

EQUINODERMOS

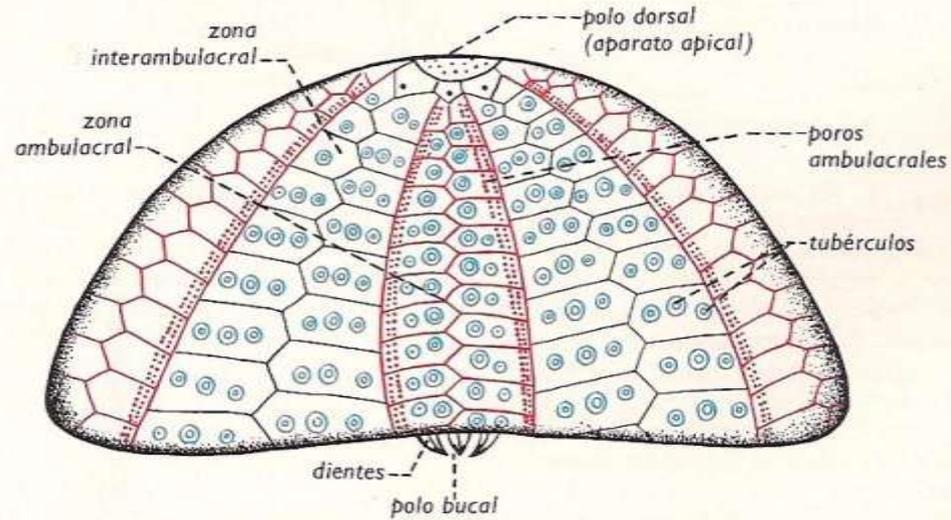

Equinodermos

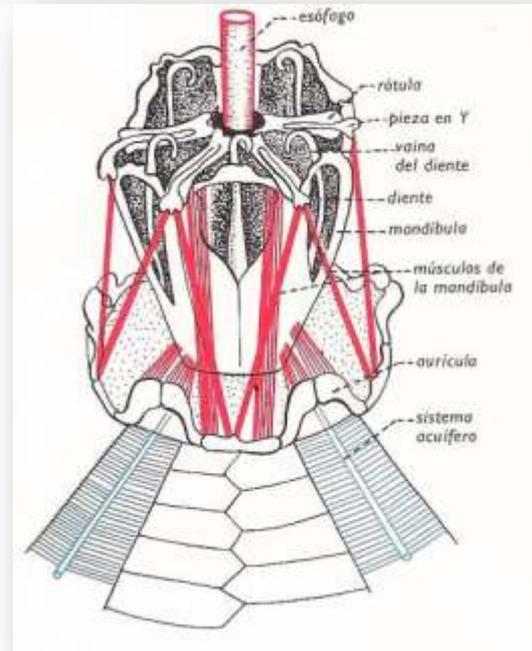

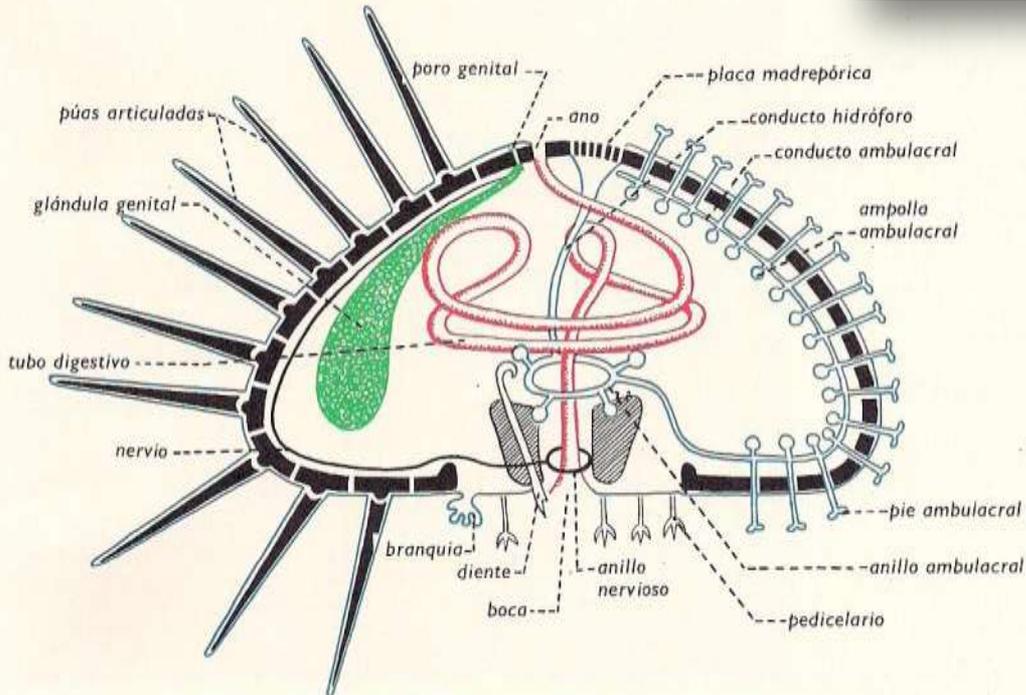

- Animales triblásticos, celomados, deuterostomos
- Cuerpo no segmentado con simetría radial pentámera
