and 0.4, 2.2 and 8.8 seconds for two, three and four dimensions with Fig 6. Considerable care has been taken to avoid rounding errors for $M \leq 2^{31}$, in particular in simulating 64-bit arithmetic to form $A * L$ in FNmult. The variable $@\%$ in lines 970... is used to control the printing format. The availability of procedures and multi-line

Fig 3 Plots of all pairs from maximum-period congruential generators with $M = 256$.

functions in BBC Basic makes the design of programs of this complexity much easier.

Fig 6 was developed in parallel with a Fortran77 version on a mainframe. The response of the microcomputer version is only slightly slower than on the time-sharing system of the mainframe. (The ratio of CPU times is 30 to 1, but the mainframe was supporting over 100 users.) However, the mainframe version has 96-bit precision and so can analyse gener-

ators of a much longer period. This is necessary, for the two congruential generators I use in simulation studies have periods 2^{46} and 2^{57} . For these the lattice structure of the outputs in two or more dimensions is certainly negligible. Unfortunately this is not true for any congruential generator I have met on a microcomputer. Acorn was probably wise to choose a shift-register generator for the BBC Computer, although so little is known about

these generators that one cannot be totally confident of it. Perhaps designers of random-number generators for 16-bit chips will use their greater word-length and superior multiplication facilities to produce better generators. If so, they ought to consult the one authoritative book on the subject: *The Art of Computer Programming. Volume 2: Semi-Numerical Algorithms* by D E Knuth; Addison-Wesley. The second, 1981, edition is essential.

Professor Brian Ripley is Reader in Statistics at the Dept of Mathematics, Imperial College, London.

DATA SHAKER

BASIC FOR THE COCKTAIL ENTHUSIAST

At the time of going to press, we're sweltering in 90°F heat and a cocktail selection program seems like a prayer answered. Mark Huckvale quenches our thirst.

A good stock of spirits, wines, liqueurs, mineral waters and juices naturally enables you to make hundreds of classic cocktails. Not having such a grand collection can put you off cocktails altogether. However, with expert advice on cocktail recipes, you can make a large number of cocktails from a limited number of ingredients. This article gives some practical advice in the preparation of cocktails and introduces an expert that is the greatest thing in cocktail mixing since Jeeves.

Mixing cocktails

Traditionally, cocktails are a mixture of spirits with other liquors to make an aperitif. Folklore has grown up over their origination, and also with their techniques of preparation. From a recipe, making cocktails relies on no special skills, so don't listen to people who tell you that stirring is better than shaking, or that the order of adding ingredients is important. There is

only really one rule, and that governs any way of making a cocktail — make it cold.

Briefly then, start with half a cocktail shaker or half a mixing glass full of ice, measure in the ingredients, shake for about three minutes or stir for about five, and strain the chilled liquid into one or more glasses. Remember that a cocktail is an aperitif, so keep it short.

Where recipes call for fruit juice, use freshly squeezed fruit whenever practical; when they call for sugar syrup, mix this up from three parts white sugar to one part water. Decorate with maraschino cherries or slices of lime or lemon and serve with panaché!

For further advice, recipes and folklore, I recommend *Cocktails and Mixed Drinks* by Anthony Hogg (Hamlyn 1979).

Cocktail selection

The Murphy's law of cocktail making states that: 'the desire for a cocktail varies

inversely with the availability of its ingredients.' In other words: if you would like it, you can't make it. The following program sidesteps Murphy's law by preparing, from your ingredients, a list of cocktails that it is possible to make — a kind of recipe book turned inside out. You tell it what you have, it tells you what you can make. In fact, at my house, the guests use it themselves.

Let me describe the operation of the program by listing its commands and what they do:

INITIALISE: In response to the INITIALISE command, the program prompts you with the name of each ingredient in turn, and you reply 'Yes' if you stock it, or 'No' if you don't.

SELECT: Once you have initialised the availability of ingredients, the SELECT command will compute and list names of cocktails that can be made from those ingredients.

PRINT: From a cocktail name, you can

list out its recipe with the PRINT command.

CHECK: An alternative means of searching for a cocktail is by the ingredients that it contains. The CHECK command allows you to ask which cocktails use a particular ingredient. You can use it to search for cocktails that might suit your taste. It also tells you which of those you can make.

MODIFY: When ingredients run out, or when you are experimenting, the availability of ingredients can be changed with the INITIALISE command all over again. Alternatively, the MODIFY command allows you to change the availability of particular ingredients by name.

There is also the command HELP which gives brief details about which commands do what, and BYE which takes you out of the program.

Program details

I have deliberately avoided a specific dialect of Basic to try to make the cocktail selection program more widely applicable. The Basic language in the listing is 'plain vanilla' Microsoft, although I have used long, variable names for clarity. However, the first two characters of the variable names can be used as unique identifiers.

The only real conversion problems you might have are with decoding the recipe strings. Each recipe is stored as a string of characters: firstly the name, then a dollar sign, then a list of ingredients. Each ingredient is encoded into three characters: a quantity descriptor (eg, 'one measure of') from the letters 'A' to 'O', and an ingredient number from '01' to '20'. The routine at line 10000 decomposes a recipe string into its constituent parts.

The program allows the use of truncated command strings and recipe names, etc, through the use of a special string comparison statement (eg, line 3110). If you cannot convert this idea into your Basic, then a simple string comparison will do as well.

I have tried to keep to the more commonly available and most widely used ingredients for cocktail mixing. There are some famous cocktail names missing as a consequence. Ideally the ingredient and recipe data should be stored in a disk file or in DATA statements. I leave that — and the addition of more recipes — up to you.

Other ideas

My experience with this program shows that it generates a great deal of interest from non-computer people. I think that this is because it is *novel* and because it is *practical*. The program fulfils a function not easily duplicated by other means, and the computer is your assistant rather than your adversary.

Novel and practical programs give home computing a credibility not generated by games software or by the current 'home finance' type software. While the cocktail selection program is not earth shaking, I think it is constructive in bringing home computer software to ordinary people.

NEWCOMERS START HERE

This is our unique quick-reference guide, reprinted every month to help our readers pick their way through the most important pieces of (necessary) jargon found in PCW. While it's in no way totally comprehensive, we trust you'll find it a useful introduction. Happy microcomputing!

Probably the first thing you noticed on picking up this magazine for the first time was the enormous amount of unintelligible-looking jargon. Well, in the words of *The Hitch-hikers' Guide to the Galaxy*, don't panic! Baffling as it may sound, the jargon does actually serve a useful purpose. It's a lot easier to say VDU, for example, than 'the screen on which the computer's output is displayed'. This guide is intended to help you find your way around some of the more common 'buzzwords' you're likely to come across in the pages of PCW.

For those completely new to computing, let's start with the question: what is a microcomputer? We can think of a micro as a general-purpose device as opposed to a typewriter which can only be used for typing, a calculator to perform calculations, a filing-cabinet to file information and so on. A micro can do all those things and more.

If it is to be of any use, a general-purpose device needs some way of having a function assigned to it. We do this by giving the computer a set of logical instructions called a program. The general term for computer programs is software. Every other part of a microcomputer system is known as hardware. 'If you can touch it, it's hardware.'

Programs must be written in a form the micro can recognise and act on — this is achieved by writing the instructions in a code known as a computer language. There are literally hundreds of different languages around, the most popular of these being Basic. Basic is an acronym of Beginners' All-purpose Symbolic Instruction Code. Although originally intended only as a simple introductory language, Basic is now a powerful and widely-used language in its own right.

Other languages you're likely to come across in PCW include Forth, Pascal, C and Comal. These are known as high-level languages because they approach the sophistication of a human language. You'll also see references to the low-level languages, assembly language and machine code. We'll look at high and low-level languages in a moment.

The heart of a micro, the workhorse, is the processor or Central Processing Unit (CPU). The processor usually consists of a single silicon chip. As with computer languages, there are a number of different types of processor around, the Z80, 6502 and 8088 being the three most common. The processor is nothing magical — it's just a bunch of electronic circuits. It's definitely not a 'brain'.

Being electronic, the processor's circuitry can be in one of two states: on or off. We represent these two states by binary (base two) notation, the two binary digits (known as 'bits') being 0 and 1. It is possible to program computers in binary notation, otherwise known as machine code (or machine language) programming.

Machine code is called a low-level language because it operates at a level close to that 'understood' by the processor. (Languages like Basic are known as high-level languages because they are symbolic, operating at a level easily understood by people but not directly understood by the processor.)

Between high-level languages and machine code is a low-level language known as assembly language or, colloquially, assembler. This is a mnemonic code using symbols which the processor can quickly convert to machine code.

Since there is no binary equivalent of a comma or the letter 'a', for example, we need some sort of code to represent each character to be processed by the computer. In order to simplify communication between computers, a number of standard codes have been agreed on. The most widely used of these codes is the American Standard Code for Information Interchange, ASCII. This system assigns each character a decimal number which the processor can then convert to its binary equivalent.

There are two types of program to do this translation for us. The first of these is a compiler which translates our whole program permanently into machine code.

When we compile a program, the original high-level language version is called the source code while the compiled copy is called the object code. Compiled programs are fast to run but hard to edit. (If we want to change a compiled program, we either have to edit it in machine code (extremely difficult) or we have to go back to a copy of the source code.) For this reason there is a second translation program: an interpreter. An interpreter waits until we actually run (use) the program, then translates one line at a time into machine code — leaving the program in its original high-level language. This makes it slower to run than a compiled program, but easier to edit.

There are two strange-sounding Basic words you're likely to come across: POKE and PEEK. When you program in a high-level language, you are normally unable to choose which part of the machine's memory the processor will use to store things. This makes programming easier as you don't need to worry about memory locations, but slows down the program since the processor has to 'look up' addresses for you. Using the POKE command, however, you can 'POKE' a value directly into a desired memory address. 'POKE 10000,56', for example, puts the value 56 into memory location 10000. PEEK allows you to examine the content of a particular memory address. If you were to follow the above POKE with 'PEEK 10000', the computer would respond by displaying the value 56. (POKEing and PEEKing is normally done to increase program speed. It's a compromise between Basic and machine code.)

So far, we have a processor and a program. Since a computer needs somewhere to store programs and data, it needs some kind of memory. There are two types of memory known as Read Only Memory (ROM) and the badly-named Random Access Memory (RAM). ROM is so-called because the processor can 'read' (get things out of) its contents, but is unable to 'write to' (put things in) it.

ROM is used to store firmware, which consists of software permanently available on the machine. An interpreter is a typical example of firmware (stick with it: it gets easier!).

RAM differs from ROM in two important ways. Firstly, you can write to it as well as read from it. This means that the processor can use it to store both the program it is running and data (information). The second important difference is that RAM needs a constant power-supply to retain its contents: as soon as you switch the computer off, you lose your program and data.

Memory is described in terms of the number of characters we can store in it. Each character is represented by an 8-bit binary number. 8 bits make one byte and 1024 bytes make one kilobyte or 1k. 32k, for example means that the computer can store about 32000 characters in its memory. If 1024 sounds like an odd number, remember that everything is based on the binary system, thus 1,2,4,8,16 ... 1024 being the nearest binary multiple to 1000.

There are numerous forms of permanent or backup storage, but by far the most common are the floppy disk and cassette.

Floppy disks or diskettes are circular pieces of thin plastic coated with a magnetic recording surface similar to that of tapes. The disk, which is enclosed in a protective card cover, is placed in a disk drive. Disk drives comprise a high-speed motor to rotate the disk and a read/write head to record and 'playback' programs and data.

The disk is divided into concentric rings called tracks (similar to the tracks on an LP) which are in turn divided into small blocks by spoke-like divisions called sectors.

There are two methods for dividing the disk into sectors. One method is called hard-sectoring, where holes punched in the disk mark the sectors, and the other is soft-sectoring where the sectors are marked magnetically. (The reason that disks from one machine

can't be read by a different make is that each manufacturer has its own way of dividing up the disk. Recently, however, manufacturers do seem to have begun to acknowledge that this situation can't go on forever, and they are working on making their disks compatible with each others.)

Since the computer needs some way of tracking the whereabouts of everything on the disk, we have a program called a Disk Operating System, more usually known simply as the Operating System (DOS or OS). The operating system does all the 'house-keeping' of the disks, working out where to put things, letting the user know what is on the disk, copying from one disk to another and so on. As you might expect by now, there are lots of different operating systems available (each with its own advantages and disadvantages). The two most popular OSs are CP/M (Control Program for Micros) and MS-DOS (Microsoft Disk Operating System).

Floppy disks provide a reasonably fast and efficient form of secondary storage and are cost-effective for business machines. For home computers, however, the usual form of program and data storage is on ordinary cassette tape using a standard cassette recorder. This method of storage is slow and unreliable, but is very cheap and is adequate for games and the like.

Another type of disk you'll see referred to is the hard disk. This is an extremely efficient method of storing large amounts of programs and data. Hard disk capacity generally starts at around 10 Mbytes (10 million bytes) and rises to ... well, you name it. Besides offering a much greater capacity than floppies, hard disks are more reliable and considerably faster. They are, however, much more expensive than floppy drives.

Since computers need some way of communicating with the outside world, we need input and output devices. Input and output devices include all manner of things from hard disk units to light-pens, but the minimum requirement for most applications is a typewriter-style keyboard for input and a tv-like Visual Display Unit for output. The Visual Display Unit is variously referred to as a VDU, Cathode Ray Tube (CRT) and monitor.

The various component parts of a computer system (processor, keyboard, VDU, disk drives, etc) may all be built in to a single unit or they may be separate, connected by cables.

Take this paragraph slowly and it makes sense! When a computer communicates with an outside device, be it a printer or another computer, it does so in one of two forms — parallel or serial. Parallel input/output (I/O) requires a number of parallel wires. Each wire carries one bit, so with 8 wires we can transmit/receive information one byte at a time (8 bits = one byte, remember). Serial I/O, in contrast, uses a single wire to transmit a series of bits one at a time with extra bits to mark the beginning and end of each byte.

To enable different devices to communicate with each other in this way, standards have been agreed for different interfaces. An interface is simply a piece of circuitry used to connect two or more devices. The most common standard serial interface is the RS232 (or V24) while the Centronics standard is popular for parallel interfaces.

When two computers want to communicate with each other over a distance, there are again two ways of doing it. Both methods use the public phone network. The simplest and cheapest method is to use a device known as an acoustic coupler. This simply plugs into your computer, and has a receptacle into which you place your telephone handset. However an acoustic coupler is slow and not exceptionally reliable.

A more sophisticated (and correspondingly more expensive) method is to use a modem. Unlike an acoustic coupler, a modem is wired into the telephone system and you should get permission for this from British Telecom.

So, now you know!

It's our service!

Whether your applications involve simple financial procedures or complicated R & D Graphics (or a myriad of techniques in between) KGB have the system for you.

With the right software packages to go with it. And all at sensible competitive prices.

But we go further still. We can help with finance and leasing. We provide sound system training. And comprehensive maintenance.

So send for our literature. Have a look at the KGB service - and find out how you can win Game, Set and Match!

Micros for the Business, Commercial and Technical user - Stand Alone and Multi-user Systems.

SOFTWARE WHICH SPREADSHEET?

SPECTRUM SPREAD

Mike Liardet continues his series with a comparison of Psion's Vu-Calc and Microl's The Spreadsheet, both available for the Sinclair Spectrum.

When Sinclair Research launched the ZX Spectrum in April 1982 the company was already in the record books, having sold more computers than any other company in history. Well yes, each sale was only £70 or so, but it had only been selling computers for two years. And just a few months (or should I say (K)night's? — groan) later, with 300,000 Spectrums sold, total Sinclair sales edged over the magic million mark.

It is a reasonable assumption that many of the thousands of Spectrum purchasers use the computer simply for games or educational purposes, and of course most of the Spectrum software is aimed at this sector of the market. But the fact is that packed into that small case, only slightly larger than a paperback book, is a computer of considerable power and sophistication. This fact will be amply demonstrated by the arrival of the much heralded micro-disk drives (for about £40) and networking facilities which will make the Spectrum almost as powerful as a CP/M business machine (costing ten times as much).

Anyway it is possible to run fairly sophisticated applications on the Spectrum, and a trickle of such packages are now becoming available. These include indexing and text processing systems, and of course spreadsheet systems.

In this article we are going to compare two of the currently available Spectrum spreadsheet systems: Psion's Vu-Calc and Microl's The Spreadsheet. Microl claims

whole lot together at the end. Just as a final bonus we will wind up with a brief review of all the cassette spreadsheet systems covered so far in the series.

Getting going

Being completely new to the Spectrum and all its software I was quite well-placed to evaluate the introductory guides and see just how easy it is to get everything up and running from scratch.

The complete package, a 48k Spectrum with printer and power supply, etc, arrived in two well-padded boxes. Once the boxes were open, I had to pause for some time just to marvel at the Spectrum: with 48k of RAM, an excellent Basic interpreter in ROM and high-resolution colour graphics it has a specification not unlike the original Apple II, which must be forty times larger, and a good bit more expensive too!

In common with most small, inexpensive machines, the Spectrum must be connected to an ordinary domestic cassette recorder and television set in order to make up a complete system. It is fairly obvious how everything fits together — all sockets are labelled and all plugs that need to be different *are* different and so it is difficult to go wrong. I experienced only minor hold-ups before I could get started: I had to fit a mains plug to the power supply and solder different plugs onto the cassette leads, as my archaic recorder did not accept the jack-plugs fitted by Sinclair.

lots of extra unfamiliar symbols printed on each key and also lacked a few of the usual computer keys, like SHIFT, CONTROL, ESCAPE, etc.

The keyboard course is provided for free with the Spectrum, and is on a cassette tape. Loading this provided me with some initial practice with the cassette recorder, getting volume levels right and so on. Incidentally it is written by Psion, who also wrote Vu-calc, and in fact a number of other Spectrum packages. The Spectrum keys are actually made of rubber, and feel more like calculator keys than VDU keys, but work reliably enough all the same. After about half an hour of keyboard training, I felt I knew enough to try out one of the spreadsheet systems . . .

Vu-Calc

Psion, the producer of Vu-calc, is one of a number of software houses working in close co-operation with Sinclair Research. It is also now converting some of its product range (including Vu-calc) onto the BBC machine. It has reputedly sold over a million software tapes for the Spectrum and ZX81 and its products range from games like Hungry Horace, to an indexing system (Vu-file) and, of course, the spreadsheet system: Vu-calc.

Vu-calc is supplied as a single cassette tape, in a standard plastic cassette box. My first impression was that there was no documentation at all, but closer inspection revealed that the paper liner for the cassette box actually unfolded into a short seven page leaflet. Although initially unimpressed by this, I found that, in practice, it was quite adequate — indeed slightly easier to use than Microl's 45-page manual for The Spreadsheet.

With my newly acquired keyboard skills I found loading the Vu-calc software completely straightforward: just type in the LOAD command, set the tape running and wait two or three minutes. Psion provides a bit of light relief while the tape is being read with a high resolution graphics image of the planet Saturn — actually the company logo.

Once Vu-calc is fully loaded and operational, the screen clears to a fairly typical

'...packed into that small case, only slightly larger than a paperback book, is a computer of considerable power and sophistication.'

that: 'The Spreadsheet outperforms all Spectrum spreadsheets including Vu-Calc.' We shall certainly put that claim to the test!

Firstly, for the benefit of the non-Spectrum owner we will deal with the Spectrum itself. Actually PCW June 82 contains a full, in-depth evaluation of it. Next we will deal with Vu-Calc and The Spreadsheet individually, and then tie the

Once everything was connected my desktop somewhat resembled a plate of spaghetti, with leads trailing everywhere, but everything seemed to work okay.

After a brief glance at the keyboard, I quickly decided to try out the keyboard familiarisation course instead of immediately delving into the two spreadsheet systems. The keyboard, although laid out in the conventional qwerty pattern, had

spreadsheet display of four columns, each wide enough to display six digit decimal numbers and 18 rows. The display is actually in colour but as I was using a monochrome TV I could only gaze wistfully at the colour picture on the front of the Vu-calc documentation. If that is a true representation of the software then users with a colour TV will get the benefit of relaxing pastel blues and greens while they are Vu-calcing.

As with most spreadsheet systems the screen simulates a window over the entire sheet. A wide blob filling a whole column width of one row indicates the current cell, the cell which will receive any number, text or formulae that may be keyed in. This blob, or cursor, can easily be moved around the sheet by pressing the four arrow keys on the Spectrum keyboard. Each key moves the cursor in the obvious direction and attempts to move the cursor off the edge of the screen cause a very rapid redraw. The effect is as if the screen window has been dragged to a new position by the cursor.

Holding a key down for a few seconds causes a series of rapid redraws, stopping when the cursor hits an outer edge of the spreadsheet. In this way I quickly established that Vu-calc's spreadsheet extends down 60 rows and across 60 columns. Of course the screen window (occupying about 6in by 6in on a 12in TV) permits only 18 rows by 4 columns to be viewed at any given moment. Thus the software is simulating a window onto a piece of paper about eight feet wide and two feet long.

With a few keystrokes it is possible to 'jump' the cursor to any named cell. Cells are identified by letters of the alphabet for the row they occupy (A to Z for the first twenty six, then AA, AB . . . BH for the remainder) and numbers (1 to 60) for their column. Thus A1 is the top left hand corner of the spreadsheet and BH60 is the bottom right. Most spreadsheet systems do not operate this way, but copy the original Visicalc convention of naming rows with numbers and columns with letters. I prefer Vu-calc in this respect, since it is fairly common to reference, say, the thirteenth column (for yearly totals) and I can never remember what is the thirteenth letter of the alphabet. With Vu-calc, I simply need to remember the thirteenth number (ie, 13).

Having established the overall dimensions of the spreadsheet, I started keying in the Benchmarks. These marks, described fully in PCW Nov 82, are designed to stretch systems to the limit, pushing both the processor and RAM memory as hard as possible. Most spreadsheets have a fairly large theoretical sheet size, but exhaust either the processor or available RAM or both long before the sheet is completely filled with numbers and formulae. This did not happen with Vu-calc. In fact it sailed through all the Benchmarks with flying colours (see below). Perhaps not as fast as some, but fast enough, and with the capacity to fill each and every one of the 3600 cells available.

Once the Benchmarks were completed I started looking for any special facilities and

was disappointed to find very little in this department. Noticeable absentees included row and column deletion, variable column widths and logs and trig, not to mention more sophisticated facilities like split screens, graphics and so on. Having only simple arithmetic is particularly restrictive, and is a slightly puzzling omission since the Spectrum comes ready supplied with all the necessary maths software as part of its Basic interpreter in ROM. Another nasty was the error trapping. Illegal arithmetic, or referencing non-existent cells, etc, causes the system to drop into Basic. Simply type GOTO 9000 and everything is restored to normal. Actually you quickly get used to this, and in any case The Spreadsheet is the same, but

Database', 'The Word Processor' and also 'The (forementioned) Spreadsheet' (from now on 'TS'). TS's packaging is certainly more impressive than Psion's. TS is supplied in a neat cardboard box, containing a cassette, nicely printed manual and various leaflets on Microl's other goodies.

Getting started with the system proved quite tricky. Firstly the manual states that LOAD "spread" is the Basic command to get the software loaded from the cassette and running in the Spectrum. Actually, after several abortive attempts I deduced that the manual was wrong and successfully used 'LOAD "TS"' instead. This actually loads TS and sets it up with demonstration data for the tutorial. The

'An interesting facility is EDIT. If a formula is EDITed, then not only the current cell is affected, but also every replication of it.'

you must be careful to key in the right line number!

Of course Vu-calc does provide facilities for loading and saving spreadsheets to cassette and these operate at quite a reasonable speed (see Benchmarks). There is also a formula replication command, permitting both relative and absolute copies to be automatically written into a line or rectangle of cells. An interesting facility is EDIT. If a formula is EDITed, then not only the current cell is affected, but also every replication of it. Thus it is unnecessary to redo the replication after a formula has been corrected.

Incidentally this latter facility gives some clue as to why Vu-calc performs so well under the Benchmarks. When the Benchmark formula (consisting of 20 characters or so) is replicated, instead of mindlessly making numerous variations of the formula for each cell, consuming 20 bytes of memory for each, it economically uses just two or three bytes as a reference to the original formula. A subsequent EDIT of this formula automatically corrects all cells which refer to it, an advantage in both storage space and time saved for the user. This implementation device is, of course, completely invisible to the user (the above description is my deduction of what must be happening underneath) and all formulae, whether resulting from a replication or not, always appear correctly displayed as if they were really stored explicitly. Incidentally a formula can also be corrected without affecting any previously made copies of it: simply type in a replacement formula without using the EDIT facility.

About the only other major facility is PRINT, which copies the screen to the Spectrum's ZX printer. This printer, not much larger than a packet of cigarettes, provides a fairly noisy printout on metalised paper.

The Spreadsheet

Microl are currently selling a selection of packages for the Spectrum, mostly prefixed by 'The'. Thus we have 'The

manual claims that the cassette also has a version of TS without demonstration data but after trying both sides of the cassette, I was unable to find it.

Fortunately, it is possible to clear TS's spreadsheet, so I was able to clear out the demonstration data to put the system through its paces. But as soon as I started replicating the Benchmarks formulae the system started bombing out—ie, dropping into Basic with a cryptic error message. Eventually I found the right section in the manual for getting restarted: type GOTO rs. But the error problem still persisted.

Actually, on the point of phoning Microl, I managed to discover what was wrong. When using the CLEAR command, to clear out the demonstration data, TS requests information on spreadsheet dimensions: the more columns you want the fewer rows available and so on. By the way, once this choice is made you can only change it by CLEARing and losing all the spreadsheet model, which is quite a serious disadvantage in itself. Anyway, in preparation for the Benchmarks, I opted for 13 columns. The system responded by saying that this permitted '<=72 rows', so naturally I selected 72, as the maximum possible. Actually it turns out that this recommended figure is wrong, and if a lower figure, say, 71, is selected then the system works correctly thereafter.

Once over these obstacles, things went reasonably smoothly. TS does have more facilities than Vu-calc, notably a full range of maths functions and variable column widths. But I found it quite a frustrating system to use.

First the minor complaints: a row-sum facility exists, but it cannot be replicated down a column. The space bar must be pushed (to set the system into 'expression mode') before a formula or number can be entered — I kept forgetting and being treated to an error message. Formulae are converted into an internal format, which is the one chosen for display. The original format can only be viewed after a considerable pause following a special key-stroke.

ABOUT THE DEALER OF YOUR FRIENDLY IBM PERSONAL COMPUTER

It is very comforting to know that when buying an IBM Personal Computer, you are investing in a machine that carries a pedigree second to none in the computing world.

As an IBM Authorised Dealer, Zynar will also contribute to your peace of mind. We are professionals. Many of us have worked not only in the computing industry itself but also with the world's 'blue-chip' component manufacturers. And, we know the Personal Computer well enough to have developed an end-user network system even before its UK availability.

As IBM consolidates its position with more software and peripherals, Zynar will continue to help you make the very most of your 'friendly' microcomputer and streamline your existing systems for faster growth and profitability.

SPECTRUM SPREAD

Lastly, I found the style of the manual occasionally condescending and authoritative: 'Finally, some more about the art of estimating . . .', etc.

Anyway, most of these minor complaints can be tolerated, but there is one

liked? Well, it does have comprehensive maths facilities, in fact access to all of the considerable number of maths functions in the Sinclair version of Basic. The actual screen display was clearer on my TV set. I imagine that it is actually a colour display,

'Like Vu-Calc, and many other spreadsheet systems, it provides the usual "windowing" facility but can take over forty seconds to redraw the screen if a shift of window is required by a cursor move.'

major problem that makes the system very difficult to use, at least for spreadsheet models of any reasonable size. TS is, unfortunately, irritatingly slow. Like Vu-calc, and many other spreadsheet systems, it provides the usual 'windowing' facility but can take over forty seconds to redraw the screen if a shift of window is required by a cursor move. (Vu-calc does this practically instantaneously.) Some of the other major facilities also take an excessively long time. For example, replicating the Benchmark formula right across all available cells takes around ten minutes. Admittedly this is a fairly Herculean task, and one would expect some sort of delay from any spreadsheet system, but ten minutes is a long time to wait.

Having dispensed with the grumbles, were there any features of TS that I actually

but the choice of colours provided a clearer image than Vu-calc on my monochrome TV. Also TS gives a short 'click' on the Spectrum speaker after every key-hit. The rubber keys on the Spectrum provide no sound on their own, and this is slightly disconcerting when you are used to the rattle of a conventional VDU keyboard. So Vu-calc operates in complete silence and TS simulates the clicking of a normal keyboard!

In conclusion

The Spectrum is a very powerful micro packed into an incredibly small case and at a very low price. Vu-calc complements it very nicely, working quickly and efficiently with no major glitches or problems. My only major criticism of Vu-calc is the lack

of maths functions. Unfortunately, anyone wanting more than + - * / will have to cross Vu-calc off their list.

Although The Spreadsheet offers a few more facilities than Vu-calc, in particular extensive mathematics, it is very slow and this makes it very difficult to use.

What about Microl's claim that it 'outperforms all . . . including Vu-calc'? I can see no validity in this claim whatsoever. Yes, it does have facilities absent from Vu-calc, but anyone can fit an electric toothbrush to a bicycle. I doubt that Microl would claim that this makes it 'outperform' a motor-bike.

Cassette-based spreadsheets: the story so far

Now that the series has been running several months and we have evaluated several spreadsheet systems, both disk and cassette-based, it is an appropriate time to take stock of all the cassette-based spreadsheet software reviewed to date.

In fact one could expect cassette-based machines to have spreadsheet systems almost as good as disk-based. This is because spreadsheet software feeds primarily on a micro's central processor and RAM memory — and the cheapest cassette micros provide identical processor power and nearly as much RAM as many of the more expensive disk-based computers. In spite of this there is a fairly considerable quality gap between disk and cassette spreadsheet software.

I suspect that the reason for this is because disk-based machines, with a huge choice of programming languages and editors, etc, do provide a superior environment for 'writing' spreadsheet software. Perhaps when cassette machines grow disks or can be easily loaded with software actually developed on a larger machine then this state of affairs may greatly improve.

So none of the cassette spreadsheets match up to the disk systems. Of the systems covered so far, their relative merits are as follows:

* Prophet II (PCW March 83): Hardware (a TV, cassette unit and Acorn Atom in metal box) and software available only in combination. Very good software, but on ugly heavy hardware. Expensive.

* ECalc (PCW July 83): Available for the Epson HX-20. Lovely hardware, but fairly poor software.

* The Spreadsheet (see above): Available for the Spectrum. Too slow.

* Vu-calc (see above): Available for the Spectrum (and now also BBC) micro. Good fast software, but provides only the basic maths functions.

Out of the four systems tested to date I would nominate Vu-calc as a best buy. Both hardware and software worked very well, and a complete set-up can be obtained for a very modest sum. The Prophet II system has better software, but it is quite a lot more expensive.

END

After the computer, what then?

Hardware from Guestel comes with the best credentials: market-leading price and performance.

There are no duds at the sale, and no cop-out after it.

You can expect training sessions for normal human beings with teachers who appreciate the difference between coming and going.

Also, installation without trauma.

Our software advice is free and it may save you some money.

After the sale, fear not.

Talk through a variety of service contracts which can be shaped to your own idiosyncrasies.

And remember, Guestel care for over 400 micro installations throughout the UK... if anything does go wrong we'll be there. Fast.

Before and after buying a computer, Guestel means anything but a hard time.

It happens sometimes... people give you what you want and the shock nearly kills you.

BIG BROTHER IS WATCHING YOU

The Data Protection Bill will have complex ramifications for the home and business computer user if it becomes law. A Sandison considers the consequences.

Credit is easily obtained by the credit-worthy, but some people find they are not; and wonder why. Somebody somewhere has a file about them. It so happens that one of those credit checking agencies has a phone number which differs from mine by only one in the first digit. I get several wrong numbers every day, some of which start gaily 'Can I have a check on Mr...' before I can even identify myself. How I long to say 'very reliable' or 'quite untrustworthy' according to my mood. But so far I have resisted the temptation.

Personal data files

That such credit checking agencies exist and use computers is well known. That you are entitled to send a small fee, receive a copy of your file and have errors corrected, is less well known. That there ought to be a similar right to be told what is said about you in other types of personal data file is a widely held view. The Government has set out to provide such a right in the 'Data Protection Bill' which was lost at the election, but has now been reintroduced. It is inspired by an economic need to ratify a European convention.

The Bill has proved highly controversial. The debate, both in Parliament and in the country at large, has tended to concentrate on the very difficult issues of what should remain confidential and when national interest requires or overrides confidentiality. The relevant professional organisations have fought lengthy battles and the lawyers, at least, have won exemption from access by the individual if they can claim legal professional privilege. The professional debates will no doubt continue long after a Bill becomes law.

Manual files

Another major debate has been whether the Bill's provisions should be restricted to computerised files, or whether the need for access to paper files is not just as relevant. The EEC convention refers only to computers and that will do for the Government. But the 'Data' to be covered by the Bill is 'information recorded in a form in which it can be processed by equipment operating automatically in response to instructions given for the purpose'. The British Library recently announced (*British Library News*, 1983,

No 83) a successful prototype of equipment to read any printed document into a computer where it is susceptible to all the manipulation which this makes possible. So the attempt to distinguish manual from computer files is already out of date and the Bill's effects may be far more widespread than at present envisaged by the civil servants involved.

How it is meant to work

Far too little attention has been given to the mechanics of the controls envisaged. The Bill starts by defining 'Personal data' as (computerised) information about, and manipulated by reference to, living individuals who can be identified from that information. It sets up a Register of nearly everyone who 'uses' such data, but the Home Office evades the crucial question whether a 'user' owns the data or operates the keyboard to 'control the contents and use of the data'. Then the Bill will make it an offence to 'hold' such personal data, or provide services to manipulate them without being registered for the particular type(s) of data for the particular purpose(s); as it will to obtain information from sources, or to disclose the information to someone or to some country, not mentioned in the Register entry. Registration fees to cover the costs of the Register will, of course, be charged. 1984 certainly seems the right year to start!

Exemptions

There are a few exemptions from registration. Personal data 'held by an individual and concerned only with the management of his personal, family or household affairs are exempt', but this hardly includes hobbies such as the family history of unrelated individuals of the same name, nor calculating batting averages for the county teams. If you allow someone else to use your machine for any non-exempt purpose, then you are running a 'computer bureau' and must register that activity.

Next, personal data held by an unincorporated members' club and relating only to members of the club are exempt: a local Residents' Association can computerise its members' names and addresses, but not that of the landlord or his agents! Then,

data held *only* for the purpose of distributing, or recording the distribution of, articles are exempt provided they consist *only* of names and addresses or are kept *only* for distribution or accounting purposes: be it noted that recording whether they replied to a circular and what they said will not be exempt! And both the club members and the recipients of the distribution must have given permission for the data to be held in that way — so that a club which computerises must retain a manual system for the objectors! How naive the lawyers are!

As a result of the debates before the election, exemptions are now also granted to word processing systems used *only* for preparing texts and data kept *only* for calculating wages and pensions or accounting for goods and services supplied. But these exemptions are very tightly worded and many obvious and simple extensions of these operations still require registration. Businesses might well be advised to apply for registration to avoid committing unintentional offences by extending their use of the computer in a new way.

But recording other transactions with clients, by estate agents, lawyers, doctors, architects, are registerable. So are library or other catalogues which list things by living authors or donors. So are the membership records of all the incorporated societies, and business records showing which customers are interested in which products as distinct from who bought and who paid. And so on.

Will it work?

But what is this vast Register (costing over £15 million to set up, with similar annual running costs) going to achieve? First it is supposed to enable the Registrar, and his staff of about 20, to allow individuals who think someone somewhere may have a file about them, to see the Register or to have, at a price, a copy of any entry. That sounds all right, until you consider what happens next.

Suppose you think a credit checking agency may have a file about you and you inspect the Register. There could well be a hundred agencies (and from their point of view, the more the merrier) operating at addresses which provide no guidance. Even their sources of information may be

GOTO page 229

STAR QUALITY?

Kathy Lang evaluates InfoStar, MicroPro's recently launched data management package running under the CP/M operating system.

InfoStar is MicroPro's entry in the CP/M-80 data management stakes. It has been available in Europe for only a couple of months in its present form, and in the US for just a little longer, but it is already second in sales of CP/M-80 data management packages in the US only to the long-established dBASE II. There are probably two very good reasons for this, excluding the inherent merits of the package. Firstly, it consists of two elements: a data entry and interactive query part, which is actually our old friend DataStar, and a reporting element, ReportStar, which is new. So anyone who already has, say, an early version of DataStar would be very likely to want InfoStar to give flexible reports on the data. Secondly, the data file format is identical with that used by Mail-Merge (used with WordStar to produce personalised letters and 'boiler-plate' documents) and by CalcStar, so anyone who uses either of those packages may expect to find InfoStar a natural partner. But for uncommitted users, how does the package measure up to the plethora of competition?

The two sections of InfoStar—DataStar and ReportStar—consist of several parts which may be invoked directly from CP/M or from within its associated module. For instance, after creating a data file format on the screen, you may then go directly to DataStar to enter data; but to set up report formats and run them, you go back to CP/M and invoke ReportStar direct. Throughout InfoStar, each screen displays the commands available at the top of the screen, in a very similar way to the prompts in WordStar. This makes it easy to see where you are in the package, and to give the commands in the appropriate format. After an initial reading, I found I very rarely needed to look at the manual for straightforward functions. (That was just as well, because for all its clarity and comprehensiveness I still didn't find it all that easy to get the overall picture from the manual, or to find the particular piece of information I needed.)

Information in InfoStar is stored in the simple 'comma delimited' format used by many packages and by Basic programs. Data entry and display are governed by a display 'form' created by the FormGen part of the package—one form per data file. This form is created by 'paint-a-screen', supplemented by question-and-answer where features such as data checking are needed. Because 'comma delimited' fields are used in records, the size of fields can be changed after records have been stored. However, as records are stored they are indexed, and the specification of key fields cannot be changed after entry. Only one index file, based on one or more key fields, is allowed for each data file. There are extensive data validation and calculation facilities. Once stored, individual records can be retrieved by specifying the key, or the file or parts of it may be scanned in stored or key order.

Those of you who are already familiar with DataStar will know that within its limitations it is a good 'workhorse' package, with flexible form-filling facilities and good 'help' features. Its reporting features have, however, always left a lot to be

maximum, including captions and messages to the form-filler. No field may exceed 255 characters. But these are generous limits, which few other packages can match. A single key is permitted, made up of one or more complete fields not exceeding 120 characters altogether. This rigidity in key field specification is one of the less attractive features of the package. Other constraints (none as serious for most applications) are shown in Fig 1.

File creation and indexing

Once a form has been created using FormGen, the first invocation of DataStar triggers off the setting up of the data and index files. So the form must contain all the information needed to set up these files. The form consists of a grid of 255 by 255 characters, which can be displayed on the screen by moving the cursor into the desired area. The underline character is used to indicate a field and its length; any other characters typed on the screen are treated as labelling information used for

'InfoStar can be tailored to a wide variety of terminals and printers. There are also facilities for patching the code to deal with special circumstances, as in WordStar and the other MicroPro products.'

desired, and ReportStar goes a long way to solving this problem. This program consists of three main sections: to create a report format; to sort the file if necessary; and to print or display the report using the pre-defined format. Formatting is achieved in a similar way to screen form design.

Constraints

A data file must be capable of being displayed on a screen format 255 characters wide by 255 characters deep as a

display purposes only. A typical screen format which I used for the Benchtest is shown in Fig 2. To indicate a key field, you just put the cursor somewhere in the set of underline characters which shows the field placing, and press CTRL/K; the underlines are then replaced by asterisks. As you can see from Fig 2, I used the first field, Refnum, as my key field. If you use more than one field to construct the key, the fields are ordered in the index as they appear in the design form. If that would be inconvenient for data entry, then the actual display order can be changed, using

the 'enter field attributes' command.

Field attributes are assigned by moving the cursor to the field to be defined, pressing CTRL/R, and then answering the questions posed. This is the place where the extensive data validation features come in, with the most powerful features being provided by the 'edit mask' option. This allows you to say whether a field must be entered (with various riders), and what kind of field it must be — eg, all letters, all numbers, a mixture, including special characters such as a decimal point, etc. It also specifies copying a field from a previous record. Range checking is provided too.

Fields may also be derived, either from calculations or from a list of allowable values stored in a separate file. So if you have, say, a field which must always contain the name of an English county, you could list all the county names in a separate file, and DataStar would allow you only to input a valid county name in that file. You can specify that a key field must take a unique value, and you can use DataStar's 'tie-breaker' feature to make non-unique keys unique. Calculated fields may be based on constants and/or other field values, using the arithmetic operators with brackets if required. Finally, you can request operator verification: this may be either by asking the person entering data just to check by sight that the field is correct, or by asking for the field to be retyped, thus providing a 'type and verify' facility as in conventional key-to-disk systems.

The index file is updated as data is entered, amended and deleted. However, the manual recommends that 'file maintenance' should be carried out regularly to give efficient access to files which are frequently updated. This may be done within DataStar, or (much more quickly, says the ReportStar manual) using the FormSort program which is part of ReportStar.

Data input and updating

Records may be entered directly to the data file and verified at the same time, or they may be entered in a batch without verification and verified later. This makes it possible to have data which is to be verified by the 'type and retype' method to be entered by one person and verified by another. In either case, the screen displays the form as created by FormGen, and data is simply entered in situ, using control characters to move from one field to another (backwards as well as forwards . . .). Once the record has been entered, you are asked to confirm that it should be stored, and given the option to make further changes.

Data access for updating or viewing may be by entering a key field value; exact matching is used, and if more than one field is needed to construct the key, then values for all the fields used must be entered. If duplicate keys exist, DataStar shows the first record with the required key. Alternatively, the file may be scanned in key order

Max file size	CP/M limit (8 Mb) — may occupy more than one volume
Max no records	Not stated
Max size record	255×255 characters
Max no fields	255
Max field size	255
Max no keyfields	25, totalling 120 characters, in one key; only one key allowed per data file
Field types	Character, numeric; several varieties of each may be validated in DataStar

BM4	Time to access 50 records from 1000 sequentially on 25-character field	NA*
BM5	Time to access 50 records from 1000 by index on two fields totalling 25 characters	2secs/key+ scrolling time (+6mins 25secs to sort & index)
BM6	Time to index 1000 records on 25-character field	1min 50secs
BM7	Time to sort 1000 records on 5-character field	5mins
BM8	Time to calculate on one field per record and store result in record	1hr 11mins
BM9	Time to total three fields over 1000 records	2mins 30secs
BM10	Time to import a file of 1000 records	1min 25secs
Notes: NA* = Not available as tested — key must match exactly when selecting interactively		

Fig 3: Benchmark Times

or in the order the records were entered. These approaches can be used in combination; for instance, you can find the first record of interest in key mode, by specifying the key exactly, and then switch to 'Index Scan' mode to display records in key order. For instance, if your file were keyed by surname, you could use this approach to look for, say, all the Smiths. Scanning by Index or Entry order may be modified selecting particular records for viewing or amending — see 'Selection' below.

Screen display

Within DataStar, records are displayed using the form created in FormGen; only one form is permitted per record, so you can't use DataStar's retrieval facilities to show, say, just parts of a record. DataStar records may also be displayed using the report formats created in ReportStar, which are discussed in the next section.

Reporting

Printed or displayed reports are created with the ReportStar arm of InfoStar. This consists of three parts: a report generator, called RGEN, with its associated editor REDIT; the sorting program FORMSORT; and the REPORT program which

actually prints the report. ReportStar cannot be used except within InfoStar, as it requires the data definition file set up by DataStar to describe the records to be printed. The report generator sets up a report format, giving you the option of using a simple default format which just spreads the chosen fields of the record across the report using appropriate column widths and column titles. Totals and counts are also available at this simple level. Alternatively, you may set up your own format from scratch. In either case, once the format has been set up, it can subsequently be edited to provide more complex forms of report.

In the advanced report generation provided within REDIT, the facilities are so extensive that it would be impossible within a short review to describe them all. They include flexible field calculation, merging of information from several files, conditional line printing, emphasis (bold, underlining, etc), sub- and super-scripts, up to nine levels of page-break and sub-totalling, operator entered fields, control over the frequency with which a field is cleared, and limited conditional execution. There are, of course, extensive formatting features controlling field and line display, including various kinds of edit masking. Any report may be either printed or stored in a file, from which you can list it

STAR QUALITY?

(under CP/M) or edit it in WordStar.

Within the reporting mechanism a number of facilities are provided for writing new data files. This is the area where it is most obvious that InfoStar consists of a new suite of programs grafted onto an older package. Many of these facilities for creating data files would more naturally have been implemented either as separate procedures or else within the interactive, data handling package, DataStar. For instance, to change the structure of a file to add an extra field, it is necessary to create a new file definition (amended from the old) within DataStar, create a report definition which includes the new field, and which tells ReportStar to write all input and new fields to the output file. Finally (assuming you don't want to print each record out as it is copied across) you suppress the printing of the detail line in the report format.

Selection

Records may be selected for screen display within DataStar by using a mask, to select particular values for fields other than those which make up the key. Initially this mask is set entirely to asterisks, which match any character. The asterisks may be replaced by match characters in any way desired. For instance, to find everyone who lived in Essex, you would simply replace the first five asterisks in the County field by the letters Essex. To find all those whose surnames began with B, you would enter a B in the first position and leave the rest as asterisks. If entries are made in more than one field, only those records which meet all the conditions are satisfied — there is no 'OR' facility. So you can't, for instance, select in one operation all the people who live in Essex, Kent, Surrey or Sussex unless you have another field which identifies those four counties as a group.

You can do this within ReportStar, where one of the options when defining a field in the report is an 'INCLUDE IF' command. This allows any tests you might need, including tests on substrings, tests with the usual relational operators, and comparisons with field values or constants. If several conditions are set, you can specify that all or some of them must be passed, using both 'and' and 'or' to combine conditions, with brackets if necessary. On the minus side, in string comparisons upper and lower case characters are considered as equivalent. However, the need to set up a report format to do this kind of selection adds an extra level of complexity; you can't change your mind so easily, or play around with selections until you get what you're after. So it works well for information with a regular, well-understood processing sequence, but less well for exploratory situations.

A further level of selection within ReportStar allows you to include records if they correspond with records in another

file, so that you only display fields from a record if the key field matches the key field in a record in the second file. It is also possible to include information from more than one file in the same report.

Sorting

Another program in the ReportStar suite, FormSort, allows you to sort any data file on up to 25 fields totalling 120 characters. The sorting is quick and efficient. The sort program can also very quickly produce new index files. It is possible to use these two features in conjunction to keep a data file ordered by one set of key fields and indexed on another set, which would to some extent mitigate the disadvantage of only having one index file. However, the user would have to take steps to ensure that the correct data order was maintained, by sorting and indexing after each update session.

Calculation

Both at input and when reporting, InfoStar allows you to calculate field values using other field values and constants, with the usual arithmetic operators and brackets. These calculations may be carried out on character fields as well as numeric, and there is a sub-string function for handling parts of fields. More extensive functions are provided within ReportStar, including some mathematical functions and string concatenation; limited control over whether a calculation takes place is also provided in reports with an UNLESS function.

Tailoring

InfoStar can be tailored to a wide variety of terminals and printers. There are also facilities for patching the code to deal with special circumstances, as in WordStar and the other MicroPro products. I didn't try patching, but normal tailoring was easy enough. Within the packages, there aren't any tailoring features as such — for instance, you couldn't design your own menus for a particular application.

Multiple files

When setting up a file definition in DataStar, you can specify that particular fields are to be copied from another file. Similarly, within reports you can include fields from records in several different files (up to 25 files, in fact). So you could, for instance, have one file of patient records, another of patient consultations, and merge data from the two when reporting.

Housekeeping

There are no file housekeeping facilities within InfoStar — you use CP/M itself for file deletion, copying and so on. There

didn't even seem to be a way to use one report format as the basis for another, keeping both, except by going out to CP/M, copying the original with PIP, and then invoking REDIT to modify the copy.

Links with outside

Importing a data file from elsewhere into ReportStar is quite straightforward: you just set up an appropriate definition file within DataStar, make sure that your data file is written in 'comma delimited' format, and then use FormSort to construct an index file. But it is a pity that the only place the manual mentions this is in a 'handy hint' at the end of the Tutorial Guide.

User image

'Like the curate's egg — good in parts' is a description that I've employed a good deal when describing user images in this series — but if ever a package deserved that description, then InfoStar does. The 'Help' banners at the top of each screen are well thought out and very helpful. Each of these screen banners includes a 'procedure number' which cross-references with the manual — an unheard of helpfulness which I have been advocating without much hope of success for a long time. Some of the other prompting features, like showing the characteristics of a field when you move the cursor into it, are also good.

On the other hand, the use of 'question-and-answer' techniques for setting up complex options, a practice found throughout ReportStar, is to my mind muddling and tedious in the extreme. This is exacerbated by the habit of showing just the current question and a few before it at any one time, so you don't always have the full context, and never know what's coming next. For instance, when setting up field attributes in reports, it is quite possible to find yourself pressing the RETURN key (for the default option) a dozen or more times to get to the one option you want to change for that field. It would be very much better to display a complete list of options, allowing the user to move the cursor to the one or two required, and using a control character to move into the detailed definition.

It would also be better to have more 'sets' of defaults for common tasks: for instance, to add one field to the record format for the Benchtest (BM1), I had to go through this process of changing the single field attribute 'write to output file?' for each of the 21 fields separately. That meant I had to press RETURN 15 times, type the number of the output file (even though there was only one valid number it would allow me to type), enter the destination field number (the same as in the input file) and press RETURN twice more. By the time I'd done that complete operation 21 times I was not in the best of tempers. Of course, that particular task is not something you'd want to do every day, but there are other less extreme examples of long-windedness in things that you might want to do quite often. And it's the totally unnecessary nature of that sort of time-

INNOVATIVE TRS 80-GENIE SOFTWARE

from the professionals

AIRBUS

Airbus continues the line of highly accurate flying simulators stocked by Molimerx. It follows in the footsteps of Shuttle and Jumbo.

The Airbus A300 is a twin engine, wide bodied jet manufactured in Europe. There are many models. The specimen chosen by the author is that powered by two General Electric CF6-50C2 turbo fans with a maximum seating of 330 and maximum all up take-off weight of 140,000 kg.

We only stock simulations which are precise models of the original, and Airbus is no exception. Indeed, Airbus could be said in some respects to be a more accurate simulation of flying the aircraft than was Jumbo, and the latter certainly set new standards in this area. The big difference between the two is that Airbus incorporates radio navigation. Five VOR's or Omnis (radio direction beacons) are included in the simulation, all of them in the Holland/Belgium/Germany area. Furthermore, they all include Distance Measuring Equipment facilities. Four runways at three airports are available for landing and take-off. Airbus also includes randomised engine failure simulation.

Like Jumbo, Airbus is flown on Instruments and only on instruments. Some of these are graphic representations of instruments. One of them is the Instrument Landing System instrument. This, without a doubt, is the best graphic representation of such an instrument produced for any computer outside of those used in actual aircraft themselves. There are 31 instruments in all:

- | | | |
|-----------------------------------|--|-----------------------------------|
| 1. Indicated air speed gauge | 2. Artificial horizon | 3. Power setting for No. 1 engine |
| 4. Power setting for No. 2 engine | 5. Slat setting | 6. Flap setting |
| 7. Compass | 8. VOR tracking instrument | 9. Instrument Landing System |
| 10. Clock | 11. All up weight | 12. Fuel |
| 13. Fuel flow | 14. Vertical speed indicator | 15. MACH speed |
| 16. Precise pitch | 17. Precise roll | 18. Altimeter |
| 19. Landing gear status | 20. Nose wheel status | 21. Wheel brakes status |
| 22. Air brakes status | 23. True air speed | 24. Wind direction and velocity |
| 25. Ground speed | 26. Destination runway, place & number | 27. Distance to go |
| 28. Precise heading | 29. Precise track | 30. Data from No. 1 DME/VOR |
| 31. Data from No. 2 DME/VOR | | |

An extensive illustrated manual is supplied comprising some 27 pages. It takes the reader through the control panel in general and then in detail. Discusses the controls at length; general discussions are held on flying technique of Airbus and then simple flight manoeuvres are described, such as normal take-off, noise abatement take-off, take-off with engine failure, climb, cruise, turning, descent, approach, final approach and landing. Procedures in overshoots and engine out emergencies in various situations are described. Two pages of simple flight briefings, in other words, instructions for suggested flights, are included. There are seven Appendices, including detailed discussions of the VOR/DME navigation system and the ILS approach system. Purchasers of Airbus may also buy the educational section of the Jumbo manual for £1 if they wish.

The program is compiled Basic and is disk orientated only. The compilation enabled the author to include very precise slow down loops in the source code. Thus as we have said, the simulation is as exact as it is possible to get. The compatibility of the program with various disk operating systems and machines will depend upon the compatibility of those DOS's and machines with the Microsoft Compiler. As far as we know, on TRSDOS it is compatible on all Genie machines (with the exception of the Model III) and of course the Tandy Model I. It is also compatible with LDOS on these machines. On the Tandy Model III the choice of DOS is somewhat more crucial as many disk operating systems running on that machine are not compatible. TRSDOS 1.3, for instance, is not. A patched version of the run time file, to enable use on the Model III under LDOS or smal-LDOS is included in the package.

wasting that is so irritating, to users as well as reviewers.

Documentation

The complexities of option definition are made no easier by the documentation. There are three manuals for InfoStar: a DataStar guide, a ReportStar Training Guide, and a ReportStar Reference Manual. Good points first: all three have an index (not as comprehensive as they might be, but at least they exist), and each suite has a Reference Card. The DataStar manual I found quite readable, the Training Guide I thought quite helpful at a 'here's how to get started' level, if you can stomach the 'happy campers' style of drawings of satisfied customers learning all about the package. I didn't find it so helpful

when it came to trying to get an overall view of what the package could accomplish — indeed, I gleaned a lot of my information about that from the 'hints' section at the end, which reads like a throwaway add-on but which is actually very useful.

You really do need some overview information, as the Reference Manual is very tough going indeed. It has a series of 'Road Maps' covering each section, but these were very detailed, and it wasn't at all easy to guess where a particular facility might be provided. This was particularly true in the area where ReportStar has to be 'stretched' to provide facilities — for instance, for reformatting data files, which would ordinarily be in the data entry part of the package. I very much regret having to criticise to this extent, as the manuals are of a very high standard typographically, and a

lot of effort has clearly gone into them. Unfortunately, it's almost as bad to have too much and too complex information as it is to have too little.

Conclusions

My overall impression of InfoStar is that it is rather an uneven package in the facilities it provides. The report formatting is extremely flexible, with a power I have not come across elsewhere. The selection and sorting features for reports are good, but I suspect that people who need that degree of flexibility in reports also want a high degree of flexibility in data entry and screen display. If so, they may well find the limitation, during data entry and interactive display, to a single index file and one screen format an irksome constraint.

Some parts of the package are unusually fast, particularly the index sorting with FormSort. Others, such as procedures involving writing a complete data file (for instance, to update all prices by ten per cent) are not so quick: Benchmark times are given in Fig 3. Disk space is economically used, because the process of storing records in comma-delimited format means that an empty field occupies only one character.

On the user image side, the similarity with WordStar and CalcStar must obviously help people who need a suite of programs, but I think many people will find the more powerful features of ReportStar difficult to use. Personally I wouldn't feel that the family resemblance was enough to give InfoStar the edge, with WordStar users, over other packages which can read and write Mail-Merge formats. However, those reporting features, even if they are tedious to use, would be extremely valuable in some environments, and if that is your requirement, then InfoStar would be well worth investigating. **END**

Summary

Package Type	Data management: variable length 'comma delimited' records, data from more than one file may be included in screens and reports.
Facilities	Screen display, sorting and reporting in three modules. Direct retrieval based on one key (several fields) per record. Reporting very flexible. Sorting flexible and fast.
Drawbacks	Limitation to one key. Complexity caused by use of report program for data management functions. Interactive selection limited. No true multifile capability. No housekeeping within package.
Ease of Use	Good at the simple level. Very tedious when specifying complex options. Connections among programs not complete.
Error Messages	Reasonably clear.
Documentation	Clear, well presented and structured, but very verbose. Has (not very comprehensive) indexes.
Costs (ex VAT)	£295
Supplier	MicroPro Inc. Review copy supplied by Tamsys Ltd, tel (07535) 56747

PCW welcomes approaches from would-be writers, even those who have never appeared in print before. In this game it's often those with practical experience who have important things to say so we don't mind if your prose is less than perfect — providing submissions have a sensible structure and follow a logical sequence, we can take care of the polishing.

If your article is already written, send it in — taking care to ensure that your name and address, together with a daytime phone number if possible, appears on both the covering letter and the manuscript. Manuscripts should, preferably, be typed or printed out (dot matrix output is quite acceptable) but *must* be double line-spaced with ample margins top and bottom and on each side. Make sure you keep a copy of *everything* you send us.

We can now accept articles on a limited number of disk formats: standard IBM 3740 single-sided, single-density 8in, and the following 5¼ in formats: Superbrain

SSDD 35-track; RML 380Z SSSD; Sharp MZ-80K/A DSSD, Cromemco SSSD, Nascom DSSD, Rair/ICL DSDD, SD Sales SSSD, Triton 35 track SSDD and ACT Sirius 1 (CP/M-86 or MS-DOS) single-sided. By prior arrangement we can accept stuff over the phone by modem using BSTAM at 300 baud but as we can only do this during office hours (10am to 6pm) it's not exactly a cheap way of getting your article to us! In the near future we hope to be able to accept material by The Source and Rewtel. Please note that if you want to send your article in this way, it should be as an ASCII file rather than as a 'work file' for any one type of word processor — ie, use your word processor to print the text to disk instead of to paper.

Please note that we cannot undertake to return manuscripts, diagrams and photographs, although we always try to return the latter. We can only return disks if they are accompanied by adequate postage and packaging.

If you have an idea for an article or a series, write us a letter outlining your ideas. A one- or two-page synopsis giving the proposed structure, sequence and content is what we're looking for. But before you send anything to us, take a good look through PCW to see what sort of articles get published and to see what style of writing we prefer (basically, avoiding promiscuity at one extreme and flippancy at the other). Also take a look through the Back Issues advert to see what sort of things we have already published — no point in re-inventing the wheel.

Once you've sent off your article or proposal, please don't hassle us for a decision. We receive far more submissions than we can ever use and it takes us a while to sort through them, acknowledge receipt and give an opinion one way or the other. Please be sure to tell us if you've sent the article to another magazine — it would be very awkward indeed if the same article appeared simultaneously in two publications! Frankly, we're more likely to accept something which has been offered exclusively to us.

Finally, we do pay for published work but please be patient! Payment *normally* follows about 4-6 weeks after publication.

**AND
SAVE £2
ON THE PRICE
OF A BINDER**

Let's face it, what can £12.50 a year buy you these days? Three or four visits to the cinema, a modest meal for two including a carafe of 'house' wine, two and a half albums from Virgin Records, a single ticket to the opera. Not a very impressive list is it?

On the other hand, £12.50 could guarantee that you will receive twelve issues of Britain's largest selling microcomputing magazine. If you are already a subscriber then send your £12.50 anyway, and we'll add another dozen issues to those you still have due on your current subscription.

As an added bonus to every person subscribing to PCW this month (whether a new subscription, a

renewal or an extension to your existing subscription), we will send you a voucher worth £2 off the cost of a PCW binder.

To qualify for this voucher you must use the subscription card stuffed inside this issue. Send it today. It's true you can't eat it, watch it in the dark, drink it or smoke it, but we reckon if you're interested in microcomputing in any shape or form, £12.50 for 12 issues of PCW delivered to your office or home is excellent value.

Lastly, 'thank you' to all our existing subscribers and regular readers. The most recent figures from the Audit Bureau of Circulation shows that PCW is currently outselling its nearest rival by more than 12,000 copies. So we must be doing something right — but feel free to let us know if you think otherwise.

1 Year Subscription (U.K. only)	£12.50	We send you 12 issues of PCW hot off the press direct to your door.
2 Year Subscription (U.K. only)	£21.50	You receive 24 issues saving yourself £3.50 off the full current subscription price. Plus you protect yourself against future increases in cover prices and postal rates which will save you £££'s over the period.
3 Year Subscription (U.K. only)	£32.50	You receive 36 issues saving yourself £5.00 off the full current subscription price. Plus you protect yourself against future increases in cover prices which will save you £££'s over the period.

PLUS

We have now arranged for special 'first-off-the-press' copies to be mailed direct to subscribers which will ensure that they arrive either on the same day or one or two days in advance of national distribution in the U.K.

PLUS

Existing subscribers can take advantage of any of the offers above. Just tick the 'this is an extension subscription' box on the coupon and enclose your payment. The additional copies will be added to your existing subscription automatically. You do not have to wait until it is time to renew (by which time this offer will probably have been withdrawn). Save money by extending your subscription today!

PLUS

We have completely reorganised our Subscription Department and any problems, change of address, special requests etc etc will be promptly dealt with by an extremely 'user-friendly' human being should you need to write to us.

PLUS

We send subscription copies of PCW in a tough polythene wrapper. It will reach you promptly every month, unfolded and in good condition.

PLUS

You can pay for your subscription to PCW by cheque, postal order or by using Barclaycard (Visa)/American Express or Access. And you don't even need a stamp for your envelope. Use the coupon on the right.

**Why do more people read PCW than
any other microcomputer magazine in Europe?
Subscribe today!**

PORTABLE PROBLEM

Personally, I think Adam Osborne has a lot to answer for. He used to write a column in the American trade newspaper *Infoworld*. Its title — 'From the Fountainhead' — irritated me a lot (you'd be laughed off the page for using that title here but apparently what we would regard as unspeakable pretension is quite acceptable in the US) but in it Adam often spoke a lot of sense, even when he was going against conventional microwisdom, which was often.

Eventually, he decided to put his money where his pen was and practise what he'd been preaching. And so he gave us the Osborne 1, one of the most successful ever computers. My immediate reaction, when I first saw and tried out an O1, was that he was playing some kind of cruel joke on us: the tiny screen, the horrible keyboard, the minute disk capacity, the flimsy casing, and above all the size and weight of what was billed as a portable computer — all seemed quite ludicrous.

As we now know, the O1 was a tremendous success despite all these apparent drawbacks — it has sold like the proverbial hot cakes and the recently-announced Executive model will probably be equally successful. Fine: thousands of people are happily computing away and the Osborne coffers have swelled suitably.

But what Adam did — intentionally or not — was to spark off a whole range of 'portable' computers. Other companies saw the success of the O1 and thought, 'If he can sell that many, there must be a big market for portables — we can make a machine which is lighter/better built/has a bigger screen/has bigger disks/looks better/etc and make money too.' So they did, and we have a whole flood of portable machines from which to choose.

But do we actually want portable computers like the ones now being offered? I can't speak for the States, where different values apply, but in the UK I am certain, through conversations with people who use and sell the machines, that the O1 has not sold well because it is portable — it has sold because it is *very cheap* and comes with a useful amount of ready-to-use software. If it was twice the size and four times the weight it would still have sold well provided it sold at the same price and came with the same software.

I must immediately stress that I'm not denying the usefulness or desirability of portables. But at the moment, we don't have the technology to build a really useful portable computer — we're still waiting for a flat screen which will give a proper display of 25 lines by 80 characters. This is now the minimum acceptable screen size for serious use; if you disagree because you use a machine with a smaller screen and think it's marvellous, then either you've

not tried a 25×80 screen and don't know what you're missing or you're one of the minority which is happy with a smaller screen — most of us aren't in that category.

I personally have no use for a portable machine, even though I'm a journalist who travels a lot. My Microwriter is smaller than any portable computer with a proper screen and keyboard could ever be and suits me fine for mobile use — I can dump text from it into my Sirius when I get home and polish and format it with a word processing package before printing it out. There are of course a great many people who would find a true portable computer a real boon but I can't help feeling that at the moment they are being somewhat conned by many manufacturers of supposedly portable machines.

Here's what a portable machine should offer. Firstly, there's the flat screen display, currently not possible but generally thought to be available before too long. Apart from the size and weight advantages of something like a large-scale LCD display, it is far more rugged than a delicate CRT tube as used in most portables, and — even more importantly — it uses only a fraction of the power required to drive a CRT, making battery operation — and hence true portability — a reality. (I know there are some portables with battery packs but who really wants something which will only run for a couple of hours or so before you have to recharge the batteries?)

Mass storage is the next problem. Bubble memories were once the great hope of the portable builders but they have never really caught on well enough for the price drop resulting from mass production to come into effect and make them economically worthwhile in general use. They're too expensive, in other words, and seem likely to remain so unless a big manufacturer decides to take a risk and create a market by mass producing them and selling them at competitive prices. EAROMs (electrically alterable ROMs) are more likely to succeed, once they can be produced in large enough quantities in versions which require a lot less power than existing ones, have a higher bit density and work on a single 5 volt power supply. This leaves us with conventional magnetic disks, a far from ideal medium because the drives use a lot of power and disks are rather fragile. The best current compromise is the 3in or 3½in microfloppy, as used in the Apricot and HP 200 machines. At least the disks are small and protected by a sealed, rigid envelope. Forget about making the machine IBM-compatible — the Americans, like a flock of sheep, have jumped onto the IBM bandwagon with a vengeance and currently seem incapable of

thinking about anything else. But by the time technology has advanced to make possible the sort of portable machine which I am describing, the IBM compatibility craze will have largely died down and become irrelevant.

This brings us to processors and other considerations. Already, it's scarcely worth building an 8-bit machine, except to sell it at a *really* low price — well under £1000 including screen, twin disks and software. Because we want a battery-operated machine, we need CMOS chips, which use very little power. A CMOS version of the 8086 16-bit chip has recently been announced so that problem is solved — our true portable will be based on this chip and will have *at least* 256 kbytes of CMOS RAM. Ignoring the display for the moment, such a machine would be incredibly expensive to build today, but every chip manufacturer worth his silicon is getting deeply involved in CMOS technology and by the time we have our big LCD display these chips will be pretty cheap.

Physically, there is a limit to how small you can make a portable machine. This is imposed by the keyboard, which must be of typewriter size and pitch. The Epson HX-20 or Tandy 100 size is probably about the minimum practical. Add a little height to squeeze in the microfloppy drives (under the keyboard with the doors at the front, perhaps) and put on a lid with the LCD display inside it and there you have it — a machine occupying the same desk areas as an A4 sheet of paper, with a total height when closed of three or four inches, totally self-contained except, maybe, for a battery charger unit, and weighing at most maybe 2 or 3 kilos. I don't think this is at all fanciful but we may have to wait for a couple of years before we can buy it; and when it does appear, we shouldn't have to pay more than £800 for it — with software, which should include a word processor, a diary/appointments manager, a database system of some sort, electronic mail capabilities (probably using a built-in modem), the inevitable spreadsheet and Basic.

In the meantime, if you want a cheap computer you can buy an Osborne or one of the other low-cost 8-bit machines now appearing. If you want a serious, non-portable, rugged machine capable of handling the hammering of daily business use, spend some more money for a proper desk-top machine. And if you want a portable, take weight-lifting classes first and don't expect to be able to use it if you're more than two metres away from the nearest power socket.

END

PCW SUBSET

Alan Tootill and David Barrow present more useful assembler language subroutines. This is your chance to help build a library of general-purpose routines, documented to the standards we have developed together in this series. You can contribute a Datasheet, improve or develop one already printed or translate the implementation of a good idea from one processor to another. PCW will pay for those contributions that achieve Datasheet status. Contributions (for any of the popular processors) should be sent to SUB SET, PCW, 62 Oxford Street, London W1A 2HG.

MYSTERY AND MAGIC

Unusual for Sub Set, we stir the murky depths of Basic and sneak up on Computer Answers in response to the following letter:

'Often look at the items in 'Sub Set' as I read through PCW and wonder what one is supposed to do with them.

Now I've seen one or two items that look as though they could be of some use to me, I am moved to write to ask if some clue as to how to use these routines could be given—perhaps either as a supplement, or even a separate article. Or is the whole thing always to remain an esoteric mystery for the experts?

I have entered one or two Z80 machine routines in the form of REM statements and found they worked quite well on the ZX81. Some of them are in decimal form, others in hexadecimal and I've never understood why.'
AJS McMillan, Keynsham, Bristol

No mystery, Mr McMillan, but Sub Set is really for readers who have some understanding of machine code fundamentals. You would not expect to find Basic or Forth tutorials in the Programs section of PCW and, similarly, we do not set out to teach machine code programming in Sub Set. However, if you do know something of machine code, the series gives you a marvellous opportunity to expand your knowledge and skill by working through the routines.

The considerable amount of documentation and comment in each Data Sheet is a valuable learning aid.

The stated aim of Sub Set is to publish machine code subroutines of general usefulness and with sufficient documentation to enable their use by people who do not know,

or even want to know, how they work. But they are written to be used within, or called by, machine code programs and not as USR routines to be called from a Basic program. Not that it stops you adapting them for USR routines if that is what you require but you do need to know some machine code to be sure of success.

It is common in the case of Z80 routines for arguments, ie, the values to be acted on, to be passed to and from the routines in registers. If these values are initially held in Basic variables then you have to POKE them into any free RAM before the USR command. You must then have a USR machine code routine that will PUSH the register contents on to stack and LD the values into the registers from where they are stored in memory before CALLing the particular subroutine in which you are interested. After RETURN from the subroutine, your routine will have to store the result values in RAM, POP the original register contents back into the registers from stack and RETURN to the Basic program. Use PEEK to get the results back into the variables.

REM statements are often used in Basic programs to provide space for machine code subroutines. Whether you type the numbers in as decimal or hexadecimal values, or even as Roman numerals, is not particularly important as long as you also include a section of Basic program to POKE these numbers into the correct RAM addresses. POKE usually uses decimal arguments so hexadecimal or any other numbering system would have to be converted to decimal before POKE.

6802 BLOCK RELOCATION

RG Cath of Chandler's Ford has sent RRL which uses a very efficient algorithm to move a block of memory to a lower address location, shifting the memory at that lower location up to fill the gap. In effect it is a rotation right by a variable number of places as shown in Fig 1.

Fig 1.

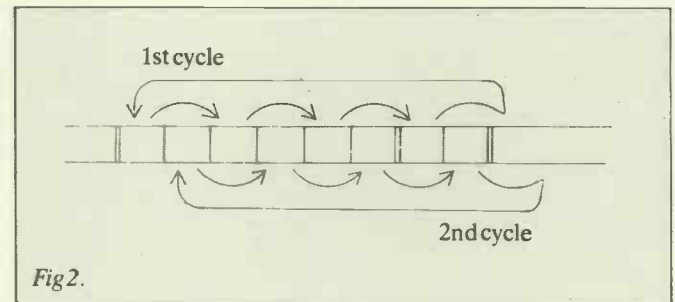

Fig 2.

To achieve the relocation by the three stages shown in Fig 1 would require the provision of a buffer large enough to hold all the bytes being shifted down. That would be very expensive in terms of memory usage, although probably the quickest way to do it. Instead, RRL works by performing a series of exchanges, illustrated in Fig 2, which may be a slower method but has the distinct advantage of only needing a one-byte buffer.

Each byte is, of course, moved by the number of bytes equal to the length of the block to be shifted down. When the pointer to the next exchange goes past the highest address being dealt with, it wraps

around to continue again from the lowest address plus the amount of overflow. The process continues until the pointer gets back to the start address. However, this does not necessarily mean that all the bytes have been moved. If the number of bytes in the block being moved down is a factor of the total number of bytes in the memory being processed, it becomes necessary to increment the pointer to a new start byte and go through another cycle. In Fig 2, two cycles are needed to complete the process. In fact it is the number of wraparounds that determines when all the bytes have been moved.

DATASHEET

```

;+ RRL - Rotate Right Long.
; CLASS: 2
; TIME CRITICAL?: No
; DESCRIPTION: Rotates a block of memory to the right (ie to
;             higher addresses) by a given distance.
; ACTION: Initialise
;         WHILE wraparounds < > movelength
;         start ← pointer
;         (stack) ← (pointer)
;         REPEAT
;         REPEAT
;         (stack) ← (pointer)
;         pointer ← pointer + movelength
;         UNTIL pointer > end of block

```

```

//      pointer ← pointer - blocklength
//      wraparounds ← wraparounds + 1
//      UNTIL pointer = start
//      (pointer) ← (stack)
//      pointer ← pointer + 1
//      ENDWHILE
// SUBR DEPENDENCE: None
// INTERFACES: None
// INPUT: M0,1 = Address of first byte of block to rotate.
//        M2,3 = Address of block + 1.
//        M4,5 = No. of bytes distance to rotate.
// OUTPUT: Cy set: Block rotated by (M4,5) places.
//        Cy reset: Invalid input, no rotation.
// REGS USED: A X Y P M0 to M8
// STACK USE: 2
// LENGTH: 121
// PROCESSOR: 6502

```

```

RRL:  LDY Z0      ;initialise Y for zero index      A0 03

```

6809 TURNAROUND

Fire-breathing Mike Kerry of Seaford, still in the vanguard of the 6809 invasion, demonstrates once again the superiority of that processor over the Z80 with his translation of John Hardman's MATRAN (PCW June 1983).

MATRAN reconfigures a two-dimensional array or matrix which is stored column by column in linearly addressed memory into row by row

storage. Or perhaps the other way about. Whichever it is, Mike has not provided us with any uses to which this transposition may be put — any suggestions? Neither has he come up with a method of performing the transposition within the original area of memory used by the source matrix, perhaps by a similar method to that used by RRL?

DATASHEET

```

:= MATRAN - Matrix Transposition, 6809 version.
// CLASS: 1
// TIME CRITICAL?: No
// DESCRIPTION: In-RAM move of a 2-dimensional array or matrix
//              changing from row by row storage at source to
//              column by column storage at destination or vice versa.
// ACTION: For each column of Source
//          save Source pointer
//          For each row of source
//          Move element from Source to Destination and

```

```

//      Increment Destination pointer
//      Add No. of columns to Source pointer
//      Restore Source pointer
//      Increment Source pointer
// SUBR DEPENDENCE: None
// INTERFACES: Source RAM or ROM. Destination RAM same byte length
//              as source.
// INPUT: X = 1st byte of source matrix
//        Y = 1st byte of destination RAM
//        A = no. of source rows, B = no. of source columns.
// OUTPUT: Transpose of Source matrix at Destination. All registers
//         returned unaltered.
// REGS USED: A B X Y
// STACK USE: 11
// LENGTH: 26
// TIME STATES: (rows + 22 + 38) * cols + 26
// PROCESSOR: 6809

```

```

```

Z80 MESSAGE ASSEMBLER

If you have ever typed lots and lots of very similar messages in to your computer, you have probably cursed it for not being intelligent enough to generate its own messages from a database of basic words and phrases. That achievement would probably need quite a sophisticated artificial intelligence program so, until

you get round to writing it, try making life a little easier by using MAKMSG from Simon Sellick of Pershore. MAKMSG acts recursively to print messages composed of ASCII characters and also 'submessages' whose addresses are embedded in the higher level message preceded by a non-ASCII 'escape' byte.

DATASHEET

```

:= MAKMSG - Message assemble and print routine.
// CLASS: 2
// TIME CRITICAL?: No
// DESCRIPTION: Recursive procedure to assemble and print messages of
//              ASCII bytes and submessages.
// ACTION: IF character picked up is a null (0) THEN exit
//          ELSE IF character is ASCII THEN print it and get next
//          ELSE pick up escape address and CALL MAKMSG.
// SUBR DEPENDENCE: 'WRCHAR' - subroutine to print ASCII character in
//                  A. It must not corrupt HL.
// INTERFACES: None.
// INPUT: HL addresses first byte of message.
// OUTPUT: HL addresses null byte at end of message.
// REGS USED: HL A F
// STACK USE: 0 + 4 * no. of sub-messages
// LENGTH: 25
// PROCESSOR: Z80

```

```

MAKMSG: LD A,(HL) ;get byte in A, test to see 7E
      OR A ;if it is a null and if so, exit 07
      RET Z ;as end of current level reached C8
      CP 80H ;test for ASCII and FE 80
      JR C, MKMSG1 ;branch if it is. Else it is an 38 0C
      INC HL ;'escape' to a substring, so pick 23
      LD A,(HL) ;up substring address in HL from 7E
      INC HL ;next two bytes, saving this level 23
      PUSH HL ;address on stack for 23
      LD H,(HL) ;continuation after return from 66
      LD L,A ;processing lower level 6F
      CALL MAKMSG ;recurse to print substring CD YY YY
      POP HL ;restore this level pointer and E1
      JR MKMSG2 ;skip the printing this time. 18 03
MKMSG1: CALL WRCHAR ;go print valid character CD XX XX
MKMSG2: INC HL ;point to next byte and 23
      JR MAKMSG ;repeat till null byte found. 18 E7

```

The true worth of a routine such as MAKMSG can only be appreciated in an application which uses many similar messages but as an example we show how the system can be used to construct jargon phrases. Fig 3 gives the hex dump mixture of ASCII codes and 'escapes', written at an arbitrary address, followed by MAKMSG's decoding.

SHARP LOGIC AND BASIC INGENUITY

In 'Making the most of the MZ-80K' (PCW, March 83), Maurice Hawes discussed the weaknesses in Basic SP-5025 and looked at methods of compensating for these by extending the interpreter. This is indeed one way of dealing with the deficiencies of SP-5025; J P L Hooper wonders whether a little ingenuity might not be another.

At first glance, the conditional statements allowed under Basic SP-5025 appear somewhat limited. Although numeric values can be compared both for equality (as in `IF A=5 . . .`) and inequality (`IF A<>5 . . .`), strings can be tested only for equality. There is no direct equivalent to the statement `IF A$<>"Y"`, for example. Similarly, although AND (test succeeds if all ANDed expressions are true) and inclusive OR (one or more of expressions are true) are supported, Exclusive OR (one, and only one, expression true) and NOT (converse of expression true) are not. With a little creative coding, however, these limits can be overcome.