- Endoesqueleto dérmico calcáreo con espinas o escleritos, recubierto por epidermis.
- Aparato ambulacral acuífero

Equinodermos

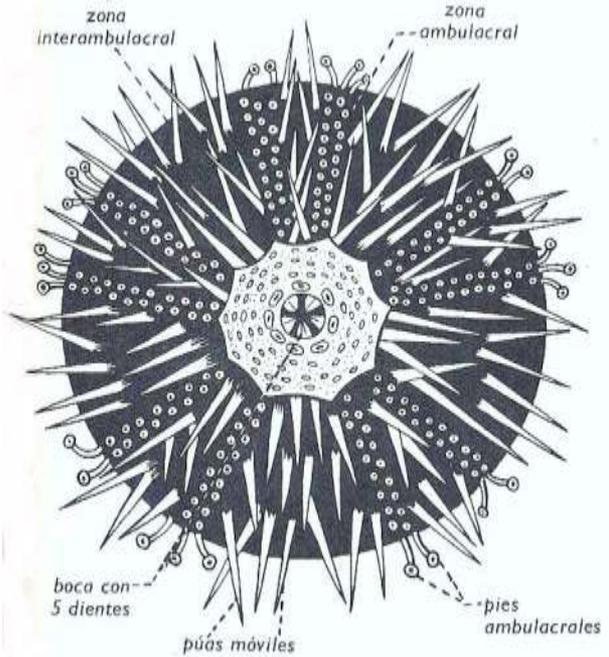

Dermatoesqueleto de Erizo de mar desprovisto de sus púas (vista lateral).