Unlike some Basics, SP-5025 does not use the words 'AND' and 'OR' in conditional statements, but employs instead the arithmetical symbols '*' and '+' — and this provides the clue as to what the interpreter is doing. Each expression in the statement is tested individually for truth (or untruth) according to the rules of Boolean Algebra, and the value of the whole conditional part of the conditional statement is then assessed upon the basis of simple arithmetic according to the signs '+' (plus) and '*' (multiplied by). It works as follows:

1) Each individual expression — for example, `A=5` — is evaluated; in this case, does A equal 5 or not? If true, the value -1 is the result (on some micros, 1 results). SP-5025 can be made to do this, according to S N Brown, PCW, page 149, July 1982, by POKEing 8861,20: 13541,20: 13562,20), while if false the result is 0. A typical Boolean Algebra equation might read

$B=1-(A=5)$
which, if A is 5, means $B=1-(-1), =1+1, =2$, and if A is not 5 means $B=1-(0), =1$. Similarly, the equation $C=20-2*(A=5)$ gives $C=22$ if A is 5, and $C=20$ if A is not 5.

2) In a conditional statement such as `IF A=5 THEN PRINT "IT DOES"` the interpreter evaluates the 'A=5' part, and comes up with -1 or 0 depending on whether A is 5 or not. The whole statement is then dealt with on the basis that if the whole conditional expression (in this case 'A=5') evaluates to zero then the test fails, while if it evaluates to anything else — to any non-zero value — then the test succeeds.

In a conditional statement like

`IF (A=5) + (B<6) THEN . . .`
each Boolean expression is evaluated separately and then — and here is the real core of the matter — the separate results are combined arithmetically according to the symbol involved (which, in this example, is '+'). So, if A is 5, and B is not less than 6, then:
'A=5' results in -1;
'B<6' results in 0;
and the combination results in $(-1) + (0), =-1$.

The combination has a non-zero value, so the test succeeds.

Incidentally, if B was less than 6 then:
'B<6' results in -1;
and the combination results in $(-1) + (-1), =-2$. The test still succeeds — so that this is an inclusive OR!

So, how does all this help with string inequalities? Read on.

SP-5025 allows string equalities like `A$="YES"` but not inequalities like `A$<>"YES"`.

In a conditional statement such as `IF A$="YES" THEN PRINT "YES"` the expression 'A\$="YES"' is evaluated as -1 if true and 0 if false, and the test succeeds if the result is anything but zero. What is needed, then, is for the evaluation results to be the other way round — for the result to be 0 if A\$ is "YES" and -1 (or, indeed, any non-zero value) if A\$ is not "YES".

This can very easily be achieved simply by modifying the expression used in the conditional statement — by adding 1!

Thus:
`IF (A$="YES")+1 THEN PRINT "NO"`
(where the modification is the '+1' part) is what is needed. Why? Because the expression '(A\$="YES")' has the value -1 if true and 0 if false. And the expression '(A\$="YES")+1' has the value 0 if A\$ is "YES" and +1 if A\$ is not "YES".

So, where (A\$="YES") is true, (A\$="YES")+1 is not true, and where (A\$="YES") is not true, (A\$="YES")+1 is true. Hence the whole conditional statement is in effect comparable to the statement `IF A$<>"YES" THEN PRINT "NO"` — and so string inequalities are 'possible' after all!

The expression '(A\$="YES")+1' used in this example actually evaluates to 1 when A\$ is not "YES", rather than to -1, and this may make it rather difficult to use

in a more complex statement of the kind `IF (A$="YES")+1 + (B$="MAYBE") THEN . . .`

because if both expressions are true (A\$ is not "YES", and B\$ is "MAYBE") then they evaluate to +1 and -1 respectively, and the whole, $(+1)+(-1)$, evaluates to zero . . . and the test fails, which is probably not what was intended at all! This, however, is easily solved simply by reversing the sign of the complete '(A\$="YES")+1' part, and making it instead

$-(A$="YES")-1$
which evaluates to 0 if A\$ is "YES" and to -1 if A\$ is not "YES". This is just what is required; now the arithmetic of the conditional statement comes out all right:
a) if both are true (A\$ is not "YES", and B\$ is "MAYBE") then the result is $(-1)+(-1), =-2$ (and the test succeeds)
b) if neither are true, then the result is $0+0, =0$
c) if one only is true, then the result is either $(-1)+(0), =-1$ or $(0)+(-1), =-1$

Note, however, that the original way round `(A$="YES")+1` results in what is in fact an exclusive OR, because

a) if both are true, then the result is $(+1) + (-1), =0$ (and the test fails)
b) if neither is true, then the result is $(0) + (0), =0$
c) while if one only is true then the result is either $(+1) + (0), =+1$ or $(0) + (-1), =-1$

This leads naturally to a more general Exclusive OR statement though applicable only to two expressions (with the proviso that each expression evaluates to -1 when true), namely one of the type `IF (expression)-(expression) THEN . . .` — observe that the normal '+' has been changed to a '-' (minus sign). This works because:

a) if both expressions are true then the result is $(-1)-(-1), =0$ (and the test fails)
b) if neither is true, then the result is $(0) - (0), =0$ (and the test fails)
c) if one only is true then the result is either $(-1) - (0), =-1$ or $(0) - (-1), =+1$ (and in either case the test succeeds).

While dealing with string inequalities and inclusive ORs the logical NOT crept

C/WP has opened a computer shop at 108 Rochester Row, London SW1 (just 5 minutes walk from Victoria) where you can see, buy and take away anything from a daisy wheel or a floppy disk to a complete computer system at those low prices which still turn others green! The shop is open from 9.00 to 5.30 Monday to Friday and 10.30 to 5.00 on Saturday. Most things are in stock most of the time, but ring 01-630 7444 to make sure. Just ask for "Shop".

FOR THOSE WHO LIKE SHOPPING AROUND

APPLE ADD-ONS

ACCELERATOR CARD

Speeds up the Apple II more than 3 times by replacing the normal 6502 processor with a much faster version. Board carries 64k memory and just plugs into Apple slot. New product.

£299 + VAT £44.85

VIDEX 80 COLUMN CARD

Steady well-formed 80-character lines for your Apple II. A must for professional word-processing on the Apple (RRP £220 + VAT).

£159 + VAT £23.85

MICROSOFT 16K RAMCARD

Tremendous value. Gives your Apple II Plus another 16k of memory for extended Visicalc or Pascal. Like Apple's "Language Card". Not suitable for Apple IIE.

£59 + VAT £8.85

UHF MODULATOR FOR IIE

Display your Apple IIE colour or mono text and graphics on your home television set. Very high quality 8MHz modulator squeezes brilliant colours into your telly. NEW.

£22 + VAT £3.30

C/WP SERIAL INTERFACE CARD

A really versatile switchable baud-rate asynchronous communications interface for Apple II. Can also be used as an interface for serial printers.

£70 + VAT £10.50

C/WP PARALLEL INTERFACE CARD

A "Grappier"-like graphics interface for parallel printers such as the Epson, Microline and Star series. Allows graphics dump onto printer. State which printer you have.

£70 + VAT £10.50

MICROSOFT Z80 CP/M SYSTEM

Turns your Apple II (Plus or E) into a CP/M machine to run programs like WordStar and dBase II. Hardware, software and all documentation.

£199 + VAT £29.85

MICROSOFT Z80 CARD (ALONE)

As above but without software. Adds a Z80 processor to your Apple II. If you already have CP/M software, allows you to run CP/M programs on Apple II.

£79 + VAT £11.85

PRINTERS GALORE

£399

+ VAT £59.85

SILVER REED EX44

Brilliantly engineered daisy wheel typewriter/printer with self erase ribbon and extended keyboard in

typewriter mode. Marvellous quality printing. Portable. RRP £485 + VAT.

EPSON MX100 TYPE III

Wide carriage 100 cps matrix printer. Tractor and friction. The ideal printer for spread-sheets and accounts. RRP £475 + VAT.

£425 + VAT £63.75

SUPERB NEW 100 CPS MATRIX PRINTER

£269

+ VAT £40.35

STAR 510 is the star of the show. Just like the Epson MX80, but faster and with extra features. More type styles. Good graphics.

Tractor and friction paper feed. The best printer at its price. Also STAR 515 for paper up to 15 inches wide. Same spec. Ask for details.

EPSON FX80

Latest version of the Epson 8 inch matrix printer. Very good quality print at 160 cps. Many enhancements on the much-loved MX80. Tractor and friction paper feed. Good graphics. RRP £438 + VAT.

£349 + VAT £52.35

EPSON RIBBONS

For MX80

£9 + VAT £1.35

For MX100

£11 + VAT £1.65

MONITORS

12 INCH GREEN OR AMBER SCREEN. Elegant plastic case. 24 MHz band width. A first class monitor.

£99 + VAT £14.85

12 INCH GREEN MONITOR in solidly built metal case. 22 MHz. Good clarity. Normally £99 + VAT.

£89 + VAT £13.35

CONTOUR 5 AND 6 MB WINCHESTERS AT GIVE-AWAY PRICES

£1195

+ VAT £179.25

Buy a 5 megabyte (or 6 megabyte while stocks last) Winchester disk at an outrageously low price. Fine for Apple II (Plus and E), Apple III, Cortez, Osborne, Sirius and Superbrain. CONTOUR is not only the least expensive hard disk, it is also the best. On Apple II can be used with DOS 3.3, CP/M, Pascal, and BOS 5.

QUALITY FLOPPY DISKS AT UNBEATABLE PRICES

Top quality disks by Wabash and BASF. In boxes of 10. All guaranteed. Library boxes £2.30 extra incl. VAT.

£19 + VAT £2.85
double density per box

£15 + VAT £2.25
single density per box

SIEMENS FLOPPY DRIVES FOR APPLE II

A really good quality compatible drive for Apple II (Plus and E). Plugs into standard Apple disk controller card. Now you can afford that second disk drive. Compare Apple's prices.

£179

+ VAT £26.85

DISK CLEANING KITS

The best way of having discs that serve you true to clean them often. Everything you need. Simple to use. Larger size £33.35 incl. VAT.

£19
+ VAT £2.85

DISKS AND DRIVES

Telephone: 01-828 9000

HOW TO PAY

In the shop we accept cash, building society cheques, bankers' drafts (just ask your bank for one - it costs about £2), ordinary cheques for up to £50 with a Bankers' Card, or most major credit cards (subject to a modest surcharge). If you pay in one of these ways you may take your purchases away with you. If you pay by cheque for goods worth more than £50, we will send them to you free of charge anywhere in the United Kingdom as soon as the cheque has cleared.

IF YOU ARE NOT IN LONDON

Why not order by telephone? If you give your name, address, telephone number and credit card number (again there is a small surcharge), we will send the goods to you by return. A charge of £2 for postage and packing for all orders whose value (excluding VAT) is under £50.

Or write to us with your order and a cheque. If we cannot supply what you want within seven days, your cheque will be returned to you.

SHARP LOGIC

pass unannounced — for, after all, NOT (expression) is merely the converse of the truth of the expression, with NOT (expression) evaluating to 0 when the expression itself evaluates to -1, and vice versa. And, as shown, this converse is achieved just by adding 1 (and, optionally, changing the sign of the whole).

Accordingly, if a statement like IF NOT (A=5) THEN ... is needed (and assuming that 'A<>5' is not to be used!) write instead IF (A=5)+1 THEN ... or IF -(A=5)-1 THEN ...

To be frank, there are few occasions when the inability to NOT, EXOR and/or test for string inequalities is serious enough to cause weeping and gnashing of teeth. Now and again, however, it would be neater, and possibly faster, to be able to use these features.

Many programs need to ask the operator questions requiring a 'yes' or 'no' answer, and it is convenient to accept a single key input, 'Y' or 'N', using the GET function. A standard routine to do this might be as follows.

```
100 REM ANSWER 1
110 REM _____
120 GET AN$: IF AN$="" THEN 120
130 IF AN$="Y" THEN PRINT "YES":
  GOTO 160
140 IF AN$="N" THEN PRINT "NO":
  GOTO 160
150 GOTO 120
160 [CONTINUE WITH REST OF
PROGRAM]
```

For those who like structured programs, without a proliferation of GOTOs, this is very messy. So, they can use:

```
200 REM ANSWER 2
210 REM _____
220 GET AN$:IF (AN$="" )-
  ((AN$="Y")+1)*((AN$="N")+1)
  THEN 220
230 IF AN$="Y" THEN PRINT
  "YES"
240 IF AN$="N" THEN PRINT "NO"
250 [CONTINUE WITH REST OF
PROGRAM]
```

This illustrates a problem of this technique with regard to the arithmetic involved. It would at first sight seem that what is needed is

```
IF (AN$="" )+((AN$="Y")+1)*
  ((AN$="N")+1)
(note the first '+') but this evaluates
incorrectly when AN$ is nothing (i.e.,
when no key has been pressed). Thus, if
AN$ is a null string the result is
(-1)+((0)+1)*((0)+1),
= -1+(1)*(1), = -1+1, = 0,
which is not what is required!
```

Luckily this can be cured by ExORing instead of InORing the expression (AN\$="")-((AN\$="Y")+1)* ((AN\$="N")+1) (note the 'minus') evaluates correctly for all inputs, including a null input — thus, if AN\$ is null then the result is (-1)-((0)+1)*((0)+1),

= -1-(1)*(1), = -1-1, = -2, and the IF test succeeds, as is required.

Another example might concern the examination of the individual characters of a string to find some particular character. For instance, in a name and address program each person's name and address might be stored as a single 'packed' string, in which the name is separated from the address by a slash ('/'), needing unpacking at some time during program operation in order to resurrect one or other portion on its own. A typical case might store, under NA\$, a name and address such as "FRED BLOGGS/1 THE STREET, ANY TOWN" and a routine for getting the name portion (N\$) is as follows:—

```
100 REM FIND NAME 1
110 REM _____
120 L=LEN (NA$): N$=""
130 FOR A=1 TO L
140 C$=MID$ (NA$,A,1)
150 IF C$="/" THEN N$=LEFT$
  (NA$,A-1):A=L
160 NEXT
```

170 [CONTINUE] which actually is both neat and fast. But it could be done like this:

```
200 REM FIND NAME 2
210 REM _____
220 L=LEN (NA$): B$=""
230 FOR A=1 TO L
240 C$=MID$ (NA$,A,1)
250 IF (C$="/" )+1 THEN N$=N$+C$
260 IF C$="/" THEN A=L
270 NEXT
```

280 [CONTINUE] which, in this particular case, is not any neater or faster than the first version.

Finally, SP-5025 aficionados (there must be some, somewhere!) will be aware that conditional statements like IF A THEN ...

are allowed (if A is zero then the test fails, while if A has any non-zero value the test succeeds), so that zero and any non-zero values of A can be distinguished, but that the comparable IF A\$ THEN ...

is *not* allowed (because what's tested must have a numerical value), so that null and any non-null string cannot so easily be distinguished. This omission can now be rectified in at least two ways (if rectification is really needed), thus:

```
IF LEN (A$) THEN ...
(LEN (A$) is only non-zero if A$ is other
than a null string), or
IF (A$="" )+1 THEN ...
(the expression is non-zero for any A$
except a null string; this is like saying 'IF
NOT (A$="" ) THEN ...' as discussed
above).
```

S N Brown (*loc cit*) points out that the equating of '-1' with 'true' causes complications in statements like

```
IF (A=5) * (B=6) + (C=7) THEN ...
which, if all the expressions are true,
evaluates to
(-1)*(-1)+(-1), = +1-1, = 0
and the test fails when apparently it should
succeed. He notes that if 'true' was '+1'
then the statement evaluates instead to
(+1)*(+1) + (+1), = +1+1, = 2
and the test succeeds. The POKEs he
```

suggests make this modification (with acknowledgements to Avalon's commented assembly listing for SP-5025, what they actually do is convert the address for the floating point constant define byte '-1' to that for '+1' in those parts of SP-5025 that a) evaluate Boolean expressions, b) work out integer values in accordance with INT, and c) hold a sequence of routines for Boolean functions called from elsewhere).

If SP-5025 is changed in this way then — naturally — expressions like (A\$="YES")+1 must themselves be modified into the form (A\$="YES")-1 and close attention to the arithmetic involved means that a number of consequential changes need be made to the various expressions suggested above. However, the more the Basic is modified the more likely program crashes become — a program written with the modifications of one Basic in mind may not run on a machine using a Basic that does not have those modifications — and while it is of course possible to have every program start with a procedure that modifies the Basic as desired not only is this a bore but in some cases it may lead to disaster (when the second Basic has already been modified in a manner incompatible with the proposed further modification!). Accordingly, if any assumptions are to be made it is best to assume that the Basic to be used is standard SP-5025, and to make the program do what is required despite SP-5025's drawbacks.

Thus, coming back to S N Brown's problem — that TRUE AND TRUE OR TRUE

(-1) * (-1) + (-1) evaluates 'incorrectly' (to 0) — an answer is to observe the sign change caused by multiplying two negatives, and to change it back by prefacing the ANDed portion with '-' (minus), like this:

IF - (A=5) * (B=6) + (C=7) THEN ... which gives all the correct results.

a) If *all* are true, then the result is -(-1) * (-1) + (-1), = -1-1, = -2 (and the test succeeds).

b) If *none* are true, then the result is -(0) * (0) + (0), = 0 (and the test fails).

c) If any one is true then the result is either -(-1) * (0) + (0), = 0 (fail) or -(0) * (-1) + (0), = 0 (fail) or -(0) * (0) + (-1), = -1 (succeed)

d) If any two are true, then the result is either -(-1) * (-1) + (0), = -1 (succeed) or -(-1) * (0) + (-1), = -1 (succeed) or -(0) * (-1) + (-1), = -1 (succeed) All of these results are correct!

To generalise this, it is necessary to make any ANDed expression negative when all the individual parts are true, and this can be assured simply by multiplying the expression with (-1)ⁿ⁻¹ where n is the number of individual parts.

Thus:
 (-1)¹*(A₁=Q₁)*(A₂=Q₂)
 (-1)²*(A₁=Q₁)*(A₂=Q₂)*(A₃=Q₃)

 (-1)ⁿ⁻¹*(A₁=Q₁)*(A₂=Q₂)*(A₃=Q₃)...
 *(A_n=Q_n)

END

C/WP has introduced a special service for you. It's called "COMPLETE SYSTEM ASSURANCE" and it doesn't cost you a penny. All that you have to do is to buy the complete system, including its software, from C/WP. You tell us exactly how you want to use the system. If we say it will do the job and it cannot, you may return the complete system to us within 30 days and your money will be refunded.

We also give you two "hotline" numbers, one for software problems and one for hardware. You can ring anytime between 9 a.m. and 5.30p.m. weekdays to get your problems straightened out. COMPLETE SYSTEM ASSURANCE also gives you the right to buy training on your computer system in C/WP's training school at a specially reduced rate of £75 a day. Write for full details.

FOR THOSE WHO WANT SOME FRIENDLY HAND-HOLDING

THE COMPLETE OSBORNE

C/WP's generous COMPLETE SYSTEM ASSURANCE scheme applies to every complete system sold by C/WP, including the modestly-priced Osborne 01.

£1495

+ VAT £224.25

The lowest-priced Osborne system costs £1495. That includes the Osborne fitted with double density disk drives (200k each), and with Screenpac which allows it to display 80 characters in a line. The software includes CP/M M-Basic, C-Basic, WordStar, Mailmerge and Supercalc. On its own that software would cost you well over £1000.

But that's not all. The system price includes the STAR 510 (recommended price £289), a newly introduced 100 cps matrix printer,

compatible with the Epson MX 80, but with many of the refinements of the FX 80. The Star is quiet and trouble-free and includes a 2.3k buffer.

This amazing package comes with C/WP COMPLETE SYSTEM ASSURANCE. Buy it with complete confidence, knowing that it is suitable for your purpose (or have your money back). Train yourself or your staff in

WordStar or Supercalc at your privileged rate. And if anything does go wrong in the future rely on C/WP's hot-lines to get you out of trouble.

If this system doesn't fill the bill, let us suggest another. We can team Osborne up with daisy wheel printers or offer you a complete system around an Apple, a CORTEX or a SAGE computer.

COMPLETE SYSTEM ASSURANCE – THE ONLY SAFE WAY TO BUY A MICRO

A BEGINNER'S GUIDE TO PROGRAM CONVERSION

Our Programs Editor, Surya, provides some direction for those trying to get to grips with program conversion.

When you've just picked up your copy of PCW and spotted a nice little cassette-based database for the MZ-80K (see Programs!), it's very tempting to sit down in front of your Dragon 32 and start tapping away, altering lines as you go and hoping that it will run when you've finished it. Unfortunately, while you can sometimes get away with this on very short programs, anything longer than twenty or thirty lines and you quickly find yourself in a mess. The first rule of program conversion is stop and think! This brief article is not a definitive guide to program conversion, but it should give a few pointers to those relatively new to the game.

So where do you start? Well, first of all think about whether a conversion is really the best approach to the problem. Although modifying an existing listing may sound easier than writing the program from scratch, this is not always the case. In choosing between a conversion and a complete rewrite, there are a number of factors to be considered:

(a) The compatibility of the machines.

Some machines support very similar dialects of Basic. The TRS-80 and the Video Genie; the Dragon 32 and the Tandy Colour, and so on. In a number of cases, the program may require only a few minor changes here and there to enable it to run on a similar machine. You may even find that no changes at all are needed.

Other machines, however, are almost entirely incompatible. Converting from a Commodore machine, for example, with its cursor-control statements embedded in the text, can be a real pain. Equally, converting from a powerful machine to a lesser beast may cause problems: the BBC's recursively-defined procedures (procedures within procedures) and REPEAT-UNTIL loops can be very difficult to rewrite efficiently for a machine which doesn't support a structured Basic.

Although converting from a simple machine to a more sophisticated one is generally easier than the other way around, you will be sacrificing the features for which you bought the machine. Any ZX81 listing will run on a Spectrum, but then what's the point of having a Spectrum?

(b) Sound and graphics.

However compatible machines may be in other respects, they usually bear not the slightest resemblance where sound control and graphics resolution are concerned. Where a program relies heavily on these

features, therefore, rewriting the program from scratch would probably be easier than attempting to modify it.

(c) Machine-code, assembler, PEEKs and POKEs.

Any program relying heavily on machine-code or assembler, or where a significant amount of PEEKing and POKEing is done, will be extremely difficult — if not impossible — to modify for a different machine. Anyone who knows enough about low-level programming to do the job would almost certainly be able to write their own routines in a fraction of the time taken to convert someone else's.

(d) The structure of the program.

I must confess a sneaking sympathy for the view that 'all that matters is that it works'. When I'm writing ordinary day-to-day programs for use around the office or whatever, my programs are neither elegant nor structured. Having publicly owned-up to this fatal flaw in my otherwise perfect character, I am now going to sing the praises of structured or modular programming.

Structured programming, is the art of assigning each component function of the program a routine of its own. Take the example of a simple database, there would be one routine to display the menu, another to accept input, another to sort data, yet another to output data to a printer, and so forth. Each routine, or module, is entirely independent of any other, being called by a central 'control' module. You could, for example, remove the printout routine simply by deleting a solid chunk of code and deleting the option from the menu. The rest of the program would be totally unaffected.

A well-structured program is not only easy to read and edit, it also lends itself to modification for a different machine. If (say) the bar-chest section cannot be used on your machine because of the difference in screen-addressing, you can simply replace it with your own routine without necessitating all kinds of changes in other sections of the program.

If a program is very badly structured, it is often easier to write your program rather than wading through GOTOs, attempting to follow a logical path which jumps in and out of loops and so on, and altering one part of the program may have unforeseen effects in a completely different part.

(e) The program as a whole.

Does it do exactly what you'd like it to, or merely approximately what you want?

There's little point in modifying an exciting program if you're then going to have to spend a lot more time on it in order to get it to do something else.

Do you understand the way the program works? If you don't, then not only are your chances of carrying out a successful modification pretty slim, but the program may not do what you thought it would even if you succeed!

By this stage, then, you should have decided whether you're going to modify the program as it stands, or write a completely new program of your own to do the job. If you decide on the latter, it doesn't necessarily put you right back at square one. The general structure of the program may provide a good starting-point, and you may also be able to incorporate some of the routines into your own program. Treat the original program as a source of ideas and techniques, but don't be limited by it.

Let's say you've decided on a conversion. I'll identify the sections likely to cause problems. PEEKs and POKEs are an obvious place to start. The author should have added REMark statements telling you what they do, and you need only figure out how to achieve the same effect on your own machine. If not, they you're into the business of getting hold of the host machine (that is, the machine the program was written for) and trying out anything you're not sure of.

Next to look for is the screen displays: mainly graphics and PRINT AT statements. These will probably have to be completely rewritten. Work out what is happening — what is being plotted and where messages appear on the screen. This can sometimes be tricky, particularly where those quaint Commodore control-codes are concerned (you may have gathered that I don't go a bundle on Commodore screen-handling). Bear in mind that you don't have to duplicate the original screen exactly — or even approximately — for menus and the like. Generally, the only time when you need to recreate the screen faithfully is during games where the graphics are vital. The difficulty of adapting such programs has already been mentioned.

By now, you will probably have come across several sections of code that appear totally alien to the version of Basic supported by your machine. In these cases you must work out exactly what is happening, when, where, why and how.

GOTO page 227

GET TO KNOW CORTEX- *really* THE VERY FRIENDLY COMPUTER

TEN FINGER EXERCISE

You'll be amazed how simple word processing is with CORTEX'S new version of WordStar. No more fumbling with messy key sequences.

CORTEX has 10 special keys to give 40 commands. This is ERASE. Hit it and a letter disappears. Hit SHIFT ERASE and a word goes. Press CONTROL ERASE and the whole line is demolished. It's as easy as that. And it's free! CORTEX's £1495 price includes a copy of C/WP's WordStar 3.3.

AS BRIGHT AS A BUTTON

The twin-processor 104k CORTEX is not only smart in performance (faster in benchmark tests than Sirius or IBM-PC) – its appearance takes some beating too. Examine its slim, but solid 83-key IBM-style keyboard. Admire its bold clear 12-inch screen, set in a minimal-sized cabinet. "But where is the computer?" we are often asked. It's there in the same small cabinet, lying flat across the bottom, screened from interference and cooled naturally, without the whine of a fan. CORTEX has been designed not to dominate your desk, to leave

room for your calendar, your telephone, your in-tray and the rest. If you want it inconspicuous, buy it in conventional cream. But for the extroverts, and the fashion conscious, CORTEX comes in bright, bright colours – warm red, C/WP green, sunshine yellow, ice white and all black.

A FRIEND IN THE NUDE

Service men love CORTEX's superb modular engineering. (Yes, you can get service anywhere in Britain.)

If anything goes wrong (which won't be often) he undoes four screws and the computer (1) slides out like a drawer. A few seconds work and the video electronics (2) slip out, or the power supply (3), leaving only the "bottle" (4).

CORTEX is your friend because it's reliable. And, if it goes wrong, it's easier and quicker to mend.

FASTEST DRAW IN ITS CLASS

It's unfair on other micros. For CORTEX has a dedicated "second computer" (as powerful as Apple II) which does nothing but handle its screen. That's why CORTEX has such dazzling quick-fire graphics.

Now CORTEX's superb graphics hardware is matched with Digital Research's CP/M Graphics software (£275). Create bar charts, pie charts, scatter graphs in a few seconds and incorporate them into your reports or display them 2, 3 or 4 at a time on your screen, or make overhead projector or conventional slides.

C/WP CORTEX

C/WP Computers, 108 Rochester Row, London SW1
Telephone 01-828 9000

ALL THIS FOR £1495 + VAT

Send me details of the 104k twin-processor CORTEX with 83-key IBM-style keyboard, 12-inch green screen, twin double-density (400k) floppy drives, CP/M and C/WP's user friendly WordStar, for £1495.

SIRIUS GRAPHICS

An add-on graphics board for the ACT Sirius I? It's not quite as crazy as you might at first think. AD Osborne points out the advantages.

In a previous article (PCW Aug 82), I bewailed the fact that, although the ACT Sirius I had superb potential for producing high resolution displays, the means of producing them was woefully inadequate. GW-Basic, which has since appeared, has many features which are not implemented on the Sirius and one is still rather limited in programming Graphics displays with those that are.

Recently, a high resolution graphics board for the ACT Sirius/Victor 9000 machines has been marketed by Magus Computer Systems Ltd, tel: 045 423 231. One might immediately ask why a high resolution micro needs an add-on graphics board! The answer to this is that it enables one to program graphics displays without using up precious memory. A screen full of high resolution display uses 40k of memory and a 128 element character set 4k. Thus, if one wishes to work with two displays (a screen display and a virtual display) together with two supplementary character sets, 96k of working memory would be required, not counting memory for an expanded Basic Interpreter.

The Magus board has 128k of RAM which more than compensates for the

requirements of two displays and supplementary character sets. When used in non-graphics mode, this RAM produces a full 128k expansion. This is worth taking into account when considering the cost of the board which is £279 + VAT. Instead of an expanded interpreter, graphics are produced by machine code subroutines residing in ROM in high memory (starting at D8000H). Having the routines as primitives also has the advantage that they may be called from other languages such as Pascal or Fortran. There is provision for storing displays to diskette and for dumping the screen to an Epson type printer. The graphics board comes with a diskette containing the Linker module as well as demonstration programs and character sets. There is both a CPM-86 and an MS-DOS version and, for an extra £10, the makers will supply both Linker modules. There is also a clear and informative manual which explains, with examples, how to use the routines with Basic 86 and how to call them from MS-Pascal (but not from MS-Fortran).

The Linker program (linkg) reserves the memory necessary for two displays and two x 128 element character sets over and

above the standard 256 element set of characters and logo elements. The architecture of the machine is such that the 40k memory for the screen display must be in low memory and must not cross the 64k boundary. The screen display memory reserved by linkg begins at 4400H and the second display (virtual display) is placed directly above this. The area reserved for character sets is below 4400H, so that if too many character sets are loaded, these start to encroach on the screen area. On the graphics board, there is 2k of dedicated RAM above the ROM (starting at D9000H) which is used as a scratch-pad area, but also contains a three word space for the Address Parameters by which strings are handled under the Microsoft calling convention. There are 16 graphics routines as outlined in Fig 1.

Most of the functions are self-evident from Fig 1 but 'Draw' and 'Shape' deserve special mention. Draw is controlled by coordinates x%, Y% and by a one-word integer f%. Bits 0 and 1 of this determine the drawing mode. This allows four modes: (i) Exclusive OR the points (toggle them on/off by previously drawn points) in the path of the 'pen'; (ii) Turn points in pen

Name of Picture file (no extent)

plans

X=705 Y= 20

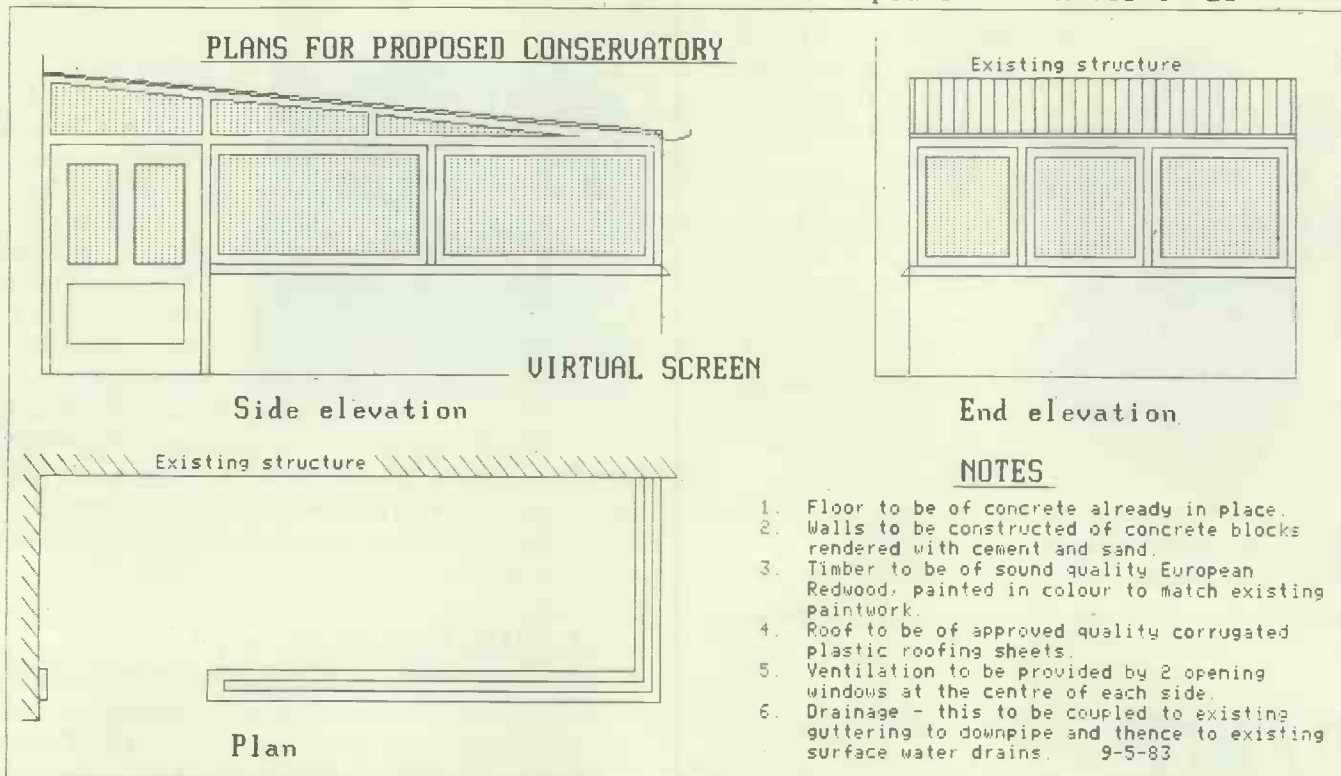

Diagram reproduced from Magus demonstration program

path ON; (iii) Turn them OFF; (iv) Do-nothing. Bits two to eight allow ways of controlling how the line is drawn depending on which of the bits is set (eg, solid/broken lines) and bits nine to 15 are ignored.

'Shape' is a routine which draws an ellipse. This routine is very powerful because the axes of the ellipse and their orientation on the display can be controlled, as well as the number of points plotted. This allows easy drawing of regular polygons. Thus, if the axes are made equal and five points are plotted, a regular pentagon results. The aspect ratio of the Sirius/Victor is 1.4 and this can be allowed for automatically by the routine to produce undistorted displays, even under rotation of the figure. The Epson printer has an aspect ratio of 1.2 and an undistorted print-out can be achieved by scaling X by this factor. However, this cannot be done automatically.

There is a skeletal program on the diskette called GRAFSUB.BAS which contains subroutines starting at line 10000, which in turn call the various graphics routines. The header listing is standard in lines 10-70 so that the user's program can be slotted in starting at say line 100-. The diagram is then programmed by defining the appropriate variables and strings and then using GOSUB statements. Any interrupt which occurs, automatically switches the system into TEXT mode and this applies to INPUT statements (but not INPUT£ statements) which cannot, there-

fore, be used while in HIRES mode. Data must therefore come from diskette or from DATA statements although INKEY\$ may be used for single character input without tripping the system back into TEXT mode. Because the routines are in machine code, drawing is very fast indeed, which is a great advantage when drawing complicated displays.

Information on interfacing with MS-Pascal is set out clearly in the Appendix to the manual and there is an object module called ROMLINK.OBJ on the diskette which must be linked to the program. There is also a listing of a procedure called set-up-fcb (file control block) which must be used to process strings to conform to the Microsoft calling convention before they are passed to PREAD.PWRITE and CHLOAD. I found that this and another procedure called MESSAGE (which passes a message to the screen) did not work without some amendment. Using Pascal gives the advantage of programming in a structural language and the compiled program runs much faster than the Basic Interpreter. This advantage is considerably off-set, however, when one is experimenting with displays because the two pass compiler followed by the linker are tediously slow. Indeed, even with some programming facility, it is generally quicker to draw a diagram with pen and ink than by computer! But this may soon be changed; Magus is about to produce a Graphics Screen Editor which is analogous to a word processor enabling blocks of

graphic displays (as opposed to text) to be drawn and shunted around at will under keyboard control without any knowledge of programming at all. I hope to review this package in a subsequent article.

Routine	Function
SETTEXT	Change to text mode
SETHIRES	Change to graphics mode
PATTERN	Produce a user defined symbol
DRAW	Draw solid or dotted lines
EPSON	Dump the screen to printer
WRITECH	Write a character to a specified point on the display
CHLOAD	Load a character set from disk
SHADE	Produce a user defined shading pattern
RUBCH	Rub out a character
CLEN	Return the dot width of a character
DEL	Clear an area on a display
SHAPE	Draw an ellipse
SETORG	Set the 1h bottom corner of a display to user specified point
PREAD	Read a diagram from disk
PWRITE	Write a display to disk
PSWAP	Interchange screen and virtual display

COMPUTERISING YOUR BUSINESS

Michael Becket gives helpful advice on how to introduce a computer into your business.

Before you install a computer, consultants used to warn companies, your office organisation must be made logical, systematic and consistent — and once you have done all that you probably do not need a computer. But that was before the advent of minicomputers. Then the cry used to be that every fourth person you employ should be a computer.

With the arrival of cheap micros it has changed again: now there are few businesses, no matter how small, that can justify not owning one. Except for the problems. Because if you get it wrong, no matter how little the electronics cost, it can make an expensive hash of the company: bills are wrong, information hides, and stock control evaporates. Or worse.

So what do the experts tell us now? It is the same advice for business machines as for home computers and sounds reasonable and right — the sensible way is to pick out the applications you really need, find the best sort of software to run it, and only as the final decision do you pick the computer to run the programs you have chosen.

Alternatively, if there is nothing strictly suitable, there are professionals who will write tailor-made software for sophisticated needs so one only need find the person/firm specialising in that area and commission the program suite. This is not really feasible for the small business as made to measure programming is fearfully expensive.

Having found the perfect software which does everything you have always dreamed of, from producing cash flow forecasts to compiling a shopping list, one need but look around to see which chunk of electronics runs it most quickly, efficiently and economically. And bingo, you are on the way to organised riches. Right?

Wrong. It sounds wonderful and even logical, but it just does not work. T H Huxley once said the history of science was the slaying of beautiful theories by ugly facts. So it is with buying computers.

Illusions

For a start, somebody who has never used a computer before finds it almost impossible to specify just what he wants. But even if he does know, how in heaven's name is one to specify it with sufficient precision to enable anybody, much less a beginner, to sort out which highly-advertised set of programs

can do it best? It is very easy to tell if one lump of tangible kit is different from another: there are specifiable characteristics. This one has 48k of RAM and that one has 128k. You may not know precisely what it means, nor how much it should have, but at least you can tell them apart. If one machine has two floppy disks containing a maximum of 1.2Mb while another costs more yet has only 600 kbytes, you know one gives you more for your money.

Programs have no measurable characteristics. They do have facilities but until you have used them, it is impossible to tell whether the highly-touted fancy gadgetry is necessary; and more to the point you do not discover until using the damn things that what you do want to do is impossible.

Take a very simple example. Some word processing programs allow pretty clever doings: you can substitute words throughout the text, shift paragraphs, change the margins and so on. But if what you really want to do is set the text in two or more columns, many of the best known ones will not let you do it. Unfortunately it is not until you have used the program for some weeks that the notion occurs and by that time it is probably too late. Or if you find it impossible to tell the size of a number without the commas for thousands and millions, you will not like Supercalc, yet nowhere do you see that little quirk mentioned.

When it comes to complex packages like accounts the problem is considerably greater. I have started a small publishing company and decided to put the accounts onto the computer. Being methodical, I prepared a list of the accounting requirements of Flame Books, drawn from a prolonged analysis of the way I do things at the moment. It did not follow slavishly the mechanical method — that would have been silly — but it ensured everything now available would continue to be so. Here is what I came up with:

Order processing

A — from an input of customer name and address, number and type of goods ordered, plus discount, the program should produce an invoice.

B — simultaneously the computer should debit the customer's account and adjust stock levels.

C — this should be able to cope with non-standard orders (eg, not an established customer but a one-off requiring no

new file), with up to five discount rates, and if required it should at the time of invoicing be able to produce a list of previous orders from that customer indicating which have been paid and total the rest to a statement.

Management information

A — sales per month of each line by number and by value.

B — total value invoiced during a stated period.

C — total cash received during stated period.

D — total of outstanding debtors.

E — list of debtors owing for more than 30 days, classified by size specified.

Continuous information

A — ability to find customer by name and by town.

B — ability to pick out large volume customers.

C — ability to aggregate some accounts for statements (common ownership).

Audit

A — the system should provide all necessary information for statutory audit.

B — it should leave clear audit trail.

This may seem excessively pernickety but since very nearly everything can now be done with comparative speed from five exercise books, I naively thought a clever computer could do it with ease. Not so. Some very clever people including software companies and computer consultants said it was too demanding and I would have to write my own software, probably using something like a database package to help. For a man who broke his basin and almost severed his big toe trying to decorate the bathroom, do-it-yourself holds few attractions; trying to produce anything as complicated as an interlocking set of programs to carry out all those tasks is clearly beyond me.

Step by step

But really this is jumping ahead. The first question really is: what software do you really need. Experience has taught one useful lesson — a spreadsheet is essential. In case anybody reading this does not consult the back of this magazine or comes to it completely raw, it may be necessary to explain that a spreadsheet is in effect a squared sheet of paper in which you can tell

the computer to manipulate the figures in one square and put them in another.

Anybody who has ever gone through the torture of preparing a cash flow forecast will go dizzy with joy when first starting to play with it. No longer do you sit there all weekend with pocket calculator in hand trying to remember what base rate is and when you have to pay certain bills. No longer do you agonise about the insertion of a sale figure for June, in case it turns out too pessimistic and you have to do the whole thing all over again. No longer do you have to curse the know-it-all who says: 'Yes that's very good but what if, as I suspect, interest rates rise in October?'

You just feed in the assumed sales along the top, tell the computer to multiply each one by price (specified), add on costs such as postage (multiply that and that by that and put the figure here), take costs from receipts and add the total to your bank balance (which in turn is adjusted for the interest rate). And oh the joy of saying 'Ah but what if...' and changing a couple of figures to make the computer work it out all over again at the press of a button.

No business can prosper without a cash flow forecast and in these tough times it is doubtful if it can survive. Bank managers are rather keen on them too. They are comforted by figures, no matter how spurious. And the company itself should get used to producing monthly management accounts to give you an idea where you stand. These are then fed into a parallel set of figures to your forecast and the two compared to see where the forecast went wrong. The advance warnings about money problems can save you from insolvency.

Word processors — although popular — are probably only necessary for organisations which have words as their main product: consultants, solicitors, surveyors, etc. They are also useful for maintaining mailing lists and also for marrying them to standard letters. For most companies, whose main use would be for letters, a typewriter is probably just as handy. There is the point that once you have bought a computer for other purposes, and decided to get a daisy-wheel printer for its output, it is probably cheaper to buy a word processor package than a typewriter. Since few companies would want to be without a typewriter, the answer may be to buy an electronic one which can be used as the printer of the computer. Then you still have the option at a later stage of buying a word processing package if you really cannot do without one.

Accounting packages are not so much essential as the main reason for buying a computer in the first place. Here you are going to be completely at sea. For any popular computer (for example, my own Sirius) there is a bewildering choice of packages. If there is a way of telling apart the products of Omicron, Tesson, Consultancy Consortium, Pulsar, Pegasus, Exact, Logic, Merit, Sapphire, Open, Microproducts, Tabs, Padmede, Graffcom or Action File, I have not found it. (I did not make up that list — that was not heavy-handed satire, those really are the

purveyors of accounting software to Sirius owners.)

Get advice

The answer is to talk to as many people as possible. The National Computing Centre gives a certain amount of free advice, your accountancy firms are pretty knowledgeable — more to the point they are very keen to get closer to small companies and are therefore ready to help free of charge. On top of that you just have to read magazines which do reviews. No they will not ask the questions you do because reviewers do not run small business on the programs for six months as a way of testing them, but you will get a comparative feel.

You will also find special suites of programs tailored for specific industries. Pubs to publishing, reinsurance to road haulage, minicabs to mail order, there are hundreds of them. Everything from corner shops to multimillion pound organisations can find off-the-peg packages. Check them carefully — many are partial solutions to a sector's problems and you may still have to add on so many other (non-compatible) bits and bobs that the original specialist service may be less than useful. To be fair though, some are economic ways of solving a small problem, and can be run on low-cost computers like the BBC B, Commodore 64, Newbrain, etc.

Accounting packages come in separate units: sales ledger, bought ledger, nominal ledger, invoicing, payroll, and stock control. You can get these piecemeal from around £200 a time and this will help spread the cost and the labour of transferring files. But make sure the units interlink and have enough capacity for your number of customers. There are also some complete packages like the Financial Director but either way you can expect the whole shebang to cost between £750 and £1500, plus VAT (for some reason nearly all computer prices are listed without VAT). A higher price is not necessarily an indication of greater quality.

Finally, the only other type of software you are likely to need is database management. This piece of computerspeak means access to information. It will for instance enable you to enter all customer names and then call for them with few facts — eg, Mr? Robinson, London; or a retailer in

Cumbria who orders grottle-stop holders; or customers in Devon who order in large quantities and so on. It can also allow you to manipulate your information and so can build up your own programs, even accounting suites. Probably the best known one is dBaseII, though a highly-praised newcomer called Superfile is reckoned to be even more flexible. But clearly this is a luxury at the start, especially as it is likely to cost upwards of £500.

Every company's detailed needs are different, but the essentials are much the same. Financial planning and running the books are vital and computers can make both less time consuming and more accurate. Companies which are now small and have no megalomaniac ambitions (I do), like a shop or a pub or garage or a small manufacturing concern, can probably make do with a fairly low cost system — the programs for home computers are enviably cheap. But once you get a proper business system (you will find disk storage pretty well essential for both types), costs rise to £2000 and up.

Warning

Two final warnings: it is going to take a long time to learn the systems, and do not get rid of your paper system just yet. Even the most 'user-friendly' programs have to be learnt — you can get the hang of spreadsheets like Supercalc (which I use) and the popular Visicalc in a matter of an hour or so but it took me something over eight hours to master WordStar (the word processing package on which this article is written), and dBaseII can take weeks to understand fully. And until you have got the hang of shifting things around the computer you will almost certainly foul something up, lose a file or just fail to get at the bit you want. So for the first year run the two in tandem, and make sure you buy from a dealer who will hold your hand when the bloody thing refuses to obey you — as it will.

Next month John Vogler describes his experiences transferring a small business onto the BBC micro.

TI IN MOTION

Adrian Bicker looks at some of the intricacies of TI Extended Basic and presents a few programs.

'TI Extended Basic is known for its sprites. These move over a 256 dot square grid, the bottom quarter of which is not visible on the screen.' That is what the manual says but it is not the case.

The first clue to the actual situation is the behaviour of a sprite moving across the screen at 45 degrees. If the grid were square, it would follow the same path each time it passed across the screen. In fact, the sprite steps across the screen each time, taking eight passes to revert to its original path. This shows that the grid is rectangular, with the lengths of the edges in the ratio of seven to eight. From this it seems that there are only 224 dots down the screen.

This is strange as the sprite sub-program accepts dot-row values from one to 256. The following program shows how this range of values is treated:-

```
100 CALL MAGNIFY (4)
110 CALL CLEAR
120 CALL CHAR (40, RPT$ ("F", 64))
130 R, P = 1
140 PRINT :: DISPLAY AT (21,1):
R;P;R
150 ACCEPT AT (22,2) SIZE (-3):R
160 CALL SPRITE (#1,40,13,R,
200,0,0)
170 CALL POSITION (#1,P,C)
180 GOTO 140.
```

The program accepts a row number and positions the large square sprite accordingly. The sprite's actual row number is then displayed for comparison against the original figure.

Entering row numbers from 195 to 226 gives varying results. For any of these values, the sprite is positioned at a row which is either 32 greater or 32 less than the row number selected. This shift appears to be random as can be seen if the same row number is entered repeatedly.

A significant point is that if you 'hide' a sprite off the bottom of the screen by using a row number of 192 or more you may be in for a surprise. If you used row 200 for instance, the sprite sometimes appears at row 168 which is actually visible on the screen!

This positioning problem only occurs if the sprite has a velocity specified in the SPRITE or MOTION sub-programs, even if the velocities are zero as above.

Getting back to the problem of the dimensions of the grid, the changing of the row numbers by plus or minus 32 for rows 195 to 226 results in rows 195 to 226 never being used.

This is consistent with the grid having only 224 dot rows. These would be numbered 1 to 194 followed by 227 to 256. This can be confirmed by running the program below which repeatedly prints the row of a sprite which is moving slowly down the screen.

```
100 CALL SPRITE (#1,43,13,1,
200,2,0)
110 CALL POSITION (#1, R,C)
120 PRINT R
130 FOR I = 1 TO 80 :: NEXT I :: GOTO
110
```

Understanding the strange arrangement of the row numbers is important for anyone who intends to use sprites seriously. There are two main ways in which it affects the planning of a program.

If you wish to have a regular sequence of sprites moving up or down the screen, their initial row numbers will have to be evenly spaced. In calculating these positions, remember that there are really only 224 rows not 256. Also, remember that the distance between rows 194 and 227 is one not 33!

A more insidious problem is overcoming the most significant limitation of TI sprites. This limitation is that you can use no more than four sprites across any row of the screen. More than this and the sprite with the highest number blanks out.

You can control this to some extent by careful planning of the positions and relative motions of the different sprites. With vertical motion, some sprites may have to start off the bottom of the screen. If so, avoid referring to rows 195 to 226 since the 32 row shift can play havoc with the careful planning and even worse, the fault is intermittent due to the random nature of the shift.

TI-99 joystick emulation

Joysticks are often the easiest way to control movement on the screen and they are frequently used in games programs. If you are still saving for your joysticks and want to convert a program to respond to the keyboard instead, the following routine should solve your problem:-

```
100 REM SET UP
110 N = 0
120 FOR I = -1 TO 1
130 FOR J = -1 TO 1
140 N = N + 1
150 JY(N) = I * 4
160 JX(N) = J * 4
170 NEXT J
180 NEXT I
1000 REM SUBROUTINE
1010 CALL KEY (0, I, J)
1020 I = I - 50 * (I < 0)
1030 P = POS ("ZXCS#DWER",
CHR$(I),1)
1040 X = JX(P)
1050 Y = JY(P)
1060 RETURN
```

The set up section needs to be put at the start of the program as it sets all the

necessary values.

Use GOSUB 1010 as a direct substitution for the CALL JOYST statement in the program to be converted. Note that the X and Y in lines 1040 and 1050 will have to be changed to correspond with the variable names used in the original JOYST call.

As it stands, the subroutine will sense the eight directions of a joystick using keys W,E,R,S,D,Z,X and C as you might guess from line 1030. This can be restricted if necessary to respond to only four directions by substituting '#X#S#D#E' in that line.

In some circumstances, there is no advantage in the subroutine repeatedly returning nil values as an unpressed joystick would. This can be avoided, decreasing the initial response time by changing line 1020:-

```
1020 IF J = 0 THEN 1010
```

Similarly, if it is preferable to press a key repeatedly rather than have auto repeat, line 1020 could be changed to:-

```
1020 IF J < 1 THEN 1010
```

There is one other problem you could have in converting a joystick program. What do you do if you are expected to press the action button? The answer is simple. Press either Q or Y according to whether joystick one or two is meant to be in use. Do not press Q and shift on the old TI-99/4s or you will quit Basic!

Try converting the following short program:-

```
200 CALL CLEAR
210 CALL COLOR (2,7,7)
220 CALL COLOR (3,13,13)
230 CALL HCHAR (24,1,40,64)
240 CALL VCHAR (1,32,40,48)
250 PY = 12
260 PX = 16
270 CALL HCHAR (PY,PX,48)
280 CALL JOYST (1,X,Y)
290 TY = PY - Y/4
300 TX = PX + X/4
310 CALL GCHAR (TY,TX,R)
320 IF R = 40 THEN 280
330 PY = TY
340 PX = TX
350 GOTO 270
```

As it is written, the subroutine can be used in TI Basic or Extended Basic on the TI-99/4 or on the TI-99/4A using the shift or alpha lock key to get the upper case letters. To make the program sensitive to lower case, just substitute small letters in line 1030.

Character redefinition

When redefining numerous blocks of characters in TI Extended Basic, it is frequently necessary to include long strings of '0's. The available RPT\$ function

is cumbersome to use too frequently. A neater approach is to define a string as follows:-

```
DEF Z$(X) = RPT$("0",X)
```

Z\$() can then be included in the character code string. For example:-
CALL CHAR (96,Z\$(15)&"101" & Z\$(28) & "808")

The same technique can be used in TI standard Basic by changing the definition of Z\$(). Make sure that you put in enough zeros for your requirements.

```
DEF Z$(X) = SEGS("000000000000000",1,X)
```

TI Display

One of the problems encountered with the standard TI-99/4A Basic is that there are no cursor control commands so that a PRINT statement invariably results in screen scrolling. This is often inconvenient especially when a screen layout has been produced for game playing.

The only way to overcome the problem is to position each character on the screen

in turn using the HCHAR or VCHAR subprograms. The following subroutine can be used to print any string or number on the screen without screen scrolling:-

```
500 CALL HCHAR (R,C,32,L)
510 FOR I = 1 TO LEN(W$)
520 CALL HCHAR (R,C+I-1, ASC (SEG$(W$,I,1)))
530 NEXT I
540 RETURN
```

Before the subroutine is used, the row and column numbers R and C must be set and W\$ must be assigned the string to be printed. If a number is to be printed assign STR\$(number).

Line 500 overcomes the remaining problem that if a short word overwrites a longer one, the end of the longer word remains on the screen. It blanks out a portion of the row starting at column C. Set L to equal the number of blanks required. If this feature is not required, use GOSUB 510.

Add the following lines and try running the test program.

```
100 CALL CLEAR
```

```
110 W$ = "TEXAS"
120 R = 4
130 L = 7
140 FOR C = 20 TO 8 STEP -2
150 GOSUB 500
160 NEXT C
170 FOR J = 1 TO 5
180 READ R,C,W$
190 GOSUB 510
200 NEXT J
210 GOTO 210
220 DATA 4,14,INSTRUMENTS
230 DATA 18,14,BASIC
240 DATA 12,11,TI BASIC OR
250 DATA 15,13,EXTENDED
260 DATA 7,7,THIS PROGRAM RUNS IN
```

If you prefer your words to be printed vertically on the screen just use VCHAR in line 500 and change the expressions in 520 to R+I-1 and C.

This approach to displaying information on the screen has another advantage over using the PRINT statement as it enables you to use the full 32 columns rather than the usual 28.

NUMBERS COUNT

THE PARTITIONS OF A POSITIVE INTEGER

More of Mike Mudge's mathematical problems.

Background

- (i) Congruences: Given three integers a, b and c we say that a is congruent to b modulo c and write $a \equiv b \pmod{c}$ if and only if $a - b$ is an integer multiple of c. Thus: $15 \equiv 1 \pmod{7}$ because $15 - 1 = 14 = 7 \times 2$.
- (ii) Partitions: A partition of a positive integer, n, is a non-increasing sequence of positive integers whose sum is n. p(n) denotes the number of partitions of n. Thus: $p(4) = 5$ because $4 = 4, 4 = 3 + 1, 4 = 2 + 2, 4 = 2 + 1 + 1, 4 = 1 + 1 + 1 + 1$.

Problem

- (a) (i) Calculate, as efficiently as possible, p(n), the number of partitions of a given n, verifying, if possible, the following results: $p(10) = 42, p(20) = 627, p(50) = 204226, p(100) = 190569292$.
- (a) (ii) Factorise the calculated p(n) into prime factors.
- (b) Verify the following observations of S Ramanujan:
 - (i) $p(4), p(9), p(14), p(19), \dots \equiv 0 \pmod{5}$
 - (ii) $p(5), p(12), p(19), p(26), \dots \equiv 0 \pmod{7}$
 - (iii) $p(6), p(17), p(28), p(39), \dots \equiv 0 \pmod{11}$
 - (iv) $p(24), p(49), p(74), p(99), \dots \equiv 0 \pmod{25}$
 - (v) $p(19), p(54), p(89), p(124), \dots \equiv 0 \pmod{35}$
 - (vi) $p(47), p(96), p(145), p(194), \dots \equiv 0 \pmod{49}$
 - (vii) $p(39), p(94), p(149), \dots \equiv 0 \pmod{55}$

- (viii) $p(61), p(138), \dots \equiv 0 \pmod{77}$
 - (ix) $p(116), \dots \equiv 0 \pmod{121}$
 - (x) $p(99), \dots \equiv 0 \pmod{125}$
- Now in 1919, S Ramanujan made the following remarkable conjecture, based upon empirical evidence, including the above results: 'If $d = 5^a 7^b 11^c$ and $24k \equiv 1 \pmod{d}$, then: $p(k), p(k+d), p(k+2d), \dots \equiv 0 \pmod{d}$. This theorem is supported by all the available evidence, but I have not yet been able to find a general proof.'
- Now c1930 S Chowla found a counter example to the Ramanujan conjecture; $p(243) = 133978259344888 \not\equiv 0 \pmod{7^3}$ however $24 \times 243 \equiv 1 \pmod{7^3}$
- Note: A fully modified conjecture was proved in 1967 by A O L Atkin; viz. If $d = 5^a 7^b 11^c$ and $24k \equiv 1 \pmod{d}$, then: $p(k) \equiv 0 \pmod{5^a 7^{(b+c)/2} 11^c}$ where [X] denotes the greatest integer not greater than X. We make no attempt to explore this brilliant result on this visit to the theory of partitions.
- (c) Find other counter examples to the Ramanujan conjecture as quoted above.
- Submit a program, or suite of programs, which tabulate p(n) as a function of n, together with its prime factors (and appropriate multiplicities). Interpret these within the context of the Ramanujan conjecture. All submissions should include program listings, hardware descriptions, run times and output; they will be judged for accuracy, originality and efficiency (not necessarily in that order). A

prize of £10 will be awarded to the 'best' entry received.

Entries, to arrive by 1 November, to: Mr M R Mudge BSc FIMA FBCS, Room 560/A, Department of Mathematics, The University of Aston in Birmingham, Gosta Green, Birmingham B4 7ET.

Note: Submissions will only be returned if a suitable stamped addressed envelope is included.

Review—May 1983

The Triangular, Tetrahedral and Fibonacci Numbers introduced in May, produced responses from Belgium and Norway in addition to the UK.

There was complete agreement on the solution sets:

- a) {1,10,120,1540,7140}
- b) {1,3,21,55}
- c) {1,8,13}

The completeness of the solution set for Problem a) has been established theoretically: AVANE SOU.B., ACTA. ARITH., 12,1967 pp 409-419.

There is, however, no such result for either b) or c) known to the present author; indeed some mathematicians have expressed an intuitive feeling that these have infinite solution sets in spite of the empirical evidence.

The competition was very close this month, the 'best' entry was ultimately considered to be that generated in Basic using an Epson HX-20 by Paul Fierens, of Paul Fredericqstraat 84, B9000, Gent, Belgium, to whom a suitable prize will be sent.

BIBLIOFILE

Computer novice, enthusiast or just eager to keep up with the automated society? Linnet Evans gives her personal appraisal of some of the many publications available in the computing market-place.

THE INFORMATION TECHNOLOGY YEAR BOOK 1983/4

The Information Technology Year Book
Editor: Dr Philip J Hills & Roger Martlew
Publisher: Century/PCW
Price: £14.95

Why did we need IT82? A boost for industry and something to distract the minds of the masses? If so, the Falklands conflict achieved the same end in a fraction of the time, and spawned a slightly better level of TV documentary afterwards too. 'How could the new technology help in your office' crowed a questionnaire from the GLC that recently landed on my desk. I opted for a new drinks machine.

So why do we need an IT yearbook? In publishing terms, IT has come of age; schools, libraries and the like actively want to acknowledge its presence. Meanwhile, there are upwards of 60 software type periodicals on the news stands, a choice of dealers in every High Street, and it ain't just Channel 4 carrying the commercials. In human terms, we badly need a port in the storm.

The 1983/84 *Information Technology Year Book* edited by Dr Philip J Hills, makes a very commendable debut in this role. It consists essentially of a number of reports from the inside on different aspects of IT and its present and future effect on commercial and private life. There is a conscious effort to mirror some of the media's well-trod paths. Diana Green's taut and tidy piece on Women in IT, featuring a case study of F International, is

a quintessential example. Robin Bradbeer writing on The Role of Computers in IT, and the section from Peter Gibbs, Information Technology and Finance, highlight the fact that the everyday media do not often allow the luxury of this level of calm, lucid, narrative writing.

Of necessity, this collection must be something of a PR exercise. The main backlash is the air of studied optimism that settles almost everywhere: a breakfast-cereal wholesomeness that's neither a reflection of nor an encouragement to the dodginess and helter-skelter that make up a greater part of the real computer world.

Interspersed are a number of lists of manufacturers, suppliers et al of the kind that can be located every month in *PCW*. In years to come, I suspect this side will offer more contents and comments, thus softening the likelihood of being instantly out-of-date. Already, it stands well aside from *The Computer Users' Year Book*.

For the individual reader, *The Information Technology Yearbook* provides a useful orientation course into this very variegated and newsworthy area, despite my reservations, and despite the price. For schools and libraries, whatever port in whatever storm, it's probably inevitable.

KIDS AND COMPUTERS

Another volume with a deserving subtitle is *Kids and Computers* from Eugene Galanter re-defined as *The Parents' Microcomputer Handbook*. Galanter is an educator, a parent, and founder/director of an institution called The Children's Computer School in New York. It was this latter, with almost half its students in the over-21 bracket, that gave the groundswell for the present book.

While the level of personal computer ownership per head is not as high overall in the States as it is in this country, the transatlantic saga has been longer-running and more intense. The US review is therefore to some extent the UK preview. But the publishers have taken great care to have the text retuned for the UK market.

Galanter is another good writer too. Bright, crisp, well-paced and oozing with prior knowledge, he steers his subjects with absolute accuracy without being didactic or patronising. The prime aim here is to enable an interface between the world as we know it, and a youth cult bigger

than the Beatles and Johnny Ray. It's not simply a game of crack-the-code with your socially diffident, faintly radioactive progeny either. Crucially, Galanter also sells the idea of interactive computing involving, in various senses, all the household.

Readers are offered a very sound idiot's guide to hardware options, to the physical location of the kit to avoid glare, social conflict, etc, and to the basics of LOAD, RUN, proprietary software assuming a cassette-based machine of the VIC type. The potentially long initial learning curve for all parties is treated with respect, though not with kid gloves (sic). The buying guide that intercepts this train of thought stirs up the arguments with unusual thoroughness: after all, for small children, ease of keyboard use may indeed put RAM size in the shade. Tiny C's are also apparently less likely to shove an integral machine onto the floor than a separate VDU. The voice of experience speaks clearly.

In summary, this is a well-designed, trenchant book making good use of its novel approach.

THE COMPLETE PROGRAMMER

The subtitle to Mike James' *The Complete Programmer* is *A guide to better programming in Basic*. Yet no way should this book be taken (or declined) as yet another syntax dictionary or moral tract on the worthiness of structured programming. James is hardly the first writer to joust with questions of policy and philosophy, such as there may be, that can underlie the programs that you and I may from time to time bodge together. Where he does score so well is in his capacity to speak, candidly and trenchantly, to a potentially very wide readership, and in the level of very warm and practical encouragement, to back this up.

All programming theory ultimately rides on the rails of program code, and it's this code-awareness that bootstraps the whole book. Swift, relevant examples are quoted frequently: James goes out of his way to draw positive virtues from more limited or wayward dialects. In mapping out many stones left unturned by the average PC owner's manual (or for that matter the more slap-happy end of commercial programming), an overview is offered of, for instance, the various sort and search routines likely to be appropriate to micro environments. If the reader is left searching beyond this book for a real response to a real question, this is part of the author's intention. The particularly tacky and virtually intangible area of testing and debugging is given a decent airing in a later chapter, with entirely practical advice on tactics.

This book should appeal to — even seduce — the heads, hands and hearts of newer programmers: interestingly, it also provides a fair refresher course for those old hands among us who now can't see the trees for the wood. If *The Complete Programmer* doesn't always give the complete answer to the complete question, then that can only be another plus factor for a book which hasn't wrapped up its subject by its last page.

THE MAKING OF THE MICRO

I'm sorely tempted to propose that Dr Chris Evans, were he still alive, could in a certain sense have done more for the IT spirit than the whole official party-line caboodle.

Chris Evans (we're not related) was promiscuously interested in anything and everything. This, with a rippling racy style and a benign love of entertaining his readers, rendered him the perfect pop pundit.

Some years ago, I was asked to put together a light-hearted article for a hi-fi magazine concerning the relationship between music and plants. After Kew Gardens and more had all professed ignorance of this wayward topic, in semi-desperation I phoned our man. I thereby gained the one-line quote I needed, which was 'bollocks', but rather more nicely phrased. Thrown in for good measure was an exquisite demonstration of fledgling voice recognition applications and a trailer for what are now known as expert systems. So far the pop punditry has held good.

It would be churlish to dub *The Making of the Micro* just a posthumous potboiler, though it reveals nothing new. Fans of his best-selling *The Mighty Micro* will recognise a very substantial sharing of text. Though tidied up for publication, it is manifestly unfinished.

The book consists partly of thumbnail sketches of the various, generally eccentric, characters whose inventions and interventions seeded the Apples and Apricots of today; and partly of cogitation and comment on the duration and duress of the computer revolution. Whether the past events are utterly 'true', or the big predictions really fulfillable, isn't important. They're both credible enough to allow us to sit back and enjoy a wheeze of a read.

The Making of the Micro
Author: Christopher Evans
Publisher: Oxford University Press
Price: £1.95

PRACTICAL INFORMATION PROCESSING

In *Practical Information Processing*, G G Skinner and E M Prentice make public some of their experience in further education. While Pitman's, RSA and other institutions now offer Word Processing as an exam subject, the book is more squarely aimed at the broader requirements of the Business Education Council (BEC) and the Technical Education Council (TEC). There's also an unintentional sidelong glance at the lone office manager trying to grasp concepts before talking to salesmen.

The text falls into two halves. One deals with the tools of the trade: basics, hardware, 'attributes of a good operator'. A worthwhile if slightly limited sprinkling of buzzwords and configuration options are provided. The way in which certain technical details are stoically hauled up-front may still turn a few stomachs; conversely, more immediate attention could have been given to the organisation and management side of small computer-based systems. More diagrams and fewer publicity shots of VDUs might have been helpful too.

The raison d'être is the second section with its sequence of WP assignments which should encourage students to read up on their (non-specific) kit before performing 30-minute workouts. An outline foreknowledge of office practice is assumed, and programmable dot-matrices won't save anyone from the traditional dinner-dance menu:

—○—○—
Cheese and Biscuits
—○—○—

Of necessity, more gentle mention is made of other proprietary software such as spreadsheets and databases.

Though personal reactions are invited, this is hardly a personal handbook, and the elements of new ground covered in the second section can't disguise the shortcomings of the first.

Conclusions

This machine is one of the best quality offerings I have ever evaluated. It is beautifully made and will almost certainly prove to be a reliable workhorse. Of course, you find that you have to pay for this quality and I'm not at all sure if it isn't just a little bit too expensive. The manuals are well presented but there appears to be a gap in the range between the very basic operator's guide and the CP/M-86 user's guide. Quite a few application packages

are already available for the APC and I'm sure that others are joining the list daily. If you're looking for a top quality business computer, then this machine should be on your shortlist for consideration.

END

A BEGINNER'S GUIDE TO PROGRAM CONVERSION

Continued from page 216

Once you've done that (he says lightly), it should be a straightforward matter to replace the offending code with your own routine. This is when you find out just how structured the program really is. I once followed a series of about nine GOTOs, the final one ending on the line following the first one with nothing having happened in between. OK it's an extreme example, but there are some funny people about...

Anyway, next on the agenda is to go through the listing making a note of anything which looks slightly, rather than totally, out of place in your machine's Basic. You'll find that most of the changes will be fairly obvious even if you've never seen some of the keywords before. Most people would guess that HOME is the same as CLS, for example. I hope the PCW Basic Converter Chart will help you sort out the stranger idiosyncracies of some

machines. I don't think anybody unfamiliar with the BBC micro is likely to have a sudden intuition that perhaps the equivalent of FRE() is HIMEM-TOP!

If you're converting to a less powerful Basic then you may have to work at simulating some of the more sophisticated features. FOR-NEXT loops come in very handy to simulate functions such as INSTR\$, STRING\$ and so on.

And this is the point where you start hammering away at the keyboard! Provided you've done all the above thoroughly, a combination of the full new PCW Basic Converter Chart and good old-fashioned trial-and-error should see you through!

END

YANKEE DOODLES

Continued from page 144

has over 200,000 computers in dealers stock, another 200,000 units in its own warehouses and a similar quantity in parts for production. Thus there are predictions that TI will soon begin dumping these units on the market at substantially reduced prices.

In the meantime, Apple and IBM are reported talking to mass merchandisers about marketing new stripped down versions of the IIe and PC. They are both trying to enter the larger home computer marketplace without upsetting their dealers.

Random news

Fortune Computer Systems, the first company to introduce a

68000-base Unix system, will announce a loss for the second quarter ending in July. Fortune attributes it to a drop in orders and delays in software shipments... Shugart is expected to introduce a 12in optical-disk drive later this year with a one gigabyte storage capability. Price is expected to be close to £10,000... Digital Equipment Corporation has disclosed that it will abandon production of 36-bit minicomputers in favour of its 32-bit machines...

Computerland has filed a suit against Softwareland seeking to have the company stop using the suffix 'land' in its name... Computers International, Los Angeles CA is reportedly at work on a 100cps daisy-wheel printer... TandonCorp, the disk drive manufacturer, will

enter the personal computer market with a system sold under a private label by Atari... Romox, Campbell CA, has demoed a reprogrammable game cartridge with the expectation that customers will bring their old Romox game cartridges back to their dealers to have them reprogrammed with new games at \$10 each... Microsoft has named a new VP of corporate communications (that means PR) who comes from a soap company. Guess it needs its act cleaned up.

Latest in the price war

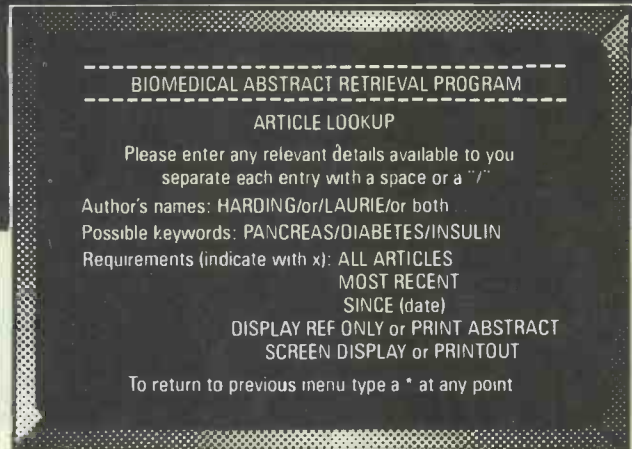

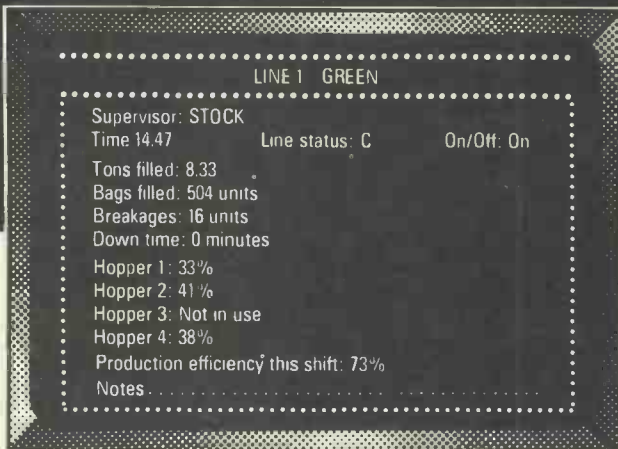

I could hardly believe my eyes, but there was the ad in my local

paper... the Timex 1000/Sinclair ZX81 on sale for \$29.97... how much lower can it go? And then the same store advertised the Commodore 64 for \$199.97 and there are reports of prices as low as \$194.99. And the VIC-20, Atari 400 and TI-99/4 are fighting it out at the \$69 level.

Price erosion has even begun on the more expensive machines. For example, I recently saw a newspaper ad for the Osborne I computer for \$988. And there are special discounts being offered on the Apple IIe when bundled with peripherals and software, so that the effective street price of the machine is now down to well under \$1000.

END

Hundreds of problems. One solution.

Controlling the production of tomato grow bags may sound simple enough, but co-ordinating *all* the different aspects on a brand-new production line was not without its headaches. When the production manager turned to the company's new micro for an answer, it was **THE LAST ONE** which made it possible to create a system in hours rather than months. TLO then went on to produce over *one hundred* individual solutions for this company in a period of less than a year.

A simple, moving, graphic display was needed by a major computer retailer to demonstrate how a new product line could maintain compatibility with some of his earlier machines. Half an hour's work with **THE LAST ONE** and he had a program displaying bar-charts, graphs and printouts. Little more than an hour later the same program was up and running on three other makes of micro. When asked what made the four machines compatible, he laid the credit squarely with **THE LAST ONE** - "some manufacturers would be hard put to even use the same mains plug - TLO at least gets them all speaking the same language."

The biochemistry department of a major Scottish university had a need for a filing system which could store details of abstracts of biochemical articles and which would allow retrieval of relevant material through entry of key words alone. A massive database had to be implemented on an Apple II computer and retrieval times needed to be measured in seconds not hours. TLO did it and the solution has since been widely published for use on other machines.

Using a computer to solve a complex problem is not always as easy as it sounds.

A product called **THE LAST ONE (TLO)**, however, has helped crack hundreds of computer problems for users throughout the world.

A glance through the three examples on this page will give you some idea just how versatile TLO is.

TLO runs on the Apple II and IIe, Commodore 4032 and 8032/96, TRS-80 Model II (TRSDOS or CP/M), most CP/M, CP/M 86 and MS-DOS machines including the IBM PC (PC-DOS) and Sirius.

Try out TLO for £50 + VAT

A limited version of TLO is now available for just £57.50 including full documentation, VAT, postage and packing. This is fully refundable against purchase of the full version, which costs £185 + VAT for Apple II and IIe, and £330 + VAT for all others.

Find out what TLO can do for you by contacting your local dealer or send for a free information pack. It could be the solution to hundreds of *your* problems.

THE LAST ONE[®]

D.J. 'AI' Systems Ltd., Dept E. Station Road, Ilminster, Somerset, TA19 9BQ. Telephone: Ilminster (04605) 4117.

BIG BROTHER IS WATCHING YOU

continued from page 201

in no more specific terms than 'banks and retailers'. So you have 100 names. If you have the energy, persistence and cash for postage and fees, you start writing to each of them, providing proof of identity and the appropriate fee, asking for a copy of the file about you (if any). You may be told it can't be supplied because it cannot be done without disclosing information about someone else who has not given permission. And each may take up to 40 days to reply. If you write to more than five or ten you will have done well.

This is just not a practical proposition. The Register is no more than a waste of many millions of public money and extra civil servants by a Government which claims that both are anathema. And the costs of registration to commerce and industry in totally unproductive man-hours and fees can only be inflationary, which the Government is pledged to reduce.

In practice you will know from personal

experience, far more easily than from any Register, very nearly all the places where files about you may be held — your employers, banks, retailers, clubs, tax offices, and any other organisations with which you have corresponded over the years. It does not take a Register to introduce a right of access to the information they hold about you. A Register of those places where there are files of second-hand information about you might be a bit more useful. If your bank has told the ABC agency about you, then ABC could have to register. Such a Register might perhaps be small enough to be useful and, since the agencies are computerised, their indexes of names could be available on-line to the Registrar and through him to those who seek files about themselves. But it would be easier to require the bank to get your permission before passing on information and to tell you who they have given it to and when.

The Bill sets out certain sensible 'Data Protection Principles'. All of these could

be given the force of Law without a Register. Unauthorised disclosure, even in machine-readable form, could count as libel if defamatory. Unauthorised access to or use of information in a file should count as 'file-breaking' or 'data-theft', and be offences as such. They would, at the same time, provide useful safeguards in many fields beyond those of personal data, such as general industrial espionage. An Office of Fair Filing could investigate complaints and initiate prosecutions without wasting anyone's time on a Register.

If you think the Register sounds like an ineffective and wasteful bureaucracy, you could write to your MP. Tell him what use you make of your personal or business computer to handle personal information which the person concerned knows you possess, is not obviously 'sensitive' and is not covered by the exemptions I have described. Ask him whether registration extends to yourself as proprietor or to your keyboard operators? And ask if it is true that you will have to register this activity under the terms of the Bill, what benefit you or the 'data subject' will get and what registration is likely to cost.

USER GROUP INDEX

As supplied by the ACC, here we present a list of User Groups throughout the country. Any alterations or additions should be sent to: ACC, c/o Rupert Steele, 17 Lawrie Park Crescent, London SE26 6HH.

W Midlands

380-Z West Midlands User Group. Contact Mr S Instone, 59 Avenue Road, Leamington Spa CV31 3PF. Tel: 0926 38751.

National

6502 Users Club. Contact W Wallenborn, 21 Argyll Avenue, Luton, Bedfordshire LU3 1EG. Tel: 0582 2697.

PRESTEL NLX 2000

offers the most sp under the Spec

See us on Stand No. 439,
Personal Computer World Show,
28 September - 2 October
Barbican Centre,
City of London

*Prestel and the Prestel symbol are trademarks of British Telecommunications.
*Subscribers are responsible for quarterly Micronet 800 and Prestel subscription charges.

Micronet 800. The spectacular service that gives micro-users access to a huge database of information, hundreds of software programs, and communication with other users.

Sinclair ZX Spectrum. The home computer that's out-shone all its rivals.

Bring the two together and it's a combination that opens up a breathtaking new world of microcomputing possibilities.

Suitable for either the 16K or 48K versions, the Prism VTX 5000 modem was designed specifically for the Spectrum and fits neatly under the micro.

Plug the other end into the outside world via your telephone and your system will give you more than you ever dreamed possible.

Micronet 800 is fun, friendly and inexpensive to run. Choose from hundreds of free games, download and use them on your Spectrum whenever you like, play on-screen games (as easy – and inexpensive – as a local phone call), and compete in Big Prize games and quizzes. There's also a range of downloadable games you can buy for less than over-the-counter prices.