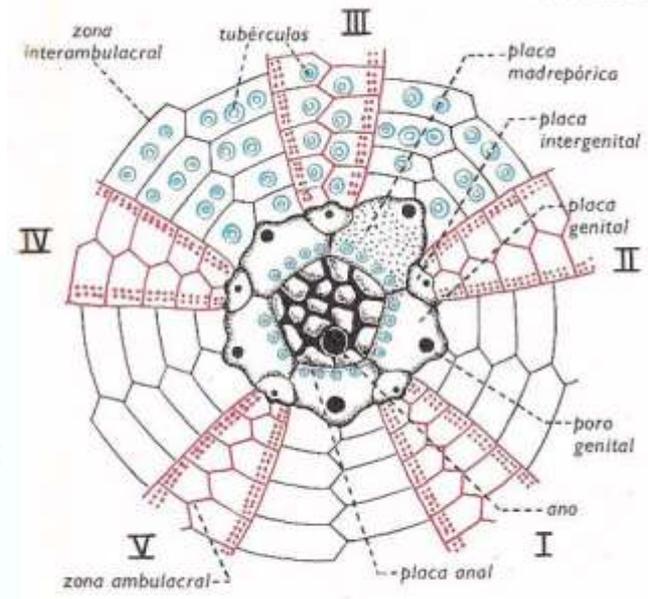

Equinodermos

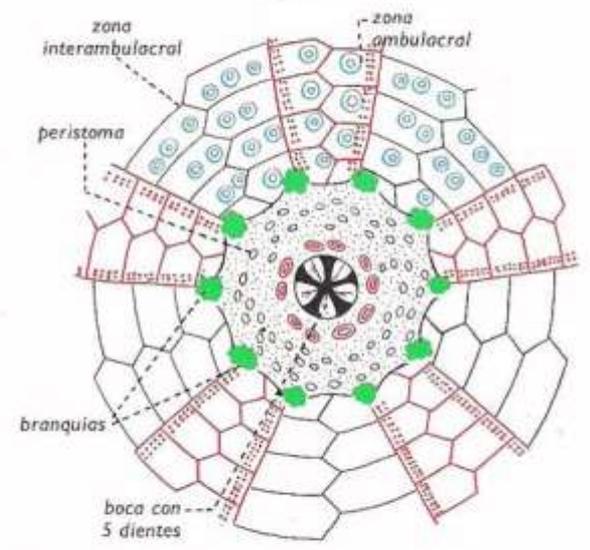

ERIZO DE MAR

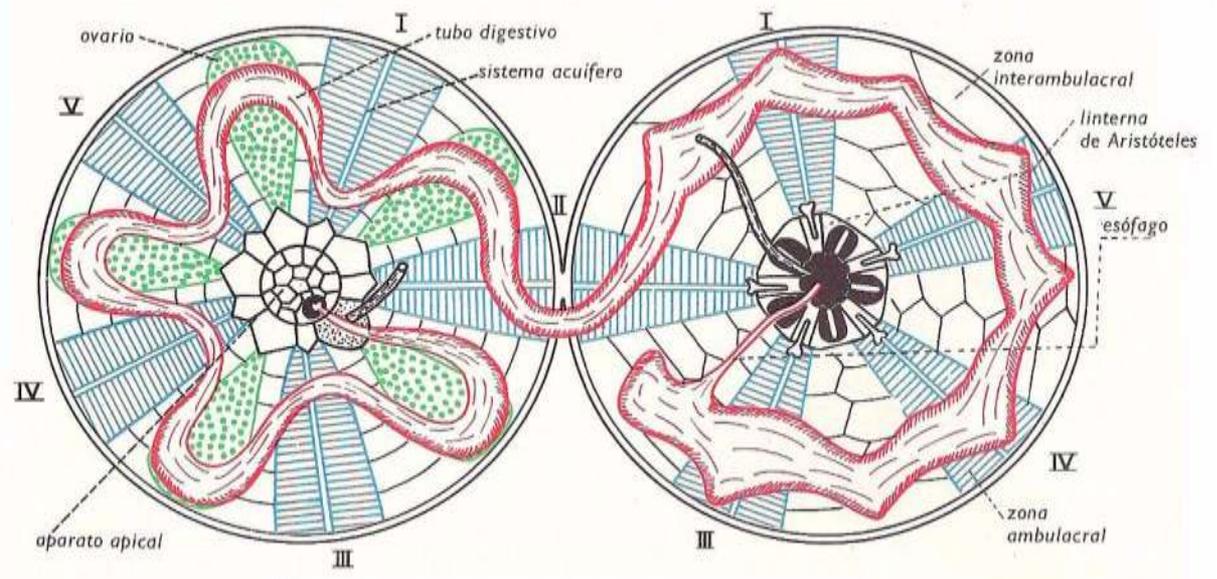

Erizo de mar vivo (polo bucal)