Learn through up-to-date education packages, and help run the household with simple business packages.

And if you need fast facts about the world of computers, Micronet 800 provides constantly up-dated product comparisons, reviews, prices, dealership and 'best-buy' information – 24-hours a day, 7-days a week.

You can access the whole range of Prestel™ information covering news, travel, holidays and entertainment, together with an electronic booking service.

Keep in touch – you can send electronic mail to any other Micronet 800 or Prestel user.

The VTX 5000 provides a full Prestel screen with graphics, and an off-line message composition facility for speedy transmission when you go on-line.

You can use the Sinclair printer to print frames and messages, or save them on tape for future use.

All this – and even more as the service grows – would normally retail at the low price of £99.95 inc VAT.

But if you join Micronet 800 before September 30, we will make you a very special offer.

Micronet 800 will provide the VTX 5000 inclusive of VAT,

post & packing and (if you need it) a free jack plug installation for the incredibly low price of £74.95 – a saving of £25 on the normal retail price.*

So don't delay – send the coupon today.

Micronet 800

Spectacular add-on

Spectrum.

** Due to reasons of space we are unable to include international and overseas user groups this month. These will be listed in the October issue.*

A History of

We would like to pay tribute to our predecessors in the communications business – smoke signal, semaphore, pigeon, postman and telephone, inter-office memo and management report. They have all served nobly in their own time, and each has handed on the torch.

Today, the demand is for faster and better communications – more accurate and more immediate data transfer from office to office and from country to country.

In 1982 TORCH's Electronic Mail system set new standards in data transmission from computer to computer. We launched the first micro to be approved by British Telecom for direct connection to the Public Switched Telephone Network, via its own, unique built-in modem.

Now a new generation of TORCH communications, backed by the resources of GEC, Britain's largest and most successful trading company, can help your business to be more efficient and faster to respond.

TORCHNET advanced Local Area Networking is a cost-effective means of linking together up to 254 TORCH microcomputers, to share expensive resources and permit fast, error-free information transfer from point to point. It is fully integrated with TORCHMAIL, security-conscious and extremely reliable.

TORCHMAIL PLUS is a dramatically enhanced version of TORCH's interactive Electronic Mail service, providing timed event management, command files, total system security and local file operations.

We do not intend to follow smoke signals and carrier pigeons into the history books. As high-speed communications become more and more important to industry and commerce, our commitment to continual improvement will ensure that TORCH communications will meet the changing needs of business across the world.

Communications

Part 1.

A History of Management Part 1.

Before we designed our expanded range of business microcomputers, we took a close look into the past – from stone tablets to electric typewriter. Never before have the demands of the businessman been so formidable. Today's manager requires total control over every aspect of his operations – instant information, worldwide communications, immediate response to changes in financial and trading conditions. He needs a total business management system.

At TORCH, we sell realities not prophecies, and today's reality is a range of hardware and software versatile enough and powerful enough to meet the demands of every business from a compact single-user system up to hundreds of networked machines providing massive processing power for a multi-national corporation.

In 1982, we revolutionised computing with the first fully communicating business micros – our highly acclaimed C-Series models. Our Z80 Disc Pack proved the most effective upgrade for the BBC Model B micro, providing twin 400K disc-drives and a Z80 processor.

We celebrated American Independence Day this year, by giving every British businessman the right to be independent of imported micro technology with our new 700-Series and 300-Series machines. Our 700 models incorporate a third processor – the Motorola 68000 with 288k RAM and able to run under full UNIX SYSTEM 3. Our 300-Series machines are intelligent workstations to utilise TORCHNET Local Area Networking.

We've come a long way from papyrus and quill pens. The TORCH microcomputer system can replace your typewriters and your filing cabinets, your ledgers and your telephones – not to mention your ageing uncommunicative computers. Today, backed by GEC, Britain's largest and most successful trading company, TORCH offers the next step in business management. Welcome to the future.

Machine (Price from)	Main Distributor/s (No. of Dealers)	Hardware	Software	Miscellaneous (Documentation)
Gemini Multiboard (£500)	Micro Value 02403 28321(7)	64k RAM: Z80: 25 x 80 VDU int (with Z80): Option: dual 5 1/4" F/D £690.	CP/M: <i>Basic Cobol: Pascal Fortran AP/L:</i>	Modular system. Other options inc ROM board & EPROM programmer. BT 2/82 (H&S).
Gemini Galaxy 2 (£1495)	As above	64k RAM: Z80A: dual 5 1/4" F/D (800k): 12", 25x80 VDU: RS232 port: P/P: C int	CPM: <i>Basic: Cobol: Fortran: Pascal: AP/L: A</i>	Options: dual 5 1/4" FD (800k): dual 8" F/D (2.4Mb)
Gimix System 68 (£2000)	SEED: 05433 78151: Windrush 0692 505189	16-64k RAM: 6800/6809: dual 5 1/4" F/D (500k): 2xRS232 ports.	OS-9: <i>Flex Basic: Pascal: A: Dis A: T/E:U</i>	With dual 8" F/D (2 Mb) £2900. Designed as development system for industrial control. (H).
Genie I (£299)	Lowe Electronics: 0629 2430 (N/A)	16k RAM: Z80: 500bps C: 16 x 64 TV int: extra C int: 1 P/P	Basic (12k ROM): <i>Pascal: A M/A: Fortran</i>	Options: single 5 1/4" F/D (184k) £220; dual 5 1/4" F/D (368k) £375 (I) Also Genie II with numeric keypad and function keys but no cassette (same price as I).
Genie III (£1900)	As above (26)	64k RAM: Z80A: dual 5 1/4" F/D (1.25 Mb): 24x80 VDU: RS232 port: P/P	NewDOS 80: <i>CP/MZ: Basic: Cobol: Fortran Pascal</i>	System complete with business applications software, maintenance contract and choice of printer £3250 (S).
Grundyl 8200 (£1850)	M-Tech Comp Serv. 0603 870620	64-256K RAM: Z80A: dual 8" F/D (2MB): 24x80 VDU: RS232 port: P/P	CP/M: <i>Basic: Cobol: Fortran: Pascal: Forth: PL/1: Ada</i>	Various hard disk options up to 26MB
Haywood 9000 Composite (£1795)	Haywood: 01-428 0111. (TBA)	64-192k RAM: Z80A: dual 5 1/4" F/D (640k): RS232 port: P/P. 15" 28x80 VDU.	CP/M: <i>Basic: Cobol: Fortran: Pascal: W/P.</i>	Graphics avail. Expandable to 18 Mb H/D. Networking version planned (H&S)
Haywood Hinet (£7500)	As above	64k RAM: Z80A: dual 8" F/D (2Mb): 11Mb H/D: RS232 port: RS422 port: P/P. 24x80 VDU	CP/M: <i>HiNet: Basic: Cobol: Fortran: Pascal</i>	Local area network, up to 32 users. Range of H/D avail. Local disks & printers if required. Work station £2050 (H&S)
HP 75C (£728)	As above	16-24k RAM: 48k ROM: CPU: 32 char display: mag card reader	Basic	8k RAM £142. Video interface £221. Thermal printer £371. (E) BT 11/82
HP 85 (£2013)	Hewlett Packard Ltd: 0734 784774 (16)	16-32k RAM: C.P.U.: 5", 16x32 VDU: C(200k): 64 cps printer: 4 P/P. Options: dual 5 1/4" F/D (540k) £1610: fustl 8" F/D (2.4 Mb) £4108.	Basic (ROM)	Full dot matrix graphics. Complete range of interfaces, peripherals and application packages avail. 16k RAM £142. (S).
HP86 (£1314)	As above	80k RAM: C.P.U.: 48k ROM. Options: 12", 24x80 VDU £238: 9", 16x80 VDU £216: 5 1/4" F/D (207k) £622	ExBasic	Many expansion possibilities including CP/M module (£362), RS232 port (£289) and up to 576k user RAM. 400x240 graphics. BT 10/82 (E)
HP 125 (£2479)	As above	64k RAM: 2xZ80A: 12", 24x80 VDU 2xRS232 ports: HP-1B port. Options: dual 5 1/4" F/D (500k) £1693	CP/M: <i>Basic: Cobol Fortran: Pascal</i>	Integral thermal printer £629. Also available with dual 8" F/D (2 Mb). (S). BT 3/82
IMS 5000 (£1500)	Equinox: 01-739 2387 (20)	16-56k RAM: Z80: dual 5 1/4" F/D (320k): 2xS/P: 1 P/P:	CP/M: <i>C/Basic: Cobol, Fortran.</i>	3 drives option: (S&H).
IMS 8000 (£2500)	As above	64-256k RAM: Z80: dual 8" F/D (1 Mb): 2xS/P: P/P	CP/M: <i>CBasic: Cobol: Fortran: MicroCobol</i>	Multi-user MVT/FAMOS available in place of CP/M. (S&H).
Jupiter Ace (£90 inc VAT)	Jupiter Contab,	3k RAM: 8k ROM: Z80A; 24x32 TV int: C int: loudspeaker.	Forth	Has 140 Forth words defined in ROM.
Kemitron K2000 E (£2300)	Kemitron 0244 21817 (3)	64k RAM: Z80A: single 5 1/4" F/D (150k): 12", 24x80 VDU: 2xS/P: P/P	CP/M: <i>Basic: Cobol: Fortran Pascal: A</i>	Extensive range of support cards and industrial interfaces.
Kemitron K3000 E (£3300)	As above	64k RAM: Z80A: dual 8" F/D (2Mb): 2xS/P: P/P	CP/M: <i>MP/M: Basic: Cobol: Fortran: Pascal: A</i>	Up to four screens and four printers can be attached. Options: 10Mb H/D.
LSI M-Two (£6000)	LSI Computers 04862 23411 (20)	64-128k RAM: 8085A: dual 8" F/D (1.2 Mb): 12", 24x80 VDU: 60 cps printer	Elsie: <i>CP/M: Basic: Cobol Fortran: Pascal: A: U</i>	Max 8 VDUs and 4 printers. Many applications packages available. Option: 10 Mb H/D £2600. (S).
LSI M-Three (£1700)	As above	64k RAM: Z80A: dual 5 1/4" F/D (350k): 12", 24x80 VDU: RS232 port: P/P	CP/M: <i>Basic: Cobol: Fortran: Pascal: A</i>	Option: Dual 8" F/D, 10 Mb H/D (E)
LSI M-four (£2175)	As above	128-256k RAM: Z80B: 8088: dual 5 1/4" or 8" F/D 3xRS232 ports: RS422 port: P/P 12", 24x80 VDU	MS-DOS: <i>CP/M-86 Basic: Cobol: Fortran: Pascal: MP/M-86</i>	Operates on either 8-bit or 16-bit applications software. Option: 10 Mb H/D
Macro 1 (£3950 or £294 pm).	Micro APL Ltd, 01-834 2687 (TBA)	64k RAM: Z80A: dual 8" F/D (1 Mb): 4xRS232 ports.	CP/M: <i>APL: U: Basic: Fortain: Cobol: Word-2star Algo: Pascal: Forth.</i>	Designed as timesharing replacement. Macro 2 with 2 Mb F/D £4750 or £334 pm.
Marinchip M9900 (£4990)	Microprocessor Eng. 0703 775482	128k RAM: 9900: dual 8" F/D (2Mb): 4xRS232 ports.	NOS: <i>Basic: Pascal: W/P: SPL: Forth: Meta</i>	Multi-user/multi-tasking OS. Options: H/D up to 120 Mb.
Micro Trainer 1 (£650)	Hewart: 0625 22030 (N/A)	16-32k RAM: 6800/6809: 10" 16x24 VDU: 2xC int: Opt: dual 5 1/4" F/D (160k) £595: 8k RAM £17.	Basic: <i>A: Pascal: PL/M: W/P</i>	SS50-based system. Graphics avail. Int card with real time clock £17. (1).
Millbank Sys 10 (£2395)	Millbank: 01-891 4691(6).	65k RAM: Z80: dual 5 1/4" F/D (700k): 12", 24x80 VDU: 2x RS232 ports: RS449 port: P/P.	CP/M: <i>Basic: Cobol: Fortran: Pascal: PLI: W/P.</i>	12-month warranty. Main-frame comm. package. Maintenance contracts. Options: 1.6 Mb F/D. 5-50 Mb H/D. (S&H)
Munroe EC8800 (£2150)	Fi-Cord Int. 061 445 7716	128k RAM: Z80A: single 5 1/4" F/D (320k): 3xRS232 ports: P/P	Munroe Multitasking System: <i>CP/M: Basic: Cobol: Fortran: Pascal</i>	High res colour graphics. Option: single 5 + " F/D. (320k). £495

Machine (Price from)	Main Distributor/s (No. of Dealers)	Hardware	Software	Miscellaneous (Documentation)
Munroe OC8820 (£2990)	As above	128k RAM: Z80A: dual 5 1/4" F/D (640k): 9", 24x80 VDU: 3xRS232 ports: P/P	As above	5MB H/D avail soon. BT 4/82.
Nascom 3 (£549)	Lucas Logic 0926 59411	48-60k RAM: Z80: dual 5 1/4" F/D (700k): RS232 port: P/P.	Basic: <i>Pascal: A: CP/M: Cobol Fortran</i>	Options dual 5 1/4" F/D (700k) £685: 48k RAM £130.
NEC PC 8001 (£599)	IBR 0734 664111	32k RAM: Z80A: P/P Option: dual 5 1/4" F/D (326k) £699	Basic N: (24k ROM) <i>CP/M: Fortran: Cobol: Pascal.</i>	Colour monitor £359 (low res) or £579 (high res) both 12", 25x80 many expansion units avail. (E) BT 6/81
Newbrain Model A (£199)	Grundy: 0223 350355 (TBA)	32k-2 Mb RAM: Z80A: Nat 420: 2xC int: TV int: 2xV24 ports.	CBasic (29k ROM): A.	Graphics. Battery or mains. Options: 1/2 Mb RAM £450. Also Model AD £299. (E).
North Star Horizon (£1975)	Comart: 0480 215005. (25) Trader Comp. 01-328 3484 (60)	32-64k RAM: Z80A: dual 5 1/4" F/D (360k): 15", 24x80 VDU: 150 cps printer: 2 S/P: 1 P/P.	DOS: Basic: CP/M: <i>Cobol: Fortran: Pascal.</i>	Options: 5-18 Mb H/D, Multi-user.
North Star Advantage (£2195)	As above	64k RAM: Z80A: dual 5 1/4" F/D (720k): 12", 24 x 80 VDU: S/P.	GDOS: CP/M: <i>CBasic: MBasic: Fortran: Cobol: Pascal</i>	Price includes business graphics & demo software.
.Oki if 800 (£3000)	Encotel. 01 686 9687	64k RAM: Z80A: 2k ROM: dual 5 1/4" F/D (768k): 12", 24x80 VDU: 80 col printer: loudspeaker: RS232 port: 20k ROM cartridge.	Basic: A: <i>CP/M Cobol: Fortran:</i>	Fully integral unit. Graphics. Options: dual 5 1/4" F/D (560k): RS232 port: PP. (1). BT 10/81
Olivetti M20 (£2395)	Olivetti 01 785 6666	128k-512k RAM: Z8001: 2-8k ROM: dual 5 1/4" F/D (640k): RS232 port: P/P	Basic: <i>PCOS: A</i>	Alternative 8086 processor board to run CP/M86 & MS-DOS. Options: 11 Mb H/D (integral): printer £738. (S) B/T 9/82
Onyx C8000 (£6875)	Onyx Dist Ltd: 09066- 5432 (TBA)	64k RAM: Z80: 12 Mb Cartridge: 10 Mb H/D: 4 S/P: P/P	CP/M: <i>MP/M Oasis: Unix: Fortran: Pascal: W/P</i>	C8001 with 128k RAM £8220. Multi-user version avail. using Oasis. (E) BT 3/81.
Oric 1 (£100 inc VAT)	Oric Products Int 0990 27641	16-48k RAM: 6502A: 28x40 TV int: C int: S/P: P/P: Loudspeaker	Basic (16k ROM): <i>Forth</i>	With 48k RAM and Forth on cassette £170 inc VAT. 240x200 colour graphics. Micro disk and modem avail soon. Viewdata compatible.
Osborne 1 (£1250)	Osborne 0908 615274(40)	64k RAM: Z80A: dual 5 1/4" F/D (200k): 5", 24x52 VDU: RS232 port: P/P	CP/M: W/P: <i>Cobol Fortran: Pascal</i> CBasic: MBasic: Wordstar: Mailmerge: Supercalc <i>Forth</i>	Integral system in weatherproof carrying case. Will run on battery pack. Option: dual 5 1/4" F/D (400k). BT11/81.
Oscar (£2560)	IDS Ltd: 0908 313997(30)	64k RAM: Z80: dual 5 1/4" F/D (800k): 12", 25x80 VDU: RS232 port: 1 P/P	CP/M: <i>Basic: Pascal Fortran: Cobol: W/P: A</i>	Also avail. with dual 5" F/D (1.6Mb) £2905 and 8" F/D (2 Mb) £3380. Advanced video board. S&H).
Panasonic JD 800M, JD850M (£3300, £4350)	Panasonic Business Equipment: 0753 75841 (10 regional dist)	64k RAM: 8085A: 4k PROM: dual 8" F/D JD800M (500k): JD850M (2 Mb): 12", 24x80 VDU: 3xRS323 ports. P/P	CP/M: Basic: A <i>Micro- Cobol.</i>	Option: 8.4 Mb H/D £2725 (up two). BT3/80(S).
Pascal Microengine (£2295)	Pronto Electronic Systems Ltd: 01- 554 6222	64k RAM: MCP 1600: 2x RS232 ports: 2 P/P.	Pascal.	CPU instruction set is P-code: no interpreter needed. Avail- able with dual 8" F/D (2 Mb) £3900.
Pasca 640 (£1900)	Westrex Ltd: 01-578 0957 (TBA)	64k RAM: Z80A: dual 8" F/D (512k): 12", 24x80 VDU: RS232 port: P/P	CP/M: <i>Basic: Cobol: Fortran: Pascal: A: W/P: U</i>	Maintenance contracts avail. Option: 5-20 Mb H/D. (S) BT 5/18
Philips P2000 (£2444)	Philips Data	16-48k RAM: Z80: dual 5 1/4" F/D (140k): 12", 24x80 VDU: RS232 port.	PDOS: UCSD p-system: <i>Pascal: Basic Fortran: A.</i>	With 48k RAM, Pascal and Basic £3300: BT 12/81.(S).
Position 900 (£1950)	Position Comp. 09252 29741 (10)	64-512k RAM: 6809: 4xRS232 ports: IEEE-488 port: 1200 band C: dual 5 1/4" F/D (720k)	OS-9: Basic 09: <i>Pascal: C: A: Cobol: U FLEX O/S</i>	Supports 4 users, expandable to 8. Networking allows 28 users on 7. Options dual: 5 1/4" F/D (1.4 Mb): 5-40 Mb H/D (E)
Position 9000 (£1536)	As above	64-512k RAM: 6809: 4xRS232 ports: IEEE-488 port: 1200 band C.	OS-9: Basic 09: <i>Pascal C: A: Cobol: U</i>	240x240 high res colour graphics. Viewdata compatible. Disk options as above. Supports 5 users. Networking allows 35 users on 7 systems (E) BT 10/82.
Prince (£3045)	Digico: 04626 78172 (50)	64k RAM: 3xZ80A: dual 5 1/4" F/D (800k): 2xRS232 port: P/P 12", 25x80 VDU	CP/M: <i>Basic: Pascal: Fortran: Cobol: W/P: A: T/E: U</i>	High res graphics. Options: single 5 1/4" F/D (400k) £600: dual 8" F/D (2 Mb) £2000 5-10Mb H/D. Rentals avail. (S).
Quantum 2000 (£2250)	Quantum Comp Sys 0532 458877	64k RAM: Z80A: dual 8" F/D (2.4Mb): 12", 24x80 VDU: C int: P/P	CP/M <i>Basic: Cobol: Fortran: Pascal: A</i>	Many expansion boards avail inc high res colour graphics. Option: 5-10Mb H/D.
Rair Black Box 3/30 (£3750)	Rair: 01-836 6921 (N/A)	64-512k RAM: 8085: dual 5 1/4" F/D (500k): 6 Mb H/D: 2xRS232 ports.	CP/M: Basic: Cobol: Fortran: M/A	64k RAM expansion £500. 256k RAM £1250. Up to 16 RS232 ports.
Research Machines 380Z (£1867)	Research Machines: 0865 249866 (N/A)	32-56k RAM: Z80A: dual 5 1/4" F/D (300k) RS232 port. P/P.	ExBasic: A: T/E: U: <i>CP/M: Fortran: Cobol: Algol: Pascal.</i>	High res colour graphics. Many possi- ble systems. With 56k RAM & dual 8" FD (1 Mb) £3347.
Research Machines Link 480Z (£560)	As above	32-64k RAM: Z80A: C: 2xS/P: P/P	Basic: T/E	High res colour graphics. Network station.

THE MT80. SHAPED BY EXPERIENCE

You are looking at the sleek, ultra modern lines of the latest dot matrix printer from Mannesmann Tally; the people who probably have more experience in computer printers than just about anyone.

The MT80 is a high quality, low cost 80 column, 80 cps printer that will complement any of today's micros in looks and quality; in either the home or the office.

It has been designed with industry-

compatible interfaces in hardware and software.

Experience tells us exactly what you want from a printer - The MT80 has dual density dot addressable and line graphics. An easy change, long life cassette ribbon. It can handle both tractor-fed fanfold and single sheet paper. There is a unique quick tear facility giving you a clean cut along the entire width of the paper. And it even has an optional

sound reduction kit for those of you who like to hear yourselves think.

But best of all, it comes equipped with another valuable asset. A very attractive price tag.

Contact your nearest distributor or send for our colour literature.

Mannesmann Tally Limited,
Molly Millars Lane, Wokingham, Berkshire
RG11 2QT. Tel: (0734) 788711. Telex: 847028

MANNESMANN TALLY
CREATING THE RIGHT IMAGE IN PRINT

Working late again?

When NEC – computer-makers to the world – made their own computer, naturally, by cutting out the middleman, they made their own computer more competitive in price. And performance.

Take the new NEC 16-bit Advanced Personal Computer (APC), for example: it can store more information and operate faster and easier than any system in its price range

The APC and its NEC 3530 Spinwriter has so many unique features – in fact, there are too many to list here.

But on the corner of this page, a small snip could mean a giant leap for your business.

And a little more time for your family.

 **Advanced Personal Computer**

Cut out the middle man. Go straight to the top.

- IRS80 LII 16k, expansion interface (32k, RS232, TEAC single disc drive, H14 printer (RS232, full ASCII), disc software including Pascal, APL80 £750 ono or will split. John (eve) Bristol (0272) 43482.
- Sharp MZ80K 48k RAM software Basic, Assembler, Disassembler, Chess, Space Invaders, Knights, Fortran. Complete with manuals, dust cover, excellent condition. Can deliver London area. £280. Tel: 01-361 1947.
- 48k expansion for VIDEO GENIE (under keyboard). Little used. With full fitting instructions and connections. Cost new £48, will accept £20. Tel: Longfield (04747) 5165.
- Selectric KBD printer (ex 2741) with hardware/software interface for Z80 micro + P10. Previously IBM maintained. V. good condition, with some manuals, sensible offers. Tel: Ian on Ips (0473) 831353.
- Sharp MZ80K 48k. Good condition, including Basic and 5 software cassettes with manual £225. Tel: 01-698 7614.
- Sharp MZ80K 48k. Hardly used. House purchase forces sale. Ex condition, some software. Can deliver Essex or Kent. £300 Rayleigh 779984. Std code 0268.
- Apple II Europlus 48k with disk drive (DOS 3-3), RS232 interface, Hewlett Packard printer and software £750 ono. Also Applesoft toolkit £15 and Graforth Language £35. All with manuals. Tel: 01-883

0812.

- Sharp MZ80-P6 printer + interface card and connecting cable for MZ80-B computer. Perfect condition. Tel: Ken Gaston after 8 p.m. or weekends on 01-549 3108 £230 ono. Will deliver within reasonable area.
- MZ-80K 48k with Quantum hi-res graphics, reset button, dust cover 70+ programs including several Basics, Pascal, Fortran, Assembler, Scramble, PacMan, Asteroids, Defender, Chess, Wizards Castle £400 ono. Tel: Wilmslow 526663.
- Sharp MZ80K 48k. Excellent condition with Sharp Assembler and 3 Basics £295 ono. Tel: 01-992 1268.
- Olivetti A4 valued around £600. Excellent working condition, all offers considered for quick sale. Also surplus Eproms, SAE for list 38 Farley Road, Derby. Tel: (0332) 366659.
- PET 32k 3032 with 3040 dual disk drive and 3022 tractor printer. Two systems available with some business software. £850 each system. Mr Sherwin Tel: Rugby (0788) 810908 eve or weekend only.
- 32k PET new ROM. Large keyboard VGC £395 incl cassette unit, prog, manuals. Tel: Histon 022023 4787.
- TRS 80 model I level II VDU cassette complete in original box including £100 software with Touch Typing. Owner upgrading. Best over £220. Tel: 0323 52821 or 58609.
- TRS 80 Mod III. 2 disc drives, RS232, editor/assembler, communications software and games disks + more software and programs. Little used, ideal for business or home. As new, £1,200. Tel: Robert on Bourne End 26261.
- Commodore 4022 printer, good condition, £200. Tel: Bordon (Hants) (04203) 4261.
- NewBrain Model AD. 32k Features built in display. As new, + computer manual and beginners manual and tape, hardly used. £200. Tel: 01-337 9571 eve.
- VIC-20, 16k, super expander, C2N cassette, joystick, introduction Basic P11, programmers reference manual, 3 cartridges including Chess, £30 software, 6 month warranty, New £410, Accept £290 ono. M.R. Sadler, Crewkerne. Tel: (0460) 73509.
- Sharp MZ-80B, expansion unit, 2nd graphics, twin disk drive and software, Accept £1,500. Giving FREE PC1211 and PRINTER, Contact Wal Tarabzouni II, Saxon Hall, 16 Palace Court, London W2. Tel: 01-229 8147.
- LYNX 48k, boxed, 5 months old. Excellent condition, Selling as upgrading to Apple, £150 for quick sale. No offers. Also 16k ZX81. No offers. Tel: 0224 820940.

- Superboard II (CPI), Cegmon Wemon, integral 12in VDU, 40AMP PSU, Eprom programmer, 2716/2732, 30 tapes, 16k RAM, 32k Eprom, expansion to fit, 32x48 screen kit, Complete spare superboard II with 6AMP PSU, manuals, Spare chips, The lot £225 ono. Tel: Reading 694445.
- Sharp MZ-80K, 48k, excellent condition, dustcover, extended Basics, Forth, M/C. Code WrdPro, many games, books, newsletters, MX-80, graphics chips and interface, over 40 cassettes, £300. Tel: 0525 376011 (after 6pm).
- UK 101, 8k with Cegmon, Basic 5 and toolkit, 16/32 lines, 300/600 Baud, Runs at 2M HZ. All cased. Variety of software, £150 ono. Tel: Harlow 443022.
- TRS-80 model 1, LII 16k, hardly used. Lots of games, all leads and manuals. Tape instruction course, IQ builder, £260 ono. Tel: Richey, 01-570 0958 after 6.30pm.
- Sirius 128k, 1.2MB, hardly used, surplus to requirements, 9 months guarantee remaining, £1,900 + VAT. Tel: Harlow (06284) 73074.
- Aculab floppy tape unit, + 15 wafers. No interface required plugs straight into VIDEO GENIE. Have gone to disk so going cheap at £70 ono. Tel: Bonnet, Kings Langley 65324.
- Tangerine mini-rack, Micron, 8k, RAM, 15k ROM, Basic, toolkit, Tanbug, Xbug, ASCII, keyboard, hex keypad, games keypad, Chunky graphics, 4 manuals, Microtran companion book. Much software, £250 ono. Tel: 01-668 3326.
- Colour NASCOM-2 48k with disk, Polydos, disk Basic, Pascal, Assembler, Polytext, AVC gives 8 colours, 782x256, cased with numeric keypad, fan, speaker, £200+ of software. £1,075 or offer. Tel: 0763 61482.
- Commodore cassette, Bags of software, little used, ideal for business, home or school, £450. Tel: Colin, Slough, 72674, or write Colin Payne, 113 Holmedale, Wexham, Slough SL2 5R3.
- DRAGON 32. All leads and manuals, + portable tv, Chess cartridge and cassette recorder. Price new £311 + only £220. Tel: Fairseat (0732) 822498 after 5pm.
- VIC20 computer, computer unit, Jelly Monsters and Cloudburst cartridges and lots of software, £100 ono. Tel: Biggin Hill 73861.
- APPLE kit, colour card, £50, Omnivision, £100, modular £7, paddles £5, desktop plan £55, Visicalc utilities £25, library boxes £1, 50 3 x £18, Pascal £45, Billing, 19 St Lawrence, Ashburton, Devon.
- TRS-80 model III, 48k, Dual Teac 175k disk drives. Also editor assembler and Accel 3 disk basic compiler. All excellent condition,

worth £1,600. Serious offers over £1,000 considered. Tel: (0734) 666104 (Reading).

- Sharp MZ80K 48K, excellent condition. Several Basics, Pascal, Forth and many games. Also NDPRO, ZEN and compatible disassembler, ROM and ZEN listings. With manuals, bargain, £260. Tel: Cheltenham (0242) 23091.
- Pet2001, 32k, new ROM with over 100 programs, mags and listings. I need the money fast, so selling cheap! Only £265 ono — for more details telephone 01-554 9548.
- Sharp MZ80K High Resolution Board, fitted reset switch, lots software, business games, utilities, Pascal, Forth etc, £275, no offers. Also Seiko, Sharp Interface, £40. Telephone David on (0253) 56361 evenings.
- Software for TR80 and Video Genie; compilers for Cobol, Basic, Fortran, Forth and Pascal; others include Visicalc, Edas, Scripts and numerous games, many books. Telephone for list, Hull (0482) 867349.
- AIM 65 development system, 20K ROM, 36K RAM, 24V Lambda and 5V cased PSUs Pettite and NDU interfaces. Full documentation cost £768, bargain at £250. Tel: 01-366 8820.
- ATARI 400 4 weeks old, Basic language, Atari recorder, Defender, Asteroids cassettes, joystick, portable television. Sell the lot £250 or swap for M2 80A or M2 80K. Tel: Garboldisham 430 home, Theford 3192 work.
- Sharp MZ-80K, 48k + interface box P3 printer and 320x200 hi-res board, Over £200 of software, including various business programs only £850 the lot. Tel: Andrew Hutchinson, Leichworth 3744.
- TRS 80 model I, L2, 16k computer with lower case modification, battery operated soundbox, VDU cassette recorder and software included £230. Tel: Charles Joyce on Rowlands Castle 2788 (STD 070541).
- Commodore 8096 business mtr to with disk drives and leads. Tel: Mike, 01-888 4946 after hours, 01-482 2283 work.
- Hewlett Packard HP-10C, calculator, as new, bought in error, £50. Tel: Maidon (0621) 53595 eyes/wknds
- SPECTRUM 16k manuals, leads, boxed, tape recorder £20. Included Software Arcadia Golf, Penetrator, Planetoids, Scramble, Nite-Flight, Hungry, Horace, Go Skiing, GFZ, Avenger, Escape, worth £200, excellent condition, £110 ono, bargain. Tel: Rob, 01-440 1635.
- PET 3008, new ROM, large keyboard, green screen, external C2N cassette deck, 3022 tractor printer, books, some software, cables etc, excellent condition, £550

 ● Sharp MZ80A, as new condition. All manuals, software, some additional programmes and tapes. In original carton, £425 ono. Tel: Radnage (Bucks) (024-026) 2229 eves.
 ● Sharp MZ-80K/A games addicts, new software to help numb your minds, Stomper, Alien Egg, Cycloids, Proteus-1, All at £6.00 exactly. For details, see: Image 18 Florence Road, New Cross, London SE14.

TRANSACTION FILE ADVERTISEMENT FORM

All Transaction File ads must be submitted by readers on this form or a photo-copy of this form. Maximum 30 words. Print one word per box, very clearly. Name, address and/or telephone number must be included in the 30 words. All ads must be accompanied by a flat fee of £2.50. Make cheques or POs payable to Personal Computer World. Ads accepted from private readers only. Ads cannot be repeated (unless sent in on another form) and we cannot guarantee to print an ad in any specific issue. Please help our typesetter to help you by printing your ad very clearly. Send form to: Transaction File PCW, 62 Oxford Street, London W1A 2HG.

Please find enclosed my cheque/PO for £2.50 for the following Transaction File ad.

ACC NEWS

Rupert Steele presents his monthly round-up of news from the Amateur Computer Club.

Micro-robotics on the move

Good news for all micro-robotics enthusiasts! The ACC is running a second national conference on the subject of amateur robotics (including micro mice and mobile arms). It will be held in London during mid November, and further details will be given in next month's ACC news.

Two years ago, the ACC held the first national micro-robotics conference at Imperial College. Over 80 people participated, including enthusiastic amateurs, designers, manufacturers and representatives from various interested bodies. A follow up was requested, either in the form of a study group or a second conference.

The group got together again at the Earls Court Computer Fair in June this year (wonderful how these exhibitions cause the old faithful to meet up to hatch their plans) and agreed to launch a second event with two main objectives:

1. A platform for state of the art designs and information exchange
2. Practical help for amateur

micro-robotics enthusiasts (for example, developing bulk buying groups to cut component costs).

They thought that interest would come mainly from the micro mouse people and those interested in mobile arms, but that the conference would also be aimed at those with other robotic interests. These would include, on the software side, artificial intelligence, voice input and output, pattern recognition and 'expert' systems. There will be a number of features in 'ACCumulator' on this subject — send your contributions to Leon Heller, 8 Morris Walk, Newport Pagnell, Bucks.

To avoid disappointment, write (or telephone) now to get your name on the mailing list for the conference: Vernon Gifford, 111 Selhurst Road, London SE25 6LH, tel: 01-653 3207. He would also be interested in any topics you would like to hear or talk about or any offers of demonstrations. Vernon (who ran the previous conference) is coordinating the early preparations for this one, but he would like to hand on to somebody who could look after the ACC's micro-robotics role, both in

conferences and convening a study group. Anybody interested?

Communications

This subject persists in the news. We are still waiting for some proper standards to emerge in the field of computer communications at the protocol level, but at least the electrical signals are well defined for communication over telephone lines. All you require (in principle at least) is a modem (MODulator-DEModulator) to connect the telephone to your RS232 signals. If your friend also has one, and the baud rates and parity specifications are the same, then providing you've got all your pins 2 and 3 (on the RS232D connector) connected right at both ends, you should be able to communicate data over the phone.

The ACC and the National TRS-80 Users group are holding a joint workshop in London on the subject of building modems. In particular, it is planned to look at the Maplin modem design along with some software to use with it. This is hoped to include a general communications program written

in the 'C' language. The meeting will be on Sunday 9 October at the Emil Woolf Accountancy College, Marylebone Lane, off Baker Street, London. For more information on this event, contact Brian Pain, on 0908 564271.

Shows

I hope to see some of you at the PCW show at the end of this month. The ACC will be there as usual, along with our computer club database; this allows us to put people in touch with their local clubs — typically we introduce one person to a club every minute of the show. So if you want to meet more interested people, come along to the ACC stand and ask about your local club. Of course, if your club doesn't tell us of its existence, then we can't tell other people about it, can we?

Incidentally, if you'd like to have printed material about your club to be available on the ACC stand (or you have a poster you would like us to try and display), then contact David Annal (address below). If you're desperate for a stand for your club, it might be worth

ACC NEWS

contacting David immediately, in case there are any cancellations.

The June show in Earls Court was quite successful from the hobbyist's point of view. Many clubs were represented (wasn't yours? ... contact David Annal, 142 Windermere Road, London SW16 5HE for a stand at the next exhibition) and the ACC database was in great demand. The show itself seemed to divide quite sharply into two camps, the small business system market and the computer games business.

Club spot

Are you a member of Micronet? Do you want to get involved in creating your own pages on Prestel at no cost other than phone charges?

Remember that you can get involved (via your computer club or the ACC) in Club Spot 800. Club Spot lives at page *8008# on Prestel, and editing facilities can be available to people with Micronet adaptors or any full alpha terminal. If you want more information, drop me a line.

Now comes the time that I go dipping into my post bag to bring out the news from clubs around the country. If you would like any (interesting?) information about your club to find its way into this column, then write to me at the address below (NB my address has changed since July) and I'll give you a mention. Believe it or not, some of your potential members do read this page.

Ms Valerie Clark of 4 Charlton Grove, Wallasey, Merseyside, writes to me to talk of a club in a

library in the area. Her ideas were still speculative when the letter to me was written, but why not drop her a line if you're interested and in the area.

She mentions that there is a problem in getting adequate computer books to be stocked in the public libraries in Wirral. This seems to be mainly because many librarians are not fully *au fait* with the computer business and are therefore frightened off buying any books at the selection meetings. She hopes that by involving library staff (as well as 'ordinary people') in a computer club, they may set sufficient interest to ensure that this vital area of knowledge is given adequate cover.

The Birmingham & Region Apple Group (BRAG—good acronym) has sent me a handout advising me not to PINE-APPLE

(it gets worse!) but instead to contact Mel Golder (021-426 2275) or Mike Bayliss (021-743 7197). It claims to dispense or cover Information—Displays—Books—Disks—Talks—Systems—Hardware—Software—Games—Advice.

Mrs Ann Flynn, of 53 Georgian Close, North Road, Drogheda, Co Louth, Eire, writes to tell me of her interest in forming a local club, possibly mainly aimed at the TI 99/4a. If you live near her, why not drop her a line. She may be prepared to allow fans of other computers to 'play' too.

*Want more information about the ACC or anything in this column? Or have you anything to report? Then write to me: Rupert Steele, 17 Lawrie Park Crescent, London SE266HH.

NETWORK NEWS

Peter Tootill gives his monthly summary of what's new in the telephone networking world

Liverpool Mailbox is now the first UK bulletin board to start running 24 hours a day, and in case you missed the new phone number, it's 051-4288924.

Mailbox-80 Stourport has a new number (03843) 73873. Phone the operator for details of system times.

The long awaited new modem chip from AMD, the AM7910, seems to be becoming available at last. It is a multi-mode device that requires only a power supply and a couple of other components to make a fully fledged modem handling various standards, including V21 (normal UK 300 baud standard), V23 (covering Prestel) and their US equivalents. The chip is expensive, (around £60) but if you need more than just a V21 modem, it offers excellent value for money. I expect that by the time you read this, modems using the chip will be well on the way if not already on the market, although I understand that supplies of the chip are very limited at present. I will give further details of any such modems when I receive them.

Maplin modem: There are apparently a couple of component changes to the modem. Recent kits should include details, but if you're not sure details from Maplin, or most bulletin boards seem to have them on somewhere.

By 'commercial' I mean systems that are run by commercial organisations rather than individual hobbyists. As always I should be pleased to receive corrections, updates and the like, either via Liverpool Mailbox, or *PCM*.

Systems which are Free at least in part.
DISTEL. Tel: (01) 683 3311. Run by Display Electronics (new and surplus electronic and computer

equipt, components, etc). The system provides information about stock lines, credit card sales, and some message facilities. 300 baud only at present. Cost: free.
REWTEL. Tel: (0277) 232 628. Run by Radio and Electronics World, the publishing side of Ambit (electronics components suppliers). Information on stock lines, some message facilities, credit card sales, the latter only for subscribers. 300 baud only at present. Cost: limited areas free, remainder £10 annual subscription.
MAPTEL. Tel: (0702) 552 941. Run by Maplin (electronic components and microcomputers). Provides information on stock levels, credit card sales to existing customers only. 300 baud only. Cost: free.

PRESTEL. Subscribers only: Prestel consists of a database made up of individual pages provided by many different organisations (not by Prestel itself). 1200/75 baud service at local call rates for a large percentage of potential users. 300 baud service on London telephone number only, at present. Cost: domestic subscribers £5.00 per quarter and no time charges outside peak periods, 80 per cent of pages are free. Business users: £15 per quarter and 5p/minute up to 6pm and Saturday mornings, no time charges outside these hours (time charges also apply to domestic users). Information: tel: Freefone 2296.

MICRONET 800. An organisation providing information within the Prestel database specifically aimed at microcomputer users. Service details as Prestel. Cost: £50-£75 joining fee (covers acoustic coupler and software—for a limited range of machines at present) and £8 per quarter on top of normal Prestel charges. Information: Micronet 800, 8 Herbal Hill, London EC1R 5JB. Tel: (01) 837 3699.

The following are fully fledged commercial systems aimed at business users:

TELECOM GOLD. Info from: Julie Ireland, 42 Weston Street, London SE1 3QD. Tel: (01) 403 6777.

COMET. Message handling system giving user facilities for leaving and retrieving messages: costs £30 per month. Info from: John Douglas, BL Systems Limited, Grosvenor House, Prospect Hill, Redditch, Worcs. Tel: (0527) 28515.

TBBS, London . . . Tel: (01) 348 6518* System Operator: John Newgas. Hours: Mon-Fri 10pm-1am; weekends 2pm-1am

CBBS North East . . . System Operators: Trevor Smith & Malcolm Piper. Hours: Tel: (0207) 43555. 2. 30pm-9am daily; tel: (0207) 32447, 7pm-midnight CCITT standards; midnight-8.30am Bell 103 (US) standards.

Mailbox-83, Stourport . . . Tel: (03843) 73873* System Operator: Jim Roden. Hours: Call Operator for times.

Forum-80 Hull . . . (Forum-80 HO) Tel: (0482) 859169. System Operator: Fred Brown. International electronic mail, library for up/down loading software.

Forum-80 Users Group, Pet Users section shopping list system. Hours: 7 days a week midnight to 8am; Tues/Thurs 7-10pm; Sat/Sun 1-10pm; nights, midnight-8am, US (Bell 103) standards.

Forum-80 London . . . Tel: (01) 902 2546. System Operator: Victor Saleh. Electric mail, library for downloading. Hours: Tues/Fri/Sun 7-11pm.

CBBS London . . . Tel: (01) 339 2136. System Operator: Peter Goldman. Facilities: electronic

mail, program downloading. Hours: Sun 5-10pm.

Forum-80 Milton . . . (TRS-80 Users Group 80-Nett) Tel: (0908) 613004. System Operators: Leon Heller and Brian Pain. Electronic mail, library, newsletter, TRS-80 information system. Hours: 7 days a week 7-10pm.

Mailbox-80 Liverpool . . . Tel: (051) 4288924. System Operator: Peter Tootill. Electronic mail, downloading, TRS-80 information. Hours: 24 hours daily.

ACC . . . members bulletin board. Tel: (0908) 44262. System Operator: Peter Whittle.

University Research Computer . . . Sweden. Tel: 010-468 23660. Guests use password '66,66' for access.

Elfa . . . Sweden. Tel: 010-468 7300706.

Rewtel . . . (Radio & Bulletin board). Tel: (0277) 232628. 24 hours service 7 days a week. Packed with useful and interesting information, etc. Subscription fee £10 p. a. Non-subscribers may have eight mins free. Hardware required: 300 baud full duplex. Standard page: 64 characters by 16 inches.

Bettisfield Remote CP/M . . . Tel: (094) 875378. Systems Operator: Jim Eccleston. Hours: 1-4pm & 7-11pm daily. Restarts 8 September.

The above information is correct and current, to the best of my knowledge, but I would be pleased to receive corrections and updates, either via Liverpool Mailbox, or to 7 Stockville Road, Liverpool L18 3EJ.

*Ring back system—dial the number, let phone ring once and then ring back.

WORDSWORTH

BEFORE YOU BUY

A BBC WORD-PROCESSOR

ASK YOUR DEALER THESE QUESTIONS:

- ★ Will it print a 200K document at one command?
- ★ Will it personalise a standard letter to 999 club members at one command?
- ★ While it is doing that, can I type up the minutes of the last meeting and save them on tape?
- ★ Can I see all the time how my print-out will look, using an ordinary television set?
- ★ Can it use the upside-down italics feature of my Obscuro Printer (without my having to buy an extra tape for £10)?
- ★ Can I embed printer codes at any position within a text line?
- ★ Will it align my 8-decimal-place figures, and add them up automatically for me?
- ★ Can I lock the keyboard in case the cat goes to sleep on it?
- ★ Can I search and replace, centralise text, count words, etc?
- ★ Does it work with all BBC operating systems, using cassettes or disks?

IF ALL THE ANSWERS ARE YES, AND IT COSTS LESS THAN £20, BUY IT.

IT MUST BE WORDSWORTH!

ALSO AVAILABLE DIRECT, PRICE £17.25 (tape), £19.50 (disk). FROM

London NW3
tel: 01-794 3886

PROGRAMS

PCW is interested in programs written in any of the major programming languages for all home and small business micros. When submitting programs to PCW please include the following:-

- (a) A cassette or disk of the program
- (b) A listing on plain, white paper (typewritten if no printer available).
- (c) Comprehensive but brief documentation.
- (d) A suitable sae if you would like your materials to be returned after use.

Please mark (a), (b) and (c) with your name, address, program title, machine (state minimum RAM where appropriate) and — if possible — a daytime phone number. All programs must, please, be fully debugged. Programs are paid for at the rate of £40 per page of published listing, plus a £100 bonus for the Program of the Month. Send contributions to: Surya, PCW Programs, 62 Oxford Street, London W1A 2HG.

I'll do my best to acknowledge receipt of programs as quickly as possible, but following this acknowledgement it will usually be some time before a decision can be made, so please be patient! Generally speaking, programs which are rejected for any reason are returned fairly quickly, so 'no news . . .'

You'll no doubt have noticed some strange-looking symbols alongside this month's Programs. Looking through some of the responses to the Reader Survey, it seems that most people are primarily interested in one class of program, be it games, utilities or whatever. With this in mind, we've decided to help you identify programs quickly using the following symbols:

- Games
- Scientific/mathematic
- Business
- Educational/Computer Aided Learning
- Toolkit/utilities

Of course, not all programs will fit into one of these categories, so these have not been given a symbol.

Atari No-Trons

by Martin Stiby

'No-Trons' is an arcade-type game for the Atari 400 with a games paddle (NB: paddle, not joystick). You have a gun at the bottom of the screen and a target at the top. You control the gun, using the paddle, and the computer controls the target. In between the two, a number of No-Trons glide happily across the screen from right to left. Your job is to blast the living daylights out of the lovable little creatures. If more than one No-Tron manages to reach the same point on the left-hand side of the screen, your score is displayed and

the game restarts.

There are a number of skill levels available, selected by twiddling the paddle and then hitting the fire button at the beginning of the game. The higher the skill level, the faster the pace.

The number of POKES and data statements make the game all but impossible to modify for readers without a paddle. As our referee puts it: 'They will be really up the creek, as it were!' Thank you, Phil. Don't call us . . .

M&J SOFTWARE

fig-FORTH FOR THE DRAGON.....£10
This cassette-based package represents fantastic value for money. It consists of the FORTH language, the standard editor, and our 6809 macro assembler. A disk simulation is provided in the high res. screen area giving 11k of space for source program development. Documentation consists of the fig-FORTH installation manual plus lots of example programs, memory map etc.

DRAGON COMPANION BOOK.....£4.95
The DRAGON COMPANION has been well received by thousands of DRAGON users throughout Europe. It was written by M. Jarvis who has an honours degree in computer sciences from Keele University. Packed full of useful information — including a listing of a full 6809 disassembler — this book is a must for any serious DRAGON user. If you are still not convinced then send a SAE for a copy of an independent review.

ASSEMBLY SOURCE LISTINGS OF fig-FORTH.....£7 each
These standard fig-FORTH assembly listings are available for the following processors:

6502, 280, 6809, 8080, 1802, 3900, 6800, 68000, 8088/8088 and PDP-11. fig-FORTH INSTALLATION MANUAL.....£5
This is a complete guide to implementing FORTH from the above listings. It contains the complete FORTH compiler written in FORTH and a listing of the editor. Disk simulation is also explained with a small program.

6809 and 6502 MACRO ASSEMBLERS.....£5 each
These programs are structured one-pass assemblers which will work on any fig-FORTH implementation with the minimum of alteration. They are provided in listing form together with instructions on use and an example program. Cassette recordings can be provided for DRAGON or MICROMART users at £1 extra.

ALL ABOUT FORTH by HAYDON.....£7.95
A annotated glossary of FORTH with cross references to fig-FORTH, Starting FORTH and the FORTH-79 Standard. Invaluable as a work of reference.

Cheques and POs to: M&J Software, 34 Grays Close, Scholar Green, Stoke-on-Trent ST7 3LU. Tel: (0782) 517876.

THE POWER BANK

sealed for life, batteries included

system compatible sine wave output

The Uninterruptable Power Supply which will:

- ★ Continue to operate your Micro Computer System when the mains electricity supply fails
- ★ Suppress dangerous spikes and surges
- ★ Stabilise voltage and frequency to your sensitive equipment

Operate your Micro Disk/Printer System from a Power Bank and forget about a disabling break in the electricity supply.

Please contact: Power Testing (Sales) Ltd, on 0277 233188.

Spectrum Almanac

by Stephen Jack

'Almanac' is an astronomical program for the ZX Spectrum. The listing below just fits into the 16k machine.

For any date between 1980 and 2000, the program will calculate the time of sunrise and sunset (in both Local and Greenwich Mean Time), together with the sun's longitude, right ascension (RA) and

declination. The program aims at an accuracy of +/- 10 (temporal) minutes; our referee checked this with the Meteorological Office in Birmingham and the dates he checked seemed to be within this limit.

Thanks to Mike Bedford-White for his modifications to the input and print routines.

```

Data for the date of 19 5 1983
Sun's longitude 57.4775 deg
Sun's mean R.A. 3.7141 hrs
Sun's mean DEC. 19.709 deg
Sunrise local time 4.1195 hrs
Sunset local time 19.7753 hrs
Time of sunrise GMT 3.9862 hrs
Time of sunset GMT 19.6419 hrs

MICROMART

NUMBER ONE FOR FUN!

That's right! We've got the games that other software companies can only imagine. So if you've got a Commodore 64 make a note of these titles:

- TANK ATAK
- MANGROVE
- CRAZY KONG
- STIX
- KAKTUS

You can buy them direct from SUPERSOFT (at £8 plus VAT each, postage & packing included). Or else visit your local dealer or any larger branch of Boots.

SUPERSOFT

Winchester House, Canning Road, Wealdstone, Harrow, Middlesex, HA3 7SJ
Telephone: 01-861 1166

Software for PET SHARP TEXAS

All programs listed can be written in German or Danish text (except for Pet).

- | | |
|---|-----------------|
| TEXAS | PET/SHARP |
| Marian Lander | Typing Test |
| Allen War | Morse Code Test |
| Lunar Lander | Plus Plus!! |

BBC Text Formatter

by Des Fisher

'Text Formatter' is a text justification and formatting program for the BBC Model B with a printer available. Nine commands offer a variety of facilities including full justification, automatic page numbering, centering, indentation and variable line-spacing.

Text is entered in the form of DATA statements in lines 2430 onwards. Justification and formatting commands are embedded in the data with the text. Since the program works by string manipulation and not by printer control codes, it should work with any printer.

The nine commands available are:-

- .JUSTOFF — switches off justification (on by default)
- .JUSTON — switches on justification
- .CENTRE — centres next line
- .INDENT — indents next line
- .PARA — create new paragraph
- .SKIPx — print x blank lines
- .NEWPAGE — move to new page
- .LSPCx — set line-spacing to x (1=normal, 2=double; 1 by default)
- .END — 'end-of-file' marker

When printing, the display can be halted by a key depression regardless of the printer status. A second key press restarts the display. If you have indicated that you do not have a printer on-line, the display

will automatically wait for a key press after each screen.

The procedure INIT in lines 610-780 defines the initial values of things like the page width, page length, margins and so on. These can be easily changed to suit your requirements.

The program is generally well-structured and extremely easy to read (and thus modify), since the author has made liberal use of REM statements.

The listing below includes some sample text (DATA statements in lines 2340 to 3450 inclusive). You could, of course, cut down the time needed to type in the program by leaving out these lines since you will need to delete them anyway, but they do give a nice demonstration of the program's output.

With a number of recursively defined procedures, the program is specific to the BBC machine. The structure of the program and plentiful comments, however, should help owners of other machines to translate it.

Although a useful program in its own right, 'Text Formatter' would really come into its own as part of a fully-fledged word processor. Someone is in fact working on this as I write and the result will be included in PCW Programs shortly.

It's
not just the price tag that puts
CALCMASTER ahead
of the competition

Obviously being the most competitively priced 8 & 16 bit business 'CALC' system available today is good news.

And the fact that it's from the same stable as the outstandingly successful **SAPPHIRE MARS** – the easiest to use full structured modelling system available – shows CALCMASTER'S undoubted excellent pedigree.

But what really puts CALCMASTER in a class of its own is its unique design concept as the low cost, easy to use, basic utility for business planning and control. **Not just another 'CALC'!**

So CALCMASTER, based on our years of business modelling experience, is a low cost, easy to use and flexible 'personal' business planner. Yet with enough real muscle in the right places to quickly make full use of your micro to get to grips with those 'everyday' managerial situations and events where your decisions count.

The **EASE OF USE** that comes from entering your calculations in English and having a 'rolling window' to view all the elements of your model, however large.

The **POWER** contained in CALCMASTER'S 1,000 cell matrix to enable you to model 'day to day' all your business and departmental activities that require quick and accurate analysis, appraisal and control. Yet with enough in reserve to handle larger functions, even including the consolidation of small to medium size models using the unique 'Read' 'Write' and 'Nested Run' facilities.

The **FLEXIBILITY** to model and assess a whole range of business and personal activities, not just the financials!

The **WIDESPREAD AVAILABILITY** that comes from CALCMASTER'S suitability for most micros with either CP/M* or CP/M86* operating systems and an 80 character screen width with at least 64K of memory and a single floppy disk drive.

So almost at a flick of a switch, you can now ensure that you and your company, like CALCMASTER, stay one step ahead of the competition.

Of course, when you need to move up to a more powerful system, CALCMASTER leads you naturally to **SAPPHIRE MARS**. Because it's totally integrated to CALCMASTER both your experience and data are not wasted and you have the complete business planning system for **ALL** your needs.

But first things first. To order CALCMASTER, and its superbly designed manual, please clip the coupon and enclose your cheque or credit card details and we will send you CALCMASTER plus details of the extensive **SAPPHIRE MASTER RANGE** of business software.

To: Sapphire Systems Ltd., 1-3 Park Avenue, Ilford, Essex IG1 4LU.

MICROMART

The SATURDAY dBASE II INTRODUCTORY COURSE

This course enables a rapid grasp to be gained of using database packages, in particular dBASE II (TM: Ashton Tate), on micros under CP/M. It is planned for those who have little or no prior knowledge of data base systems on computers, or dBASE II, and starts virtually from scratch covering:

- Introduction to Micros & CP/M
- Databases on Microcomputers
- Introduction to dBASE II
- Hands on use of dBASE II
- System design for dBASE II
- Programming in dBASE II
- Practical work on dBASE II
- Programming aids & style

Numers are strictly limited to not more than 20 delegates. Registration is at 0900-0915, lunch 1300-1415, and conclusion at 1800. Several micros are used for hands on work including: Osborne, Sirius, Televideo, Galaxy, etc. Four lecturers are present so as to ensure that every delegate receives individual help in the practical sessions.

The next course is on Saturday JUNE 4th. Currently planned dates are for the following SATURDAYS at a West London hotel:

June	4, 18
July	2, 16, 30
September	10, 24
October	15, 29

Cost: £90 + VAT payable in advance but with scaled refunds if cancellation within specified notice periods. Cost includes course material, meals and refreshments, and a copy of Arthur Green's book: "dBASE II User's Guide". Payment by Cheque, PO, Access or VISA. Detailed explanatory leaflet available with fuller description. To make a booking or to obtain further details, telephone or write to: Steve Conlon at:

AQUA COMPUTING LTD

(Dept PW5), 10 Barley Mow Passage,

TRS-80 Genie Multi-Maths

by Barrie Snell

'Multi-Maths' is a menu-driven mathematical calculation program for the 16k TRS-80 and Video Genie.

The program is intended to be of use to anyone needing to carry out a significant number of assorted calculations. Although it doesn't do anything that couldn't be done on a programmable calculator, it has the advantage of holding thirteen routines on memory as well as offering annotated input and output, of course. As well as being a useful program to the more mathematically-inclined, some of the routines will doubtless come in handy for inclusion in other programs.

The thirteen options offered by 'Multi-Maths' are:-

- A Circle finder
- B Combinations
- C Factorials
- D Logarithms
- E Least squares curve fitting
- F Permutations
- G Pythagorean triplets
- H Polynomial evaluation

- I Quadratic equations
- J Rational fractions
- K Statistics
- L Simultaneous linear equations
- M Spearman's coefficient of rank correlation

Most of the above should be self-explanatory, but to briefly run through them . . .

*Circle finder requests coordinates of three points. It then calculates the radius and centre of the circle passing through them (assuming the points do not lie on a straight line).

*Combinations calculates the number of possible combinations of n objects taken in groups of r. The largest number of objects the routine can handle is 33.

*Factorials calculates the factorial of any given positive integer. The routine is fairly fast, taking about fifteen seconds to find the factorial of 1000 (compare that with the speed of a scientific calculator!). For values up to 3199, the routine tells you

S. Lester, 219 Uxbridge Road
Harrow Weald, Middx HA3 6TW

PROGRAMS

roughly how long you'll have to wait; for values larger than this, it tells you to 'prepare for a long wait.'

*Logarithms calculates, as you'd expect, the logarithm of any positive number to any given (positive) base.

*Least squares curve fitting fits an equation of degree 1, 2, 3, 4, 5 or 6. You can enter up to 50 coordinates in the form 'x,y'. The routine will request the degree of polynomial — 1 fits a straight line, and, generally, the higher the order of polynomial the better the fit (assuming a straight line fit isn't appropriate). Higher orders of equation, of course, require more data than lower orders.

*Permutations calculates the number of permutations of n objects taken in groups of r. As for combinations, the maximum number of objects is 33.

*Pythagorean triplets calculates all possible whole number values of primitive pythagorean triangles, giving the two sides and hypotenuse. 'Primitive' means that having found 3-4-5, the routine doesn't waste time looking for multiples like 6-8-10, 30-40-50 and so on.

*Polynomial evaluation calculates the value of any given polynomial with the constant term, variable X and coefficient of X being entered by the user.

*Quadratic equations calculates the real or complex roots of X1 and X2 when given the coefficient of the X squared term, coefficient of X term and the constant.

*Statistics requests a set of numeric data which it sorts into ascending order. It then calculates the arithmetic and geometric means, the median, sum of values, minimum and maximum, range, mid-range, variance and standard deviation.

*Spearman's coefficient of rank correlation attempts to find correlations between two given sets of data. This is a standard technique used to test the validity of data.

It's a great pity that 'Multi-Maths' wasn't written in modular form. Admittedly, TRS-80 Basic doesn't exactly go out of its way to encourage structured programming, but a modular structure would have made it easy for readers to borrow routines for inclusion in their own programs. As it is, the program tends to jump about a little. Still, I have no doubt that both the program as a whole and a number of the routines in it will prove useful. In order to save memory for data entry, the program is highly-compressed and has no REM statements, so care should be taken when typing it in.

STOCKFILE — the fast, low-cost easy stock control program for the Apple II of Apple IIe!

STOCKFILE lets you record and constantly update 1000 different stock lines on one 5 1/4" data disk. Create up to 30 different data disks, giving you records of up to 30,000 different stock lines!

STOCKFILE is the "plain English" program. No computer jargon! Easy to learn, easy to understand, easy to run. Fast calculation of stock and "shrinkage" values.

STOCKFILE lets you print out at any time full details of any stock line and print complete or selective stock lists with automatic totals of stock and "shrinkage" values.

STOCKFILE needs a minimum of 48K Apple II or Apple IIe, one disk drive and 80-column printer.

STOCKFILE program disk, sample data disk and full, clear instructions for only £59 + VAT. Free delivery.

THE NATIONAL 6809 CENTRE

Stirling Microsystems is the country's leading '6809' Centre where you can get professional advice and practical demonstrations of one of the widest ranges of '6809' based hardware and software. Take the Positron 9000 System with 64K - 256K RAM, it offers true multi-tasking with multi-user capabilities. One of the most powerful '6809' development systems available today running OS-9 or FLEX operating systems. Complete Positron Systems available from £2050.00 + VAT.

Send for full details of DENNIS (77-68), the ECM High-Res Graphics Computer Project based on the '6809'.

Flex Operating System Software for 6809 on 5" or 8" disks.

	EX. VAT
Configurable Flex with Editor & Assembler	120.00
Debug Package	56.00
Sort/Merge Package	56.00

New Brain

EDITOR adds extra commands to the machine Change, Find, Get, Insert, Delete, Move, Value, Organise, Centre, and Right Justify Text.

Can be used as a word processor database or program editor, handling up to 24k on a 32k machine, £15.

RENUMBER resequence. All or part of a program may be renumbered with update of Goto/Gosub/Then/Resume statements, £6.

ORIC 1 CREATE HIGH SPEED PROGRAMS WITH EDITOR ASSEMBLER: DISASSEMBLER: IMMEDIATE TEST FACILITY.

Full 6502 code plus labels with autobranch calculation. Pause/ops, ORG, START, END, DEL, EQU, DEFS, DEFV, DEFB, DEFS. Optional high speed hex-display as per a monitor or full disassembly with address, hex code, label, mnemonic, operand and symbols table, output to screen or printer. Complete with Instruction Manual, £15.

CLEARLY A BETTER WAY TO VIEW THE FACTS IN BUSINESS

Now you can transform even the most obscure facts into high-quality, multi-colour A4 sheets or overhead projection transparencies, making the Pixy Plotter the ideal aid for all kinds of business presentation.

With the new 3-pen Pixy Plotter you can turn your facts and figures into meaningful pie charts, flow charts, bar graphs, even circles, arcs and spirals easily and quickly.

And with the automatic pen change you can achieve up to 8 brilliant colours to create an extra dimension for reports and presentations.

With its sleek, compact design, it's the ideal companion for any popular

desktop micro, only requiring standard available software to drive the plotter.

Its low cost now puts professional quality plotting within the reach of even the smallest of businesses.

There's never been a better way to put colourful pen to paper (or film).

Why not get a fuller picture of what the new Pixy Plotter can do, from your nearest distributor or send for our free colour brochure.

Mannesmann Tally Limited,
Molly Millars Lane, Wokingham,
Berkshire RG11 2QT. Tel: (0734) 788711.
Telex: 847028.

PIXY PLOTTER

CREATING THE RIGHT IMAGE FOR BUSINESS

Compatibility.

When one World beater meets another.

You're bound to recognise at least one of the beautiful products above.

Miss Dominican Republic was chosen to supremely reign as Miss World 1983. Certainly, a World beater in her own right.

Then there's the QX-10. A fully integrated Desktop Microcomputer System. A new member of the world beating Epson family.

But there's more to the functional yet stylish lines of the QX-10 (just to prove that beauty isn't only skin deep). The lightweight CPU, monitor and Keyboard units are very easy to use - even for a first time operator.

You could say that our system takes all the hard work out of using software, and once used...you probably will. What's more, when it comes to cost you'll find there's more power for your money.

Just look at these qualities.

192k upgradable to 256k RAM, Z80A CPU, RS-232C and parallel interfaces. CP/M and multifont BASIC comes as standard.

The QX-10 offers an incredible graphics capability. The 80 columns x 25 line display has 640 x 400 resolution and full bit image control for

greater definition, 16:1 zoom and special effects. Not to mention a unique split screen facility enabling different types and graphics to be shown together. A major first for educational applications.

For even more power - simply slot in up to 4 optional interface cards, for IEEE 488, RS-232C, plus a universal interface card for developing your own prototype interfaces. Clock and calendar with full battery back-up complete the system.

As with all the other respected Epson products, you are assured of high quality. (We even manufacture the slim line disc drives ourselves.)

The QX-10 is the complete desktop system that represents exceptional value for money at £1735 plus V.A.T.

We call it compatibility. You will call it the incredible QX-10.

Ask to see it right away - you can't afford not to!

QX-10

Program of the Month

MZ-80K Directory

by Frank Rooney

'Directory' is an extremely versatile database program for cassette-based MZ-80K systems. It is fully-compatible with all the popular dialects of Sharp Basic, including the SP-5025 supplied with the machine, but is particularly suited to Speedbasic. Under Speedbasic, data is read/written at approximately three times the speed of Basic SP-5025.

The format of the database is almost entirely user-defined, the user selecting the filename, number of fields per record, maximum field length and the name of each field. All records are automatically indexed as they are entered.

On running the program, you are presented with a title page and two options: (1) create a new file, or (2) load a file from tape. Option (2) requests the filename, asks you to insert the approximate data tape and then searches for the specified file. Selecting option (1) takes you through a simple setting-up procedure to determine the format of your file. When this information has been entered, you then move into the main menu shown in the screen photo above. The dangerous options are (8) and (9). Option (8) (Clear file) deletes your file and file-format from memory and re-runs the program. Option (9) (Exit Program) deletes everything — including the program — and passes you back to Basic.

The other options should all be fairly self-explanatory. Option (1) allows you to add new data to the file currently held in memory; (2) performs an alphanumeric sort on same; (3) allows you to edit and/or

interrogate the file (of which, more later); (4) allows you to delete a specified record; (5) steps through the file, displaying either the whole of each record or just the first field; (6) prints either the whole file or selected entries, and includes a special routine for labels; and (7) saves the data to cassette as a named file. The main menu also keeps a running tab on remaining available memory.

Option (3), as mentioned above, is the search option. Where the index number is known, you can simply enter this to effect a high-speed, indexed search. Otherwise, you enter the content of the first field (a surname, for example), and the program carries out a sequential search on this field. If it is unable to find an exact match, it will attempt to find entries with a similar spelling. It will still locate 'John Smith', for example, if you ask it for 'Jonathan Smith' or 'John Smitt'. This is an extremely useful feature if you're unsure of a spelling.

The printer-control codes employed in the very flexible print routine in lines 1670-2790 were written for the Epson MX80 FT III printer. You will, of course, have to change these if you are using a different printer and the REM statements in lines 1690-1720 should provide you with the necessary information.

'Directory' cannot be compared to a disk-based system. Relying on low-speed data transfer and sequential searches, it is obviously slow when large amounts of data are involved (though at least it can't give a 'Bdos' error!). It is, however, surprisingly fast for what it is. Incidentally, if you are

Atom Ghost Maze

by A S Whittington

'Ghost Maze' is a version of Pacman (can I say that without being sued?). The idea, if anyone out there has never played a version of the game, is to dash madly round

INDUSTRIAL APPLE, BBC, SIRIUS

IONET Process Control System — scores of transducers, miles apart on a single wire. Free Apple Demodisk for genuine enquiries and trade.
Sample prices —
Apple/BBC/Sirius IONET interface from£95.00 + VAT
8 way 12 bit Analogue to Digital Remote.....£200.00 + VAT
IONET is compatible with Intersil's **REMDACS** and Analog Devices' mix 'n' Match, Signal Conditioning Modules. Remotes and Modules are available to suit any transducer any job.
Also —
Fortran, Basic, Logo, Lisp Pascal compilers from£50.00
Apple 8748 micro development system.....£150.00
Apple and BBC controlled 10 way mains panel.....£150.00

Mail order only. Access or Barclaycard accepted

Dustcovers available for any computer or printers etc.

PROGRAMS

a maze eating dots and being chased by muncher-monsters. If you eat an asterisk on your travels, you then have a random amount of time (usually not very long) in which to catch and eat a muncher-monster. You score points for eating dots, stars and monsters. If you manage to eat all six monsters, you score bonus points and are awarded an extra life.

If you get into trouble, you can unleash one of your 'monster-muncher-sensing zapper missiles'. But you should use these sparingly since you have only a limited number and their use costs you valuable points.

The player has a good deal of control over the game, selecting the number of lives, skill level and number of 'zapper missiles' available — each being in the range 1-10.

The graphics are unremarkable but adequate, and the sound effects are good.

The skill range is wide — ranging from simple to virtually impossible.

A word of explanation is required when it comes to entering lines 280 to 360 inclusive. The underline characters should be entered as grey blocks. Since these blocks are not directly accessible through the keyboard, you have to be a little bit clever. When you've entered everything up to and including line 270, enter the following line as a direct command:

FOR A=0 TO 31; A?8100=FF;NEXT A

This will produce a line of 32 grey squares halfway down the screen. Type '280 P.' then use the cursor keys to position the cursor over the first grey square. Now use the COPY key to enter the appropriate number of squares. You'll have to keep repositioning the cursor so that you don't run out of squares, of course. It all sounds more complicated than it actually is!

OUT NOW

THE NEW DELTA 14 HANDSET FOR THE BBC
Used for years by DATABASE owners these high Specification handsets have 14 pushbuttons to take the strain off of your keyboard.

The DELTA 14 comes in two parts. One handset will plug into the A/d to give analogue spring return joystick plus three button functions.

The second part is the DELTA 14B/1 adaptor box which connects the 15 way "D" to the user port. This gives 12 buttons on a 4 x 3 matrix. The eighth line selects a second joystick which can be plugged into the adaptor box.

DELTA 14B JOYSTICK HANDSET FOR BBC £10.95
DELTA 14B/1 ADAPTOR BOX AND CABLE £13.95

TRS-80 Model 4 Personal Desktop Computer. Yes, it looks similar to a Model III, but compare the price and the standard features of this all-new Model 4 to any other computer in its class.

Amazing Versatility. Model 4 can run all Tandy® Model III programs without change. It will soon be able to run CP/M-based software. This means that Model III disk owners can upgrade to a Model 4 without making their present software obsolete, and have at their disposal thousands of different applications.

Friendlier ... and Faster. Because of its 64K memory and 80 x 24 display, you'll find Model 4 perfect for large business applications. Clock speed is twice that of Model III, plus there's "MemDisk", which lets you use extra memory as a superfast disk drive. The result is keystroke-quick responses instead of time-consuming disk access.

And That's Not All. The software print spooler lets you print out a job at the same time you're using Model 4 for other tasks. With the Job Control Language, you can set up a whole series of operations for your Model 4 to perform without supervision. The new Microsoft BASIC includes CHAIN and COMMON for extra-large programs.

Full - and Helpful - Documentation. You get a comprehensive owner's manual, reference card, our famous tutorial manual for BASIC programming and a tutorial introduction explaining how to get the most out of your Model 4.

Super Features. Including a full 80-column by 24-line display for word processing and large spreadsheets, a built-in high resolution green screen monitor, numeric keypad, parallel interface and dual 5 1/4" disk drives, a new keyboard with control, caps, and three function keys, and compatibility with Model III TRSDOS, LDOS and CP/M plus programs that put thousands of applications at your disposal.

Model 4 Upgrades

64K RAM Kit For Disk Model 4. Expands internal memory from 64K to 128K. Installation required (not included).
26-1122 £99.95

RS-232C Interface Board. Installation required, (not Included).
26-1148 £79.95

Microprocessor: Advanced Z-80A 8-bit. **Clock Speed:** 4 MHz. **Memory:** 14K ROM, 64K RAM-expandable to 128K. **Keyboard:** 70-key typewriter style with control key, 3 programmable function keys (F1, F2, F3), caps key and 12-key datapad. **Video Display:** 80 characters by 24 lines (Model 4 mode), 64 x 16 (Model III mode), or double-wide 40 or 32 characters per line. Upper and lower case and reverse video. Memory mapped with high-resolution 12" green monitor, includes 96 text, 64 graphics and 96 "special" characters. **Sound:** Obtainable from BASIC with sound command including tone and duration. Toggled "keyclick" filter. **Disk Drives:** One or two built-in double density 184K 5 1/4" drives. **Operating System Compatibility:** TRSDOS 6.0, TRSDOS 1.3, LDOS, CP/M Plus (available soon). **Programming Language:** New Advanced Microsoft BASIC with CHAIN, COMMON and more. **Input/Output Interfaces:** Cassette operation at 500/1500 baud selectable under ROM BASIC. Parallel printer interface with TRSDOS print spooler. Model III/4 Input/Output bus. **Dimensions:** 12 1/2 x 18 7/8 x 21 1/2". **Power:** Integrated power supply, 240V AC, 50 Hz.

Model III Owners!

Model 4 Upgrade Kit. Allows Model III disk system owners to convert their computer to a Model 4. Installation required, (not included).
26-1123 £599.95

SAGE
COMPUTER TECHNOLOGY[®]

THE WISE MAN'S CHOICE

THE SAGE family of computers is expanding! Added to the exciting SAGE II is the new SAGE IV. Both machines provide power from the Motorola 68000 chip which is a true 16 bit processor (some even call it 32 bit) and give new levels of performance in personal computers.

With the addition of the new machine SAGE now covers the complete range of business micro-computers. Configurations now extend from memory of 128K to a massive 1 Megabyte, and storage systems from 640K to potentially 200 Megabytes of Winchester disk.

SAGE software is expanding! There is now a choice of four operating systems for the machines. The standard UCSD p-System (complete with Pascal, FORTRAN, and BASIC compilers) is now available in a multi-user form for the SAGE IV which has ports for six users.

For the user who prefers a COBOL environment MP/SL now offer the BOS system (CAP Micro-Cobol) together with their large range of multi-user application software. With the implementation of RAMDISK, BOS runs twice as fast on the SAGE as any previous machine, and the list includes some sizeable mini computers!

CPM is available. What more to say except that Digital Research now give their blessing to SAGE with their CPM68K system. This comes complete with a 'C' compiler and will allow UNIX software to be compiled and run under the CPM environment.

SAGE Application software is expanding! Many of the major Apple Pascal system houses have opted for the SAGE as their development machine (remember it goes 14 times as fast as an Apple), and our software directory is getting very large, with a choice of Accounting programs, Modelling programs, Database programs, Project monitoring systems, and a host of software for specialist applications. As we say it's rather hard for anyone developing software to look away from SAGE because it makes other so-called 16 bit computers look pedestrian.

SAGE draws pictures! An interface to the PLUTO graphics system gives superb high speed, high resolution graphics in eight colours.

MicroAPL offer their MIRAGE APL system on SAGE computers, and again the SAGE delivers performance only previously found on mainframe or timesharing systems.

Every SAGE shipped is complete with ONE YEARS ON-SITE SERVICE from GCS Engineering who have over 120 field engineers, so 24 HOUR CALLOUT means just that.

SAGE is affordable! SAGE prices start at under £3000 and a typical 4 user system complete with Winchester disc AND terminals is under £7500.

Wise men need to be convinced! Call your local dealer today.

Apple Text Maker

by Colin Davies

'Text Maker' is a disk utility routine for a 48K Apple 11+ running Apple DOS.

The routine is used to turn programs and subroutines stored on disk into text files. Although text files occupy approximately a third more disk space than Basic program files, they have two advantages. The first is that text files can be EXECuted; this enables programs and routines to be merged. The second advantage is that you can edit programs stored in this form on a word processor. I've written programs in WordStar on several occasions, and the superior editing facilities make programming a lot easier.

When you've typed in the routine, run it. Enter the destination slot and drive when prompted, and 'Text Maker' will helpfully store itself as a locked text file called 'STORE'. To use the routine, simply EXECute STORE. This will

append 'Text Maker' to the program currently stored in memory. 'Text Maker' will then run itself, ask you for a filename, destination drive and slot and store the program in memory (minus itself) as a text file under the filename given. Finally, it switches back to the original logged drive and deletes itself from RAM. All very neat.

The routine assumes you have 48K RAM and that there is a 'HELLO' file present on the work disk; if you store your HELLO programs under a different filename, you'll have to amend line 63998 accordingly.

'Text Maker' occupies the fourteen highest available line numbers: that is, 63986-63999. These line numbers, therefore, must be avoided in your own programs.

```

63986 N$ = "STORE":N = 1: GOTO 63988
63987 HOME : INPUT "ENTER FILENAME ";N$
63988 PRINT : INPUT "DESTINATION SLOT ";DS
63989 PRINT : INPUT " DRIVE ";DD
63990 SS = PEEK ( - 18953) / 16
63991 SD = PEEK ( - 18952):D$ = CHR$ (4)
63992 PRINT D$"OPEN "N$",S"DS",D"DD: PRINT D$"UNLOCK "N$: PRINT D$"DELETE
"N$
63993 PRINT D$"OPEN "N$: PRINT D$"WRITE "N$
63994 POKE 33,30: IF NOT N THEN 63996
63995 LIST 63987,: PRINT "RUN 63987": GOTO 63997
63996 LIST 0,63986: PRINT "HOME"
63997 PRINT D$"CLOSE "N$: IF N THEN PRINT D$"LOCK "N$
63998 PRINT D$"VERIFY HELLO,S"SS",D"SD
63999 TEXT : HOME : DEL 63986,63999

MICROMART

HAVE YOU CONSIDERED BAR CODES

Bar-codes give a speedy and error free means of data entry and provide a foolproof method of identification for any item or document. Typical uses include stock control, libraries, filing systems, security and checkpoint verification, point of sale terminals, spare parts identification, etc. etc. Already most grocery products are bar-coded at source and many other areas of industry and commerce are following. Bar-codes will soon be commonplace.

APPLE 2 PET BBC micro

A complete low cost bar-code identification system is available for these micros. It contains all the hardware, software and documentation needed to read and print bar-codes, (using an Epson dot matrix printer). Most bar-code formats may be read and the system may easily be patched into an existing applications program.

£199.00 + VAT

★★★ NEW ★★★ RS232 bar-code reader

This new stand-alone unit decodes the bar-code and converts it into ASCII for transmission to the host computer via a RS232 port. Complete with scanning wand, power supply and cables. Works with virtually any computer.

£385.00 + VAT

More information on these products is available on request. Please state your micro and area of interest. The decoder board is available separately to OEMs.

THE AUTUMN COMPUTER TRADE FORUM

4th-7th October 1983
National Exhibition Centre, Birmingham

Sound business sense for volume buyers

The Autumn Computer Trade Forum is the UK's largest and most successful trade event and the only show that fully understands the needs of volume buyers.