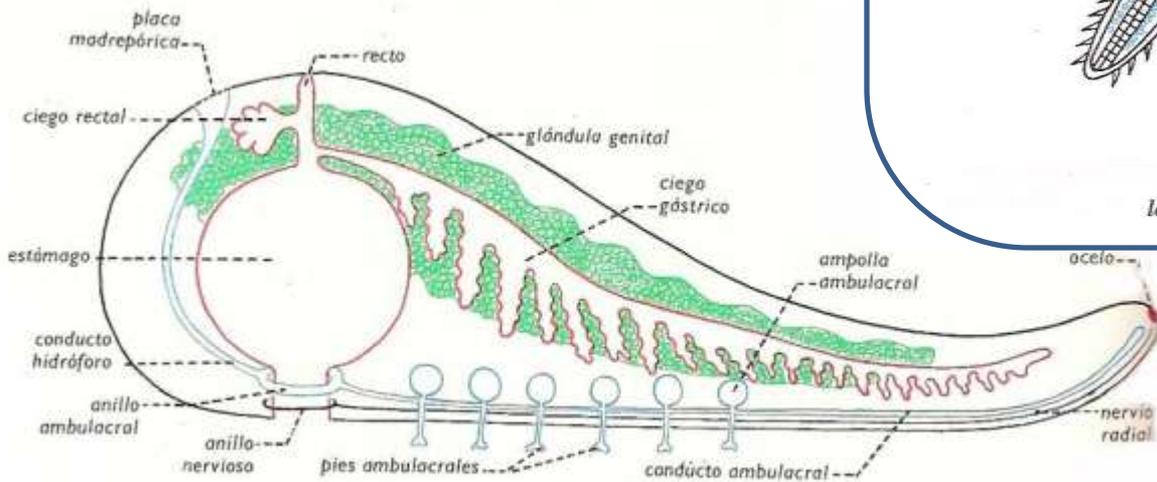

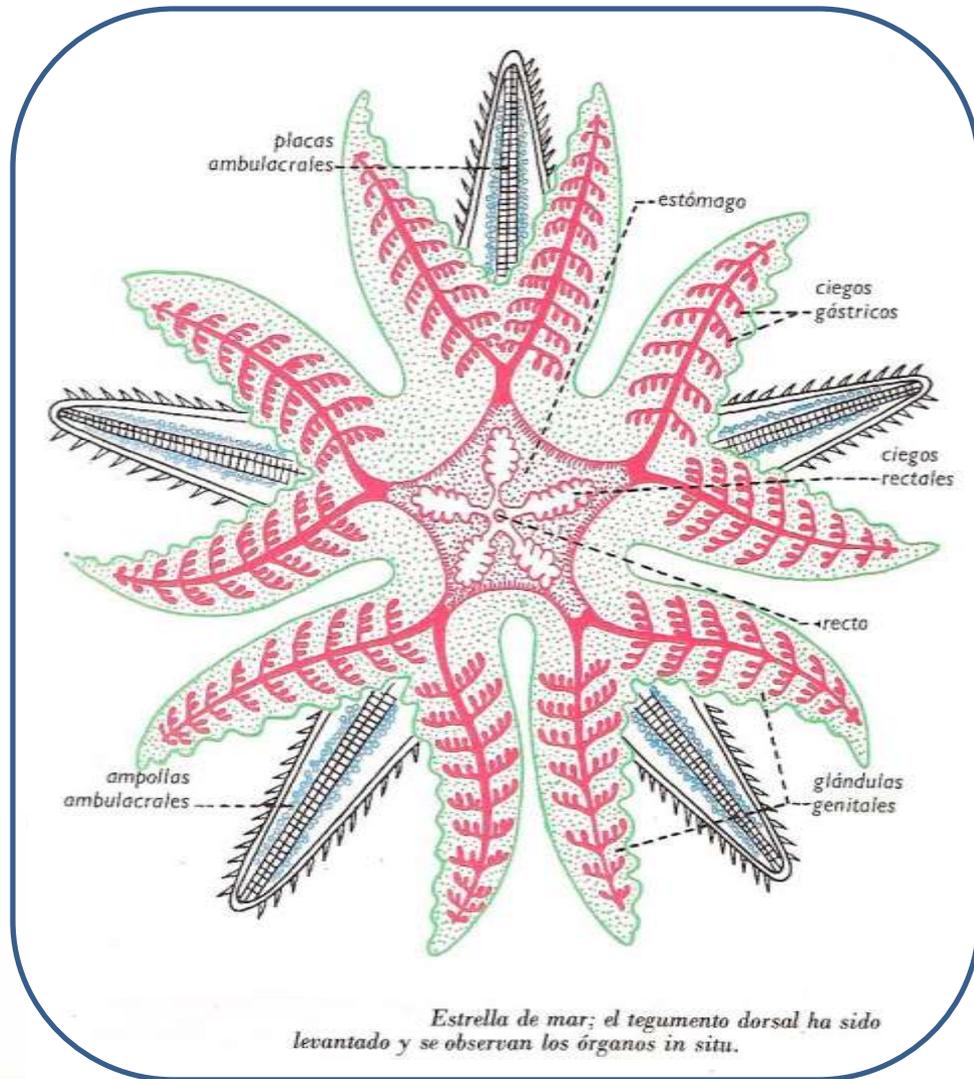

Polo apical (superior)

Polo basal (bucal)

Equinodermos

Equinodermos

ASTEROIDEOS:
estrellas de mar

EQUINOIDEOS:
erizos de mar

OFIUROIDEOS:
Ofiuras

HOLOTUROIDEOS:
holoturias, cohombros de mar

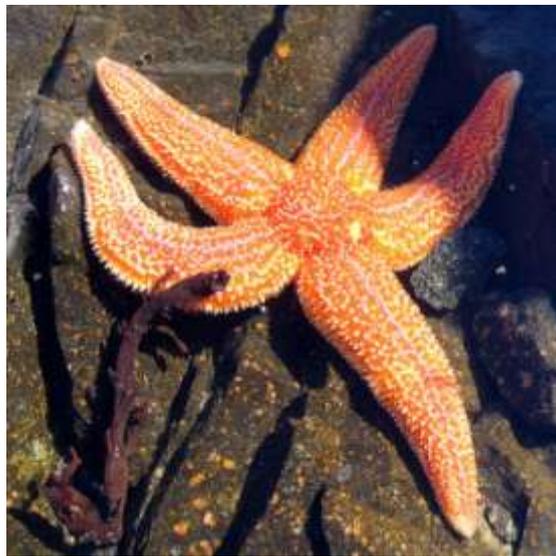

CRINOIDEOS:
lirios de mar

Presentación montada
con fines educativos
por José Antonio Pascual