It offers you a comprehensive display of minis, micros, software and peripherals in an environment that's specially made for volume business.

Who is CTF for?

Distributors. Dealers. Software houses. Systems integrators. Retailers. OEM's. In fact anyone who makes a living buying and selling computers, software and peripherals. So whether you're new to DP/WP or know the business backwards, CTF is the event you mustn't miss.

How can CTF help you sell more?

The exhibitors at the Computer Trade Forum understand your needs. That means they'll be talking your language. Quantity terms. Discounts. Marketing support programmes. Delivery schedules. The whole range of services to help you sell more.

Who will be at CTF?

Texas Instruments. Logica. DEC. Systime. DRG. Zygol. Motorola...and many more! And for every name you know there'll be many you don't—with products that could well be your next year's big seller.

Why CTF is different!

The Computer Trade Forum is the only show that understands what volume buying really means. The atmosphere, the choice of exhibitors, the absence of

razmatazz are all designed for profitable business.

CTF has been specifically designed for you and as a proven, established national event it offers you even more with the support of leading UK suppliers.

Post the coupon today

The general public is not invited to CTF. The emphasis is on volume business. And for you it's free! Just fill in the coupon and we'll send you free tickets (worth £3.00 each) by return of post.

If you need to know more, call 01-747 3131.

Computer Trade Forum
232 Acton Lane, London W4 5DL

Please send mefree tickets for myself and colleagues.

ORIC
SOFTWARE

TANSOFT

NEW

ORICMON

A complete machine code monitor including mnemonic assembler/disassembler, block move and verify, trace and slow-motion run and full cassette handling, plus manual.
£15.00 inc VAT and 90p postage and packing
16k or 48k

ORIC MUNCH

Our best arcade game yet. Can you fight off the ghosts, eat the power pills and catch the elusive fruit. An exciting game that will keep you amused for hours.
£7.95 inc VAT and 40p postage and packing
48k

3D LINK 4

A set of new exciting and challenging games. Hangman, Moonlander, Substrike, Roadrace and 3D Noughts and Crosses.
£6.90 inc VAT and 40p postage and packing
48k

HOUSE OF DEATH

If you were baffled by Zodiac you will be terrified by House of Death. Can you discover the secret of the haunted house and escape with your life?
£9.99 inc VAT and 40p postage and packing
48k

ORIC BASE

This is a database system used for the maintenance of personal and small business information. It is supplied on cassette with a comprehensive manual. A sophisticated query language is used to manipulate data and allow reports to be printed, data to be sorted or moved about and running totals to be kept. A Macro command facility allows the creation of application specific command strings which can be used easily by non-technical personnel. Requires a 48k machine.
Price: £14.50 including VAT and 90p postage and packing.

ZODIAC

A traditional adventure game in which the player has to find the 12 cunningly hidden signs of the Zodiac which lead him to greater treasures. The player manipulates objects through simple sentences which the program can understand and can ask for his score at any time. A save game feature is also included. Requires a 48k machine.
Price: £9.99 including VAT and 40p postage and packing.

ORIC-CHESS

Using high resolution graphics to display the chess board this package will play a challenging game of chess with five levels of skill. The computer looks ahead for its own moves plus its opponent's. The skill level dictates how far the computer looks ahead although at the expense of more time. All chess rules including Castling and En Passant are obeyed. Requires a 48k machine.
Price: £9.99 including VAT and 40p postage and packing.

ORIC FORTH

This is a cassette-based implementation of FIG-FORTH, the language distributed by the Forth Interest Group in the United States. It has been extended to utilise the graphics and sound capabilities of the Oric. It is supplied with an editor and a full Forth assembler. A 96-page manual is included in the package. A demonstration music program is also supplied. Requires a 48k machine.
Price: £15.00 including VAT and 90p postage and packing.

ORIC OWNER MAGAZINE. £10

Why should you subscribe to *ORIC OWNER*? Your Oric 1 is one of the most powerful low-cost computers on the market today. *Oric Owner* is the only magazine totally dedicated to the Oric and its supporting hardware and software. From issue to issue *Oric Owner* is able to bring you in-depth information on the Oric, advance news on the latest add-ons, superb programs to try and 'behind the scenes' interviews with the engineers who designed it. If you wish to keep ahead of the latest developments and news on the Oric then *Oric Owner* is essential. At only £10 for a year's subscription of 6 issues (£15 for overseas readers) can you afford to be without *Oric Owner*? **SUBSCRIBE TODAY!**

Calling all Software Writers.

If you can write top quality games, business or utility software we want to hear from you. Haven't got an Oric? Convince us of your capability and we will supply one!

2 Crown Dale, London, SE19 3NQ.

BRITISH TELECOM APPROVED

ACT Sirius 1 linked with Telex puts the world at your finger-tips

This new facility greatly simplifies the task of sending telexes. By connecting direct to the standard Telecom telex line the Sirius can prepare, send and receive telexes automatically.

Eliminating all of the drudgery and frustration typically associated with telex communications (no more punch tape, no more noise etc.) the Sirius controls the job. Now the user of a microcomputer can enjoy the facilities previously found only on a dedicated telex

message switching computer without interrupting normal procedures. Yes, this software runs in the "background" and does not interfere with traditional "foreground" tasks, such as word processing, payroll, financial modelling etc.

These are just a few of the features and benefits of this unique system. For further details or a demonstration, please contact us by telex or clip off the corner of this advert and attach it to your letterhead or business card.

The DP55 Daisywheel -a Serious Contender

The DP55 is the product of the most experienced printer design and engineering team in the world. It is made by the world's largest independent printer manufacturer and is supported by the world's most professional service and maintenance organisation.

This is why the DP55's throughput consistently exceeds that claimed by its competitors; and why the DP55's extensive facilities are proven productivity tools – not merely a list of sales features; and why the DP55 will give consistent service throughout its entire, hard working life.

The DP55's heritage is recognised by the best known names in the computer industry who prefer to put their label on a Dataproducts printer.

That is why people who are serious about letter quality printing choose the DP55 from Dataproducts.

ABOVE COMPARISON

BELOW £250

The revolutionary Synthesiser PP-2000 is the first Professional Polyphonic Synthesiser to retail at below £250. We at Fuller having firmly established ourselves in the world of Micro Computing now take the logical step into the world of Electronic Music. Our policy has always been to supply first class quality goods at a price the average man in the street can comfortably afford. We feel we have more than accomplished this aim with our PP-2000 Professional Synthesiser. By easing the strain on our customers pockets, this now makes it possible for the less affluent musician to afford an instrument that was once only accessible to the chosen few! By doing this we feel we are widening the realms of creativity in music of the 80's. The sound of the PP-2000 is infinite and so is your imagination. The controls can roughly be put into three groups. Those used for sound generation, those used for varying the sound and those used for controlling other circuits. The PP-2000 Synthesiser is only £249.95 + £7.50 p&p via securicor.

Fuller

FULLER MICRO SYSTEMS
The ZX Centre, Sweeting Street,
Liverpool 2. Telephone: 051-236 6109

Sound Generation

There are three different basic waveforms, (spaced an octave apart). These can be mixed along with the noise generator. There is a pitch bend control and a vibrato control.

Sound Processing

Filter - The filter is voltage controlled and has resonance and frequency controls. Using this circuit it is possible to obtain a very wide variety of different sounds. In addition it can be used to give filter sweep (commonly known as wah wah).

Amplifier

The amplifier is also voltage controlled. Using the L.F.O. and A.D.S.R. with it, it will create tremolo effect, key sustain and crescendo.

Chorus Unit

This adds depth and body to the sound. It has variable speed depth and there are two effects.

L.F.O.

The L.F.O. can be used to give tremolo, wah wah, vibrato and variable chorus speed.

A.D.S.R.

With this circuit you can vary the length of the rate after release or make the rate get steadily louder after depression of key. It can also be used to control the V.C.F. Full size 49 keyboard, complete unit measures 800mm x 460mm x 100mm.

Please supply £7.50 p&p for each Synthesiser. I enclose a cheque/P.O. for £ payable to FULLER MICRO SYSTEMS or debit my Access/Barclaycard No.		PP-2000 Synthesisers

... think seriously who you buy from.

It's surprising where you can buy a micro these days. The chemist, the newsagent, department stores – it won't be long before your local greengrocer is selling Apples as well as apples!

But who do you really trust? Do you honestly believe that the 'Johnny come lately's' can offer you the expertise and in depth knowledge of a specialist?

Do you honestly believe that they have the influence and status in the market, to offer you a full choice of the latest technology and all at probably the best prices around.

In all branches of Laskys, you'll find Micropoint, our specialist micro computer department. And at Micropoint you'll find everything you're looking for. Computers, Peripherals, Software, Programs, expert advice, test play and comparison facilities. It's the complete micro service, plus Laskys free 2 year parts and labour guarantee. *

Unfortunately we can't guarantee that you'll find the same standards anywhere else.

IT TAKES FLEXIBILITY AND PRICE TO PRODUCE CLEAR WINNERS.

This is the new Decision Mate V from NCR.

Designed and manufactured in Europe, it's a high performance micro-computer specifically developed for the business professional.

It offers all the processing power, versatility and reliability of much larger and more expensive systems.

At the same time it is easily installed, simple to use and can be upgraded as and when required.

The Decision Mate V is the first of a family of NCR micro-computer products providing maximum functions at the lowest possible cost.

The basic Decision Mate V features 64 K of memory, upgradable to 512K, high resolution monochrome or colour video display, dual 5 1/4" floppy discs, upgradable to 10Mb and a dedicated graphics processor.

The detachable keyboard is light, low-profile, multi-language and has 20 programmable function keys.

The Decision Mate V processor can be upgraded

from an 8 bit to an 8 and 16 bit dual processor.

This enables the user to not only select from the large range of established 8 bit software but also ensures compatibility with the expanding range of 16 bit software.

To further enhance the Decision Mate V we're introducing Decision Net, a local area network, which will link up to 63 micro-computers sharing expensive peripheral devices.

All of which adds up to a very flexible unit and, when we tell you that the basic Decision Mate V costs well

under £2,000 it's not hard to see why we call it a clear winner. Every time.

See the Decision Mate V at the PCW Show, the Barbican, 28th Sept. - 2nd Oct. with software from: Comsoft Ltd. on Stand 428, Comshare Ltd. on Stand 381, MPI Ltd. on Stand 120, or contact us on 01-388 8440.

THE DECISION MATE V
a clear winner from

NCR

The SHELTON SIG/NET a growing force in Microcomputing.

A range of Micro Computers expandable from Twin Floppy to Hard Disc and on to Multi User, and Local Area Networks.

A Flexible Disc System, Z80A based, CP/M* Operating system, 400KB, 800KB, or 1.6KB storage on twin 5 1/4" diskettes.

◀ **Prices start at £1,390**

A Hard Disk System, Z80A based, CP/M* Operating System, 400KB Storage on 5 1/4" diskette, Hard disk options from 7MB to 52MB.

Prices start at £2,695 ▶

A Multi-User System, using a Hard Disk System as the Hub Processor, and operating under McNos a proven CP/M* Compatible Operating System, up to 16 users are available, each User Workstation has 64KB and its own Processor to provide full speed operation. 3 users providing 256KB of memory with 7MB of Hard Disk Storage and 400KB floppy diskette.

◀ **Priced at £4,590**

Also available on expanding range of Modules including 8088 with 256K Colour Graphics, ARCNET* etc.

BUSINESS MANAGEMENT BREAKTHROUGH

A truly integrated business system implemented on CPM 2.2 & MPM 2

- ★ *Powerful facilities to control your business*
- ★ *Rapid development of Application or Report tasks*
- ★ *Fast flexible data entry and data correction*
- ★ *Automatic record field content validation on entry*
- ★ *Comprehensive security features*

From defining record structures to producing invoices the facilities available will amaze. Put this unique product to work for you. Discover that the limits imposed are really insignificant, for instance, individual record size can be up to 10K bytes with no fixed restrictions on number or size of record fields within that 10K. Record field types and size can be changed without need to reload data files. Up to 20 files open in tasks. 5 indexes per file with optional auto-update.

The comprehensive security features protect against unauthorised access and data loss. You will be safe against power fails during your master file updates. Top security data is encrypted and optionally compressed. You can change the encoding key when you like. There are 4 options on file back-up to match the needs of the real User world.

The BMS package supports screen and printer templates and a powerful file interface. These facilities enable Reports and other "tasks" to be developed in seconds with the BMS high level language using common English verbs.

The word processor and file interface allow merging of data from records to produce invoices, mailing lists, letters etc. And then there is the Spread-sheet system, the Graph system, the Command file operation, the import/export of files and Applications. Menu or command operation. we think you will be impressed.

Price of BMS: £299 plus V.A.T. Dealer enquiries welcome.

Also "Chess-machine" package for the I.C.L. Personal Computer with excellent graphics and game control features. Includes 900 problems from Chess Master level play under time control. Problems are from the B.T. Batsford book "Encyclopaedia of Chess Middle-games — Combinations". Price £24.95 includes V.A.T. & p+p.

The MICROLINK INTERFACE links a wide range of laboratory instruments to microcomputers

MICROLINK THE TECHNICALLY SUPERIOR INTERFACE

- A fully modular interface designed and built to the highest professional standards.
- A range of more than 25 different modules including analogue inputs and outputs, digital inputs, outputs and controls, timers and counters. Data transfer rates of 20kbytes/sec are achievable with MICROLINK.
- A large capacity cabinet for up to 18 modules is available so that several functions can be carried out with a single MICROLINK.
- Full software support and programming manuals for CBM, Hewlett Packard and Sirius.
- Competitive pricing – 32 analogue inputs and 8-bit analogue to digital conversion for about £750.00 and 16 thermocouple inputs and 12-bit analogue to digital conversion for under £1000.00.
- Whole systems can be supplied including the MICROLINK, computer, peripherals and software.

MICROLINK THE FLEXIBLE INTERFACE WITH APPLICATIONS IN:

- CHEMISTRY
Interfacing spectrophotometers, mass spectrometers, electronic balances, temperature monitors, colorimeters and transient and chart recorders.
- LIFE SCIENCES

THE CROWN RANIER
ONLY £795 + VAT

CROWN RANIER – The leader of all interfaced daisy wheel printer/typewriters: Here's why:

The unbeatable Crown Ranier is the only heavy duty daisy wheel printer/typewriter which runs on a linear motor – no belts or cables to break, stretch or wear – and uses the IBM ribbon and lift off correctors. The reliability has become legend in these days of expensive electronic typewriter breakdowns.

CENTRONIC – IEEE – RS232 INTERFACES – No external boxes – interchangeable daisywheels – variable pitch – three free daisy wheels – automatic whole line correction – easily copes with standard printed forms – 195,000 characters per ribbon (at least twice the average character length) – standard lift off correctors – a printer/typewriter at the flick of a switch.

Perfection as a typewriter (now used by local authorities and multi-nationals), perfection as a printer.

Beware of lightweight, low cost machines – these can never give long term reliable service. **THIS MACHINE WILL!!** The professional machine.

Ask you local computer or office equipment dealer for further information. **EX STOCK DELIVERY.**

Bright-Line Modulators

Types V8, V8/S, V8/SX to interface Apple Computers to UK TV sets.

Bright-Line Modulator cards allow you to make full use of your computer's colour and graphics capabilities. The V8/S offers the additional feature of high-quality sound through your TV set loudspeaker.

Features:

- Easy installation with clear and simple instructions.
- Full 8MHz bandwidth for maximum picture definition.
- Complete with co-ax lead and polarised connector.
- Display clarity suitable for 80 column text.
- Modulators with sound option are pre-aligned.
- Made in UK.

PACE ... SOLE EUROPEAN DISTRIBUTOR FOR THE MOST VERSATILE 80 COLUMN

★ Character dot matrix is 9 x 11 which provides three lines of dots for full descenders on lower case letters. The full ASCII set of 128 characters is provided.

★ Shift key does what you would expect it to do, and also has a shift lock facility and a visual LED shiftlock indicator.

★ Character set also includes twelve additional keys not normally available on the Apple keyboard.

★ This card includes a built in softswitch i.e. no cable changes necessary when switching between 40/80 columns and graphics.

★ The built in communications software driver gives your Apple the ability to be used as a true interactive intelligent terminal to mainframe computers or communications facilities. Fully compatible with CCS serial cards and Apple communication cards etc.

★ The Vision 80 typeface is of an attractive appearance and is highly legible due to its large 9 x 11 character font.

Moore on Kuma

Come to Kuma for 700 software.

The Sharp 700 is coming! If you are a potential 700 dealer or owner contact us for a software list. As the UK's top Sharp software publisher, we can have you up and running in no time at all.

Commodore Accounts and Database.

Two recent introductions for the Commodore range are Non VAT Accounts and Database programs in the proven 'Solid State' series.

Non VAT Accounts is aimed at small businesses and clubs who need to keep financial records but are not large enough to be VAT registered. It caters for a full 12 month period and allows up to 50 entries per month.

The Database has 255 pages with up to 10 entries per page. Other features include search, print, browse, calculate, sort and print summary. Also when a file becomes too big, it can be split into two.

Both programmes are a cassette based (lots of disk ones are on the way) and cost £24.50 - vat each.

MSDOS Forth

Kuma is well known as a centre for the Forth language and would like to let all Sirius owners know that as well as CPM 86, Kuma Forth is now available under MS DOS as well.

HX Terminal Software.

Desk Master 5 has now been released. It's the editing terminal which allows you to prepare messages off-line before talking to your bureau or electronic mail box. The cost is £39.50 - VAT.

Epsom HX 20 Book.

Because of our contribution in the area of software to the HX 20, Kuma has been appointed as distributors by the publishers for the new book called 'Getting Started with the HX 20'. This will be very helpful for people who have only just bought HX 20's and want a hand getting the best out of it.

Update to Spreadsheet Calculator on M-Z 80 A & K

The cassette based Sharp Spreadsheet Calculator called Calc 3.1 has now been updated to 3.2. The improvements include a more elegant display, faster calculations, and more available memory for the spreadsheet. So send your tape in with £5.00 for the update.

Low Cost WP Unit.

Kuma have a special package deal for a word processing unit based on the SHINWA CP 80 printer and the Sharp MZ 80 A for less than £750.00. So phone 0628 71778 to get the details straight away.

Special Offers.

During August and until September 14th Kuma have special offers on hardware and software, so phone in to get the details.

Electronic Mail.

For those people who wish to contact Kuma using electronic mail boxes, the addresses are as follows.

For the British Leyland Comet Service, the address is "Kuma." For Telecom Gold, the address is "KUM 001."

P.C.W.Show.

Kuma will be exhibiting at the P.C.W. show in the Autumn, so please come along and visit our stand. We'll be most pleased to see our existing customers and every body else who is interested in our products.

Book from Kuma.

Kuma is publishing its first book called 'MZ80A and MZ80K Explained'.

This is a detailed description of these excellent Sharp computers, giving details of both its instruction and its machine code software architecture. A must for someone who wishes to know how their MZ 80K or MZ 80A works.

The cost for this is £5.95.

COMDEX

EUROPE '83

Gateway to the European Computer Market

- COMDEX/EUROPE '83 is the only computer exhibition organized exclusively for ISOs and the producers of the products they sell.
- COMDEX/EUROPE '83 is the best way to build... expand... upgrade the distribution and sales network you need to capture your share of this dynamic growth market.
- Exhibiting at COMDEX/EUROPE '83 is the most cost-effective way to meet with and talk to existing and potential sellers of your products and services... the professionals who will recognize the profit potential of what you offer... The professionals who know and understand local, regional and national differences and how best to present your products to their end-user customers.
- And you can do it all in a business-like environment that no mass attendance end-user exhibition can offer.
- If you manufacture, produce or offer:
 - Computers
 - Computer Systems
 - Word processing systems
 - Peripherals
 - Magnetic media
 - Special computer furniture
 - Forms, ribbons and other supplies
 - Packaged software
 - Related services, etc.
- And you sell your products or services through independent sales organizations (ISOs) like:
 - Dealers
 - Systems integrators
 - Systems Houses
 - Distributors
 - Value adders
 - Computer wholesalers
 - Office machine/product dealers
 - Computer retailers/boutiques/ departments/franchise-holders
 - Manufacturers Representatives
 - Commercial OEM's etc.
- COMDEX/EUROPE '83 is the only computer exhibition that targets all the independent sales-organizations (ISOs) in all countries of Europe.

The Interface Group, organizers of COMDEX/EUROPE and other computer related conferences and exhibitions, enjoys an outstanding reputation for doing an effective job of delivering the target audience and market place to you.

Now that Superfile is here: some good things to do with yesterday's databases.

Don't throw those old disks away! An obsolete database could make some budgie very happy. Superfile, the advanced new British database manager, could make you even happier. Just look at the advantages:

- Variable length items – store the data you type in without padding – double your disk capacity.
- Search on all items in the database.
- Flexible records – add new Fields at any time.
- Superfile tacks itself onto CP/M and makes the database accessible to programs in any high level language.
- Logically a multi-file database: relational searches easily done via high level language.
- Simple-to-use Screen Forms and Report generator packages.
- Multi-user – on MP/M, CP/Net, Turbodos Shelton SIG-NET.
- Made in England and widely used by the Government, Hospitals, schools and Universities.
- Prices: single user £485, multi user £710.

True or False: You Can Now Run Apple Software in Your IBM PC.

True. Introducing Quadlink by Quadram. The revolutionary enhancement board that turns your IBM Personal Computer into an Apple-compatible system.

Quadlink. Simply plug it inside your PC, press a few keys, and instantly run virtually any Apple software package available.

Quadlink greatly enhances your PC's capabilities.

True. Quadlink gives you access to the largest software library ever written. Business, educational, and entertainment packages. Software for any professional or home use. This means your PC can now do more than ever before. In more ways than ever before.

© Copyright 1983 Quadram Corporation
All rights reserved

Apple and the Apple logo are registered trademarks of Apple Computer, Inc.
IBM and the IBM logo are registered trademarks of International Business Machines Corporation.

With Quadlink, there's no diskette reformatting needed.

True again. With Quadlink you'll never have to worry about "compatibility." Just put your Apple diskette in the PC drive and watch it go. It's that easy. Like having an Apple computer inside your IBM.

And every Quadlink comes with that traditional Quadram Quality built right in.

Absolutely true.

Quadlink is available only at authorized full-service Quadram dealers.

True. So visit the Quadram

dealer nearest you today and ask to see Quadlink in action. And while you're there ask about our full line of IBM PC enhancements. Including the popular six-function Quadboard. You'll agree: when it comes to quality engineering and dependable performance, Quadram passes the test.

Quadlink™ by Quadram™

Like having an Apple Computer inside your IBM PC.

The Juki 6100 printer. It should cost a lot more than £399*

JUKI MODEL 6100
LETTER QUALITY DAISYWHEEL PRINTER

**EX-STOCK
£399 + VAT
FREE 24 HR.
DELIVERY**

- ★ "Drop in" Daisywheel Triumph Adler compatible
- ★ IBM Selectric Ribbon
- ★ Compatible Centronics Interface and Industry standard control codes makes the 6100 ideal for: BBC, Dragon, Oric, Apple, Newbrain, Sirius and others.

The new Juki model 6100 letter quality daisy wheel printer has full features you'd expect to find on a more expensive printer. It can support word processing and graphic functions, print 18CPS, and use a simple drop-in daisy wheel.

The 6100 has 10/12/15 pitch, proportional spacing, utilizes standard IBM Selectric typing ribbons, has 2K buffer memory, parallel interface, and both tractor feed and serial interface are available as options.

That's only the beginning. Best of all, the low-noise Juki model 6100 is extremely reliable.

You can pay more, *but you can't buy better* — the JUKI MODEL 6100.

NO DELAY — TELEPHONE YOUR CREDIT CARD No. TODAY AND YOU CAN START PRINTING TOMORROW, AND IF YOU'RE NOT SATISFIED, RETURN WITHIN 14 DAYS FOR A FULL REFUND.

Alphatext

£2960

For a fully operational Alphatext system, including Alphatronic P2 8-bit micro, two disk drives, VDU, daisywheel printer, Alphatext software, operator manual and systems manual. The system illustrated is the more powerful Alphatronic P3, price £3,410.00, which offers the option of 8 or 16 bit operation.

Triumph Adler has made word processing

the WP system that stands alone

Compare the exclusive Triumph Adler Alphatext WP system with other leading systems... and one thing stands out.

At under £3,000.00 — complete — the Alphatext system stands alone.

That price includes everything

* a powerful Alphatronic P2 — part of the largest range of 'ready to use' micros on the market. A high quality, engineered computer, able to cope with many of your computing tasks as well as word processing.

* a TRD170S daisywheel printer, with variable line spacing and choice of typefaces.

* a comprehensive systems manual, plus a unique step-by-step 'teach yourself' user manual that enables almost anyone to become competent, quickly and easily.

* and the Alphatext WP system — powerful yet simple, with a host of easy-to-use features for text generation, formatting and editing, simultaneous printing and processing, text storage and so on. A weak point in many WP systems is the lack of a mathematical calculation facility. Alphatext has it

Just compare the Alphatext features

+ upgradeable	Block move/duplicate	Full headers/footers	Auto decimal tab	Auto word wrap	Auto centring	Auto pagination	Background print	Display format (Characters x lines)	Disk storage capacity	Optional applications software	Daisywheel printer	Audio training courses	Approximate price

Apple and IBM PC users,

Wizard
performance products add
magic to your computer

The finest of plug-in performance products for your Apple II and Apple IIE personal computer.

WIZARD-80

80-Column Card

Lets you see exactly what you will get when typing/editing 80-column format. Displays upper/lower case. Compatible with CP/M, word processors, modems, software and all current Apple II expansion boards. **£190**

WIZARD-16K

16K RAM Memory Card

Expands your memory . . . Adds 16K bytes of RAM. Compatible with Z-80 cards for CP/M. Runs with all Apple languages. **£76**

WIZARD-BPO (for Serial & Parallel Printers)

Buffered Printer Output Card

Lets you continue using your Apple while the printer prints. Contains 16K byte "Character Buffer" expandable to 32K bytes full graphics included. **£153 (parallel)
£183 (serial)**

WIZARD-IPI

Smart Printing at a Smart Price

The Wizard Intelligent Printer Interface for parallel printers (complete with cable). It offers not only text printing, but enhanced text formatting such as: line length, left and right margin, page length, software control of automatic line feeds and perforation skips.

Graphics too - hi-res screen dump, alternate hi-res screen dump, 90 degree rotation, inverse video, double-size picture, left margin alignment . . . all done with single-key commands. **£69**

For your IBM Personal Computer:

WIZARD-SPOOLER (Both parallel and parallel/serial versions)

Contains 16K byte character buffer expandable to 64K bytes. Enables you to use your IBM PC while the printer is printing. The parallel/serial version allows you to switch from parallel to serial so that you can run either of two printers from your personal computer. **£222 (parallel)
£268 (parallel/serial)**

WIZARD-MEMORYCARD

Will expand the memory capacity of your IBM PC in 64K increments up to a maximum of 256K bytes. **£330 (64K version)**

For your EPSON Printer

WIZARD-EBI

Up to 64K of Buffering in your Epson MX Series Printer

The Wizard Epson Buffered Interface mounts completely inside any MX Series printer. It provides up to 64K characters of buffering in steps of 8, 16, 32 or 64K, and offloads the time-consuming printing task from the computer to the buffer.

Use your computer for the next task while the printer prints the previous one. The Wizard-EBI, with its on-board 5 volt regulator will never overload the Epson 5 volt supply as others do. **£120**

ABOVE PRICES ARE EXCLUSIVE OF UK V.A.T.

LINK

SOFTWARE DEVELOPMENT ENGINEER

A programmer is required to join our development team involved with software development of our automated broadcast television products. (Including processor controlled broadcast studio colour television cameras). You should be experienced in writing assembly language programmes for process control/automation applications using the NSC800 (a CMOS Z80) series of processors or similar. Experience in the use of higher level languages would also be an advantage.

TELEVISION SYSTEMS SALES ASSISTANT

An assistant with a sales engineering background who has the ability to progress into the area of writing and costing proposals and quotations for the design and construction of broadcast television systems (studios and outside broadcast vehicles) is required to join our sales team. You should have a knowledge of television broadcast engineering, a technical writing ability and a financial awareness.

Competitive salaries are offered together with free permanent health insurance, contributory pension scheme and generous relocation assistance where necessary.

Please telephone our Personnel Department on Andover (0264) 61345 for an application form or alternatively, write to us giving us full details of your background and experience.

Algotek COMPUTERS

Wakefield

Algotek Computer Co Ltd
11 Wood Street, Wakefield WF1 2EL
Tel 0924 369555

At Dragon we design our software to keep one step ahead of you.

Take Doodlebug* for example.

With six bugs on your side you may think the game is merely tough to cope with.

But then you should try it with only five. Then four. Then three. The game grows more difficult as your skill grows. Of course Doodlebug isn't the only one to do this.

There's also Meteoroids† with sixteen levels of difficulty and several modes of play, to test your capabilities as a space pilot.

And our Chess program has nine levels from difficult to downright impossible. Just right for every budding Boris Spassky.

Shuttlezap*, on the other hand, is one of our more complicated arcade-type games. Complete with in-flight reports, and navigational briefings, Shuttlezap will even talk to you.

Whirlybird Run* is a bit more down to earth. But only a bit. You are the pilot of a helicopter over alien territory and then

through caverns and then, well, try it yourself and see.

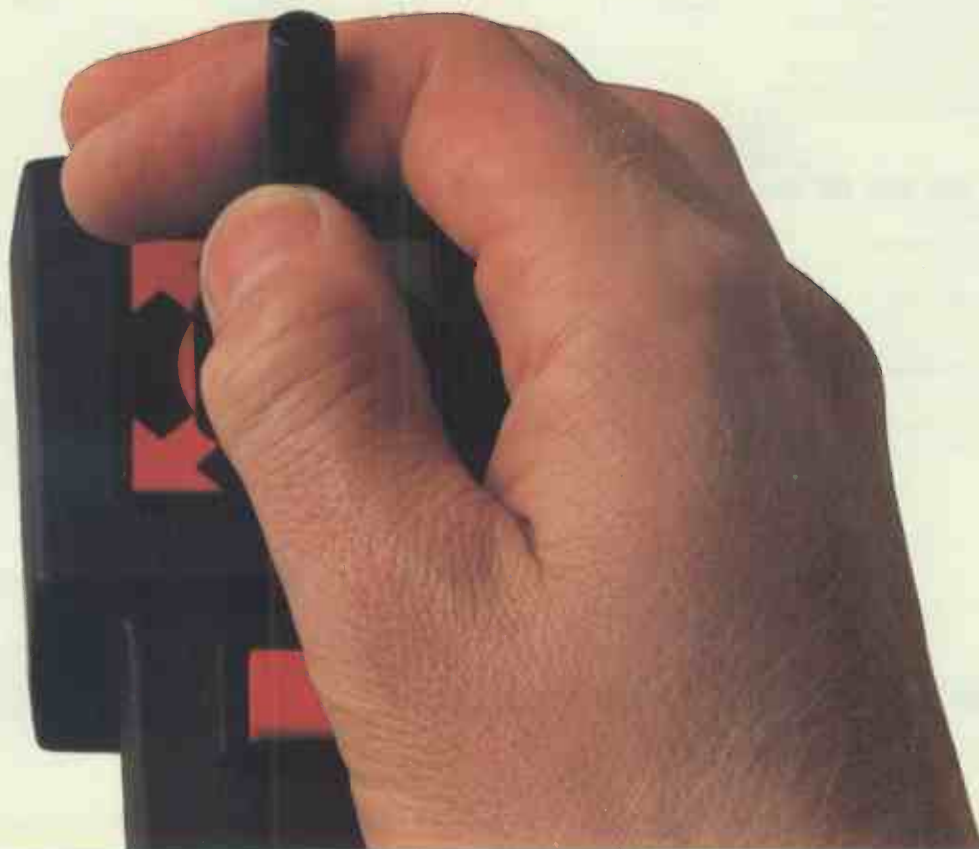

Or, to go lower still, dive below the sea to recover gold in Shark Treasure*.

It's a bit like 'Jaws' - the only trouble is there's up to six sharks after you.

Back in space with Galax Attax*. In this you defend your ground base against alien intruders, but you can never win, they just keep on coming. In Storm Arrows* you are pitted against (surprise, surprise) arrows. But be care-

Once you've mastered Doodlebug try a more difficult game.

ful not to run out of fuel - just like real life. While in Cosmic Invaders† all you have to do is save the universe (without leaving your own front room).

And, if you actually enjoy driving yourself mad, then try Berserk* for starters. You could end up looking like the man on the pack front, if the robots don't get you first.

Or even spend some time in a maze. Unfortunately in Ghost Attack* you have company in the form of some

particularly single-minded ghosts whose sole aim in life is to eat you.

Then there are a number of adventure games, none of which can be considered easy, and which can only be played on a real computer.

In Madness and the Minotaur, you descend into the labyrinth of King Minos (but watch out for the monsters that dwell there).

While in Quest you command medieval forces to overcome a whole host of enemies. Just the thing for the power mad amongst you.

And Black Sanctum involves overcoming the forces of black magic. It starts in the frozen wastes of the north and ends who knows where.

These are just a few of our expanding software range. New titles are added each month, and, while some may be rather difficult, rest assured that using the Dragon could hardly be more simple. Even the handbook is written in everyday English, not some kind of obscure computer language.

So if you can read, you can master the Dragon.

But you can't beat it.

DRAGON 32
The first family computer.

Like Doodlebug for instance.

*Joystick required.
†Joystick optional.

WINCHESTER FILING SYSTEM

The WFS is a versatile filing system enabling the use of the Winchester Hard Disk drives on the BBC Micro. The WFS is supplied in EPROM, and supports all the O.S. and BASIC file handling calls.

ALSO AVAILABLE MID-SEPTEMBER

E-NET is a flexible network filing system for the BBC Micro, specifically designed for Educational use. It uses the network interface in the BBC machine, so that if you already have networked machines it only requires fitting a new ROM in each client's machine and installing the Hard Disk unit. (If you do not have network Bs then a network interface has to be fitted).

E-NET allows up to 200 computers to share a common, large central disk store, and overcomes many of the inconvenient features of earlier network systems.

TORCH Computers

Z-80 Disc Pack for the BBC Microcomputer **£897.00**

This unit connects to the BBC Micro in the same way as a normal disc drive, but as well as offering a dual 2 x 400K disc drive for use under BBC BASIC or other languages it provides the option of using the wide range of CP/M software available for business and data processing applications. The firmware supplied with the machine allows switching between BASIC and CPN, a powerful operating system developed from CP/M 2.2.

In addition to the disc pack a second processor is supplied. This is a Z-80A with its own 64K RAM card, communicating with the 6502A in the BBC computer through the 'Tube'. Typically the speed of execution of programs under the twin-processor system is increased by up to 50% compared with a conventional single-processor computer. A third processor, the 16 bit 68000, will shortly be available.

TORCH CF240 **£2,400 + VAT**

WORDSTAR WORD PROCESSOR SUPPLIED FREE OF CHARGE

This is an extension of the BBC microcomputer/Torch disc pack system, available in a single unit. The computer contains a BBC-based peripheral processor connected to the main Z-80 computer, a dual 2 x 400K disc drive as described above, a high resolution (80 character) colour monitor and a complete British Telecom approved 1200 baud modem. It is the only microcomputer which has been granted permission for direct connection to the Public Switched Telephone Network both in the U.K. and the United States.

The TORCH can communicate either directly with another TORCH or with virtually any other type of computer via Prestel or BT Gold. Using the Gateway facility of Prestel it is possible for the TORCH to access vast amounts of information stored by private organisations on public database systems. The Mailbox facility of Prestel also allows the use of electronic mail.

TORCH CH240/10 As above but with a 10 MB hard disc drive.
TORCH CH240/21 As above but with a 21 MB hard disc drive

CLIP

YOUR WINCHESTER

BACKUP

CLIP — Compressed Library Interchange Program

CP/M MS DOS CP/M-86 £95 RTII £150

- **Backs up a Winchester on to floppies.**
- **Compresses text or data to less than half size.**
- **Large files can span multiple discs.**
- **Selective backup or retrieval, on an inclusive or exclusive basis.**

CLIP has no equal in reputation, convenience, power or economy.
CLIP comes standard with the **CIFER** Business Management System, and with all Winchester systems supplied by **COLT & TRIUMPH ADLER (UK)**.

CLIP offers effortless backup.

You can create new commands using a menu procedure, and give each command a name, for later use. To repeat that command, the name alone is sufficient.

All prices excl. VAT, post free in U.K.
Most popular disc formats from stock.

With **CLIP's** powers of selection and compression, the user can expect a four-to-one saving over global copying, with no effort except to feed discs on cue.

Or, **CLIP** can select just the new/updated files and reduce the backup load still further.

THE
MIRACLE

IS

COMING

PORTICO TEC

It's the micro you've been waiting for.

A computer that's equally at home as a big-screen portable or as a compact, stylish desk-top business machine.

With the power you are looking for, at a price that's a breakthrough in value.

Incorporating all the latest developments to give it the specifications you want.

And a performance way ahead of the crowd.

Because every Miracle comes with more than a thousand pound's worth of integrated software – word-processing, data management, financial planning, communications – all the software you need, in fact, to use the Miracle as a complete business system without spending another penny.

So if you're in the process of buying a micro, a word of advice.

Wait for the Miracle to happen.

It won't be long.

And it'll be well worth the wait.

TECHNOLOGY LTD.

BY QUADRAM™

Parallel Port

There's a parallel I/O designed to operate most printers and parallel devices.

Or a second serial port on Quadboard II.

Serial Port

Used for connecting modems, printers, and other serial devices, Quadboard's serial adapter can be configured as COM1 or COM2 and fully supports IBM PC communications software.

also Qswap™, the feature that lets you switch line printers one and two, back and forth, as your printing needs change.

Proven Design

Quadboard is the number one IBM PC option board on the market today. Nothing even comes close, because Quadboard is designed with performance in mind. Engineered for dependability and built with only the finest components available. Each board has been thoroughly tested and "burned-in" for years of reliable service.

INCREDIBLE PRICE, ASK YOUR DEALER.

Our full line of IBM PC accessories: Quadboard II, Quad 512+, Quadcolor, Quadscreen, Memory Board, Serial Board (Single or Dual ports), Parallel Board, Chronograph, and Micro-fazer.

All products are sold through local personal computer dealers. If yours does not stock Quadram, please ask him to call us at (404) 923-6666.

SAFT VR2C 1.2v 'C' size nicads. 18 cells in ex equipment pack. Good condition - easily split to single cells. £9.50 + £1.90 post and packing.

VIDEO MONITORS

12" CASED. Made by the British KGM Co. Designed for continuous use as a data display station, unit is totally housed in an attractive brushed aluminium case with ON-OFF, BRIGHTNESS and CONTRAST controls mounted to one side. Much attention was given to construction and reliability of this unit with features such as, internal transformer isolated regulated DC supply, all components mounted on two fibre glass PCB boards - which hinge out for ease of service, many internal controls for linearity etc. The monitor accepts standard 75 ohm composite video signal via SO239 socket on rear panel. Bandwidth of the unit is estimated around 20 Mhz, and will display most high def graphics and 132 x 24 lines. Units are secondhand and may have screen burns. However where burns exist they are only apparent when monitor is switched off. Although unguaranteed all monitors are tested prior to despatch. Dimensions approx. 14" high x 14" wide by 11" deep. Supplied complete with circuit. 240 volt AC operation. ONLY £65.00 PLUS £9.50 CARR.

24" CASED. Again made by the KGM Co with a similar spec as the 12" monitor. Originally used for large screen data display. Very compact unit in lightweight alloy case dim. 19" H x 17" D x 22" W. All silicon electronics and composite video input make an ideal unit for schools, clubs, shops etc. Supplied in a used but working condition. ONLY £55.00 PLUS £9.50 CARR. & INS.

14" COLOUR superb chassis monitor made by a subsidiary of the HITACHI Co. Inputs are TTL RGB with separate sync. and will plug direct into the BBC micro etc. Exceptional bandwidth with good 80 col. definition. Brand new and guaranteed. Complete with full data & circuit. 240 v AC working. Dim. 14" x 13" x 13". ONLY £99.00 PLUS £9.50 CARR.

SEMICONDUCTOR 'GRAB BAGS'

Mixed Semis amazing value contents include transistors, digital, linear, I.C.'s triacs, diodes, bridge recs, etc. All devices guaranteed brand new full spec. with manufacturer's markings. Fully guaranteed. 50+ £2.95 100+ £5.15.
TTL 74 Series A gigantic purchase of an "across the board" range of 74 TTL series I.C.'s enables us to offer 100+ mixed "mostly TTL" grab bags at a price which two or three chips in the bag would normally cost to buy. Fully guaranteed all I.C.'s full spec. 100+ £6.90 200+ £12.30 300+ £19.50

CALLING DEC USERS

Brand new and boxed

RSX 11M 3.2 Documentation kits, fill 3 feet of your bookshelf! Under half price only £120.00 carr. £6.50 0 vat on manuals. DEC MSV11-DD 32k x 16 bit RAM £195.00 We are always keen to buy all types of used or surplus DEC equipment.

SUPER DEAL? NO - SUPER STEAL!!

The FABULOUS 25CPS TEC Starwriter

Daisy wheel printer at a fraction of its original cost.

BRAND NEW AT ONLY £499+ VAT

Made to the very highest spec the TEC Starwriter FP1500-25 features a heavy duty die cast chassis and DIABLO type print mechanism giving superb registration and print quality. Micro-processor electronics offer full DIABLO/QUME command compatibility and full control via CPM Wordstar etc. Many other features include bi directional printing, switchable 10 or 12 pitch, full width 381 mm paper handling with upto 163 characters per line, friction feed rollers for single sheet or continuous paper, internal buffer, standard RS232 serial interface with handshake. Supplied absolutely BRAND NEW with 90 day guarantee and FREE daisy wheel and dust cover. Order NOW or contact sales office for more information. Optional extras: RS232 data cable £10.00. Tech manual £7.50. Tractor feed £140.00. Spare daisy wheel £3.00. Carriage & Ins. (UK Mainland) £10.00.

Save over £400

TELETYPE ASR33 I/O TERMINALS

FROM £195 + CAR + VAT
Fully fledged industry standard ASR33 data terminal. Many features including ASCII keyboard and printer for data I/O auto data detect circuitry. RS232 serial interface. 110 baud. 8 bit paper tape punch and reader for off line data preparation and ridiculously cheap and reliable data storage. Supplied in good condition and in working order
Options: Floor stand £12.50 + VAT
KSR33 with 20ma loop interface £125.00 +
Sound proof enclosure £25.00 + VAT

SOFTY 2

The amazing SOFTY 2. The complete "toolkit" for the open heart software surgeon. Copies, Displays, Emulates ROM, RAM and EPROMS of the 2516, 2532 variety. Many other features include keyboard, UHF modulator. Cassette interface etc. Functions exceed capabilities of units costing 7 times the price! Only £169.00 pp £1.95 Data sheet on request

DATA MODEMS

Join the communications revolution with our range of EX TELECOM data modems. Made to most stringent spec and designed to operate for 24 hrs per day. Units are made to the CCITT tone spec. With RS232 i/o levels via a 25 way 'D' sct. Units are sold in a tested and working condition with data. Permission may be required for connection to PO lines.
MODEM 13A compact, async, same size as telephone base. Up to 300 baud, full duplex over 2 wires, but call mode only £75.00
MODEM 2B/C Fully fledged, up to 300 baud async, ANSWER & CALL modes, auto answer, auto switching, ideal networks etc. Just 2 wire connection to comms line. £85.00
MODEM 20-1 Compact unit for use with PRESTEL or full duplex 2 wire link. 75 baud transmit - 1200 baud receive. Auto answer. £130.00
MODEM 20-2 same as 20-1 but 75 baud receive 1200 baud transmit. £130.00
MODEM 20-3 Made for data rates up to 1200 baud in full duplex mode over 4 wire circuit or half duplex mode over 2 wires. £130.00 Carriage. 13A £4.50. 2B/C & 20 £9.50.
DATA PUMP MODEM compact unit upto 1200 baud full duplex over 4 wires or half duplex over 2 wires. BELL specification with data i/o via RS232 25 way D socket, remote test etc. 240 v operation. Supplied complete with data £65.00 carr. £4.50.

For more information or details of other types of ex. stock modems contact sales office.

SPECIAL MODEM OFFER

EX TELECOM. Direct connect. 2 wire, European standard, 75/1200 baud data modems. Normally priced at £140.00, we have a limited quantity of guaranteed working, but cosmetically defective (ie scratches and scuffs on panels etc.) units at a super low price of only £69.95. Modems are made to the highest standard and conform to the CCITT tone spec. Ideal for MICRONET, PRESTEL or DISTEL's forthcoming high speed ports. Standard RS232 data i/o via 25 way D sct. With data.
MODEM 2A Early version of modem 2B/C 300 baud full duplex, send-receive, auto answer. RS232 i/o. With data but untested. End of line clearance. Only £35.00. Supplied complete with data. Carriage & Ins. £9.50

MOST SUPPORT STORIES START WITH A WIFE AND SIX KIDS.

This is one about a microprocessor and its peripherals. They can be even more costly to maintain when things go wrong. However don't despair—with our help it may never happen.

Digital Computer Services is an independent maintenance support service for users, manufacturers and dealers of mini and microcomputer systems. From centres throughout the country DCS offers a fast off – and on – site service. No more worries about the various equipment in your system. DCS has the experience and the facilities to maintain a wide range of hardware.

MICRO-DIGITAL

NEW

S100

A new series of S100 boards designed to operate in 8-bit or dual 8/16-bit systems, fully meeting the IEEE 696 specification.

- CPU 88** Dual processor board with 4MHz Z80A and 5MHz 8088, using an 8-bit wide data bus. Either processor can be switched at any time.
- 256k DRAM** A full 256k of memory with 24 bit addressing and 8-bit or 16-bit data path. Self refreshing and bank selectable.
- COMBO 1** Designed to handle all I/O and subsidiary functions, 2 RS232 with software selectable baud rate, 'Centronics' parallel output, Floppy Disk Controller, Konan Winchester Controller interface, Real Time Clock Calendar, software selectable 8-bit wide EPROM.

and in addition our 8-bit range offers the following boards plus ancilliary items such as 15 and 6 slot Motherboards and cards cages.

- SBMC** Processor board with 4MHz Z80A, up to 32k EPROM and 1k RAM, 2 full RS232 serial ports.
- DFDC** Floppy Disk Controller, single/double density, single/double sided, 8" or 5 $\frac{1}{4}$ " or mixed, IBM 3740 format compatible.
- 64k SRAM** 64k of Static Memory, with bank selection and segment switching.
- SIO4** Provides 4 RS232 serial ports with independant baud rate selection.

IBM 80 CARD

Expand the capability of your IBM PC with our CP/M 80 second processor card.

- True CP/M 80 not an emulation.
- Built in Corvus hard disk interface with multi user capability.
- Drive "M" utility makes RAM behave like a super fast disk drive.
- Files generated under CP/M 80 and 86 are identical in structure and are interchangeable between operating systems.
- File transfer utility between PC DOS and CP/M Mz 6MHz version.....£265

PET CP/M.....£495

The **SOFTBOX** allows the PET to run under the world's most popular operating system CP/M80.

- Built in RS232 and CORVUS hard disk interfaces.
- Operates with any 2000, 3000, 4000, 8000 system.
- Z80 cpu running at 4MHz with no wait states.
- 64K RAM, full documentation, free copy of CP/M80.
- Will run any standard CP/M 80 software.

IEEE-488 INTERFACES

B300

Bidirectional IEEE-488-RS232 interface 40 char input buffer, full handshake, etc etc.....£186

C100

Unidirectional IEEE-488 to RS232.....£120

A100

IEEE-488 to Centronics/Anadex Parallel.....£106

GPI 1000

Z80 based bidirectional IEEE-488 to RS232 with up to 59K input buffering.....£275

GPI SC

A version of the GPI 1000 configured as an RS232 controller for the IEEE-488 bus.....£275

TV/VIDEO interface

Reproduces the content of the pet screen on a TV or video monitor.....£46

RS232 to 20 Ma current loop adaptor.....£25

PET HARD DISKS.....£495

The **HARDBOX** is the intelligent controller that lets you add a CORVUS hard disk drive to your Commodore computer.

- PET DOS 1 and 2 compatibility.
- Multi User capability with file and record locking, passwords.
- 16 Mb max file size and up to 65535 records per relative file.
- 2000 files on 6Mb drive.
- Access to 6,10,20 Mb drives with video tape backup.

SIRIUS/VICTOR 9000 CARD

This card now being manufactured under licence by Sirius Systems Technology allows the Sirius/Victor to run any standard CP/M 80 program without modification.

- Specification as per the IBM 80 CARD
- 6MHz version.....£199

DEVELOPMENT TOOLS

8048 family in circuit emulator.....£1100

8748 Programing card.....£395

Cross Assemblers for most popular

microprocessors.....£130

P+T 488 S100 to IEEE-488 controller card.....£355

Small Systems also carry a comprehensive range microcomputer software for detailed information on this or any of the above products ring 01-328 7145.

DEALER ENQUIRIES WELCOME

CAREER OPPORTUNITIES AT THE BYTE SHOPS

Due to rapid expansion, The Byteshops – Britain's leading specialist microcomputer chain and part of the Comart Group – are looking for extra key personnel for their business computer centres. Applicants unless stated, should have a minimum of two years experience in the microcomputer industry. We offer excellent salaries and conditions with genuine prospects of advancement as we operate a policy of promoting from within. Interviews will be conducted locally, but write or telephone in the first instance to:

June Hamilton, The Byteshop Head Office,
Little End Road, Eaton Socon,
St. Neots, Cambridgeshire PE19 3JG
Tel: 0480 215005

SENIOR SALES EXECUTIVES

London, Nottingham, Manchester

Excellent opportunities for ambitious Senior Sales Executives. A high basic structured salary is offered plus a benefits package including car. Candidates must be experienced dealing with 'Blue Chip' companies and be conversant with desk top systems such as the IBM PC. Experience of a wide range of application software essential.

RETAIL SALES EXECUTIVES

London, Nottingham

Enthusiastic Sales Executives required for retail sales area of the store with experience of selling small business machines, for example the BBC and Osborne.

CUSTOMER SERVICE SUPERVISOR

London

The successful applicant will head a team of three engineers and be capable of working on his own initiative liaising direct with customers. We would expect the position to be suitable for a self starter with a minimum of three years experience as a Service Engineer.

TRAINEE FIELD SERVICE ENGINEERS

Various

Super opportunity to break into the Microcomputer industry for someone with a degree or HNC in Electronics or Computing.

CUSTOMER SUPPORT EXECUTIVES

Birmingham, Manchester, Southampton

Good all rounders required who like dealing with people, to handle customer enquiries and support. Good knowledge of desk top and modular systems together with CP/M compatible application software.

We are an equal opportunity employer

BBC Micro Users AT LAST . . . The real alternative D.F.S. AVAILABLE NOW!!! FROM

THE NEW AMCOM DISC FILING SYSTEM

This amazing new disc filing system adds greater flexibility to your BBC Computer. It has two distinct modes which auto select on booting the system. Mode zero is the standard mode which retains compatibility with presently available software. Mode one, the extended mode, allows for sixty-three file names per disc, over 100% increase on the existing DFS, and also permits the file names to be up to fifteen characters in length providing much greater scope for meaningful file names. In both models page is set at £1500. This gives 10% more usable memory than Acorn's DFS, in modes 0, 1 and 2. If you already have a Disc interface fitted, it is very easy to upgrade, you simply remove the DFS Eprom and replace it with the Amcom DFS Eprom, if not, then it is possible to purchase an entire Disc interface kit (consists of 11 I.C's). With this DFS no track cutting is required, and soldering is unnecessary.

NINE NEW COMMANDS ARE NOW AVAILABLE

- *Clear Quickly and easily erases an entire disc
- *Format Formats drive 0 to 3 in either 40 or 80 tracks
- *OPT2,n Alters the number of sectors per track to n
- *OPT3,n Alters the number of tracks per disc to n
- *OPT5,n Sets the start address of the DFS buffer (see OPT7)
- *OPT6,n Provides control over which part of the file spec. will be displayed ie. only display directory and program length, or just display drive and load address etc
- *OPT7,n Sets the length of the DFS buffer
- *OPT8,n Allows 80 track drives to read 40 track diskettes
- *SYS Selects either Acorn mode or Extended mode

There is a built-in formatter which will format in either forty or eighty tracks in both modes of operation. This formatter also allows for user definable parameters to be included for the development of software protection.

With this disc filing system a user definable buffer can be used while compacting the disc. This will enable disc compacting to be carried out without overwriting any programme in memory. Alternatively a new disc may be formatted without any resident programme being overwritten. This DFS also allows for the use of wildcard characters, using either the # symbol for a single wildcard and the * character for multiple wild characters. (e.g. CHAIN "P*" could be used to chain a programme called PRINTER as long as there are no other files whose names begin with P). Has many friendly features such as assisting in transfer of cassette files to disc. This DFS is totally compatible with Econet etc., and is complete with a utilities disc and comprehensive manual. The utilities disc contains many useful programmes including machine language printer screen dumps in all modes, including High Res. (Epson & NEC 8023). It also has a nibble editor to scan discs, read data, edit them, and then write back to the disc. Also included is an eight way DIL switch which may be used to select the start up options these are:

- Link 1, Determine if the system starts up in 40 or 80 tracks.
- Link 2, Select Acorn or Extended mode at start up.
- Link 3 & 4, Selects type of drive, i.e. Shugart, Canon, etc.
- Link 5, Select auto-boot or not, on "break".
- Link 6-8, Select screen mode on start up, i.e. mode 0 to 7 etc.

AVAILABLE NOW DIRECT FROM **PACE** OR CONTACT YOUR LOCAL DEALER Comes complete with disc, manual 8-way dil switch and full fitting instructions. Disc filing system: £34 inclusive of VAT or as complete disc interface kit (inc DFS): £95 inclusive of VAT.

**Microcomputers?
Let Rank Xerox
point you in
the right direction.**

If you're confused about which microcomputer system is *exactly* right for your office, let Rank Xerox be your guide.

Today, with so many systems available, it makes sense to deal with just *one* company who can supply all your microcomputing needs – the hardware, and specifically tailored software.

The advantage: total compatibility. There's no shopping around for compatible equipment (printers, disc drives, etc.); just look for the Xerox name. You'll find it on every item you require to quickly establish a cost-effective micro-computer system.

Also, Rank Xerox offer you the "Helpline" service. As its name suggests, we don't just provide you with the right microcomputer system for your business, we also help you through those first vital stages of operation. Any questions, just call us and our specialists will work with you on a telephone link. No charge.

On-site servicing is another benefit of choosing Rank Xerox. And it's prompt.

Powerful microcomputers designed to help you manage your business better

Not just power, but simplicity, too. And compactness. Keyboards and controls have been more thoughtfully designed to make working with Xerox micro-computers easier and more comfortable.

The new Xerox 820 II range, for example, has all the built-in memory and

operating power you could possibly need. It's CP/M* based with 8-bit or 16-bit versions. You could select the advanced 820 II HRG, with on-screen graphics for plans, graphs and so on.

For extremely powerful word processing and microcomputing together in one complete system, there's the Xerox 823.

And remember, these are *expandable* systems that grow as your business needs grow. At the same time, they're *adaptable* systems, with many disc drive and printer options to suit your requirements.

Software for every aspect of your more efficient business.

Every aspect of your business can be controlled more efficiently by you and your better designed Xerox microcomputer.

Budgetary and financial analysis, records and data management, word processing, plus specific business accounting packages that help you to calculate payroll, update sales ledgers, and monitor stock control, and more.

Suddenly, you could have instant access to all the information you need to make informed business decisions – information you can update, manipulate, and store on easy-to-file discs.

You're able to work in your choice of computer languages too, including BASIC, Pascal, Cobol and APL.

Which Xerox microcomputer system is right for you? Let us point you in the right direction right now. To the coupon below. Simply fill in and freepost it today.

Alternatively call our 24-hour enquiry service. Dial the operator and ask for Freefone 2279.

MEMOTECH
MTX
SERIES

MTX500 £275 MTX512 £315

**Available in September—please phone for sales information
Memotech products are designed and made in Oxford and Witney**

The All-Purpose System

The MTX Series

The MTX Series is a new departure in micro-computer technology. Whether your needs as a user are for personal programming, games playing, scientific or process control, educational or business use the MTX Series is already capable or very easily adaptable to almost every application. Glance through the standard features below — you'll see what we mean.

Software

The MTX's 16k ROM contains several languages and routines which enable the novice or the experienced programmer to make full use of the machine. Standard languages are MTX BASIC, LOGO type commands, and NODDY. ROM routines include an ASSEMBLER/DISASSEMBLER with screen display of the Z80 CPU registers, memory and program, which can be manipulated from the keyboard. Machine code programs can be stepped through one instruction at a time, and easily called from within BASIC programs. A further feature is the Virtual Screen facility which enables the programmer to define sections of the screen to work independently whilst maintaining all full screen facilities. Pascal is available as an add-on ROM pack.

Hardware

The MTX500 has 32k of user RAM as standard (64k on the 512), expandable to 512k plus 16k of dedicated video RAM. Sixteen colours, 40 column text, 256 x 192 high resolution graphics with all sixteen colours available, and easily moveable user defined graphics (Sprites) combine to make effective screen displays quick and simple to achieve. Standard outputs are centronics

printer port, two joystick ports, an uncommitted I/O port, 2400 Baud Cassette port, separate TV and Video Monitor ports, 3 voice sound with hifi output plus a dedicated games cartridge port. Other standard features include the Z80A processor running at 4MHz, real time clock, full moving key keyboard with 79 keys including eight function keys and separate numeric pad.

The Disc Based System

The MTX series has been produced with performance and expandability uppermost in the design team's thoughts. When expanded to Disc level the computer supports the following facilities, which will be available in October:

- 80 column video board
- 5¼" floppy discs
- 5¼" hard discs
- CP/M 2.2, enabling the widely available range of CP/M based software
- Memotech Silicon discs — multiples of 256K of fast RAM expandable to 8m bytes
- Colour Wordstar
- A/D and D/A converters
- Networking

MTX

CONTINENTAL SOFTWARE

We're not just playing games...

BLOBBO

A fast maze chase with untold perils and hazards.

TOADO

Get the toad back to his nest - but don't get run over or drown on the way.

SUPER MINEFIELD

You may have seen other Minefield games but ours has tanks that lay invisible mines, and spiders that are *very* tricky to avoid.

CONTINENTAL INVADERS

Classic arcade action, with all the features that make this game so popular.

KILOPEDE

This one is very fast - its not easy to get past level two.

RADAR/SONAR

Eliminate submarines with a combination of radar screen and sonar, very realistic.

FLIGHT SIMULATOR

Take off, navigate and land your high powered light aircraft. All the features of true flight.

ALSO AVAILABLE:

RESCUE, BEAVER, CONTINENTAL RAIDERS, PILE UP, SIGNAL MAN and many more.

we mean business too.

MTXCALC

Sophisticated and powerful, the professional spreadsheet program.

MTX WORD PROCESSOR

All necessary features are included to give a powerful business tool.

ACCOUNTING PACKAGE

Sales and Purchase Ledgers, stock control, payroll - the complete business system.

PROJECT PLANNER

Speaks for itself, and helps you achieve deadlines efficiently and effectively.

STRATEGY BOARD GAMES

CHess, BACKGAMMON, OTHello, DRAUGHTS.

EDUCATION PROGRAMS

MATHS 1 PHYSICS 1

The first two programs in a series of specially written software designed to teach at the pace and level best suited to the user.

Peachtree Software

The gilt-edged investment for your microcomputer

You need to be sure that the application software you choose carries the hallmark of stability and reliability and will be a sound investment for the future. It should enhance the value of the microcomputer you select to solve your business problems.

The Peachtree Portfolio of Application Software meets this need. The range provides for simple book-keeping (*Peachtree Basic Accounting Systems*), comprehensive accounting (*Peachtree Business Management Systems*) and integrated office automation (*Peachtree Office Productivity Systems*).

Peachtree is part of the world's largest Application Software company. We have over 20 years experience helping users of large and small computers get the full value from the computerisation of their business.

A nationwide network of independent computer retailers offers our portfolio of products on many different types of microcomputer. These companies provide the local support you want - backed up by Peachtree.

Major microcomputer manufacturers and distributors have made their investment in Peachtree Software for their computers.

They include:

IBM, DIGITAL, BRITANNIA,
RANK XEROX, PHILIPS, OSBORNE,
POSITRON, OEM, EPSON,
GRUNDY, WANG, MEMORY,

SAMURAI (distributed by Micronetworks)

SANYO and ALTOS (distributed by Logitek)

Peachtree Software is available for these machines through their own distribution networks - backed up by Peachtree.

THE SOFTWARE THAT WORKS FOR YOU.

Peachtree Software International Limited,

We welcome callers, no parking problems.

Choose from the Sunshine range of Spectrum Software

Bring some Sunshine into your life

Cruising
Behind the wheel of your machine. Cruising on Broadway. You look mean. People stop to stare. Suddenly a black-and-white pulls onto the Broadway behind — its light flashing and siren wailing. The chase is on!
Cruising on Broadway is a tyre-burning fast machine-code game for the 16 & 48K Spectrum. The further you can get the more difficult it becomes — cash prizes are being offered each month for the highest scores. £4.95*

Blind Alley
A deadly duel, deep in space, Blind Alley is what passes for sport in the year 3017. Your craft must use strategy to out-wit and corral the opponent — in this crazy development of the pursuit games of the late 2600s. After each round in the enclosure game more players are sent against you to test your skill and agility. Blind Alley is the machine-code action of the future — now! For the 16 & 48K Spectrum. Blind Alley can be played with a Kempston Joystick. £4.95*

Galaxy Attack
An amazing three part hybrid of adventure and arcade action. Your task will take you through the depths of space to a crash landing on a far flung planet where you race against time to repair your crippled ship before the walkers get you. You probably won't make it but if you do the third and final part of your incredible journey will begin... the assault on the alien mothership itself. Galaxy Attack is the acid test — the ultimate game — think you're up to the challenge? Then now's the time to try... Galaxy Attack is totally machine coded and will only work on the 48K Spectrum. £5.95

Androids
Trapped in an endless maze populated only by vicious androids your only objective — survival. You have a lazer of course and can withstand a few blows, but you'd better be quick on the draw, these guys are designed to kill. Maybe you can find an exit — but escape is impossible and your replenished resources won't last long. The fastest, most head-spinningly demanding game you'll ever play. £5.95

Swordfight at Midnight
More like a simulation than a game, Swordfight at Midnight presents you with a duel to the death between two swordsmen — play against a friend or against the computer. Not a program whose possibilities will be exhausted in a day or even a week. What it has in common with arcade space games is a demand for quick reactions to attack but it adds to this necessary ingredient subtleties of skill and tactics that will open up endless new ways of approaching the duel. An important aid to learning these skills is a "playback" facility which enables you to watch the game that has just taken place and spot your errors. £5.95*

SPECIALLY FOR THE DRAGON USER

Cruising
Quick thinking and dexterity are required to master this high speed chase game. Use the keyboard to travel around a maze — try to cover it all before the chaser gets you. All you have to help you is the ability to make a gap in the track which may slow your enemy up a bit but watch out — things only get tougher — the mazes get harder and more chasers appear. A high speed all machine code challenge guaranteed to raise your Adrenalin to new heights — no-one has yet mastered the highest levels. £6.95

NEW DRAGON USER
Dragon User — the new independent monthly magazine dedicated to putting the Dragon through its paces. Available through your newsagent for 60p, or take out a subscription for 12 issues for £8.

SUNSHINE

*Available through W. H. Smith's and computer dealers.

Trade/dealer enquiries welcome.

Meet the Business Demands of Tomorrow, Today

Ormbeta business software has been developed to help your business overcome the challenges of the 1980's and beyond.

Ormbeta is the most flexible business software so far developed in the U.K.

Ormbeta systems are in UCSD PASCAL, the world's finest and most efficient operating system.

Ormbeta can be supplied to run on almost any business machine on the market. Apple, IBM, Xerox, Sirius, Victor, and Sage, and more to follow.

Ormbeta is already being developed for tomorrow's machines, such as the Apple LISA.

Ormbeta includes all the 'off-the-shelf' packages, Sales and Purchase Ledger, Payroll etc, but can also be customised to particular requirements.

If you would like to find out how Ormbeta can help you meet the business challenges of tomorrow, or if you are a dealer and want to help others, fill in the coupon today – or telephone us now on Ormskirk (0695) 77043. You will never look back!

CAREER OPPORTUNITIES WITH

SYMBIOTIC COMPUTER SYSTEMS LTD

SYMBIOTIC Computer Systems manufacturers of the SYMBFILE Winchester hard disk sub system, and SYMBNET fibre optic network are looking for experienced staff to further strengthen their unique position in the micro peripheral market.

AREA SALES MANAGERS

Dynamic young people aged 22-35 years old, with a number of years experience using micro computers. Proven sales ability would be preferred but is not essential. You will be required to work largely on your own initiative, selling to and supporting our growing network of dealers. We require people to work in and around

**LONDON, LEEDS, MANCHESTER,
OR BRISTOL**

Excellent remuneration for the right candidates including

COMPANY CAR.

TWO LOCAL SALES SUPPORT SOFTWARE TECHNICIANS

Required to support our growing Dealer Network.

ELECTRONIC DESIGN ENGINEERS

To work on microprocessor/network design projects.

TWO SENIOR DESIGNERS

Candidates should have a thorough experience of digital circuit design. Working knowledge of 808X and 6502 an advantage. Successful candidates should expect to manage and assist in training less experienced members of the design team.

TWO JUNIOR DESIGNERS

Applicants should have some experience of digital circuit design, successful candidates will become part of a design team and, although the positions offered are not trainee posts, they will receive training appropriate to the projects undertaken.

TWO MICRO SYSTEMS PROGRAMMERS

To work as part of a development team whose responsibilities include writing of system support programs for Winchester hard disk and network interfacing to different micros. Skills in 6502 and 808X assembler languages required. A good working knowledge of the CP/M and MS DOS operating systems an advantage. Candidates will become part of a system support team and will be expected to eventually take the leading roles in that team.

All the above posts offer

EXCELLENT REMUNERATION

If you feel you have the necessary qualifications and experience we are seeking contact:

W.S. Sayers on 01 683 1137/8

or write to SYMBIOTIC Computer Systems Ltd, 32, Elmwood Road, Croydon, Surrey CR9 2TX.

The SPRINT 11 PLUS with the Qume Connection

Qume's legendary print quality is now available for your small business or personal computer with our new SPRINT 11 PLUS daisywheel printer. The secret is The Qume Connection interface module. Our first Qume Connection modules fit the most popular computers, including those from IBM, Tandy, Commodore, Xerox, Hewlett Packard and Sirius through our range of R.S.232C, I.E.E.E. and Centronics interfaces.

Qume Connection modules for other microcomputers are on the way. You can get the SPRINT 11 PLUS that's right for your printing requirements, with a choice of 40 or 55 cps. So make the Qume Connection by calling us or one of the authorised Qume distributors listed.

A British Company of **ITT**

**Just because you
need it in a flash,
don't expose
yourself!**

You've a deadline to meet, the right CP/M Software package is needed, the right decision has to be made; which format, which product, when can it be delivered, at what price?

You need good advice, and just as important, you need to talk to someone who has a large enough range to be able to offer honest advice. Someone who can then deliver on time, someone whose catalogue is fast becoming the byword of the software industry.

So don't expose yourself, talk to Software Limited. Choice, advice and delivery, all aimed at meeting your deadline.

Software Limited...
Because there's more to choose from, we're the only choice to make.

ny goes places, er grow with it?

Whether you're a small company on the way up, or a large company with bigger ideas, the computer system you install should be the one that won't run out of steam as you move ahead.

That's why more than 1,000 companies in the United Kingdom, large

and small, are going places with Alpha-Micro.

Because as demand on the system increases, it can be upgraded without the expense of redeveloping software, which remains compatible with the entire Alpha-Micro range, supporting up to sixty terminals. In addition, any Alpha-Micro configuration may be used as a base from

which to build a much larger system, with no redundancy of hardware.

So that as you grow, the system grows with you. With increasing flexibility, and increasing cost effectiveness.

Back all this up with a highly experienced dealer network, which has genuine experience of both business and specialist applications, and you have a system that will fit perfectly into your company.

Alpha-Micro - the one to grow with.

16/32 Bit Micro based on the Motorola 68000.

Multi-user operating system supporting Basic, Fortran, Pascal, Cobol, Lisp and Word Processing.

Optional Database Management, CPM capability, IBM Communication Software.

Unbeatable Price.

Our dealers have produced software packages for such diverse businesses as Estate Agents, Hotel Administrators, Farm Auctioneers, Fuel Distributors, Practising Accountants, Insurance Brokers, Solicitors and many more.

Call us on 01-930 4884 and let us put you in touch with the dealer who best suits your particular needs and location.

PERSONAL COMPUTER WORLD

The Plug says 'No' to dirty power.

WARNING: Unfiltered power can damage your computer's health.

WHY

Because dirty power is the most likely cause of the unexplained errors and circuit malfunctions which can upset all micro based products and their users.

HOW

The Plug with its own built in filter and transient suppressor reduces the effect of electrical noise and spikes and increases the reliability of both hardware and software.

Protect your computer from unnecessary power problems, say 'No' to dirty power.

The Plug is available from dealers or direct from the manufacturer

R.R.P. £15.50 including p.p.
Dealer enquiries welcome.

SWANLEY ELECTRONICS

Dept PCW, 32 Goldsel Rd., Swanley, Kent BR8 8EZ, England.

UK prices are shown first. UK customers must add postage (£1 on Sinclair products, £3.50 on other computers and disk drives and £4.50 on other printers) and the 15% VAT. The bracketed prices are European export prices and include insured airmail postage to all the countries of Europe including Norway, Sweden, Finland, Denmark, Spain and Italy. No VAT should be added to export prices. We are the leading computer export specialists and will be happy to quote prices for overseas delivery both inside and outside Europe. Official UK credit orders welcome from Government laboratories, schools, universities and local authorities, etc.

CP/M-80 Software from The Software Toolworks

C/80 Compiler ver 2.0 £50.00

As reviewed in April '83 PCW. Conforms to Kernighan and Ritchie, complete with assembler - also generates M80 compatible code. Lacks long integer and floating point date types - requires 48K.

RATFOR pre-processor £42.00

Brings structured programming to FORTRAN-80 with many useful features. Utilities from 'Software Tools' included.

LISP/80 interpreter £42.00

The language of Artificial Intelligence - including a LISP editor and an example of ELIZA and analysts game. Requires 48K.

TEXT formatter £45.00

A powerful text formatter producing left and right justified margins, table of contents, index, form letters and footnotes. Will pass printer ESC codes.

UVMAC - Z80 Macro Assembler £35.00

Powerful macro-assembler which generates absolute code - with many useful features.

AUTODIFF - files comparator £40.00

Flexible and easy to use, finds differences in both text and binary files - essential for every software tool kit.

MYCHESS Chess playing program £35.00

With nine skill levels, game save and restart facilities, does not require graphics terminals - a championship program.

All on 8" SSSD and Osborne formats
please enquire for other formats

GAMES and UTILITIES for the OSBORNE £30.00

Several available - ADVENTURE, MUNCHKIN, Sketch Editor, File Compressor and Encryptor.

Send you order with cheque (add £2.00 p&p and VAT) to:

INTELLIGENT SOFTWARE

Do you want to create intelligent software and exciting products? Would you like to work alongside the people who designed the unique robot chess machine pictured below?

If you have flair, talent, a will to succeed and a desire to work to high professional standards on interesting projects, then you could join us:

To enquire about vacancies (in both of our London offices and our Cambridge office) in the following fields:

Hardware design
Systems software
Video game design & programming
General programming
Graphics design
Project management

Please write to:

CHIP CHAT

The launch of ACT's Apricot recently had an element of surprise for all the white-hot technocrats who attended. This was a cake modelled to look just like ACT's new piece of leading-edge technology. It even came as a separate screen, computer and keyboard! Rumours are abroad that ACT is about to go into the bakery business... And on the subject of launches, Data General chartered Concorde to fly to New York for the launch of an integrated office microsystem. This was instead of shelling out to organise a separate launch in each European city. One wonders: is it cost-effective?... And still on the subject of launches, Torch Computers allegedly paid William Woollard (of Tomorrow's World fame) £4000 to speak at the recent launch of the 68000-based Super Torch. That probably wasn't cost-effective... Regular readers of this august page will no doubt remember the reference, a couple of issues ago, to HELP, a fitness program which used those appalling instruments, skinfold calipers (shock, horror, probe,

etc), as a sort of perverse peripheral device. Those who have a deep and heartfelt respect for that most English of qualities, decency, will no doubt prefer the 'tone up at the terminals' guide, produced by Verbatim Corporation in California, to help flabby operators improve their chances of competing in the Olympic Games next year. Naturally, this guide is in response to yet another report on eyestrain, backstrain... which are associated with VDUs. Members of the PCW team who discussed this contemporary hobbyhorse reckon the manual typewriter to be a far worse cause of all sorts of strain than a mere VDU... What was very odd about the communiqué which related to this fitness guide is this: it included a photo of a suitably attractive young lady looking generally fit and ready to go—in some appropriate exercising pose. According to the caption enclosed with the photo she goes by the name of Denis Katnich, and she is a Los Angeles physiologist—Chip Chat reckons she is actually Denise and is a physiologist—

we hope... Software Arts, the creator of Visicalc, has sold copies of that very same illustrious spreadsheet to the value of \$25 million (we wonder if they used Visicalc to forecast this). How ironic, then, that it should be presented with the same sum again from International Computer Programs, Inc, at its 1983 executives' conference. This huge sum of money was actually an award for Visicalc's achieving over \$1 million in sales. Somehow it seems that Software Arts doesn't need the money—what about using it to support Ethiopia, SA?... The star of ITV's Ultra Quiz, to go on show nationwide as from 9 July, will undoubtedly be an Epson QX-10 (no, not Miss World). This machine will help astrologer Russell Grant to predict, at the beginning of each round, which of the 2000 morons chasing round the world after one £10,000 prize will get chucked out. Epson's training manager will be on hand to offer explanations as to why the computer makes its particular predictions. Let's hope he will have been trained in the art of diplomacy if the

machine predicts everything wrong... Hewlett-Packard is a funny organisation. One of its big publicity 'things' is the 'Hewlett-Packard Service to Sailing', which seems strikingly inappropriate. In fact, the crew of Victory '83—Britain's challenger in this year's America's Cup races, will be using an HP120. While one might be forgiven for believing the use for this machine to be the steering of the boat; one would be wrong. It's to be used for inventory control. What a let-down! All the same, yachtsmen will be using the profitable HP-41CV to check navigational calculations—wouldn't a Husky be better?... At the same time, though, that ol' HP-41CV gets everywhere! It's in use by astronauts on the shuttle as well... Not only this, but the press release which told this little story also managed—Lord knows how—to include a passage about HP's new factory in Bristol. It did this quite sneakily and without a break of any discernible degree in the text. Publicity moves in mysterious ways.

END

BLUDNERS

The author of Apple VAT, published in the June issue, has written to say that there is a rather drastic error in the program: it doesn't clear the previous (input) totals before calculating the output totals! To improve instantly the financial standing of your business, add the following line:

7425 FOR I=1 TO 3: TT(I)=0: NEXT I

Gremlins made their presence felt in two of the Benchtests in last month's issue. In his review of the Sord M5, Steve Mann stated that the basic package included two games 'joypads'—certainly, the review machine came complete with the joypads and the packaging seemed to indicate that these were standard issue. However, this may well not be the case.

The price war at the cheaper end of the home computer market seems to be hotting up, and dealers are vying with each other to offer the best deal, so it would be as well to check with your local retailer to see whether he will offer the joypads free of charge. Observant readers will have noticed that the M5 Benchtest omitted the Benchmark timings—the review was done in a great hurry and the machine had to be returned before the Benchmark timings had been done. We will certainly include these figures in our next Benchmark summary.

In his review of the Tandy Model 100, Dick Pountain based his conclusions on the mistaken belief that the 24k model sold for £495. In fact, as was stated in the 'Prices'

section, the 8k version retails at £499 while the 24k Model 100 will set you back £649. Readers should bear this in mind when pondering Pountain's pontifications.

This month's final bludner concerns a letter from Mr G J Suggett, in which he discussed cross-figure puzzles and included an example from *Games and Puzzles* magazine.

We printed the clues for this example, but managed to omit the grid on which the answers are entered. For the cross-figure freaks out there, we print the missing diagram here—for the clues, see 'Cross Figures', page 110, August PCW.

OCT. 19, 20, 21...
THREE DAYS THAT
WILL CHANGE
YOUR IDEAS ABOUT
SOFTWARE...
FOREVER!

Don't Miss The National Software Show in San Francisco.

To keep up on what's happening in your industry is a monumental task. Here's the solution to help you see what's on the horizon: attend The National Software Show in San Francisco, October 19, 20 & 21st, 1983. You'll get hands-on exposure to the latest concepts and strategies being presented by over 200 exhibitors. This Trade Show is exclusively for ISO's, retailers, distributors, dealers, system houses, commercial OEM's, volume buyers, venture capitalists and industry press.

Be present as the best, unveil the newest. In addition, you can improve your business acumen by attending the 22 session Conference. Here Industry leaders will share with you the secrets and processes that have kept them on top in a highly competitive field.

Pre-Register today. Write or call for attendee information: The National Software Show, 21 Tamal Vista, Suite 175, Corte Madera, CA 94925, (415) 924-1194.

The National Software Show is brought to you by Raging Bear Productions, Inc., Creators of exciting Industry Trade Shows and Conferences.

Lisa™

Lisa is more than a Personal Computer. It is your personal office system that understands the way you work — it is the next generation of personal computing.

Lisa combines words, numbers, lists, graphs and pictures to produce the information you want, when you want it — simply and efficiently. Lisa comes complete with 6 business programs that *integrate*. Whether you work in a large corporation or own or manage a small company, Lisa will provide you with all the facts and figures.

Why not contact Personal Computers Ltd. and see how Lisa can help you. Telephone 01-377 1200 for a demonstration of this revolutionary and powerful computer, or book your place for the following seminar dates.
